PREFACE

FOR many years I have contemplated writing a history of the United States in a single volume, that should fall between the elaborate works, which are beyond the reach of most busy people, and the condensed school histories, which are emasculated of all literary style through the necessity of crowding so many facts into small space.

In writing this history my aim has been to present an accurate narrative of the origin and growth of our country and its institutions in such a form as to interest the general reader. I have constantly borne in mind the great importance of combining the science of historical research with the art of historical composition. I have aimed also, especially when treating the national period, to balance the narrative and critical features in intelligent proportion. A mere recital of facts, without historic criticism, without reference to the undercurrents that move society, is no longer acceptable in this age of thinking readers.

I have endeavored to write, as stated, for the general reader, but not with a patronizing form of expression, as if addressed to the uneducated, or to children, nor with a burden of worthless incident and detail, nor yet with any effort to please those who delight only in the spectacular. At the same time, knowing that many intelligent people who wish to know something of their country are not fond of reading history, I have given careful attention to style, in the hope that the book might be easy and pleasurable to read, as well as instructive.

I have devoted much space to the life of the people,—their habits, modes of life, occupations, general progress, and the like, especially in the earlier period when they differed most widely from ourselves. But in treating the national period I have, how-

ever, without neglecting the industrial and social features, given greater space to political and constitutional development, as in this the life of a people who govern themselves is epitomized.

In my treatment of wars and disputes with foreign powers, I am aware that, with all my effort to view a subject from a neutral, judicial standpoint, an unconscious bias may be discerned; but should the book find any foreign readers, I beg them to remember that I have written absolutely *sine ira*.

In treating the Civil War and the great events that led to it, I have taken the utmost care to be fair to both sides; though as a native and resident of the North I no doubt partake of the prejudice of my section, if such prejudice can still be said to exist. I have refrained from using the terms "rebel" and "traitor" to designate those who rose against the government in the sixties, because of my profound respect for their sincerity.

One subject—American literature—I had hoped to treat with greater fullness; but I found that an adequate treatment of this very important subject would require too great a space for the scope of this volume. It is therefore recommended that this phase of our history be studied in separate works devoted to the purpose.¹

The notes at the ends of the chapters are intended to elucidate something that has preceded in the text, to give personal traits of leading characters, to mention matters of too meager importance for the main narrative, or, as in many cases, to relate some event of real importance which did not exactly fit in the body of the text.

In preparing this work I have had frequent recourse to the original sources, but make no pretense that the work is based wholly, or even chiefly, on original research. I have freely used the works of other writers. A large number of these have been cited in the footnotes for the purpose of aiding the reader who desires to pursue the subject further, or to acknowledge an obligation to an author whose thought or form of expression has been, in some measure, adopted. Much information, however, has been gathered from sources not herein mentioned.

¹ Wendell's "Literary History of America" is an excellent work; so also is Trent's "History of American Literature."

That the work may be accepted as authoritative throughout, I have exercised the utmost care to secure historic accuracy; but absolute accuracy is not always attainable, especially where points are under dispute, and where such a great number of subjects are to be treated. The pointing out of any errors by the reader will be deemed a kindness.

My thanks are due to many kind friends for suggestions; to various librarians in Philadelphia and New York for special courtesies; to Mr. Stewart Culin, former curator and Indian specialist of the University of Pennsylvania, who kindly read and criticised the chapter dealing with the Indian character. Above all, I am indebted to Professor Herman V. Ames of the University of Pennsylvania, who read the greater portion of the manuscript and made many important suggestions. To his thorough scholarship and ripe judgment I have deferred in many instances.

H. W. E.

PHILADELPHIA,
February, 1904.

AMERICAN CHRONOLOGY

DISCOVERY AND COLONIZATION

- 1000. Leif Ericson discovers Vinland (New England).
- 1492. Oct. 12. Columbus discovers the New World.
- 1497. The Cabots discover the continent of North America.
- 1498. Columbus on third voyage discovers South America.
- 1506. Columbus dies at Valladolid.
- 1507. New World named after Americus Vesputius.
- 1513. Balboa discovers the Pacific Ocean and Ponce de León discovers Florida.
- 1519-1521. Cortez conquers Mexico. Magellan sails round the world.
- 1524. Verrazano and Gomez explore New England coast.
- 1528. Cabeza de Vaca explores southern United States.
- 1533. Pizarro conquers Peru.
- 1534. Cartier sails to the Gulf of St. Lawrence.
- 1541. De Soto discovers the Mississippi River.
- 1565. Founding of St. Augustine.
- 1576. Frobisher discovers northwest passage, Frobisher Strait.
- 1579. Drake explores coast of California.
- 1584. Raleigh sends first expedition to America.
- 1588. Defeat of the Spanish Armada.
- 1604. Acadia settled by the French.
- 1607. May 13. Founding of Jamestown, Virginia.
- 1608. Founding of Quebec by Champlain.
- 1609. Hudson discovers the Hudson River.
- 1619. First assembly meets at Jamestown. Slaves first sold in Virginia.
- 1620. Coming of the Pilgrims in the *Mayflower*.
- 1623. Settlements at New Amsterdam. First settlements in New Hampshire.
- 1630. The great emigration to Massachusetts. The founding of Boston.
- 1634. Maryland first settled by Calvert.
- 1635. Connecticut settled by emigrants from Massachusetts.

1636. Founding of Providence by Roger Williams. Harvard College founded.
1637. War with Pequot Indians. First negro slaves in New England.
1638. Swedes first settle in Delaware.
1639. First constitution in America adopted by Connecticut.
1643. May 30. New England Confederation formed.
1649. Toleration Act in Maryland.
1655. Stuyvesant conquers the Swedes in Delaware.
1656. Quakers expelled from Massachusetts.
1662. Connecticut charter granted.
1663. Charter granted to Rhode Island.
Charter for the Carolinas granted.
1664. Sept. 8. The English conquer New Amsterdam. New Jersey given by
King Charles II to his brother, the Duke of York.
1667. Fundamental Constitutions drawn up for the Carolinas.
1673. Marquette explores the Mississippi.
1676. Bacon's Rebellion in Virginia. King Philip's War in New England.
1681. Penn receives charter for Pennsylvania.
1682. Penn founds Philadelphia and makes treaty with the Indians. La Salle
explores Louisiana and takes possession for France.
1686. Edmund Andros made governor of all New England.
1689. Rebellion against Andros ; his fall and arrest.
1692. Salem witchcraft delusion.
1700. Iberville plants colony in Louisiana.
1713. Treaty of Utrecht, ending Queen Anne's War, which began in 1702.
1733. Georgia settled by Oglethorpe.
1748. Treaty of Aix-la-Chapelle, ending King George's War, which began
in 1744.
1754. Colonial Congress at Albany ; Franklin's plan of union.
1755. Braddock's defeat.
1756. French and Indian War formally begun.
1759. Wolfe captures Quebec.
1763. Treaty of Paris ; end of the war. Conspiracy of Pontiac.

PERIOD OF THE REVOLUTION

1765. Stamp Act. Colonial Congress in New York.
1770. "Boston Massacre."
1773. Destruction of tea in Boston Harbor.
1774. Sept. 5. Continental Congress meets in Philadelphia. Boston Port Bill.
1775. April 19. Fight at Lexington and Concord.
May 10. Capture of Ticonderoga. Meeting of Second Continental
Congress at Philadelphia.

1775. June 17. Battle of Bunker Hill.
December. Daniel Boone settles in Kentucky.
1776. July 4. Declaration of Independence.
Aug. 27. Battle of Long Island.
Dec. 26. Washington captures Hessians at Trenton.
1777. June 14. Flag of stars and stripes adopted by Congress.
Sept. 11. Battle of Brandywine.
Oct. 17. Surrender of Burgoyne.
Washington encamps at Valley Forge and Howe occupies Philadelphia.
1778. French-American alliance.
June 28. Battle of Monmouth.
Dec. 29. British take Savannah.
1779. Sept. 23. Naval victory of John Paul Jones.
1780. May 12. Charleston taken by British.
Aug. 16. Battle of Camden.
Oct. 7. Battle of King's Mountain.
1781. Adoption of the Articles of Confederation.
Oct. 19. Surrender of Cornwallis at Yorktown.
1782. Nov. 30. Preliminary treaty of peace.
1783. Sept. 3. Final treaty of peace signed.
Nov. 25. British army evacuates New York.
Dec. 4. Washington's farewell to his officers.
1786. Shays's rebellion in Massachusetts.

FROM THE MAKING OF THE CONSTITUTION TO THE CIVIL WAR

1787. Ordinance of 1787 adopted.
May 14. Constitutional Convention meets at Philadelphia.
Sept. 17. Constitution finished and signed by the delegates.
1788. Rufus Putnam plants first settlement in Ohio.
June 21. New Hampshire becomes the ninth state to ratify the Constitution, securing its adoption.
1789. March 4. New government goes into operation.
April 30. Washington inaugurated first President.
1790. First census. Population 3,929,214.
1791. Vermont admitted to the Union. St. Clair defeated by the Indians.
1792. Kentucky admitted to the Union.
1793. Jefferson founds Republican (Democratic) party.
1794. Wayne defeats the Indians in Battle of Fallen Timbers.
1795. Jay's treaty ratified.
1796. Tennessee admitted to the Union.

1797. John Adams inaugurated President.
1798. Alien and sedition laws enacted. Navy department established.
- 1798-1799. Kentucky and Virginia resolutions.
- 1798-1800. Serious trouble with France.
1799. Dec. 14. Washington dies at Mt. Vernon.
1800. Overthrow of the Federal party.
Capital removed to Washington, D.C.
1801. Jefferson becomes President.
1802. Ohio joins the Union.
- 1801-1805. War with the Barbary States, North Africa.
1803. Purchase of Louisiana.
1804. Burr kills Hamilton in a duel.
- 1805-1807. Lewis and Clarke expedition.
- 1806-1807. Burr's conspiracy, trial, and acquittal.
1807. Fulton succeeds with the steamboat.
June 22. The *Leopard* fires on the *Chesapeake*.
December. Jefferson's embargo enacted.
1808. Prohibition of the foreign slave trade.
1809. James Madison inaugurated President.
1811. Nov. 7. Battle of Tippecanoe.
1812. June 18. War declared against England.
Aug. 16. Hull surrenders Detroit.
Aug. 19. The *Constitution* defeats the *Guerrière*.
Oct. 13. Battle of Queenstown Heights.
1813. Sept. 10. Perry's victory on Lake Erie.
Oct. 5. Battle of the Thames.
Nov. 9. Battle of Talladega.
1814. July 25. Battle of Lundy's Lane.
Aug. 25. The British capture Washington.
Sept. 11. Battle at Plattsburg and defeat of the British on Lake Champlain.
December. Hartford Convention.
Dec. 24. Treaty of Ghent.
1815. Jan. 8. Battle of New Orleans.
America secures indemnity and treaties from Algiers, Tunis, and Tripoli.
1816. Indiana admitted to the Union. Admission of Mississippi, 1817; of Illinois, 1818; of Alabama, 1819; of Maine, 1820; of Missouri, 1821.
1817. James Monroe becomes President.
1818. War with the Seminole Indians.
1819. Purchase of Florida from Spain.
First steamship, the *Savannah*, crosses the Atlantic.
1820. The Missouri Compromise.

1823. Dec. 2. Monroe Doctrine promulgated.
1825. Inauguration of John Quincy Adams. Opening of the Erie Canal.
June 17. Lafayette lays corner stone of Bunker Hill Monument.
1826. July 4. Death of John Adams and Thomas Jefferson.
Panama Congress.
1828. Building of the first passenger railway begun at Baltimore.
1829. Andrew Jackson becomes President.
1830. Fifth census. Population 12,866,020.
1832. Nov. 19. Nullification by South Carolina. Jackson vetoes bank charter.
Black Hawk War.
1833. Jackson removes bank deposits. Compromise tariff adopted.
1836. April 21. Battle of San Jacinto.
Wilkes's Antarctic expedition.
Admission of Arkansas.
1837. Inauguration of Van Buren.
Patent of the telegraph by Morse.
Great panic. Admission of Michigan.
Burning of the *Caroline*.
1841. March 4. William Henry Harrison inaugurated President; dies April 4,
and John Tyler becomes President.
Howe invents the sewing machine.
1844. First telegraph line in America, between Baltimore and Washington.
1845. James K. Polk becomes President. Florida and Texas admitted into
the Union. Death of Andrew Jackson.
1846. Beginning of the Mexican War. Fight at Palo Alto.
Admission of Iowa. Walker tariff enacted. Wilmot Proviso intro-
duced in Congress.
1847. Feb. 23. Battle of Buena Vista.
March 29. Capture of Vera Cruz by General Scott.
Conquest of California.
September. Fall of the City of Mexico.
1848. February. Treaty of Guadalupe Hidalgo.
Discovery of gold in California.
Wisconsin enters the Union.
1849. Zachary Taylor inaugurated President.
1850. Admission of California. Death of Calhoun.
July 9. Death of President Taylor. Millard Fillmore President.
Clay Compromise enacted.
Census shows population of 23,191,876.
1852. Death of Clay and Webster.
1853. Inauguration of Franklin Pierce.
1854. May. Kansas-Nebraska bill enacted.

1854. Commercial treaty with Japan.
 1857. Inauguration of Buchanan.
 March 6. Dred Scott decision.
 1858. Admission of Minnesota.
 First Atlantic cable laid.
 Lincoln-Douglas debates.
 Sept. 18. Mountain Meadow Massacre, Utah.
 1859. Admission of Oregon.
 John Brown's raid on Harper's Ferry.
 1860. Population 31,443,321.

THE CIVIL WAR AND OUR OWN TIMES.

- Dec. 20. Secession of South Carolina.
 1861. Secession of Mississippi on Jan. 9 ; of Florida, Jan. 10 ; Alabama, Jan. 11 ;
 Georgia, Jan. 19 ; Louisiana, Jan. 23 ; Texas, Feb. 1 ; Virginia, April
 17 ; Arkansas, May 6 ; North Carolina, May 20 ; Tennessee, June 8.
 Feb. 4. Confederate government organized.
 March 4. Lincoln inaugurated President of the United States.
 April 14. Fall of Fort Sumter.
 July 21. Battle of Bull Run.
 Nov. 8. Capture of Mason and Slidell.
 Admission of Kansas.

-
1864. June 19. The *Kearsarge* sinks the *Alabama*.
Aug. 5. Battle of Mobile Bay.
Sept. 2. Sherman captures Atlanta.
Oct. 19. Battle of Cedar Creek.
Nov. 15. Sherman begins his march to the sea.
Dec. 15-16. Battle of Nashville.
Admission of Nevada.
1865. April 1. Battle of Five Forks.
April 3. Evacuation of Richmond.
April 9. Surrender of Lee at Appomattox.
April 14. Assassination of Lincoln ; Andrew Johnson President.
April 26. Surrender of Johnston's army.
Dec. 18. Thirteenth Amendment ratified.
1866. July 27. Second Atlantic cable completed.
1867. May 2. Reconstruction bill passed over veto.
Purchase of Alaska.
Admission of Nebraska.
1868. Feb. 24. President Johnson impeached by the House.
Trial in the Senate fails.
July 21. Fourteenth Amendment adopted.
1869. Inauguration of U. S. Grant.
May 10. Pacific Railroad completed.
1870. Population 38,558,371.
March 30. Fifteenth Amendment ratified.
1871. November. Great fire in Chicago.
1873. February. Congress demonetizes silver.
Financial panic.
1876. Centennial Exposition at Philadelphia.
Admission of Colorado.
Invention of the telephone.
Custer's army destroyed by the Indians.
1877. Inauguration of R. B. Hayes.
Great railroad strike.
1878. Electric light perfected.
February. Bland-Allison silver bill passed.
1879. Jan. 1. Resumption of specie payments.
1880. Population 50,155,783.
1881. James A. Garfield inaugurated President.
July 2. Assassination of Garfield. Dies September 19. Chester A.
Arthur becomes President.
1883. Letter postage reduced to two cents.
1885. Grover Cleveland becomes President.
1886. Oct. 6. Statue of Liberty unveiled, New York.

however, that America was the first great nation in history to solve the greatest of all governmental problems, — to blend Nationality and Democracy in perpetual wedlock under one government, in such proportion as to secure the benefits of both; to protect local self-government by the mighty arm of a great nation, which is strong enough to perpetuate its own existence.

Other facts that render the study of our history important are, — that our manhood suffrage is more nearly universal, our free school system more extensive, than in any other country; that our land first introduced religious liberty to the world; that in the past hundred years we have been the greatest colonizer of all countries, though this fact has been disguised by the further fact that our colonies have become coequal states, — a thing unknown before in history; and that, on the whole, the growth and development of the United States during the nineteenth century is the most wonderful fact in modern history. There are other items also (of which we are too prone to boast), such as these, — our iron and steel products are greater than in all other countries combined; we produce more coal, wheat, maize, and cotton than any other country. Our railroad mileage far exceeds that of any other nation, so also our telegraph lines, our newspaper issue. In short, our nation, though still in its youth and in its most rapid period of growth, is already the richest nation on the globe.

The New World, inhabited only in modern times by civilized man, has been divided, for the most part, into a dozen or more independent republics, and it is very remarkable that one of these republics stands without a rival and without a second among its fellows; that this one, as a civilizing force and as a military power, surpasses all the rest combined.

A study of American history will reveal the fact that many of our institutions, customs, and characteristics are indigenous to our soil; but it must not be forgotten that most of the best things in our civilization have their roots in the far past, in the centuries that made their record in the world's life long before this Western Hemisphere was known to the white man. In art, in sculpture, we must still find our models in the old masters of other lands; in

music we have only made a start, and are still dependent on the German and the Italian; in literature we have made a noble beginning, but we must still bow to the mother country, whose classic treasures we have appropriated as our rightful inheritance. But in useful inventions we surpass all peoples of all ages. That this one country in a single century has given to the world steam navigation, the electric telegraph, the cylinder press, the sewing machine, the mower and reaper, anæsthetics, the telephone, the electric light, and the electric railway is the most astonishing fact in the history of modern progress. On the whole, however, the history of our country but illustrates the truth of the continuity of history, the transplanting of Europeans and European institutions to the New World and their development under new conditions. That most of our institutions have grown by evolution from the beginnings made by the early settlers and brought by them from their homes across the sea no thoughtful student of history will deny.

At first glance it might seem that the history of the United States, from its mere newness, must be less fascinating than that of the older countries; and it is true that the stories of royal dynasties, of orders of nobility, of ancient castles, are wanting in American history. But we have much to compensate for all this. We have not only the story of the marvelous development, the unprecedented growth of a vast people and their institutions; we have also the personal story of the barefoot boy, born among the lowly, but untrammelled by the iron fetters of caste, rising by the force of his own genius to the highest rank in the political, the military, or the industrial world. Among the greatest of our statesmen, our commanders of armies, our captains of industry, the great majority have risen from the commonest walks of life; and who can write fiction so fascinating as to compare with the story of such a life?

Again, American history presents one absorbingly interesting feature that is wholly unique in modern annals,—the removal of an ancient race that another race might be transplanted to the soil. Behold first the wild man of the forest in his native haunts. See him chase the deer and the buffalo and strive with his enemy in battle. His life is full of tragedy and romance, of rivalry, of hatred,

and of love. See him in the vast solitudes of nature living in apparent contentment with his family and kindred, amid the crude surroundings of his home; hear his rude song resound from hill to hill. Now behold a stronger race coming from afar, and the long warfare between Civilization and Barbarism begins. The wild man at length must yield, or flee before the forces of modern life, or he must die. It is the decree of Providence, for he is a cumberer of the ground.

Now comes the pioneer with his ax, his cattle, and his plow; the development of a continent begins. The New World becomes the home of the oppressed from every land. Cities rise where the forest waved over the wild man's home, and the hills and valleys resound with the teeming life of an industrious and ambitious people. Nearly two hundred years pass, when they rise and win their freedom from political bondage. Now are laid the foundations of a mighty nation, and the people grapple with the greatest problem of all,—the problem of self-government. The new nation has a thorny road for many years, but it toils upward, surmounts every obstacle, and increases more and more. Three quarters of a century pass. The nation has grown great. But, alas! there is internal strife that now breaks forth into dreadful war. The nation's life trembles in the balance,—but it is saved, and the nation is born again. It rises from the civil conflict with youth renewed and stronger than before; and the men that strove together become friends and brethren. Now begins the latest scene of the wonderful panorama,—an industrial development which has no parallel in the world's history. In the space of forty years the youthful nation shoots ahead of all its rivals as a financial and military power, in commercial, manufacturing, and agricultural industries, and is second to none in its standard of civilization. Such is the United States of America at the dawn of the twentieth century.

Few civilized nations have less in common with the United States than has Italy or Spain; yet the history of our country must begin with the story of a Spaniard who was first an Italian.

HISTORY OF THE
UNITED STATES OF AMERICA

HISTORY OF THE UNITED STATES

CHAPTER I

CHRISTOPHER COLUMBUS AND THE AGE OF DISCOVERY

IN the world of history we find here and there the name of some commanding genius that stands out as a landmark, and shines with a luster that time has no power to dim. Such is the name of Christopher Columbus.

It will hardly be disputed, that among rulers and statesmen of all time Julius Cæsar must be placed at the head; that among military leaders the greatest the world has yet known was Napoleon Bonaparte; and that in the still higher domain of literature William Shakespeare holds the foremost place. And it is no less true that the name of Columbus stands at the head of the list of navigators and discoverers.

SPIRIT OF THE AGE

At this point it is well to give passing notice to the historic setting of the career of Columbus. For immemorial ages Europe had enjoyed commercial relations with Asia. But in the seventh and eighth centuries the Saracen invaders came near destroying these relations. The Mohammedan hordes became masters of North Africa and of Spain, and Christian Europe was cut off from the East as never before. Of all the European cities Constantinople alone retained a flourishing trade with the East.

At length, near the end of the tenth century, the Seljukian Turks, a nomadic, half-civilized people of Central Asia, became converted to the religion of Islam, and in their zeal for the new religion and for conquest they soon began to encroach upon the Byzantine Empire. Early in the eleventh century they had spread their blighting power over Armenia and Asia Minor, destroying a noble civilization and

substituting their own barbarous mode of life. The menace to Christendom was appalling, for the terrible Turk seemed insatiable in his greed of conquest. Then it was that Christian Europe awoke to the necessity of self-defense, and the result was a series of uprisings, known in history as the Crusades. These Crusades, seven in number, covering nearly two centuries, were undertaken for the purpose of rescuing the Savior's tomb from the hands of the infidel and of restoring to the Christian zealot his time-honored privilege of making a pilgrimage to the holy city of Jerusalem. This result was not permanently achieved, but the commercial results were great and lasting. The Crusades not only checked the Mohammedan invasion, they also brought about a diffusion in Europe of a wider knowledge of Asiatic lands and peoples and created a greater demand for their products.

Meantime the city of Venice became a rival of Constantinople in trading with the Indies; and at length Genoa became the rival of Venice and allied itself with Constantinople. The southeastern portion of Asia, with the numberless adjacent islands, was known as the Indies; and the term had also a general use which included the islands of Cipango, or Japan, and parts of China, known by the poetic name of Cathay. There were two important routes of trade with the Indies. The favorite route of the Venetian trade was chiefly by water, by way of Cairo, the Red Sea, and the Indian Ocean, while Genoa took the northern route by way of the Bosphorus, the Black Sea, and thence overland by various routes by means of caravans. The goods sent to the Orient were chiefly linen, light woolen goods, coral, glass vessels, and wine; those received in return and distributed over Europe from Venice and Genoa were spices, ivory and pearls, silks, and precious stones. The routes were long and laborious and fraught with many perils. The goods changed hands several times in the long journey, and the Europeans never met the people of India. They believed Cathay to be a vast empire of fabulous wealth, of gilded cities, and of mighty rivers.

The rivalry in Eastern trade had continued for a long period between these two Italian cities, when one of the routes was suddenly blocked by one of the great events of history — the fall of Constantinople, 1453. For more than a thousand years the city of Constantine, beautiful for situation above all the capital cities of the world, had been one of the chief centers of

Christendom; but the detestable Turk, now of the Ottoman type, had again, since the last Crusade, been extending his baleful influence over the eastern Mediterranean and tightening his coils about the city on the Bosphorus — and at last it fell into his power and the crescent supplanted the cross. The Moslem now made hazardous the use of the Bosphorus and the Black Sea to the Christian trader, and his corsairs plowed the eastern Mediterranean in search of Christian plunder. Thus an important route to the Indies was closed.

This checking of the Eastern trade at a moment when Asiatic products had become a necessity to Europe caused the idea to take possession slowly of men's minds that some other route, an "outside route," to the far-off "land where the spices grow" might be found. But first we must glance at the

THEORIES OF THE EARTH AND GEOGRAPHICAL KNOWLEDGE

For many ages before the time of Columbus there was a general belief among scholars that the earth is a sphere. This doctrine was taught by Pythagoras, nearly six hundred years before Christ, by Plato, by Aristotle, and later by nearly all the leaders of thought down through the Middle Ages.¹

There was some vague notion of an antipodal world, yet how men on the opposite side of the earth could walk with their heads downward was a question that puzzled the wisest; for no Newton had yet risen to tell the world of the law of gravitation, and no Copernicus to teach that the earth is but a ball swinging in space, and that "upward" and "downward" are but relative terms.²

For centuries the boldest navigators were deterred from venturing far into the unknown seas, because popular fancy had filled them

¹ Aristotle, in the fourth century B.C., declared that those who connect the region in the neighborhood of the Pillars of Hercules with that toward India, and also assert in this way that the sea is one, do not assert things very improbable. Eratosthenes, in the third century B.C., said, "If the extent of the Atlantic was not too great, one might easily sail from Iberia (Spain) to India." Strabo, in the first century A.D., quoted him with approval and added, "It is quite possible that in the temperate zone there may be one or more habitable lands." Seneca prophesied that, "In tardy years the epoch will come in which the ocean will unloose the bonds of nature, and the great sea will stretch out and the sea will disclose new worlds."

² Copernicus was born in 1473 — while Columbus was at Lisbon. His theory of the solar system is now universally accepted.

Newton lived nearly two centuries later. He was born in the year in which Galileo, the greatest pupil of Copernicus, died — the year that marks the opening of the war against Charles I in England — 1642.

with impassable barriers. It was believed that the earth was belted in the center with a fiery zone where the vertical rays of the sun were unbearable, where the seas boiled with fury, and where vegetable and animal life could not endure. It was also believed that Europe occupied the top of the terrestrial ball, that the ocean sloped downward in all directions, and that if a ship passed too far down, it would never be able to return. Still another belief was that the

Monsters of the sea. remote region of the outer ocean, the Sea of Darkness, as the Atlantic was called, was inhabited by dreadful gorgons and sea monsters, while above the waters hovered a gigantic bird so large that it could seize a ship in its talons and fly away with it into the upper air.¹ No theory was too extravagant for belief during this period. It was believed by many, and even taught in the schools, that the redness of the sun in the evening was caused by his looking down upon hell.²

Most of these fantastic theories, however, were exploded before the active career of Columbus began. In 1487 Bartholomew Diaz of Portugal completed a voyage, the greatest in history up to that time. He sailed down the African coast, doubled the Cape of Good Hope, proceeded some hundreds of miles into the Indian Ocean, and returned to Lisbon by the same route. The entire voyage had covered thirteen thousand miles. The fiery zone had been passed, no sea monsters had been encountered, and the homeward journey had seemed no more uphill than the outward trip. Other great voyages were made with like results. No one after this gave credence to the wild theories that had so long controlled the popular mind.

Geographical knowledge during the Middle Ages was meager. The ancients believed that the outer unknown world was composed chiefly of water. This theory was also maintained by Mela, who flourished about the middle of the first century of the Christian era, and was known as the Oceanic Theory. But Claudius Ptolemy, who wrote a hundred years later, advocated the theory that Asia extended interminably to the north and east in vast deserts and impenetrable swamps, that Africa extended indefinitely southward, and that the two continents met somewhere in the far Southeast and inclosed the Indian Ocean. This theory gained general acceptance and was known as the Continental Theory.

This Ptolemaic view held sway in mediæval Europe for more

² Adams's "Columbus," p. 28.

than a thousand years. But about the middle of the thirteenth century certain travelers to the far East reported in Europe that Asia was not a *terra incognita* of boundless extent, but that an ocean lay east of Cathay. A half century later this fact was confirmed in the remarkable production of Marco Polo.

The Polos were a wealthy family of Venice. When Marco was a boy of seventeen his father, a wealthy merchant, made a trading

MELA'S IDEA OF THE WORLD, A.D. 50.

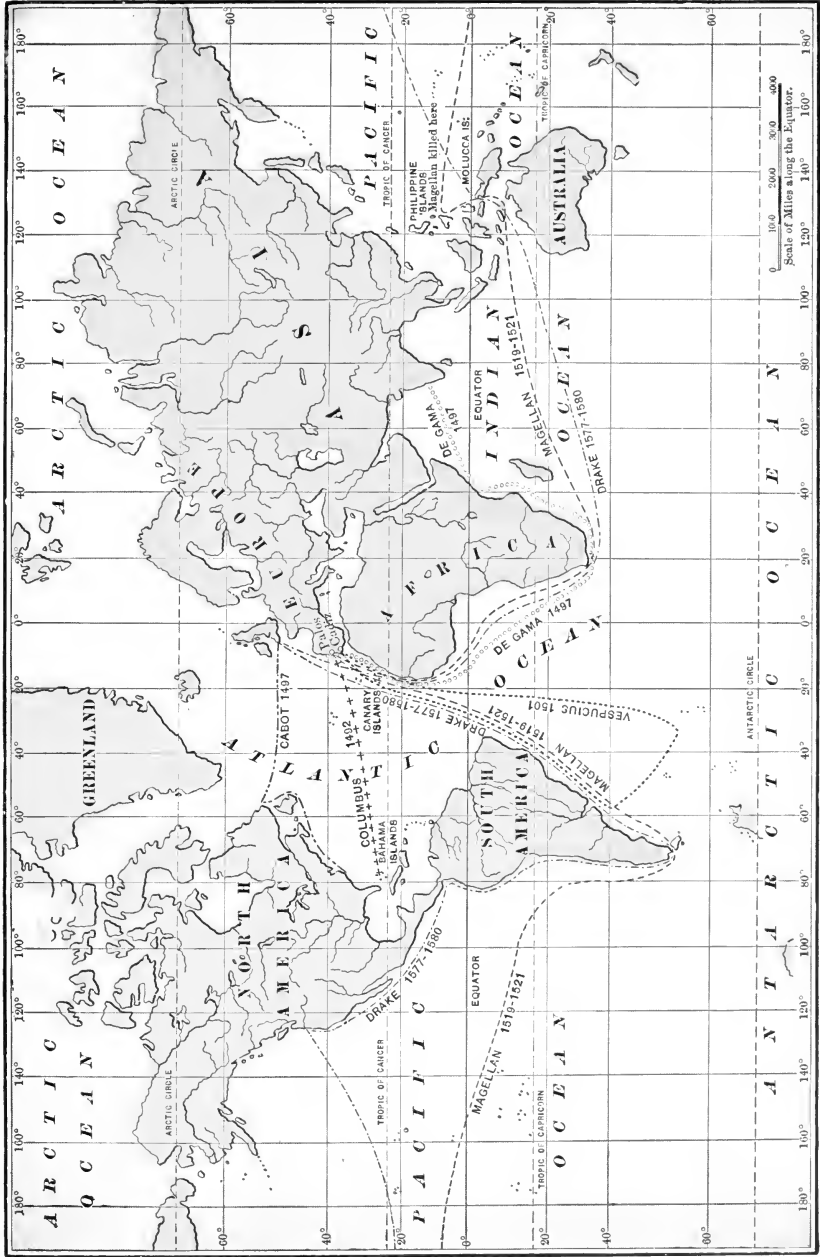

journey to the far East and took the boy with him. For four years they journeyed over mountains and through deserts, trading as they went, until they reached the famous empire of Cathay. Marco was taken into the service of the great emperor known as Kublai Khan, was made a high official, and here he remained for many years. At length he returned to the home of his childhood, reaching Venice in 1295, after an absence of twenty-four years. Soon after this Venice and Genoa were at war. In a

sea fight the Genoese were successful, and Marco Polo among others was taken captive and was cast into prison. Here he became intimate with a fellow-prisoner to whom he related his travels in the East. His friend wrote the words as they fell from Polo's lips, and afterward they were published in book form as "The Book of Marco Polo concerning the Kingdoms and Marvels of the East." It described Tibet and Burmah, and Hindustan, Siam, and China. It told of the gorgeous landscapes, the towered cities, the beautiful rivers. It confirmed also the growing belief that there was an ocean east of Asia. The book was one of the most remarkable productions of the Middle Ages, and, like Raleigh's "History of the World," and Bunyan's "Pilgrim's Progress," owed its existence to a prison cell. No other book had ever appeared in Europe that contributed so much to the knowledge of the East as did the book of Polo. In the centuries following various Europeans sailed into China seas, so that by the time of the fall of Constantinople it was a well-known fact that an ocean washed the eastern coast of Asia. How natural then, since the earth was known to be a globe, for men to conclude that the ocean west of Europe might be the same as that east of Asia; and if so, a western voyage must bring the mariner to the Indies of the East. This belief rendered it certain that the New World would have been discovered, even though by accident, had Christopher Columbus never lived.

But although the theory of the fiery zone and the devouring sea monsters had been exploded, and the mariner's compass had come into general use, no navigator was yet bold enough to venture to cross the Sea of Darkness. It was believed that a route to the Indies could be found by sailing around Africa. Portugal, leaning to the Oceanic Theory, took the lead in this great enterprise, and Portugal was led by Prince Henry the Navigator, who was also a prince in fostering education and science.¹ He inspired many important voyages and among them the famous voyage of Diaz, mentioned above, which took place a score of years after the death of Henry.² But the distance to the Indies by the

¹ Prince Henry was a cousin of King Henry V of England and an uncle of King John of Portugal. He stood among the leading astronomers and mathematicians of his time. He died in 1463.

² The geographical position of Italy prevented its taking the lead in discovery, but Italy was the school of navigation for the world, and the greatest of the discoverers of this period — Columbus, Cabot, Vespucci, and Verrazano — were all Italians. See Payne's "History of America," Vol. I, p. 95.

GREAT VOYAGES FROM 1492 TO 1580.

African route was very great, even if feasible, and thoughtful men of the maritime world cast their eyes longingly toward the unknown West—and here we must introduce the great discoverer, Christopher Columbus.

EARLY LIFE OF COLUMBUS

One of the most beautiful of the Italian cities is Genoa, the birthplace of the discoverer of America. The city is built on the southern slope of the Apennines, between the summit of the mountains and the northern shore of the Mediterranean Sea, and as one approaches from the sea, the city with its palaces and cathedrals, rising tier above tier, presents a sublime and impressive appearance. It was here that Christopher Columbus was born.¹ The exact date of his birth cannot be determined. The older writers placed it about 1436; but recent investigators favor a later date. Tradition informs us that his father, Dominico Columbus, was a wool comber, and it seems that the family had for several generations followed the same handicraft. Christopher had two brothers younger than himself, Bartholomew and Diego, and a sister of whom nothing is known. Not much is known of the boyhood of Columbus. It is certain that the family were respectable, but not of special influence nor in possession of wealth. The education of Christopher was not extensive nor profound. In addition to the common studies he probably learned Latin, higher mathematics, and astronomy; and in nautical science and cosmography he was a life-long student and acquired all the learning of the age in which he lived.

While yet a child the attention of Columbus was turned toward the sea. His voyages on the Mediterranean began when he was a boy of fourteen, and by the time he reached his majority he was a hardy and skillful mariner. Some of his voyages were purely in the pursuit of commerce; in others he was engaged in naval struggles between the warring Italian states. On one occasion he commanded a vessel which engaged in a death duel with a huge Venetian galley. The two ships grappled, and the crews fought hand to hand for several hours, many being slain, when at length both vessels took fire. Most of those remaining perished. Columbus saved his life by leaping into the sea and swimming to shore, six miles distant.²

¹ No less than sixteen Italian towns have claimed to be the birthplace of the great navigator. Columbus, however, refers in his writings to Genoa as the place of his birth.

² This story, given by Columbus's son Fernando, is doubted by some critics.

About 1470 Columbus abandoned his native land and became a resident of Lisbon.¹ He was doubtless attracted to that city by its reputation of being the chief center in Europe for nautical science and by its great activity in promoting discovery. Here for many years Columbus made his home, supporting himself by making maps and charts, taking an occasional voyage down the African coast to the Cape Verde Islands, the Azores, and once far into the North, touching the coast of Iceland.² He was a man of striking appearance, tall and muscular, courtly in manner, and affable in conversation. His eyes were light gray, his cheeks ruddy as those of a boy, while his hair was waving and as white as snow.³ He was received in the upper circles of society, and ere he had been many years in his adopted city he married and from this time on he seems to have had greater opportunity to study the one subject nearest his heart.⁴ At this period also he conceived that greater thought which became henceforth the guiding star of his life.

The belief that the East could be reached by sailing westward was held by many learned men, and was not original with Columbus; but he was the first and the only man of his times who was ready to risk his all in an attempt to demonstrate the theory. For this he deserves a place among the greatest characters of history.

Columbus had been in correspondence with the great Florentine astronomer, Toscanelli,⁵ who had sent him a map of the earth showing that there was but one ocean between Europe and Asia, and expressing his belief that the latter could be reached by sailing westward from the former. Columbus was also versed in the writings of Ptolemy, of Roger Bacon, and of Marco Polo. Polo's book, though nearly two hundred years old, made a deep impression on the mind of Columbus and had much to do in shaping his life. He read also the great work of Cardinal d'Ailly, "Imago Mundi,"⁶ and all these things he pondered

¹ Vignaud believes that Columbus did not arrive at Lisbon before 1476.

² The voyage to Iceland is known only by tradition.

³ This description is from Las Casas, who knew Columbus. Las Casas further says that Columbus was rough in character and passionate when irritated. None of the well-known portraits of Columbus are accepted as authentic.

⁴ It is said that his wife's father, now dead, had been a noted navigator and the maps and charts he left now came into the possession of Columbus.

⁵ Vignaud, in a recent work, "La Lettre et La Carte de Toscanelli," tr. London, 1902, aims to prove that Columbus had no communication with Toscanelli. His argument is very strong and leaves the matter in doubt. Columbus makes no reference to the astronomer in his writings.

⁶ A copy of this great work, with marginal notes in the handwriting of Columbus, is still preserved in the library at Seville.

in his heart. The result was he reached the conclusion, which became the settled conviction of his mind, not only that the East could be reached by sailing to the West, but also that God had raised him up to accomplish this great work for mankind—and from this conviction he never wavered to the last day of his life.

COLUMBUS AND THE SOVEREIGNS

Henceforth this great thought was the dominant force in the career of Columbus. It became the ruling passion of his life, and entered into all his acts. He had not the means to carry out his great project, nor did he feel that it came within the province of private enterprise. The work was too important and too vast for the individual; it was worthy to be the work of a nation. Columbus therefore applied to John II, king of Portugal, laid open his plans, and requested that he be sent on the great mission of discovery. The king was inclined to hear; but first he would consult with the wise men of his kingdom. He called them together, and they condemned the scheme as visionary.

King John now did a thing that was unworthy of him, for in the main he was a man of probity and justice. He noted the plans of Columbus and sent out a secret expedition to make the proposed discovery; but it resulted in nothing. Columbus, hearing of this treachery, left Portugal in dudgeon and repaired to Spain. He left his home, his wife, and his children, taking with him only his eldest boy, a child of tender years, whom he left with a relative in Andalusia. This was probably in 1485, and soon afterward he was at Cordova laying his plans before the sovereigns of Spain, Ferdinand and Isabella. But it was difficult to get a hearing from these at this time, for Spain was in the midst of a long war with the Moors. As the sovereigns moved from place to place in pursuit of the enemy, Columbus followed—to Salamanca, to Malaga, and again to Cordova—and pressed his suit with unwearied energy. The sovereigns at length referred him to Talavera, the queen's confessor, who again referred the matter to a junto of learned men. Some of them believed in his project, but the majority condemned it, and after several years of incessant toil Columbus had done nothing. He had already sent his brother Bartholomew to England to lay the matter before Henry VII, and was now about to quit Spain and apply to the court

**Perfidy of
King John.**

**Columbus
in Spain.**

of France when he made the acquaintance of the Duke Medina Celi. The duke became interested in his plans and took him into his own home, where he entertained him for two years. He sought to interest the sovereigns in the plans of his new-formed friend; they offered to consider the subject seriously as soon as the war was over; but Columbus thought this only a courtly way of getting rid of him, and at last, sick at heart, he again determined to leave Spain.

For six or seven years he had labored in season and out of season; he had been jeered in the streets and pointed out as a dreamer and a fanatic. But his lofty soul was unmoved. He met every discouragement with an undaunted spirit. He now called for his little boy and turned his back upon Spain, still undismayed, still determined to achieve the goal of his ambition. In his journey afoot he called at the Franciscan Monastery La Rabida and asked for bread and water for his child. This was probably in the autumn of the year 1491. While here he again related the story of his ambition. The prior, Juan Perez, who had been confessor to the queen and was greatly esteemed by her, heard and believed. His patriotism was aroused. Why, thought he, should Spain throw away so great an opportunity? He interested several others, one of whom was Alonzo Pinzon, who became captain of one of the vessels in the great voyage that was to follow. Perez also dispatched a messenger to the queen begging an interview. On the fourteenth day afterward the messenger returned with the desired invitation, and by midnight Perez was on his way to the royal court at Granada. He related to the queen anew the story that she had often heard before. He spoke of the grandeur of Columbus's views, and defended the scientific principles on which they were based. He dwelt on the glory that would come to Spain if the venture should succeed, and the trifling loss should it fail. This proved the turning point in the life of Columbus, and Perez was his benefactor.

Queen Isabella was converted. She sent Perez back with a sum of money for Columbus, bidding him array himself properly and come into her presence. Columbus arrived in time to witness the fall of Granada, January 2, 1492. After eight centuries on Spanish soil the Moslem was conquered at last, and as Boabdil, the last of the Moorish kings, slowly and sadly passed outside the city gates, weeping over his fallen empire, the Spanish banners were unfurled over the crumbling walls of the Alhambra. Spain was delirious with joy; and as soon as the festivities occasioned by the great

victory had subsided, the sovereigns granted a careful hearing to the waiting navigator.

But there were discouragements yet in store for this heroic soul. When he laid his plans before the king and queen, his conditions were such that they refused to accept them. He demanded that he be made admiral of the ocean and viceroy of the heathen lands he might discover, and also that he receive one eighth of the income from such lands, and one tenth of all the profits by trade or conquest, offering at the same time to bear one eighth of the expense of the voyage.¹ The terms were not accepted, the council broke up, and Columbus for a third time determined to seek aid in a foreign land. He mounted his mule and started toward France.² Scarcely had he gone when Santangel, the royal treasurer, rushed into the presence of the queen and implored her with impassioned eloquence not to let the golden opportunity slip away. He spoke of the incalculable gain if Columbus's dream should become a reality, and how deep would be their regret should some rival nation obtain the treasure that Spain had thrown away. The Marchioness de Moya, who had long been a friend of Columbus, added her eloquence, and Isabella was again converted. She dispatched a messenger to inform Columbus that his terms would be accepted. The messenger overtook him when six miles on his way and told him the great news. Columbus quietly turned about and rode back into the city.

THE VOYAGE

The most famous of all sea voyages began on the morning of Friday, August 3, 1492, about an hour before sunrise. After several months of preparation three little ships or caravels had been fitted out, the *Santa Maria*, the *Pinta*, and the *Nina*, only one of which was a decked vessel. A motley crowd composed the crews of these vessels. When it was learned what the destination of the voyage was, the greatest difficulty was experienced in securing a crew. This would hardly have been possible but for the twofold error under which Columbus labored. He believed the earth to be smaller than it is, and that Asia extended much farther to the east than it does. Never was there a more fortunate mistake, for had the distance been

¹ Pinzon had made this offer to Columbus. The voyage is estimated to have cost a sum equivalent to nearly \$100,000. See Thatcher's "Columbus," I, p. 490.

² Some look upon this act of Columbus as obstinate and showing a want of tact. Others regard the demands of Columbus and the high value at which he placed his services, in spite of his former discouragements, as the highest indication of genius.

known, the securing of his crew would have been scarcely possible. Even as it was, the hardest sailors shrank from an enterprise so daring and so uncertain in its outcome. The government was obliged to use force. Men were pressed into the service, some of whom were criminals released from prison for this purpose. At length ninety mariners with a physician, a surgeon, an interpreter of Asiatic languages, a metallurgist and a few others, aggregating in all one hundred and twenty souls, were got together, and the voyage was begun. Columbus, who was now an admiral, commanded the largest vessel, the *Santa Maria*; Alonzo Pinzon, a navigator of note, was captain of the *Pinta*, and his brother Vincent of the *Nina*. With tears and lamentations the friends of the departing ones bade them good-by, for it was generally believed that they were setting out on a journey from which none would return. The sailors, as well as their friends, were fully convinced that a voyage across the unexplored Sea of Darkness was fraught with unknown perils, and their minds were filled with ominous forebodings. Six days after leaving Palos they reached the Canary Islands, and here a sudden eruption of Mt. Teneriffe filled the men anew with consternation; they interpreted it as an evil omen.¹ The admiral allayed their fears by explaining the cause of such eruptions as best he could, and by citing Mt. *Ætna* and other volcanoes whose frequent eruptions had no particular meaning attached to them. The first week of September had passed when they left the last of the Canaries behind and were fairly launched upon the open sea. As the men gazed fondly upon the receding shore, dissolving at length into a pale blue line on the verge of the horizon, and then disappearing beneath the waters, they broke into wails and sobs. It seemed to them as the last farewell of the land of home. Behind them were family, home, and friends, — all that was lovable and loving; before them was the vast dark sea, whose silent depths seemed the more ominous from its very silence.

**Superstition
of the crew.**

Sailors are the most superstitious of men, and even in our modern days of geographical knowledge, of steam, and of ironclads, everything that breaks the monotonous life on the ocean wave attracts attention and has its meaning. How much more was this true in the time of Columbus. He and his crew had launched out into the region of the unknown; their ships were small and weak, and the

¹ These incidents are from the account of Las Casas, who received them from Columbus's journal, which has been lost.

ocean through which they plowed was fathomless in its depths and measureless in expanse; never before had it been explored by civilized man, and moreover, in popular fancy, it had for ages been peopled with shapeless monsters and unknown terrors. What wonder that Columbus had trouble in allaying the fears of his subordinates!

Day after day the three caravels glided through the waters. The weather was fine almost throughout the voyage, says Columbus in his journal; but fine weather and fair winds had little power to remove the superstitious fears of the sailors. They were forever on the watch for some dreadful happening.

Early in the voyage they noticed the fragment of a mast floating in the water, and they quickly decided that it must be the remains of some hapless wanderer as foolhardy as themselves. It seemed as the bones of the slain traveler in front of the murderer's cave warning the passer-by not to enter.

One of the most alarming incidents of the voyage was the deflection of the needle. It pointed no longer to the north star, but deflected slightly to the northwest. The pilots were alarmed; they feared that the very laws of nature were changing, and they were surely entering into another world. Columbus himself did not understand this variation of the needle, but he affected to have no fears, and explained it apparently to the satisfaction of his followers. Again, the Sargasso Sea, unknown to them before, awakened all sorts of wild conjectures and presages of evil. The constant blowing of the trade winds in the same direction led them to believe that it would never change, and they would therefore never be able to return home. Indeed, everything possible was construed into a cause of alarm. Columbus alone remained undaunted; he had absolute confidence in success, and he believed himself directly under the guidance of Heaven.

Alarming incidents.

After sailing westward for two or three weeks the voyagers became deeply interested in their outlook for land. Various signs indicated that it could not be far off. Tropical birds that are not supposed to reach mid-ocean in their flight were seen from time to time; floating seaweed sometimes gave them hope. On September 25, Pinzon shouted from the stern of his vessel, "Land, land, Senior, I claim my reward."¹ They all looked to the southwest, the direction

¹ A reward of 10,000 maravedis per year (probably equal to \$420 of our money. See Thatcher, I, p. 490) had been offered by the sovereigns of Spain to the one who first sighted land.

in which he pointed, and indeed there seemed to be land. Columbus fell on his knees and thanked God; the crew sang the *Te Deum*; the night was spent in rejoicing. But lo! when the morning arose the dream was dissolved, and only the unbroken expanse of water lay before them in its merciless boundlessness. They had seen only a mirage or a thin stratum of cloud lying low on the horizon. Frequently they were deceived by the distant banks of clouds or by fog, and their hopes were raised again and again only to be dashed to the ground. After the voyagers had sailed steadily westward from the Canaries for an entire month without sight of land, the crew became more despondent and restless; they begged their commander to turn back while there was still a chance to reach home and civilization. Columbus was inflexible. From the moment they left Palos he had not faltered, and now he had no thought of yielding to the clamors of the sailors. Now he would dilate on the honor and fortune that awaited them; again he would threaten to place the leaders in irons, if they persisted.

It must be confessed, however, that Columbus was himself puzzled. He had firmly believed that by sailing twenty-five hundred miles to the west he would reach the islands of Cipango; and that the gorgeous empire of Cathay was but a few hundred miles farther on. They had now traversed twenty-seven hundred miles of trackless ocean, and no land yet appeared. He had kept two reckonings of the distance they had come, — a true and a false one, the former for himself and the latter to deceive the sailors, as he feared that if they knew how far they were from Europe, nothing could induce them to proceed.

Columbus was perplexed at not finding land. There is no evidence, however, that he wavered in his purpose or was inclined to turn back. But being urged by Pinzon, he now decided to change his course. Had they continued their westward course for a few days longer, they would have reached the coast of Florida; but this, of course, they did not know, and the many flights of small birds, always going to the southwest, convinced them that land must be nearest in that direction. They accordingly stood to the southwest, and in this direction they sailed steadily for three days and yet no land appeared.

The crew now became more hopeless than ever. They felt as if they were in a world of enchantment, where the signs of land were but delusions alluring them on and on to destruction. Old seafaring

men were appalled at the thought of their vast distance from home, and the apparent boundlessness of the ocean in which they sailed. But on the morning of October 11 the signs of land were so unmistakable that the most reluctant could doubt no longer. A floating branch of thorn with berries on it, a staff carved by the hand of man, and weeds that grow only on land¹—all these were picked up from the water on that morning. All were now convinced that land was near, and that it was a matter of but a few days at most when the discovery would be made. The three caravels that night presented a scene of suspense and eager expectancy; not an eye was closed in sleep. About ten o'clock Columbus saw from the top of the castle of his vessel the dim flicker of a light at a great distance, and its uncertain movements indicated that it might be a torch in the hands of some one walking. As the long hours of the night wore away every eye was strained in the vigilant gaze into the far-away horizon in search of the longed-for land.

The midnight hour passed and it was October 12,² 1492, — one of the most prominent dates in the world's history, made so by the work of the men of these three little, **First view of land.** lonely vessels so far from the civilized world, with crews so lately despondent, but now so full of expectant gladness. Two hours more passed when suddenly a shout of wild joy arose from the deck of the *Pinta*. It was followed by the firing of a gun as the joyful signal of land. There was no mistake this time; the coming dawn revealed, at a distance of six miles, a verdant shore covered with waving trees. The goal had at last been reached, and we can only imagine the joy that filled the hearts of these men after their long and painful voyage that seemed to promise so little. And what must have been the feelings of Columbus at this sacred moment? What a world of emotion must have thrilled his soul when first he realized that the object for which he had spent long years of unceasing toil, and had sacrificed so much, had at last been achieved.

THE NEW WORLD

Columbus fully believed that the discovery he had made was a new and short route to the Indies, and that the land before him was probably one of the Japanese islands lying off the eastern coast of

¹ The first one to see the land was a sailor named Rodrigo de Triana. Columbus, however, received the reward for having seen the light a few hours before.

² New style, October 21.

Asia. Had this been the extent of his discoveries, it would indeed have been a great boon to mankind, and his name would no doubt be remembered for all time.

But he had done far more than he knew. He had opened the way to the discovery of a continent, vast in its dimensions, unknown before to civilized man, — a continent containing the greatest rivers of the world, lofty ranges of mountains extending for thousands of miles, and mineral wealth that would require centuries to unfold, — a continent that was to be the seat of mighty empires and the home of millions yet to be born. What would have been the thoughts of Columbus had all this, as the result of his discovery, been presented to his vision?

The land first discovered by Columbus was one of the Bahama Islands which he called San Salvador.¹ Soon after daybreak the three vessels cast anchor, and the admiral, richly clad in scarlet and bearing the royal banner of Spain, made for the shore in a small boat. He was accompanied by Pinzon and a few others. The beach was lined with human beings who had come running from the woods on seeing the vessels, which they thought to be gigantic white-winged birds. As the Spaniards approached the shore, the natives fled in terror, and in a few moments all were hidden away in the forest. Columbus on landing was overcome with emotion; he burst into tears; he bowed himself down and kissed the ground; he thanked God for the realization of the dream that he had cherished so long. He then drew his sword and took possession of the new lands in the name of the sovereigns of Spain, and exacted at the same time the most solemn promise of obedience from his followers. Their attitude had greatly changed; their bitterness toward the admiral for having led them so far into the region of the unknown was now replaced by a feeling little short of admiration. They surrounded and embraced him, kissed his hands, and promised the most implicit obedience.

The natives, seeing that they were not pursued, and overcome by curiosity began again to emerge from their coverts. They
"Indians." approached the Spaniards slowly and timidly, bowing themselves to the ground again and again, and showing every sign of adoration. They were especially attracted by the

¹ It is not positively known which of the Bahamas was the landing place of Columbus. Most writers believe it was Watling Island. See Adams's "Columbus," p. 89.

shining armor, the beards, the clothing, and the light color of their strange visitors, whom they thought to be inhabitants of the skies, and the commanding appearance of Columbus in his brilliant uniform plainly indicated that he was the leader.¹

Columbus was greatly interested in the newly found specimens of the human race that stood before him. They were cinnamon-brown in color, darker than the European and lighter than the African, had straight, raven-black hair, high foreheads, expressive eyes, and well-formed bodies. They wore no clothing whatever, and all were males except one, a young female of beautifully formed body. Columbus believed himself to be in the Indies, and he called these people "Indians," a name that spread until it included all the aborigines of the Americas.

Columbus cruised for ten days about this island and its neighbors, and he was puzzled. He was searching for the Indies. He saw waving forests and crystal streams and bright-plumed birds; but where were the towered cities, the mighty rivers? where were the spices and the ivory and the gold? He found naked savages; where were the kings and the princes in their royal robes? Surely he must find Cathay? He bore a friendly letter from the king and queen of Spain to the Grand Kahn. Could he return to Europe without seeing the mighty emperor, or even locating his gorgeous dominions? Alas for the limitations of genius! Looking upon this scene from our standpoint, how pathetic it seems. Columbus was groping among these little islands in search of an empire that was more than ten thousand miles away, and between him and it lay an undiscovered ocean far greater in extent than the one that he had crossed.

When the Spaniards asked the natives where gold could be procured, they always pointed to the south. They also told of a rich and populous island called Cuba. This must be Cipango, thought Columbus, and thither he steered. They discovered the Cuban coast, but it seemed much like the other lands they had seen. The admiral sent two explorers far into the interior; they found the most luxuriant groves swarming with bright-hued birds and insects; they found fields of maize and cotton, but no rich cities as Marco Polo had described — only rude villages of huts
Cuba.
 aswarm with naked barbarians, such as they had seen at San Salvador. Again was Columbus baffled, and he sailed away after a cruise

¹ Irving, Vol. I, p. 195.

of several weeks and discovered the island of Hayti, which he named Hispaniola (Spanish land). The autumn weeks passed. Pinzon with the *Pinta* had separated from the other two caravels, no one knew why. On Christmas Day the *Santa Maria* drifted upon the shoals of an island and was wrecked. Columbus now bethought himself of his condition. The world had not yet heard of his great discoveries. Only the little *Nina* was left him, and a vast ocean rolled between him and civilization. Suppose she, too, were wrecked! He and his friends must then spend their lives among the savages in these far-off islands of the sea, and who would tell the story of their discoveries? Except as a dreamer and a fanatic, who then would remember the name of Columbus? It is true, they had not found Cathay, nor could they bring back spices and precious stones; but they had discovered strange, beautiful lands beyond the dark sea, and a new race of mankind; and the coast of Asia they thought must be near, and if so, the way to the Indies was found at last—was this not success? This story Columbus wished to bear to the sovereigns of Spain and to proclaim it to the waiting world.

Moved by such thoughts Columbus determined to embark for Europe without delay. In a rude building made of the timbers of the *Santa Maria* forty of the men, who wished to remain, made their home, and the rest embarked on January 4, carrying with them ten of the native Indians. In a few days they unexpectedly overtook Pinzon with the *Pinta* cruising about the Cuban coast, and the two launched out together for Europe. After sailing for some time they encountered a storm of the most violent character. The small vessels labored and struggled for life, lost in the hollow of the waves or riding high on their crest, at length drifting apart to meet no more during the voyage. The crew of each believed the other to have perished.

Columbus almost abandoned hope of ever reaching Europe, and he prepared two carefully written accounts of his discoveries; the one he retained in the ship, while the other he sealed in a ball of wax, placed it into an air-tight casket addressed to Ferdinand and Isabella, and threw it overboard, in the hope that, should he and his crew find a grave beneath the billows, some future wanderer of the ocean might pick up the little token, and that it might reveal to the world the strange story of their romantic wanderings, and thus the name of Columbus might not perish nor the benefits of his success be lost to mankind.

But the storm abated and the little craft was still afloat, and, strange to say, a few weeks later, on the same day and but few hours apart, the *Nina* and the *Pinta*, after their long separation, were moored in the haven at Palos, Spain, whence they had weighed anchor more than seven months before.¹

March 15,
1493.

LATER CAREER OF COLUMBUS

Seldom in any country has a private citizen received such homage as was accorded Columbus by Spain on the completion of this famous voyage. The people of Palos were wild with joy when they learned that the vessels entering their harbor on that fifteenth of March were the same that had gone on their perilous voyage the year before. The places of business were closed, bells were rung, and the whole people gave themselves up to a long fête of exultation. What a contrast between this reception of the hero and that given him a few years before when, in these same streets, he was jeered by the rabble as an adventurer and a madman — when he was forced to beg a crust of bread for his hungry child at the little convent on the hill!

Columbus soon apprised his sovereigns at Barcelona of his return and his success, and they bade him come at once into their presence. His journey thither was a triumphal march. In front of the procession were six of the ten Indians brought from the New World;² next were exhibited live parrots, stuffed birds of unknown species, plants and Indian ornaments and trinkets. Columbus rode superbly in the midst surrounded by the choice chivalry of Spain. As the procession entered Barcelona the people abandoned themselves to the most unrestrained enthusiasm. The streets were thronged with a surging multitude, the windows were filled with wondering eyes, and even the house tops were covered with men eager to get a glimpse of this strange procession. The king and queen sat in state upon the throne, beneath a canopy of gold, erected for the occasion, and surrounded by the highest nobility of Spain. Here they waited to do honor to this civilian, whose achievements had made for them, as

Reception of
Columbus at
Barcelona.

¹ It is notable that the voyage westward had been begun on a Friday, had left the Canaries on Friday, that land was first sighted on Friday, that the return voyage was begun and ended on Friday.

² One had died on the voyage and three were ill at Palos. Irving gives a fine description of Columbus's reception by Ferdinand and Isabella.

well as for himself, a name that would never be forgotten. If ever there was a moment in the life of Columbus when his joy exceeded that which he felt at his first view of the Bahama Islands, it must have been now. Well could he now forget the seven years of toil and discouragement he had suffered before the voyage began.

As he approached the throne the sovereigns rose and received him as one of their own class. Columbus bore his new honors with befitting modesty. He told his royal hosts the simple story of his discoveries, and as he concluded they both fell on their knees and thanked God for the new lands added to their dominions, and for the opportunity of carrying the Gospel to the heathen that might inhabit them.

The sovereigns now decided to settle the matter between Spain and Portugal concerning the right to the new lands by an appeal to Pope Alexander VI. The Pope thereupon issued his famous bull establishing the "Line of Demarcation."¹ All discoveries east of this line, an imaginary one drawn from pole to pole, one hundred leagues west of the Azores and Cape de Verde Islands, changed the following year to three hundred and seventy leagues, were to belong to Portugal and all west of it to Spain. It will be seen that this gives all the New World, except the eastern portion of Brazil, to Spain.

The sovereigns now busied themselves in fitting Columbus out for a second voyage across the Atlantic. No trouble this time to secure a crew. Young men of aristocratic birth hastened to join the expedition; Columbus's brother Bartholomew and Ponce de Leon were among the voyagers. With a fleet of seventeen ships of various sizes the admiral set out from Cadiz on September 25, 1493, and after a prosperous voyage landed on a small mountainous island which he named Dominica. He then hastened to the island of La Navidad, where he had left the colony. Of the forty left on the island every man had perished, and the white bones scattered about told the sad story. The colony — the first colony planted by white men on the soil of the Western World — had been destroyed by the natives, and this marked the beginning of that mortal strife between the white race and the red race, that was to continue for centuries, and to result at last in the complete dominion of the former and the universal conquest of the latter.

After founding a colony in San Domingo, and spending three

¹ May 2, 1493.

years in Porto Rico, Jamaica, and other islands, Columbus returned to Spain in 1496, and two years later he made a third voyage on which he discovered Trinidad and the mainland of South America at the mouth of the Orinoco River, which, still believing himself in Asiatic waters, he took to be one of the great rivers mentioned in the Bible as flowing from the Garden of Eden. The fortunes of the great navigator now took a downward turn. He had tasted of the waters of adversity; he had drunk at the purest fountain of success and popularity, and now in the closing years of his life he must again drink of the bitterest cup of all — that born of jealousy, envy, and malicious hatred. He had powerful enemies at the Spanish court, and they were unwearied in their efforts to poison the minds of the sovereigns against him. His critics had begun their work even before his return from the second voyage. They belittled the value of his discoveries, represented him as a tyrant and an adventurer, and incapable of governing the newly planted colonies, never forgetting to speak of him as a foreigner and not a true Spaniard. At length they were successful, and a pusillanimous soul named Bobadilla was sent to the West Indies with power to supersede Columbus if he found the charges against him to be true. He exceeded his instructions, condemned Columbus without a hearing, and sent him bound in fetters to Spain. On landing Columbus wrote a touching letter to the queen, reciting his wrongs.¹ She commanded that he be unbound, and that he come into her presence. In tears he fell prostrate before her and told the story of his hardships. She was deeply moved, and Columbus was reinstated in the royal favor; but he was not restored to the governorship of his colony. Columbus now made a fourth and final voyage to the New World and discovered the coast of Honduras. He returned in 1504 and found to his sorrow that his enemies were again in the ascendancy. His benefactress, Queen Isabella, was dying. A few weeks later she breathed her last, and the hopes of Columbus were shattered to fragments. King Ferdinand had grown indifferent to the claims of the admiral, and did not even consult him in managing the lands beyond the Atlantic. It must be stated, however, that the admiral had not been successful in governing his colony. Columbus was bowed down with grief and disappointment. Old

voyage.**

¹ The letter was addressed to a friend who stood near the queen and who made her acquainted with its contents.

age was deepening the furrows in his brow, and his long years of toil and hardship had utterly broken his health. He was in want of the necessaries of life; but his spirit was unconquerable, and to the very last he kept planning to do even greater things for Spain than he had yet done. No palliation can be offered for the sovereign of Spain for allowing this aged navigator, who had done so much for his kingdom, to die in poverty and want. The end came at Valladolid on May 20, 1506, and there his body was buried.¹

**Death of
Columbus.**

It is true that Columbus had made a failure in his attempt to govern the colony he had planted in the West Indies, and that the popular clamor against him, both in the colony and in Spain, furnished the sovereigns ample ground for an investigation. It is also true that his ever sanguine spirit, and his belief that he had found Cathay, led him to make promises of gold for the coffers of Spain that could not be fulfilled. These things and the ceaseless clamor of his enemies led the king to turn a deaf ear to his cries.

It is supposed that he died in the firm belief that he had discovered the eastern coast of Asia and had opened a new route to the Indies. The real grandeur of his achievement perhaps never dawned upon his mind. What a joy must have thrilled his soul and soothed his dying hours could he only have known that he had discovered a vast continent rivaling the Old World in extent, and that his name would be forever enshrined in the human heart as one of the rare few whose luster never fades.

As in the early years of the sixteenth century other navigators rapidly rose into prominence, the name of Columbus fell into temporary obscurity, but when in later years it was known that it was not the East Indies, but a great new continent that had been discovered; when it was remembered that the world owed the discovery to this wandering Genoese, his half-forgotten name was revived and he was placed among the immortals.

But Columbus, with all his admirable qualities, was very human, and was not without his faults. That he was deeply religious none can deny, but he did not rise above his day and generation in morals. He was in no sense a reformer. He captured an Indian chief by treachery while pretending to be his friend; he kidnapped many

¹ His remains were afterward removed to Seville, and later to San Domingo, then to Havana and again back to Spain (1898). The removal from San Domingo to Havana was made in 1796. But there is some doubt that the body removed was that of Columbus. See Adams, p. 249.

hundred natives and sent them to Spain for the slave market; he advocated the slave trade on a large scale, and inaugurated the treacherous methods of dealing with the Indians that were afterward carried on by Spain for hundreds of years.

But Columbus did a great work for mankind, and the world has rightly chosen to give his name the highest place among the great names of that age of discovery. His greatness consisted, not in his conception of a new thought, for the thought was old, nor in doing for the world a work that no other could have done, but in his willingness to undertake to demonstrate the truth of his theory. He dared to do where others only talked and theorized. In this he stood far above every other man of his times. "He linked forever the two worlds." It is true he achieved more than he intended; but his intentions were great also, and he deserves the highest credit for carrying his vast plan into execution. The fame of Columbus is secure, though "his discovery was a blunder, his blunder was a new world, and the new world is his monument."¹

JOHN CABOT

Continental America was not first discovered by Columbus, but by John Cabot, who like Columbus was an Italian and a native of Genoa. Little is known of the life of Cabot beyond the facts that he was born at Genoa, became a citizen of Venice, and later, about 1490, of Bristol, England; that he was a seaman and merchant, and that, next to the Northmen, he was the first white man known to have made a voyage to North America.

For ages there had been a current belief in England, known to legend and song, that there were lands unknown, somewhere, far away, beyond the stormy western sea.² And when the news reached England that Columbus, whose brother had sought in vain for aid from the English king, had succeeded in his great voyage, this belief was confirmed, and Henry VII felt that the prize which might have been his had slipped from his grasp. But when John Cabot applied to him for a permit to seek western lands, it was readily granted. The grant bore the date March 5, 1496, and was issued to John Cabot and his three sons, — Lewis, Sebastian, and Sancto; but for some unknown reason the expedition did not sail for over a year afterward. The start is said to have been made on

¹ Winsor.

² Payne, Vol. I, p. 232.

May 2, 1497, in a single vessel, the *Matthew*, the crew consisting of eighteen men.¹ They landed, June 24, on the coast of Cape Breton Island, or possibly Newfoundland, or Labrador. They saw no natives, but found their traces, and reported that the natives "used needles for making nets and snares for catching game."

In August, Cabot was again back in Bristol, and it was reported that he had drifted three hundred leagues along the coasts of the new lands; but this is not believed, as the shortness of the time would not have admitted such an extended tour. "Vast honor" was paid to Cabot on his return, we are informed; "he dresses in silk, and the English run after him like mad people." The king granted him a bonus of ten pounds, and later twenty pounds a year. He made a second voyage in 1498, and followed the coast of North America as far south as Cape Hatteras, and some claim to Florida, returning to England late in the autumn. He believed, like Columbus, that he had reached Cipango and Cathay. Nothing is known of Cabot's career after the second voyage. He is supposed to have died in the year 1500.

For many years it was believed that Sebastian Cabot, and not his father, was the real discoverer of North America; but modern research has dealt a damaging blow to this claim. Sebastian was a navigator of some note; he spent many years in the service of England and of Spain; but there is no proof that he had anything to do with the discovery of America. It is possible, even probable, that he and his brothers accompanied their father on his first voyage, but no contemporary record, aside from the king's grant, makes any mention of them, and in the second grant their names are not mentioned. It is now certain that Sebastian Cabot played false to the memory of his father long after these voyages had been made. He gave out that his father had died before the first voyage, and that he himself had commanded both. This story was believed for centuries, but no critical student of history now accepts it. The Cabot discoveries created a furor in England, but it was short-lived. The voyagers brought no gold, and interest in the subject soon died away. But many years later, when

¹ One account gives two ships, another five with three hundred men — both of doubtful authority (see Beazly, p. 55). The safest accounts are a letter written by Soucino, an Italian of London, to his friend, the Duke of Milan; and another by Pasqualigo to his family in Venice — both within a few months after Cabot's return. Payne and some other writers think that Cabot started on his first voyage in 1496 and spent the following winter in Iceland.

the world came to know that a new continent had been found, England laid claim to the whole of North America on the ground of the Cabot discoveries.

THE NAMING OF AMERICA

Strange were the fatalities in the career of Christopher Columbus, —doubt concerning so many events of his life, no authentic portrait, the indigence and want of his last years, and, above all, the failure of the New World to be called after his name.

For many years it was not known that Columbus had discovered aught than some unimportant islands of the sea; that a great continent was to be opened to civilization, through his initiative, had not yet dawned upon the world. Meantime others were making voyage after voyage over the western seas and bringing their glowing reports of what they had found. Among these was Amerigo Vespucci, or Americus Vesputius, a native of Florence, a resident of Seville. Not much is known of his life; but it is claimed that he made at least three voyages to the new lands. On one of these, probably in 1501, he is said to have explored far down the coast of Brazil. It now began to dawn upon Europe that a new continent had been discovered, but this was not connected in the public mind with the work of Columbus, who had discovered only islands and possibly a new route to the Indies. When, therefore, Vespucci wrote a brief account of the "New World," as he called it, he created a greater sensation than Columbus had done ten years before. His pamphlet was translated into many languages, and he was hailed throughout Europe as one of the greatest mariners of his time.

In 1507 Professor Waldseemüller, of the little college of St. Dié among the Vosges Mountains of Lorraine, published a pamphlet on geography, and in this he first suggested the name America. "I see no reason why," he states, "this fourth part of the world should not take its name from its sagacious discoverer and be called Amerige, or America." The suggestion found favor, and it was not long until the name America found its way on all new maps and globes representing the Western Hemisphere.¹ At first it was confined to Brazil, but at length it was made to designate all of South America and eventually (about 1541) all the land area of the New World.

¹ This same year, 1507, Waldseemüller made a map of the New World and used on it the name America. A copy of the original was recently found in an old library at Wurtemberg.

There is no evidence that Americus, who was a friend of Columbus, had any intention to defraud the latter of the honor of giving his name to the continent, nor was there any sinister motive on the part of the German professor. The naming of America must be classed as an accident born of ignorance of the facts. The "Indies" discovered by Columbus were renamed West Indies, and the name came to be confined to the islands lying east of Central America.

OTHER DISCOVERERS AND DISCOVERIES

The eastern coast of North America was discovered 1000 A. D. by the Northmen led by **Leif Ericson** (son of Eric the Red, who had planted a colony in Greenland), and a temporary settlement called Vinland made. As the vine does not grow north of 47 degrees, the settlement was probably somewhere on the New England coast, but the exact location cannot be ascertained. Several voyages to Vinland were made, according to the Norse sagas, and the voyagers encountered Indians whom they called "Skraelings," inferior men. These pre-Columbian discoveries had long been forgotten at the time of Columbus, who probably never heard of them. They added little to geographical knowledge and left no permanent effect on the world.

Balboa.— A Spaniard named Vasco Nunez de Balboa, a bankrupt and leader of rebels, while traversing the Isthmus of Panama, in 1513, was informed by an Indian chief that there was a great sea beyond the mountains, and that the lands bordering on it abounded in gold. Balboa ascended the mountains and, casting his eyes to the southward, beheld a vast glittering sea that seemed boundless in extent. He called it the South Sea. It proved to be the greatest body of water in the world, and came to be called the Pacific Ocean.

Magellan.— In 1519 a bold Portuguese navigator, named Ferdinand Magellan, with five small vessels and about two hundred and fifty men, sailed from Spain westward, and three years later fifteen of them with one ship returned from the East to their starting point. All the rest had perished, and among them the brave commander, Magellan, who was killed by the natives in the Philippine Islands. This was the first voyage around the world.

Other early discoverers of importance were, **Vasco da Gama**, who sailed around Africa in 1597 and reached the East Indies by way of the Indian Ocean, returning a few years later laden with spices and ivory, and thus accomplishing what Columbus and others were attempting to do by crossing the Atlantic; **Caspar de Cortereal**, who explored the eastern coast of the United States in 1500; and **Cabral**, who, the same year, in a voyage to India while attempting to follow the course of Vasco da Gama, swung too far westward and touched the coast of Brazil. This was a real, though accidental, discovery of America and might have occurred even if the discoveries of Columbus had never been made. These three navigators, Gama, Cortereal, and Cabral, were all Portuguese.

Under Discoveries may also be mentioned the Conquest of Mexico by Cortez, with a band of about five hundred Spaniards in 1521, and the Conquest of Peru twelve years later by Pizarro.

CHAPTER II

THE INDIAN

IN these modern days when friend can converse with friend across three thousand miles of sea, when the news of the day from the uttermost parts of the earth lies printed before us on the following morning, it seems almost incredible that it is but four centuries since half the land area of the globe was utterly unknown to the inhabitants of the other half.

What a world of wonder was unfolded to the eyes of the European as he explored the great new continent, with its broad silent rivers, its illimitable plains, its boundless forests ! Here he found the most wonderful cataracts of the earth, the longest rivers, the broadest valleys, the greatest lakes ; he found a vast mountain system, extending from the Arctic regions through the torrid zone into the frigid climes of the South — almost from pole to pole ; he found strange new birds and animals and plants ; but amid all the wonders of this enchanting land the most wonderful thing he found was the new race of his own human kind. Yes, here was man, the most interesting of all studies — more interesting even to the botanist than are the trees and the flowers, more interesting to the astronomer than the stars, or to the geologist than the minerals and the fossils. Here was a new race unlike all known races of men. Physically the Indian was equal to any other race ; mentally he was weak and he was strong. He was a child, he was an animal, and yet he was a man. He lived amid the vast solitudes of the wilderness and seemed but a part of nature, yet his breast was filled with human passions ; he had his loves and his hatreds, his religion and his hopes. Not having advanced in civilization to the point of using letters, he had not recorded his own history. Where the Indian originally came from, how he came to inhabit America, and how many ages he had dwelled here before the coming of the white man, will probably never be known. Many are the theories concerning the origin of the red man, but all are mere conjectures.

The Indian has been classed as a distinct and separate race of mankind, and indeed he differs as greatly from the Caucasian, the Mongolian,¹ or the Ethiopian as they differ from one another. In fact the various Indian nations differ so greatly as to call forth the opinion that they could not all belong to the same race or stock; but while the Algonquin and the Iroquois differed greatly from each other and still more from the Aztec and the Inca, the difference was no greater than that between the Englishman and the Russian, the Spaniard and the German. Moreover, all the aboriginals of the New World were characterized by certain peculiarities which marked them conclusively as belonging to the same race. In color the typical Indian was cinnamon-brown, varying in shade; he had high cheek bones, small, dark set eyes, straight, raven-black hair, and a scanty beard. "The race is physically more homogeneous than any other on the globe."²

INDIAN RELIGION

The American Indians were all religious. The belief in a Great Spirit who governed the world, who taught the water to flow and the bird to build her nest, who caused the changing of the seasons and the succession of day and night, who gave the sunshine to his children and brought the thunders and the rain—this belief was universal with the aboriginals of America.³ The Indian believed in a future life, a happy hunting ground, where he would be accompanied by his dog, would need his bow and arrow and hatchet, and where his occupation would be similar to that of this life, except that all care and sorrow, and toil that wearies, would be removed. The religion of the red man was an ever present consciousness; he prayed when he sat down to meat and when he arose; he prayed when he went on the chase and when waging war upon his fellowman. His religion, however, was grossly corrupted with superstition. He believed that spirits dwelled in animals, in trees, and in everything about him. His imagination peopled the air and the water and the forests with living, invisible creatures, and often filled him with superstitious dread. Many of these spirits are evil, and the Indian felt that he must protect himself against them⁴ by carry-

¹ Physically the Indian resembles the Mongolian.

² Brinton's "Myths of the New World," p. 52.

³ Some writers claim that the monotheistic idea was unknown among most Indian tribes until the coming of the Europeans. See Brinton, p. 69.

⁴ Starr's "American Indian," p. 80.

ing some charm, by repeating certain secret words, and he often propitiated them, as he believed, by offerings and by prayer. He believed in signs and omens and dreams. The rustle of a leaf, the whistle of a bird, or the rolling of the thunder—all had their meaning to the untutored red man. His dreams were revelations from heaven, and he would sacrifice anything to carry out their suggestions.

He worshiped the Great Spirit; he worshiped the sun and the stars, the rivers and the mountains, but rarely did he bow down to that which he had made with his own hands. He offered to his God the firstlings of his flock, the best of his possessions; but only here and there, as among the Aztecs of Mexico, did he engage in the revolting practice of offering human sacrifice.

In one respect the religion of the Indian differed from that of almost all other peoples. He did not look upon himself as a sinner in the sight of the Great Being. His tribe may have offended as a whole, but he did not feel a personal responsibility, nor did he believe that his future happiness depended in any way upon his actions in this life. His religion led him to torture himself at times in the most shocking manner; he did this, not as an atonement for sin, but to enlist the sympathy and aid of his God in some special enterprise. He never failed to pray for success in any special undertaking, even though his sole object was to steal horses and other property from his enemy. He believed in a life of happiness hereafter for all men (except perhaps his most hated enemy), regardless of their manner of living in this life. As a rule the Indian had little to regret. He followed the dictates of his conscience with the utmost exactness; and while his conscience, which was based on tribal custom and not upon religion, bade him to be honest and kind in his dealings with his own people, it permitted him to steal from his enemy, to destroy his property, and to torture him to death.

HOME LIFE

The home life of the American Indian before it was disturbed by the coming of the white man was of the most simple and primitive character. It was scarcely above that of the animals that inhabited the forest with himself. He lived in a den of filth—a little hut or a movable tent,¹ and with this he was content. Here he often slept or

¹ To this rule there were many exceptions, such as the Aztecs, the Incas, the Pueblos, and the Iroquois who had houses of a more substantial character and who were far less nomadic in their habits than many of the tribes.

smoked during the day, and at evening he sat with his family or his friends and told over the legends and myths of his tribe that had been handed down from generation to generation, or dilated upon his own deeds of valor in the chase or on the battlefield. His legends were inexhaustible and included such sublime themes as that of the Creation, when the ocean was boundless, and silence and night were universal, until Hurakan, the mighty wind, or the gigantic bird with its eyes of lightning and the sound of its wings as the roar of thunder, passed over the vast, dark water and produced light and earth and animals and men;¹ or that of the Heroes of the Dawn, fair of complexion and mighty in war, who had founded their nation countless ages ago and had departed to the East, whence they would come again and claim their power as of old;² or that of the implacable strife between the twin brothers, Light and Darkness, who at length compromising, agreed that each reign half the time, and thus we have day and night. From these sublime legends the narrator would descend to the relating of weird and revolting witch and ghost stories unworthy of the wizard or the crone. Sometimes, however, he would sit for hours in absolute silence and gaze on the ground, not giving the slightest attention to the gambols of his children about him or to his squaw by his side busy with her bead work or in the dressing of skins.

There is in the Indian countenance a certain serious, almost sad, expression which is readily noticed by strangers. This may result from the fact that he is never free from superstitious fear. He lives in constant dread, not of the armed foe or the wild beast, but of the myriads of invisible spirits that inhabit everything in nature about him.³ Against these mysterious powers, which he fancies to be ever present, he has no power to contend, and his unceasing fear of them for ages has probably set its stamp indelibly upon his face.

Usually, however, the Indian at home seems, in a great measure, happy. No greater proof of this is needed than the fact that he sings. His musical instruments are few and crude indeed; but he sings in his tent and he sings at play. His games are numerous and he engages in them with his whole heart. The old and the young, the male and the female, engage in many of the plays. But

¹ This was a legend of the northwestern tribes.

² This was a legend of Mexico and South America, and is considered a remarkable prophecy of the coming of the white man who "wrote the doom of the red man in letters of fire." See Brinton, p. 220.

³ Grinnell's "Story of the Indian," p. 164.

with all this, there seems to be something wanting to true happiness; there is a vein of sadness that pervades all Indian life. In many of his plays there is a self-inflicted pain; many of his songs are in a minor key. This results, perhaps, as stated before, from his perennial fear that is born of superstition.

The Indian is not cruel by nature, as is commonly supposed. It is true that the main business of his life, the slaying of his fellow-man in war and of the wild animal in the chase, and the want of refining influences at home, have left their mark upon his nature and rendered him indifferent to suffering. It is true that he is cruel in times of war; but when his anger is not aroused, when unsuspecting of danger or treachery, there is none among the children of men more kind-hearted or more steadfast as a friend than the wild Indian. He will share his last morsel with the stranger within his gates, and he has often been known to offer his life for the protection of a friend.

Another popular error is the belief that the Indian squaw is a slave to her husband.¹ It is true that the squaw does the necessary work in the home: she prepares the meals, dresses the skins, raises the corn, and gathers the wild rice and the berries; but her husband engages in the more arduous duties of following the war trail and slaying the wild beast. His toil is less constant, but far more perilous and fatiguing than hers. They simply divide the labor and both are content. The fact that the woman carries the tent when moving has shocked many a traveler; but this custom doubtless arose from the fact that it was necessary for the man to be untrammelled so as to be on the lookout for danger. One reason why the woman and not the man cultivates the fields will be shown by the following: A white man asked the men of a tribe why they did not help the women in the labors of the field, and they replied, "Because women know how to bring forth and can tell it to the grain; but we do not know how they do it, and we cannot teach the grains."²

Family quarrels are almost unknown among the Indians; the man does not abuse his wife; she manages her home as seems best in her own eyes, and if she has nothing to set before him when hungry, he does not chide her for being improvident or for not

¹ McMaster and other historians give this erroneous view.

² The wife of a Sioux, after planting her corn patch, will rise at night and walk around it in an entirely nude condition, so as to impart to the grain the magic of her own fecundity. Brinton, p. 174.

raising more corn or gathering more rice and berries; he bears it in silence and without murmuring. In many tribes the woman has¹ great influence and has much to do in deciding important questions. The descent among Indians was usually reckoned in the female line, and among the Iroquois the women owned the land and had greater influence than the men. Female Indian chiefs were by no means uncommon among the tribes of North America.

INDIAN OCCUPATIONS

North America, when first explored by the white man, was found to be inhabited over its entire surface by Indian tribes. They were scattered thinly and there were not more perhaps than half a million in the aggregate. It requires a vastly greater land area to support a people who live off the natural products of the country than to support an equal number who live by tilling the soil and raising domestic animals. The Indian lived chiefly from natural products unaided by the hand of art. His serious occupation was twofold, — the business of war and one long life struggle for food. Some tribes, especially those of the Southwest, received a partial supply of food from tilling the soil in the most primitive manner, raising maize and a few other products; but the great source of the food supply of the Indian was the flesh of wild animals taken in the forest in which he dwelt; and to capture these animals with his imperfect means required the utmost skill, and this he acquired in a remarkable degree.

The Indian, spending his life in the depths of the forest, was truly a child of nature and nature was his study. He observed her changing forms with the utmost acuteness, and while he often misinterpreted their meaning, the facts were truly his. The rolling of the billowy clouds, the ever changing color of the sky, the opening buds and the fading leaves, the majestic, silent river, the howling of the winter's storm — these and a thousand other things were observed by this inhabitant of the woods; they spoke to him a definite language, and he did not fail to comprehend. But the most important acquisition of the Indian brain was his knowledge of animals, especially of those on which he depended for his daily food. His knowledge of the haunts and habits of animals was astonishing; and not less so his skill and ability in capturing them. He could imitate the

¹ Sometimes in this chapter I have used the present tense, but in the main my description of the Indians refers to them in their primitive state as found three hundred years ago.

gobble of the wild turkey, the whistle of the bird, or the bark of the wolf,¹ and deceive those creatures in their own abodes. He was almost as fleet of foot as the deer or the hare; he could follow a trail with the keenness of a bloodhound. As he crept through the forest in search of game, no item of interest escaped his notice; his ear caught every sound; he seemed to see in all directions at the same moment, and seldom could the keenest-scented animal escape his cunning and his craftiness.²

Let us now take a rapid glance at the Indian as a warrior. It was in this capacity that we knew him first. We have heard from childhood how our grandfathers hewed their way into the deep wilderness where their conquest of the forest and the soil and the wild beast was an easy task compared with that of the savage man with whom they had to contend. We have read of the Indian wars of colonial days—of the horrible massacres, the inhuman tortures; of the bands of hideous warriors who roamed over hills and valleys, seeking out the peaceful abode of the industrious pioneer, who, with his devoted wife and loving children, had sought to make a home in the wilderness—of these painted fiends dashing with dreadful yells upon the harmless family; braining the astonished husband and father with the tomahawk before the eyes of the wife and children; stopping the shrieks of the fond wife only by striking her down also, to die quivering in her husband's blood; seizing the terrified children and carrying them away into hopeless and life-long captivity! We have all heard the baleful story, and it is not fiction; it is truth, and was enacted hundreds of times.³

Incredible as it seems, this monster is the same Indian that we have seen sitting among his children in his wigwam, telling over the stories of his grandfather's days, smoking serenely, accepting his meal, however scanty, without murmur—the Indian who never

¹ McMaster's "History of the People of the United States," Vol. I, p. 6.

² But no Indian could surpass our pioneer hunters in woodcraft. Such hunters as Daniel Boone and Simon Kenton, without the training of previous generations, were more than a match for the keenest of the red men. The cause of this lies in the fact that the white race is endowed with a greater degree of mentality than any other race of men.

³ In referring to this practice of the Indians, as a necessary part of history, it is but fair to add that they committed such deeds only when on the war path, and also that the white men at times were not a whit less cruel than the untutored red men. No massacre by the Indians ever surpassed in fiendish cruelty the Guadenhutten massacre in the Tuscarawas Valley, Ohio, in March, 1782, when ninety-six peaceful, friendly Indians, who had been converted to Christianity, were murdered in cold blood by a band of white men who called themselves the Pennsylvania militia.

scolds his wife nor strikes his child, who is kind-hearted, who prays without ceasing, and who never doubts that he will enter the happy hunting ground. Such a contradiction of character in the same being may seem difficult to explain.

Judged from such deeds alone as the above mentioned, the Indian must be pronounced the most cruel and hellish of all men born. But let us examine the premises before drawing our conclusions. The Indian was essentially a warrior. His noblest art was the art of war. He inherited his warlike spirit from his fathers. He imbibed it from his mother's breast. It was fostered in his childish plays. It was part of his religion. But how about murdering innocent women and children? This was part of legitimate warfare with the Indian. He practiced it on his own race as readily as on the whites. And even in this there was method in his madness. He killed women and children because they would become warriors or would bring forth warriors. His wars were wars of extermination, his motto was slay and spare not, and he never seemed to think he was doing wrong. In time of peace he was passive, and even gentle in his own rude way; but when his war spirit was roused, when the peace pipe was broken, the wild beast in his nature took possession of him, and his fury knew no bounds. He became, —

“ in sober truth, the veriest devil
That e'er clinched fingers in a captive's hair.”

During the period of our early settlements there were many fierce conflicts between the whites and Indians, and many were the deeds of cruelty recorded against the latter. But it is certain that they seldom or never practiced their cruelties without some specious ground for so doing, and in truth they were scarcely more to blame than their white neighbors. Sometimes the French and sometimes the English inflamed them against the Americans; and again, there were dishonest American traders who roused their anger by cheating them. Finally there was one abiding cause of strife between the two races. The Indian saw that his lands were gradually being taken from him and that his race was being driven farther and farther toward the West; and at times whole tribes and nations rose against the intruders and determined to repossess the hunting grounds they had lost. Hence there was unceasing warfare along the frontier, and the Indian could not discriminate between the innocent and the guilty. He was still a barbarian.

The Indian often tortured his captive. He would flay him alive, cut out his tongue, or burn him to death over a slow fire. And he would gloat with the joy of a fiend over the dying agonies of his foe. For this no excuse or palliation can be offered. Yet it only proved the Indian to be a man, as distinguished from the beast — a crude, undeveloped, uncivilized, barbarous man. No further evidence is needed to prove that man and the brute are not akin, and that in the heart of the natural man there is a spirit of evil, as well as a spark of the divine.

The Indian warrior surpassed all other men in his power of endurance and his capacity for suffering. He could travel on foot for hundreds of miles without food. If captured by his enemy, he would suffer himself to be tortured to death by fire, or his body to be torn to pieces by bits without exhibiting a feeling of pain, or permitting a cry to escape his lips. He chanted his death song with his latest breath.

No special rules of warfare were followed by the Indians. No one was compelled to go to war; but to refuse to do so made one very unpopular, if he was young and able. The chief held his authority, not by law, but principally through his powers of leadership. If he was a natural commander, if he had taken many scalps, if he had encountered great dangers and displayed great heroism, the young men were quite ready to follow and obey him. Even in battle the Indians had no particular rules or order to guide them. Each brave did what seemed best in his own eyes. An Indian battle was not the carefully planned meeting of two armies, drawn up with scientific precision, as we find among civilized peoples. It was rather a series of skirmishes, of personal hand-to-hand encounters, of ambushes, without plan and without order. The Indian was full of courage, but he was wily and treacherous. He would not fight an enemy fairly, if he could surprise and assassinate him. He would lurk in a ravine, or dark shadow, or behind a tree until his enemy came near, when he would spring upon him with the ferocity of a tiger, uttering, at the same instant, a yell so piercing, so heart-rending, that no one who ever heard it could forget it to the end of his life.¹

CIVILIZATION

The most hopeless feature in connection with the Indian problem is that the race seems incapable of civilization. No barbarous peo-

¹ McMaster, Vol. I, p. 7.

ple awaits and longs to be civilized. Civilization comes as a gradual indigenous growth covering centuries, or is carried to them by more enlightened peoples. If the latter, they are almost sure to resist it at first as a wild horse resists capture, but eventually seeing that what is offered them is better than what they have, they come to desire further enlightenment, and when a people reaches this stage, its future is secure. Even the Ethiopian, while he has shown little or no capacity for civilizing himself, is capable of being improved by contact with more enlightened races. The negro race in our country to-day has progressed less rapidly in its third of a century of freedom than was hoped, but it has, nevertheless, done something: it has shown a capacity to improve, and has produced many intelligent, aspiring men. But far less is this true of the American Indians. When first discovered by the Europeans, they ranged from the savage, man-eating tribes of Yucatan and British Columbia to the half-civilized nations of Mexico and Peru. Since then little change has been wrought in Indian culture. Their learning the use of firearms and of the horse has greatly changed their mode of life, but has not brought them civilization. Their centuries of contact with the most enlightened race of the earth have profited them little—not because they have lacked opportunity, not because they were crowded from their original homes, not even because of a want of native intelligence, but because they have chosen to fight against the arts of civilized life and to resist it to the death. Ages of contact with civilization have produced in the Indian little aspiration to improve his own condition, to make his race a world force, or to elevate it above the state of barbarism. The Indian languages are laden with poetic beauty; but no Indian has produced a poem that will live, no Indian has written a history, no tribe has reared a monument. For four centuries the race has been associated with the most progressive of all races; but has any Indian invented a machine, or founded a school, or established a printing-press? His association with the white man has, in the main, proved a curse to him rather than a blessing, for he has absorbed the vices without the virtues of an enlightened people. Some Indians, it is true, have been Christianized, but the great majority have persistently resisted every attempt to advance them. Their contact with the whites has largely broken up their tribal relations, and freed them from the rigid morality born of tribal custom, and their present state is worse than the first. Even the greatest Indians ever known

to the white race, such as Pontiac and Tecumseh, whose courage and endowments the world must admire, became great and famous, not by attempting to elevate their race, not by fostering civilization, but by fighting against it.

The Indian is essentially a child of nature. Take him to the centers of industry and civilization, and he pines for his forest home; dress him in the garb of a gentleman, and place him in the home of luxury, and he longs for his dirty wigwam, his breech clout, and his bead-covered moccasins.¹ He loves, above all things, the wild freedom of the wilderness, the flowing river, the waving forest, the crags and peaks of the mountains. The conventionalities of civilized life, the hum of industry in the great city, have no charms for him. It is the howl of the wolf, the scream of the wild bird, the southing of the wind among the trees — these furnish the music that touches the soul of the Indian. He aspires to no improvements beyond that which his tribe enjoyed when he was born. What was good enough for his fathers is good enough for him. He is not educated, and he does not wish to be. He does not desire to know anything of the great world beyond his own home in the wilderness. He does not know his own age. He notes the changes of the seasons and counts time by the moon; but how many moons ago since he was born, or since his children were born, he does not know, and he does not care.

Such is the American Indian of to-day; such he was three hundred years ago. What will his future be? Some claim that the Indians of North America are not diminishing in numbers, that there are as many to-day as when Jamestown was settled. Others claim that their numbers are constantly decreasing. The latter are probably correct. It is certain that whole tribes have disappeared; others have greatly diminished; still others have been absorbed into neighboring tribes and have lost their identity.²

As to the future of the Indian, one thing is as sure as the coming of the morning, — if he continues to reject the arts of civilized life,

¹ To this rule there are many exceptions. Since writing the above I have met many Indians, taken from their tribes in childhood and educated in the government schools, to whom this statement will not apply.

² The whole number of Indians in the United States, according to the census of 1900, was 266,760. Of this number 137,242 are said to be "civilized," that is, they are "taxed" Indians, who do not live in tribal relations on reservations. The decrease in Indian population during the preceding ten years was 6,847, and the decrease since 1850 is nearly 200,000, part of which may be accounted for by migrations to British America and Mexico.

he must perish as a race. The white man has come with his civilization — his schools, his churches, and his newspapers, his railways and telegraph — and above all his ambition to increase more and more. If the red man cannot or will not meet him on the same ground, he must die. I am not defending the national morality of driving a people from the land they had possessed for ages; I am simply stating the great truth that ignorance and barbarism must fall before the irresistible march of modern civilization. If the red race will not rise to the situation, if it will not make itself a force in our government, if it refuses to join the great procession of modern thought, there is nothing before it but a grave; and the future historian must record the story of a people that have been, a people that refused the sustenance necessary to life, a people that died by their own hand.

NATIONS AND TRIBES

The Indians of North America were divided into several great families, distinguished by language, habits, and personal appearance, and each family was composed of many different tribes.

One of the most prominent families was the **Iroquois**, living for the most part in New York. Some of the tribes, however, extended into Canada, the Ohio Valley, and the South. They built connected log houses, fortified their villages, and cultivated the soil. They were noted for physical strength, courage, and their warlike propensities. Five tribes of the Iroquois, the Cayugas, Mohawks, Oneidas, Onondagas, and Senecas, were banded together in a confederation known as the Five Nations, and after being joined by the Tuscaroras in 1714, called the Six Nations. In addition to these the Eries, Hurons, Cherokees, and a few other tribes belonged to the Iroquois. The Cherokees formerly occupied the Ohio Valley, and they with the Pawnees are supposed to have built the curious mounds to be found in that locality. The former belief that there was a civilized people known as the Mound Builders who preceded the Indians is no longer held by thoughtful students of the subject.

By far the greatest Indian family in North America, measured by the extent of territory occupied, was the **Algonquin** family. They surrounded the Iroquois on all sides, extending from Labrador westward through British America to the base of the Rocky Mountains and southward to South Carolina. They also extended westward through the Mississippi Valley to the Rocky Mountains. The most important tribes of the Algonquins were the Massachuset, Mohegan, Lenni Lenape (who made the famous treaty with William Penn), Miami, Illinois, Sac and Fox, Ojibwa, Blackfoot, Shawnee, and other tribes. Most of the famous Indians of our history, as King Philip, Pocahontas, Pontiac, and Tecumseh, were Algonquins. This nation compared favorably with the Iroquois in every way. Both had advanced above the state of barbarism and showed an interesting incipient civilization. Their highest accomplishments were the raising of

SCALE OF MILES.
Indian Reservations in Red

corn and the making of pottery. There are at present near 100,000 Algonquins and about 40,000 Iroquois living on various reservations. Many of them are self-supporting, living mostly by agriculture; but in general civilization they have not advanced greatly beyond the state in which they were first discovered.

The **Athabascans** were another great family, which extended from the Arctic regions to Mexico, mostly west of the Rocky Mountains. They were divided into many tribes, including the warlike Apaches, the Atna and Kuchin of Alaska, the Navajos of Arizona and New Mexico, the Beavers and Slaves of British America.

The **Dakota** or **Sioux** family occupied that portion of the United States west of the Great Lakes about the head waters of the Mississippi, the Yellowstone Valley, and the adjacent portions of British America. Among them we find the Crows, Assiniboines, Iowas, Mandans, Omahas, Osages, and Winnebagoes. About forty-five thousand of them still exist.

The **Muskogi** family were among the most cultured and industrious of Indians. They built good houses and cultivated the soil. The leading tribes were the Creeks, Chickasaws, Choctaws, and Seminoles, occupying for the most part the southern portions of the United States.

The **Shoshone** family included the semi-civilized Aztecs of Mexico, the Comanches, the Snakes, the Utes, the Mokis, and many other tribes.

Since writing this chapter on the Indian I have made the acquaintance of Colonel R. H. Pratt, the founder and superintendent of the Indian school at Carlisle, Pa. Colonel Pratt has spent many years in dealing with the Indians. He is a man of infinite sympathy with the great work in which he is engaged, and his knowledge of Indian life and character, equal no doubt to that of any other man in the country, entitles his opinions to the respect of all students of this question. Colonel Pratt does not agree with the majority of the historians in their statements that the Indians cannot be civilized, and I hereby cheerfully make a record of his views. He believes that the Indians do not differ essentially from other races in their capacity for civilization, and that only the right conditions have been wanting. He claims that it is a mistake for the government to keep many of the Indians on reservations, apart from the great currents of business, and to foster them in idleness by furnishing them supplies. He is convinced that if the Indians were scattered among the whites they would soon become self-supporting and show the same capacity to improve that is found in other races. It is a well-known fact that the most degraded Indians in the country are those who still maintain their tribal relations, live on the reservations, and are fostered by the government.

CHAPTER III

EXPLORATIONS

SCARCELY had Europe caught its breath after its astonishment at the unexpected discovery of a great continent beyond the western ocean when the period of exploration began. Some of the explorers were sent forth by their respective governments; others went at their own expense. Many of the expeditions were of the most daring and adventurous character, and the chief motive forces were a thirst for gold and the spirit of adventure, to which were usually added some pretense of preparing for future colonization and a desire to convert the natives to Christianity.

Spain had taken the lead in discovery; she also took the lead in exploration. Before the middle of the sixteenth century Spanish explorers had overrun a territory in the New World greater by far than the whole of Europe. Having covered Central America and a large portion of South America, they turned their attention to the north.

Of the early Spanish expeditions on the soil of the United States the one offering the greatest attractions to the lover of the adventurous was probably that led through the southeast and the Mississippi Valley by Ferdinand, or Hernando, de Soto, who was himself the most chivalrous and picturesque of all the early explorers of our country. To this expedition and its ambitious leader the main portion of this chapter will be devoted.¹

¹ To give a full account of all these exploring parties and what they did would tend to swell this volume to the point beyond its intended limits, while a brief summary of each would fail to reproduce in any degree the spirit of those times, and would furnish little to attract the reader. I have chosen therefore to present all except one in simple outline, while to that one a larger treatment will be given.

Though it may seem out of harmony with the remainder of this history, the method I have employed in treating this subject was adopted because I have heard various persons say that in attempting to read American history, they become utterly tired of the subject by the time they have read the dry details of the discoveries and explorations.

DE SOTO

The pages of fiction can scarcely parallel the strange romance of the career of Ferdinand de Soto. He was born in the year 1500, in the quaint and quiet Spanish town of Xeres—a town of ruined castles and gloomy monasteries. He was a boy of remarkable beauty and gave early promise of unusual talent. His father was an impoverished nobleman, and being too poor to educate him and too proud to teach him the art of earning a livelihood, his boyhood would have been spent in idleness, had not a powerful nobleman, Don Pedro Avila, adopted him into his family. Avila gave him a thorough education, including all the chivalric accomplishments of the Middle Ages.

On reaching manhood De Soto, like many other Spanish youths of the time, made his way to the New World. As a Spanish cavalier he spent many years in Darien, and many were his deeds of wild and daring adventure. It was said that he was the handsomest and most chivalric man in the army and that he surpassed all his fellows as a horseman and swordsman.

In 1531 De Soto joined Pizarro, as second in command, in the infamous conquest of Peru. He was far more humane than his cruel and heartless chief. He denounced Pizarro with the greatest severity for putting the harmless Inca to death; but the fact that he was a member of that gang of robbers **Conquest of Peru.** and shared in its spoils must remain forever a blot upon his name. His share of the Peruvian gold was equal in value to half a million dollars. He now resolved to return to Spain, which he had not seen for fifteen years. On reaching his native land he was hailed as the conqueror of Peru and soon he became the most popular and powerful nobleman in Spain. Before embarking for America he had been betrothed, it is said, to Isabella, the daughter of his benefactor, Avila, the playmate of his childhood, who had been pronounced the most beautiful woman in the kingdom. All these years she had waited for De Soto. They were married soon after his landing, and for the second time within half a century "Ferdinand and Isabella" became the most conspicuous and popular pair in Spain.

De Soto was unused to wealth, and he spent his money with a lavish hand. He lived in a mansion and kept trains of servants. In two years half his fortune had melted away. He then bethought

himself how he might replenish his coffers, and his mind turned again to America. He knew about Florida and believed it to be a land, not only of flowers, but of gold, and his request to make a conquest of that country at his own expense was readily granted by Charles V. With some six hundred men he and his charming wife embarked for Cuba in April, 1538. He had been made governor of that island by the emperor. His followers included the flower of the nobility, young men of wealth and station, and a number of veteran soldiers who had served under him in Peru. Gayly over the sea the little fleet swept, the men as light-hearted as if on a holiday excursion and as confident as if the gold they sought were already in view. Reaching Cuba, they disembarked and more than half a year was spent in festivities and preparation for the invasion.

FLORIDA

Florida was the name given to the vast unexplored region of the southeastern part of the United States, a region since divided into half a dozen flourishing states. It had been so named **Ponce de Leon, 1513.** by Ponce de Leon, who, a quarter of a century before the coming of De Soto, had wandered through the wilderness in a pathetic and fruitless search for that magical fountain which, as the natives informed him, would bring youth to the aged and life to the dying. Fifteen years later Narvaez, with a band of three hundred freebooters, had landed on the coast of Florida, made an excursion into the interior, and treated the Indians with such inhuman cruelty that the latter rose in their fury and destroyed the invaders of their soil — and but few were left to tell the story. It was this land that De Soto would now invade and become master of. His chief aim was not to slay and conquer the simple natives, not to make some great discovery that would benefit his race and perpetuate his name, but rather to gain wealth and the power that wealth can purchase.

In the early spring of 1539 De Soto left Cuba with his brilliant army,¹ an army that, for equipment and richness of uniform, could not have been surpassed by Spain in the palmiest days of her chivalry. The faithful Isabella would gladly have accompanied her husband, but he anticipated hardships as well as success, and he left her behind. Fondly she waved her last farewell to her gallant lord as

¹ 570 men and 223 horses. Winsor, Vol. II, p. 245.

the vessels moved out from the harbor; fondly she hoped for his early return loaded with riches and honor.

The hearts beat high with De Soto's crew as they launched out from the Cuban coast. None seemed to doubt that wealth and honor awaited them. As the pale blue line in the far-off horizon informed them that they were nearing the flowery land, their joy broke forth into songs and exclamations of delight. There at last was their El Dorado. There was the land of the cedar and vine, the land that was abloom with perpetual spring—and it must also be the land of gold. It must be another Mexico, another Peru; and the name of their commander would henceforth rival those of Cortez and Pizarro. Thus thought the followers of De Soto, and they rejoiced, they "filled high the cup with Samian wine"; they saw themselves in imagination returning to Spain covered with glory and laden with gold.

But with their music was mingled a minor strain when they remembered that De Leon and Narvaez had found no gold; they had found only disaster and death. Again was their dream disturbed when before the dawn of the first morning after they landed at Tampa Bay they were rudely awakened by the savage yells and a shower of arrows from a horde of naked warriors. The Spaniards leaped up in terror and ran for their lives to their ships. This was the beginning of the three and a half years of unceasing strife and turmoil and battle which was to end in the destruction of the greater portion of the Spanish army.

De Soto was not at heart a cruel man. He had no desire to wantonly slay the natives;¹ he fully intended, however, to give battle whenever the Indians opposed his march. After this first attack he drew up his army in battle array and marched inland; but the inhabitants had all fled into the forest and their village was deserted. A few, however, were made captive, and De Soto loaded them with presents and sent them to their chief, begging that he return and make friends with the Spaniards. The chief sent back a defiant answer expressing his hatred of the invaders and his intention to fight them as long as they remained in his territory. The various Indian tribes were usually friendly to their first white visitors, and the Spanish commander was at a loss to account for such hostility; but he soon discovered the cause of it. This tribe had a few years before come into contact with De Narvaez, and this

¹ One contemporary writer, however, Oviedo, states that De Soto was fond of the sport of killing Indians.

same chief had been mutilated by that heartless Spaniard by having his nose cut off while his mother had been put to death, being torn to pieces before the eyes of her son by bloodhounds.¹ No wonder that a mortal hatred against the Spaniards now rankled in his savage breast. In fact, the one great obstacle that De Soto had to encounter in his long journey through the wilderness was the hostility of the Indians caused by the memory of Narvaez. Wherever that adventurer had gone he had left a trail of infamy and a deadly hatred of the white man among the natives. De Soto did all in his power to counteract this feeling, but only partially succeeded. There is little doubt that the loss of half his army was due to this cause.

The Spanish commander now made a most fortunate acquisition to his army in the person of Juan Ortiz, a fellow-countryman who had lived with the Indians for ten years. He had come from Cuba with a party searching for Narvaez, and with three companions had been made captive. The other three were tortured to death, but Ortiz, a handsome and athletic youth of eighteen years, was saved by an emotional Pocahontas, the daughter of the chief, who begged her father to spare him. He was now familiar with the Indian language and habits, and he became De Soto's guide and interpreter. The Spaniards eagerly inquired of Ortiz where gold might be found, but he could give them no definite information. He only knew that something over a hundred miles to the northeast there lived a great chief to whom all the surrounding chiefs paid tribute.

WANDERING IN THE WILDERNESS

To find this forest king De Soto immediately set out, and thus began his great three years' march through the wilderness which was to end only with his life. For more than a hundred miles the army, cavalry and infantry tramped through the magnificent forests of oak and pine, alternating with long stretches of treeless prairie adorned with bright flowers and waving grass. But more than once their steps were arrested with vast, dismal swamps and impenetrable bogs. Reaching the city of the great chief, they found that his majesty with his subjects had fled and had taken refuge in the swamps and forests. De Soto sent Indian runners to offer the chief

¹ The Spanish explorers usually carried bloodhounds with them, and when they wished to inflict a cruel death and strike terror to the natives they would throw their victim to these animals.

his friendship, but the wily red man feared another Narvaez and no efforts could draw him from his hiding place. The few Indians captured, on being questioned about the one subject nearest the Spanish heart, told of a land many leagues northward where gold abounded, as they had heard, in great quantities, and the army hastened on. This was a trick often employed by the natives to get the white invaders of their soil to pass on, and it seldom failed to produce the desired effect. The army moved steadily northward for several months, traversing the central portion of the present state of Georgia and touching upon South Carolina.

Had not the finer and nobler feelings of the Spaniards been obscured by their blind pursuit of fortune, this tour might have been made one of great interest and of scientific usefulness. Here were strange trees laden with climbing vines, flowers of every color, herbs and grasses in numberless variety, unknown to the most learned botanist of that day. Here were birds and animals peculiar to America, and, above all, man in an uncultured state, living his simple life in the great forest among the lower orders of creation. What an opportunity for study! But the Spaniards cared not for these things; they were in search of gold, and for this shining goddess they braved every peril and suffered every hardship that human nature is capable of enduring.

The country through which they passed was far more densely settled by the red men than were the northern and central portions of the United States. The tribes were nearly all partially civilized; they lived in firmly built houses and cultivated the soil. Their civilization was fully equal to that of the lower classes in Spain. The army passed through a great many Indian villages, most of which were deserted, the occupants having fled to the woods at the approach of the invaders. Frequently the Spaniards stopped for a rest of several days in these deserted towns. The natives would sometimes remain wholly out of sight until the white men had gone; at other times they would suddenly emerge from the forest in hostile bands and attack the foraging parties sent out from the camp. Sometimes while on the march the army was harassed for whole days by marauding Indians, lurking behind trees and hedges watching for an opportunity to send the flint-pointed shaft, or bursting forth from their coverts in bands, sending a shower of arrows and then hieing away to their hiding places with the fleetness of the antelope. Many of the Spaniards, and a far greater number of the

Indians, were killed in these skirmishes. Had not the former been well protected by coats of mail, the entire army would no doubt have been destroyed within the first year.

De Soto was ever ready with friendly overtures to the fleeing chiefs. A few of them were won by his presents and kind words; others were defiant and hostile in the last degree. One of them made answer to his proffers of friendship as follows: "Others of your accursed race, in years past, have poisoned our shores. They have taught me what you are. What is your employment? To wander about like vagabonds from land to land; to rob the poor . . . to murder the defenseless. With such people I want no friendship. War, never ending, exterminating war is all I ask." The Spanish commander admired the heroism and intelligence displayed by this answer and renewed his efforts for an interview, but all in vain.

Long and weary months the Spanish army wandered about in the deep wilderness scarcely knowing whither they went, seeking fortunes as one follows an *ignis fatuus*. They procured most of their food from the fields of maize cultivated by the natives. For meat they drove with them a herd of swine. They often made Indian captives whom they pressed into service as guides or bearers of burdens. The guides on several occasions misled them into great swamps and marshes. The penalty for such an act was to be torn to pieces by bloodhounds, and they bore their punishment with the utmost fortitude.

The Spanish army entered an Indian country, called Vitachuco, whose chief, a man of powerful physique and noble bearing, bore the same name as his country. De Soto made a friend of him, as he thought, and was received into his capital, which consisted of two hundred strong houses built of timber. After several days' feasting, Juan Ortiz, the interpreter, informed the governor that the Indians had laid a plot to destroy the entire Spanish army. The Spaniards were to be invited to assemble on a great plain between a forest and a lake outside the city, to witness a parade, where several thousand warriors were to amuse them, when suddenly, at a given signal, the Indians were to seize their weapons, previously hidden in the grass, and fall upon the Spaniards without mercy. De Soto was amazed at the information. He quietly informed his men of the plot and bade them assemble well armed and drawn up in line for battle. The fatal day came, and De Soto walked by the side of

Vitachuco, at the latter's request, to the scene of the coming battle. Twelve stalwart Indians, secretly armed, accompanied their chief; but an equal number of Spaniards loitered carelessly near. Thus walked the white and the red chiefs, in apparent friendship, each ready to give the signal to his followers to leap in deadly strife upon those of the other. The moment came, the signal was given, and in an instant the tranquil serenity of that beautiful sunny morning was transformed into the dreadful din of battle. The Indian chief was made captive by the bodyguard of De Soto, who, leaping on a horse held near by a page, was soon at the head of his cavalry in the forefront of the battle. All day the battle raged. The Indians were heroic in their courage, and they outnumbered the Spaniards ten to one; but it was the naked body against the coat of mail; the bow and arrow against the steel Toledo blade in the hands of the most skillful swordsmen in the world, and the red men were mowed down like grass before the reapers' scythe. Many of the Indian braves were slain, many were made prisoners, and became the servants of their conquerors. Vitachuco was pardoned by De Soto and again treated as a friend; but the fallen chief was unconquered and unconquerable. Sometime after the battle his fury arose and with a dreadful war whoop he struck De Soto in the face with his fist and felled him unconscious to the ground. In an instant a dozen swords were thrust into the Indian's body and he fell dead. The blow had disfigured De Soto for life, smashing his nose and knocking out several of his teeth.

THE INDIAN QUEEN

De Soto learned that there was far away to the north a rich and powerful Indian nation known as Cofachiqui, or Cofitachiqui, governed by a queen, a young and beautiful girl of eighteen years. He heard also that the land abounded in the richest mines of gold and silver, and he decided to direct his steps thither; but the way was long and the soldiers footsore and weary, and months of jogging along through marsh and bog, over arid plains and through dense forests, must be endured ere they could reach their goal. At length they traversed a broad, open country and came to the bank of a beautiful river. One evening as they came to a bend of the river they heard from the opposite shore the din of voices, the shouts of playing children, and the barking of dogs. Next morning they

discovered that it was the home of the princess who ruled over Cofachiqui.¹

De Soto was exceedingly anxious to make friends of the youthful queen and her people. He bade Ortiz shout across the river, and assure the natives that he desired their good will and friendship. The Indians were astonished at the appearance of the Spaniards. At the break of day they gathered in great numbers on the river bank where they now stood gazing in speechless wonder at the strange sight—warriors wrapped in bright steel armor, with glittering swords in their hands, and the richly caparisoned horses, animals which these Indians had never before seen. Presently six of the chief men of the nation entered a canoe and crossed to the encampment of their strange visitors.

“Do you come for peace or war?” they asked with the true dignity of the brave.

“I come for peace,” replied De Soto; “I seek only a peaceful passage through your land; I need food for my people and beg your assistance.”

After a brief conversation and an earnest request by De Soto to meet their queen in person, the chiefs recrossed the stream. Soon afterward the Spaniards saw a highly decorated canoe brought to the edge of the water, and this was followed by a gorgeous palanquin borne by four men. From the palanquin stepped a young woman who took a seat amid downy cushions in the canoe. She was rowed across the river accompanied by eight female attendants and many warriors in other canoes. The queen was dressed in the highest art known to the red children of the forest. As she stepped upon the shore the Spaniards were greatly impressed with her quiet dignity, her modest, graceful manner, and her rare beauty. Through the interpreter she and De Soto entered into conversation, in which she offered him the use of half the houses of her capital during his stay with them. She then arose and handed to one of her maids a string of rich and costly pearls, and bade her give it to De Soto; but the latter begged that she suspend it from his neck with her own hand. This she hesitated to do as she feared that it would be a violation of her woman's modesty. But De Soto insisted that such an act could not be immodest as they were treating of peace and friendship, of all things the most serious between strange peoples.

¹ It is believed that this Indian town stood on the present site of Silver Bluff, on the east bank of the Savannah River, in Barnwell County, S.C.

The princess yielded to his request, whereupon he took from his finger a beautiful gold ring set with a ruby and presented it to her.

The army crossed the river and occupied the apartments assigned them. This was certainly an oasis in the desert, a haven of rest for the weary travelers, and now, too, their hopes were to rise on the wings of the wind to the highest point. On inquiring for the object of their search, their fair hostess informed them that there were great quantities of gold within her territories, and she sent men to the mines to bring specimens. At last the Spaniards believed they had found another Peru. Now they would load themselves with gold and return to their native land. The men returned from the mines laden with the metal, but it proved to be a worthless alloy of copper—and the Spaniards awoke from their radiant dream, and in sorrow turned again their weary eyes to the wilderness. Before leaving the country, however, the queen presented her guests with a great number of really valuable pearls.

The habit of De Soto was to compel every Indian chief whom he got into his possession to accompany him at least to the bounds of the chief's territory. His object was to prevent Indian attacks upon his army. This he made known to the queen of Cofachiqui, and informed her that it would be necessary for her to accompany them. She demurred, but De Soto insisted and practically made her captive. This seems cruel after all the kindness with which she had received the Spaniards, but De Soto feared that in no other way could he prevent an uprising of the treacherous red men.

They left the city by the river early in May, 1540, and traversed the northern part of Georgia, the princess being carried in her palanquin by her own warriors and followed by her maids. Thus they plodded along for weeks when one day the lovely maiden, of whom the whole army was proud, proved that she was not only a dignified queen and an ideal hostess, but a true Indian—she suddenly leaped from her couch and, running with the fleetness of a deer, darted beneath the underbrush of a dense forest. De Soto and his men never saw nor heard of her again. She probably returned to her quiet home on the banks of the river and resumed her happy reign over her people.

THE BATTLE OF MAVILA

Our adventurers now turned southward through the present state of Alabama. They made a long stop with a friendly Indian tribe

on the Coosa River, and departing, left behind one of their number who had fallen in love with the chief's daughter and chose to remain with the Indians.

In southern Alabama there dwelt the most warlike and powerful of all the Indian tribes of the Southeast. The chief, whose name was Tuscaloosa, heard of the coming of the Spaniards and went to meet them, receiving them with the blindest smile and inviting them into his capital. But this was only a blind; his purpose was to entrap his white visitors and destroy them to the last man. The capital¹ was built like a fort, surrounded by a strong wall made of timbers and surmounted by towers. De Soto entered the city gates with a portion of his army, and a little later the fight began between two servants and soon became general. The Spaniards were standing in an open square when the Indians, who had sent their squaws and children to the forest, poured out from the houses and rushed upon them with their blood-curdling war cry, and white and red men grappled in deadly combat. The white men fought their way to the main gate, outside of which their horses were tethered. Leaping upon the horses they made ready to charge, but the Indians had surged through the gates and leaped over the walls in great numbers, and now they hurled the Spaniards back for a hundred paces over the plain, when the latter turned about, made a desperate charge, and drove the Indians back into the city. Again the Indians rushed out and again the white men hurled them back, following them into the open square, and there continued their deadly sword thrusts. Thus for hours the two armies, surging to and fro, fought like demons. The Spaniards set fire to the city and in a few minutes every house was ablaze, and the roar and heat of the flames were added to the din of battle. When night came the Indian army was destroyed. Some had probably escaped to the forest; thousands lay dead upon the ground. But the Spaniards had paid dearly for their victory. Many of them were dead and nearly all the survivors wounded.² Forty-five of their horses were killed and all their camp equipage, baggage, medicines, and the pearls from Cofachiqui had been consumed in the fire. De Soto on his noble charger had led the fight. Early in the afternoon an arrow pierced his thigh and stuck fast, rendering him unable to sit in his saddle; but not having

¹ The town called Mobile, Mavila, or Mavilla, probably stood on the present site of the Choctaw Bluff, on the Alabama River, in Clarke County, Ala.

² The total losses from all causes at the end of this battle is stated by the "Gentleman of Elvas" at one hundred and two.

time to extract the arrow, he stood up in his stirrups and thus fought the remainder of the day.

This battle of Mavila was one of the greatest ever fought between the white men and Indians on the soil of the United States.¹ The army was unable to move for near a month after this terrible experience. There were many wounds to be dressed and but one surgeon, a man of little skill, left alive.

The army never recovered from the effects of this battle. From this day forth De Soto was a changed man. His buoyant and jovial spirits were gone. He heard that ships from Cuba with fresh supplies for his army were now in Pensacola Bay, but a few days' march distant and thither he would go for recruits and supplies. But rumors now reached his ears that filled him with dismay. He was informed that his men were disheartened and would desert him at the earliest opportunity. Disguising himself, he mingled among them at night, listened to their conversation, and found the rumor to be true.

De Soto was deeply dejected. He felt that he could not raise another army if this one deserted him. He had spent his fortune and accomplished nothing. His faithful Isabella had written him, urging and begging that he give up his vain pursuit of fortune and return to her. But his spirit was too proud; he could not yield. How could he return with his ragged and penniless army? How could he endure poverty and humiliation after the taste of wealth and popularity he had enjoyed? No, he must succeed or die; gold was more precious than life, and disgrace was worse than death. Such was De Soto; such was Spain in the sixteenth century. This man of iron will now came to the desperate decision to head off his mutinous men by refusing to inform them about the ships and by turning northward again into the wilderness.

DISCOVERY OF THE GREAT RIVER

Sadly and wearily now the army turned again to resume its journey through the unexplored forest. The march from this day was aimless and almost hopeless. They wandered from place to place, caring little whither they went. The army was without tents or baggage; their clothing had turned to rags, and they dressed themselves in skins. Through illness and incessant fighting with

¹ See Bancroft's "United States History," Vol. I, p. 48.

the Indians their numbers were constantly decreasing. But few of their horses remained, and most of the men traveled on foot.

De Soto was no longer the frank, energetic, and trusted commander; he was moody, sullen, distant, and careworn. He had lived but forty years, but the furrows of age were deepening in his face. It is believed that from this time forth his mind was unbalanced, that he felt his pursuit of gold to be hopeless, and that he was resolved to die in the wilderness. But strange as it may appear, the one and only great historic event in the life of De Soto was yet before him; he was yet to do, all unconsciously, the one thing that would bring him enduring fame and link his name forever with American history,—he was yet to discover the Mississippi River.

During the autumn and winter months the general course of the army was northwestward, and it was in the spring of 1541, and probably at Chickasaw Bluff, not far from the present boundary between Tennessee and Mississippi, that they first cast their eyes upon the great river. The majestic current, a mile and a half in width, swept by, bearing upon its bosom trees and logs and great quantities of driftwood. Here the mighty river had rolled for ages unknown, and De Soto was the first white man to look upon its turbid waters.¹ But he and his followers did not realize the magnitude of the discovery; they were still seeking for gold. They built four barges, crossed the river, and made a detour of several hundred miles to the northwest, through the present states of Arkansas and Missouri. This tour covered a year, and it was a year of extreme hardship and toil; a year of Indian fighting and disaster. Many of them perished, and among them the faithful interpreter, Juan Ortiz. In the early spring of 1542 the expedition returned to the Mississippi, by way of Red River, and now the great march was soon to close.

De Soto was weary unto death with his long and fruitless toil. His countenance was haggard and worn, nor was it in his power to conceal his deep depression of spirits. He was attacked
Death of De Soto, May 21, 1542. by a slow fever, which increased in violence, until he saw that he must die. Calling his officers about him, naming one as his successor, he bade them an affectionate farewell and died, commending his soul to God. They buried him "darkly, at dead of night," with the impressive service of the Catholic

¹ Cabeza de Vaca had, however, seen one of the mouths of the Mississippi a few years before.

Church, to which he had always been faithful. That the Indians might not find the body, all traces of the grave were obliterated; but the Indians were soon seen prowling about and looking knowingly at the burial place, and it was determined to remove the body and sink it into the depths of the river. With solemn countenances a few of the officers rowed out to the middle of the great river at midnight, bearing the body of the dead chieftain, inclosed in a casket made of a hollowed-out oaken log, and reverently they lowered it into the water.

The new leader lacked the indomitable spirit of De Soto, and the army soon decided to abandon the further search of fortune and return to civilization. They at length moved toward the southwest, in the hope of finding Mexico. After wandering for some months west of the Mississippi, they returned to that river, and in rudely built boats floated with the current to the Gulf of Mexico, and in September, 1643, reached a Spanish colony in Mexico. At starting, three and a half years before, they were a dashing army, many of them rich and of noble birth, adorned with the most brilliant uniforms and animated by the highest hopes of fame and fortune; now they were careworn, dejected, and penniless, dressed in the skins of wild animals and covered with wounds and scars, and less than half of their original number, the rest of them having found a grave in the wilderness.

When Isabella heard of the death of her husband, her grief was uncontrollable. Strangely eventful had been her life. Long and weary years she had waited and loved. Then came a few short years of happiness, too ravishing to endure. And now came the blow that was too heavy to be borne. Her grief was the grief of Niobe, and in a few years she had mourned herself to death.

For wild and reckless adventure the career of De Soto would be difficult to parallel. But his great expedition in the Southeast, while fascinating, was singularly barren of good results. Aside from the accidental discovery of the great river there is nothing to mark it as useful—no study of the language and habits of the natives, no record of the flora and fauna, nor scientific observations of the topography of the country. Little indeed was added to the knowledge of the New World by this costly expedition of De Soto.

OTHER EXPLORATIONS

Spanish. — In 1528 **Panfilo de Narvaez**, with four ships and about four hundred men, explored the northern coast of the Gulf of Mexico. The expedition was most unfortunate. Many were killed by the Indians; Narvaez was drowned near the mouth of the Mississippi River. At length but four were left, **Cabeza de Vaca** and three companions. These wandered about for eight years, traveling over two thousand miles, crossing the continent, and finally reaching a Spanish settlement on the western coast of Mexico.

De Vaca and his companions told wonderful stories of their travels, and one of these stories was of seven cities¹ of which they had heard, said to contain vast treasures of gold; and **Coronado**, governor of a province in Mexico, raised an army of over a thousand men, two thirds of whom were Mexican Indians, and went in search of these cities. He discovered many Zuni Pueblos of the Southwest, the Grand Cañon of the Colorado, and penetrated as far northeastward perhaps as the valley of the Platte River. But he found no gold, lost many of his men, and returned to Mexico broken-hearted. In the summer of 1541 Coronado and De Soto, with their respective parties, were but a few days apart, and Coronado, suspecting this, sent a messenger to find De Soto; but he was not successful. The expedition of Coronado was better managed than that of De Soto, and it yielded better results in extending geographical knowledge.

Other Spanish explorers were **Gordillo**, who explored the southeastern coast of the United States in 1520; and **De Ayllon** who, with five hundred men, sailed northward along the Atlantic coast in 1526 and made a fruitless attempt to found a colony in what is now Virginia, near the site of Jamestown. The fact that the Spanish explorers on the soil of the United States found no gold will probably account for the fact that no important Spanish settlements were made within it.

French. — The king of France refused to respect the "Line of Demarcation" by which the Pope had divided all heathen lands between Spain and Portugal, and demanded that if Father Adam had made such a will, the will be produced. The French, however, confined their early explorations to the north. In 1534 **Jacques Cartier** made a voyage to the Gulf of St. Lawrence, exploring southern Labrador, Prince Edward Island, and Anticosti. He returned to France, and the next year came again and sailed up the St. Lawrence River as far as the present site of Montreal, so called from the name he gave the place — Mount Royal. The explorations of other Frenchmen — Champlain, Allouez, Marquette, Joliet, and La Salle — will be mentioned in a later chapter. The English explorers were settlers as well and will be treated under colonization.

¹ Known as the seven cities of Cibola.

CHAPTER IV

COLONIZATION—THE SOUTHERN COLONIES

THE New World had been discovered for a century, and the territory of the present United States was still a wilderness, uninhabited except by the native savage.¹ It was not possible that such a condition could endure. North America presented wonderful opportunities for future development. It was bounded by two oceans, while Europe had but one; its central river valley for extent and fertility was unequalled in the world; nor could Europe match the Great Lakes, the cataract of Niagara, the Mississippi River, the Rocky Mountains, or the Grand Cañons of the Colorado and the Yellowstone. It was only through colonization that this vast and beautiful land could become truly useful to mankind, and the time was ripe for a portion of Europe to transplant itself permanently to North America. The burning question during the closing decades of the sixteenth century was, Which of the European states will succeed in becoming the mother of civilization in North America? The chances all seemed to favor Spain. Spain had taken possession of Mexico and South America² and of the adjacent islands of the sea; and, moreover, she had laid claim to all of North America on the ground of the Pope's decree of a century before. Her great advantage lay in the fact that she was by far the greatest maritime power of the earth. But Spain was ill fitted to found empires and build nations. Her motives were too low. She sought, not to found self-supporting colonies, but to plunder the natives in her mad search for gold. For gold she slew the red man, for gold she enslaved the black man, and gold proved the ruin of Spain. Spain.

¹ The only settlement of white men in the present United States was at St. Augustine, Fla., founded 1565, and at Santa Fé, New Mexico, settled in 1582 or later. The great French Huguenot, Coligny, first sent Ribault, who made a settlement in Florida; but they were brutally massacred by Menendez, a Spaniard. Gourges, a Frenchman, afterward made fearful retaliation by destroying the Spanish colony.

² Except the eastern portion which belonged to Portugal.

For nearly a hundred years Spain had held undisputed sway in the New World. Neither England nor France had followed up their early discoveries with attempts at colonization. England during the sixteenth century was struggling with the Reformation and the political questions accompanying it; France was rent with civil and religious wars. Both were thus deterred for many years from giving serious attention to the new lands of the West, though both agreed in disputing the exclusive claims of Spain.

Meantime Spain had a clear field. No other nation ever had such an opportunity to establish a great empire.¹ But Spain proved unworthy of her trust. The chief cause of her downfall was, as stated, her too great devotion to the god of gold. This caused a decline in her agriculture and manufacturing. But there were other causes. Spain lost her best artisans and laborers through the expulsion of the Moors; she lost much of her commercial spirit through the expulsion of the Jews; and, worst of all, the horrors of the Inquisition robbed the nation of much of its choicest blood. In addition to all this the efforts of Spain to increase her political power in Europe and to lead the forces of the counter reformation only weakened the Empire and hastened its downfall.

While Spain was declining through her own inherent weakness, France and England were rapidly rising. France had reached a season of peace and also a season of wide influence under the reign of that broad-minded statesman, King Henry of Navarre, the author of the Edict of Nantes. The French now began to occupy Acadia and the St. Lawrence Valley. But it is with the work of England that we are here concerned. The reformation in England had continued through the reigns of Henry VIII, Edward VI, and, after a momentary reaction under Mary, had been completed under Elizabeth. The long reign of "Good Queen Bess," ending in 1603, brought not only internal peace, a notable revival of industries at home and activity on the sea, it also raised the British nation to a first-class power. And the Spaniard at length found his match in the Briton.

For five centuries, in their island home, the Norman and the Saxon, the Angle and the Jute, had commingled, until each had lost his identity in the producing of a race unsurpassed by any other in history — the English race; and this people now, at the close of a long and successful struggle for religious liberty, had taken a fore-

¹ See Johns Hopkins University Studies, Vol. VIII, pp. 122-123.

most place among the nations. England was now seized with a desire to expand, and her attention was turned toward the New World.

Various were the motives of the British in turning their attention to colony building. One of the chief causes was a feeling of rivalry with Spain; another was a belief that the island was already overpopulated and needed an outlet for its surplus population. To these causes must be added the desire to search for gold, to find a northwest passage, and, as developed a little later, a belief that the colonies could be made to furnish certain commodities, such as silk and wine, which could not be produced in England.

Reviving the half-forgotten voyages of the Cabots, England laid claim on this ground to the greater portion of North America. Conscious of the strength of youth, Englishmen set forth upon the sea, and stood ready to dispute with Spain the **England.** dominion of the ocean. The Elizabethan Era is renowned in English history, not only for its literature, but for its growing power upon the sea, and especially for its hardy and skillful seamen. There were Hawkins the slave trader, the famous half-brothers, Humphrey Gilbert and Walter Raleigh, Gosnold, Newport, and Frobisher, and above all Francis Drake, the greatest seaman before Nelson. Drake was the first to put into practice the policy of weakening Spain by attacking her in America.¹ Drake it was who made a great voyage around the earth ending in 1580, the second in history, in which he took many Spanish prizes; and henceforth he was known by the Spaniards as the Dragon. Eight years after the completion of his famous voyage he played an important part in the most momentous event of the century in which he lived—the defeat of the Spanish Armada.

Never before had Europe witnessed so vast a display of power upon the sea as that which Philip II now put forth in the "Invincible" Armada. Spain was at this time by far the richest and greatest nation of Europe or the world. Mexican and Peruvian gold had poured into the Spanish coffers in uncounted millions,² and the power of the Empire was felt to the uttermost parts of the sea. This was the golden age of the Spanish Empire, and the Armada was the most notable product of that age. With this vast fleet Philip would now smite and disable the island kingdom, and at the same

¹ Fiske's "Old Virginia and Her Neighbors," p. 24.

² It is estimated that by looting the Indians of Mexico and Peru, Spain was enriched by a sum equal to \$5,000,000,000.

time he would present a spectacle to the world that would overawe any other nation that might have the temerity to measure swords with the Castilian. The Armada consisted of one hundred and thirty ships, the largest ever seen in Europe, bearing thirty thousand soldiers and three thousand heavy guns. Not only to chasten England for daring to claim a portion of the New World did Philip send forth this fleet, but especially to force back into the Church the straying Briton who had wandered from the Catholic fold.

Great was the excitement in the British Isles when the people knew of the hostile coming of the Armada. Europe stood aghast with consternation. Had England been conquered, France and the Netherlands would immediately have been attacked. But the English rose to the occasion. Forty thousand soldiers were soon under arms. The English fleet was much smaller than the Spanish, but the ships were swifter, and above all, they were manned by such masters of the sea as Lord Howard of Effingham and Hawkins and Frobisher and Drake, while the Armada was commanded by the Duke of Medina Sidonia, a man of little skill and less experience. The gigantic fleet approached the Plymouth harbor in May, 1588, in the form of a grand crescent seven miles in extent. The English met the foe and destroyed many of their ships by making sudden dashes, then sailing beyond the reach of the Spanish guns, and again by sending fire ships among them. In a few weeks the Spanish fleet was greatly disabled, and, moreover, it was penned within the German Ocean. The conquest of England was now abandoned, and the remnant of the Armada, attempting to reach Spain by sailing around England and Scotland, encountered, near the Orkney Islands, a succession of terrific storms, and many more of the vessels found a bed in the depths of the sea. The soldiers perished by thousands, and comparatively few of them ever again reached their native land. Few events in history have been more far reaching in their results than the destruction of the Spanish Armada. It marked the end of Spanish dominion of the sea. It was the beginning of the end of the national greatness of Spain. From this time the Empire declined steadily and irresistibly, and three hundred and ten years later the downfall was completed in the short, decisive war with the United States of America. What England began in 1588 her child, then unborn, was to complete three centuries later; and the power of Spain was confined to the bounds of her own peninsula.

The greatness of the modern British Empire takes its rise from the defeat of the Spanish Armada. As a maritime power England soon rose to the first place, and from that day to the present there has been none successfully to dispute her sway. The defeat of the Spanish Armada has been pronounced the opening event in the history of United States.¹ From that moment North America was open to colonization with little danger of hindrance from the Spaniards. Even before that event England had made a beginning of colonizing America, and the first Englishman to engage in it was Sir Humphrey Gilbert. Obtaining a charter from Queen Elizabeth, he made a heroic attempt to found a colony in Newfoundland; but Gilbert lost his life by shipwreck, and his mantle fell on the shoulders of a much abler man than himself, one who must be considered the father of English colonization on the soil of the United States—Walter Raleigh.

**Gilbert's
Charter, 1578.**

Raleigh was one of the best representative Englishmen of his age. He was a student of books and a leader of men. A pupil of Coligny, a friend of Spenser, he was a statesman and a scholar, a courtier and a soldier, and in each he was one of the leading men of his times.² Raleigh was granted a charter similar to that of Gilbert. He sent two exploring ships to the coast of North America, and they brought back glowing accounts of the beauty of the land and the gentleness of the natives. They had landed at Roanoke Island off the coast of North Carolina. It was at this time that the eastern coast of North America received the name Virginia in honor of the Virgin Queen.³ Raleigh's first colony was sent out in 1585 under Ralph Lane with one hundred and eight men, who settled on Roanoke Island; but after a year of hardships they were picked up and carried to England by Sir Francis Drake, who happened to touch at that point in one of his great voyages. They brought back with them tobacco and the potato, and first introduced the use of these in England. Raleigh was disappointed at the failure of his colony and he determined to try again. In 1587 he sent a colony of one hundred and fifty, seventeen of whom were women, under John White, and soon after they landed at Roanoke, Virginia Dare was born. She was a grandchild of Governor White, and was the first English child

**Sir Walter
Raleigh.**

³ It is said that Elizabeth herself suggested the name Virginia.

born on the soil of the United States. The governor soon found it necessary to make a voyage to England, intending to return to his colony. But the war with Spain interfered, and three years passed before an English vessel reached Roanoke. When at last help came, the colony had utterly disappeared and its fate was never known.¹ Raleigh was still undis-
The lost colony. mayed. He exclaimed to a friend as late as 1602, the year of his fifth expedition, which also failed, "I shall yet live to see it an English nation." But the great man's fortunes now took a downward turn. His royal patron died, and in her place came the bustling little egotist, James I. Raleigh fell into disfavor; he was cast into prison, where he remained for twelve years, meantime writing his "History of the World." Then, after a brief season of liberty, he was again imprisoned on the false charge of treason and was soon after beheaded. No more dastardly deed was ever committed by a British sovereign than the murder of Raleigh.

Notwithstanding the fact that none of the colonies planted by Raleigh was permanent, he must be awarded the honor of securing the possession of North America to the English race, of making known the advantages of its soil and climate, and creating the spirit of colonization among his countrymen.² It was Raleigh above all men who prepared the way for successful and permanent English colonization on the soil of the United States.

VIRGINIA

At the beginning of the seventeenth century all the eastern portion of North America, which afterward became the thirteen original states, was known as Virginia. Great interest in American colonization was awakened throughout the kingdom by a little book on "Western Planting," inspired by Raleigh and written by Richard Hakluyt. Several voyages were made before any permanent settlement was established.³ These voyages, undertaken by individuals, had not been successful financially or otherwise. From this

¹ Years afterward the people of Virginia found children among the Indians with light hair and eyes, and it was believed that they were descendants of members of White's colony who were probably adopted by Indian tribes.

² Winsor, Vol. III, p. 334.

³ In 1602 Bartholomew Gosnold, one of Raleigh's captains, sailed to Cape Cod and Buzzards Bay, intending to found a colony, but failed to do so. In 1603 Martin Pring made a voyage to New England; a son of Humphrey Gilbert sailed to Chesapeake Bay and was killed by the Indians. In 1605 Captain Weymouth made a voyage to the Kennebec River and returned with five Indians.

cause others were deterred from risking their fortunes in similar enterprises. But the success of various commercial companies which had multiplied in the last half century for the purpose of trading with distant countries, especially of the East India Company, chartered in 1600, naturally suggested similar enterprises for the western world.¹ And further, the corporation as a form of local subordinate government had long been familiar to the English merchant, as Osgood says, and readily "lent itself to plans of colonial extension."² Accordingly, in 1606, two companies were formed, Virginia was divided into two parts and a part granted to each, the London Company and the Plymouth Company.³ They obtained a royal charter enabling each to found a colony, granting the right to coin money, raise revenue, and to make laws, but reserving much power to the king. Each was given a block of land a hundred miles square, and the settlements were to be at least one hundred miles apart. The London Company had permission to plant a colony anywhere on the coast between the thirty-fourth and forty-first degrees north latitude, and to what they did we now direct our attention.⁴

Great haste was now made by the London Company in preparing for colonization in America, and on the 19th of December, 1606, three small ships bearing one hundred and five colonists and commanded by Christopher Newport, a famous sea captain, set out upon the wintry sea for the New World. The largest of the vessels, the *Susan Constant*, was of one hundred tons burden and the smallest of but twenty tons. The voyage was long and dreary, and it consumed the remainder of the winter. On reaching the American shore the weary voyagers were greeted by the singing of birds and the fragrance of flowers. Entering Chesapeake Bay they named the two projecting points at its sides Cape Henry and Cape Charles, after the two

The London
Company.

¹ Doyle, Vol. I, p. 108.

² To the English motives for colonization, as given on a preceding page, another was now added — rivalry with the French. The French king had, in 1603, made an extensive grant in America to De Monts, and colonists had gone out in 1604. The French grant was from forty degrees to sixty degrees north latitude; the English from thirty-four to forty-five degrees. These claims greatly overlapped, and thus were sown the seeds of future strife between the two nations.

³ So called because the men composing the former were London merchants, the latter, Plymouth merchants. The two companies were really but subdivisions of one great company.

⁴ See Poore's "Charters and Constitutions," Part II, p. 1888 *sq.* The Plymouth Company made an effort to found a colony the same year on the coast of Maine, but it was not successful.

young sons of the king.¹ They chose out one of the great rivers flowing into the bay, left upon it the name of King James, ascended it for about thirty miles, and founded a town which also they called after the name of their king. Thus was founded the first of the permanent settlements which were to multiply and expand, and in three hundred years to grow into the greatest nation of the earth. Let us take a glance at the colonists. It would be difficult to imagine a set of men less fitted to build a colony and found a nation than were those who settled at Jamestown in 1607. Among them were but twelve laborers, a few carpenters, a blacksmith, a mason, a barber, and a tailor, while more than fifty were "gentlemen," that is, men without an occupation, idle, shiftless men who had joined the enterprise without realizing that years of labor were essential to success. But there were a few men of worth in the company. There were Wingfield, who became the first president of the governing council, Gosnold, the famous mariner and pupil of Raleigh, and John Smith, the hero of many strange adventures. They soon erected a few tents and small cabins; some, however, found a dwelling place by burrowing into the ground. For a church they nailed a board between two trees, stretched a canvas over it, and beneath this the Rev. Robert Hunt held services according to the rites of the Church of England.

Captain Newport, after spending some weeks exploring the James River, returned with his ships to England, promising to come again as soon as practicable. The colony was soon in a pitiable condition. Arriving too late to plant spring crops, and finding little cleared land fit for cultivation, the men were soon reduced to short rations. The allowance to each man for a day was a pint of wormeaten barley or wheat, made into pottage. Governor Wingfield lacked the ability to rule the men, and there were constant quarrels among them. To their other misfortunes was added a continual fear of Indian attacks; and owing to their exposure in the swamps and their lack of proper food, they were attacked by fevers. They died sometimes three or four in a night, and before the end of September half of the little colony, including Gosnold, had found a grave in the wilderness.

The entire colony would no doubt have perished before the return of Newport but for the courage and vigor of one man, the most notable and conspicuous character in the early colonial history

¹ Henry, the elder and heir to the throne, died in his boyhood, and his brother became King Charles I of England.

of America—John Smith. Smith was still a young man, but according to his own story, his record was an extraordinary one. When scarcely beyond boyhood he joined the French army and later that of the Netherlands in which he served for several years. He then embarked on the Mediterranean and was thrown overboard as a heretic, swam to an uninhabited island, was picked up by a vessel and carried to Egypt. We next find him traversing Italy on foot, slaying three Turks successively in single combat in Transylvania, and at length captured by the Turks and sold into slavery. He slew his master with a flail, escaped into the Scythian Desert, wandered through every country of Europe, and joined the Virginia colonists soon after reaching his native land. It was now left for his sojourn in the American forest to furnish the crowning romance of his life.

**Adventures
of John Smith.**

While exploring the Chickahominy River he was taken captive by the Indians. After entertaining his captors for several days with a pocket compass and such curios, he was condemned to death by the savages. His head was laid on the block when at the last moment a little daughter of the chief, named Pocahontas, rushed forward, laid her head upon the head of the intended victim, and begged that his life be spared. Her request was granted, and he was sent back rejoicing to his people.

Pocahontas.

This romantic story, as also the account of his other adventures above mentioned, rests wholly on Smith's own testimony, and most historical writers in recent years are disposed to discredit them, especially the story of his rescue by the Indian girl. It seems clear that John Smith gave a highly colored narrative in relating his adventures, but there is reason to believe that the story of his rescue by Pocahontas is true.¹ The only ground for doubting the story is Smith's well-known spirit of boasting and the fact that in his first account of his capture by the Indians he does not mention this incident. On the other hand, there is one powerful argument, which seems almost conclusive, in favor of the truth of the story. It was not an unusual occurrence among many Indian tribes, when they were about to put a captive to death, for some impulsive Indian, usually a female and in most cases a member of the chief's family, to beg the life of the intended victim at the last moment.² Such a request was seldom denied, and the rescue was usually followed by

¹ Fiske makes a strong argument in favor of the truth of the story.

² See the case of Juan Ortiz, above, p. 44.

a formal adoption of the rescued one into the tribe; and this is exactly what Smith claimed was done in his case, though he was given his freedom to return to his colony. How could he have invented a story coinciding so perfectly with an Indian custom with which he could not have been familiar? Such a thing is far less credible than the story itself.

It is not disputed, however, that John Smith was a man of wonderful energy; and that he did more for Virginia than any other of the early settlers. He soon became governor of the colony, and he saved the colonists from starvation by trading with the Indians for corn. He succeeded above all others in keeping the men at work and thus laid the foundations for future prosperity. Smith later explored Chesapeake Bay and its rivers and afterward the New England coast, and he made maps of them that are remarkable for their accuracy.

Of Pocahontas it is known that although she was a rollicking, romping girl who often visited Jamestown and amused the colonists with her pranks, she grew into stately womanhood and married one of the colonists, John Rolfe, a widower — that she accompanied her husband to England, where she was received with great favor, and that she died in England after giving birth to a son who afterward made Virginia his home and became the ancestor of several of the most prominent families of the state.

Let us return to our colony. Life in the forest bore heavily on the little band, and but thirty-eight of them were alive when, in January, 1608, Captain Newport returned with food supplies and one hundred and twenty more colonists. Others came from time to time, and in 1609, when John Smith returned to England, the colony numbered five hundred. The government had been placed, by the first charter, in the hands of a council of thirteen, resident in England, and appointed by the King, which should coöperate with a local council. But a new charter was granted in Virginia's second charter. 1609 by which the council in England, originally distinct from the company, now became a part of it,¹ while the local council was abolished, being superseded by a governor. By this charter the bounds of the settlement were enlarged to four hundred miles along the coast, two hundred miles each way from Old Point Comfort, and extended "up into the land throughout from sea to sea west and northwest." The company was also given much greater power than that granted by the charter of 1606.

¹ H. L. Osgood, in *Political Science Quarterly*, Vol. XI, p. 274.

Lord de La Warr, or Delaware, was appointed governor of Virginia under the charter of 1609. He embarked with nine ships and five hundred men and women for Virginia; but encountering a terrible storm off the Bermuda Islands, he was delayed at those islands for many months — and woe to Virginia in consequence! The “Starving Time” came. The Indians were now hostile and no food could be obtained from them. Men with blanched faces wandered about actually dying for food. The death rate was frightful. Of the five hundred left by Smith the fall before only sixty remained alive in the spring of 1610. These now decided to abandon Virginia and embark in the four little pinnaces that were left them, hoping to reach dear old England. Early in June they gathered together their meager possessions, and with the funeral roll of drums left their cabins behind. Sadly, yet joyfully, they floated down the river to its mouth, when lo! far off in the horizon they beheld a moving speck — and another and another! They waited — and up the bay swept the ships of Lord Delaware! They all now returned to Jamestown, and the colony of Virginia was born again. How slender the thread on which hung the infant life of the firstborn of the United States!

“Starving
Time.”

Arrival of
Delaware.

Delaware soon had the colony on its feet, but the next year he returned to England and sent Sir Thomas Dale to govern in his stead. Dale was a man of much ability and strength of character, and as Fiske aptly puts it, “Under his masterful guidance Virginia came out from the valley of the shadow of death.” He introduced several radical reforms, the most important of which was the partial abolishing of communism. Before his coming the land and other possessions were held in common; no one owned private property; each man was a servant of the state, and the tendency of many was to do as little as possible. Dale gave each of the old settlers three acres of ground with the right of possessing private property. The effect was to stimulate industry, and from this time there was never a scarcity of food in Virginia. The new governor also established other settlements along the James, and although he was an austere man, ruled with a hand of iron, and was merciless in his punishment of criminals, his five years’ stay wrought a great change for the better in Virginia.

Dale.

In 1612, during the incumbency of Dale, a third charter was granted to Virginia. This charter added the Bermuda Islands to

Virginia, empowered the company to raise money by means of lotteries, and was far more liberal than either of its predecessors in granting governmental powers. It is interesting to note the first steps toward democratic government in America as shown by the rapidly succeeding charters of Virginia. King James, blindly devoted to the autocratic theory of government, refused to embody any democratic features in the first charter. The local council was subject to a superior council resident in England, and both were under the instructions of the king. The charter guaranteed the rights of Englishmen to the people, but gave them no voice in their own government. But the colony came to the verge of failure, and in the belief that a more liberal government would enhance the prospects of success,

**Evolution of
democracy.**

a second charter was applied for and granted. By this charter of 1609 all vacancies in the council, as also the executive office, were to be filled by the vote of the stockholders. This gave the company the character of a body politic, the right of self-government. It was a great advance over the first one in the process of transplanting English government to American soil, a great step toward the more important charter of 1612. By this third charter all governmental power, including the making of their own laws and the choosing of all officials, was given into the hands of the stockholders. But the company did not immediately extend this right to the colonists; it placed local affairs in the hands of a governor of its own choosing. A few years later, however, the liberal element, led by Sir Edwin Sandys, gained control of the company, and to attract new settlers, as well as to curb the power of a profligate or tyrannical governor, the company instructed its governor to call an assembly of the settlers and give them a share in the government. Hence came the House of Burgesses — the first representative body in America.¹

Meantime the white and red races were united in Virginia by the marriage of Rolfe and the daughter of the Indian chief Powhatan.² This secured peace with the Indians for eight years, until the death of Powhatan. About 1616 tobacco became the staple product of the colony. The English learned its use from the Indians, and marvelously soon after the discovery of the weed the use of it spread

¹ See Morey's "Genesis of a Written Constitution," *Annals of American Academy*, Vol. I, p. 529 sq.

² The name of this chief was Wahunsunakok. The name of the tribe was Powhatan and the English called the chief also by this name.

through every civilized land. It was the one thing that found a ready sale in England. Every farmer raised tobacco, and it was grown in the streets of Jamestown; it even became the money of the colony, and the minister and public officers were paid their salaries in tobacco.¹

The colony, however, was, on the whole, a disappointment to the company that had founded it. One of their chief objects was the same that had lured Pizarro and De Soto — a desire for gold. They were not content with the sassafras roots and cedar logs that their ships kept bringing, nor even with the tobacco. When, therefore, the London Company, or Virginian Company, as named by the second charter, were convinced that gold could not be found in that part of America, their interest in the colony was greatly diminished, and to this fact was due much of the anarchy and disorder in Virginia.

After the departure of Dale the colonists suffered severely for a few years at the hands of a wicked governor, Samuel Argall, who robbed and plundered them in every way in his power. But better times were at hand. About this time Sir Edwin Sandys gained the ascendancy in the Virginia Company, and his energy and wisdom were soon felt in the colony. One of his first acts was to send the colony, in 1619, one of its best governors, Sir George Yeardley, who became the first to introduce popular government into America.

The most memorable year in the early history of Virginia was 1619. It was this year that witnessed the beginnings of two institutions, opposite in character, each of which was destined to play a great part in the future development of the new nation that was now struggling to be born. The first was government by the people, and the second the institution of slavery.² The first was to increase and expand until it developed into the greatest self-governing people in the world's history; the second was to fasten itself like a blight on the free institutions of the same people and in the end to bring about the sacrifice of tens of thousands of human lives. In November of the preceding year the Virginia Company had issued an order limiting the power of the governor of the colony and establishing a legislature of burgesses to be elected by the people. The first

**Slavery
introduced.**

**Self-govern-
ment.**

¹ The tobacco sent to England in one year, 1704, exceeded 18,000,000 pounds. By 1750 the yearly exports of Virginia and Maryland reached 85,000,000 pounds. Beer, "Commercial Policy of England," p. 51.

² A Dutch vessel brought twenty negroes and sold them to the colonists. Thus began a traffic in slaves that continued till after the Revolution.

House of Burgesses, composed of twenty-two delegates, met in July, 1619, soon after the coming of Yeardley, and ere long the people were living under laws of their own making, and a "government of the people, for the people, and by the people" thus gained its first foothold on American soil. This granting of a share in the government to the people attracted new settlers, who, from this time, came in ever increasing numbers.

This same year of 1619 witnessed the coming of ninety young women to be wives of the colonists. To secure one of these prizes the bachelor planter was required to win the maiden's consent and to pay her passage across the sea (about one hundred and twenty pounds of tobacco), and as there were many more men than maidens, the courtship must have been very interesting. Other women were brought from time to time, and family life was soon firmly established in the new colony. Indeed, from this time forth life in Virginia had its attractions as well as its hardships. The lowing of the herds, the chattering of the fowls, the shouts of playing children, the sound of the builder's hammer, and of the woodman's ax ringing out from the depth of the forest, bespoke a happy and prosperous community.

But colonial life still had its misfortunes. A great calamity befell the people of Virginia in 1622 in the form of an Indian massacre.

Indian massacre. The friendly chief Powhatan was dead, and his brother Opekanokano, who had never been friendly to the English, now reigned in his stead. This chief now instituted a massacre in which three hundred and forty-seven of the settlers were killed. The blow was a dreadful one; but the whites, recovering from the shock, pursued the savages with merciless fury, putting to death a far greater number than they had lost. Twenty-two years later this same chief, now an aged man, made a second attack on the settlement, killing over two hundred, but his tribe was again put down with a firm hand and himself taken captive and put to death.¹

Loss of charter. In 1624 the Virginia Company, after a severe struggle with the Crown, was deprived of its charter. The chief cause of this was that the Puritan element, which formed the backbone of the opposition in Parliament, had also gained the ascendancy in the Virginia Company. Nor did James like the action of the company a few years before in extending representative government to the colonists. The result was the loss of

¹ He was killed while in captivity by one of his own race, so some authorities claim.

the charter. Virginia became a royal colony and so it continued to the war of the Revolution. But the change had little effect on the colony, for Charles I, who soon came to the throne, was so occupied with troubles at home that he gave less attention to the government of Virginia than the company had done, and popular government continued to flourish. Of the six thousand people who had come from England before 1625 only one fifth now remained alive, but this number was rapidly augmented by immigration. Governor Yeardley died in 1627, and John Harvey, a man of little ability or character, became governor. Harvey kept the Virginians in a turmoil for some years, but the colony was now so firmly established that his evil influence did not greatly affect its prosperity.

The longest rule of one man in our colonial history was that of Sir William Berkeley, who became governor of Virginia in 1642 and continued to hold the office till 1677, with the exception of a few years under the commonwealth. Berkeley was a rough, outspoken man with much common sense, but with a hot temper and a narrow mind.¹ He was a Cavalier of the extreme type, and during the first period of his governorship he spent much of his energy in persecuting the Puritans, many of whom found refuge in Maryland.

About the time Berkeley assumed the office a fierce religious war broke out in England between the Cavaliers and the Roundheads, or Puritans. The latter, led by Oliver Cromwell, one of the strongest personalities in British history, eventually triumphed over the Cavaliers and, in 1649, King Charles I was beheaded by his own subjects. Berkeley, with most of the Virginians, was loyal to the Crown, and he invited the young son of the executed monarch to come to America and become king of Virginia. But Parliament would suffer no opposition from the colony, and it sent a commission with a fleet to reduce the colony to allegiance. The Virginians were only mildly royalist and they yielded without a struggle; but they lost nothing by yielding, for the Commonwealth granted them greater freedom in self-government than they had ever before enjoyed. 1652.

In two ways the brief period of the commonwealth in England had a marked effect on the history of Virginia. For the first and only time during the colonial period Virginia enjoyed absolute self-government. Not only the assembly, but the governor and council were elective for the time, and the people never forgot this taste of

¹ Doyle, Vol. I, p. 207.

practical independence. The other respect in which the triumph of the Roundheads in England affected Virginia was that it caused an exodus of Cavaliers from England to the colony, similar to the great Puritan migration to Massachusetts, caused by the triumph of the opposite party twenty years before.

An anonymous pamphlet published in London in 1649 gives a glowing account of Virginia, a land where "there is nothing wanting," a land of 15,000 English and 300 negro slaves, 20,000 cattle, many kinds of wild animals, "above thirty sorts" of fish, farm products, fruits, and vegetables in great quantities, and the like. If this was intended to induce home seekers to migrate to Virginia, it had the desired effect. The Cavaliers came in large numbers; and they were of a far better class than were those who had first settled the colony. Among them were the ancestors of George Washington, James Madison, James Monroe, John Marshall, and of many others of the far-famed "First Families of Virginia." By the year 1670 the population of the colony had increased to 38,000, 6000 of whom were indentured servants, while the African slaves had increased to 2000.¹

The Restoration of 1660 brought the exiled Stuart to the British throne as Charles II, and Berkeley again became governor of Virginia. Oliver Cromwell, the Lord Protector of England, had died in 1658, and Richard, his son and successor, too weak to hold the reins of government, laid aside the heavy burden the next year and Charles soon afterward became king. Charles was not a religious enthusiast, as his father had been; he was a worthless debauchee, who cared much for his own ease and little for the welfare of his subjects. The new sovereign was utterly without gratitude to the people of Virginia for their former loyalty, and indeed, it may be said that his accession marks the beginning of a long period of turmoil, discontent, and political strife in Virginia. Charles immediately began to appoint to the offices of the colony a swarm of worthless place

hunters, and some years later he gave away to his court favorites, the Earl of Arlington and Lord Culpeper, nearly all the soil of Virginia, a large portion of which was well settled and under cultivation. The Navigation Law, enacted ten years before, was now, at the beginning of Charles's reign, reenacted with amendments and put in force. By this the colonists were forbidden to export goods in other than English vessels, or elsewhere

¹ For indentured servants see *post*, p. 199.

than to England. Imports also were to be brought from England only. The prices, therefore, of both exports and imports, were set in London, and the arrangement enabled the English merchants to grow rich at the expense of the colonists. The result was a depreciation in the price of tobacco, the circulating medium, to such a degree as to impoverish many planters and almost to bring about insurrection. And now to add to the multiplying distresses of Virginia, Governor Berkeley, who had been fairly popular during his former ten-year governorship, seems to have changed decidedly for the worse. He was a Royalist to the core, and appeared to have lost whatever sympathy with the people he ever had. He was accused of conniving with custom-house officials in schemes of extortion and blackmail, and even of profiting by their maladministration. Popular government now suffered a long eclipse in Virginia. In 1661 Berkeley secured the election of a House of Burgesses to his liking, and he kept them in power for fifteen years, refusing to order another election.

**Navigation
Laws.**

But the people, who had been long imbibing the spirit of liberty in their forest home, at last rose in rebellion against the tyranny of their cynical old governor. The uprising is known as Bacon's Rebellion. The general causes of this rebellion were political and economic tyranny, the immediate occasion was Berkeley's Indian policy. The Indians became hostile in 1675, and for many months the massacre of men, women, and children in the outlying settlements was of almost daily occurrence. But Berkeley persistently refused to call out the militia, for the reason, it was believed, that he did not wish to disturb the fur trade, from which he was receiving a good income. In March, 1676, the assembly raised a force of five hundred men, but when they were ready to begin a campaign, Berkeley suddenly disbanded them. The people were now exasperated and ready for rebellion — and then rose Bacon.

Nathaniel Bacon was a young lawyer of noble English birth, a collateral descendant of the great author and jurist of the same name; he was rich, eloquent, and popular. In defiance of the governor he raised a band of men and marched against the Indians, inflicting on them a stinging defeat. Berkeley, greatly incensed at the young man's insubordination, started after him with a troop of horse; but scarcely had he left Jamestown when word reached him that the whole lower peninsula had risen against him. Hastening back, he found that he must do some-

**Nathaniel
Bacon.**

thing to placate the people, and he dissolved the long assembly and ordered a new election. This was duly held, and Bacon was elected to the burgesses. This assembly passed a series of reform laws known as "Bacon's Laws." The old governor, deeply offended at this course, dissolved the assembly and proclaimed Bacon, who had again marched against the Indians, a traitor; whereupon Bacon, at the head of several hundred men, marched upon Jamestown and burned it to the ground. Berkeley fled before the armed invaders and took refuge on the eastern side of the Chesapeake. Bacon had now full control of Virginia's affairs, and he even contemplated resistance to the king's troops, that were said to be on their way to the colony, when a deadlier foe than armed men — the swamp fever — ended his short, brilliant career, and Virginia was destined to spend another hundred years as a royal colony.

Bacon was the life and soul of the insurrection, and after his death his followers scattered like frightened quail and Berkeley was soon again in possession. The vindictive old governor now wreaked his vengeance on the followers of Bacon until he had hanged more than a score, including the Rev. William Drummond, a Scotch Presbyterian and one of the leading men in the colony.¹ But the king was displeased with Berkeley's rancor. "The old fool has taken more lives in that naked country than I have taken for the murder of my father," said Charles. Berkeley was recalled. He sailed for England in the spring of 1677, leaving his family and evidently expecting to be reinstated. But the king refused to see him, and he died, broken-hearted, a few months later.

The Bacon Rebellion, occurring at the same time with King Philip's War in New England, and exactly a century before that greater rebellion, so vastly different in its results, was one of the most important episodes in our colonial history. Bacon was a true reformer, talented in a high degree, but somewhat wanting in judgment. His intention no doubt, in case the king's forces came, was to hold them at bay until the grievances of the colonists, including the oppression of the Navigation Laws, should have been redressed. But in this he doubtless would have failed and would have paid the penalty of resistance with his life. His death was therefore opportune, and his influence on the future of the colony was probably greater than if his life had been prolonged.

¹ The king afterward granted aid to Mrs. Drummond, declaring that her husband had been put to death contrary to the laws of the kingdom.

The speedy downfall of Berkeley, however, had little effect in rescuing Virginia from the grasp of the Royalists. One of the court favorites to whom the soil of Virginia had been granted, Lord Culpeper, came out as governor, and a rapacious tyrant he was. In 1684 he was succeeded by Lord Howard of Effingham, who was not a whit better than Culpeper. Among the later governors were Nicholson, who had had a notable career in New York, and Sir Edmund Andros, who had had a more notable career in New England. In each of these the colonists found a great improvement over such creatures as Culpeper and Effingham. But they fell short when compared with Alexander Spotswood (1710-1722), one of the ablest and best governors of colonial Virginia. The habit of governing through lieutenants, the governor residing in England, became prevalent early in the eighteenth century. One man, Douglas, was nominal governor for forty years, drawing a large salary, though he never crossed the Atlantic Ocean.¹

In spite of the many drawbacks, of the unworthy governors and their frequent quarrels with the assembly and people, Virginia continued to prosper, and by the end of the seventeenth century the population numbered a hundred thousand. The people up to this time were almost wholly English, but in 1700 several hundred Huguenots made their home in the colony. About 1730 the Scotch-Irish began to settle in large numbers in the Shenandoah Valley, and soon after these came the Germans. The frontier was moved gradually westward from the tide-water counties until it had crossed the summit of the Alleghanies. The coming of these peoples infused new modes of life, new religious customs, new democratic ideas into Virginian society; and in the course of the next half century many vital changes were brought about, as the abolition of primogeniture and entail, the separation of Church and State, and religious toleration.² Thus the various nationalities, blending slowly into one people, spent the remainder of the colonial period hewing away the forests and laying the foundations of a great state.³

¹ Spotswood and many other real governors were called "lieutenant governors," the "governor" residing in England.

² See Fiske's "Old Virginia," Vol. II, p. 396.

³ The limits of this volume will not admit a full history of the several colonies. This must be sought in the various state histories and in such works as those of Doyle and Fiske. A short account of the domestic and political institutions of the thirteen colonies will be given in a later chapter.

NOTES

William and Mary College.—The second college founded in America was William and Mary, Harvard alone preceding it. The father of this college was the Rev. Dr. James Blair, and the object was to train young men for the ministry. Blair was sent to England in 1691 to secure funds. He met with fair success until he approached Sir Edward Seymour, the treasury commissioner. When Blair declared that the people of Virginia had souls to save as well as the people of England, Seymour exclaimed: "Souls! damn your souls. Grow tobacco!" The good doctor, however, succeeded. He returned in 1693 with the charter, became the first president of the college, and held the position for fifty years. The college was located at Williamsburg. Next to Blair its best friend was Governor Nicholson.

Two Virginia Love Stories.—Governor Francis Nicholson was one of the best governors Virginia had; but on one occasion he lost his dignity. He fell madly in love with a daughter of Major Burwell near Williamsburg, but the young lady refused him. Nicholson raved about the matter in public and declared that if any one else married the girl, he would "cut the throats of three men: the bridegroom, the minister, and the justice who issued the license." Suspecting that a brother of Dr. Blair was the favored one, he threatened vengeance on the whole family of Blairs. In fact the governor made such a fool of himself that he was called to England (1705) at the instance of Dr. Blair. (Fiske's "Old Virginia," Vol. II, p. 122.)

The other love story ended more happily. The Rev. Professor Camm, the last president of William and Mary before the Revolution, was a middle-aged bachelor. He had a young friend who was desperately in love with a Miss Betsey Hansford. But his wooing was fruitless. He then begged Professor Camm to intercede for him. Camm did so; he bombarded Betsey with Scripture texts to prove that matrimony is a duty, but without avail. At length the young woman suggested that the professor go home and look up II Samuel xii. 7. He did so and found the text "Thou art the man,"—and, well, Camm himself married Betsey. (*Ibid.* p. 127.)

Governor Berkeley's Report to the Commissioners of Plantations (1671). Extracts.

15. What number of planters, servants, and slaves?

Answer.—We suppose, and I am very sure we do not much miscount, that there is in Virginia above forty thousand persons, men, women, and children, and of which there are two thousand black slaves, six thousand Christian servants, for a short time, the rest are born in the country or have come in to settle and seat, in bettering their condition in a growing country.

17. What number of people have yearly died within your plantation and government for these seven years last past, both whites and blacks?

Answer.—All new plantations are, for an age or two, unhealthy, until they are thoroughly cleared of wood; but unless we had a particular register office, for the denoting of all that died, I cannot give a particular answer to this query, only this I can say, that there is not often unseasoned hands (as we term them) that die now, whereas heretofore not one of five escaped the first year.

23. What course is taken about instructing the people within your government in the Christian religion ?

Answer. — The same course that is taken in England out of towns ; every man according to his ability instructing his children. We have forty-eight parishes, and our ministers are well paid, and by my consent should be better if they would pray oftener and preach less.

But of all other commodities, so of this, the worst are sent us, and we had few that we could boast of, since the persecution in Cromwell's tyranny drove divers worthy men hither. *But, I thank God, there are no free schools nor printing, and I hope we shall not have these hundred years ;* for learning has brought disobedience and heresy and sects into the world, and printing has divulged them, and libels against the best government. God keep from both !

MARYLAND

The founding of Maryland marks the beginning of a new plan in colony building in North America. The tentative experiments of Gilbert and Raleigh had for their object mainly the establishing of trading posts, from which a search for gold and for a northwest passage to the Indies might be carried on.¹ Close upon these followed the founding of the earliest permanent colonies by chartered companies, the chief objects being to bring commercial advantage to the companies, and to make good by actual occupation English claims to the soil. With the founding of Maryland came the first permanent proprietary government of America, that is, a government by a lord proprietor, who, holding his authority by virtue of a royal charter, nevertheless exercised that authority almost as an independent sovereign.

As shown on a preceding page, the idea of colony planting in America by means of a corporation was borrowed from existing corporations common in England at the time. It is interesting here to note the proprietary form of government, — its origin, the transplanting of the institution to America, and its gradual democratizing. It is well known that the Maryland charter was borrowed in great part from the Palatinate of Durham ; but this needs a word of explanation. In mediæval times it was customary in Continental Europe for a sovereign to grant almost regal powers of government to the feudal lords of his border districts, so as to prevent foreign invasion. These districts or manors were often called palatinates or counties palatine, because the lord dwelled in a palace, or wielded

¹ See also other motives mentioned on p. 57.

the power of the king in his palace. His power was regal in kind, but inferior in degree to that of the king.¹ William the Conqueror, soon after the battle of Hastings, adopted this plan in case of a few counties, one of which was Durham on the borders of Scotland, and this one alone remained at the time of Charles I. The English landlord was as familiar with the palatinate form of government, as Osgood says, as was the English merchant with the corporation. It was most natural, therefore, that the proprietary form of government be adopted in the work of colonizing America, and it was equally natural that the palatine of Durham be made the model.

The charter of Maryland granted in express terms "as ample rights, jurisdictions, privileges, prerogatives, . . . royal rights . . . as used and enjoyed . . . within the bishopric or county palatine of Durham." This was one of the many instances of planting English institutions in America; it was an attempt to introduce a limited feudalism on American soil. And it is a notable fact that all the English colonies founded in America after Maryland were of the palatinate type, except those founded spontaneously by the people in New England.²

It will be noticed that this form of government was monarchical; but monarchical government did not flourish in America. In a new country where all men were obliged to work for a living the conditions for building up an order of nobility were wanting. The great distance from the motherland tended to lessen the feeling of reverence for the sovereign, and men soon absorbed that wild spirit of freedom so characteristic of life in the forest. The result was that democracy gained an early foothold in every colony, and it continued to increase in power all through the colonial period.

The father of Maryland was George Calvert, the actual founder was his son, Cecilius Calvert. George Calvert was a man of broad views and stanch character. About the time of the accession to the throne of Charles I, Calvert resigned his seat as British secretary of state and turned his attention to colonization in the New World.

King James had raised him to an Irish peerage with the title of Lord Baltimore. Receiving a grant of land in Newfoundland, which he named Avalon, he removed thither and planted a colony; but after a brief sojourn he determined, owing to the severity of the climate and the hostility of the

George
Calvert.

¹ Osgood, in *American Historical Review*, July, 1897, p. 644.

² Fiske, "Old Virginia," Vol. I, p. 280.

French, to abandon the place. He sailed for Virginia, in which he had already been interested as a member of the original London Company and later of the governing council. But Baltimore, having espoused the Roman Catholic faith, found the Virginians inhospitable, owing to the spirit of religious intolerance of the times. Returning to England he obtained the promise of a charter for a large tract of land north of the Potomac River, and King Charles in granting it named the place Maryland in honor of his queen, Henrietta Maria. The object of the lord proprietor, as Baltimore was now called, was twofold. He wished to found a state and become its ruler, for he was truly a man of the world; he loved power and he loved wealth. Second, he wished to furnish a refuge for the oppressed of his own faith; for the Roman Catholics, as well as the Puritans, were objects of persecution in England.

But before he could carry his purpose into execution, and before the Great Seal was placed upon his charter, George Calvert died. The charter was then issued to his son, Cecilius, and the son, who became the second Lord Baltimore, was faithful in carrying out the project of his father.

The new colony as set forth in the charter was bounded on the north by the fortieth parallel, and on the south by the southern bank of the Potomac, while the western boundary was to be the meridian passing through the source of that river. From this line the colony extended eastward to the Atlantic Ocean and included all of the present state of Delaware and portions of Pennsylvania and West Virginia. In after years these boundary lines, as marked out by the charter, led to serious complications between Maryland and her neighbors.

**Bounds of
Maryland.**

Never before had an English sovereign conferred such power upon a subject as that now granted to Lord Baltimore. He was required by the charter to send the king two Indian arrows each year, as a token of allegiance to the Crown, and if any gold and silver were mined in Maryland, one fifth of it was to be paid to the king. But aside from this the proprietor was invested with almost kingly power. He could not tax his people without their consent, but he could coin money, make war and peace, pardon criminals, establish courts, and grant titles of nobility. The government of the colony was very similar to that of the feudal estates of the Middle Ages.

But this "miniature kingdom of a semi-feudal type" was affected

by the leaven of democracy from the beginning. The charter, as stated, defined the relations of the proprietor to the king; it also defined his relations to the colonists. It provided that the laws be made by the proprietor *and the freemen*. Here was the entering wedge; the people could not be taxed without their own consent, and they were soon making their own laws. They won the right to initiate legislation in their first contest, a slight one, in 1635. At first the assembly consisted of the governor, council, and all the freemen; but as the people increased in numbers, the proxy system supplanted this. The proxy system, however, proved unsatisfactory and it soon gave way to the delegate system. By the middle of the century both the representative system and a bicameral legislature were firmly established in Maryland.¹

Aside from the fact that Maryland was the first of the proprietary governments, the colony is especially remembered in American history as the first in which religious toleration had a place. This condition came about in the most natural way. Baltimore, as an honest adherent of the Catholic faith, could not have excluded his fellow-Catholics from his new dominions. Such a course would have proved him untrue to his own avowed principles, and defeated one of his objects in founding the colony; namely, to furnish a home for oppressed Catholics who were shamefully treated in England at that time.

It was equally impossible for him to have excluded Protestants, being the subject of a Protestant king who ruled over a Protestant nation. Had he done this, he would have raised a storm in England which would have proved fatal to the colony. He did therefore the

Religious freedom. only wise thing to be done, — he left the matter open, inviting Catholics and Protestants alike to join his colony. The spirit of the age was an intolerant spirit, and while Baltimore cannot be said to have been moved by any advanced views of religious toleration, nor was his primary object in founding a colony a desire to furnish a home for the oppressed in conscience, it is certain that he rose above the intolerance of the times, as shown by his subsequent invitation to the Puritans of Virginia and New England to make their home in Maryland. Thus for the first time in colonial history we have a state in which a man could worship God with freedom of conscience and without being oppressed by intolerant laws. Baltimore proved a wise and just governor. His

¹ Mereness's "Maryland," p. 196.

treatment of the Indians was not surpassed by that of William Penn. Indeed, one might search in vain through all our colonial history for a ruler superior to Cecilius Calvert.

The first settlers, about three hundred in number, reached Maryland in March, 1634. Leonard Calvert, a brother of the proprietor, led the colony and became its first acting governor. They settled on a small island in the mouth of the Potomac, paying the Indians for the land in axes, hoes, and cloth. Here they planted the cross and founded a town which they named St. Mary's. The colony was happily founded, and it advanced more in the first six months than Virginia had done in as many years.

Maryland was singularly free from Indian massacres as also for many years from maladministration; but there was one source of constant irritation that annoyed the colony for a generation, and that was the jealousy of the Virginians. The second charter of Virginia had included all the territory that afterward became Maryland, and the people of Virginia disputed the right of Baltimore to plant this colony there; but their objections could not hold good from the fact that the Virginia charter had been canceled in 1624 and the province had reverted to the Crown. But there were two other causes of an unfriendly feeling from the elder colony: first, her northern neighbor was under Catholic control and this was irritating to the intolerant Virginians; and, second, Maryland enjoyed free trade in foreign markets which Virginia did not. This unfriendly spirit between the two reached its acute stage through the action of one man, whose name fills a conspicuous page in the early history of Maryland, and that man was William Clayborne.

Clayborne was a Virginia surveyor, a member of the council and also a tradesman. The year before the charter of Maryland was issued to Calvert, Clayborne had established a trading post on Kent Island in the Chesapeake without any title to the land. Soon after the settlement at St. Mary's had been made Baltimore informed Clayborne that Kent Island must henceforth be under the government of Maryland; but the latter, encouraged by the governor of Virginia, resisted, whereupon Baltimore ordered that he be arrested and held prisoner if he did not yield. Soon after this a party from St. Mary's seized a pinnace belonging to Clayborne, who, retaliating, sent a vessel against his enemy and in a skirmish, in which several men were killed, the Marylanders made captives of the Virginians. This occurred in 1635 and two years

**William
Clayborne.**

later Clayborne repaired to England to lay his case before the king. He met with little success and during his absence the enemy seized and occupied Kent Island. Clayborne returned to Virginia and for more than ten years longer we find him a disturbing element to the peace of Maryland. In 1645, aided by a piratical sea captain named Ingle, he again gained control of his favorite island and indeed of the government of Maryland, Leonard Calvert being forced to take refuge in Virginia. But Clayborne's reign was of short duration, and the coveted island eventually passed permanently under the control of Maryland.

In spite of internal disturbance the colony increased in numbers and prosperity year by year. The political and social condition of the people swayed to and fro with the great events that were taking place in England, and when at last the Puritan party under Cromwell triumphed over the Cavaliers, Baltimore, who had favored the royal party, would doubtless have lost his title to Maryland but for the tact he exercised in appointing a Protestant governor, William Stone, to rule over it.

The year 1649 — that eventful year in British history in which King Charles I was put to death — witnessed the famous Toleration Act in Maryland. By this act the toleration of all Christian sects — a privilege that the people had enjoyed in practice since the founding of the colony — was recognized by law.¹

The Toleration Act was very liberal for that period, but it would not be so considered in our times. For example, it did not "tolerate" one who did not believe in the Trinity, the penalty for this offense being death. Any one speaking reproachfully concerning the Virgin Mary or any of the Apostles or Evangelists was to be punished by a fine, or, in default of payment, by a public whipping and imprisonment. The calling of any one a heretic, Puritan, Independent, Popish priest, Baptist, Lutheran, Calvinist, and the like, in a "reproachful manner," was punished by a light fine, half of which was to be paid to the person or persons offended, or by a public whipping and imprisonment until apology be made to the offended. This act was drawn up under the directions of Cecilius Calvert himself; it was probably a compromise between the Catholic party and the Puritans, who, driven from Virginia by Berkeley, had arrived in

¹ Except Unitarians: not till 1826 — one hundred and seventy-seven years after this — did Jews and Unitarians gain full political rights in Maryland.

Maryland in large numbers. This was the first law of its kind enacted in America, and it was in force, with brief intervals of suspense, for many years.

On the fall of Charles I a commission sent by Parliament, a member of which was Maryland's old enemy, Clayborne, came to receive the surrender of the colony, and Governor Stone, who though a Protestant was not a Puritan, was degraded from his office. This was in 1652 and three years later Stone, having raised a small army, met the Puritans at Providence, now Annapolis, and a pitched battle was fought, known as the battle of the Severn. Many were killed. Stone was defeated and made prisoner. The Puritans now had full control. Before this battle occurred they had suspended the Toleration Act in defiance of the proprietor and passed one of their own shutting out "popery, prelacy, and licentiousness of opinion." Baptists and Quakers, as well as Catholics and Episcopalians, were denied religious liberty. As Fiske puts it, they tolerated "everybody except Catholics, Episcopalians, and anybody else who disagreed with them." But this was going too far, even for Oliver Cromwell, who sided with Calvert; and at the word of that powerful dictator the Toleration Act was restored and the Puritan domination was ended.

**Puritan
triumph.**

In 1661, soon after the Restoration in England, Lord Baltimore sent his only son, Charles Calvert, to be governor of his colony. Charles was an excellent governor. He served fourteen years when in 1675 his father, Cecilius, died and he became the lord proprietor.¹ For the first time now the Marylanders had the proprietor living among them. Cecilius, the founder of the colony and its proprietor for over forty years, devoted his life to Maryland; but he resided in London and never crossed the Atlantic Ocean.

This period, from the Restoration to the English Revolution in 1688, was one of unusual quiet in Maryland. It is true that the people were on the verge of rebellion in 1676 — an echo of the Bacon Rebellion in Virginia — and that the government after the death of Cecilius was for a time similar to that of Berkeley in Virginia, tending toward aristocracy and nepotism, restriction of the suffrage, and the like; but on the whole the inhabitants were happy and industrious and were rapidly increasing in numbers. During this time the Quakers, the Dutch, the Germans, and the Huguenots were in considerable numbers finding their way to Maryland.

¹ The population at this time was about twenty-five thousand.

Meantime the boundary dispute between Maryland and Pennsylvania, to cover over three quarters of a century, had begun. This will be treated in the account of Pennsylvania. Charles II and his brother James, disregarding the grant of their father to Lord Baltimore, conveyed to William Penn a large portion of his territory, which afterward became Delaware; and James, after he became king, was about to deprive Baltimore of his charter altogether when, in 1688, he was driven from the British throne, in what is known as the glorious Revolution. William and Mary became the sovereigns of England, and Baltimore promptly dispatched a messenger to proclaim to his colony their accession to the throne. But the messenger died at sea, the message was not delivered, and while the other colonies in quick succession proclaimed the new sovereigns, Maryland hesitated. The delay was fatal to Baltimore's charter, and in 1691 Maryland became a royal province. **Maryland becomes a royal colony.** Baltimore, however, was still permitted to receive the revenues in the form of quitrents and excises from his sometime colony. Maryland remained a royal colony till 1715 when it passed back into the hands of the Calverts. The royal governors, among whom we find the ubiquitous Nicholson and Andros, were all men of commendable worth.

When Maryland became a royal colony one of the first acts of its legislature was to pass a law establishing the Church of England¹ and persecuting the Catholics and to some extent the Puritans. Alas, for the dreams of the Calverts! They had founded the colony as an asylum for the oppressed in conscience, especially for those of their own faith; but now in less than sixty years after its founding the Catholics constitute but one twelfth of the population and these, though among the best citizens of Maryland, are rigorously proscribed by law; and to further exasperate them the capital was now moved from St. Mary's, the Catholic center, to Providence, *alias* "Anne Arundel Town," now Annapolis.

In 1715 Charles Calvert died and his son Benedict became the fourth Lord Baltimore. He had become a Protestant, and the government of Maryland was now restored to him. The colony re-

¹ The annual tax for the support of the church was forty pounds of tobacco for each "poll," rich or poor. But the law did not specify the kind of tobacco, and many paid the minister with the most unsalable stuff that they raised. The clergy sent over were generally a bad lot, gamblers and winebibbers. A common trick with them was to stop in the middle of a marriage service and exact a good round fee before finishing the ceremony.

mained from this time in the hands of the Calverts to the war of the Revolution. Benedict died but six weeks after the death of his father, and his son Charles, a boy of sixteen years, became the proprietor of Maryland.¹ During the remainder of the colonial era frequent quarrels between the governor and the assembly resulted, as in all the royal and proprietary colonies, in a steady gain of power for the people.

It would be interesting to follow the fortunes of this colony through the half century preceding the Revolution, the so-called "neglected period" of colonial history; but the limits of this volume forbid a further treatment, except in a general way with the rest in future chapters on "Colonial Wars" and "Colonial Life."

NORTH CAROLINA

North Carolina came near being the first of the permanent English colonies in America. Five voyages were made under the Raleigh charter of 1584 with the view of planting a permanent colony on the soil that became North Carolina; but the effort ended in failure, and almost a century passed when other hands carried into effect the noble ambition of Raleigh. Again, the people who founded Virginia had intended to settle in the vicinity of Roanoke Island, but a storm changed their course, and the first colony was planted in the valley of the James.

The first settlements in North Carolina that were destined to live were made by Virginians, in 1653, on the banks of the Chowan and Roanoke rivers, in a district called Albemarle from the Duke of Albemarle. A few years later men from New England made a settlement, which they soon abandoned, on the Cape Fear River. In 1665 Sir John Yeamans, an English nobleman of broken fortunes, came from the Barbadoes with a company of planters and joined the few New Englanders who had remained on the Cape Fear River. This district was called Clarendon. Meantime Charles II had issued a charter, in 1663, granting to eight of his favorites the vast territory² south of Virginia, and two years later the charter was enlarged and the boundaries defined and made to extend from twenty-nine degrees north latitude to thirty-six degrees thirty minutes,

¹ The population was now 40,700 whites and 9500 negroes. Chalmers, "American Colonies," II, 7.

² A charter for the same tract had been granted to Sir Robert Heath in 1629, but this had lapsed for want of use. It was repealed in 1664.

the southern boundary of Virginia, and from the Atlantic Ocean on the east to the "South Sea," or Pacific Ocean, on the west. The grant embraced nearly all the southern portion of the present United States, and the government it created was, like that of Maryland, modeled after the palatinate of Durham. Of the eight men to whom the grant was made the leading spirit was Lord Ashley Cooper,¹ afterward the Earl of Shaftesbury, whose name is still borne by the Ashley and Cooper rivers of South Carolina.

The new country had been named Carolina a hundred years before by Ribault, the Huguenot, in honor of Charles IX of France,² and the name was now retained in honor of Charles II of England.

An account of the first attempt to govern this colony fills a curious page in American history. Shaftesbury, who was unmatched as a theoretical politician, conceived a plan of government that seems ludicrous to the American reader of to-day. The plan was supposed to have been drawn up by John Locke, the philosopher, and was known as the Fundamental Constitutions, or the "Grand Model,"³

The "Grand Model." which proved to be grand only as a grand failure and a model only to be shunned by the liberty-loving American of the future. By this plan the essence of monarchy, of aristocratic rule in the extreme, was to be transplanted to America. It divided the land into counties, and for each county there was to be an earl and two barons who should own one fifth of the land while the proprietors retained another fifth. The remaining three fifths were reserved for the people as tenants, who were to be practically reduced to serfdom and denied the right of self-government. Its one good feature was its guarantee of religious liberty, though the Church of England was established by law.

But the settlers in North Carolina had found even the colonial governments too oppressive and had migrated deeper into the wilderness for the purpose of gaining a larger amount of freedom. Could they now accept such a government as proposed by Shaftesbury? Certainly not willingly; nor was it possible to enforce it, and after

¹ The other seven were the Earl of Clarendon, the Duke of Albemarle, Lord Craven, Lord John Berkeley, Sir George Carteret, Sir William Berkeley, and Sir John Colleton.

² It is claimed by some that the name Carolina was not used by Ribault; but it is known to have been used when Charles I was king of England.

³ This singular document is given in full in Ben: Perley Poore's "Charters and Constitutions."

twenty odd years of futile attempts to do so the whole plan was abandoned.

Sir William Berkeley, one of the proprietors and governor of Virginia, had appointed as governor of Albemarle, the northern portion of Carolina, William Drummond, a Scotch Presbyterian clergyman, whom he afterward put to death for following Bacon. Samuel Stephens, succeeding Drummond in 1667, called an assembly to frame laws and ere long the settlement was in a steadily growing condition. A law was passed with a view of attracting settlers. It exempted all newcomers from paying taxes for a year, outlawed any debts they may have contracted elsewhere, and provided that for five years no one could be sued for any cause that might have arisen outside the colony. This plan had the effect of attracting many of a worthless class, so that the Albemarle settlement came to be known in Virginia as "Rogues' Harbor." Governor Stephens and his successor made strenuous but fruitless efforts to put the Fundamental Constitutions in force.

The Navigation Laws were later put into operation, and they greatly interfered with a lucrative trade with New England. The people were heavily taxed and at length, in 1678, they broke out in an insurrection led by John Culpeper, who seized the government and held it for two years. This followed in the train of the Bacon Rebellion in Virginia.

The proprietors next sent Seth Sothel, now a member of the company, to govern the colony. Sothel proved to be a knave; he plundered the proprietors and the people most shamelessly, and after five years of turbulent misrule he was driven into exile—the same year that witnessed the Revolution in England and the exile of James II. 1688.

Owing to incompetent and thieving governors, appointed through favoritism and not fitness for the office, and to abortive attempts to introduce the Fundamental Constitutions on an unwilling people, the Albemarle colony did not prosper, and in 1693 the population was but half what it had been fifteen years before, while the Clarendon colony planted by Yeamans on the Cape Fear had been wholly abandoned. Meantime another colony had been planted at the mouths of the Ashley and Cooper rivers (as will be noticed under South Carolina). These two surviving colonies, several hundred miles apart, now began to be called North and South Carolina. Their governments were combined into one, and better times were

now at hand. In 1695 John Archdale, a good Quaker, became governor of both Carolinas, and from this time the settlements were much more prosperous than before.

After 1704, however, North Carolina was again in turmoil, the causes being bad governors and continued attempts to establish the Church of England at the expense of the Dissenters, more than half of whom were Quakers. During this first decade of the eighteenth century, settlers came in increased numbers. Huguenots came from France and settled at Bath near Pamlico Sound; Germans from the Rhine founded New Berne at the junction of the Trent and Neuse rivers. The white population was now about five thousand; Albemarle settlement had extended many miles into the forest; this involved encroachment on the soil of the native red man — and it brought its troubles.

In the autumn of 1711 a terrible Indian massacre took place in North Carolina. Hundreds of settlers fell victims of the merciless tomahawk. The chief sufferers were the inoffensive Germans at New Berne, where one hundred and thirty people were slaughtered within two hours after the signal for the massacre was given.¹

Indian war.

Various tribes, led by the Tuscaroras, engaged in the massacre. But the people rallied, and, receiving aid from South Carolina, they, led by Colonels John Barnwell and James Moore, hunted the red men from place to place and in a great battle near the Neuse destroyed four hundred of their warriors. At length the Tuscaroras, whose ancestors had come from New York, resolved to abandon their southern home and return to the land of their fathers. They removed in 1714 and joined the Iroquois or Five Nations of New York, and that confederation was afterward known as the Six Nations.

The people of North Carolina were, in the main, honest and well meaning, and when not goaded by profligate rulers and unjust laws, quiet and peaceable. It is true there were many who had fled from other colonies to escape debts or the hand of the law; but a large portion of society was composed of sturdy, Christian men and women. Religion soon found a footing here as in the other colonies, though there was no resident clergyman in the colony before 1703. The Church of England was supported by taxation, but the Dissenters were in the majority. The Quakers especially became numerous, George Fox himself, the founder of the sect, having visited the place and made many converts.

¹ Fiske, "Old Virginia," Vol. II, p. 302.

In 1714 the lords proprietors sent out Charles Eden for governor, and he was the best and ablest governor the colony ever had. But on his death, eight years later, the colony again fell into unworthy hands. A period of great turbulence followed when, in 1729, all the proprietors save one having sold their interests to the Crown, North Carolina and South Carolina were separated and each was henceforth a royal colony.¹

Separation of
North and
South Caro-
lina, 1729.

Of the royal governors sent out after this date several were tyrannical or worthless; but the people increased rapidly in numbers. There was for many years a steady inflow of Germans from the Rhine by way of Pennsylvania, and, beginning about 1719, a still larger stream of Scotch-Irish from Ulster. During the first sixty-six years—the entire proprietary period—the people of North Carolina clung to the seaboard. But now the eastern slope of the Alleghanies was rapidly peopled, chiefly by Scotch-Irish and Germans, with a large sprinkling of shiftless “poor whites” from Virginia. The settlement of the region of the “back counties” had little connection with those of an earlier date on the coast, and the colony was practically divided into two distinct settlements with a broad belt of forest between them. The conditions of life were very different in the two. The back country was non-slaveholding, and the economic conditions were very similar to those of the northern colonies; while the coast settlements were slaveholding and were marked by all the characteristics of southern life, except the aristocratic feature.

The products of the colony were at first tobacco along the Virginia border, rice on the Cape Fear River, and grain, cattle, and especially swine in both these sections. But at length the great pine forests began to yield their wealth, and before the Revolution tar, turpentine, and lumber became the chief products of North Carolina.

Of all the thirteen colonies North Carolina was the least commercial, the most provincial, the farthest removed from European influences, and its wild forest life the most unrestrained. Every colony had its frontier, its borderland between civilization and savagery; but North Carolina was composed entirely of frontier. The people were impatient of legal restraints and averse to paying

¹ The price paid was about £50,000. Carteret had declined to sell. He was later granted for his share a strip of land just south of Virginia, sixty-six miles wide “from sea to sea.”

taxes; but their moral and religious standard was not below that of other colonies. Their freedom was the freedom of the Indian, or of the wild animal, not that of the criminal and the outlaw. Here truly was life in the primeval forest, at the core of Nature's heart. There were no cities, scarcely villages. The people were farmers or woodmen; they lived apart, scattered through the wilderness; their highways were the rivers and bays, and their homes were connected by narrow trails winding among the trees. Yet the people were happy in their freedom and contented with their lonely isolation.

SOUTH CAROLINA

North Carolina and South Carolina were twin-born. Though settled at different times by different peoples, both were included in the famous charter of 1663, both were intended to be governed by the Grand Model, and as they were not separated politically until 1729, their histories run parallel for many years, and much that we have said of the one will apply to her twin sister to the south.¹

It was the shores of South Carolina that Ribault, under the direction of the great Coligny, had attempted to settle with a colony of Frenchmen, but failed, and now, after a hundred years had passed, it was left for the English to lay the permanent foundations for a commonwealth. The first English settlement was made in 1670, when William Sayle sailed up the Ashley River with three shiploads of English emigrants from the Barbados, and they pitched their tents on its banks and built a town, which has since wholly disappeared. In 1671 Sir John Yeamans, whom we have met in North Carolina, joined the colony, bringing with him about two hundred African slaves, and ere this year had closed two ships bearing Dutch emigrants arrived from New York. Ten years after the first settlers arrived, a more favorable site for the chief town being desired, a point between the Cooper and Ashley rivers was chosen, and here Charleston was founded in 1680.

South Carolina differs from most of the colonies in not having had to battle against impending dissolution during its first years of existence, and from all the others in depending largely on slave labor from the beginning.

Popular government found a footing in South Carolina from the first. Scarcely had the first immigrants landed when a popular

¹ The original plan was to found but one colony. The terms North and South Carolina first began to be used about 1690.

assembly began to frame laws on the basis of liberty. Sayle was their leader and first governor, but he soon died and was succeeded by Yeamans, who ruled for four years, when he was dismissed for having enriched himself at the expense of the people. Yeamans was followed by John West, an able and honorable man, who held the office for nine years. In 1690 the notorious Sothel, who had been driven from North Carolina, came to South Carolina, usurped the government, and began his career of plunder; but the people soon rose against him and he was forced to flee. After this several of the governors were common to both North and South Carolina.

**Early govern-
ors of South
Carolina.**

No attempt was made during the early years of the colony to introduce the Fundamental Constitutions; but when, about 1687, a vigorous effort was made to do so, the people resisted it, basing their rights on the clause in the charter which conferred the right of making laws on the proprietors only "by and with the advice, assent, and approbation of the freemen." The people were determined in their resistance; they refused to be trampled by the heel of tyranny; their very breath had been the pure air of liberty. The contest covered several years, and the people won. That abortive "model" of government was at last set aside and no attempt was ever again made to enforce it in America.¹

Prosperity now began to dawn on the twin colonies as it had not done before. About this time came the wise Archdale as governor, and he was followed by Joseph Blake, a man of like integrity and wisdom, a nephew of the great admiral of that name. The close of the century was marked by the coming of the Huguenots to South Carolina. In 1598 the sovereign of France, "King Henry of Navarre," had issued the "Edict of Nantes," granting toleration to the Protestants or Huguenots of his kingdom. This edict was revoked in 1685 by Louis XIV, and the Huguenots were not only forbidden to worship God in their own way, but also forbidden to leave their country on pain of death. Many, however, probably half a million, escaped from the land of their cruel king and settled in various parts of the world. They were a noble and intelligent people, who "had the virtues of the English Puritans without their bigotry," and their

lina.**

¹ Except in 1698 when a fifth set of the Constitutions was drawn up and the proprietors instructed the governors to enforce it as far as they were able, but they had little success. MacDonal's "Documents," p. 150.

coming to America infused into colonial life another element of stanchness of character that was felt all through colonial days. Among their descendants we find such men as Paul Revere, Peter Faneuil, and John Jay. These people were at first coldly received on the shores of South Carolina, but in time they came to be regarded as a substantial portion of the population. It was Governor Blake that first recognized the worth of the Huguenot immigrants, and he secured for them full political rights.

Governor Blake died in 1700, and South Carolina entered upon a long season of turbulence and strife. Sir Nathaniel Johnson became governor in 1703, and the trouble began. His first act was to have a law passed by sharp practice excluding all Dissenters, who composed two thirds of the population, from the assembly. The people discovered the trick, and the next assembly voted by a large majority to repeal the law. But Johnson refused to sign their act. The assembly then appealed to the proprietors, but they sustained the bigoted governor. The people then appealed to the House of Lords and won their case, as they always will when they stand together. The proprietors yielded when the act of their governor met a royal veto from Queen Anne and when threatened with the loss of their charter, and the Dissenters were restored to their share in the government. The Church of England, however, was made the state church and so it continued to the time of the Revolution. The colony was divided into parishes, which became political, as well as ecclesiastical, divisions.

Hard upon this trouble followed an attack by a French and Spanish fleet of five ships and some eight hundred men upon Charleston; but the colonists were awake to their danger. They defended their city, and the fleet was driven away after losing its best ship and probably one third of its men. This was an echo of the war of the Spanish Succession, or Queen Anne's War, to be noticed in a later chapter.

The most distressing calamity that befell South Carolina in its youth was the Indian War of 1715. The Yamassee tribe, which had aided the whites against the Tuscaroras in North Carolina, now joined with other tribes and turned upon their former friends, and a disastrous war followed. The cause was chiefly an intrigue with the Spaniards of St. Augustine, who, in spite of the Treaty of Utrecht, by which the long war between Spain and England had come to an end, did all in their power to destroy the English settle-

ment. Another cause was that many Indians were indebted to the English traders, and they sought to avoid payment, and still another was that the remembrance still rankled in the red man's breast that many of his race had been kidnaped by the whites and sold into slavery. The war began in the usual way: the Indians fell upon the unsuspecting farmers with relentless fury, and nearly a hundred perished the first day. But the settlers were quick to fly to arms. The war lasted ten months. Four hundred whites perished; but the Indians were utterly defeated and the survivors driven from their homes into Florida. To meet the heavy expenses of the war the assembly issued bills of credit, or paper money, as North Carolina had done after its Indian war, and this brought further distress to the colony. At the time of this war Charles Craven was governor and he was one of the wisest and ablest governors of the period.

**Indian
war.**

Another convulsion, ending in a bloodless revolution, came next in the programme of South Carolina. The cost of the war had been so great that the people called upon the lords proprietors, who had derived a large income from the colony in quitrents, to aid in bearing the expenses. But the proprietors in their greed refused, and they refused to permit the assembly to raise money by import duties, or by selling vacated Yamassee lands. They also refused the rural freemen the right to vote in their own districts, requiring them to go to Charleston to vote. The people were exasperated; they rose in rebellion and appealed to the king to make South Carolina a royal province. Their request was granted; the charter was forfeited on the ground that the proprietors were unable to govern the colony, and in 1719 South Carolina became a royal colony; but, as related in our account of North Carolina, ten years yet elapsed before the proprietors sold out to the Crown and the two colonies were separated. The king first sent out the professional governor, Francis Nicholson, of New York, of Virginia, of Maryland. But we would cast no reflection on Nicholson; he was one of the best governors of the colonial era. Where others enriched themselves at the expense of the people, he reached into his own pocket for funds to foster education and to relieve the distressed.

Revolution.

From the time that South Carolina became a royal province its growth was rapid and substantial, and so it continued through the remaining half century of the colonial era. But the people did not show any great surfeit of gratitude to the king for relieving them

of proprietary rule. They contended with the royal governors, encroaching steadily on the royal power. In 1748 Governor Glen wrote the authorities in England that "the assembly disposed of almost all the places of office or trust," and the people, through the assembly, "had the whole of the administration in their hands, and the governor, and thereby the Crown, is stripped of its power."¹

In 1740 the colony suffered from a slave insurrection led by one Cato, but it was soon put down. The city of Charleston was burned this same year; but a new city, far more beautiful, rose from the ashes of the old. Indeed, Charleston was one of the most delightful of cities, even in the earlier times, as testified by Governor Archdale and other writers. The society resembled the cavalier society in England. "Hospitality, refinement, and literary culture distinguished the higher class of gentlemen."²

The earliest important product of South Carolina was rice, though it required a hundred years to bring the industry to perfection; to determine the best kind of soil and labor, and to invent

Rice. the machinery for harvesting, threshing, and husking.³

Wild rice was native in the South, but this was inferior to the cultivated rice introduced from Madagascar about 1693 by a sea captain, who gave a bag of seed to a South Carolina planter. Not many years passed till the Carolinas rivaled Egypt and Lombardy in furnishing rice for Southern Europe.

By the middle of the eighteenth century indigo became a strong rival of rice in South Carolina. Its culture is said to have begun

Indigo. through the experiments of a planter's daughter, a young girl named Eliza Lucas, who set out the plants on her father's farm. Many other products, as grain, furs, cattle, and the products of the forest, were exported from South Carolina, but not until a later generation was cotton enthroned as king.

Rice grows best in marshy ground and swamps, and its cultivation is peculiarly destructive to human life. The same is in a great measure true of indigo. These facts had much to do in shaping the economic and social condition of South Carolina. They made it the chief slaveholding community in America. No white man could long endure the malarial atmosphere of the rice swamps. Even among the blacks the death rate was very high, and their ranks had to be refilled constantly from Africa. But slaves were cheap. A

¹ Winsor, Vol. V, p. 334.

² *Ibid.*, p. 317.

³ Schaper, in American Historical Association Reports, 1900, Vol. I, p. 286.

strong black man could be purchased for forty pounds and, as he could earn near that amount in a year, the planter found it more profitable to work him to death than to take care of him.¹ Almost from the beginning the slaves in South Carolina outnumbered the whites; slavery became the cornerstone in the political system and so it continued to the time of the Civil War.

The people of South Carolina clung to the seaboard even longer than did those of their sister colony to the north. In 1715 some five hundred Irish came and occupied lands vacated by the Yamassees near Port Royal. But the back country was held by the Cherokees until 1755 when they made a treaty ceding this territory to the Crown. Soon after this a notable movement of the population began. Emigrants from Pennsylvania, from Virginia, and from North Carolina poured into this region in large numbers. The population in 1760 was estimated at one hundred and fifty thousand, three fourths of whom were slaves.

The character of society in the two Carolinas, except in the back counties, differed widely, from two causes: first, from a difference in the character of the settlers, but chiefly from the fact that one possessed a seaport, a metropolis, while the other did not. Many of the South Carolinians were men who had fled from religious persecution at home, as the Huguenots; while the class of restless men who always seek frontier life, because ill at ease in organized society, was much smaller than in North Carolina. But, as stated, the main difference arose from the fact that North Carolina had no important seaport, and therefore little direct communication with Europe or New England. Charleston, on the other hand, through its commodious harbor, carried on a brisk foreign trade. Here came ships from many lands— from Europe, the West Indies, and from New England— bringing the commodities and luxuries of civilized life. Here lived the wealthy planter, visiting but seldom his plantation where herds of black men toiled under the lash of the overseer. Most naturally the conditions in Charleston fostered the growth of aristocracy, while in culture and refinement the city came to rival Philadelphia and Boston.

Contrast of society in North and South Carolina.

GEORGIA

The last, as well as the first, of the English colonies planted in North America belongs to the southern group. Seventy-five years

¹ Fiske's "Old Virginia," Vol. II, p. 326.

had elapsed between the founding of Virginia and Pennsylvania, and twelve English colonies were now flourishing on the soil of North America. Then came a lapse of fifty years at the end of which Georgia, the last of the famous thirteen, came into existence.

The founder of Georgia was James Oglethorpe, who alone of all the colony planters lived till after the Revolution and saw the thirteen colonies become an independent nation. Oglethorpe is remembered in history chiefly as the founder of Georgia, but aside from this he was a man of much prominence. While still a youth he served in the European wars under Marlborough and Prince Eugene and witnessed the battle of Blenheim and the siege of Belgrade. Returning to England, he became a member of Parliament and took a high stand among his fellows, as he had done in the army. While in Parliament his attention was drawn to the miserable condition of the debtor's prisons, lately replenished by the bursting of the South Sea Bubble, and he devised the plan to transplant the unfortunate inmates to the wilderness of America.

A charter was granted for twenty-one years to a board of trustees for the land between the Savannah and Altamaha rivers and westward to the "South Sea." The new country was named Georgia, from George II who had granted the charter. The liberties of Englishmen were guaranteed to the colonists, and freedom in religion to all except Catholics. The object in founding the colony was threefold: to afford an opportunity to the unfortunate poor to begin life over again, to offer a refuge to persecuted Protestants of Europe, and to erect a military barrier between the Carolinas and Spanish Florida. Oglethorpe was chosen governor and with thirty-five

First landing in Georgia, 1733. families he sailed from England, reaching the mouth of the Savannah in the spring of 1733, and here on a bluff overlooking the river and the sea he founded a city and called it by the name of the river. The character of Oglethorpe's company was better than that of the men who had founded Jamestown a hundred and twenty-five years before, but inferior to the character of the first settlers of Maryland or of South Carolina. The year after the founding of Savannah a shipload of Salzburgers, Protestant refugees, a deeply religious people, sailed into the mouth of the Savannah and, led by Oglethorpe, they founded the town of Ebenezer. This same year the governor sailed for England and soon returned with more immigrants, among whom were

John Wesley, the great founder of Methodism, who came as a missionary, and his brother Charles, who came as secretary to Oglethorpe. Scotch Highlanders soon came in considerable numbers and settled nearest the Spanish border. George Whitfield, the most eloquent preacher of his times, also came to Georgia and founded an orphan school in Savannah.

Georgia was the only colony of the thirteen that received financial aid by a vote of Parliament—the only one in the planting of which the British government, as such, took a part. The colony differed from all others also in prohibiting slavery and the importation of intoxicating liquors. The settlers were to have their land free of rent for ten years, but they could take no part in the government. The trustees made all the laws; but this arrangement was not intended to be permanent; at the close of the proprietary period the colony was to pass to the control of the Crown.

Oglethorpe's military wisdom was soon apparent. In the war between England and Spain, beginning in 1739, the Spaniards became troublesome and the governor, this same year, made an expedition against St. Augustine with an army of over two thousand men, half of whom were Indians. The city was well fortified and he failed to capture it; but three years later when the Spaniards made an attack on the colony Oglethorpe, by the most skillful strategy, repulsed the enemy and drove him away.

Oglethorpe was governor of Georgia for twelve years when he returned to England. In four respects the settlers were greatly dissatisfied. They wanted rum, they wanted slaves, they greatly desired to take a hand in their own government, and they were not content with the land system, which gave each settler but a small farm that must descend in the male line. In all these points the people won. On account of these restrictions the colony grew but slowly and at the end of eighteen years scarcely a thousand families had settled in Georgia. The people claimed that the prohibition of liquors drove the West India trade away from them and at length the prohibition was withdrawn. As to slavery, it still had its opponents—the Salzburgers, the Scotch Highlanders, the Wesley brothers. But the great majority favored its introduction on the plea that slave labor was necessary to the development of the colony. On this side we find the great preacher, Whitfield, who went so far as to purchase a plantation in South Carolina, stock it with slaves, and use the proceeds for his orphan

**The four
wants.**

house in Savannah. His claim was that the negroes were better off in slavery than in their native heathenism. Parliament finally relented and in 1749 Georgia became a slave colony; but only under strict laws for the humane treatment of slaves.

In the matter of governing without a voice from the people, the trustees found it as impracticable as the promoters of the Grand Model had done in the Carolinas. Before their twenty-one years had expired they threw the matter up in discouragement, and in 1752 Georgia became a royal colony. The people now elected an assembly and the king appointed the governor. The right to vote was extended to Protestant freemen, with certain property restrictions. But the colony in one respect showed itself still benighted, as were all its twelve sisters, by denying the franchise to Roman Catholics.

After this change of government Georgia grew very rapidly, and by the time of the Revolution numbered some fifty thousand souls, about half of whom were slaves. Georgia in its later career presents no striking features differing from those of the other southern colonies. The English church was made the state church, but religious freedom was extended to all Protestants. The chief products were rice, indigo, and lumber, and there was a very lucrative fur trade carried on with the Indians. It was believed at first that the production of silk would become the leading industry, as the mulberry tree, which furnishes the natural food of the silkworm, grew wild in Georgia; but after a trial of several years the business was abandoned.

The social condition of Georgia resembled that of North Carolina. There were no schools, and the mails seldom or never reached the inland settlements. The people were mostly small farmers, with here and there a rich planter. There was little town life. Savannah was the only town of importance, and it was still a wooden village at the time of the Revolution. The roads were mere Indian trails, and the settlers saw little of one another. To the end of the colonial era Georgia was essentially the southern frontier of South Carolina, as North Carolina was of Virginia.¹

NOTE

The Pirates.— In our own age of international order it is difficult to realize what sway was held on the seas by the pirates two hundred years ago. These

¹ Fiske, Vol. II, p. 336.

pirates, called also buccaneers and filibusters, infested the American coast and the West Indies especially between 1650 and 1720 and they often numbered thousands. Many of these men were utterly without a redeeming feature of character. One of these fiends named Olonnois, having captured a Spanish crew of ninety men, beheaded them to the last man with his own hand. (Fiske, "Old Virginia," II, p. 349.) The most notorious, and one of the most desperate of the pirates was Henry Morgan who was at the height of his career about 1670. He captured whole towns on the Spanish-American coast and put the inhabitants to the sword. Many towns, however, purchased immunity from the buccaneers by paying them from time to time. Others welcomed them because they brought much gold and spent it lavishly. There was scarcely an American colony whose officials were not at one time or another in connivance with the pirates. But at the beginning of the eighteenth century there was a crusade against them. South Carolina took the lead and sometimes half a score were hanged in a day at Charleston. One of the most famous of the pirates was Captain William Kidd. The Earl of Bellomont, governor of Massachusetts, sent Kidd, hitherto an honest merchant, against the pirates in 1696. Reports soon came in that Kidd had turned pirate, and when he returned to Boston he was arrested and sent to London for trial. Kidd claimed that his crew had overpowered him and become pirates against his consent. It is believed, however, that he was guilty; but his trial was a very unfair one, his conviction resting on the testimony of two of his pals, who had turned king's evidence. The charge of the judge was strongly against him. He was hanged in London in 1701. *Cyclopedia of American Biography.*

CHAPTER V

COLONIZATION — NEW ENGLAND

WHEN North America was first settled by the English race the blessings of religious freedom had not yet fully dawned upon mankind. For a century the Christian world had struggled with the intolerant spirit of the Middle Ages. Much, indeed, had been accomplished, but the evolution was slow, and another century must elapse before one could stand in the broad daylight of religious liberty.

No people were more enlightened during this period than the English, yet England furnishes a striking example of religious persecution. The English Reformation is commonly dated from Henry VIII, but that monarch did little more than transfer to himself the power before wielded by the Pope. The seeds for such a revolt had been sown long before by John Wyclif. It was the leaven of Lollardism that brought about in the English heart the conditions which now made the work of Henry vastly easier than it otherwise could have been. After the death of Henry the religious mind of England swayed to and fro for a hundred years and more with the caprice of the sovereign and the ever changing condition of politics. At length, however, the country settled down to the maintenance by law of an Established Church; but there were many whose consciences could not be bound. There were many who attempted to purify the Church of England and were called Puritans, while still others separated from it and were called Separatists.

These Dissenters, or Nonconformists, as they were often called, were very numerous during the reign of James I. James was a narrow-minded pedant, and probably without any very deep religious convictions. Bred in the Presbyterian faith, he despised Presbyterianism because incompatible with his ideas of monarchy. Of the Puritans he said, "I will make them conform, or I will harry them out of the land." They refused to conform, and the cruel monarch did the latter—he harried them out of the land.

THE PILGRIM FATHERS

The Separatists¹ were less numerous by far than other classes of Nonconformists, yet they formed the advance guard of the great Puritan exodus from the mother country to the shores of New England. The town of Scrooby in Nottinghamshire was the center of a scattered congregation of Separatists whose minister was John Robinson and whose ruling elder was William Brewster, the village postmaster. After enduring many persecutions this little band of Christians, who now became "Pilgrims," escaped with difficulty from their native land to Amsterdam, Holland, whence a year later they removed to Leyden. Here they dwelt for eleven years, exiles for conscience' sake, earning their bread by the labor of their hands.

But the Pilgrims felt that Holland was not their home; they could not endure the thought of giving up their language and customs for those of the Dutch, nor were they willing to return to their native England, where religious persecution had not abated. They had heard of the colony of Virginia, and their thoughts were directed to the wilderness of the New World. Through the friendship and aid of Sir Edwin Sandys, and others, they secured a little money and purchased a little vessel, the *Speedwell*, hired another, the *Mayflower*, and determined to cross the wide waters to America, where they might worship God in their own way and still be Englishmen. Having secured a grant from the Virginia Company to settle in the Hudson Valley, and a promise from the king that he would not interfere with them, and having mortgaged themselves to a company of London merchants, they set forth with brave hearts to encounter the unknown perils of the sea and of the wilderness. The *Speedwell* proved unfit for the sea, and the little band reëmbarked from Plymouth, England, in the *Mayflower* alone. Their minister Robinson had remained in Leyden, and Brewster was the leader. He and John Carver were well advanced in years, but most of the company were in the prime of life. William Bradford was thirty and Edward Winslow but twenty-five. Before leaving Plymouth they were joined by Miles Standish, a sturdy soldier of thirty-six, who was in sympathy with the movement though not a member of the congregation.

¹ The Separatists were often called Brownists, from Robert Browne, the reputed founder of the sect. The sect, however, had its origin before Browne's time. See Eggleston's "Beginners of a Nation," p. 146.

The Pilgrims
in Holland.
1608-1620.

The "Pilgrim Fathers" with their wives and children, as borne by the *Mayflower*, numbered one hundred and two; one died on the voyage and one was born. After a perilous voyage of many weeks they anchored off the coast of New England, far from the point at which they had aimed, and here they were obliged to remain.¹ Being north of the bounds of the company that had granted them a patent, they occupied a country to which they had no legal right. Before landing they drew up a compact for the government of the colony and chose John Carver governor for the first year. This compact, the "first written constitution in the world," was an agreement by which they pledged themselves "solemnly and mutually, in the presence of God and of one another," to form a body politic, to frame such laws as they might need, to which they promised "all due submission and obedience."

The compact was signed by all the adult males, forty-one in number, on the 11th of November, the day on which the *Mayflower* entered Cape Cod harbor.² An exploring party went ashore, and they found the country bleak and uninviting in the extreme. The snow was half a foot deep, and the fierce wind blew the spray of the sea upon them where it froze until their "clothes looked like coats of iron." But the Pilgrims had not sought ease and comfort; they expected hardships and discouragements. They chose Plymouth harbor as a landing place, and on December 16, one hundred and two days after leaving Plymouth, England, they made a landing in the face of a wintry storm, on a barren rock since known as Plymouth Rock. Next they "fell vpon their knees and blessed y^e God of heaven, who had brought them ouer y^e vast and furious ocean."³

In a few days the men were busily engaged in building cabins, returning each night to the ship; but ere they were finished the

¹ There had been earlier attempts to colonize the New England coast. Gosnold had sailed into Buzzards Bay in 1602, but the would-be colonists who came with him went back in his ship to England. In 1607 George Popham, with a party, undertook to colonize the coast of Maine, but after the experience of one severe winter they all returned to England. Without attempting to plant a colony, Martin Pring had sailed into Plymouth harbor in 1603, and George Weymouth visited the coast of Maine in 1605.

In 1615 Captain John Smith with a company of sixteen men explored a portion of the New England coast, and it was he and not the Pilgrims, as is commonly stated, who gave the name "Plymouth" to the landing-place of the latter.

² New style, November 21.

³ The tradition of the famous "Landing on Plymouth Rock" should be revised, as the women and children remained in the ship for many weeks longer. See Ames's "The *Mayflower*, Her Log," p. 278.

wintery blasts had planted the seeds of consumption in many of the little band, and before the coming of spring more than forty of them, including the wives of Bradford, Winslow, and Standish, had been laid in the grave. And yet when the *Mayflower* sailed for England in the early spring, not one of the survivors returned with her, and it is a singular fact that nearly all who survived that dreadful winter at Plymouth lived to a good old age. Among those who died the first year was Governor Carver, and William Bradford, the historian of the colony, was chosen to fill the office, and he held the position for thirty-one years.

The coast at this point was unusually free from Indians, owing to a pestilence that had swept them away a few years before. During the winter they saw but few natives; but they found many Indian graves and here and there hidden baskets of corn. One day in March the people were astonished at the bold approach of an Indian who entered their village crying, "Welcome, Englishmen." This Indian, whose name was Samoset, **Samoset.** of the Wampanoag tribe, had learned a little English from fishermen on the coast of Maine. He went away and returned in a few days with another of his people named Squanto, who was to become a benefactor to the infant colony of white men. Squanto had been kidnaped some years before by traders and sold into slavery in Spain, but he was rescued and sent back to his own home by an Englishman, and from this time he was an unswerving friend to the English. He taught the Plymouth people many things about fishing and raising corn, and a few years later, **Squanto.** when dying, he begged them to pray that he might go to the Englishman's God in heaven. He could now speak the English language fairly well, and he informed the settlers that his great chief Massasoit desired to make a treaty of peace and friendship with them. The treaty was soon made and it was faithfully kept by both sides for more than fifty years. One object of Massasoit in making this treaty was to protect his tribe from his enemy Canonicus, the chief of the powerful Narragansett tribe. **Treaty with Massasoit.** Soon after this Canonicus, wishing to show his hostility toward the new friends of his old enemy, sent Governor Bradford a challenge in the form of a snake skin filled with arrows, but when the skin was returned filled with powder and shot, the forest king decided that it were better to make friends of the white men and did so. With the exception of a little skirmish in defense of a

party of traders at Weymouth, the Plymouth people were free from Indian wars till the rise of King Philip — more than a half century after the landing of the *Mayflower*.

The government of Plymouth was a pure democracy, all the freemen assembling in town meetings to choose their officers, make laws, and render judicial decisions. So it continued for eighteen years, when the growth of the colony rendered the meeting of all voters impossible and they established a representative government, each settlement sending two representatives; but the people retained, for twenty years longer, the Referendum — the power to repeal any law that their assembly might enact.

The colony of the Pilgrim Fathers had much to contend with and it increased but slowly. At the end of ten years' existence it contained scarcely more than three hundred people. They had to grapple with the most serious obstacles, — the severe climate, the unproductive soil, and the want of means to carry out what was necessary to be done. To these was added a lack of educational facilities to attract other settlers and a feeling in England against the Separatists, even among Puritans, who refused to join or sympathize with a body of men that had entirely severed their relations with the Church of England. These things had much to do with retarding the growth of Plymouth; but there was another drawback still more serious during the first six years.

The Pilgrims had, before leaving England, virtually mortgaged themselves to a company of "merchant adventurers" of London by forming with them a stock company. In this company every colonist above sixteen years of age engaged to serve the colony seven years, at the end of which each would receive the profits of one share of stock.¹ This arrangement necessitated a communistic mode of living at Plymouth, and Governor Bradford soon saw that the system was sapping the life of the colony.² At length he sent Miles Standish to England to have the contract canceled if possible; but in this he failed, and in 1627 the colonists purchased their freedom for a large sum which required seven years for them to pay. At this time the communal system was for the most part broken up, and each household was granted twenty acres as a private allotment.

The American people of to-day look back with pride to the sturdy

¹ Some contributed money, in addition to personal service, and received thereby a greater amount of stock. See Bradford's "History of Plymouth Plantation," (Boston, 1898), p. 57.

² *Ibid.*, pp. 162-163.

Christian character of the founders of our nation; and of the various rivulets of emigration that resulted in the earliest settlements, it is certain that the one holding the highest place of honor in the great American heart is the little band of Pilgrims who settled at Plymouth in 1620. With all their narrowness we must admire them. No state was ever founded by a more heroic people, and no people were ever moved by nobler motives. The colony continued to live its humble life in the forest in its own way until many years later it was merged into another, and finally became a part of the great state of Massachusetts.

MASSACHUSETTS BAY

Puritanism increased mightily in England during the later years of James I and the reign of his son Charles, notwithstanding the cruel persecutions. If the Dissenters hoped for better things by the change of monarchs, they were doomed to disappointment; for if James had chastised them with whips, Charles chastised them with scorpions. But King Charles with all his bigotry was not the moving spirit during his reign in persecuting Dissenters; for this we must look to his more bigoted courtier, William Laud, the Archbishop of Canterbury.¹ Laud was a man of remarkable energy. He was an extreme lover of law and order and a powerful supporter of the royal prerogative. In religion he clung with unyielding tenacity to the letter of the law, but had little conception of its spirit. How a man could, on principle and for conscience' sake, dissent from the Established Church was wholly beyond the comprehension of Laud, nor could he respect the one who did it. It was Laud above all men who visited bitter persecutions upon the Puritans in the reign of Charles, and it was Laud who, all unconsciously, did a great service for humanity — he caused the building of a powerful Puritan commonwealth in the New World. The great migration set in with the ascendancy of Laud; "it waned as he declined and ceased forever with his fall."²

It will be remembered that Puritan and Pilgrim were not synonymous terms. The Puritans, as stated before, were those who sought to purify the English Church and to modify its forms, while remaining within it. The word "Pilgrim," while it has acquired a religious

¹ Laud did not become archbishop until 1633, though he had long been an intimate adviser of the king.

² Eggleston, "Beginners of a Nation," p. 196.

meaning, was not an ecclesiastical term. It was applied only to the Separatists or Independents who settled at Plymouth because of their migration, first to Holland and later to America. But eventually the Puritans became Independents, not only in America, but also in England, and from them have grown the great religious denominations of the English-speaking world — the Congregationalist, the Baptist, the Methodist,¹ and to a great extent the Presbyterian.

During the ten years following the coming of the Pilgrims in 1620 there were numerous conflicting land-grants made in eastern New England, and various scattered settlements sprang up in the neighborhood of Plymouth. An enumeration of these would only be confusing to the reader.

We have noticed, in our account of Virginia, that King James in 1606 chartered two companies, the London and the Plymouth companies. The former succeeded in founding Jamestown; the latter, after various sporadic attempts, had in 1620 done nothing. Meantime, John Smith of Virginia fame had explored the coast of northern Virginia, as it was then called, made a map of the coast, and named the country New England. In 1620 the old Plymouth company secured a charter and was henceforth known as the Council for New England. Sir Ferdinando Gorges was its leading member. This charter was for the vast territory between the fortieth and forty-eighth degrees of latitude, the name New England being substituted for northern Virginia. This new company, in its effort to found colonies, made many land grants, one of which, in 1628, was to six men, of whom John Endicott was the chief. This same year Endicott, who was to play a leading part in the early history of Massachusetts, came out with a following of sixty and settled at a place called Salem, joining a small settlement already there. But the great Puritan exodus was yet to begin, and as a large number of Puritans were now ready to join the colony, it was deemed far more satisfactory to have a royal charter than a mere land grant. A charter was therefore secured from Charles I in March, 1629, confirming the land grant of 1628, namely, from three miles south of the Charles River to a point three miles north of the Merrimac, extending westward to the Pacific Ocean which was believed to be much nearer than it is.

¹ The Methodist church rose at a later date; but it had its origin in the same spirit that actuated the Puritans.

This new company was styled the Governor and Company of Massachusetts Bay in New England. The government was to be placed in the hands of a governor, deputy governor, and eighteen assistants, to be elected annually by the company.¹

This charter was very similar to the third charter of Virginia of 1612. But there was one remarkable point of difference: it did not provide, as did the Virginia charter, that the seat of government must remain in England. This omission led to the most important results in the building of New England. The year of the granting of the charter was the same in which the despotic king of England dismissed his Parliament and began his autocratic rule of eleven years without one. The political situation, therefore, as well as religious persecution, rendered the Puritan party extremely uncomfortable in England. Consequently, a small party of leading Puritans met at Cambridge in August of this year and adopted the "Cambridge Agreement," to migrate to Massachusetts, on condition that the charter and seat of government be transferred thither. To this the Massachusetts Bay Company agreed, and John Winthrop, a gentleman of wealth and education, one of the strongest and most admirable characters in the pioneer history of America, was chosen governor. Thomas Dudley was chosen deputy governor. A party of three hundred had been sent to join Endicott at Salem, and in April of the next year, 1630, Winthrop himself embarked, with a large company, for the New World.

The Pilgrims of 1620 were men of great zeal, but of little knowledge; many of the Puritans of 1630, however, were men of education and fortune,² members of Parliament, or clergymen of the most liberal education. Led by such men, the movement created a profound impression in England, and thousands now prepared to cross the western ocean and take up their abode in the forests of New England. More than a thousand came in 1630, and as the policy of the king and Laud became more intolerable, the tide increased in volume. The people came, not singly, nor as families merely, but frequently as congregations, led by their pastor.

Winthrop had brought with him the charter, and this was the first step in a very important process—the process of fusing the

¹ Provision was also made for "one great, general and solemn assembly" to meet four times a year.

² Chalmers's "Introduction," Vol. I, p. 58.

The great migration.

company and the colonists into one body. The second step, which soon followed, was the admitting of the colonists, or "freemen," to membership in the company. By this the company ceased to be a private trading company conducted for commercial gain; it became a body politic, a self-governing community. The condition of freemanship was made, not a property or educational test, but a religious qualification. The company was conservative and the process was slow. When there were 3000 settlers there were but 350 freemen, but the beginning of popular government was at hand. The ostensible object of the company, when it secured the charter, was to profit by trade; the real object was to establish a religious community with freedom of conscience, not for all, but for those only who were in religious accord with them. And the religious test for freemanship became the safeguard by which they secured for the future the end for which they had sacrificed so much. The matter of popular government, however, did not come without some friction, as we shall soon notice.

Some time after landing, Winthrop found a clear spring of water on a peninsula called Shawmut, and there he took up his abode, founded a town, and called it Boston. Newtown, now Cambridge, was the first capital, but Boston was soon chosen as the seat of government. Meantime, Roxbury, Charlestown, Watertown, Dorchester, and other towns were founded.

The various Puritan settlements were soon in friendly relations with the Pilgrims at Plymouth. They had formerly professed to despise the Separatists, but scarcely had the shores of England receded from their view when they felt a sense of freedom as never before,¹ and this feeling took a deeper hold on them until they found themselves no longer Puritans in the original sense, but Separatists pure and simple. Their churches were organized on the Plymouth plan, and were never connected in any way with the Established Church of England.

In the matter of local government, the old parish system of England, half ecclesiastical and half political, was reproduced in the town or township. But it soon lost its religious functions and became the political unit, with absolute control of local government; while in Virginia, where the old name was retained, the opposite ensued—the parish became a religious division, while the county became the political unit. This subject will be treated more fully in our chapter on Colonial Life.

**Local govern-
ment.**

¹ Eggleston, p. 213.

The general government was at first conducted by the governor, deputy governor, and the assistants. This caused discontent among the freemen and when, in 1631, a tax was assessed for public works, the people of Watertown protested with the argument that it was taxation without representation. The Watertown protest was heeded and the freemen, who had delegated their right of electing the governor to the assistants, now resumed that right, and to punish Winthrop for his aristocratic tendencies, they dropped him and elected Dudley governor. Thus, in New England, as well as in the South, the democratic tendency was apparent almost from the beginning. But the freemen soon found it inconvenient for all to meet in General Court, and they established the representative system. Each town sent two delegates¹ and these, with the governor and assistants, formed the General Court, which had legislative and judicial power. The freemen, however, continued to meet at Boston once a year to choose a governor and other officials; but as this practice became inconvenient, the proxy system was introduced, and this developed into the system of written ballots and sealed returns.² In 1641, the General Court adopted a code of laws known as the "Body of Liberties." Prior to this they had been governed by the common law of England and the precepts of the Bible.

**General gov-
ernment.**

The settlers of the Bay colony had their hardships, — the long, harsh winters, the unfertile soil, the lurking red man, often hostile, and other obstacles common to pioneer life, — but the growth of the colony was phenomenal. The great Puritan exodus continued for ten years, and by 1640 more than twenty thousand home seekers had sailed into the harbors of Massachusetts Bay. Such a movement of population had not been known since the Crusades of the Middle Ages. Strong houses soon took the place of the early built cabins; herds of cattle, goats, and swine covered the countryside, and ships were soon carrying loads of lumber, salt fish, and furs to the mother country.

No one was more astonished at the growing prosperity of the Puritan commonwealth than was the despotic king who had granted the charter. From the ignoblest of motives, therefore, though ostensibly because of complaints that had reached his ears from a few malcontents, who had been sent back to England by the Puritans, King Charles determined (1635) to annul the charter. A writ of *quo*

¹ After 1636 the delegates were from one to three according to population.

² Bishop's "History of Elections," p. 123 sq.

warranto was issued, and Sir Ferdinando Gorges, an uncompromising enemy of the Puritans, was to be made ruler of New England. But suddenly the opposition to the king became so threatening in England that he dropped the matter, and the charter was left unharmed. The people of Massachusetts had meantime shown a spirit of defiance similar to that by which their posterity, a hundred and forty years later, drew the attention of the world. They sent a messenger, in the person of Edward Winslow of Plymouth, to London to plead their cause, but at the same time they fortified their coast towns, collected arms, and trained militia. When, however, the king abandoned his designs against the charter, Massachusetts became practically an independent colony. In 1643 even the oath of allegiance to the Crown was dropped, and for a long period the colony was wholly without interference from royal authority. During the Civil War in England, and even during the period of the commonwealth under Cromwell, Massachusetts followed the same independent course as before.

The governorship, during the early years of the Bay colony, alternated between Winthrop and Dudley. But in 1636 Harry Vane, a young man who had arrived the year before, the son and heir of a high official in England, was chosen to fill the office. Vane was not a bad man, but he was radical, and his selection at a time when the wisest heads were needed to guide the ship of state proved to be unwise.

It was at this early period that two notable events mark the history of Massachusetts, and they were brought about by two notable persons, — Roger Williams and Anne Hutchinson. Williams was a young English clergyman of great strength of character and irrepressible enthusiasm. In his own land he found no rest, on account of

**Roger
Williams.**

his religious teachings, and in 1631 made his way with his young wife to New England. Scarcely had he landed when his troubles began anew. He seemed like an Ishmael — his hand against every man and every man's hand against him. He stirred up opposition at Boston, at Plymouth, and at Salem. He refused to take the oath of fidelity; he denied the right of the magistrate to punish for violations of the first table of the Decalogue; he denied the right of compelling one to take an oath; he denounced the union of Church and State, and pronounced the king's patent void, as the Indians were the true owners of the land. The discontent caused by Williams's doctrines became so serious that the General Court took hold of the matter and, after a second offense, ordered him to leave the colony within six weeks. He still

kept up the disturbance and it was decided to send him directly to England. Williams, hearing of this decision, made his escape into the forest and wandered about for fourteen weeks, spending his nights with the Indians, or in hollow trees, until eventually he settled in one spot and became the builder of a city and the founder of a state. 1636.

Roger Williams has been looked upon as an apostle of religious liberty, and so he was. His ideas were far in advance of his age, and some of them have since spread throughout the Christian world. We admire Williams for his sincerity, his adherence to principles. But he was impractical and wanting in tact. He was mainly right in the abstract, but wrong in his methods of application. He was wrong in preaching revolutionary doctrines, and urging them on a people who were not ready for them. Had the colonists followed him in declaring the royal charter valueless, their independence would soon have come to an end. The people of Massachusetts were proud of their theocratic government; they had labored and sacrificed much to obtain it, and probably it was the very best for them at the time. They cannot, therefore, be blamed for dealing with Williams as they did.

Scarcely had the affair of Roger Williams been settled when the colonists found it necessary to deal with another religious enthusiast. The men were in the habit of holding meetings, to which the women were not admitted, to discuss public and religious questions. Mrs. Anne Hutchinson, a woman of talent and eloquence, resented this insult to her sex, as she called it, and began to hold meetings at her own house. Here they discussed theological questions and put forth views at variance with those of the ministers and the magistrates, asserting that the latter were under a covenant of works while she and her followers were under a covenant of grace. The whole colony became agitated with the subject. John Winthrop and most of the magistrates and ministers opposed the new doctrines, while the young Governor Vane and others favored them. At length, after Winthrop had been reëlected governor and Vane had sailed for England, Mrs. Hutchinson was exiled from the colony. She made her way to a new anti-nomian settlement near that of Roger Williams, whence, after a sojourn of several years, she removed farther westward and was captured and murdered by the Indians.

Anne
Hutchinson.

About twenty years after the Hutchinson episode another and

more serious affair disturbed the peace of Massachusetts. The Quakers, a religious sect newly founded in England, began coming to Massachusetts in 1656. They refused to take an oath and many thought them Jesuits in disguise. Reports of their extreme fanaticism had reached the colonists, and the first arrivals were sent back. Laws were then enacted to prohibit their coming, but they came in defiance of the laws. At length a law was passed (there was but one majority in the lower house) pronouncing the death sentence upon any Quaker who, having been once banished, should return to the colony. To the astonishment of all, a few of the banished ones returned and demanded the repeal of the cruel law. Their fanaticism increased with the persecution; they walked the streets and entered the churches in a nude condition,¹ denouncing the laws and the Puritan form of worship. The authorities were perplexed. They had not expected to have occasion to enforce their harsh law; they had only meant to keep out a people whom they despised. But now they must actually put these people to death or yield to their demand and repeal the law. They met in solemn conclave and again decided by one majority to enforce the law. Four of the Quakers were hanged.

But public opinion did not sustain the magistrates and the law was repealed. Thus the Quakers, by sacrificing a few lives, won a victory, and they eventually settled down and became quiet, useful citizens, devoting much of their energy to the conversion of the Indians.

Another popular delusion, still more serious in its results, was what is known as the Salem Witchcraft. This we notice here though it belongs to a later period. The witchcraft craze began on this wise. Some young girls who were in the habit of reading witch stories imagined themselves bewitched, and began to accuse an old Indian woman and others of bewitching them. The tale was believed, and the excitement it caused spread like an epidemic. Hundreds of people, accused of being witches, were thrown into prison; nineteen were hanged, one, an aged man, was pressed to death, and two died in prison before the crazy superstition had spent its force.

It was not long until the people awoke to the horror of their delusion, and then they bitterly repented their folly — as a drunkard, in his sober moments, mourns over the deeds of his delirium. It is unjust for later generations to make this delusion a ground of re-

¹ Lodge's "English Colonies," p. 354.

proach upon the people of New England. Be it remembered that witchcraft was believed in at this time in every part of the civilized world, and thousands had been put to death in Europe for the same cause.¹ When it is remembered, further, that the religion of the Puritans was austere and somber, that the people were given to the morbid habit of introspection, that they ever had to battle with the dark, frowning forest and the wily Indian, and further that the age was a superstitious age — remembering all these things, we can only wonder that our forefathers were not more frequently the victims of some delusive craze than they were.

Massachusetts grew and prospered greatly, and by the time of the Restoration in England, in 1660, the colony had become a powerful commonwealth. The independence of the colony was largely due to the internal strife and frequent changes of government in England, which left little time and opportunity to deal with matters beyond the sea. But soon after Charles II became king he began to look with jealous eye upon the increasing importance of Massachusetts Bay. He accused the colonists of assuming powers not warranted in the charter and of violating the Navigation Acts, and he ceased not to harass them in various ways until the last year of his life, when he succeeded, on a writ of *quo warranto*, in having the charter pronounced void by the high court of chancery, and the liberties of the great Puritan commonwealth were temporarily at an end. Other matters of importance, as the New England Confederacy, King Philip's War, the career of Sir Edmund Andros, and the like, belong rather to the history of New England as a whole than to that of one colony, and will be treated in a later chapter.

Loss of Massachusetts charter, 1684.

CONNECTICUT

The other New England colonies were founded and built up by the same class of people that had settled Massachusetts, and they were actuated by much the same motives and ambitions. The history of the one as given is therefore in substance the history of the others. A brief notice, however, of the interior settlements is here in place.

The people of Massachusetts were not long in casting their eyes westward from their own barren coast to the fertile valley of the Connecticut River, which Adrian Block, the Dutchman, had discov-

¹ The law in England imposing death for witchcraft was not repealed for forty years after this Salem delusion.

ered some years before; and the result was that a new colony was soon flourishing on its banks. The father of Connecticut was Thomas Hooker, who had been driven from his native land by the persecuting Laud. He had arrived at Boston, in 1632, in the same ship which

**Thomas
Hooker.**

bore that other noted divine, John Cotton. Cotton became the Puritan pastor at Boston, and Hooker at the adjoining village of Newtown, now Cambridge. Hooker was not only a preacher of great power; he possessed the elements of statesmanship of the most modern type. Governor Winthrop, with all his admirable qualities, was an aristocrat to the core. He believed in the government of the many by the few, and it was he that influenced the Bay colony to create freemen out of the citizens but slowly, and to limit the suffrage to members of the

**Hooker and
Winthrop.**

Church. To this Hooker could not agree. A sharp controversy ensued between him and the governor of Massachusetts. To Winthrop he wrote that, "In matters which concern the common good, a general council chosen by all, to transact business which concern all, I conceive most suitable to rule and most safe for relief of the whole."

This was modern democracy at its best, nor was the sentiment ever surpassed by the writer of the Declaration of Independence. It was this disagreement with the powers of Massachusetts that led Hooker to dreams of pressing farther into the wilderness and founding another colony. Another cause for this desire, as some think, was that he was disturbed by the fact that his rival, John Cotton, had surpassed him in winning public attention. Cotton, the pastor at Boston, was the leading clergyman, the religious oracle of the colony; while Hooker, conscious of equal power and eloquence, believed that the insignificance of the town in which he was located, away from the harbor, in the midst of an unfertile region, had much to do with curbing his influence. But Hooker was a man of spotless character, and his ambition to extend his influence was an ambition to do good.

In the balmy days of June, 1636, the famous year of the founding of Providence and of Harvard College, Hooker and his entire congregation migrated on foot to the Connecticut Valley, driving their cattle before them. Here they found a post of Plymouth men and Dutch traders from the Hudson striving for the mastery; but Hooker ignored both, began the town of Hartford, and thus laid the foundations of a new com-

**Founding of
Connecticut,
1636.**

monwealth. Other congregations, from Dorchester and Watertown, soon followed and founded the towns of Windsor and Wethersfield. Within a year eight hundred people had found their way into the valley.

The government was a provisional one under a commission from Massachusetts, for a year, when the three towns, with the scattered settlers around, banded together and formed a little independent republic; and here, in a rude legislative hall, with no flare of trumpets, occurred one of the great events of early American annals — the production of the first written constitution in history that really created a government.¹ This constitution, known as the Fundamental Orders, brought forth little that was new; it modeled a government after that of Massachusetts, the chief departures being that a governor could not serve two successive terms and especially that no religious test be required for citizenship. It created a General Court with legislative, judicial, and administrative powers, while local town government had already been transplanted from the mother colony. It provided for a representative government; but sixty years passed before Connecticut had a bicameral legislature. No mention whatever was made by the Fundamental Orders of the British government or of any allegiance to the king. Here on the banks of the Connecticut was one of the birthplaces of modern democracy, with the needful elements of a nationality; here was a federal government, a prototype in miniature of the present government of the United States, which is to-day, as Mr. Fiske says, “in lineal descent more nearly related to that of Connecticut than to that of any of the other thirteen colonies.”

This constitution, with some alterations, was in force for one hundred and eighty years. John Haynes became the first governor of Connecticut. Springfield, founded about the same time, remained a part of Massachusetts.

Meanwhile John Winthrop, son of the Massachusetts governor, built a fort at the mouth of the Connecticut River, which was named Saybrook, after Lord Say and Lord Brook, under whose authority he acted. Of more importance was the founding of the New Haven colony, in 1638. Rev. John Davenport and Theophilus Eaton, a wealthy merchant from London,

**First written

¹ Neither the *Mayflower* compact, nor the agreements of the Narragansett communities had created a form of government. Osgood, in *Political Science Quarterly*, XIV, p. 261.

led a company of emigrants, mostly from Massachusetts, and pitched their tents on the northern shore of Long Island Sound. Here under a great oak Davenport expounded the Scriptures, saying that the people, like the Son of Man, were led forth into the wilderness to be tempted; and here they set up their government with the Mosaic law as their code adapted to their conditions, and with the closest union of Church and State. Eaton was made governor and was reelected annually for many years. Other towns, Milford, Guilford, and Stamford, soon came into existence, and these united with New

Haven, all taking the name of the New Haven Colony.

1643. Thus the river valley and the northern shore of the sound gradually became peopled with Puritan settlers. These two newborn colonies came near being strangled in their infancy. Their dangers were twofold—from the Dutch and from the Indians. The Dutch of New Amsterdam claimed the Connecticut Valley, and for many years there was desultory strife between them and the English settlers, when at length the latter succeeded in driving out the former.

But the greatest menace came from the Indians, and scarcely had these infant settlements been made when the people had to pass through an Indian war, the first in New England's history, and known as the Pequot War. The Pequot Indians had murdered a Virginia trader on the Connecticut River, and John Endicott marched against them with a body of soldiers. The Indians refused to give up the guilty ones, and Endicott burned two of their towns and destroyed their crops. The next spring the storm broke forth

The Pequot war, 1637.

in earnest. The Pequots, who had been murdering settlers during the winter, made every effort to enlist the powerful Narragansetts; but the alliance was prevented by Roger Williams. A company of about eighty white men, accompanied by about three hundred Indian allies of the Narragansett and Mohegan tribes, surprised the enemy in their fort at day-break one morning in May, and slew more than six hundred, but seven making their escape. A few months later another battle was fought, and the Pequot power was utterly broken. The chief, Sassacus, escaped to New York with a few followers, and was afterward murdered by one of his own subjects. Thus the whole tribe was practically exterminated, and for forty years afterward New England was free from Indian wars.

The people of Connecticut occupied their land for many years

without any title to it except what they had from the Indians. But in 1662 the younger Winthrop secured a royal charter for Connecticut from Charles II, the most liberal that had yet been given. The only restriction was that the laws should not conflict with the laws of England. This charter, creating a corporation on the place, was similar to that of Massachusetts, to which the king objected. One object in granting it, as in the case of Rhode Island, was to encourage rivalries to Massachusetts. The charter included the New Haven Colony; but that colony sternly resisted, and at length consented to become a part of Connecticut only when there was danger of its being absorbed by New York. But many of the New Haven people emigrated to northern New Jersey rather than come under the rule of Connecticut. John Winthrop now became the leading man in the colony, as his father had been in Massachusetts, and he held the office of governor for many years. After the serious trouble with King James II and with Andros, Connecticut, still retaining its liberal charter, was free from royal interference, and for a long period this "Land of Steady Habits" was the most peaceful and happy of all the English colonies in America.

RHODE ISLAND AND PROVIDENCE PLANTATIONS

We have noticed the flight of Roger Williams from Salem, and his wandering through the forest in search of a place to rest his head. He visited the good old chief Massasoit, who received him with great kindness, and Canonicus, who gave him a tract of land at the head of Narragansett Bay; and here on the banks of a little river he, with five followers, laid out a town and called it Providence. Soon after this William Coddington and John Clark, with a small following, settled on the little island of Rhode Island, then called Aquednok, which they purchased from the Indians, and founded the town of Portsmouth. These settlers were but twenty in number, but they adopted an agreement, chose Coddington governor, and put into motion the machinery of government. The Providence people had adopted a similar agreement, and thus they had two miniature independent commonwealths. These little settlements soon attracted people from Massachusetts. Mrs. Hutchinson came, and joined the Coddington settlement; but as she and Coddington could not agree, the latter left the place in 1639 and founded Newport on the same island. Newport and Portsmouth were united the next year,

and Coddington was made governor. These communities were founded on the principle of absolute freedom of conscience. Most of the settlers were of the type of the founders, antinomians and malcontents — men who could not endure the rigors of Puritan theology, law, and custom. In fact, their spirit of freedom was extreme, and it went wild. They could not agree among themselves, and for many years Rhode Island was the most turbulent of all the New England colonies.¹

Their “soul liberty,” as Roger Williams termed it, did not extend to civil matters. In Providence only heads of families could vote, all unmarried men being denied the right of suffrage. Later the suffrage was restricted to owners of land. The settlements, being without title to their land, sent Williams in 1643 to England to secure a charter. The king and Parliament being then at variance, he obtained his charter from a committee of the latter, and on his return was received with great enthusiasm. The charter was issued to the “Incorporation of Providence Plantations in the Narragansett Bay in New England.” It gave the people power to govern themselves, but was simply a charter of incorporation and contained no land grant.² The town of Warwick had now been founded, and the four towns were united under the new charter. But the union was short-lived. Coddington, in 1648, obtained a separate charter for Portsmouth and Newport. But this action was not satisfactory, and after a bitter quarrel of several years the four towns were again united under the charter secured by Williams.

After the Restoration, however, this charter granted by Parliament was not considered valid, and in 1663 Roger Williams secured from Charles II a second charter for “Rhode Island and Providence Plantations,” which confirmed the privileges granted by the first, made a land grant, and provided that no one be molested “for any difference in opinion in matters of religion.”² Here was the spirit of Roger Williams embodied in constitutional law, and it grew and expanded until it covered all Christendom. But with sublime inconsistency the legislature of the colony, some time after the charter was granted, declared that “Roman Catholics shall not enjoy the rights of free-men.” So liberal was this charter and so devoted to it were the people that it remained in force until after the Dorr Rebellion of 1842. Connecticut and Rhode Island enjoyed greater freedom of

¹ Winsor, Vol. III, p. 337; Lodge, p. 389.

² See Poore, Vol. II, pp. 15-94.

government than any other of the American colonies. They were called "two little republics embosomed within a great empire."¹

The colony of Rhode Island was never popular among its neighbors. As Doyle says, "Rhode Island was to New England what New England as a whole was to the mother country" — an outcast child that in the end brought glory to the parent state. The colony was excluded from the confederacy of 1643, and, moreover, it was harassed for years by the claims upon its territory by Massachusetts and Connecticut. But the people were plucky and they successfully defended their rights, and in spite of external encroachments and internal dissensions the colony grew in strength and importance, and its trade extended in every direction.

NEW HAMPSHIRE

The territory that afterward became New Hampshire was included in a grant of land in 1622 by the Council for New England to Sir Ferdinando Gorges and John Mason, both of whom had been interested in New England affairs from the beginning. The grant extended from the Merrimac River to the Kennebec.² The first settlement was made in 1623 by a Scotchman named Thomson, at the mouth of the Piscataqua River, and was called Little Harbor. A few years later Edward Hilton, a London fish merchant, founded Dover six miles up the river. He was soon joined by his brother William and several families, and later by others from Massachusetts.

A company called the Laconia Company was formed in England in 1629, and the next year it sent a vessel to the mouth of the Piscataqua, bearing a colony of settlers with Captain Neal as governor. Portsmouth, first called Strawberry Bank, was settled, and Governor Neal spent several years exploring the forest. He brought back a discouraging report to his company, and the settlement was left to shift for itself.

In 1638 a settlement was made at Exeter between the Piscataqua

¹ Chalmers's "Introduction," Vol. I, p. 109.

² A second patent to New Hampshire was granted to Mason November 7, 1629, and the name New Hampshire was used; ten days later another to Gorges and Mason for "Laconia," and two years later still another to the same for the land near the mouth of the Piscataqua. It would be confusing to the reader to attempt to remember all the land grants and patents in addition to the royal charters of those times. Many of the charters and grants conflict, and many make grants of lands whose bounds were unknown.

and Merrimac rivers by John Wheelwright, the brother-in-law of Mrs. Hutchinson, who had been banished from Massachusetts.

These little towns had come into existence, each independent of the others. None of them had a stable government, and there was constant discord and turbulence. In 1639 the towns formed an agreement to unite, but as Massachusetts claimed this territory, the towns at length agreed to come under her jurisdiction. The union was formed in 1641, the people of the settlements retaining liberty to manage their "town affairs," and each town was permitted to send a deputy to the General Court at Boston.

New Hampshire joins Massachusetts.

New Hampshire continued a part of Massachusetts until 1679, when the king separated them. He joined them again in 1686; but they were finally separated in 1691, and New Hampshire again became a royal province, the president and council being appointed by the Crown and the assembly elected by the people. Until 1741, however, the governor was but a lieutenant under the supervision of the governor of Massachusetts.

New Hampshire grew very slowly for many years. The chief cause of this was the fact that the heirs of Mason claimed the right to the land, and their infinite disputes and litigations with the settlers concerning the land titles repelled home-seekers. At last, after a hundred years of controversy, the Mason heirs were satisfied (1749) by the purchase of their claims.

In 1719 a colony of Scotch-Irish immigrants settled in New Hampshire and founded the town of Londonderry, so named from the city in Ireland from which they came. These people were thrifty, and they soon began an industry which they had learned in Ireland — the raising of flax and manufacturing of linen goods. The goods made by means of the old spinning-wheel in these humble cabins in the forests became famous over all New England, and even in the mother country.

After the middle of the eighteenth century a bitter dispute arose between New Hampshire and New York concerning the territory lying west of the Connecticut River, both colonies claiming it. One of New Hampshire's governors had laid out about one hundred and

Vermont.

forty townships in this disputed region. These were called the "New Hampshire Grants." But in 1765 the king decided the contest in favor of New York, and when the governor of that colony ordered the settlers, now several thou-

sand in number, to repurchase their lands, they rose in rebellion. Led by Ethan Allen and Seth Warner, both afterward famous in the War of the Revolution, the "Green Mountain Boys" fought off the New York officers, and in 1777 they declared the "New Hampshire Grants" an independent state under the name of Vermont. Fourteen years later Vermont became the first of the states, aside from the original thirteen, to enter the Union.

The two proprietors of Laconia had, in 1629, divided their possessions, Mason receiving the portion that became New Hampshire,¹ and Gorges the eastern portion, which was called Maine. It will be remembered that the Laconia patent was simply a grant of land from the Council for New England and not a royal charter. In 1639, however, Gorges received from Charles I a royal charter for Maine, from the Piscataqua to the Kennebec and one hundred and twenty miles inland. This charter was similar to that of Maryland, erecting a county palatine and proprietary province. But in 1677 the heirs of Gorges sold their rights to Massachusetts. The territory was now called the District of Maine, and under this name it was governed by the elder colony for nearly one hundred and fifty years, when, in 1820, Maine was admitted into the Union as a state.

We have now six important colonial settlements in New England, besides many smaller ones that are not usually accorded the dignity of separate colonies. Two of these six, Hartford and New Haven, had united and become one, and a similar union was to be effected between two others, Massachusetts Bay² and Plymouth, thus reducing the number to four.³ These four, Massachusetts, Connecticut, Rhode Island, and New Hampshire, were among the thirteen states, the other two New England states, Vermont and Maine, as we have seen, coming into the Union after the Revolution.

Having followed the settlements of the various New England colonies, let us now take a brief survey of matters that affected all these colonies, during what may be termed the second period of their existence.

¹ Mason spoke of it as New Hampshire in his will of 1635, after Hampshire in England, where he had held an important office; but the colony was not so called by the settlers before the restoration of Charles II. For a hundred years and more after the colony was settled the heirs of Mason made the settlers much trouble by claiming their lands.

² Massachusetts was called Massachusetts Bay for about a hundred and fifty years after its founding.

³ The union of Massachusetts and New Hampshire being temporary.

CHAPTER VI

NEW ENGLAND AFFAIRS

IMMEDIATELY after the close of the war with the Pequot Indians, there came a proposition from Connecticut for a union of the New England colonies, for the purpose of protection against their common enemies. After several years of negotiation, this proposition resulted in

THE NEW ENGLAND CONFEDERATION (1643-1684)

This union, the prototype of our present national Union, had its origin in the same town that gave to the world its first written constitution, and the same that, nearly two centuries later, became the seat of the famous Hartford Convention.

The articles were drawn up at Boston in May, 1643, by the leading men of New England. Among the representatives we find Haynes, governor of Hartford, Eaton, governor of New Haven, and from Plymouth and Massachusetts, Winslow and Winthrop. Four colonies only entered into the compact—Massachusetts (including New Hampshire), Hartford, New Haven, and Plymouth—no invitation to join the union being extended to Rhode Island, or to the scattered settlers of Maine. Rhode Island was left out for obvious reasons, and Maine, chiefly because most of the settlers were of the Established Church.

The name adopted was "The United Colonies of New England"; the union was a loose confederation, each colony retaining its home government as before. The main object in uniting was to protect themselves the better from their common enemies—from the Indians about them, from the Dutch on the west, the French on the north, and even from possible dangers from the mother country, which was, at that moment, in the throes of civil war. The union was merely a business arrangement; it did not conduce to arouse any particular attachments or patriotism. The business of the confed-

eration was to be transacted by a commission of eight men, two from each colony; a vote of six was required to carry a measure, and their vote was final. The expenses as well as the spoils of war were to be divided among the colonies, in proportion to their respective male populations between the ages of sixteen and threescore years. The articles provided for the delivering up of the runaway slaves and of fugitives from justice. This feature was the prototype of the Fugitive Slave Law of a later generation. Provision was made for the admission of other colonies, and that the union should be perpetual.

The coalition was unfair to Massachusetts, whose people, exceeding in numbers the population of the other three combined, could thus be drawn into war without their own consent. The only remedy lay in violating the compact, and this Massachusetts did ten years after it was made, by refusing to engage in a war with the Dutch, nor was there any power to coerce her. The union was very weak after 1662, when New Haven was joined to Connecticut; it continued, however, until 1684, when it was dissolved, after an existence of forty-one years. The coalition had been very useful to the people; it had given weight to their dealings with the Dutch, and it carried them through the most dangerous Indian conflict of colonial times. It also furnished a precedent for colonial union in later times.

KING PHILIP'S WAR

The relations of the colonists to the Indians were threefold: they traded with the Indians, they fought with them, and they preached the gospel to them. The early settlers carried on trade with the natives, because it was profitable, and because it was often necessary, in keeping the colonists from starvation. They sought from pure and honest motives to convert the red men to Christianity. The people of Massachusetts were foremost in this laudable ambition. The Reverend John Eliot, the Apostle to the Indians, labored for many years to give them the gospel, and translated the Bible into their language.¹ Eliot was assisted by many others, and many of the dusky inhabitants of the forest learned to bow down to the Christian's God. Nevertheless, conflict between the white men and the Indians was at times inevitable. The Indian could not understand the perpetual obligations of a treaty, nor could he discriminate between the honest settler who sought only to do him good, and the

¹ This translation is now a great literary curiosity. No man can read it, the language having perished with the people that used it.

conscienceless trader who defrauded him. Hence the two races were embroiled in wars from time to time, until the stronger race finally triumphed over the weaker, and took sole possession of the land. No other result, indeed, was possible. The two races were so unlike in their aspirations and their capacity for civilization that they could not dwell together, and barbarism fell before the onmarch of civilization.

Philip was the son of Massasoit, chief of the Wampanoags, who had made a treaty of friendship with the Pilgrims of Plymouth soon after their landing. This treaty had been faithfully kept for fifty years, but soon after the death of the aged chief, Philip and his tribe became estranged from the white settlers and began to prepare for war. No particular cause for the war that ensued is known. It was apparently a spontaneous outburst, rather than the result of a conspiracy of the Indians. It is supposed that the Indians, seeing the gradual encroachment of the white men upon the lands of their fathers, determined to drive the intruders from the country.

The war began with an Indian attack on the town of Swansea, in which several men, women, and children were killed. The cry of alarm instantly spread throughout the colonies and the effect was immediate. Three hours after the messenger had reached Boston a body of men was on the march from that city toward the Indian country. Other towns responded with equal vigor, and ere many days the New England forest rang with the crack of the musket and the war whoop of the savage. Had the Indians met their civilized foe in open battle they would soon have been annihilated; but their method was to attack the lonely farmhouse, the unprotected settlement, or to creep by stealth at dead of night upon the sleeping hamlet and with fiendish yells to fall upon their victims with the tomahawk.

Philip was a bold and powerful leader. He succeeded in enlisting the aid of the Narragansetts; but many of the Indians, especially those converted by Eliot, assisted the colonies. In the summer of 1675 the towns of Brookfield, Deerfield, and Northfield were burned by the savages, and many of the inhabitants perished. A band of soldiers led by Captain Beers was ambushed near Deerfield and almost all were killed. The Indians then attacked Hadley, and while the villagers were fighting desperately it is said that an aged man with flowing white hair and beard appeared and took command of the battle, and the savages were soon driven

**Attack on
Swansea.**

Goffe.

off. Many thought him an angel sent from heaven for their deliverance. It proved to be Goffe, the regicide, who had long been hiding in the town.¹

The following winter a thousand of the best men of New England marched against the savage foe; they surprised the Narragansett fort and put to death probably seven hundred people in a night. By the spring of 1676 the Indians were on the defensive. Philip became a fugitive and escaped his pursuers from place to place. At length he was overtaken in a swamp in Rhode Island by Captain Ben Church of Plymouth and was shot dead by one of his own race. The war soon ended; the Indians had lost three thousand men, their power was utterly broken, and never again was there a war of the races in southern New England. But the cost to the colonies was terrible. Thirteen towns had been laid in ashes; the wilderness was marked on every side with desolate farms and ruined homes. A thousand of the brave young men had fallen, and there was scarcely a fireside that was not a place of mourning. The public debt had risen to an enormous figure, falling most heavily on Plymouth, in proportion to population. In this colony alone the debt reached was £15,000, more, it was said, than the entire property valuation of the colony — but this debt was paid to the last shilling.

Death of Philip.

EDMUND ANDROS

Scarcely had this disastrous war come to an end when New England was called upon to face a new danger, and one from an altogether different source. The new foe was the British monarch. But this was not the beginning of the trouble. Fifteen years before, soon after Charles II had come to the throne, he became embittered toward the people of New England for refusing to give up the regicides, Whalley and Goffe, who had assisted in the putting to death of his father. This feeling of the king was heightened by the Massachusetts Declaration of Rights of 1661, which, while professing allegiance to the king, was regarded by him as an encroachment on his authority. This declaration is one of the memorable documents of the colonial era. By it the General Court declared any imposition contrary to their own just laws, not repugnant to the laws of England, “to be an infringement” of their rights. This was

¹ Goffe and his father-in-law, Whalley, had signed the death warrant of King Charles I, and after the Restoration they fled to America and lived in hiding till their death.

aimed, for the most part, at the Navigation Acts. It has the true American ring. Doyle, the British historian, declares that it seems to take us forward a hundred years, and that the "men of 1776 had nothing to add to or take from the words of their ancestors."

Commissioners were sent to the colony in 1664, and a long and fruitless controversy concerning violations of the Navigation Acts and other matters resulted. Massachusetts would probably have lost her charter at this period but for the war between England and Holland. A Dutch fleet had entered the Thames and was threatening London. This enlisted the full energy of the mother country, and New England's liberties continued for some years longer.

But the resentment of Charles against the colonies only slumbered; it was not dead. His hands being again free, he opened the old quarrel. Massachusetts was the chief object of his wrath, nor was it difficult for him to find grounds of accusation against the colony:

Massachusetts offends the king. her disregard of the Navigation Acts, her refusal to allow the English Church within the colony, her purchase of the territory of Maine;¹ and even the independent way in which the New England colonies had managed the Indian war was offensive to the Crown. It must be added, however, that there was a deep-laid scheme in England to destroy the separate colonial governments, and unite all New England, New York, and New Jersey under one government, so as to curb the growing spirit of liberty and to resist more effectually the French aggressions from Canada.

In 1676 Edward Randolph, an officer of King Charles, and an enemy of the colony, arrived in Boston. His complaints to the king of the neglect of the people of the colony to observe the Navigation Acts added fuel to the flame of the monarch's wrath. Randolph set about to build up a more liberal party, with Tory leanings, in Massachusetts; and it must be added, he was to some extent successful. Times had changed somewhat in Massachusetts Bay. The rigid Puritan rule of the preceding generation had softened. The Puritan party in England had waned, and no longer was it able to fight the political battles of its American offspring. Moreover, as men in the colony advanced in wealth and engaged in commerce on

¹ It was about this time that the heirs of Mason and Gorges laid claim to New Hampshire and Maine, repudiating the dominion of Massachusetts. They won their suit; New Hampshire became a royal province, but Massachusetts purchased Maine of Gorges's heirs for £1250. This act of independence greatly incensed the king.

the high seas, they were unwilling to incur the displeasure of England. From these causes and through the efforts of Randolph a moderate party grew up in Church and State, a party that preferred a moderate course, rather than one of open defiance to the king. The attitude of this party made it easier for the king in his charter-breaking campaign than it would have been had the people of the Bay been a unit in their opposition. But the great majority of the people were not with this new party. The colony as a whole resisted the royal encroachments at every step; but after a long legal struggle of nearly eight years she was forced to give up that noble charter which Winthrop had brought from England fifty-four years before, and which, as the guardian of their liberties, had imbedded itself deeply in the hearts of the people. With the charter went the independent government of Massachusetts, to return no more for a hundred years,¹ when a later generation was to rise in successful rebellion against the mother country.

**Loss of the
charter,
1684.**

In the year following this triumph of the Crown King Charles died, and his brother, James II, more tyrannical than himself, began his short and turbulent reign. He sent Sir Edmund Andros, who had made a record as governor of New York and New Jersey, to govern New England and also New York and New Jersey. Andros arrived late in 1686, and made his seat in Boston. The people knew and despised him, nor did his brief administration do aught to redeem his reputation. As a royal officer he was faithful, but he had little respect for the people. Instructed to make laws and levy taxes without a legislative body, by the aid of a council only, he was not slow in carrying out his instructions. He abolished the legislature and laid taxes at his pleasure; he even took from the local town meeting its power of taxing; he sent innocent men to jail and curbed the liberty of the press. This was exasperating in the extreme, but the acme was reached when the despotic governor attacked the titles to the land, pronounced many of them void, and exacted quitrents from the owners.

**Coming of
Andros.**

Andros demanded the charter of Rhode Island, and while the charter itself was placed beyond his reach,² the colony yielded readily to his sway. In Connecticut he was strongly opposed, but, appearing in person at Hartford, he demanded the charter. The assembly was in session and Andros present. The session was prolonged till late in the night, when suddenly

**October,
1687.**

¹ Except for two years, 1689-1691.

² Winsor, Vol. III, p. 339.

the lights were put out, as tradition informs us, and Captain Wadsworth seized the precious charter, escaped in the darkness, and hid it in the hollow of an oak tree, ever after known as the Charter Oak.

Andros's reign in New England was that of a despot. As Doyle says, "All those devices of tyranny which England had resisted, even where they were rare and exceptional, were now adopted as part of the regular machinery of government."¹ But there were breakers ahead. The spirit of liberty, fostered by a half century of self-government, could not be crushed in the New England heart. The people waited, and the opportunity came. While Andros was at the height of his power a copy of the declaration of the Prince of Orange to the English people reached the colony. Andros arrested the messenger that brought it, but he could not arrest the wild shout of joy that rang from one settlement to another, from the ocean shore to the river valley. Next came the news of the prince's landing on British soil, and this became the signal for the people to rise in rebellion against their oppressor. Andros was seized and sent a prisoner to England, and the people again breathed the air of liberty.

Soon after this the old charters of Rhode Island and Connecticut were declared restored, and they continued in operation till long after the Revolution. Massachusetts failed to recover her old charter, but was granted a new one. By this the territory of the colony was greatly extended through the addition of Plymouth, Maine, and Nova Scotia. But the ancient independence was gone. The laws were again to be made and the taxes levied by a legislature elected by the people; but every act must henceforth be sent to England for the royal approval, and henceforth the governor, his deputy and secretary were to be appointments of the Crown. The new charter also opened the door of citizenship, requiring a property test, but no longer a religious test. This feature destroyed forever that intimate union of Church and State that had characterized the first generation in Massachusetts Bay. The Church and State were still united, but the Puritan hierarchy had full control of the government no longer. One feature of this charter—the provision that the council be elected by the retiring council and the assembly—rendered it unlike any other American charter. From this cause Massachusetts is often placed in a class by itself as a semi-royal colony.

¹ "English Colonies," Vol. II, p. 305.

Regretfully we take final leave of Plymouth as a separate organization—Plymouth, the oldest of the New England colonies and destined in future ages to be held in memory the most sacred of them all. For seventy-one years the colony had sailed its little boat through storm and sunshine, but from this time its identity must be lost in that of Massachusetts. Of the original band of Pilgrims who had left England in the *Mayflower*, but two remained alive.¹

PURITAN LAWS AND CHARACTER

During the seventeenth century the combined New England colonies formed practically, if we except Rhode Island, one great Puritan commonwealth. They were under separate governments; but their aims and hopes, their laws, for the most part, and their past history were the same.

The people as a whole were liberty-loving in the extreme, but the individual was restrained at every step by laws that no free people of to-day would tolerate for an hour. Paternalism in government was the rule in the other colonies and in Europe, but nowhere was it carried to such an extreme as in New England. Here the civil law laid its hand upon the citizen in his business and social relations; it regulated his religious affairs, it dictated his dress, and even invaded the home circle and directed his family relations. One law forbade the wearing of lace, another of "slashed cloaths other than one slash in each sleeve and another in the back." The length and width of a lady's sleeve was solemnly decided by law. It was a penal offense for a man to wear long hair, or to smoke in the street, or for a youth to court a maid without the consent of her parents. A man was not permitted to kiss his wife in public. Captain Kimble, returning from a three-years' ocean voyage, kissed his wife on his own doorstep and spent two hours in the stocks for his "lewed and unseemly behavior."

In the matter of education the Puritans stood in the forefront. Many of the clergy were men of classical education, and through their efforts Harvard College was founded but six years after the great exodus began. Before the middle of the century Massachusetts required every township of fifty families to employ a teacher to educate the young in reading

**Early New
England
laws.**

**Founding of
Harvard,
1636.**

¹ The two survivors were John Cooke, who died in 1695, and Mary Cushman, who lived seventy-nine years after the famous voyage, dying in 1699. Mary Cushman, however, was survived by Peregrine White, the child born on the *Mayflower*.

and writing, while every township of one hundred families must maintain a grammar school. The other colonies soon followed with similar requirements.

But the most striking feature in the life of New England is found in its religion. The State was founded on religion, and religion was its life. The entire political, social, and industrial fabric was built on religion. Puritanism was painfully stern and somber; it was founded on the strictest, unmollified Calvinism; it breathed the air of legalism rather than of free grace, and received its inspiration from the Old Testament rather than the New.¹ There was a gleam of truth in the charge of Mrs. Hutchinson that the Puritans lived under a covenant of works. This was because they had not yet fully grasped the whole truth of divine revelation. No further proof of the legalistic tendencies of Puritan worship is needed than a glance at their own laws. A man, for example, was fined, imprisoned, or whipped for non-attendance at church services. He was dealt with still more harshly if he spoke against religion or denied the divine origin of any book of the Bible.² Laws were made that tended to force the conscience, to curb the freedom of the will, and to suppress the natural exuberance of youth — laws that could not have been enacted and enforced by a people who comprehended the full meaning of Gospel liberty, or had caught that keynote of religious freedom sounded by the ancient prophet and resounded by St. Paul and Luther, "The just shall live by faith."

Nevertheless there is no more admirable character in history than the New England Puritan of the seventeenth century. His unswerving devotion to duty, his unlimited courage based on the fear of God, his love of liberty and hatred of tyranny — these are the qualities that have enthroned him in the memory of the American people. We deplore the narrowness and intolerance of the Puritans; but they were less narrow and intolerant than the English and most of the Europeans of that day. They committed errors, but they were willing to confess them when they saw them. They banished Roger Williams as a disturber of the peace, not for his

¹ The Puritan conscience was painfully overwrought. Nathan Mather wrote that in his youth he went astray from God and did dreadful things, such as whittling behind the door on Sunday. Sometimes a child would weep and wail in the fear that it was not one of the elect and would go to hell.

² But such laws were not peculiar to New England. See the Toleration Act of Maryland, *supra*, p. 80.

opinions; but they bore witness to his spotless character. They executed a few Quakers, but confessed their error by repealing their own law. They fell into the witchcraft delusion, which was prevalent throughout Christendom at the time; but they were first to see the dreadful blunder they had made and they were not too proud to publicly confess it. Judge Sewall made, before a large congregation, a confession of his error as only a hero could have done; and he begged the people to pray "that God might not visit his sin upon him, his family, or upon the land." Such was a trait of the Puritan character that leads us to forget his faults and to admire rather than censure him.

New England developed steadily throughout the colonial era. The people were chiefly of the stanch yeomanry, the great middle class, of England. Many of them were men of fortune and standing in their native land. The people of Massachusetts were slow in reaching out from the seaboard; not till about 1725 did they begin to colonize the Berkshire Hills. The Connecticut Valley was more productive than any other part of New England, and the people of Connecticut were more purely agricultural in their pursuits than were those of any other portion, except New Hampshire. The chief industry of Rhode Island was trade, while Massachusetts was divided, agriculture and commerce holding about equal sway. Six hundred vessels plied between Boston and foreign ports, while the number of coasting vessels was still greater.

Manufacturing was carried on, but not on any great scale. Saw-mills and gristmills were numerous along the rivers, and they did a large business in preparing timber and grain for transportation. Hats and paper and other commodities were made on a small scale; but the most extensive manufacturing was carried on by the farmers and their families, who made many of the utensils for their own home use, as will be noticed in a subsequent chapter.

The stern Puritan customs were gradually softened, more rapidly in Massachusetts than in Connecticut, owing to the many Crown officers residing in Boston. The first attempts to introduce the Episcopal form of religion were sternly resisted, but at length it found a footing, though not in Connecticut till well into the eighteenth century. About 1734 a religious revival, started by Jonathan Edwards and carried on by George Whitefield, the evangelist, spread over parts of New England, and to some extent revived the waning Puritan religious fervor.

The population at the opening of the Revolution reached nearly 700,000, about 300,000 of which was in Massachusetts, including Maine. Connecticut contained about 200,000 people, New Hampshire some 75,000, and Rhode Island some 50,000.¹ All the colonies had negro slaves, but very few in comparison with the southern colonies. Probably there were not more than 15,000 slaves in all New England, of whom Massachusetts and Connecticut had the majority. Indented servants were slow in coming to New England, and when they came, their rights were guarded by salutary laws.

¹ See Lodge, p. 408.

CHAPTER VII

COLONIZATION — THE MIDDLE COLONIES

THE nine colonies whose early history we have traced were all established by Englishmen; but we have now to notice one, destined in future to be the most populous and wealthy community of them all, which was founded and controlled for forty years by a different people—the Dutch. The people of Holland,¹ after a long and terrible war with Spain, had won religious and political independence. With the fall of the Spanish Armada the naval power of the Dutch began to rise, and by the coming of peace in 1609, the Briton alone could rival the Hollander upon the sea.

The Dutch had taken possession of the Molucca Islands and had seized from Portugal the control of the Indian Ocean. Their navigators were unsurpassed in daring adventure. They traded with the Mongolian of the Orient and introduced the use of tea and coffee into Europe; they sailed around South America and gave Cape Horn its name, around the Cape of Good Hope and planted a colony in South Africa; they discovered, in 1606, the far-away continent of Australia, and later the islands of New Zealand and Tasmania. In their effort to find a north-east passage to China they sailed between Nova Zembla and the North Pole and reached a higher latitude than had ever before been reached by man. Their vessels also plowed the icy waters of the Antarctic seas, where they discovered dreary, unpeopled lands where human feet had never been.

As early as 1597 the Dutch made voyages to the West Indies, but it was left for an Englishman in the employ of the Netherlands to make the one and only discovery in the New World by which that nation is remembered. The Dutch East India Company, a great organization trading with the Orient, was exceedingly anxious to find a shorter passage to the China seas. It sent Henry Hudson in search of a northeast passage, but Hudson, after a vain attempt

¹ Holland was the most important state of the Netherlands, and the term is often used for the whole country.

covering several months, turned his little vessel to the waters of the West. The continental character of southern North America was known through the discoveries of De Soto, Coronado, and De Vaca; but the northern portion of that continent was still believed to be an open sea through which a passage to the Orient would yet be found, and it was this delusion of a hundred years that brought Hudson to the western world. He carried with him a letter from his friend, John Smith, with whose exploits in Virginia every reader is familiar. Smith informed Hudson of his exploring the Chesapeake the year before and of his belief that the coveted passage might be found a little farther northward. Hudson now sailed down the New England coast, and in September, 1609, he entered the broad and beautiful river that bears his name. He sailed up the river to the site of Albany, and the impressions he received from the majestic beauty of the palisades, the kindly treatment of the natives, and the many-colored forest, robed in its autumnal foliage, led him to write that it was "as fair a land as was ever trodden by the foot of man."¹

Hudson had also sailed into Delaware Bay, and in consequence of his discoveries Holland laid claim to the valleys of the Hudson and the Delaware, then called the North and South rivers, and the country between them was named New Netherland. Trading posts were soon established on Manhattan Island and up the Hudson, but nothing was done at this time toward planting a permanent colony.² The Dutch West India Company was chartered by the States-General of the

¹ But Hudson was not the first white man to enter the New York Bay. The bay and river had been discovered by Giovanni Verrazano, a Florentine in the employ of the French king, as early as 1524, and again the following year by the Spaniard, Estevan Gomez. After that French vessels frequently ascended the Hudson as far as Albany, trading with the Indians, but their voyages had ceased and were well-nigh forgotten when Hudson rediscovered the river. (See Fiske's "Dutch and Quaker Colonies," Vol. I, p. 68 sq.) While Hudson was exploring the Hudson River, Champlain was not far away, exploring the lake that bears his name, and John Smith was bartering with the Indians in the wilderness of Virginia (*ibid.*, p. 96). Hudson, returning, was detained in England by King James, who determined that so great an English voyager should no longer be employed by foreigners. The next year (1610) Hudson set forth in an English ship, and while in the great bay, afterward called by his name, his mutinous crew set him adrift, with his son and a few others, in an open boat, while they returned to England. On arriving, the crew were sent to jail and an expedition sent to search for Hudson, but the great navigator was never again seen nor heard of.

² In 1614 Hendrick Christiansen built Fort Orange near the site of Albany. Adrian Block explored Long Island Sound, and Cornelius May sailed into the Delaware Bay. At the same time a few traders had settled on Manhattan Island.

Netherlands in 1621. It was a gigantic monopoly (successor to a short-lived company called the New Netherland Company) to which was given control of all Dutch navigation on the coasts of Africa and America. This company was given very extensive commercial and governmental powers, but it was answerable to the home government.

It was three years after the landing of the Pilgrim Fathers at Plymouth that this company sent a small Dutch vessel, with some thirty families, chiefly Walloons (Dutch word for strangers), Protestant refugees from Belgium, to the mouth of the Hudson. A few of them debarked at Manhattan, but the majority sailed up the Hudson and settled at Fort Nassau, later called Fort Orange, now Albany. Almost simultaneously with this the Dutch built Fort Nassau on the Delaware, just below the present city of Camden, a few Dutch families settled on Long Island, and some Dutch traders established a post on the Connecticut River at the site of Hartford. The Dutch had laid claim to the entire vast region between Chesapeake Bay and Cape Cod, through the discoveries of Hudson and Block, and by these settlements they were making good their claim.

The English also claimed this whole territory; but as the Thirty Years' War was raging in Germany, and the Spanish war cloud was darkening over the British Isles, it was thought best not to make an enemy of Holland. On the other hand, the Dutch and British entered into a defensive alliance against Spain. This continued for several years, during which the Dutch on the Hudson were safe from English interference. At the end of this period came the great internal conflict in England—the strife between Charles I and the Puritans, the Civil War, the execution of the king, the dictatorship of Cromwell—covering in all nearly forty years; and during these forty years the Dutch were left in control of the Hudson Valley; then came the reckoning, as we shall see on a later page.

The first director of the Dutch colonies was Cornelius May; but in 1626 Peter Minuit was appointed to this office, and, arriving at Manhattan, he purchased the entire island of the Indians, some twenty-two thousand acres, for twenty-four dollars' worth of beads and ribbons. Perhaps no other equal area in the world is now worth so vast a sum of money as Manhattan Island. Minuit built a fort at the southern point and called it

NEW AMSTERDAM

Thus began the great metropolis of the New World, now New York City. The government of the new colony was carried on by

Governor, or "Director General," Minuit and a council of five appointed by the company in Holland. It was very similar to the government of Virginia before the first House of Burgesses was elected. The people had no voice whatever in their own government. Because of this and of the fact that in Holland the people enjoyed peace and religious liberty the migration was slow, and at the end of five years but three hundred people lived on Manhattan Island. The company thereupon offered great inducements to attract colonists. It issued its charter of "privileges and exemptions" (1629), by which the patroon system was established. Under this system any member of the West India Company who would bring or send at least fifty settlers fifteen years of age or over, was granted an estate of sixteen miles frontage on one side of a river or bay, or eight miles on each side of a river, and as far inland "as the situation of the occupiers will admit." The Hudson Valley was soon dotted with these estates, and thus was planted in America a feudal system very similar to those of the Old World.¹ The patroon was bound to provide a farm ready stocked for each of his tenants, and to provide a schoolmaster and minister of the gospel for each settlement. He had full control of the government and courts. The tenants were temporarily serfs, as they were obliged to remain on the land for ten years. They were also obliged to sell their produce to the patroon, to grind their corn at his mill, and, after a certain time, to pay him a small annual rent. The most noted of the patroons became the founders of the great families, afterward so prominent in New York — the Van Rensselaers, the Schuylers, the Livingstons, and others.² The company **Van Twiller succeeds Minuit, 1632.** and patroons were soon quarreling, and the dispute was carried to the States-General. One result was the recall of Minuit, who was accused of favoring the patroons. He was succeeded by Wouter van Twiller, who, after five years of misrule, in which he enriched himself and wasted the company's money, was recalled. William Kieft then became governor.

Up to this time New Netherland had not attracted the home

¹ The patroons also made settlements on the Delaware, but these did not flourish and were short-lived.

² These great estates, transmitted from generation to generation, were held in the same families for more than two centuries. On the death, in 1839, of Stephen van Rensselaer, one of the greatest landholders, his tenants refused to pay rent to his successor, and hence arose the anti-rent riots in New York. The courts decided in favor of the tenants in 1852.

seeker. The best land had been occupied by the patroons, and the settlers were scarcely more than servants. The company had held, or attempted to hold, the monopoly of the fur trade. But now the trade, as also the cultivation of the soil, was thrown open to all, while the patroon privileges were greatly restricted. The effect was magical. People came from New England; Redemptioners¹ from Maryland and Virginia; peasant farmers from continental Europe; the rich and the educated, as well as the poor, from various parts of the world came, though not in large numbers, to the valley of the Hudson, and made it their permanent home. It is said that in 1643 no less than eighteen languages were spoken in New Amsterdam — and the great city into which it has grown has never since lost its cosmopolitan character.

Kieft was a bustling, energetic man, but he was an autocrat and a tyrant. He was governor for about ten years and they were years of storm and disorder. He quarreled with the Swedes on the Delaware, with the English on the Connecticut, and with the Indians on all sides. Before his time the Dutch had lived at peace with the Indians and had profited greatly by the fur trade; but Kieft was wanting in discretion and capacity, and disastrous Indian wars marked his governorship.

When about to engage in an Indian war this autocratic ruler found it necessary to consult the people. He thereupon called an assembly of the heads of families, and these chose a board of Twelve Men, with De Vries, one of the best men in the colony, as its chairman, to advise with the governor. This improvised Parliament authorized the raising of money for the war and demanded that the people be permitted to elect the governor's council.

Kieft agreed reluctantly, but soon forgot his promise and resumed his despotic rule. His treacherous policy with the Indians caused a general uprising of the Algonquin tribes and many were the bloody massacres in the country around. Among the victims was Mrs. Anne Hutchinson, who had been driven from Massachusetts, with all her large family, except a little granddaughter who was made captive. The very existence of the Dutch colony now hung in the balance, and it might have been annihilated but for the coming of an Englishman from Massachusetts — John

¹ Redemptioners were persons who were sold into service for a certain number of years as payment for their passage across the sea. Many of these, on gaining their freedom, preferred to remove to another colony, away from the scenes of their servitude.

Underhill, hero of the Pequot War. Underhill, with an army of one hundred and fifty brave Dutchmen, fell at midnight on the Indian stronghold in the mountains north of Stamford, and put seven hundred warriors to the sword before daybreak. This broke the Indian power, brought peace, and saved the colony of New Netherland.

But peace did not come to the hot-headed governor. Again he was obliged to call an assembly — Eight Men this time. But no more could he agree with them than formerly with the Twelve Men. When they protested against his methods of taxation, he lost his temper. "In this country I am my own master and may do as I please," said the irate Kieft. But the people were exasperated and in their behalf the Eight Men appealed to the States-General. They blamed Kieft for the pitiful condition of the colony, begged that a new governor be sent them and that the people be given some voice in the government, or that they be permitted to return with their wives and children to their dear fatherland. This petition had some effect. Governor Kieft was dismissed by the company, and Peter Stuyvesant, the last and most famous of the Dutch governors, became his successor. Kieft sailed for Holland, but the vessel was wrecked at sea, and the fallen governor was among the lost.

Stuyvesant was a sturdy, self-willed, obstinate old fellow, with little culture and much strength of character. He was a man of great energy and no doubt his intentions were honorable; but he

Peter Stuyvesant, 1647-1664. was a born autocrat, had no sympathy with democracy and no power to read public opinion. He was an experienced soldier and had lost a leg in battle. With all his faults he was a vast improvement over Van Twiller and Kieft. But he was never popular, and on one occasion the people demanded his recall, but the company refused to grant their request.

The government of New Netherland had been thus far almost a despotism, and its chief object in existing was to enrich a company of traders. But the settlers now determined to demand their rights — a share in their own government. The more were they urged to this step when they compared their own condition to that of the self-governing English colonies about them. The haughty governor

was forced to yield, and he chose **The Nine Men, 1647-1651.** Nine Men as his counselors, from a larger number selected by the people. These men protested against the high taxes and the heavy export duties, and they petitioned the home government to cancel the company's charter and grant the colony a repre-

sentative government similar to that enjoyed by the people in Holland. The petition for popular government was reluctantly granted by the company; but so skillfully did the imperious old governor manage the election that he succeeded in retaining almost the entire governing power in his own hands. When the iron-willed governor at length permitted an assembly of delegates from a number of the towns to convene, he sat with them in the legislative hall, where the loud stamping of his wooden leg on the floor warned them when matters were not going as he desired. After a session of but four days he dissolved the assembly, and for ten years (1653-1663) there was no meeting of the representatives of the people.

The population of New Netherland increased slowly till 1653, when there were two thousand residents, eight hundred of whom belonged to New Amsterdam, which had been incorporated that year. About this time a book describing the colony was published in Holland, and it created a great interest among all classes. From this time a stream of emigration poured into the Hudson Valley, and by 1664 the population reached ten thousand, having increased fivefold in eleven years.

Governor Stuyvesant, however, is remembered more on account of his relations to the English and the Swedes than for his domestic affairs. After two or three years' dispute with the people of New England, he agreed with them to fix the western boundary of Connecticut about where it now is, and the Dutch from this time ceased to disturb the peace of the Connecticut Valley. But of greater importance was Stuyvesant's dealings with the Swedes who had settled on the Delaware about the time that Kieft became governor of New Netherland. Both banks of the Delaware were claimed by the Dutch, and Stuyvesant received authority from Holland to take possession of the Swedish settlement. In 1655 he entered the Delaware with six hundred men in seven ships. The Swedes had no power to resist such a force; they yielded readily, and New Sweden passed into the hands of the Dutch.

The governor, returning home, found his people engaged in an Indian war, brought about by a Manhattan Dutchman, who shot a squaw for stealing peaches from his orchard. He soon brought it to an end, but the Indians were restless, and in 1658 the war again broke out and continued at intervals for five years.

Meantime Stuyvesant turned his attention to religious matters; he determined to enforce uniformity of worship according to the

Dutch Reformed Church. He persecuted Lutherans, Baptists, and Quakers without mercy, until public opinion, supported by the company, called a halt and forced him to desist. Seventeen years had passed since the self-willed governor had begun his reign; but the time of reckoning was at hand, and Dutch rule in America was drawing to a close.

NEW YORK

For more than three centuries England and Holland had been the closest of friends; but now, at the close of the long and bloody Thirty Years' War, which ended with the Treaty of Westphalia in 1648, the power of Spain was crushed, and the Dutch, no longer having anything to fear from his Catholic Majesty, rose to dispute with the English the dominion of the seas. This brought about an unfriendly rivalry between the two nations, and the unfriendliness was increased by the fact that the Dutch of New Netherland traded freely with the English colonies. They carried great quantities of Virginia tobacco to Holland, and thus at least £10,000 a year was lost in customs duties to the British government. The first Navigation Law, 1651, was aimed largely at the Dutch trader, but the wily Dutchman ignored the law and continued as before. This was one cause that determined the English on the conquest of New Amsterdam. Another, and probably the chief one, was that the Dutch colony on the Hudson separated New England from the other English colonies and threatened British dominion in North America.

The English claimed New Netherland on the ground of the Cabot discoveries; and Charles II now, 1664, coolly gave the entire country, from the Connecticut to the Delaware, to his brother James, Duke of York, ignoring the claims of the Dutch colony, and even disregarding his own charter of two years before to the younger Winthrop. Richard Nicolls of the royal navy set out with a small fleet and about five hundred of the king's veterans. Reaching New England, he was joined by several hundred of the militia of Connecticut and Long Island, and he sailed for the mouth of the Hudson.

Stuyvesant had heard of the fleet's arrival at Boston, but he was made to believe that its object was to enforce the Episcopal service upon the Puritans of New England, and so unsuspecting was he that he went far up the river, to Fort Orange, to quell an Indian disturbance. Here he was when informed that Nicolls was moving toward New Amsterdam. Stuyvesant hastened down the river with all speed,

arriving at New Amsterdam but one day before the English fleet hove into view. Nicolls demanded the surrender of the fort. Stuyvesant refused; he fumed and fretted and swore and stamped his wooden leg. He tore to bits a conciliatory letter sent him by Nicolls. He mustered his forces for defense. But the people were not with him; they were weary of his tyrannical government in which they had no part, weary of enriching a company at their own expense, and the choleric old governor had to yield. The fort was surrendered without bloodshed; New Amsterdam became New York, after the Duke of York; the upper Hudson also yielded, and Fort Orange became Albany, after another of the duke's titles, and all New Netherland, including the Delaware Valley, passed under English control.

**Surrender of
New Amsterdam,
1664.**

By what right Charles II seized New Netherland is probably known to kings and rulers, but not to the humble historian. Queen Elizabeth had laid down the postulate that mere discovery, without occupation, did not constitute a right to new lands. This was a good rule when applied to Spain to refute her claims to North America; it was another story when applied to the English concerning the Hudson Valley. But the English deftly evaded the difficulty, to their own satisfaction, by claiming that the Hudson Valley was part of Virginia as given by James I, in 1606, to two companies. This tract had been settled at both ends,—on the James River and the New England coast,—and why should a foreign power claim the central portion because not yet occupied? Thus argued the English, and their argument won because sustained by force of arms. And yet, the providential hand may easily be seen. The conquest of New Netherland was scarcely less important than was the conquest of New France, a century later, on the Plains of Abraham. It all belonged to the preparation—not for British dominion in North America, but for the dominion of future generations that were to occupy the land. Before their power England was yet to go down, as New Netherland and New France first went down before hers. Thus England, all unwittingly, became the instrument in preparing the way and fighting the battles for a nation that was yet to be born.

It is interesting to note the later career of Peter Stuyvesant. After a journey to the fatherland to vindicate his course, he returned to New York and made it the home of his old age. Here on his farm, or "bowery," now bounded by Fourth Avenue and the East

River, by Sixth and Seventeenth streets, New York City, amid the scenes of his former strife and turmoil, he spent a few quiet, happy years. A venerable figure was the aged Dutchman, and many who had hated him before now learned to love him. He and Governor Nicolls became warm friends, and many a time they met and drank wine and told stories at each other's tables. In 1672 this last of the Dutch governors died at the ripe age of eighty years, and his body was laid to rest at the little country church near his home—at a spot now in the heart of the vast metropolis, whose population is ten times greater than that of all the North American colonies of that day.

A short war between England and Holland followed the conquest of Nicolls, and the Dutch sailed up the Thames River and visited fearful punishment on the English, though they did not win back New York. But nine years after the Nicolls victory, we may say by anticipation, the two nations were again at war, and a Dutch fleet reconquered New York and took possession of the Hudson Valley; but by the treaty of peace the next year the country was ceded back to the English, and Dutch rule ceased forever in North America.

At the time of the Nicolls conquest the little city at the southern point of Manhattan contained some fifteen hundred people, and the whole province about ten thousand, one third of whom were English. The colony now became a proprietary colony, but as the proprietor afterward became king of England, it was transferred to the list of royal colonies. Nicolls became the first governor. He was able and conscientious. The rights of property, of citizenship, and of religious liberty had been guaranteed in the terms of capitulation. To these were added at a later date equal taxation and trial by jury. In one year the tact and energy of Nicolls had transformed the province practically into an English colony. After

Nicolls. four years of successful rule Nicolls returned to England—and a few years later, as he stood by the side of his master, the Duke of York, at the battle of Solebay, his body was torn to pieces by a cannon ball.

The English inhabitants of New York had gladly welcomed the change of government, and even the Dutch had made little resistance, as they were tired of the tyrannical rule of the company. If there was any bitterness against English rule remaining, it was wholly removed in 1677 by an event of great importance to both hemispheres—the marriage of the leading Hollander of his times, the

Prince of Orange, to the daughter of the Duke of York, the two afterward to become joint sovereigns of England as William and Mary.

It is interesting to note here the transition in this colony from Dutch to English rule. It has been claimed by a few writers that our institutions are derived from Dutch more than from English sources; but a little study into this subject will easily prove the contrary. The people over whom Nicolls became governor in 1664 were composed of three separate communities, each different from the others in its government: the Dutch settlers on the Hudson, the settlements on the Delaware, and the English towns that had grown up under Dutch rule on Long Island. Now these English towns during the period of the Dutch supremacy enjoyed far more liberal local government than did the Dutch towns on the Hudson. And in this one respect Kieft, who encouraged popular government among the English towns, was wiser than Stuyvesant, who opposed it.¹ These English towns held their popular meetings, chose their officials, and transacted other business after the manner of the New England towns; while in the Dutch towns there were no town meetings, no popular elections, the ruling officials forming a kind of close corporation with power to fill all vacancies and choose their own successors. As to which of these types came nearer being the model for our local government of to-day, no reader need be informed.

**Town gov-
ernment.**

When Nicolls became governor he made little immediate change in the general or local government except to adopt English titles for the public officers. To understand this two things must be remembered. First, the charter for New York, true to the Stuart instinct, made the Duke of York absolute master, and it made no provision for the people to take any part in their own government; second, it was practically such a government that Nicolls already found in New Amsterdam. With a ready-made machine at hand, why should he take the trouble to make a new one? He proceeded, however, to frame a code of laws known as "The Duke's Laws." These were intended at first for the English settlers only, but were later extended to all. This code was borrowed largely from the laws of New England, with the two important omissions that there was no provision for the people to take any part in the government, and that there was no religious test for citizenship. It retained many Dutch features, and introduced a few new features. To the

¹ See McKinley, in *American Historical Review*, Vol. VI, p. 18.

Court of Assizes, consisting of governor and council, sheriff and justice, was assigned the legislative and judicial power; but as the sheriff and justices were appointees of the governor, there was no popular government in the plan.

But this plan did not prove permanent. The English portion of the colony clamored for representative government. The agitation continued until 1681, Edmund Andros being then governor, when the English population was ready to break into open rebellion, unless their demand for an assembly be granted. Accordingly the next year the duke promised the people an assembly, and the first one was elected in 1683, while Thomas Dongan was governor. This assembly, composed of eighteen men elected by the people, now proceeded to adopt a declaration of rights known as the **Charter of Liberties.** "Charter of Liberties," by which it declared the representatives of the people coördinate with the governor and council, and that no taxes could be laid without their consent. It also provided that all laws be subject to the duke's approval.

What might have been the fate of this charter under normal conditions we know not, as the conditions were suddenly changed. The duke's royal brother was suddenly carried off by a stroke of apoplexy, and the duke became king of England as James II. New York now became a royal colony, and the new king, who at heart despised popular government, refused to sign the Charter of Liberties, abolished the New York assembly, and sent Andros to govern the colony as consolidated with New England and New Jersey. Andros, with a council of seven men, was to govern nine colonies as a conquered province. We have noticed his career in Boston and need not repeat it here. The fall of his master from the British throne occasioned the immediate fall of Andros; but this did not bring immediate peace to New York. The colony was now about to pass through another exciting experience.

But first, a further word is here in place concerning the sources of our present governmental system. Mr. Douglas Campbell, in two large volumes entitled "The Puritan in England, Holland, and America," has taken great pains to show that **Sources of our institutions.** we are indebted far more to Dutch than to English sources for our system, and his attempt to prove too much leads the critical reader to believe too little.

It is true that the English race is more nearly related to the Dutch than to any other, and the English language resembles the

Dutch language more than any other. It is also true that the Netherlands preceded England in securing religious liberty and in establishing free public schools; that the manufacturing of textile fabrics developed in Flanders earlier than in the island kingdom across the channel, where it grew up later largely through the migration of skilled workmen from the Netherlands; that many thousands of Dutchmen and Flemings, driven from their country by religious wars, made their permanent home in England. From these facts it will be seen that the influence of Netherlands institutions on English civilization must have been great; and it was probably still greater on American civilization, because the Dutch immigrants to England nearly all became Puritans, and there is no doubt that Dutch blood coursed in the veins of a large per cent of the New England Puritans.¹ No doubt also the Pilgrim Fathers absorbed something from the Dutch during their sojourn in Leyden.

But when all is said on this side it must be added, on the other, that in the seventeenth century English popular self-government was ages in advance of the same in the Netherlands. No better proof of this is needed than a glance at the colony of New York. It was the English towns, even under Dutch jurisdiction, that demanded and received a large measure of self-government; it was the first English governor that extended that great bulwark of Anglo-Saxon liberty, the jury system, to the Dutch settlers, who at first shunned it as a thing to be feared; it was the English population of the colony that clamored for their birthright—an assembly and the power of taxation. During all this period the Dutch settlers in the main were passive in matters of popular government, and but for the coming of the English and the overthrow of Stuyvesant and his nation, New Netherland might have remained as despotic a government as was New France. Moreover, the New England free school system grew, not from Dutch models, but from the inherent character of the Puritan religion. In the face of these facts, how can Mr. Campbell or any one contend that our institutions of to-day are derived from Dutch rather than from English sources?

News of the accession of William and Mary and of the imprisonment of Andros at Boston created a great excitement in New York; and the militia, led by Jacob Leisler, a German merchant, took possession of the government. For two years Leisler, with the aid of his son-in-law, Milborne, governed the

¹ Fiske's "Dutch and Quaker Colonies," Vol. I, p. 47.

colony with vigor and energy. But he offended the aristocracy and the magistrates, who pronounced him a usurper. Meantime he took measures to defend the colony against the French and Indians, who had fallen on the frontier town of Schenectady, had massacred the people, and had burned the town.

The Leisler movement was in part the outgrowth of the anti-Catholic wave that swept over England and her colonies during the reign of James II, and Leisler's vivid imagination greatly magnified the danger of a general religious war. He called for the election of an assembly to vote taxes for the pending war with Canada, but many of the people denied his authority and refused to respond.

Leisler's next step was one that marked the beginnings of great things. He called for a meeting in New York of delegates from all the colonies to make preparations for the war, and the seven delegates that met, chiefly from New England, constituted the first colonial congress in America. They took counsel concerning the war, which will be noticed in our chapter on Colonial Wars. The clouds were now darkening around the head of Leisler, and his career was almost over.

In 1691 Henry Sloughter was appointed governor, and he sent his lieutenant before him to demand the surrender of the fort. But the lieutenant could not prove his authority, and Leisler refused to surrender. At length, when Sloughter arrived, Leisler yielded to his authority and quiet was soon restored. But Leisler's enemies were determined on his destruction. He and his son-in-law had been cast into prison, and Governor Sloughter, a weak and worthless man, was induced to sign their death warrants while drunk, tradition informs

us. Before the governor had fully recovered his senses, Leisler and Milborne were taken from the prison and hanged. Leisler had doubtless been legally in the wrong in seizing the government; but his intentions were undoubtedly good, and his execution, after all danger was past, was little else than political murder, and it created two hostile factions in New York that continued for many years.

With the passing of Leisler the royal government was restored, and the people for the first time secured the permanent right to take part in their government, as in the other colonies, and, as in the others, the assembly steadily gained power at the expense of the governor. The royal governors sent to New York were, for the most

part in their government, as in the other colonies, and, as in the others, the assembly steadily gained power at the expense of the governor. The royal governors sent to New York were, for the most

part, men without principle or interest in the welfare of the people. A rare exception we find in the Earl of Bellamont, whose brief three years at the close of the century as governor of New York, Massachusetts, and New Hampshire were all too brief for the people, who had learned to love him as few royal governors were loved. His successor, Lord Cornbury, was probably the most dissolute rascal ever sent to govern an American colony, not even excepting the infamous Sothel of the Carolinas.

An event of great interest occurred in New York in 1735, known as the Zenger case. Governor Cosby had entered suit before the Supreme Court of New York to obtain a sum of money and had lost. He then removed the judge and appointed a new one, and thus offended the popular party. Peter Zenger, the publisher of a newspaper, the *New York Weekly Journal*, attacked the governor through its columns and severely criticised his action. The governor was enraged at these attacks, and he ordered the paper burned and the editor arrested for libel.

**The Zenger
case, 1735.**

At the trial, Zenger was defended by Andrew Hamilton of Philadelphia, the greatest lawyer in America. The justice of the cause and the eloquence of Hamilton won the jury, and resulted in a complete victory for the accused editor. This was the first important victory for liberty of the press in America, and with little variation this liberty has been held inviolate from that time to the present.

A few years after Zenger's case had been disposed of, New York society was greatly convulsed by the so-called Negro Plot. This was a craze similar to the witchcraft delusion which had swept over Massachusetts half a century before. It had its origin in a general belief that the Spanish Catholic priests, in league with the slave population, were planning to burn the city. The craze spread like an epidemic; the whole community went mad, and before the storm abated, twenty-two persons, four of whom were whites, had been hanged, thirteen negroes burnt at the stake, and a large number transported. The craze soon passed away and the people recovered their normal senses. The account of this affair constitutes the most deplorable chapter in the history of New York. It is now believed that no plot to burn the city existed, and that every one who suffered on account of the delusion was innocent.

**Negro Plot,
1741.**

The province of New York grew steadily to the time of the Revolution. Every decade witnessed the coming of home seekers in large numbers to the valley of the Hudson. French Protestants, Scotch, Irish, Scotch-Irish, refugees from the Rhenish palatinate, and others spread over the beautiful river valleys; but the great majority of the people were English and Dutch. By 1750 the population was probably eighty thousand and this number was more than doubled by the opening years of the Revolution.

**Growth of
New York.**

New York City was a busy mart indeed, containing some twelve thousand people in 1750, and more than five hundred vessels, great and small, plowed the waters that half surrounded it. The city was the political, social, and business center of the province. Among its leading figures in winter were great landholders of the Hudson Valley and Long Island, who spent their summers on their estates. But the great middle class, composed chiefly of tradesmen of every grade, made up the majority of the population.

NEW JERSEY

The first settlements in New Jersey were made by the Dutch along the western bank of the Hudson, with one on the Delaware at Fort Nassau; but these settlements were insignificant, and the history of the colony properly begins with the occupation of the territory by the English. New Jersey was included in the grant of Charles II to his brother James, the Duke of York, in 1664. The same year James disposed of the province to two of his friends, Lord Berkeley and Sir George Carteret, and it was named New Jersey in honor of the latter, who had been governor of the island of Jersey in the English Channel. The next year Carteret began to colonize his new possessions. He sent his nephew, Philip Carteret, as governor, who, with a company of emigrants, made the first settlement at Elizabethtown, so named in honor of Sir George's wife. A still larger number came from New England, especially from New Haven, because of the great dissatisfaction in that colony with its forced union with Connecticut. These Puritans founded Newark and adjacent towns.

Carteret granted a form of government in what was known as the "Concessions," which granted religious liberty to Englishmen in the new colony, and a government to be carried on by a governor, council, and an assembly of twelve to be chosen by the people, and

no taxes were to be laid without the consent of the assembly. A farm, free for five years, was offered to any one "having a good musket . . . and six months' provisions,"¹ who should embark with the governor, or meet him on his arrival; while those who came later were to pay a half-penny an acre quitrent. The first assembly met in 1668, and the severity of the code of laws adopted plainly indicated the Puritan domination of the colony. After a session of but five days it adjourned, and met no more for seven years. The first quitrents fell due in 1670; but many of the settlers refused to pay rent, claiming to have received their lands from the Indians, the real owners, or basing their right to titles confirmed by Governor Nicolls of New York. The people rose in rebellion, elected an illegal assembly, and called James Carteret, illegitimate son of the proprietor, to be their governor. But Sir George did not sustain his son, and the rebellious government fell to the ground.

The settlers, however, quietly tilled their farms and gave little heed to matters of government. Not even the reconquest of New York (which included New Jersey) by the Dutch, in 1673, caused any serious disturbance of the New Jersey farmers. The constant commotion between Carteret and his colony discouraged Lord Berkeley, and he sold his interest in the province to two English Quakers, John Fenwick and Edward Byllynge. The latter soon became a bankrupt, and his share passed into the hands of trustees, the most prominent of whom was William Penn—and thus we are introduced to the most famous of American colony builders.

The province was soon after this divided into two parts: East Jersey, which was retained by Carteret, and West Jersey, which now became the property of the Quakers. The line between them was drawn directly from Little Egg Harbor to the Delaware Water Gap. The year before the division Fenwick had led a few colonists and settled at Salem, but the first important settlement in West Jersey was made in 1677, when two hundred and thirty people sailed up the Delaware and founded Burlington, and within two years several hundred more had made their homes in the vicinity. Two wholly separate governments were now set up, and they were as different as white from black. The stern New England Puritans had settled in East Jersey in sufficient numbers to give coloring to the laws,

Jersey divided, 1676.

Two governments.

¹ One seventh of the land was to be reserved for the proprietors and two hundred acres in each parish for the minister. See Winsor, Vol. III, p. 424.

and in these laws (enacted by the first assembly before the division) we find enumerated thirteen crimes for which the penalty was death. In West Jersey the government was exceedingly mild. A code of laws with the name of Penn at the top gave all power to the people, and made no mention of capital punishment. This was the first example of Quaker legislation in America.

When Edmund Andros was governor of New York, in the later seventies, he claimed authority over the Jerseys also, as the property of the Duke of York. He arrested and imprisoned Governor Philip Carteret of East Jersey, but the courts decided against Andros, and the Jerseys continued their own separate existence.

In 1680 George Carteret died, and two years later East Jersey was sold at auction to twelve men, one of whom was William Penn.¹ Each of these twelve men sold half his interest to another man, and thus East Jersey came to have twenty-four proprietors, and they chose Robert Barclay, a Scotch Quaker, governor for life. Everything went smoothly under their mild government; but this tranquility was soon to end.

When James II became king of England he demanded the charters of the Jerseys on writs of *quo warranto*, leaving the ownership of the soil to the people, and united East and West Jersey to

Andros. New York and New England under the government of

Andros. At the fall of the king and the expulsion of Andros the Jerseys were left in a state of anarchy, and so it continued for more than ten years. The heirs of Carteret and the Quakers laid claim to the colony; and New York made a similar claim. After a long season of confusion it was decided to surrender the whole colony to the Crown, and in 1702 New Jersey became a royal province. Queen Anne, who was now the reigning monarch, extended the jurisdiction of New York's governor over New Jersey, and this arrangement continued for thirty-six years, when, in 1738, the two colonies were finally separated.

New Jersey, numbering some seventy-five thousand inhabitants in 1760, was settled almost wholly by English people. A few Dutch,

Growth of New Jersey. Swedes, and Germans were scattered here and there, but not in such numbers as to affect society. The Quakers occupied the western part, while the eastern portion was settled by emigrants from England, New England, and a few from Scotland and the southern colonies. Almost the entire population were

¹ The price paid was £3400 sterling.

farmers. The numerous towns were little more than centers of farming communities. The colony was guarded, as it were, on the east and west by the two great colonies of New York and Pennsylvania, and it escaped those peculiar perils of frontier life with which most of the other settlements had to contend. This was doubtless the chief cause of its rapid growth. New Jersey was also singularly free from Indian wars, the people living on the most friendly terms with the red men, with whom they kept up a profitable trade in furs and game.

DELAWARE

The soil of the little state of Delaware had more claimants than that of any other of the thirteen original colonies. It lies along the great bay and river of the same name, and its importance consisted in its command of these and of the great fertile valley drained by them. It was first claimed by the Dutch by right of the discovery of Hudson, next by the Swedes, who made the first permanent settlement, and finally it came into the possession of the English. Among the English, Delaware was claimed by Lord Baltimore as part of Maryland; it next became the property of the Duke of York, was sold by him to William Penn, and only after the Revolution did the inhabitants of Delaware become the owners. Of the original thirteen states Delaware was the only one except New York that was founded by another than the English race.

The first settlement in the territory that afterward became Delaware was made by the Dutch in 1631, who were sent by De Vries, a noted Dutch colonizer and one of the patroons of New Amsterdam. Between thirty and forty colonists settled on the Delaware Bay near the site of Lewes, but they were led into a foolish quarrel with the Indians and were massacred to the last man. The quarrel began from a most trivial cause. The Dutch had set up a tin plate bearing the arms of Holland. An Indian, without knowing its meaning, thoughtlessly destroyed it. The Dutch considered this an insult to their nation and demanded that the offender be given up. Thus began the trouble which resulted in the destruction of the whole colony. When De Vries came the following year to visit his colony, he found nothing but heaps of ashes and charred bones.

Even before this unfortunate occurrence the Swedes, under the guidance of the greatest of Sweden's kings, Gustavus Adolphus, were

planning to colonize the western bank of the Delaware.¹ It was resolved to "invite colonists from all the other nations of Europe," to exclude slavery, and to make the colony a home for the oppressed of all Christendom. The Swedish king incorporated a company in 1627, took a deep interest in the project, and pronounced it "the jewel of his kingdom."

But the Thirty Years' War was raging in Germany and Gustavus Adolphus determined to invade that country in defense of Protestantism. In 1632, at the battle of Lutzen, his great life came to a close, and Swedish colonizing in America was checked, but not abandoned. The fortunes of Sweden now fell into the hands of Oxenstiern, the executor and chief minister of the dead king. Oxenstiern, one of the greatest statesmen of his time and scarcely less able than his fallen chief, now renewed the patent of the company, extended its benefits to Germany, and secured the services of Peter Minuit, former governor of New Amsterdam, to lead his colony to the New World.

In two vessels the colonists sailed, and they reached New Sweden, as they called the new land, early in the year 1638. They built a fort on the site of Wilmington and named it Christina after the child queen of their native land. They purchased lands of the Indians on the western side of the Delaware as far up as a point opposite Trenton, founded a town on the site of Philadelphia, built churches here and there, and soon presented the appearance of a happy and prosperous community. But trouble soon came. The Dutch claimed the entire Delaware Valley as part of New Netherland and Governor Kieft protested vigorously at the time the Swedes made their settlement; but Sweden was too powerful a nation at that time to be defied, and the colony was left for the time unmolested.

New Sweden grew by immigration and spread over the surrounding country. John Printz, one of the early governors, made his headquarters on the island of Tinicum, twelve miles below Philadelphia, drove from the Delaware Bay a band of would-be settlers from New England, and displayed an aggressive spirit in general. It

¹ See Bancroft, Vol. II, p. 502. William Usselinx, a Hollander and one of the founders of the Dutch West India Company, was the first to lead Sweden into this enterprise. Refused a charter by his own country, he turned to Sweden and became one of the projectors of the new company. Sweden's only right to American soil lay in the assumption that unappropriated lands were common property. See Jameson, in American Historical Association Papers, II.

seemed for a time that the whole Delaware Valley would be settled and held by the Scandinavians. But the Dutch were jealous; they came and built Fort Casimir where New Castle now stands, and thus got control of the bay. Soon, however, a Swedish war vessel entered the bay and put an end to the Dutch fort. The blustering Stuyvesant was now governor of New Amsterdam, and he determined to avenge the insult and put an end to New Sweden. He entered the bay with a fleet bearing over six hundred men. The Swedes, who numbered but seven hundred in all, were overawed, and New Sweden, which had existed seventeen years, ceased to exist as a separate colony. The people, however, were permitted to retain possession of their farms, and the community continued to prosper under its new government. The Swedes eventually scattered to various parts and lost their identity and their language; but, like the Huguenots and the Salzburgers, they infused an element of strength into the veins of the future American.

**Stuyvesant
conquers
New Sweden,
1655.**

The conquest of New Amsterdam by the English, in 1664, included Delaware, which now became the property of the Duke of York. The Duke's Laws, framed by Nicolls for New York, were at length extended to Delaware, and the people were granted some measure of self-government. In 1682, however, the year of the founding of Pennsylvania, the duke sold Delaware to William Penn, and the colony, which came to be called the "Three Lower Counties," or the "Territories," was the same year annexed to Pennsylvania. From this time it was in possession of the Penns and had no separate governor. Though the colony secured a separate legislature in 1702, under a charter of privileges granted by Penn, its history to the time of the Revolution was identified with that of its great neighbor to the North.

PENNSYLVANIA

The idea of founding a separate colony in America as a refuge for persecuted Quakers was not original with William Penn, but with George Fox, the founder of the sect. Fox was a man of intense religious fervor and of wonderful personal magnetism. Greatly troubled in conscience, he sought rest for his unquiet soul in the Established Church, then among the Dissenters, and finally, after a most diligent study of the Bible, he felt that the "inner light" had

dawned upon him, and he went forth to preach to the world. He began preaching at the age of twenty years, in 1644, the year in which William Penn was born. His sincerity was unquestioned and his fervor was contagious; he became the founder of a sect, the prime actor of one of the greatest religious movements of the seventeenth century. The times seemed ripe for such an awakening, and within forty years from the time that Fox began preaching his followers numbered seventy thousand.

The Quakers refused to recognize all social ranks, or to pay taxes to carry on wars, and they met with great opposition from the beginning; their meetings were often dispersed by armed men; an act of Parliament pronounced them a "mischievous and dangerous people." It was not long until the Quakers, driven by persecution, began to migrate to America. Their reception in Massachusetts and elsewhere was anything but cordial, and this led them to turn their attention to founding a colony of their own. Most of the followers of Fox were from the lower walks of life, and they were greatly elated when the talented young son of Admiral Penn, a personal friend of the king, became an open convert to their society. The admiral at first stormed at his son for taking this step. The king was about to raise the elder Penn to the peerage,

**William
Penn.**

but when he heard that the son had become a Quaker, he drew back. This increased the fury of the father against his son. But his anger was short-lived; he at length forgave him, and William Penn soon became the most prominent Quaker in England. His experience in New Jersey we have noted; but owing to the various contentions of that colony with New York and to the want of clear land titles, home seekers were rather repelled than invited, and Penn cast a wistful eye to the fair lands beyond the Delaware.

The king of England was indebted to Admiral Penn to the sum of £16,000, and William Penn, on the death of his father, inherited the claim. At Penn's request King Charles granted him, in payment of this claim, a tract of forty thousand square miles in America. In the petition to the king, dated June, 1680, Penn asked for the territory west of the Delaware River and from the northern boundary of Maryland to the north "as far as plantable, which is altogether Indian." It was the largest grant ever made to one man in America. The charter was granted the following March. Penn

had chosen the name New Wales for his province, but the king called it Pennsylvania in memory of the deceased admiral.¹ The boundaries of the colony, as given in the charter, became the subject of the most serious dispute, and the matter was not fully settled for nearly a hundred years.

The dispute between Lord Baltimore and Penn began the same year in which the charter was granted, the former claiming that the fortieth degree fell north of Philadelphia, whereas the king in granting the charter had supposed it would fall at the head of Delaware Bay. Penn therefore insisted that the line be fixed where it was supposed to be, and, after a long contention, the matter was settled in his favor. The boundary line, however, was not determined until many years later—long after Penn and Baltimore were in their graves. It was not until 1767 that two English surveyors, Mason and Dixon, completed this line, which has since borne their names, and which, after acquiring a new meaning, became the most famous boundary line in the New World.²

¹ Penn came near being the author of the name of his colony. When "New Wales" was abandoned he suggested "Sylvania" (from the Latin word "sylva," a forest) and the king added the prefix, "Penn."

² The province was to extend five degrees westward from the Delaware River; and "the said lands to be bounded on the north by the beginning of the three and fortieth degree of Northern Latitude, and on the South by a Circle drawn at twelve miles distance from New Castle Northward and Westward unto the beginning of the fortieth degree of Northern latitude." (See Poore's "Charters," Vol. II, p. 1510.) Just what the "beginning of the three and fortieth" and the "beginning of the fortieth" degrees meant was not clear. Penn, finding that the fortieth degree fell too far north to give him a harbor on the Chesapeake, contended that the "beginning" of the fortieth degree did not mean the fortieth degree, and he won in part; but it cost him dearly, for, although the charter set the northern boundary at the "beginning of the forty-third degree," which would have thrown it north of Buffalo, it was finally fixed at the forty-second degree. In 1732 the heirs of Penn and Baltimore signed an agreement that the line between Pennsylvania and Maryland be run due west from the tangent of the western boundary of Delaware with the arc twelve miles from New Castle. Many years of further wrangling followed, when it was decided to employ the two expert surveyors, Charles Mason and Jeremiah Dixon, who fixed the line at 39° 44' and extended it westward about 230 miles. At intervals of a mile small cut stones were set in the ground; each stone had a large "P" carved on the north side, and a "B" on the south side. Every five miles was placed a larger stone bearing the Pennsylvania coat of arms on one side and that of Lord Baltimore on the other. These stones were cut in England and afterward brought to the colonies. A few of them still stand, but time has crumbled many of them; others have been carried away piecemeal by relic hunters, and a few are doing service as steps before the doors of farmhouses along the route.

When Mason and Dixon's line was run both Pennsylvania and Maryland were slave colonies. In later years Pennsylvania emancipated her slaves, while Mary-

Of all the colony builders of America the most famous in our history is Penn. Nor was he excelled by any in sincerity of purpose and loftiness of aim. His province was a princely domain, a vast fertile region traversed by beautiful rivers and lofty mountain ranges, and holding beneath the soil a wealth of minerals unequaled by all the other colonies combined. The colony was rightly named, for it was one vast forest, extending from the Delaware over the Appalachian Mountain system, down its western slope and far into the Ohio Valley. It was inhabited by Indians alone, except for a few Swedish hamlets along the lower Delaware, the inhabitants of which, some five hundred in number, Penn pronounced a "strong, industrious people." Penn was granted ample power for the government of his new possessions, the king requiring, as a token of allegiance, two beaver skins each year, and also a fifth of the gold and silver that might be mined. In this feature the charter reminds us of the charter of Maryland. The proprietor was clothed with the power to establish courts, appoint judges, to train soldiers, to wage wars, and to make laws; but the king retained the veto power, and, unlike all the other colonial charters, the power of taxing the people of the colony was reserved to the English Parliament. This provision remained a dead letter until the approach of the Revolution, when it became very significant.¹ A strange omission of this charter was that it did not guarantee the settlers the rights of Englishmen, as did the other charters. To gain an outlet to the sea Penn purchased of the Duke of York the three counties of Delaware, as we have seen.

That Penn was a religious enthusiast and a true philanthropist is well known; that he was a man of the world whose secondary object, private gain, was never lost sight of, is not so well known, but equally true.² His venture in colony planting was soon published widely over England. He drew up a frame of government and offered a liberal share of the government to the colonists. He also offered five thousand acres for one hundred pounds and one hundred acres for two pounds, subject to a small quitrent, and it was not long till many were ready to join the enterprise. Penn appointed

land retained hers and went with the South. During the half-century preceding the Civil War, the original limits and meaning of the line were lost sight of; no one thought of it as a boundary between two states, but rather as the boundary between the free and slave states.

¹ See Poore's, "Charters," p. 1515.

² See Shepherd's "Proprietary Government in Pennsylvania," p. 174.

his relative, William Markham, the first governor of Pennsylvania, and in the autumn of 1681 sent him ahead with three shiploads of emigrants. Markham bore an affectionate letter from the proprietor to the Swedes in which he said, "You shall be governed by laws of your own making, and live a free, and if you will, a sober, industrious people."

The year after Markham's voyage Penn himself followed him to the New World in the ship *Welcome*. The passengers numbered about a hundred, one third of whom died of smallpox on the ocean. The *Welcome* sailed up the Delaware and landed at New Castle in the autumn of 1682. Penn was received with a cordial greeting by the inhabitants; he produced his royal patent, which transferred the territory from the duke to himself, and spoke so kindly to the people that he readily won their hearts. Reaching Chester, he called a provisional legislature, and some time was spent in allotting lands and framing laws. Proceeding up the Delaware, he came to the site on which was to rise the city of Philadelphia, soon to become the chief city in colonial America, and in a later generation the birthplace of independence and of the Constitution of the United States. Here already stood a Swedish village, and a Lutheran church at Wicaco,¹ and here Penn decided to build a city and make it the capital of his province. He purchased from the Swedes the neck of land between the Delaware and the Schuylkill rivers, and in the early months of 1683 the streets of the new city were laid out. The growth of Philadelphia was phenomenal. In less than four years it had passed New York, which had been founded sixty years before.

**Penn's
arrival.**

It was a few months after this time that Penn made his famous treaty with the Indians under a great elm tree on the banks of the Delaware, a short distance north of the newly founded city.² The Indians were of the Delaware or Lenni-Lenape tribe. The chiefs sat in a semicircle on the ground, says tradition,³ while Penn, with a few unarmed attendants, all in their Quaker garb, addressed them as friends and brothers, compared the white and red men to the different members of the human body, and made a pledge to live in peace and friendship with them.

**Penn's
treaty.**

¹ This church still stands near the bank of the Delaware, and is one of the most interesting landmarks in Philadelphia.

² The city has long since absorbed the place. The elm was blown down in 1810, and a beautiful monument now marks the spot.

³ This tradition is doubtless based on Benjamin West's painting. See Fisher's "True William Penn," pp. 242-245.

These children of the forest were deeply touched by the sincerity and open candor of the great Englishman, and they answered through a chief that they would "live in love with William Penn and his children as long as the sun and moon give light."

These mutual vows constituted the treaty; no written words were required and no oath was taken. Yet this sacred treaty was kept unbroken till long after those who had made it had passed away. It was said that the Quaker dress was a better protection among the Indians than a musket, and that when an Indian wished to pay the highest compliment to a white man, he would say, "He is like William Penn."¹

In the early spring of 1683 the legislature of the colony met in Philadelphia. The proprietor presented a new frame of government, giving all power of lawmaking into the hands of the people represented by a council which should originate all laws and an assembly that should approve them. All freemen were made citizens and all Christians were freemen, except servants and convicts. A law was passed uniting the "Lower counties" to Pennsylvania and naturalizing the Swedes. Penn was voted the veto power for life. Laws were made for the training of children, the useful employment of criminals, religious toleration—and all were in keeping with the humane spirit of the proprietor. For some years the government was very unsettled.

Penn had established a home in Philadelphia, and there would he gladly have spent his life; but his trouble with Baltimore took him back to England in the summer of 1684, and his business kept him there for fifteen years. After the English Revolution Penn was suspected of giving aid and comfort to the dethroned monarch whose brother had granted him his charter, and in 1692 he was deprived of

¹ Governor Markham had already treated with the Indians for the purchase of lands, and Penn, on various occasions after this meeting at Shackamaxon, made bargains with them for lands, the most famous of which was the "Walking Purchase." By this he was to receive a tract of land extending as far from the Delaware as a man could walk in three days. Penn and a few friends, with a body of Indians, walked about thirty miles in a day and a half and as he needed no more land at the time, the matter was left to be finished at some future time. (See Channing's "Students' History," p. 117.) In 1733, long after Penn's death, the other day and a half was walked out in a very different spirit. The whites employed the three fastest walkers that could be found, offering each five hundred acres of land. One of them was exhausted and died in a few days, another injured himself for life, but the third, a famous hunter named Marshall, walked over sixty miles in the day and a half, greatly to the chagrin of the Indians. See Walton and Brumbaugh's "Stories of Pennsylvania," p. 39.

his colony. The control of Pennsylvania was then placed into the hands of Governor Fletcher of New York. But nearly two years later, the charges against Penn having been removed, his right to Pennsylvania was restored. In 1696 Markham granted a new frame of government, in which the power to originate legislation was taken from the council and given to the assembly. Again, in 1699, William Penn crossed the Atlantic to visit his growing family in the forests of Pennsylvania, and he found that vast changes had been wrought in his absence. Twenty thousand people had made their homes in his province. The city that he had founded was fast rising to importance, and the wilderness of the river valley was dotted with farms. Here he found not only his fellow Quakers, but Germans from the Rhine, Swedes, and Dutch, together laying the foundations of a great commonwealth.

The great-souled proprietor had been deeply humbled since last he saw the fair lands of Pennsylvania, — he had lost his faithful wife and eldest son, he had lost his fortune, and he had borne the charge of treason against his native country. And now to these was added another sorrow — the people of his province had been weaned away from him during the intervening years; he was no longer the “Father Penn” that he had been before; they clamored for even greater freedom than his generous soul had granted them at first, and to this was added the demand of Delaware for a separate government.¹ Penn was grieved, but he granted these requests. He gave Delaware a separate legislature, and a new government to Pennsylvania. The form of government that Penn now conferred on his colonists practically transferred all power to the people, subject to their allegiance to the Crown, and the veto power of the governor. It eliminated the council as a legislative body, giving it but a negative influence as an advisory board to the governor. It also defined the rights of prisoners, granted liberty of conscience, and made provision for amendments. This constitution remained in force for seventy-five years — to the War for Independence.

In 1701 Penn bade a final adieu to his beloved Pennsylvania and sailed again for his native land. But even now, after his long years of turmoil, it was not for him to spend his old age in rest and quiet. On reaching England, he found that he had been robbed of the remnant of his fortune by an unjust steward, and later he was thrown into

¹ Delaware had been granted a separate government as early as 1691, but the following year Governor Fletcher, of New York, reunited it to Pennsylvania.

prison for debt. In his earlier manhood he had suffered various imprisonments for conscience' sake, but now he chafed under confinement and to secure his release mortgaged his province in the New World. But still other misfortunes awaited him. He was stricken with paralysis, and for years he lay a helpless invalid, dying in 1718 at the age of seventy-four.

The character of Penn is one of the most admirable in history. It is difficult to find a man, especially one whose life is spent in the midst of political turmoil and governmental strife, so utterly incorruptible as was William Penn. When on the threshold of manhood, when the hot flush of youth was on his cheek, the blandishments of wealth and station and of royal favor beckoned him to a life of ease and pleasure; but he turned away from them all and chose to cast his lot with a despised people—purely for conscience' sake. No allurements of Pharaoh's court, no threats of an angry father, nor frowning walls of a prison-cell could shake his high-born purpose to serve God in the way that seemed to him right. His life was full of light and shadow. He suffered much, but he also accomplished much—far more than the age in which he lived was ready to acknowledge. He founded a government and based it on the eternal principle of equal human rights, with its sole object as the freedom and happiness of its people; and that alone was sufficient to give him a name in history.

Thirty-seven years elapsed between the founding of Pennsylvania and the death of the founder, and he spent but four of these years in America; yet we are wont to regard William Penn almost as truly an American as was Franklin or Washington, and in the annals of our country his name must ever hold a place among the immortals.

The growth of Pennsylvania was more rapid than that of any other of the thirteen colonies, and though it was the last founded save one, it soon came to rank with the most important, and at the coming of the Revolution it stood third in population. Penn had willed the colony to his three sons, John, Thomas, and Richard, and these with their successors held it until after the Revolution. In the early part of the eighteenth century a great number of palatine

**Pennsylvania
Germans.**

Germans, driven from their homes by religious wars, found their way to Pennsylvania, settled Germantown (since absorbed by Philadelphia), and scattered over the Schuylkill and Lehigh valleys. The English were for a time alarmed at the influx of such numbers of a foreign people; but they

were not long in discovering that these Germans were an industrious, peace-loving people, fairly educated, and, while wholly unostentatious, as sincerely religious as the Puritan or the Quaker.

Still greater during this period was the stream of Scotch-Irish from Ulster. These hardy Scotch Presbyterians, who had occupied northern Ireland for two or three generations, being curbed in their industries for the protection of English industries and annoyed by petty religious persecution, came to America in great numbers,¹—so great as to form more than half the population of Pennsylvania, and to spare many thousands of their numbers to the southern colonies along the coast and the wilderness of Kentucky and Tennessee. In Pennsylvania they settled chiefly on the plains and mountain slopes west and south of the Susquehanna. These people, as well as the Germans and others, were attracted to Pennsylvania because of the liberal, humane government inaugurated by William Penn. Slavery was never popular in Pennsylvania, and the number of slaves was kept down by strict laws against their importation. Before the Revolution many of them had been set free by their masters. Of Redemptioners, mostly Germans and Irish, there were probably more in Pennsylvania during the eighteenth century than in any other colony. The majority of them, after their period of servitude, became useful citizens.

During the long period of her colonial youth we find in Pennsylvania the same kind of quarreling between the people and the governors, the same vagaries in issuing paper money, the same unbridled spirit of freedom, the same monotonous history, as we find in most of the other colonies. Among her governors we find in the early period no really great men, but in 1723 there arrived in Philadelphia a young man from Boston who soon rose to be the leading figure in the colony, and so he continued for more than half a century. This was Benjamin Franklin, who, it may be further said, was the greatest character of colonial America.

¹ Fiske, "Dutch and Quaker Colonies," Vol. II, p. 353.

CHAPTER VIII

COLONIAL WARS

FRENCH EXPLORERS

BEFORE the coming of the Pilgrim Fathers, or even the founding of Jamestown, the French had made a beginning toward the occupation of Canada. At the moment when Henry Hudson was bartering with the Indians along the banks of the Hudson, Champlain was but a few miles away, exploring the beautiful lake that bears his name; and the year before that he had established a post on a rocky cliff overlooking the majestic St. Lawrence, and had named it Quebec.¹ For many years thereafter the French came in small numbers, scattering through the wilderness, trading in furs, and seeking to convert the Indians to Christianity. The conversion of the Indians became the care of the French government, and the work was intrusted to the Jesuit priests — men who would brave every peril to carry the religion of Rome to the benighted red man. They established missions in many places and at the same time made useful explorations through the great northern wilderness. In 1634 Jean Nicollet, sent by Champlain, discovered Lake Michigan. Other Frenchmen discovered Lake Superior and portions of the boundless regions west and south of it.

In 1666 one of these, Father Allouez, went far into the lake region, beyond the head of Lake Superior, and while there he heard of the vast, treeless plains of Illinois and of the great river beyond that flowed toward the south. Returning to Quebec, Allouez related what he had heard, and the hearts of others were fired with a desire to explore the great valley in the southwest. Among these was Father James Marquette, who had recently come

¹ As early as 1534 Cartier ascended the St. Lawrence as far as the site of Montreal, and Roberval made an unsuccessful attempt to plant a colony near the site of Quebec in 1542. The French had planted a colony of jail birds on Sable Island, off the coast of Nova Scotia, in 1598, and De Monts settled a colony in Acadia in 1604; but neither colony was permanent. Champlain had made a previous exploring tour (1603) to the American coast.

from France. He, with another Jesuit priest named Joliet and a few guides and companions, determined to explore the western wilderness, where no white man's foot had been. They ascended the Fox River, carried their canoes across the portage to the Wisconsin, and floated down this stream to the Mississippi. They then launched their little boats upon its bosom and floated for hundreds of miles with its current. The shores were covered with dense forests abounding in wild animals, or stretched away in boundless, grassy plains, with here and there the well-known traces of the red children of the forest. On they floated, past the mouths of the turbid Missouri and of the clear, sparkling Ohio, and still on until the semi-tropical plants and breezes replaced the rigorous climate of the north. When they reached the mouth of the Arkansas, they decided to retrace their steps, and the toilsome work of rowing up-stream was begun. After a weary journey of many weeks they reached the Illinois River, and, ascending it, crossed the country to Lake Michigan. Joliet now hastened back to Canada to tell of their discoveries, while the self-denying Marquette determined to remain in the wilderness and give his life to the enlightenment of the savages. But his labors were soon to end; one day, as he was kneeling by a rude altar of his own making, his spirit passed away, and his friends found his lifeless body in the attitude of prayer.

**Marquette
and Joliet,
1673.**

1675.

Of still greater importance were the achievements of Robert Cavelier de La Salle, a young Frenchman born at Rouen, France, and educated at a Jesuit school. While yet a young man he migrated to Canada and occupied an estate at Fort Frontenac, now Kingston, on the shore of Lake Ontario. Inflamed with the news of Marquette's discoveries, he determined to leave his lands and herds and explore the great western country, and thus to secure it for his king. La Salle was probably the first of his nation to plan the holding of the entire Mississippi basin and the lake region by means of military posts. After several years' negotiating, he received permission from Louis XIV to occupy and explore the great valley of the Mississippi. In the spring of 1682 he began one of the most famous exploring tours in the early history of our country. Taking with him a few companions, he floated down the Mississippi to its mouth, took possession of its vast basin in the name of France, and called it Louisiana in honor of the king. He then made the long

**La Salle
reaches
mouth of
Mississippi,
April 9, 1682.**

and weary journey back to Quebec, and thence sailed to France, where he soon succeeded in interesting his king in planting a colony at the mouth of the Mississippi. The king sent La Salle back with four vessels, one of which was an armed frigate, bearing nearly three hundred colonists. It is claimed that the French king expended more money in fitting out this colony than did all the English sovereigns combined in planting their thirteen colonies in North America.

The little fleet sailed into the Gulf of Mexico, but missed the mouth of the great river and landed on the shore of Texas. One of the vessels was wrecked. Many of the voyagers returned to France, but the dauntless La Salle, with a small company, remained, built a fort, and spent some months in a fruitless search for the Missis-

Death of sippi. Contentions arose among the men, and one day
La Salle, La Salle was murdered by two of his own countrymen.
1687. Thus perished this ambitious Frenchman; his body was left to molder in the wilderness; his dream was unrealized, but his name, in connection with the greatest of American rivers, has a place in history second only to that of De Soto.

KING WILLIAM'S WAR (1690-1697)

King James II of England, unlike his profligate brother, Charles II, was extremely religious, and his religion was that of Rome. The large majority of the people of England were Protestants; but they would have submitted to a Catholic king had he not used his official power to convert the nation to Catholicism. From the time of James's accession, in 1685, the unrest increased, until, three years later, the opposition was so formidable that the monarch fled from his kingdom and took refuge in France. The daughter of James and her husband, the Prince of Orange, became the joint sovereigns of England as William and Mary. This movement is known in history as the English Revolution.

Louis XIV, the king of France, was a Catholic and in full sympathy with James. Moreover, he denied the right of a people to change sovereigns, and espoused the cause of James; and war between the two nations followed. This war was reflected in America, as King William rejected an offer of colonial neutrality, and it is known as "King William's War." The English colonies had long watched the French encroachments on the north; the French determined to hold the St. Lawrence country, and to extend their power

over the vast basin of the Mississippi; and each was jealous of the other concerning the fisheries and the fur trade. To these differences must be added an intense religious feeling. The English colonies were almost wholly Protestant except Maryland, and even in Maryland the Protestants were in a large majority. New France was purely Catholic, and the two forms of Christianity had not yet learned to dwell together, or near together, in harmony. King James had not confined his designs to the home country; he had not only revoked some of the colonial charters and sent the tyrant Andros to domineer New England, but he had instructed his Catholic governor of New York, Dongan, to influence the Iroquois to admit Jesuit teachers among them, and to introduce the Catholic religion into the colony. It was at this time that Leisler seized the government of New York, and called the first colonial congress. Exasperated by these things, the English colonists were eager for the conflict, while the French Canadians were equally ready to grapple with them. King William's War was very different in aim and meaning in the colonies from what it was beyond the Atlantic. In America it was the first of several fierce contests, covering seventy years; or, it may be said, it was the beginning of a seventy years' war, with intervals of peace, for the supremacy in North America.

The war began by a series of Indian massacres instigated by Frontenac, the governor of Canada. The first of these was the destruction of Dover, New Hampshire, a town of fifty inhabitants. One night in July, 1689, two squaws came to the home of the aged Major Waldron and begged a night's lodging. Being admitted, they rose in the night and let in a large number of Indians who lay in ambush. Waldron was put to death with frightful tortures, the town was burned to the ground, about half the people were massacred, and the remainder were carried away and sold into slavery. In the following month Pemaquid, Maine, met a similar fate. In February, 1690, a body of French and Indians, **Indian massacres.** sent by Frontenac, came to the town of Schenectady on the Mohawk. For nearly a month they had faced the wintry blasts, plowing their way through the deep snow on their mission of destruction. At midnight they fell with dreadful yells upon the sleeping village. In a few hours all was over; the town was laid in ashes. More than sixty were massacred, many were taken captive, a few escaped into the night and reached Albany. The towns of Casco and Salmon Falls soon after met a similar fate.

The war spirit was now aroused throughout the colonies. It was determined, through Leisler's congress,¹ to send a land force against Montreal by way of Lake Champlain, and a naval expedition against Quebec. The expenses of the former were borne by Connecticut and New York, and of the latter by Massachusetts. Sir William Phipps of Maine, who had this same year, 1690, captured Port Royal in Nova Scotia, commanded the naval force. He had thirty or more vessels and two thousand men. But the vigilant Frontenac, in spite of his fourscore years, was on the alert. He successfully repelled the land force, which turned back disheartened, and then hastened to the defense of Quebec. But here he had little to do. Phipps was a weak commander, and the fleet, after reaching Quebec and finding it well fortified, returned to Boston without striking an effective blow. The people of Massachusetts were greatly disappointed at the failure of the expedition. The debt of the colony had reached an enormous figure, and to meet it bills of credit, or paper money, were issued to the amount of £40,000. Phipps was soon afterward sent to England to seek aid of the king and a renewal of the old charter that Andros had destroyed. King William was hard pressed at home, and he left the colonies to fight their own battles; he also refused to restore the old charter, but he granted a new one, as we have noticed, and made Phipps the first royal governor of Massachusetts.

The war dragged on for several years longer, but it consisted only in desultory sallies and frontier massacres. The towns of York, Maine, Durham, New Hampshire, and Groton, Massachusetts, were the scenes of bloody massacres, and hundreds of people were slain.²

In 1697 a treaty of peace was signed at Ryswick, a village near The Hague, and the cruel war was temporarily over. Acadia, which had been prematurely incorporated with Massachusetts, was restored to France. But this treaty was only a truce. The English and French nations had not learned to love

**Treaty of
Ryswick,
1697.**

¹ See *supra*, p. 144.

² Many were the heroic deeds of those days of savage warfare. One of the most notable was that of Hannah Dustin, the wife of a farmer near Haverhill, Massachusetts. She saw her home burned by the savages and her infant child dashed to death against a tree, while she and a neighbor named Mary Neff were carried away captive. It was not long till she planned her escape. To prevent being followed, and to avenge the murder of her babe, she reached a desperate resolve. Twelve Indians, nine of whom were men, lay asleep about them when she and her companion and a boy, who was also a captive, rose at midnight, and with well-directed blows killed ten of them, sparing only a squaw and a boy, made their escape, and returned to their homes. Mrs. Dustin had scalped the dead Indians, and she received a bounty of £50 for the scalps.

each other, and the questions in dispute had made no progress toward settlement.

After the death of William and Mary the crown of England was settled (1702) on Anne, the sister of Mary. James, the exiled king, died in 1701, and his son, known as James the Pretender, was proclaimed king of England by the French sovereign. This act alone would have brought another war, but there was another provocation. King Louis of France placed his grandson, Philip of Anjou, on the throne of Spain, and thus greatly increased his power among the dynasties of Europe. This was very distasteful to the English, and the war that followed was known as the War of the Spanish Succession. In America, however, it was styled

QUEEN ANNE'S WAR (1702-1714)

After this brief season of peace the colonists were obliged to face another long and murderous war. In character this war was similar to that which preceded it, a contest over Acadia and New France, consisting of surprises and bloody massacres. Early in the conflict the coast of Maine was swept by bands of savage red men and equally savage Frenchmen, and hundreds of men, women, and children were tomahawked or carried into captivity. On an intensely cold morning in February, 1704, at daybreak, a party of nearly four hundred French and Indians broke upon the town of Deerfield, and with their terrible war cry began their work of destruction and slaughter. Nearly fifty of the inhabitants were slain, and more than a hundred were carried into captivity.¹ A few years later Haverhill, Massachusetts, met with a fate similar to that of Deerfield.

Deerfield,
Massachusetts.

In 1704 the colonists made an unsuccessful attack by sea on Port Royal, Acadia, and another in 1707; and three years later the British government, having at last decided to aid the colonies, sent a small fleet under Colonel Nicholson, which was joined by an armament from Boston, and a third attack was made. This was successful; Port Royal surrendered, and was named Annapolis in honor of the English queen, while Acadia was henceforth called Nova Scotia.

¹ Among the captives were the minister, Williams, his wife, and five children. Mrs. Williams soon perished by the tomahawk. The rest were afterward rescued, except a seven-year-old daughter. Many years later a white woman in Indian garb appeared at Deerfield. It proved to be the daughter of the Rev. Mr. Williams. She had married a Mohawk chief. Her friends besought her to remain with them, but her heart was with her dusky husband and half-breed children, and no entreaties could influence her to remain with the friends of her childhood.

A beginning of English success was thus made, and the bold scheme of conquering Canada was now conceived. Sir Hovendon Walker arrived at Boston with a fleet and an army, and these were augmented by the colonists at the bugle call of Governor Dudley of Massachusetts, until the fleet consisted of nine war vessels, sixty transports, and many smaller craft, bearing in all twelve thousand men. Nothing like it had ever before been seen in American waters. In August, 1711, this imposing fleet moved to the northward, and at the same time a land force of twenty-three hundred men under Colonel Nicholson started for Montreal by way of Lake Champlain.

It would seem that New France must certainly fall before such a power, and all Canada be added to the British dominions in America. But there was one fatal obstacle to success, and that was the want of ability in Admiral Walker. He not only lacked capacity to command such a force, but he was wanting in courage. The whole movement came to nothing. Walker lost eight ships and a thousand men in a dense fog at the mouth of the St. Lawrence, and refused to go further, believing that the disaster was a blessing in disguise, a merciful intervention of Providence to save his men from "freezing, starvation, and cannibalism."¹ Nicholson, hearing of the return of the fleet, was greatly enraged, and burned his wooden forts, led his army to Albany, and disbanded it.

Vaudreuil, the governor-general of Canada, had heard of the enemy's approach and had prepared for him as best he could. The people were thrown into a state of wild consternation; but when they heard of the disastrous failure of the fleet, they rejoiced and praised God that He had preserved them and dashed their enemy to pieces, and a solemn mass was ordered to be said every month for a year, to be followed by the song of Moses after the destruction of Pharaoh and his host.²

Both nations were now weary of the war, and the Treaty of Utrecht was the result. By this treaty Acadia, Newfoundland, and the Hudson Bay territory were ceded by France to England; and the Five Nations were acknowledged to be British subjects. The aged king of France used the last efforts in his power to avoid giving up Acadia, but all to no purpose.

The Peace of Utrecht, like that of Ryswick sixteen years before, was but a temporary peace. The great problems in America were

¹ Parkman's "Half Century of Conflict," Vol. I, p. 170.

² *Ibid.*, p. 173.

left unsettled. The treaty fixed no limits to Acadia, nor did it mark the boundary between the British colonies and Canada. These were questions that must sometime be settled; but there was another question of far greater importance, and that was whether France or England would obtain control of the great valley of the Mississippi. The embers of war were thus left unquenched, and the time was bound to come when they would burst forth into flame.¹ The Treaty of Utrecht brought a nominal peace that was unbroken for thirty years; but meantime the two nations, like crouching tigers, made ready each to spring upon the other.

The king of France had sullenly given up his beloved Acadia, but he retained Cape Breton Island, still more important because it commanded the mouth of the St. Lawrence. Here, on a tongue of land in the southeastern portion of the island, the king determined to build a fortress far more imposing than any other in America, and to call it after his own name — Louisburg. This project was scarcely on foot when Louis XIV died, and the plan was carried out by his successors. The great object of this movement was to furnish a base from which to guard the St. Lawrence Valley against all comers, and to reclaim, if possible, the fair land of Acadia.

But the French did not stop with the founding of Louisburg; they spent this season of peace in strengthening their hold on the Mississippi Valley. As early as 1698 a naval officer named Iberville had been sent by his king to carry out the great work attempted by the ambitious La Salle — to plant a colony on the lower Mississippi. Iberville made great haste lest the English precede him to the coveted land. He reached the mouth of the great river, and ascended it for some distance. The chief of an Indian tribe gave him a letter that had been written thirteen years before by Tonty, while searching for the lost colony of La Salle. Iberville found no suitable place on the banks of the river, and settled his colony on Biloxi Bay. A few years later a colony was planted on Mobile Bay. In 1718 New Orleans was founded by Bienville, a brother of Iberville, and four years later it was made the capital of the vast region known as Louisiana.

France had now two heads, as Parkman puts it, to her great North American possessions—one amid the Canadian snows and the other in the tropical regions of the South. But two thousand

¹ Parkman, "Montcalm and Wolfe," Vol. I, p. 117.

miles of untrodden wilderness lay between the extremes of this boundless domain, and the French knew that to hold it something more than merely claiming it must be done. They began, therefore, the erection of a chain of forts, or military posts. They built forts at Niagara, Detroit, and other points, to guard the great lakes, and they even encroached on the soil of New York and built a fort at Crown Point. In the Illinois country they founded Vincennes and Kaskaskia, and pushed farther southward, while from the Gulf of Mexico they moved northward, establishing one post after another, until by the middle of the eighteenth century there were more than sixty forts between Montreal and New Orleans. France now claimed all of North America from Mexico and Florida to the Arctic Ocean, except the Hudson Bay region and the narrow English margin on the east between the mountains and the sea; and it must have seemed to human eyes that the future development of the continent must be modeled after the Latin civilization rather than the Anglo-Saxon. But a great struggle was yet to determine the trend of American civilization. Before treating of that, however, we must take note of another preliminary skirmish, known in our history as

KING GEORGE'S WAR (1744-1748)

This war, known by the above name in America, was but the faint glimmer of the dreadful conflagration that swept over Europe at this time under the name of the War of the Austrian Succession. On the death of Charles VI, emperor of Austria, in 1740, the male line of the House of Hapsburg became extinct, and his eldest daughter, Maria Theresa, ascended the Austrian throne. But there were other claimants, and the matter brought on a war of tremendous dimensions, embroiling nearly all the nations of Europe. Again we find France and England on opposite sides, war being declared between them in the spring of 1744. Of this great war we have little to record here, as little of it occurred in America. Aside from the usual Indian massacres, but one great event marks King George's War—the capture of Louisburg.

Louisburg, as we have noticed, was built on a point of land on Cape Breton Island; it commanded the chief entrance to the greatest of American rivers, except only the "Father of Waters." It was a powerful fortress; it had cost six million dollars, and was twenty years in building. Its walls of solid masonry, from which frowned

a hundred cannon, were from twenty to thirty feet high, and their circumference was two and a half miles. The fort was the pride of the French heart in America. It was looked upon as an impregnable fortress, that would keep out every intruder and baffle every foe; yet it was reduced and captured by a fleet of little fighting strength, bearing a few thousand soldiers, chiefly New England farmers and fishermen.

The father of the Louisburg expedition was William Shirley, governor of Massachusetts, and William Pepperell of Maine was made its commander. New England furnished the men, while Pennsylvania sent some provisions, and New York a small amount of artillery. The fleet was composed of something over a hundred vessels of various grades, and just before sailing these were joined by four English men-of-war from the West Indies, commanded by Commodore Warren. On the first day of May, 1745, this motley fleet came under the walls of Louisburg. A landing was soon made, and the "men flew to shore like eagles to their quarry." Every effort of the French to drive them back was foiled. The artillery was managed by the master engineer, Richard Gridley of Boston, who was to figure in the same capacity in two far greater wars. The siege continued for six weeks, when a French war vessel of sixty-four guns, laden with military stores, came to the rescue of the fort; but she was captured by the English fleet in open view of the helpless besieged in the fort. This was the final stroke. The garrison could hold out no longer. On the 17th of June the fort and batteries were surrendered, and the British flag soon waved over the walls of Louisburg.

The French king was astonished at the fall of his great fortress in America, and determined to recapture it. He sent D'Anville with a fleet for the purpose, but D'Anville died, and his successor committed suicide, and the project came to naught. The next year the king sent another fleet, but it was captured by the English; and then came the Treaty of Aix-la-Chapelle.

The peace, as arranged at Aix-la-Chapelle, restored to each power what it had possessed before the war — save the great sacrifice of life and treasure — and that meant that Louisburg must be restored to the French. A wave of indignation swept over the English colonies when they learned that the fruit of their great victory had been quietly handed back, without their knowledge or consent, to the enemy from whom it had

**Capture of
Louisburg,
1745.**

**Treaty of Aix-
la-Chapelle,
1748.**

been taken; and here we find one of the many remote causes that led the colonists in later years to determine that American affairs must be managed in America and not by a corps of diplomats three thousand miles across the sea, who had little interest in the welfare and future of their kindred in the New World.¹

¹ But the English looked at the matter from a different standpoint. Chalmers complains bitterly (Vol. II, p. 253) that England in this war had lost her reputation and had expended £30,000,000 on which she must pay interest—all for the colonists, who had lost nothing, and who ungratefully continued to defraud the mother country by smuggling. He neglects to state that most of this expenditure took place in Europe and had no connection with American affairs.

CHAPTER IX

THE FRENCH AND INDIAN WAR

THE Treaty of Aix-la-Chapelle of 1748, like its predecessors at Ryswick and Utrecht, failed to settle the vital question between the rival claimants of North America. A commission of two Englishmen and two Frenchmen sat in Paris for many months after this treaty was signed, endeavoring to adjust the French-English boundaries in America; but they labored in vain.

The first subject in dispute was the bounds of Acadia. The Treaty of Utrecht ceded it to England without defining its bounds, and thus planted the seeds of future quarrels. The French now contended that Acadia comprised only the peninsula of Nova Scotia, while the English claimed that the bounds formerly given to it by the French must now be adhered to. By these bounds the vast territory comprising northern Maine, New Brunswick, and a great portion of the St. Lawrence Valley were included in Acadia. While this question was pending, a more important and immediate one came up for solution, namely, the ownership of the Ohio Valley.

This valley of the "Beautiful River" was a princely domain. It extended southward from Lake Erie and westward from the base of the Alleghany Mountains, comprising an endless succession of hills and valleys, watered by innumerable crystal streams, and stretching on and on until it merged at length into the greater valley of the Mississippi. The French claimed this vast region as a part of the great basin of the Mississippi discovered by Marquette and La Salle, and now secured by a cordon of forts from Canada to the sunny climate of the Gulf of Mexico. The English claimed it on two grounds, both of which were as shadowy as the claims of the French: first, the early charters of Virginia and of other colonies (based on the Cabot discoveries) which covered the unknown regions westward to the equally unknown "South Sea"; and second, the claims of the Iroquois. The Iroquois had been acknowledged British subjects by the Treaty of Utrecht, and their lands were therefore British territory, and their conquests were considered

**The Ohio
Valley.**

British conquests. Roving bands of these Indians had, at various times, traversed this western country, and had here and there driven off the natives or gained some trivial victory; and the English now claimed many thousands of square miles in consequence of these "conquests." They "laid claim to every mountain, forest, or prairie where an Iroquois had taken a scalp."¹

The claims of both nations were extravagant in the extreme. If the French had had their way, the English would have been confined to the narrow space between the crest of the Alleghanies and the Atlantic. If the English boundaries had been accepted, the French would have been hemmed within a small portion of Canada, north of the river St. Lawrence.

Both nations were now moving to occupy the Ohio Valley. The governor of Canada sent Céloron de Bienville, who, with a company of Canadians and Indians, floated down the Allegheny and Ohio rivers, and took formal possession in the name of his king. At the mouth of a river flowing into the Ohio, he would choose a large tree and nail to it a tin plate bearing the arms of France, while at its root he would bury a leaden plate inscribed with the statement that the country belonged to France. This was done at many places along the Ohio.²

During this same year, 1749, the English made a far more rational and tangible move toward securing the coveted territory. The Ohio Company was formed; it was composed of a few wealthy Virginians, to whom King George II granted five hundred thousand acres of land free of rent for ten years, between the Monongahela and Kanawha rivers, on condition that they plant one hundred families and maintain a fort in their new possessions. A little later the French made an important move. They built a fort at Presque Isle, where Erie now stands, Fort Le Bœuf, twenty miles from this, and Venango, on the site of the city of Franklin, Pennsylvania. This action alarmed Governor Dinwiddie of Virginia, as Virginia claimed the whole of the Allegheny Valley by right of her charter of 1609. The governor, therefore, determined to make a formal protest against the occupation of this territory by

¹ Parkman, "Montcalm and Wolfe," Vol. I, p. 125.

² The plate buried at the mouth of the Muskingum was found half a century later by some boys while bathing. Part of it was melted into bullets, and the remainder is now in the cabinet of the American Antiquarian Society. The plate buried at the mouth of the Kanawha was unearthed by floods, and was found by a boy in 1846, ninety-seven years after it had been buried. *Ibid.*, p. 48.

the French, and in choosing a messenger to make the journey to the newly built forts he unconsciously introduced to the future a young man who was destined to hold the first place in the heart of the great nation that was soon to be born in America — George Washington. Washington was a youth of twenty-one years and was adjutant-general of the Virginia militia. He had seen much experience in the woods as a surveyor. He was tall and stalwart, and he not only excelled all his fellows in athletic sports, but was specially noted for his moral character and for his unswerving fidelity to truth and duty. This first appearance of Washington in public life revealed the metal of which he was made, and plainly foreshadowed the great deeds of which he afterward became the hero. With the strength and vigor of youth, he and a few attendants made this perilous journey through the broken forest. Over hills and mountains, swamps and marshes, encountering deep snows and frozen rivers, and every peril of a wilderness yet untrodden by the foot of the pioneer, he carried the letter of Virginia's governor to the French commandant at Fort Le Bœuf. Washington's chief guides were Christopher Gist, a pioneer noted for his great skill in woodcraft, and Half King, an Indian chief whom he picked up on the banks of the Ohio. He was treated with much kindness by the French commandant, Saint-Pierre, who, however, declared in his answer that he would remain at his post, according to the commands of his general, but promised to send Dinwiddie's letter to Marquis Duquesne, the governor of Canada.

Washington's journey, 1753.

Washington's return trip was full of adventure. Thinking he could make better time, he left his horses and all his guides except Gist, and started out on foot. At an Indian village called Murdering Town they were shot at by a native whom they caught and whom Gist would have killed but for Washington's interference. Reaching the Allegheny River, they attempted to cross on a raft, but Washington was thrown into the current among the ice floes. He regained the raft, thoroughly drenched with the icy waters, and they reached an island in the river, on which they were obliged to spend a bitterly cold night. Next morning the river was frozen over, and they crossed on the ice and were soon again speeding through the forest. They reached Williamsburg, Virginia, on January 16, whence they had started seventy-eight days before.

Washington thus won the warm favor of his governor and the attention of all Virginia. The people early recognized in him the

rising hero, nor was it long until his further services were needed, for hostilities were at hand. Before midsummer of this same year, 1754, Washington, in command of a small body of militia near a place called Great Meadows, fired on a body of Frenchmen under the command of Jumonville, and the latter with nine of his men were killed;¹ and the great war that was to shake two continents, and to determine the language and civilization of the future United States, was begun.

A VIEW OF THE BELLIGERENTS

It is in place here to take a momentary view of the two peoples, as we find them in America, who were about to grapple in a great final struggle for the control of the continent. There are many points of resemblance. Both had occupied portions of the continent for nearly two hundred years, both were intensely religious, representing different forms of Christianity, and each was bigoted and intolerant and jealous of its rival. However we may admire the religious fervor of the Puritan, the Presbyterian, and the Huguenot, we must equally admire the French Catholic, who made his home in the wilderness and gave his life to the conversion of the savage.

The religious zeal of both peoples had, however, become greatly modified during the two centuries that had passed, owing chiefly to the coming of many who sought only adventure or gain. In 1750 we look in vain through the English colonies for the Puritan of the Winthrop type, and it is almost equally difficult to find in Canada the spirit of Allouez or Marquette. Again, the French and English were alike in personal courage, in a jealous love of the respective countries from which they had sprung; and both had imbibed that spirit of wild freedom inseparable from a life in the wilderness. But the points of difference between the English and the French in America are more striking than their points of agreement.

First, as to motive or object in settling in America. The chief object of the English was to find a home for themselves, far from persecution, where by patient industry they might build up a commonwealth; while secondarily, they would lead the red man to embrace Christianity.

The object of the Frenchman was twofold. First, he would build up a great New France which should be the glory of his native land;

¹ But on July 4 Washington capitulated at Fort Necessity.

second, he would convert the native red man to his religion; and third, he sought the wealth to be derived from the fur trade. These are comprehensive statements. It was the French government, as reflected in its loyal sons, that aimed to build up a New France; it was the French Jesuit, typifying the religious sense of the nation, who labored to convert the Indian; it was the French settler who strove for the wealth of the fur trade.

But while the Englishman would found a new England by migrating in thousands, the Frenchman would do the same for his nation, not by migrating, but by making Frenchmen of the Indians. When the Englishman wished to marry, he found a wife among his fellow-immigrants, or imported her from England; the Frenchman desiring a wife found her in the forest — he married a squaw. The English generally migrated in families, or congregations; the French who came were mostly men, and thus they lacked the indispensable corner stone of the State — the family. One great blunder made by the Frenchman was his failure to diagnose the Indian character. He evidently believed the Indian more capable of civilization than he was. The Frenchman spent himself to lift up the Indian, but more frequently the Indian dragged him down to barbarism; he married the squaw and raised a family, not of Frenchmen, but of barbarians. The French made many thousands of nominal converts among the natives, but there is little evidence that the Indian was changed in habits or character by his conversion, or that he was led to aspire to a higher civilization.

**Points of
difference.**

A second important difference between the two peoples is found in their relation to their respective home governments. The English colonies had been left by their sovereign to develop themselves, and they grew strong and self-reliant. Two of them, Rhode Island and Connecticut, chose their own governors; and, aside from the ever irritable Navigation Acts, they all practically made their own laws. They were very democratic, and almost independent; and, indeed, but for want of one thing, union, they constituted a nation. The French colonies, on the other hand, were wholly dependent on the Crown. From the beginning the king had fostered and fed and coddled them, and they never learned to stand alone. As a whole they were a centralized, hierarchical despotism. As men they experienced an individual freedom, born of life in the wilderness, but political or religious freedom was beyond their dreams or desires.

Again, the English colonies opened wide their doors to all the

world. The English Protestants were intolerant of Catholics, it is true, and even of one another; but their religious strife was chiefly intellectual and theological, and they continued to dwell together on the same soil. The French, on the other hand, excluded all except Catholics from their new domains. The French Huguenots, who were ill at ease among the English in Carolina, petitioned their king to permit them to settle in Louisiana, where they might still be Frenchmen and still be his subjects; but the bigoted monarch answered that he did not drive heretics from his kingdom only to be nourished in his colonies, and they remained with the English and became a part of them.¹ And the narrow-minded king reaped the reward of his folly; while the English in America numbered, at the opening of the French and Indian War, at least twelve hundred thousand souls, the French population barely reached sixty thousand. The French king might have had, without expense to himself, a quarter of a million industrious people of his own nation dwelling in the Mississippi Valley; but he threw away the opportunity, and that vast fertile region was now peopled only by roving Indian hordes. The French had control of a territory twenty times as great as that held by the English; but the English had a population twenty times as great as the French.

In one respect, and one only, the French had the advantage over the English: they were a unit. The French king had but to command, and all Canada was ready to rush to arms. The English were composed of separate colonies—republics, we may say; each enjoying much liberty without the responsibility of nationality; each joined loosely to the mother country, but wholly separate politically from all its fellows. Each colony had its own interests and lived its own life, and it was difficult to awaken them to a sense of common danger. Governor Dinwiddie, in 1754, appealed frantically and in vain to rouse his neighbor colonists to action. Indeed, it required two or three years' warfare to awaken the English to a sense of their duty, and the result was that the French during that period were successful on every side.

The far-sighted Franklin saw this great defect—this want of union; and at a colonial conference held at Albany, in 1754, and known as the Albany Congress, he brought about a plan of union, known as the Albany Plan. This plan provided for a president-general to be appointed by the

**Albany
Congress.**

¹ Parkman, "Montcalm and Wolfe," Vol. I, p. 22.

Crown, and for a council to be elected by the legislatures. But the English government rejected the plan because it was too democratic, while the colonists rejected it because they feared it would increase the power of the king, and the colonies plunged into this war, as into those that preceded it, without concerted action.

An important consideration at the opening of this great struggle for a continent was the attitude of the Indians. Had all the tribes thrown their weight to either side, the other side would doubtless have been defeated. But it happened that **Attitude of the Indians.** they were divided. The majority of the Indians, however, were with the French, and most naturally so. The Frenchmen flattered and won them by treating them as brethren, by adopting their customs, by marrying into their tribes, and by showing a zeal for their souls' salvation. The Frenchman readily fell into the Indian habits. Even the great Canadian governor, Frontenac, is said to have at times donned their costume and entered the uncouth dance, where he would leap as high and yell as loud as any child of the forest.

The Englishman, on the other hand, never received the native red man on the same footing with himself, never cared for his confidence, nor desired him as a neighbor. Often the two races were friendly, but a mutual suspicion was never absent.¹ Moreover, the English wanted land, which the Indians were loath to yield, and the French wanted furs, which they were always ready to furnish. In view of these facts it is not strange that the majority of the natives sided with the French. Nearly all the Algonquin tribes were French in their sympathies. But the very notable exception we find in the fierce, warlike Six Nations, or Iroquois, of northern New York, who cast their lot with the English. The enmity of the Iroquois toward the French had its origin in a little skirmish they had in 1609 with Champlain, when a few of their chiefs were slain. But there was another cause. The Iroquois and the Algonquins were deadly, hereditary enemies, and so they had been from a time far back, beyond the coming of the white man to North America; and the intimacy between the Algonquins and the French proved a serious barrier to the latter when they sought to make friends of the Iroquois.

Nevertheless, for a quarter of a century before the opening of the war we are treating, the French were making every effort to win the Six Nations, and they would doubtless have succeeded but for the counter influence of one man, William Johnson, the British superin-

¹ Sloane, "The French War and the Revolution," p. 34.

tendent of Indian affairs. Johnson spent many years among the Iroquois, knew their language as he knew his own, married a Mohawk squaw, and was made a sachem of their tribe. As Sloane says, his attitude toward the Indians was French rather than English, and it was he above all men who held the Iroquois firm for the English during the French and Indian War.

DUQUESNE AND ACADIA

The colonial wars treated in the preceding chapter did not originate in America; they were but reflections or echoes of far greater wars in Europe. But the French and Indian War had its origin on this side of the water, and was caused by boundary disputes between two great European powers concerning their possessions in North America. And yet this was closely connected with the tremendous war that raged simultaneously in Europe, known as the Seven Years' War, in which Frederick the Great of Prussia contended, at first single-handed, and later in alliance with the British, against the powerful French and Austrian monarchies. The formal declaration of war between France and England was not made till May, 1756; but hostilities broke out in America two years before this, and the year 1755 is marked by two of the most memorable events of the war. These were the ill-starred expedition of Braddock against Fort Duquesne and the drastic dealing with Acadia by the English.

One Sunday, late in February, 1755, a British general of stately bearing and in bright uniform came to the home of Governor Dinwiddie at Williamsburg, Virginia. The governor wrote to a friend: "He is, I think, a very fine officer, and a sensible, considerate gentleman. He and I live in great harmony." The gentleman was General Braddock, and he was accompanied by his secretary, William Shirley, son of the famous governor of Massachusetts. Braddock had come to be commander in chief of the English and American forces against the rising enemy on the north and west. The ministry had decided on three expeditions — against Niagara, Crown Point, and Fort Duquesne, respectively; and to the last of these Braddock was now to address himself. Three months after reaching Williamsburg we find him at the Ohio Company's old trading station, now Cumberland, Maryland, with a motley army of some thirteen hundred men, partly British regulars, partly provincial troops, and with a sprinkling of Indians. After much delay and

trouble in collecting wagons, food, and forage, which caused the commanding general, as well as his quartermaster, to "storm like a rampant lion," the army was ready to begin its march across the mountains to attack Fort Duquesne.

Fort Duquesne was a French post situated at the junction of the Monongahela and Allegheny rivers, the spot now occupied by the great iron city of Pittsburg, with its teeming life and its hurrying thousands. When Washington made his famous trip to Saint-Pierre, two years before, he took notice of this spot, and reported to his governor that an English fort should be planted there. A few months later a body of men were sent to carry out Washington's suggestion; but ere they had finished their task, several hundred French and Indians floated down the Allegheny and drove them away, and erected Fort Duquesne. To capture this fort Braddock would now lead his army, and he seemed never to dream of failure. Braddock was haughty and self-willed, but he was brave and not without ability. He refused to be advised by those who knew more of the foe and the country than himself. He looked with contempt on the Virginia troops, and made them feel their littleness in his eyes at all times; nevertheless one of them, George Washington, was a member of his staff.

Three hundred axmen were sent before to cut a road, and the army began to move from Cumberland early in June. The march was long and toilsome, but the spring was in full bloom and there was much to attract the lover of nature's beauty. Over the hills and ridges, streams and deep gullies, up the steep mountain slopes, the brave, hilarious soldiers marched through the great primeval forest, and the woods rang with their shouts and music. The road was cut but twelve feet wide, and the army, four miles in length, seemed like a gigantic centipede trailing its weary way through the wilderness.¹ On the 9th of July, when they had come within eight miles of Duquesne, at a point near where Turtle Creek flows into the Monongahela, surrounded by the dense forest and under the shadow of a line of hills, they suddenly met the enemy whom they sought. Braddock was surprised, but not ambuscaded, as is commonly stated. The enemy were about nine hundred strong; two thirds of them were Indians, the rest French and Canadians. They were led by Captain Beaujeu, who, seeing the English advance column, turned to the motley hordes

**Braddock's
march.**

¹ See Parkman's "Montcalm and Wolfe," Vol. I, Chap. VII.

behind him, waved his hat, and gave the signal. Instantly there was a terrible war whoop and the French and Indian forces spread into two parts to the right and left, hid behind trees, and opened a murderous fire. The English column wheeled into line and returned the fire with the utmost courage and steadiness. The enemy were scarcely visible from the beginning; they had adopted the true Indian mode of fighting. The first moments gave promise of English success. The French commander, Beaujeu, was killed at the beginning of the encounter, and most of the French and Canadians wavered and fled. But not so with the Indians. They quickly saw their opportunity — hiding places in plenty, with an enemy before them that did not know or would not adopt their mode of warfare. They swarmed on both flanks of the English in great numbers, firing as rapidly as they could load from behind trees, bushes, and fallen timber.

The English fired volley after volley, though they could see no enemy — only numberless puffs of smoke from which the bullets whizzed into their ranks like hail. At length they huddled together in disorder and confusion. Braddock heard **The battle.** the firing and came with all speed with the main army; but he knew nothing of Indian warfare, and he was too proud to learn. He galloped forward and back among the men, striving with threats and oaths to form them into battle lines, refusing to adopt Indian methods, and striking down with his sword men who hid behind trees. The Virginia troops knew how to fight Indians, and they might have won the day had they been allowed to use Indian methods, as they attempted to do; but the haughty general refused to permit it, and they, like the regulars, stood and quivered like frightened quail as they were mowed down by the invisible enemy. The scene was one of horror beyond description. The ground was covered with dead and wounded, and these were trampled in the mad rush of men and horses, while the yells of the savage hordes in the distance, heard above the din of battle, added to the general pandemonium. Braddock dashed to and fro like a madman, and at last, when his army had stood this frightful slaughter for three hours and more than two thirds of it was cut down, he ordered a retreat.

The battle was almost over. Four horses had been shot under Braddock, and he mounted a fifth, when a bullet was buried in his lungs, and he pitched from his horse and lay quivering and speechless on the ground. The ruined army was soon in full retreat, but

only a third was left alive and unhurt. Of eighty-six officers sixty-three were killed or disabled. The escape of Washington seemed miraculous; two horses were killed under him and four bullets pierced his clothing. Young Shirley, Braddock's secretary, fell dead with a bullet in his brain. The loss of the French and Canadians was slight, but a considerable number of the Indians were killed.

The fallen general was carried on a litter back over the rough-hewn road that had brought him to the field of death. His wound was mortal. He was at times silent for many hours, then he would say, "Who would have thought it? Who would have thought it?" It is said that during his last hours he could not bear the sight of the British regulars, but murmured praises for the Virginia troops and hoped he would live to reward them.¹ Four days after the battle he died, near the Great Meadows where Washington had fought Jumonville the year before. His body was buried in the middle of the road, as he had requested, and, lest the spot be discovered by the Indians, the whole army — men, horses, and wagons — passed over his grave.

Acadia had been settled by the French before the founding of Jamestown; but it was soon in the possession of the English, and again of the French, and so it passed back and forth like a shuttle between the two nations till the Treaty of Utrecht, when it became a permanent English possession. But its inhabitants were French, and, led by their priests and encouraged by the home government, they retained the language and customs of France, refusing to take the oath of allegiance to the British king. Furthermore, they fostered a spirit of hostility to the British government, and it was feared that an outbreak against the newly founded English settlement at Halifax might occur at any time. Governor Duquesne wrote in October, 1754, to one of his subordinates, urging that a plausible pretext for attacking the English be devised. At the same time the English, led by Governor Shirley, were planning the most drastic measures — no less than the removal by force of the entire French population from Acadia. Plans were ripened during the following winter, and in the early spring the expedition set forth from Boston under Colonel Monekton, with John Winslow, great-grandson of a Mayflower Pilgrim, second in command. On the first of June they sailed into the Bay of Fundy

Acadia
settled, 1604.

¹ Parkman's, "Montcalm and Wolfe," Vol. I, p. 226.

and anchored within a few miles of Beau Sejour, the only military post on the peninsula still in possession of French troops. After a short resistance the fort surrendered to the English, who, some months later, began to carry into effect their cruel decision to deport the Acadians. They had ample authority, for the Lords of Trade in London had written that the Acadians had no right to their lands, if they persisted in refusing to take the oath.

The Acadians, some seventeen thousand in number, were a simple, frugal, industrious, and very ignorant people, who lived apart from all the rest of the world. They raised their herds and cultivated their little farms in contentment, and made their clothes from wool and flax of their own raising. They often had quarrels and litigations among themselves, but in the main they were happy and contented. The British government up to this time had been fairly lenient with them; it had granted them the free exercise of their religion and had exempted them from military service. Nevertheless, the Acadians, led by their superiors, had fostered an unfriendly, almost a hostile, spirit against their government during the more than forty years of British rule.

After the surrender of Beau Sejour, the English thought it a favorable moment for exacting the oath of allegiance which had so long been refused. But it was again refused, and the painful business of deporting the Acadians began early in the autumn. The scenes at Grand Pré, made famous by Longfellow's "Evangeline," furnish a fair sample of the whole. This section was under the charge of Winslow, and he wrote that the duty before him was the most disagreeable of his life. Grand Pré was a quiet rural vil-

Grand Pré. lage, surrounded by broad meadows, their green slopes dotted with farmhouses. It was now late in August, and the waving fields of grain betokened the industry and thrift of the simple inhabitants. Winslow, with a body of troops, was encamped at the village, and he issued an order for the men of the community to assemble at the church on a certain day to hear a decree of the king; and the glittering bayonets of the soldiers warned them in unmistakable language of their peril if they refused. The men, clad in homespun and wholly unarmed, assembled in the church to the number of four hundred and eighteen, and heard the fatal decree that their houses and lands and cattle were forfeited to the Crown, and that they, with their families and household goods, were to be removed from the province. The men were thunderstruck at the

announcement; however, as Winslow says, many of them did not then believe that the decree would be carried out. But it was carried out with merciless severity, and within a few weeks hundreds of them were launched upon the sea for unknown shores, while the howling of the herds and the howling of the dogs could alone be heard from the desolate farms that had so lately been the scene of life and peace and plenty. Other similar scenes occurred in various parts of Acadia; but the majority of the people escaped to the forests and could not be captured. More than six thousand in all were deported, families usually being kept together. They were scattered among the English colonies from New Haven to Georgia. Many of them afterward returned to Canada, some to their old homes in Acadia; and a large number of them made their way to the west bank of the Mississippi, in Louisiana, where their descendants are still to be found.

It is difficult to pronounce judgment on this merciless dealing of the English with these simple, untutored people of Acadia. History has generally pronounced the deed a harsh and needless one, that has left an indelible stain upon its perpetrators. Assuming that the English had a perfect right to the province, they employed, after forty years of forbearance, perhaps the only means, aside from extermination, by which they could secure their ends and crush opposition to their government. Assuming, however, that might does not make right, the English should not have owned Acadia at all. They held it only by the doubtful right of conquest. The land had been settled and was occupied by the French, and, if there is a standard of human rights above the rulings of kings and governments and the results of unholy wars, these people should have been permitted to choose their own sovereign. Viewing the matter in this light (as the Acadians doubtless did), we must pronounce these simple people the victims of a dastardly outrage, and they must ever elicit the sympathy of mankind.

At the time when the English planned the two campaigns against Fort Duquesne and Acadia, they also decided on two other expeditions — against Niagara and Crown Point. The movement against Niagara was to be led by Governor Shirley, but it came to nothing; that against Crown Point was led by General William Johnson. He had nearly four thousand troops, mostly from New England, and with this army he met Dieskau, a brave and able French commander, with a somewhat smaller

**Defeat of
Dieskau,
1755.**

army. Several hundred on each side were Indians. The battle occurred near Lake George, and Dieskau was defeated and mortally wounded. The honor of this, the only English victory of the year, belonged rightly to General Lyman of Connecticut. Johnson, however, assumed the honor; and through his friends at court he was rewarded with knighthood from the Crown and a bonus of £5000.

The following year, 1756, witnessed but few changes in the war situation. Both nations formally declared war in the spring. Lord Loudon was made the chief commander of the British forces, with General Abercrombie as second in command. The Marquis de Montcalm became the commander of the French. The English planned great things and accomplished almost nothing, while Montcalm captured Oswego, with fourteen hundred prisoners and large stores of ammunition. The only English success, aside from building a fort on the Tennessee River to guard against Indians in that part of the country who were in sympathy with the French, was the destruction of Kittanning. This was an Indian village on the Allegheny River, forty-five miles above Fort Duquesne, and was the base of many Indian raids on the Pennsylvania frontier. Early in September, Colonel John Armstrong, with three hundred men, surprised the town one morning at daybreak. A desperate battle ensued; the Indians were defeated and their town was utterly destroyed, and for several years thereafter the settlers of western Pennsylvania had rest from Indian massacres. The year 1757 was even more humiliating to British arms than the preceding year had been. Lord Loudon planned the destruction of Louisburg, the powerful French fortress on Cape Breton Island that had surrendered twelve years before to the New England farmers and fishermen. Loudon embarked in June from New York with a large fleet, and was joined at Halifax by Admiral Holborne with another. With nearly twelve thousand men they now made ready to attack the powerful stronghold. But Loudon was wanting in skill as a commander, as well as in the mettle of a true soldier. Hearing that Louisburg was guarded by a French fleet, and that the garrison had been increased to seven thousand men, he abandoned the enterprise and returned to New York.

While the English cause languished for want of a leader, the French had found one of great vigor and ability in the person of Montcalm. This intrepid warrior, hearing that Loudon had drawn heavily on the militia of New York, and had left the northern

frontier of that colony but half protected, determined to strike a telling blow for his country by attacking Fort William Henry at the head of Lake George. This fort was formed of embankments of gravel, surmounted by a rampart of heavy timbers, **Montcalm.** and mounted seventeen cannon. Colonel Monro, a brave Scotch veteran, was in command, and the garrison numbered twenty-two hundred men. It was rumored in early July that the French under Montcalm were contemplating an attack; but Monro felt fairly secure, owing to the strength of his fort, the bravery of his men, and the fact that General Webb with sixteen hundred additional troops lay at Fort Edward, but fourteen miles away.

The rumor proved true. Stealthily through the midsummer forest, along the shore of the silvery lake, over the streams, and among the hills, crept the army of Montcalm. It was seven and a half thousand strong—sixteen hundred were Indians. On the 3d of August the wild war whoop and the rattle of musketry from among the timbers told the garrison that the siege was begun. The spot was fast becoming historic; here Dieskau had **Captures** received his death-wound and here Sir William Johnson **Fort William** had won his knighthood. But this third encounter **Henry.** between the same peoples in this lonely forest seemed to promise victory to the French. Monro saw his danger, but he refused the French demand to surrender. He sent messengers daily to General Webb, begging for reënforcements. Webb was within hearing of the cannonade, and held more than a thousand men in idleness; but he refused to raise a finger for the rescue of the fort. He sent a letter to Monro, advising him to surrender. The bearer fell into the hands of the Indians, and the letter fell into the hands of Montcalm, who sent it to Monro, renewing his demand for the surrender of the fort. For several days longer the roar of the cannon echoed from the neighboring mountains, when the white flag was raised over the fast-crumbling walls. The English were to march out with the honors of war, to be escorted by French troops to Fort Edward, and not to serve again for eighteen months.

And now was enacted one of those bloody deeds characteristic of early America—a deed of which only savage man is capable. The French commander used every effort to restrain his Indian allies, but a taste of blood had awakened their savage nature and turned them to demons; the practice of generations was too strong to be overcome by the restraints of civilized warfare. They rushed into

the fort and tomahawked the sick and wounded, the women and children. But this did not appease their thirst for blood. They even attacked the column of marching soldiers. Montcalm ran among them with wild gestures, striving with threats and entreaties to restrain them. "Kill me," he cried, "kill me, but spare the English who are under my protection." But the savage hordes were not restrained until they had slain eighty of the New Hampshire men in the rear of the column.

WILLIAM PITT

The fortunes of England were now at the lowest ebb. For three years she had suffered one defeat upon another, and now, at the close of the year 1757, there was not an English fort or hamlet in the basin of the St. Lawrence or in the Ohio Valley. The chief cause of this condition was a want of ability in the conduct of the war. The Duke of Newcastle, who was at the head of the British cabinet, was little fitted to carry on the great business of the nation. Above all things England wanted a man of ability and decision of character at the head of affairs, and at length she found one in the person of the rising statesman, William Pitt, the greatest Englishman of his generation. Pitt came into power in the summer of 1757, and his comprehensive mind soon grasped the situation. His touch was the touch of the master; he soon changed the succession of defeats to a succession of victories, and to him above all men was due the fact that England and not France became the possessor of North America.

In the early spring of 1758 Pitt sent a powerful fleet commanded by Admiral Boscawen to capture Louisburg. The fleet consisted of twenty-two line-of-battle ships and fifteen frigates, and bore ten thousand troops under the command of General Amherst. With Amherst was associated the most brilliant young military commander of England — James Wolfe. After a long and tempestuous voyage, the fleet lined up in the waters of Louisburg early in June, and on the 7th a landing was effected under the leadership of Wolfe. The outposts were soon captured, and the British cannon opened on the French fortress. For many weeks the incessant roar of the bombardment told of the coming doom of Louisburg. By the end of July the walls began to crumble, the French garrison of fifty-six hundred men surrendered to their conquerors, and for the second time the fort passed into English

**Fall of Louis-
burg, 1758.**

hands. This was the first important British victory in the French and Indian War; and, with all honor to Boscawen, to Amherst, and to Wolfe, the chief glory of the victory must be awarded to William Pitt. Thus began a series of English successes that was to continue to the end of the war; but the series was broken by one disastrous reverse.

It was during these same weeks when the British shells were bursting over the walls of Louisburg that Abercrombie and Lord Howe led an army through the wilderness of northern New York, only to be defeated by the great French commander, Montcalm. The army was the largest ever yet assembled in America, comprising fifteen thousand men — six thousand British regulars and nine thousand provincials, or, as we must soon begin to call them, Americans. The nominal leader was General Abercrombie, the real one Lord Howe, a young man of great vigor who may be favorably compared with Wolfe. We find also in this army John Stark and Israel Putnam, who afterward became famous in a greater war. The object of the army was to capture Fort Ticonderoga, on the shore of Lake Champlain, now held by **French victory at Ticonderoga.** Montcalm with a force of not less than four thousand men. Howe laid his plans with great skill and approached the fort, but at the first skirmish with the French pickets he was shot dead.¹ His death was an irreparable blow to the English, who nevertheless attacked the fort again and again with heroic bravery. The stupid Abercrombie, himself remaining out of danger, imposed an impossible task upon his brave artillery. Six times in a single day they dashed against the fort with ever increasing slaughter. They were mowed down in hundreds by the hail of musketry, and on the evening of that fatal day 1944 of their number lay dead on the field² — a greater loss of life than was suffered by either side in any battle of the Revolution. The broken army retreated into the wilderness, and Ticonderoga remained in the hands of the French.

There was one ray of sunshine, however, to cheer the defeated army. Colonel John Bradstreet with three thousand provincials set out in August to capture Fort Frontenac. Crossing Lake Ontario in open boats, they landed on the Canadian shore, and in a few days the coveted prize was in their possession. This was a serious blow to the French, as the communi- **Fort Frontenac.**

¹ Howe was a brother of Admiral Howe and General Howe of the Revolution.

² Sloane's "French War and the Revolution," p. 69.

cation between Quebec and the Ohio Valley was now completely severed.

It remains to say a word of the third great expedition of the year — that against Fort Duquesne. This was in command of General Forbes, ably assisted by George Washington with nineteen hundred Virginia troops, John Armstrong with twenty-seven hundred Pennsylvanians, and the brave Swiss officer, Colonel Bouquet.¹ The route selected was not the road cut out by Braddock three years before, but a shorter and more difficult one, over the mountains from the head waters of the Juniata and down the western slope to the Allegheny. Forbes was afflicted with a mortal illness and had to be carried on a litter, but his heart was strong and brave, and the labored march was continued. Major Grant, with eight hundred men, was sent ahead to decoy a portion of the garrison from their shelter. But the French came out in unexpected numbers, and in a sharp conflict Grant lost almost three hundred men.

So slow was the progress of the main army that when winter approached many weary miles were yet to be covered. A council of war was about to decide to abandon the project for the season, when word was received that the French garrison had been greatly weakened and could not endure a siege. This news infused new life into the expedition, and it was decided to press forward. Washington was sent ahead with twenty-five hundred men, but when he reached the place he found nothing but smoking ruins. **Capture of Fort Duquesne.** The French had fired the fort and abandoned it; and this much-coveted spot, which had cost Braddock and his brave army so dearly, passed into English hands without a blow. The place was now named Pittsburg in honor of William Pitt, who had inspired the expedition; and the great city that grew up on the spot retained the name, and is a perpetual monument to the memory of the great commoner, whose unswerving friendship for the colonies during the Revolution can never be forgotten.

FALL OF QUEBEC

Pitt's success during his first year of power was marvelous. He had played a winning hand in the terrible war that convulsed Europe at the time, and had won the most signal victories in

¹ This army, about six thousand in number, was composed almost exclusively of Americans.

America. Louisburg, Frontenac, and Duquesne had fallen before his victorious armies, and the French hold on the Ohio country was entirely broken. Pitt now planned still greater things for the coming year — no less than the complete conquest of New France, and the expulsion of French authority from all North America. General Stanwix was to guard the frontier between Pittsburg and the lakes; General Prideaux and Sir William Johnson were to advance on Montreal by way of Niagara; while Amherst, who had been made commander in chief, was to lead an army to the Champlain country where Abercrombie had been so drastically beaten the year before. But the most important expedition of the season was to be sent against Quebec under the command of Wolfe.

Prideaux proceeded to Niagara and invested the fort; but at the beginning of the bombardment he was killed by a bursting shell, and Sir William Johnson took command. After a siege of three weeks the fort surrendered, but Johnson made no further effort to reach Montreal. By this victory the entire upper Ohio Valley passed to the control of the English. Amherst gathered his army of ten thousand men at Lake George in June, and the next month he sailed down the lake to Ticonderoga; but the French abandoned the fort for Crown Point, and a little later retreated from this point, taking up a strong position on Isle-aux-Noix in the Richelieu River. Amherst then spent the summer building useless forts, and made no effort to support Wolfe, as he was expected to do.

Canada was in a deplorable condition in 1759. The harvest of the year before had been meager, and a barrel of flour cost two hundred francs.¹ Many of the horses and cattle had been killed for food, and the people were on short rations ere the summer had begun. And besides, thieving officials robbed the people, and British men-of-war guarded the mouth of the St. Lawrence. A bitter quarrel between Montcalm and the boastful Canadian governor, Vaudreuil, added to the confusion. Their dispute was carried to the court at Versailles, and Montcalm was sustained; but the one great desire of his heart, an additional army of veterans, was denied him.

Quebec is situated on a promontory in the northwestern angle made by the junction of the St. Charles River with the St. Lawrence, and from the former extends a table-land eastward to the beautiful falls of the Montmorency, about seven miles from the city. This plateau was occupied by Montcalm with an army of nearly seventeen

¹ Parkman, Vol. II, p. 172.

thousand men, regulars, Canadians, and Indians. Back of the city, on the north bank of the St. Lawrence and westward from the mouth of the St. Charles, lay the Plains of Abraham,¹ which had been left unguarded, as the rocky steep was supposed to be inaccessible from the river.

General Wolfe was still in his youth; he had just passed his thirty-second year. In appearance he was uncomely, and his health was delicate; but the fire of genius sparkled from his eyes. The son of a British general, he had imbibed his martial spirit from childhood. From the age of fifteen he had served his king, and while still a boy he was noted for deeds of skill and daring. At the capture of Louisburg his reputation was greatly enhanced, and the keen eye of Pitt now singled him out to command the perilous expedition to Quebec. Wolfe had spent the winter in England and had won the heart of a beautiful maiden; and now he gave her and his beloved mother a fond and final good-by, and launched out upon the journey from which he was not to return.

His fleet, bearing eight thousand men and commanded by Admiral Saunders, entered the St. Lawrence in June, and on the 26th it was anchored off the island of Orleans, but few miles below the city of Quebec. In the English army we find Colonel Monckton of Acadian fame, and Guy Carleton, William Howe, and Isaac Barre — all afterward famous in the Revolution. Wolfe made

**Wolfe invests
Quebec.**

his camp on the eastern bank of the Montmorency, near its mouth, and opposite the encampment of Montcalm.

The dreary weeks of the summer were spent by the two armies lying, each in view of the other, waiting and watching for some unexpected advantage. Wolfe was anxious for a general engagement; but Montcalm, distrusting his Canadian and Indian allies, steadily avoided one. On the last day of July the impatient Wolfe, with a large detachment of his army, forded the Montmorency at low tide and made a desperate assault on the French position; but the ever watchful Montcalm was on the alert, and the English were driven back with the loss of four hundred and fifty men. The French had attempted to destroy the British fleet with fire ships, but in vain. The old wooden vessels, laden with pitch, powder, and other combustibles, were sent burning down the river, and grandly they lighted the heavens and the surrounding country; but the English grappled

¹ So called from Abraham Martin, who had formerly been the owner of the plateau.

with them and ran them ashore or sent them onward toward the sea.

As the summer wore away and the situation remained unchanged the disappointment of Wolfe threw him into a dangerous fever. He had lost nearly a thousand men, and the enemy did not seem to be weakened. He had expected reinforcements from Amherst, but he looked and longed in vain. For many weeks he had kept up an incessant bombardment, day and night; but, aside from burning the lower part of Quebec, this had brought him little advantage. At length it was determined to attempt to scale the heights of Abraham and bombard the city from there, or force Montcalm into an engagement in defending it. The resolve was a daring and heroic one, but the desperate courage of Wolfe was unlimited. He had just risen from a bed of illness; his fever had subsided, but he was further afflicted with an incurable disease, and he had reached the condition in which a soldier is at his best—he had no hope of returning alive to his native land. To his physician he said, “I know perfectly well that you cannot cure me; but pray make me up so that I may be without pain for a few days, and able to do my duty.”¹

The English broke up their camp, and on that moonless night before the fateful day they moved as silently as possible up the river till they had passed the sleeping city. Wolfe had a strange presentiment of death. To a lifelong friend on his flagship he gave a miniature of his affianced bride and requested that it be returned to her. While on the deck of one of the boats he recited with deep pathos portions of Gray’s “Elegy,” especially the stanza ending with —

“The paths of glory lead but to the grave.”

Some hours before dawn the English vessels landed the soldiers on the north shore, beneath the rocky steeps that led to the Plains of Abraham, and the men were soon clambering up the cliffs toward the summit. At the coming of dawn the ever vigilant Montcalm was amazed to find that his enemy had outwitted him—that the heights above the city were crowned with long and threatening lines of British soldiers, almost five thousand in number. The French commander was stunned at the changed conditions before him. He saw that he must do one of two things: abandon the city to its fate and save his army by

**The Plains of
Abraham.**

¹ Parkman, Vol. II, p. 268.

flight, or grapple with the enemy in a final, desperate struggle for Canada. His army, though superior in numbers, was composed largely of Indians and unskilled Canadians, and its fighting qualities were much inferior to those of the British veterans. **Surrender of Quebec, September 17, 1759.** Montcalm chose to fight, and before noon the two armies were engaged in a fierce, determined conflict. The battle was short and decisive. The French gave way, and ran for their lives; and a few days later the city of Quebec passed into the hands of its British conquerors.

But the English paid dearly for their victory. Their noble commander had fallen to rise no more. During the battle Wolfe had hurried here and there amid the hail of bullets, urging and encouraging his men. Twice wounded, he continued his efforts, until a ball lodged in his breast and he sank to the ground. He was carried to the rear and offered surgical aid. "There is no need," was his answer; "it is all over with me."

The next moment he was informed that the French were in full retreat. He received the news as one awakened from a dream, and immediately gave orders that a regiment be placed at the Charles River bridge to cut off the enemy's retreat. Then, turning upon his side, he murmured in a low, sweet voice, "Now God be praised, I shall die in peace," and a moment later his soul had passed into eternity.

A similar fate befell Montcalm, the noblest Frenchman of them all. He had been ill supported by the governor, the envious Vaudreuil, and it seemed fitting now that he should yield his life with the cause which he could no longer sustain. While guiding his flying troops toward the city gates, he received a wound that caused his death. On being informed that his wound was mortal, he answered, "I am glad of it." He then asked how long he had to live, and was answered by the physician that he would probably die within twelve hours. "So much the better," was his reply; "I am happy that I shall not live to see the surrender of Quebec."

The body of the dead commander, followed by a groaning and sobbing multitude, was borne through the dusky streets of the city. Beneath the floor of the Ursuline Convent, in a grave partially made by a bursting shell, the remains of the greatest Frenchman that ever set foot on American soil were laid to rest.

Measured by its results, the battle of Quebec was one of the

most important ever fought in America. France made a desperate effort, the following year to recover the city, but an English fleet came to the rescue, and the effort was vain. Montreal soon after surrendered to General Amherst, and French dominion in America was ended. The conflict had been raging at intervals for a hundred years. The sum of human life and treasure that had been sacrificed by the two rival powers for supremacy in North America was beyond all calculation. The fall of Quebec practically ended the war in America, but a treaty of peace was not signed until three years later, owing to the mighty conflict, known as the Seven Years' War, that was still raging in Europe. Meantime Spain came to the rescue of France, and in consequence lost possession, for a time, of Cuba and the Philippine Islands, which were conquered by England in 1762.

The Treaty of Paris, signed in 1763, stands alone among treaties for the magnitude of its land cessions. England gave Cuba and the Philippines back to Spain and received Florida instead. France ceded to Spain, in compensation for Florida, the city of New Orleans and that vast tract west of the Mississippi known as "Louisiana." To Great Britain France surrendered all the rest of her American possessions, including the Ohio Valley, Canada, Cape Breton, and all her islands except two in the Gulf of St. Lawrence. Thus France lost everything, and henceforth that country had no footing on the mainland in the Western Hemisphere.¹

**Treaty of
Paris.**

But these vast land cessions did not constitute the chief results of this conflict. As before stated, the trend of civilization in North America was to be determined by the outcome of the French and Indian War. Gallican civilization differed widely, as it does to this day, from Anglo-Saxon; and the result of this war was that the latter must prevail, not only in the future nation that was soon to come into existence, but also in the vast dominion on the north now wrested from France to become a part of the British Empire. The war did much also for the English colonists. It brought them into contact with one another, led them to see as never before that their interests and destiny were common, and prepared them for the political union that was soon to follow. It awakened in them a self-consciousness, and, as will be noticed on a future page, brought out clearly the true relations between them and the mother country.

¹ Except the brief possession of Louisiana, 1800-1803, by Napoleon Bonaparte.

CONSPIRACY OF PONTIAC

The fall of French dominion in Canada and the West left the Algonquin Indians unprotected. Since the days of Marquette and La Salle the many tribes of this great family had lived in harmony with the French, and during the late war had been their faithful allies. But they now found in their new masters a people very different in their attitude toward the red man. The French had treated them as equals and brethren; but the English, while they often made friends among the various tribes, never went far out of their way to conciliate them. And now, at the close of this long war, their feelings toward the allies of their enemy were anything but cordial. The French had lavished presents upon them, but the English doled out blankets, guns, and ammunition with a sparing hand.

The proud-spirited Indians were exasperated at the patronizing air of the English, and the rising flame was secretly fanned by the Frenchmen who were still scattered among them. A conspiracy was soon formed to massacre all the English garrisons and settlers along the frontiers of Virginia, Pennsylvania, and the regions of the Great Lakes. The leader of this great movement was Pontiac, probably the ablest Indian warrior ever known to the white race in America. Pontiac belonged to the Ottawa tribe, but it is said that his mother was an Ojibway. He came to be chief of both tribes and of several others, and he was now the soul of the great conspiracy against the English. On a certain day in June, 1763, to be determined by a change of the moon, every English post was to be attacked and the garrison murdered, and all the whites were eventually to be driven eastward beyond the Alleghanies.

Pontiac visited many of the tribes and won them by his extraordinary eloquence. To others he sent messengers, each bearing a wampum belt and a red-stained hatchet. Almost every tribe of the great Algonquin family, and one tribe of the Six Nations, the Senecas, joined in this conspiracy. So adroitly was the plot managed that the attack was made almost simultaneously in all parts, and every English post fell into the hands of the savages except three,—Detroit, Fort Pitt, and Niagara. Of these three, Detroit, attacked by Pontiac in person, was successfully defended by Major Gladwyn, Fort Pitt was saved by Colonel Bouquet, and Niagara was not attacked.

The war continued at intervals for three years, when the Indians

yielded, and agreed to a treaty of peace. Pontiac a few years later went to the Mississippi Valley, where he perished, like his great prototype, King Philip, by the hand of one of his own race. He was buried on the soil where St. Louis afterward rose, and "the race whom he hated with such burning rancor trample with unceasing footsteps over his forgotten grave."¹

NOTES

Duquesne. — As stated in the text, Colonel Forbes was so ill when he crossed the mountains that he had to be carried on a litter. He died the following spring. The Indian allies threatened to refuse to follow a leader who had to be carried, when the witty interpreter, Conrad Weiser, quieted them by saying, "Brothers, this man is so terrible in war that we are obliged to confine him, . . . for if he were let loose upon the world, he would deluge it with blood." (Drake's "Making of the Ohio Valley States," p. 76.) After Washington, sent by Forbes, had taken Fort Duquesne, Captain West, brother of the great artist, led a party to Braddock's battlefield to search for the bones of their comrades. Captain Halket, who was with the party, found two skeletons in each other's embrace, and recognized them by the teeth to be his father and brother. He fainted at the sight. (Parkman, Vol. I, p. 160.)

Pitt and Wolfe. — William Pitt, the "Great Commoner," was an aristocrat and by no means a democrat in the modern sense. His egotism was his greatest defect. "I am sure," said he, "that I can save this country and that nobody else can." Frederick the Great said of him, "England has long been in labor and at last has brought forth a man." Pitt was severely criticised for appointing Wolfe to lead the Quebec expedition. "Pitt's new general is mad," said ex-Premier Newcastle. "Mad, is he?" returned Pitt; "then I hope he will bite some other of my generals." This reminds one of President Lincoln's remark about General Grant. Being informed that Grant sometimes drank, he expressed a desire to know the brand of whisky Grant used, as he wished to give some to his other generals.

Washington's Modesty. — The Southern colonies took little part in the war during the last years of its progress. Even Washington, after the capture of Fort Duquesne, retired to his plantation, and was soon afterward elected to the Virginia House of Burgesses. Being called on to give an account of his military exploits, he rose in his seat, but stood abashed and unable to utter a word, when the speaker relieved him by saying, "Sit down, Mr. Washington, your modesty equals your valor, and that surpasses any power of language I possess."

Detroit, Pontiac. — Pontiac's plan for capturing Detroit was very skillful, but it miscarried. It was not unusual for the Indians to come into the fort and amuse the garrison with their rude games and dances. Pontiac's plan was to lead his warriors within the fort on a pretended friendly visit, each to hold a weapon hidden beneath his cloak, and at a given signal to fall upon the English

¹ Parkman (references to Parkman are to the 5th edition), "Conspiracy of Pontiac," Vol. II, p. 313.

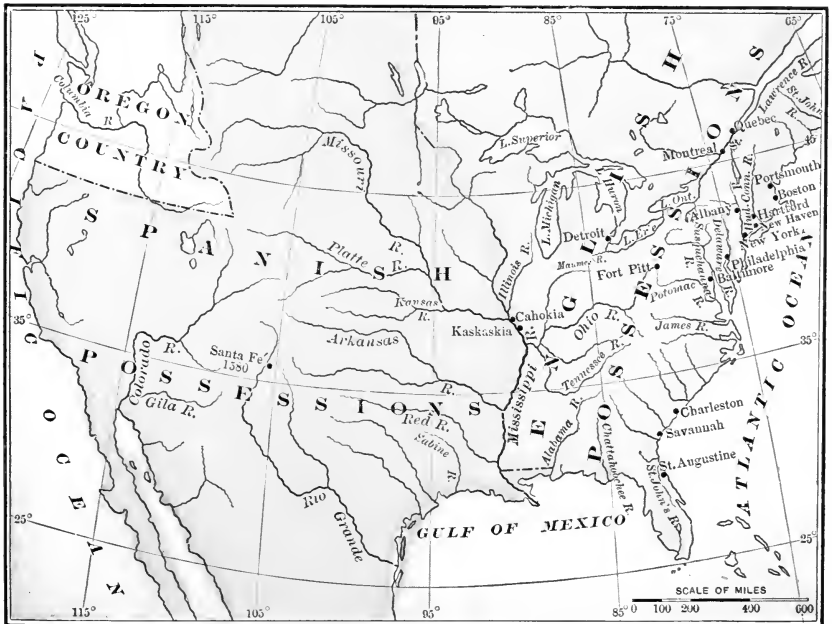

and murder them to the last man. But on the day before this was to occur, an Indian girl, well known to the English, revealed the plot to Major Gladwyn, and when the Indians came they found the white men drawn up in battle line and armed to the teeth. Pontiac did not give the signal, but afterward attacked the fort, and besieged it unsuccessfully for several months, when it was relieved by General Bradstreet. Gladwyn and Pontiac had both fought on opposite sides in Braddock's battle near Fort Duquesne. Pontiac kept two secretaries, one to read his letters and the other to answer them, and he managed to keep each ignorant of what the other did. To carry on the war he secured loans from the Canadians and gave promissory notes written on birch bark, signing his name by making the totem of his tribe, the figure of an otter. Every note was paid in full. On hearing that a trusted friend of his, a Canadian, had been offered a bushel of silver to betray him, Pontiac went to the friend's house and slept there all night to show his perfect confidence. The genius of Pontiac was very remarkable, and had his great powers been devoted to uplifting and civilizing his race, his name would hold a conspicuous and abiding place in history.

Sir William Johnson was a power among the Indians, and, with all his shortcomings, he did a great service for his countrymen in keeping the Iroquois (except the Senecas) from joining the great conspiracy. It was to him that Pontiac came to arrange a treaty of peace in 1766, making the long journey to Oswego, New York.

Michilimackinac. — The plan adopted at Michilimackinac was similar to that at Detroit. Here the Indians arranged to play a game of ball within the fort. The squaws were to stand by with concealed weapons. At a certain signal the players ran to the squaws, seized the weapons, and began the bloody work. The English were unprepared, and few of them escaped alive. At Presque Isle the garrison surrendered after a terrible siege of two days. Sandusky was captured by treachery, and every man in the fort was put to death except the commander, Ensign Paulli, who was carried to Detroit as a trophy. He was afterward given his choice of two things — to be put to death, or to marry a squaw. He was not put to death. (Drake, p. 85.)

BEFORE THE FRENCH AND INDIAN WAR.

AFTER THE FRENCH AND INDIAN WAR.

CHAPTER X

COLONIAL LIFE

To compare our own age with a former age only to show our cleverness and wisdom over those of our ancestors — to laud and magnify our intelligence and civilization at the expense of our forefathers — is at least of doubtful good taste. Certain it is that we, with the same environment, would be as our grandfathers were, would act, speak, and believe as they did. It cannot be demonstrated that the human race has, in historic times, advanced in mental capacity at all. Our modern civilization has produced no greater figures than Moses or Plato, Aristotle, Hannibal, or Cæsar. But to get nearer the time we are treating: Shakespeare died but nine years after the founding of Jamestown, and the same year
Harvey discovered the circulation of the blood; yet **1616.**
with all our advance in civilization the world has not produced another Shakespeare, nor has any anatomist of our times made a discovery equal to that of Harvey. The year before
the coming of the Pilgrim Fathers, Kepler discovered **1619.**
the three eternal astronomical laws that bear his name; and the year before Roger Williams hied away to his native land for a charter and the New England Confederacy was formed, Isaac Newton, the discoverer of the universal application of the
law of gravitation, was born — and Keplers and New-
tons since then have been rare. **1642.** We may twit the seventeenth century for its religious intolerance, its belief in witchcraft, its ignorance of steam navigation, of electric motors, and of sulphur matches — and here is the answer: “We gave you Shakespeare and Harvey and Kepler and Newton.” Verily, we are no better nor cleverer than were our ancestors; yet in one respect we are wiser than they — superior to former generations: we do not persecute our Roger Bacons and Galileos; we welcome them as prophets of good. And herein lies the secret of modern progress. The result has been marvellous. Our modern way of living is quite unlike that of our fathers

of colonial times, and a glance at the latter is not only interesting, but also highly profitable.

POPULATION AND SOCIAL RANK

In 1760 the population of the thirteen colonies was approximately 1,600,000, about one fourth of whom were negro slaves. The people were scattered thinly over the vast region along the seaboard between New Brunswick and Florida, extending from the coast in decreasing numbers to the foothills of the Alleghanies. A few settlers and traders had occupied the valley of the Ohio, but in one colony only, Pennsylvania, had the settlers crossed the Alleghanies in any considerable numbers. About half the population lived on either side of Mason and Dixon's line. The most populous of the colonies was Virginia, Massachusetts coming second and Pennsylvania third. The largest city was Philadelphia, with 25,000 inhabitants; the only other cities exceeding 5000 were Boston, New York, and Charleston.

In New England and the South, the people were almost wholly of English stock,¹ with a sprinkling of Scotch-Irish and other nationalities, and, especially in the South, of French Huguenots and Germans. In the middle colonies less than half the population was English; the Dutch of New York, the Germans of Pennsylvania, the Swedes of Delaware, and the Irish of all these colonies, together with small numbers of other nationalities, made up more than half the population.

In all the colonies there were well-drawn social lines; birth and pedigree counted for more than in the free America of to-day. The lowest stratum of society was composed of African **Social caste.** slaves. Slavery existed in all the thirteen colonies, but the great bulk of the slaves, perhaps four fifths of them, were in the South. The institution did not pay at the North, and it never became an important social factor in that section. Few were the rights of the slaves before the law in any of the colonies; but with regard to their condition they may be divided into three classes. Those in New England and the middle colonies were for the most part domestic servants, and they usually received mild and humane treatment, were instructed in religion and morals, and were not infrequently admitted to the family circle. In Virginia and

¹ New England was of more purely English stock than was the South.

Maryland, where all social life centered round the owners of the great plantations, the slave was a body-servant to his master, or more frequently a plantation laborer, living a life of ignorance and contentment in his rude hut with his family.

Slavery.

At certain seasons of the year his labor was arduous, but, on the whole, his condition was a happy one. Among this class we find mechanics and artisans, trained for the various duties about the plantation. A severer form of slavery marked the third class, which was found farther south, where the blacks were brought from Africa or the West Indies in great numbers, and where, under the lash of the taskmaster, they wore away their lives in the rice swamps with unrequited toil.

For many years there was no particular public sentiment against slavery; but about the time of the English Revolution, the Quakers and Germans of Pennsylvania began to be heard in opposing the institution on moral grounds. Thus began a public feeling against slavery that was destined to increase in volume for more than a hundred and fifty years, and at last to bring about the overthrow of the institution in America.

Next above the slaves, and not far above them, stood the indented white servants. Many of these were criminals, who, being thrust upon the colonies by the mother country, escaped imprisonment or death by a long term of servitude in America. Others were waifs from the streets of London, sold by their inhuman parents, or kidnapped by cruel traders and sold into servitude across the sea. Still others, known as redemptioners or free-willers, voluntarily sold their services for a term of years, not usually more than five, in order to pay their passage across the

Redemptioners.

sea. The shipmaster would bring a company of them to an American port, and dispose of them to the planters, farmers, and merchants. The majority of the redemptioners, after serving their time, merged into the great middle class and became substantial citizens. Many left the scenes of their servitude and pushed out to the frontier, hewed their homes out of the frowning forest, and led a quiet, industrious life. Of the convict class, few were reformed by their service; the majority continued shiftless and worthless, and constituted, especially at the South, the most undesirable element of society. On election days and other special occasions they, and too often citizens of the more respectable classes, would gather at the taverns and courthouses and spend the time drinking, gambling,

and fighting. They also, with the free negroes, constituted the chief criminal classes in most of the colonies. Crime was punished by hanging, whipping, ducking, branding, and by exposure in the pillory and the stocks—less frequently by imprisonment, except in some of the northern colonies. The indented servants, like the slaves, were far more numerous in the South than in the North, but in no place were they socially or politically of much importance.¹

The next higher class, the most numerous of all, comprised the traders, shop-keepers, and small farmers—the rank and file, the bone and sinew of the land. Especially was this true of the northern and middle colonies. To this class belonged the great mass of the people, and they were for the most part prosperous, contented, and moderately educated, but not highly cultured. They were sturdy, honest, usually religious, and hospitable to strangers. There is no doubt that in morals the colonists as a whole were equal to any people in the world. Governor Spottswood of Virginia wrote to the bishop of London that in that colony he had observed less profaneness, drunkenness, feuds, and villainy than in any part of the world where his lot had been.

At the top of the social scale stood the ruling class, composed in New England of the clergy, magistrates, college professors, and other professional men; in New York of these classes, and, above all, of the great landholders along the Hudson; while in the South the proprietors of the great plantations were uppermost in society, and near them stood the professional men. In all the colonies social lines were distinctly drawn, more so than in our own times. The style of dress was, in some colonies, regulated by law, and no one was permitted to dress “above his degree.” Worshipers in church and students in college were obliged to occupy seats according to their social standing. The upper class made much of birth and ancestry; and, whatever our prejudices against rank, it is significant that from this class came many of the leading statesmen and generals of the Revolution. With all the class distinctions, however, it was not unusual in those days, as at present, for an aspiring youth to rise from the lower walks of life and take his place among the leaders of society.

The ruling class.

¹ In Virginia the indented servants outnumbered the slaves for a hundred years. In all the colonies there were strict laws against their running away. Sometimes man and wife, or parents and children, were separated, to meet no more for years, or even for life. See Bolles's "Pennsylvania," p. 177 *sq.*

OCCUPATIONS AND CUSTOMS

America in colonial days was a land of farmers. Our forefathers on migrating to America found no great cities with innumerable openings for the industrious and thrifty, no great industries with salaried positions awaiting them. They found only a vast, uncultivated region — the valleys, the plains, the illimitable succession of rolling hills, crowned with primeval forest; and from this they must clear the timbers and delve into the soil for their daily bread. Hence a nation of tillers of the soil. A few ministers and artisans, rulers and merchants, there had to be, but their combined numbers were few compared with the great body of the people, — the farmers.

In New England, however, the soil was not fertile; a farmer could get a living from the soil and perhaps a little more, but he could not thrive and accumulate money, and it was not long before many of the people turned their attention to the sea. They became fishermen and sailors, shipbuilders and merchants. They took cargoes of fish and cattle and the products of the forest and of the soil to the West Indies, to England, and to Spain, and brought in return molasses and the many articles of manufacture that they could not make at home. There were few manufactories, but the people supplied many of their own wants. Nearly every farmer was also a rude mechanic. He and his sons usually made the furniture for the household and many of the implements of the farm as well, while his wife and daughters spun the flax and wove it into a coarse cloth from which the family was clothed.

The New England farmhouse was scantily furnished. It was solidly built of wood, but, as if inspired by their stern Puritan religion, the builders gave all too little attention to comfort, and the average New England farmhouse would have been scarcely endurable in winter but for the great open wood-fire about which the family (usually a large one) gathered in the evening and made brooms, shelled nuts, and told stories. But the "house of the seven gables" was not wanting in New England. Many of the rich in the cities and their suburbs built fine stone, brick, or wooden mansions, and lived on the fat of the land. The furniture in the dwellings of the rich was often imported from England, as was also the tableware — china, wedgwood, cut glass, and silver plate.

Town life in New England was everything, while in the South,

as we shall notice later, the county or the plantation was the geographical unit. The Puritans were not great landholders; they were small farmers. Each had his little clearing surrounded by the dark, merciless forest, with its wild beasts and wild men. But he was loath to dwell far from the town, where he attended church and market, and which became his city of refuge on the approach of hostile Indians. Many farmers lived in the village or very near it.

The Village. The town was a straggling, rural village with unpaved, shady streets partly covered with stumps of native trees. There were at least three important buildings in the town, always near together — the church, the tavern, and the blockhouse. The church in early Puritan days was built of logs, provided with benches, and never heated. The congregation was summoned by the sound of a horn or a drum, and the people sat in order of social rank and listened to the long sermons. If a man or a boy fell asleep or misbehaved, he received a rap on the head from the rod of the tithingman; while if a woman fell into a doze, she was awakened by the brushing of her face with a rabbit's foot appended to the rod. In early times, when the red man still lurked in the woods, the men went to church armed, and the minister often preached with a musket by his side.

The tavern or ordinary was not only a lodging place for travelers, but also a drinking house, and a place of general gossip for the village and neighborhood. Here the people would gather on special days to take a social glass, to get the latest news, and to discuss politics and religion. The tavern was considered a public necessity, and a town that did not maintain one was subject to fine by the Gen-

The Tavern. eral Court.¹ The principal drinks were rum, small beer, and cider, and these were used freely by men, women, and children. The tavern keeper was a man of great importance — usually a jolly gentleman whose stock of information on all current topics was inexhaustible. He was often the chief man, next to the town clerk, in the town — schoolmaster, leader of the singing in the church, member of the town council, land agent, surveyor, and the like. He was required to be a man of good character, and was not permitted to sell strong drink to drunkards.

The blockhouse was strongly built of logs, the second story extending over the first and being provided with portholes so that the occupants could fire directly down on a besieging enemy. In case

¹ Field's "Colonial Tavern," p. 13.

of an Indian attack the whole population would abandon their homes and rush to the blockhouse, and in this way their lives were often saved. The blockhouse in New England ceased to be of great importance after King Philip's War.

Passing westward into New York, we find a soil very different from the barren lands of New England. The great valleys of the Hudson and the Mohawk were exceedingly fertile, and in this colony the majority of the people were tillers of the soil.

But New York was by no means wholly agricultural. The second great industry was that of trade, and this was of two kinds — trade with foreign countries and the other colonies and the Indian fur trade. New York City was the center **New York.** of all maritime commerce, and was a formidable rival of Boston and Philadelphia. The Indian fur trade was exceedingly lucrative, and hundreds of men were constantly engaged in it.¹ A trader would go into the Indian country laden with rum and trinkets and implements prized by the natives, and for these he would receive furs and peltries, with which he would float down the Hudson and sell them to the foreign traders of Manhattan.

The character of society in New York was unlike that of any other colony, owing to the patroon system, which continued all through colonial days and far into the national period. The patroon had a luxurious, well-built house of brick **Society.** or stone, a retinue of servants, large barns, orchards and gardens, and broad pasture lands dotted with flocks and herds. His tenants were scattered for miles about him, and among them he lived much like a feudal lord of the Middle Ages.

The majority of the people, especially in the country, were Dutch, and they clung tenaciously to the customs and habits of their nation. They were a plodding, industrious, religious people, who dwelt in small wooden or brick houses with sanded floors, and high, steep roofs, and, in the villages, with the gable ends, "notched like steps," turned toward the street. The window panes were very small; the doors, each with its knocker of brass or iron, were divided into an upper and a lower section. Country houses were placed as near together as the extent of each farm would allow, often forming a little village street.² A great fireplace in each house was usually built of tiles brought from

¹ But the fur trade was greatly crippled when, in 1732, England forbade the people to export hats.

² Earle's "Colonial Days in Old New York," p. 116.

Holland, and on these were stamped various Scripture scenes, one of which was Lazarus leaving the tomb and waving the flag of the Netherlands.¹ One of the features of the Dutch village and farmhouse was the stoop, on which, in summer evenings, the family would sit and chat for hours with their neighbors, the men smoking long Dutch pipes, the women busy with their knitting or sewing.

The Dutch were more liberal in games and amusements than were the Puritans of New England. No people in America presented a more attractive picture of quiet, pastoral contentment, of unruffled satisfaction in life, of thrift and plenty, than the Dutch rural population of New York. Thus these people continued their rustic life, maintaining their customs and language for nearly two centuries; but after the Revolution they were forced to yield to the ever increasing tide of the English race, until they gradually lost their identity and their language.

In New Jersey the mode of life was somewhat similar to that of New England, from which many of the people had emigrated. This was especially true of East Jersey, while in West Jersey, where the Quakers predominated, the mode of life resembled that of Pennsylvania. The soil, with the exception of the sand regions in some portions of the colony, was fertile, and farming was practically the sole industry. There were few large estates, the great majority of the settlers being small farmers, each with his clearing in the forest; and this, with the fact there were few slaves or indented servants, brought about a social equality unknown in most of the colonies. There was little culture or education except in the villages that dotted the great highway between New York and Philadelphia. The people were thrifty and honest; houses were left unlocked, and there was little crime. The laws and punishments were modeled after those of New England.

The moment we cross the Delaware into Pennsylvania we find a notable change in colonial society. It is true there were many English Quakers, as in West Jersey, but they were outnumbered by others. There were Germans, Irish, Scotch-Irish, Welsh, and Swedes. The tolerant spirit of the Quaker government had attracted men of every nationality and every creed. First in numbers came the Lutherans and Presbyterians, and after these the Dunkards, Moravians, Baptists, Anabaptists, Pietists, and Mennonites, with a sprinkling of Methodists, Episcopalians, and Roman Catholics. Yet with all

¹ Earle's "Colonial Days in Old New York," p. 126.

the mixture of sect and nationality there was no colony in America more peaceful, contented, and democratic than Pennsylvania. It is true that the Germans and the Scotch-Irish could not get along well together, and they kept apart by settling in separate communities or in parallel bands across the colony, while the English predominated in Philadelphia and vicinity. There was **Pennsylvania.** also frequent political strife between the Scotch-Irish and the Quakers, and the latter often combined with the Germans to retain their prestige in the legislature. The chief industry was farming; the soil was rich and productive, and the river valleys were laden with waving fields of grain every year, while the broad meadows and mountain slopes were dotted with grazing herds. But there were other occupations in Pennsylvania. Many were engaged in the fur trade and still more in foreign commerce, while the iron industry had its beginning early in the eighteenth century.

Philadelphia was a fine, well-built city with straight streets crossing at right angles — and its plan, originating with Penn, became the model for nearly all the cities of the United States. This city passed New York in population but few years after its founding; about the middle of the eighteenth century it left Boston behind, and so it continued the largest city in America until after the Revolution.

Crossing into Maryland and Virginia, we again find a great change in the social atmosphere. Here there was little or no town life; villages were few and insignificant. The planter or great landlord stood at the head of society; the plantation was the center of social and industrial activity, and the sole important product of the plantation was tobacco. The great estates were situated along the river valleys. In the center stood the well-built and well-furnished mansion of the landlord, and around it were clustered the offices, tobacco houses, barns, stables, and negro huts, the **Maryland and Virginia.** whole presenting the appearance of a small village. The planter enjoyed every luxury of the age. He had blooded horses, carriages, and body servants in abundance, and his dress was fashioned after that of the upper classes in England. His monotonous life in the forest led him to long for company of his own class, and gave rise to the hospitality for which the Southerner became famous. He treated strangers with great cordiality, and often sent to the nearest tavern requesting that any chance traveler might be sent to spend the night at his home.

As we move farther to the southward we find another marked

change. Here, especially in South Carolina, the great staple was rice. The rice planters were men of education and culture, and they comprised the ruling class. Most of them lived in Charleston and spent but a few months of the year in the malarial regions in which the rice was produced.

The old colonial aristocracy of the South was not without its shortcomings, but on the whole it was chivalric and picturesque; and it is a remarkable fact that it was this old aristocracy of a single southern colony that furnished the newborn Republic with its greatest soldier, half of its first cabinet, and four of its first five presidents.

The small farmers of the South were also a respectable class, and of course more numerous than the great planters. They were slave owners on a small scale, and many of them rose by dint of genius, by thrift and industry, to the upper class,¹ while, as stated before, there was an almost impassable barrier between them and the lower classes, composed of servants and slaves.

RELIGION ; EDUCATION ; MEDICINE

In tracing the growth of the several colonies we have had frequent occasion to notice the religious life of the people, but a few additional words are necessary here. In the Carolinas, Virginia, and Maryland the Church of England was recognized by law as the State Church; and in Maryland, which had passed through Catholic and Puritan hands, this church was supported by general taxation.² Many of the clergy were men of doubtful morals, men who were foremost at the horse races, and who were seldom outdone in drinking, betting, and gambling. The Established Church had little footing in the North, outside of New York, where it was rapidly gaining. In Pennsylvania and Rhode Island alone were all religions free.

In New England, except Rhode Island, the Puritan or Congregational Church was practically the State Church. In no other part of America had religion taken such a powerful hold on the people as here. The minister was held in the highest esteem and reverence by the people, who considered it a privilege to sit on the hard seats and listen to his three-hour sermon as he dilated on the special providences of God, on some metaphysical abstraction, or on the

¹ Patrick Henry and John Marshall were striking examples of this.

² This had been done at times in Virginia and the Carolinas.

tortures of the lost soul. The New England ministers were men of profound learning. Many of them could read the Old Testament in the original Hebrew, the New in the original Greek, and expound them in classic Latin.

New England minister.

We may grow weary of the pedantry, the metaphysics, and the narrowness of the Puritan ministers, but it cannot be denied that they were sincere, honest men. The greatest of the New England ministers was Jonathan Edwards, whose work on the "Freedom of the Will" is one of the very few colonial productions that still live in American literature.

Next to religion the Puritans valued education, and they had scarcely become established in their new home when they turned their attention to the education of their children. In 1636 it was voted to found a college at Newtown, now Cambridge, three miles west of Boston. Two years later, John Harvard, a young clergyman, gave the institution a portion of his estate, amounting to about \$4000, — a large sum in those days, — and it was called after his name. In 1647 the General Court of Massachusetts ordered that a common school be established in every township of fifty families, and a grammar school in each of the larger towns. From this crude beginning has developed the public school systems of the United States. The school term in New Eng-

Schools.

land was seldom more than four months in the year; the teacher was often a youthful divinity student, and sometimes the minister of the parish, or even the innkeeper. The pupils pondered for long, weary hours over the "New England Primer," the catechism, and various cumbrous text-books of the time.

In New York, New Jersey, and Pennsylvania commendable effort was made to educate the young, but the schools fell below those of New England, and seldom at this period was a school to be found outside the towns and villages. In the South the education of the masses was almost wholly neglected, except for some feeble efforts in Maryland and Virginia. The rich employed private tutors, the minister, or sometimes an indented servant, while a few of the most opulent sent their sons to England or the North to be educated. There was no public school system in Virginia before the Revolution,¹ yet this colony could boast the second

¹ The seven colleges founded before the Revolution were: Harvard, 1636; William and Mary, 1693; Yale, 1701; Princeton, 1746; University of Pennsylvania, 1749; King's (Columbia), 1754; and Brown University, 1764.

college in America in point of the time of its founding. The efforts to educate the young in many of the colonies was most praiseworthy, but outside of New England and New York there was no public school system till after the Revolution, all efforts to educate the young in other colonies being private.

The practice of medicine in the colonies was in a cruder state even than were the educational facilities. The village doctor was

Medicine. indeed an important personage, quite equal to the schoolmaster or the innkeeper, and not much inferior to the minister. He was at home in every family, and was highly respected by all classes. He was present at every birth and every funeral; he sat with the minister at the bed of death, and put his name with that of the lawyer to every will.¹ His medical education was usually meager, and often consisted only of a short apprenticeship with some noted physician. No medical college existed in the colonies before the Revolution. The practice of bloodletting for almost any disease was universal; and if the physician was not at hand, this was done by the barber, the clergyman, or any medical amateur.² The drugs used were few, and their rightful use was little known. St. John's-wort was taken as a cure for many ills, for madness, and to drive away devils. A popular medicine was composed of toads burned to a crisp and powdered, then taken in small doses for diseases of the blood.³ There was a great deal of mystery in connection with the practice of medicine. In addition to the regular physicians there were many quacks who hawked their Indian medicines and special cures about the country; but these were not peculiar to colonial times — we have them still.

MEANS OF TRAVEL; MAILS; NEWSPAPERS

In nothing has there been a greater change in the last hundred years than in the means of travel. For two thousand years, as Henry Adams says, to the opening of the nineteenth century, the world had made no improvement in the methods of traveling. That century brought the river steamer, the ocean greyhound, the lightning express train, the bicycle, the electric car, and the automobile. In colonial times travel by land was in the old-fashioned stagecoach, on horseback, or afoot. The roads were usually execrable. Many of

¹ McMaster, Vol. I, p. 29.

² Eggleston's "Transit of Civilization," p. 53.

³ *Ibid.*, p. 58.

the towns were wholly without roads, being connected with their neighbors by Indian trails. The best roads to be found were in Pennsylvania, all centering into Philadelphia, and on these at all seasons the great Conestoga wagons lumbered into the busy city, laden with grain and produce from the river valleys and the mountain slopes. Long journeys were often made on foot by all classes. A governor of Massachusetts relates that he made extensive journeys afoot, and speaks of being borne across the swamps on the back of an Indian guide. A favorite mode of travel was on horseback. A farmer went to church astride a horse, with his wife sitting behind him on a cushion called a pillion; while the young people walked, stopping to change their shoes before reaching the meetinghouse. Great quantities of grain and other farm products were brought from the remote settlements on pack horses, winding their weary way through the lonely forest by the Indian trails. Coaches and chaises were few until late in the seventeenth century. Not until 1766 was there a regular line of stagecoaches between New York and Philadelphia. The journey was then made in three days; but ten years later a new stage, called the "flying machine," was started, and it made the trip in two days. A stage journey from one part of the country to another was as comfortless as could well be imagined. The coach was without springs, and the seats were hard and often backless. The horses were jaded and worn, and the roads were rough with boulders and stumps of trees, or furrowed with ruts and quagmires. The journey was usually begun at three o'clock in the morning, and after eighteen hours of jogging over the rough roads the weary traveler was put down at a country inn whose bed and board were such as few horny-handed laborers of to-day would endure. Long before daybreak the next morning a blast from the driver's horn summoned him to the renewal of his journey. If the coach stuck fast in a mire, as it often did, the passengers must alight and help lift it out. When they came to a river, they found no bridge. The crossing was made, at the peril of all, on a rude raft of timbers, or a number of canoes lashed together. After five or six days of such torture the traveler from Boston found himself in the city of New York. The great highways of those early days were those that nature had furnished—the rivers and bays. Without these the people of the different colonies would have been isolated indeed, and would scarcely have known of the existence of one another. Even

Roads.

The stage-coach.

as it was, only the few ever traveled far from home; the majority of the native common people lived and died in the neighborhood in which they were born.

The mail was carried by postriders, who followed the main roads as far as there were any; on reaching the roadless settlements they found their way through the forest as best they could. **The mails.** by the trails and bridle paths. The postman left a city, not at regular intervals, but only when he received enough mail to pay the expenses of the trip. The remote settlements were fortunate if they received mail once a month. Benjamin Franklin was appointed post-master general in 1753, and he served about twenty years.¹ He soon made the service a paying one to the Crown. Yet even then the amount of mail delivered in the whole country in a year was less than that now delivered in the city of New York in one day.²

Newspapers were not carried in the mails, but by private arrangement. The newspapers were small and ill-printed, and contained little that we would call news. The chief contents were bits of poetry, advertisements for runaway slaves and indented servants, arrivals of cargoes, bits of European news, and essays on politics, morals, and religion. The *Boston News Letter*, established in 1704, was the first permanent newspaper in America. At the opening of the Revolution there were thirty-seven newspapers printed in the colonies, with a combined weekly circulation of about five thousand copies. The first daily was not printed until 1784.

COLONIAL GOVERNMENT

In addition to the brief account of the government of each colony in our narrative of the settlements, an account must here be given of colonial government as a whole.

The thirteen colonies are usually grouped, according to the form of government, into three classes — the Charter, the Royal, and the Proprietary; but recent historical criticism has reduced these three forms to two, the Corporation and the Provincial.³ The corporation

¹ As early as 1710 Parliament passed the first colonial post office act.

² McMaster, Vol. I, p. 41.

³ In a series of able articles in the *Political Science Quarterly*, Vol. II, H. L. Osgood shows that the "charter" does not indicate a form of government; it is simply a grant of power of certain rights which may or may not pertain to colony planting. In granting a colonial charter the king created a corporation and gave it the power to found and govern a colony. The government was therefore a government by the corporation in accordance with certain directions given in the charter.

was identical with the charter form, and at the opening of the Revolution there were but three, including Massachusetts,¹ the other two being Rhode Island and Connecticut. The provincial forms included the proprietary colonies, Maryland, Pennsylvania, and Delaware, and the royal colonies, Virginia, the Carolinas, New Hampshire, New York, New Jersey, and Georgia.

So variable were the forms of colonial government that but two colonies remained under the same form from the time of their founding to the Revolutionary War. These two were the chartered colonies of Rhode Island and Connecticut. It will be noticed that at the close of the colonial period the royal form of government predominated, seven of the thirteen being of this class. The movement against the chartered and proprietary colonies that brought about this condition was begun late in the reign of Charles II, was kept up for half a century, and ended in 1729 when the Carolinas became royal provinces. One colony, Georgia, was founded after this time, and, after flourishing for nineteen years as a proprietary colony, was passed over to the Crown (1752) according to the terms of its charter. Massachusetts was the first to fall a victim to this new policy, losing its charter in 1684. On receiving its new charter, in 1691, Massachusetts became a semi-royal province, and is by some writers placed in a class by itself. New York, New Jersey, and the Carolinas passed into royal hands during this crusade, and even the governments of Pennsylvania and Maryland were each for a short time taken from their respective proprietors.

By leaving out of consideration the two self-governing colonies, Rhode Island and Connecticut,² we find the colonial governments strikingly uniform. Each consisted of three organs,³ (1) the governor, appointed by the Crown or by the proprietor, or proprietors, (2) the council, also appointed by the Crown, and (3) the assembly or house of representatives, elected by the people. These three, corresponding to the king and the two houses of Parliament, resembled the British government.

The governor directly represented the Crown or the proprietor. His position was a most difficult one to fill. Representing a higher power, by which he was appointed and from which he had explicit

¹ More strictly, Massachusetts was a corporation only before 1684; after 1691 it was a royal colony with a charter.

² For the government of these, see *supra*, pp. 107 and 113.

³ Except Pennsylvania and Georgia, to be noticed later. See Morey, in *Annals of the American Academy*, Vol. IV, p. 215.

instructions, he nevertheless owed a duty to the people over whom he was placed, and the interests of the two were so conflicting as to

**The gov-
ernor.** keep the governor in a constant turmoil. The powers of the governor were extensive. He could convene, prorogue, or dissolve the legislature, or veto any of its laws.

He had command of the militia, and he appointed many officials, such as judges, justices of the peace, sheriffs, and the like, and, especially in the early period, he had industrial, commercial, and ecclesiastical as well as political duties; but in one respect he was ever held in check — he had no power over the public purse. Many of the governors were honest men and faithful to their duties; but others, and perhaps the majority, were profligate men, the fruits of the spoils system of that day, who sold the offices at their disposal, and who cared little for the welfare of the colonists.

The council consisted usually of twelve men, though in Massachusetts there were twenty-eight, and in early Maryland but three.

The council. They had to be residents of the colony in which they served, and they were usually men of station and wealth.

Appointed by the same power that appointed the governor, they usually sided with him in his conflicts with the assembly. The functions of the council were threefold, — it was a board of advisers to the governor, it constituted the upper house of the legislature, and it frequently formed the highest court of the colony. In Massachusetts, after 1691, the council was elected by a joint ballot of the legislature, called the General Court. In the other provincial colonies it was appointed by the Crown or the proprietors.

The assembly, or lower house of the legislature, represented the people and was elected by them. It had the chief legislative power;

**The
assembly.** but its acts could be vetoed by the governor, or be set aside by the Crown within a certain time after their passage.

But the assembly held the key to the situation by its sole power of taxation. To this right the assembly of every colony clung with jealous tenacity. Through the exercise of this right the colonies may be said to have been self-governing, and their liberties were secure so long as they could retain this sole right of taxing themselves. For many years the British government wrestled in vain with the problem of how to get an American revenue at the disposal of the Crown. The governor, representing the Crown, and the assembly, representing the people, were in frequent conflict during the whole colonial period; and the assembly usually won

through its one all-powerful weapon—a withholding of supplies. On many occasions the assembly would refuse to grant the governor his salary until he had approved certain laws it had passed, though often his act was in direct violation of his instructions. Nor was it infrequent that the assembly grew arrogant and meddled in purely executive affairs, such as military matters, the appointment of officials, and the like, all through its power over the purse.

The legislature in every colony was bicameral, except in Pennsylvania and Georgia, in each of which it consisted of a single house. This bicameral system had its model in Parliament, but it seemed to spring up spontaneously in America. It began in Massachusetts in 1644, when the assembly or deputies first sat apart from the council or magistrates, and the two bodies henceforth remained separate. Other colonies soon followed the example, until all the legislatures came to be divided, except in Pennsylvania, where the governor's council had no legislative functions after 1701, and in Georgia. In Connecticut and Rhode Island, and in Massachusetts before 1684, the people elected the governor, and, aside from the Navigation and a few other restrictive laws, were practically independent of the Crown.

The representative system of government, as we have assumed all along in our narrative, was common to all the colonies, though it was not introduced in Georgia before 1752. It began in Virginia with the first meeting of the burgesses in 1619; it was introduced in Massachusetts in 1634, in Plymouth and Maryland in 1639. The system of representative government was allowed, but not required, by the early charters. But after it had sprung up spontaneously in various colonies, it was recognized and ratified by the later charters, as in those of Connecticut and Rhode Island, and the second charter of Massachusetts, though it was not mentioned in the New York grant. The franchise came to be restricted by some property qualifications in all the colonies, in most by their own act, as by Virginia in 1670, or by charter, as in Massachusetts, 1691.¹ In no colony was universal suffrage to be found.

In the judicial system the justice of the peace stood at the bottom. In most cases he was appointed by the governor, and he tried petty civil cases only. Next came the county courts, before which were tried civil cases involving **Courts.**

¹ "Property, not men, voted," says Thorpe, "Constitutional History," Vol. I, p. 192. The religious test was also applied in some form in every colony.

sums to a certain amount and criminal cases not involving capital punishment. The highest colonial court was usually composed of the governor and the council. But in some colonies the governor appointed a body of judges for this function, while he and the council acted as a court of appeals. In certain cases, also, a further appeal could be made to the Privy Council in England.

A practice of the colonies was to keep an agent in England to look after their interests. This practice originated in Virginia about 1670, and was soon followed by other colonies. Sometimes the same agent represented two or more colonies, as in the case of Franklin. The duties of these men were similar to those of modern diplomatic representatives. To the English Board of Trade, which became a permanent institution after 1696, nearly all colonial questions were referred, and the board reported them to the king, or to a committee of the Privy Council. It was to this board that the colonial agents presented the interests of their respective colonies, and their efforts did much toward bringing about a closer fellowship between the mother country and the colonies. This good feeling between them was at its best about the year 1750.

In methods of local government the colonies were less uniform than in the general government. As stated in our account of Massachusetts, the old parish of England became the town in New England. The people, owing to the necessity of guarding against the Indians and wild animals, and to their desire to attend the same church, settled in small, compact communities, or townships, which they called towns. The town was a legal corporation, was the political unit, and was represented in the General Court. It was a democracy of the purest type.¹ Several times a year the adult males met in town meeting to discuss public questions, to lay taxes, to make local laws, and to elect officers. The chief officers were the "selectmen," from three to nine in number, who should have the general management of the public business; the town clerk, treasurer, constables, assessors, and overseers of the poor. To this day the town government continues in a large measure in some parts of New England. The county in New England was of much less importance than the town. Its business was chiefly the holding of courts of law, the keeping of court records, and the care of prisoners.

In Virginia, which may be taken as the type of southern local

¹ See Shaler's "United States," Vol. II, p. 475.

government, the county, first called the shire, was the unit of representation. The large plantations rendered the compact settlement impossible. At first the parish was the local unit, but it soon gave way to the county. The chief county officer was the sheriff, appointed by the governor. Next to the sheriff stood the "colonel," whose duties were largely military. The counties were divided into parishes which were governed by vestries, whose duties were largely ecclesiastical. Local government, judicial and administrative, was chiefly in the hands of a county court, whose members, usually prominent planters unlearned in the law, were appointed by the governor. This court gradually came to do the business formerly done by the parish. Instead of the town meeting, as in New England, the Virginians had their "court days," on which the people of every rank would gather on the green about the courthouse to transact private business, to engage in sports, and to listen to stump speeches.

In South Carolina there were parishes, but neither counties nor townships. In the Carolinas the governor and legislature found it almost impossible to govern the mountainous districts, and they were aided by bands of "regulators" organized for the purpose.

In Maryland the "hundred" was the unit of representation till 1654, when it gave way to the county. The officers of the hundred, except the assessor, were appointed by the governor. Maryland discarded the term "hundred" in 1824, but Delaware, having adopted it, retains it to this day. In Delaware the "levy court," composed of the assessors, justices, and grand jurors, met once a year to fix tax rates.

The middle colonies borrowed from both New England and the South; they adopted a mixed system of county and township government. In New York the township was the local unit, and not till after the English conquest was the county organized. Under English rule the town meeting was instituted, but with less power than in New England. They chose "overseers," instead of "selectmen," and other officers. After 1703 they chose a "supervisor" to manage the affairs of the township; and he was also a county officer as a member of the county board of supervisors, which met once a year.

In Pennsylvania the county was at first the only organization for local government.¹ It had charge of the non-judicial, as well as

¹ Except in Philadelphia. All the county officers were elective in Pennsylvania.

the judicial, business. This was at first among the duties of the court, but at length it was placed in the hands of commissioners elected by the people. As the population increased the township was organized to aid the county in local matters, such as the care of highways, the assessing of property, and the like; but the county remained the administrative district and the unit of representation. Nearly all the states organized since the Revolution have adopted the mixed system of New York and Pennsylvania.

THE NAVIGATION ACTS

Throughout the colonial period, after the middle of the seventeenth century, the one great source of irritation between the mother country and her colonies was found in the Navigation Acts. The twofold object of these acts was to protect English shipping, and to secure a profit to the home country from the colonies. As early as the reign of Richard II steps had been taken for the protection of shipping, but not before 1651 were there any British statutes that seriously hampered colonial trade. The Long Parliament, in 1642, exempted New England exports and imports from all duties, and a few years later all goods carried to the southern colonies in English vessels were put on the free list.

In 1651, however, while Cromwell was master of England, the first of the famous Navigation Acts was passed. The chief provisions were, that no goods grown or manufactured in Asia, Africa, or America should be transported to England except in English vessels, and that the goods of any European country imported into England must be brought in British vessels, or in vessels of the country producing them. The law was directed against the Dutch maritime trade, which was very great at that time. But it was nowhere strictly enforced, and in New England scarcely at all.¹

In 1660 the second of these memorable acts was passed, largely embodying the first and adding much to it. This act forbade the importing into or the exporting from the British colonies of any goods except in English or colonial ships;² and it forbade certain enumerated articles — tobacco, sugar, cotton, wool, dyeing woods, etc. — to be shipped to any country, except to England or some

¹ Palfrey, Vol. II, p. 393.

² Three years later all ships were pronounced foreign except those built in England or the colonies.

English plantation. Other goods were added at a later date. Such goods were to pay heavy duties when shipped to England, and in 1672 the same duties were imposed on goods sold from one colony to another. Had these laws been strictly enforced, the effect on the colonies that produced the "enumerated" articles would have been disastrous, for they enjoyed a flourishing trade in these goods with other countries. Other articles, such as grain, salt provisions, and fish, were not put on the list, because these were produced in England, and, had the entire colonial production been sent to that country, the English producer would have been ruined.¹ Rice was also allowed to be shipped direct to all ports south of Cape Finisterre. Some things, however, the Parliament did purely to favor the colonies, — it prohibited the raising of tobacco in England and kept Spanish tobacco out by high duties, it kept out Swedish iron by a high tariff, to the advantage of the colonies, and it paid a bounty on various colonial products.

In addition to these laws there were two other classes of laws, all, however, belonging to the same system, which tended to impede the development of the colonies, — the corn laws and the laws against manufacturing. The corn laws in the interest of the British farmer, beginning about 1666, practically shut out from England grain raised in the colonies. This drove New England and New York to manufacturing, and this again led England to forbid manufacturing in the colonies. These laws were far more effective than the Navigation Acts. It is stated that in 1708 New York manufactured three fourths of the woolen and linen goods used in the colony, and also fur hats in great numbers, many of which were shipped to Europe and the West Indies. This trade was largely suppressed by English laws passed at various times. In 1732 an act forbade the exporting of hats to England, to foreign countries, or from one colony to another. It also limited the number of persons a maker of hats might employ. Iron was found in all the colonies, and forges and furnaces were established in many places. But in 1750 Parliament enacted a law declaring that "no mill or other engine for rolling or slitting iron," "nor any furnace for making steel shall be erected in the colonies"! After this only pig and bar iron could be made. Parliament also enacted laws at various times restricting the manu-

First corn laws.

Manufacturing forbidden.

¹ Egerton's "British Colonial Policy," p. 72; N. Y. Col. Doc., Vol. V, p. 63; Beer's "Commercial Policy of England," p. 82.

facture of woolen goods. These laws bore heavily on the northern colonies, but were little felt in the South, where manufactories were rare.

Probably the harshest of England's laws in the suppression of colonial trade was the Molasses Act of 1733. By this act prohibitive duties were placed on molasses and sugar, from the French West Indies to the colonies.¹ New England enjoyed a great trade with the islands, receiving molasses and sugar for flour, stock, **The Molasses Act, 1733.** lumber, and fish, part of which could not be sold to England owing to the corn laws. Had the Molasses Act been enforced, the prosperity of New England would have been at an end.

The northern colonies, which produced the same kinds of goods as England produced, and consequently were barred from the English trade, suffered deeply by the trade laws, while the southern colonies, which raised commodities, such as tobacco and rice, which could not be duplicated in England, suffered far less.

The Board of Trade and Plantations, established as a permanent body in 1696,² kept account of the acts of colonial legislatures, corresponded with the governors, and informed itself thoroughly concerning all matters of colonial trade. But in spite of all efforts the Navigation Acts could scarcely be enforced at all. It may be said that the whole people became lawbreakers, and often the customs officials and even the governors connived at their practice. **Smuggling.** Smuggling was universal. It went on regardless of the admiralty courts established in most of the colonies.

"Juries found their verdicts against the most undoubted facts."³ The Molasses Act was certainly an economic and a political blunder; it not only made the people lawbreakers, it led them to hold Parliament in contempt, as not able to enforce its own laws.

But the colonists were not without examples in smuggling. It was estimated that forty thousand people in Great Britain were engaged in smuggling. The illegal imports of French silks, of India tea, and the like exceeded the legal imports.⁴ On moral grounds, therefore, England could not reproach America.

¹ The object of the act was to aid the English sugar islands. France had adopted a liberal policy with regard to the trade of her West India Islands, and this had crippled the trade of the British West Indies. See MacDonald, p. 248.

² Before this date the work was done by a committee of the Privy Council.

³ Chalmers's "Introduction," Vol. I, p. 183.

⁴ Stanhope's "Pitt," p. 215.

In fairness to England it must be said that not all her colonial trade laws were unfavorable to the colonies. As we have noticed, the raising of tobacco in England was forbidden — at first under James I, because the weed was offensive to that monarch, but later for the protection of the colonies. But further, at the beginning of the eighteenth century there was a heavy balance of trade against England with Norway, Sweden, and Russia, from which she purchased large naval stores. To correct this and to discourage manufacturing in the colonies, Parliament offered bounties on American hemp, lumber, tar, turpentine, etc. So effective was this law, passed in Anne's reign, that England was soon exporting a surplus of these articles received from her colonies.¹

In viewing the subject of England's colonial policy during this period, two things should be borne in mind; namely, that the subject has usually been treated, on this side of the Atlantic, from a purely American point of view, and that England was no more severe in the treatment of colonial trade than were other countries having colonial possessions. The British government acted throughout on the ground, taken by all European countries at the time, that the existence of colonial possessions was for the purpose of benefiting the mother country. The system involved the subordination of the interests of the colonies to those of the mother country.² The aim of Great Britain was to export manufactured goods to America, and to import raw materials, and at the same time to retain the balance of trade in her own favor. This she usually succeeded in doing. In 1759 New England sent to England goods to the value of £38,000 and purchased goods to the amount of £600,000³ — chiefly with money made by smuggling. But in one respect the British policy greatly stimulated American industry. It made New England a shipbuilding community. This was brought about by the fact that the Navigation Laws placed the colonial-built ship on the same footing with the English-built ship.

On the whole, the British policy was unfortunate for British interests; it served to alienate the colonists, little by little, and prepared them for the final break with the mother land. Lecky, one of the ablest of the British historians, says: ⁴ "The deliberate selfishness of the English commercial legislation was digging a chasm between the mother country and the colonists."

CHAPTER XI

THE REVOLUTION — OPENING EVENTS AND CAUSES

THE American Revolution, viewed from its results, was one of the greatest movements in human history. The expenditure of life and treasure has often been exceeded, but the effect on the political life of the world is not easy to parallel. The chief result was the birth of the first successful federal government in history, a government that was destined to expand to the western ocean within a century and to grow into a nation of vast wealth and power and of still greater possibilities.

It is believed by many that the mild bond of union which held the American colonies to the mother country might have remained unbroken for an indefinite period, but for the unwise policy that brought about the resistance of the former; others are of the opinion that the child had come of age, and that nothing could have long delayed a political separation. Be that as it may, it is certain that for more than fifty years before the Seven Years' War there was a strong attachment between the two peoples, and that the thought of severing their bond of union was nowhere entertained. It is true that the royal governors were forever complaining to the Lords of Trade about the unruly spirit of the colonial assemblies; it is also true that the colonists were constantly annoyed by the Navigation Acts, and that they thought it not robbery to evade them when they could; but these were only ripples on a smooth sea. And America was happy; the people continued to hew away the timbers and to build cities and churches and schools, to delve the soil, to raise grain and tobacco and cattle; they had grown strong in battling with the forest, the Indians, and the wolves: but with all their growing strength, of which they could not have been unconscious, they did not long to escape the mother wings; their proudest boast was still that they were Englishmen.

It must be said, however, that a separation sooner or later was inevitable. It is true that there was no plot, no conspiracy in

America looking to independence; but there were forces at work for many years that must eventually dissolve the political bond between the two peoples. It must be remembered that, while America was the child of England, it was not the child of the England of 1760, but rather of the England of 1600. The great Puritan immigration ceased with 1640, the Cavalier immigration ceased a few decades later, and in all the century that had passed since then the migration from England had been small. The English institutions, transplanted to America early in the seventeenth century, had developed on purely American lines, had been shaped by the social, political, and economic conditions peculiar to America. The result was that the two peoples unconsciously grew apart, so far apart that they were no longer able to understand each other; and when England now attempted to play the part of parent, the fact was brought out that the relations of parent and child existed no longer between the two countries. The colonies had reached a point in their development where they could govern themselves better than they could be governed by a power beyond the sea. Writers who find in the Stamp Act, the tax on tea, and the like, the sole cause of the Revolution, fail to look beneath the surface. These were but the occasion; they hastened its coming, but the true causes of the separation had their roots in the far past.

**Remote
causes of
separation.**

Again, the conquest of Canada changed the relations between England and the colonies. So long as this old enemy hung on the north, both England and her colonies were held in check: the colonies felt a certain need of protection; England felt that a contest with the colonies might drive them to a coalition with the French. But now as this obstacle was removed both could be natural in their relations with one another; and this normal relationship soon revealed how far apart they stood. England then failed to recognize this divergence; she attempted to deal with America, not as a part of the empire, which it was, but as a part of the British realm, which it was not.¹ But for this false assumption by the British government and an attempt to act in accordance with it, the old relations might have continued for years to come.

But an evil day came. The sky had been specked with a little cloud here and there for many years. Why should so many criminals from the British prisons be forced upon the colonists? This was irritating, and had been so from the earliest period of their colo-

¹ Snow's "Administration of Dependencies," p. 149.

nization. Why was the attempt of various colonies to preserve society by checking the African slave trade summarily crushed by the Crown, in order simply to enrich the English trader? This did not indicate a mother's affection for a child. Again, the overbearing hauteur of many of the royal governors, who were supposed to represent the king, was distasteful to a people who believed themselves as good as any other Englishmen. Still again, during the late war with the French, the British officers were ever ready to show their contempt for the provincial troops, and colonial officers were often replaced by British officers. All these things were at least unpleasant for the American-Englishman to contemplate; but they were not serious, and their effects would have passed away like a morning mist but for the greater events that were to follow.

OTIS AND HENRY

The long war was nearing its close; Quebec had fallen and British arms were triumphant in all parts of the earth, but withal, the British debt had risen to alarming proportions. The colonies also had incurred heavy debts by the war, and a small portion of them had been paid from the English treasury. There was now a general feeling among British statesmen that the colonies should, in some regular and systematic way, be made to bear a portion of the burdens of the empire.

George Grenville now became head of the English government; and, no doubt with good intentions, he decided on a threefold policy in relation to the colonies. First, the Navigation Acts must be enforced. The high duties of the Molasses Act of 1733, which had always been evaded, were lowered in the Sugar Act of April, 1764, after which it was determined to enforce them. Second, a standing army must be maintained in America; and third, the colonies should be taxed.

In order to enforce the navigation laws custom officers were to be armed with "Writs of Assistance," or general search warrants, which authorized them to enter any store, warehouse, or private dwelling to search for smuggled goods. This system of spying was very distasteful to the people, and their resentment was intensified by the genius of James Otis, a brilliant young Boston lawyer, who must be considered the pioneer of the Revolution. Otis was an advocate of the king, but he resigned the office and took up the

cause of the people. In a fiery, passionate address before the Superior Court he sounded a clarion note, declaring that the power used in issuing the writs was the kind of power, the exercise of which had "cost one king of England his head and another his throne," and calling upon the people to resist. The people took up the cry, and it spread from the New England hills to the valleys of the Hudson, the Delaware, and the James. In a short time the whole country was roused to resistance against the infringement of their liberties. Otis based his argument on the broad ground of the rights of the colonists as Englishmen.¹ The speech of Otis was an epoch-making one; it sounded the first note of resistance to British authority heard in colonial British America, and has been called the opening scene of the Revolution. John Adams, then a young law student, listened to the passionate eloquence of Otis, and wrote, fifty-six years later, "Then and there the child Independence was born."²

Scarcely had the sound of Otis's eloquence ceased to reverberate when a second note of warning arose. It came from Patrick Henry of Virginia. Henry was a young lawyer of Scotch parentage. As a youth he was shiftless and gave little promise for the future, though he had a fair education.

**Patrick
Henry.**

Three years before attaining his majority he was married; he became a storekeeper and failed; then he went to live with his father-in-law, an innkeeper, and became his assistant. The future seemed to promise him little, but he played the violin and seemed contented with his lot. At length he turned his attention to the law, and after six weeks' reading was admitted to the bar. For several years his clients were few and he barely earned his daily bread, but still he was happy with his violin. It was after ten years of married life, when in his twenty-eighth year, that his remarkable genius was discovered. He burst forth suddenly upon the public; he became the most eloquent public speaker of his generation.

The matter that brought Henry to the front is known as the Parson's Cause. It had no connection with navigation acts nor

¹ Channing's "United States," p. 43.

² Otis soon after was elected to the Massachusetts assembly, became the leader of the popular party, and wrote several vigorous pamphlets. Some years later, in an altercation with a customs official, the latter struck him on the head with a cane, inflicting a wound that impaired his health for life. He fought as a private in the battle of Bunker Hill. Otis retired from public life long before his death, which occurred in 1783. He had often expressed a desire to die by a lightning stroke, and one day, as he stood in his door during a thunder shower, his wish was gratified; he was instantly killed by lightning.

with writs of assistance; but the principle involved was one and the same. Virginia still paid its clergy in tobacco; but back in the fifties, under pressure of the war, the assembly passed an act permitting the payment of public dues, including the salaries of the clergy, in provincial money. All went well for several years, when the clergy, feeling themselves defrauded, complained to the bishop of London, who laid the matter before the king, and the king summarily vetoed the Virginia law. Rev. James Maury now made a test case, sued in the court for damages, or back salary, and won his suit. A jury was to fix the amount of damages, and it was before this jury that Patrick Henry blossomed forth to the world, transformed from a shiftless mediocre to one of the leading men of his age.

Parson's Cause.

Henry was in the wrong, or rather the Virginia assembly had done wrong, for it partially repudiated an honest debt by forcing payment in a depreciated currency. But that was not the chief question dealt with by Henry. The question was, What right has a king three thousand miles away to interfere in the private, internal affairs of Virginia? Virginia has the right to make her own laws, was the burden of his speech; in annulling a law at the request of a class, "a king, from being a father to his people, degenerates into a tyrant, and forfeits all right to obedience." The friends of his Majesty cried "treason," but the people were ripe for such a prophet and heard him gladly; so with the jury, for they awarded the parson only a penny. The fame of the orator spread far and wide. The people admired the rising genius, and, as in the case of Otis, their admiration was inseparably linked with what he had said about their rights and the infringement of those rights by the king; and thus were sown in the American heart the seeds of discontent.

THE STAMP ACT AND OTHER ACTS

No crisis had yet been reached. Otis and Henry had each made more than a local reputation at the expense of British authority, and they had both won. The writs of assistance had fallen still-born, and the king had yielded in the Parson's Cause. A shadow was thus cast over the royal prerogative, but it was not threatening; American loyalty was too deep-seated to be seriously shaken by such trifles. But greater events were soon to follow.

Every source of English revenue was drained on account of the

great war debt, and it was proposed to lay a tax on the colonies, not to pay the interest on the national debt, nor to be expended in England in any way, but solely for the protection and defense of the colonies. It was thought necessary to maintain a standing army in the colonies to preserve order and to prevent Indian outbreaks, and this belief was confirmed by the great conspiracy of Pontiac. The colonists, however, strenuously denied the need of British troops on American soil in time of peace. They believed that the true reason was to hold them in awe. Franklin, who was then in London, stated to a committee of Parliament that there was no occasion whatever to inaugurate such a movement, that the colonists when but a handful had defended themselves against the Indians, and that they were more competent to do so now. But all protest was unavailing, and the government decided to quarter an army of ten thousand men among the Americans, and to tax the latter for its partial support. Lord Grenville sought how to raise the revenue by the easiest method without offending the colonists. There is little doubt that he was sincere and that he did not mean to offend them. A stamp tax suggested itself; but the idea was not original with Grenville. As early as 1728 Governor Keith of Pennsylvania had proposed a stamp tax for America. Governors Shirley and Dinwiddie had again proposed it about 1755, but the oncoming war had deferred the matter.¹

Grenville proposed the stamp duties in the spring of 1764, a year before the act was to be passed. His object, as he said, was to consult the colonial agents and even the colonial assemblies, requesting them to propose some better method, **Grenville.** if possible, for raising the necessary revenue. No doubt Grenville, like most British statesmen, felt piqued at the evasion of the navigation laws in America and at the failure of the writs of assistance; but there is no proof that he desired to humble the colonists with an army and with stamps. He doubtless meant it all for the best, but with all his sincerity, he was narrow-minded, and never perhaps dreamed of the storm he was about to raise. The year passed, and a majority of the colonial assemblies spoke against the proposed law, none offering an alternative; the universal voice from America was

¹ Pitt was not in favor of it. "I will never burn my fingers with an American stamp tax," said he. As early as 1732, when a stamp tax for America was proposed to Premier Sir Robert Walpole, he answered, "I will leave the taxation of America to some of my successors who have more courage than I have." See Lossing's "Cyclopedia of United States History," p. 1334.

against it. But this warning was not heeded; and in March, 1765, the Stamp Act became a law and was to go into operation on the first of the following November. The colonies were not without friends in the Commons during the debate that preceded the passage of the law, the foremost of whom was Colonel Barre,¹ who had fought by the side of Wolfe at Louisburg and Quebec. In a sudden burst of eloquence, in answer to the statement that the colonies were "children planted by our care, nourished by our indulgence, and protected by our arms," Barre made his famous reply:

**Colonel
Barre.**

"They planted by your care! No; your oppression planted them in America. Nourished by your indulgence! They grew up by your neglect of them. They protected by your arms! Those sons of liberty have nobly taken up arms in your defense."²

The stamps, ranging in value from a few pence to several pounds, were to be placed on newspapers, marriage licenses, deeds, shipping bills, and many kinds of legal papers — fifty-four kinds of documents in all.

The promoters of this law in Parliament doubtless expected some protest from America, but they were not prepared for the violence of the opposition that was awakened. A few weeks after the news of the act reached the colonies the storm broke forth in all its fury. The Virginia legislature was then in session, and Patrick Henry, who

**The Virginia
resolutions,
May 30,
1765.**

was now a member, offered a series of resolutions in which he declared that the people of that colony were entitled to all the privileges of natural-born subjects of England; that they, through their assembly, had the exclusive right to tax the colony; that they were not bound to yield obedience to any law, except of their own making, designed to impose any taxation whatsoever upon them; and that any person or persons who assert or maintain such right "shall be deemed an enemy to his Majesty's colony." In supporting his resolutions Henry made one of his great speeches, in which the well-known passage occurs, "Cæsar had his Brutus, Charles I his Cromwell, and George III" — "Treason," shouted the speaker, and the cry was echoed from the chamber. "George III," continued Henry firmly, "may profit by their example. If that be treason, make the most of it." The old conservative members opposed the resolutions, but Henry's

¹ Pitt was absent with the gout.

² The expression "Sons of Liberty" was soon caught up in America, and made the party name of a patriotic society that spread through all the colonies.

impetuous eloquence carried them through by a narrow margin.¹ These ringing resolutions were sent over the land to the North and to the South, and by midsummer they had been published in all the leading newspapers in America.

Massachusetts again joined hands with Virginia in upholding colonial liberty. The legislature, led by Otis, issued a circular letter to all the colonies, calling for a general congress to meet the following autumn. The Stamp Act Congress, in response to this call, met in the city of New York. Nine of the colonies were represented, while the remaining four sent their expressions of good will. This congress sat but three weeks. Otis was its leading spirit, ably seconded by Christopher Gadsden of South Carolina.² It framed a Declaration of Rights, and respectfully petitioned the king and both houses of Parliament. Gadsden, in a notable speech used the significant words, "There ought to be no New England men, no New Yorkers, known on the continent, but all of us Americans." This congress was important in that it fostered concerted action and established a precedent for union.

Meantime, during the summer, the opposition to the Stamp Law grew in intensity. The Sons of Liberty organized in every colony, determined to prevent the operation of the law. Most of the colonial legislatures took action against it, and as the time drew near, riots occurred in various sections, and mass meetings were held to denounce the odious law. As the first installments of stamps began to arrive and the names of the distributors were made known, the rioting increased and reached its culmination in Boston, where the usual meeting place, Faneuil Hall, became known as the Cradle of Liberty. Boxes of stamps were seized and destroyed by the mob; distributors were burned in effigy. The fine residence of Chief Justice Hutchinson of Massachusetts was sacked and his valuable library destroyed. In New York Lieutenant Governor Colden attempted to enforce the act, but the people were furious. He threatened to fire on the crowd, and was informed that if he did so he would speedily be hanged to a lamp-post.³ Colden's best chariot

¹ Next day, in the absence of Henry, the resolutions were reconsidered, and modified, and the most violent one was struck out. But they had been given to the public in their original form, and in this form they were published broadcast over the land.

² In the Stamp Act Congress we find Livingston of New York, Dickinson of Pennsylvania, Rodney of Delaware, and Rutledge of South Carolina, who was chosen president; all were leading men of the Revolution.

³ Fiske's "American Revolution," Vol. I, p. 24.

was seized, dragged through the streets with the images of himself and of the devil sitting side by side in it, and burned in the open square in view of his own house. Merchants and business men banded together and agreed not to import goods from England until the law was repealed; newspapers came out with a death's-head and crossbones where the stamps were required to be. In short, the opposition was so determined and widespread that it was evident that the law could not be enforced except at the point of the bayonet.

Viewing the matter calmly from this distance, it must be confessed that no better or more equitable method of taxing the colonies could have been found than by means of stamps, if it be conceded that England had the right to tax them at all. But this was exactly what the colonists denied. "Taxation without representation is tyranny," became their battle cry. Lord Mansfield and others explained that the colonies were represented in Parliament, as every member of the Commons represents in a broad sense the whole British Empire, and that the colonists were as truly represented as were eight ninths of the inhabitants of England, who had no vote for members of Parliament and yet were taxed by them. The Americans answered that there was a great difference between the Englishman who had no vote and the colonist; as the former was a part of the British public to which the member of Parliament was responsible, while the latter, three thousand miles away, could not appeal to his interests or his fears.¹ If we agree that America was not represented in Parliament, it cannot be denied that the colonists were clearly in the right. It is a badge of slavery to be taxed by a foreign power. The men that lay a tax should be a part of the people that pay the tax. Thus they are taxing themselves as well as their fellows, and the danger of abuse is reduced to a minimum.

The British Parliament heard the wild clamor from the American wilderness. Under a new ministry, with the Marquis of Rockingham at its head, the subject of repealing the Stamp Act became the principal business. William Pitt, now Earl of Chatham, rose from a sick bed to make one of his great speeches in favor of the colonists, rejoicing, as he said, that America had resisted. Pitt took the moderate ground that while Parliament had a right to lay external taxes, as in the navigation laws, she had no right to lay internal taxes.

¹ See Channing's "United States of America," p. 30.

The other side was presented by Grenville with candor and ability, but Pitt carried the day, and the law was repealed in February, 1766. With the repeal was passed the **Declaratory Act.** "Declaratory Act," a declaration that Parliament had the right to tax the colonies "in all cases whatsoever."

The Americans gave little heed to the Declaratory Act. They rejoiced in the repeal of the Stamp Act, and were ready to return to their former allegiance. But the very next year Parliament, with a foolhardy rashness that admits of no explanation, wantonly probed into the half-healed wound. The Rockingham ministry soon fell, and the Great Commoner was called again to take the helm. He became nominal premier, but his health was broken and he retired to the country. The ministry was composed of men of various shades of political doctrine, and each became practically the master of his own department. Against the wishes of Pitt, Charles Townshend became the chancellor of the exchequer, and held in his hands the matter of taxing the colonies. He was a man of brilliant talents, but without the conservatism and foresight necessary to statesmanship. He was a firm believer in the right of Parliament to tax the colonies, nor was he willing that the Declaratory Act be left on the statutes a dead letter. No; he would tax the colonists again without delay and show them who was their master. It was Townshend, above all men except his sovereign, who was responsible for the Revolution. Through his guidance Parliament laid an **Townshend acts, June, 1767.** import duty on tea, glass, paper, lead, and a few other articles imported into the colonies. The revenue thus raised was to be used in paying the royal governors and the other officials appointed by the Crown. This form of taxation, known as "external," as contrasted with the "internal" taxation of the Stamp Act, had been acknowledged to be legal by the colonists. But they could not escape the belief that the act was meant to annoy and humble them. The same Parliament had pronounced the writs of assistance legal, and had suspended the functions of the New York legislature for refusing to make certain required appropriations. This was a blow at the independence of colonial assemblies. Moreover, the colonists had always insisted on paying the salaries of their own governors, and thus making them feel responsible to the respective assemblies; and to have this privilege taken out of their hands without their consent was not conducive to harmony. All this was irritating in the extreme, and the colonists, who had dis-

covered their strength in opposing the Stamp Act, were in no condition to be thus dealt with. Their fury rose again, and for the third time within six years colonial America, from the mountains to the sea, was aflame with indignation against the mother country.

A new light now arose in the Massachusetts assembly in the person of Samuel Adams, who became the most powerful political leader during the early years of the Revolution. John Dickinson, of the Pennsylvania assembly, in a series of able "Letters from a Farmer," attacked the British position with great force, while George Washington led the planters of Virginia to resistance. Led by such men, the colonists determined to purchase no English goods on which the import duties had been laid.

Important events now followed rapidly upon one another. The Massachusetts assembly sent a circular letter to the other colonies, setting forth the rights of the colonists as Englishmen and **February 11,** urging a united petition to the king. The English govern- **1768.** ment demanded that the letter be withdrawn, though it had expressly disavowed a desire for independence; the assembly refused, and was dissolved by Governor Bernard. The Virginia burgesses issued a still bolder circular, calling for union. This circular, the "Virginia Resolutions," 1769, condemned the Townshend acts, and declared that the people of Virginia could be taxed only by their own representatives. The governor then dissolved the assembly; but the members met again, in the Raleigh tavern, and pledged themselves to the non-importation policy.

Regiments of British troops had been sent to Boston to enforce the Townshend acts, and a few of their number, in answer to the taunts and jeers of the people, fired on the latter, several of whom were **Boston** killed.¹ This became known as the "Boston Massacre." **Massacre,** The people were maddened by the massacre; a great **1770.** meeting was held in Old South Church, and through Samuel Adams they demanded that the troops be instantly removed from the town. The lieutenant governor, acting for the absent governor, saw that the temper of the people was such that he dare not refuse, and the soldiers were removed to Castle William, on a little island in the harbor. In 1771 Governor Tryon of North Carolina, with fifteen hundred troops, fired upon the people who had organized as "regulators" to maintain public order.

¹The offending soldiers were tried in a Boston court and acquitted. They were defended by John Adams and Josiah Quincy.

The coast of Rhode Island had been menaced by an armed British schooner, the *Gaspee*, whose captain, in pretense of enforcing the revenue laws, committed many outrages upon the people, until, in June, 1772, it was burned to the water's edge by a band of infuriated citizens. The ministry then **The *Gaspee*.** ordered that the offenders be sent to England for trial, but the Rhode Island authorities declined to obey the order.

This rapid succession of events showed plainly that the breach was widening, and that the signs of the times pointed to still more serious differences between England and America. Meanwhile Parliament had receded a little; it had repealed the Townshend duties,¹ all but one, the duty on tea, and that was retained in order to maintain the principle at stake—the right to tax the colonies. This duty was retained at the instance of one man, the man who had now become the real as well as the nominal master of the British realm.

KING GEORGE III

In 1760 occurred the death of the second of the Hanoverian sovereigns of England; and his grandson, a youth of twenty-two years, ascended the throne as George III. The young sovereign was received with universal applause throughout the empire, including America. Fair and promising were his prospects for a long and successful reign. For two generations England had been governed by Parliament, and Parliament had been in the hands of a few great Whig families. The first two Georges had little to do in the management of the empire, but the third was not long in his high station before he determined to take the reins of government into his own hands—to obey the frequent mandate of his mother, “George, be king!”

The times were specially favorable for his purpose. The Old Whigs, who had retained their power in large part by the open purchase of seats in Parliament, were fast losing the confidence of the people. For two hundred years there had been no redistribution of seats, and many old towns, known as “rotten boroughs,” which had dwindled to almost nothing, were still represented, while growing cities like Manchester and Leeds had no representation in Parliament.

¹ The Townshend duties had produced but £295, owing to the non-importation agreement, while the expenses incident to their attempted enforcement reached £170,000. Channing's “United States,” p. 60.

The Tory party, after a long exile from power, owing to its adherence to the pretending Stuarts, was now rapidly gaining ground. George III took advantage of these conditions, and, putting himself at the head of the Tories, soon became the real master in English politics. The vast power of patronage, amounting to many million pounds a year, which had been wielded by the Whigs for many years, was soon in the hands of the king, and in the purchase of seats in the Commons for his favorites he outdid the Whigs in the worst days of their corruption.

It was a sad day for the British Empire when King George became its political master. He was a man of narrow intellect, and lacked every element of the greatness of statesmanship. "He had a smaller mind," says the British historian, Green, "than any English king before him save James II." He showered favors on his obsequious followers, while men of independent character whom he could not bend to his will became the objects of his hatred. Pitt he pronounced a "trumpeter of sedition"; Burke and Camden were the objects of his wrath. He had not the capacity to shield his natural littleness by surrounding himself with great men, as many a mediocre sovereign has done. He despised Grenville for his independence and got rid of him as soon as he could. He recalled Chatham to the premiership because he could not help doing so, but he rejoiced that the old Commoner was broken with age and infirmity, and even expressed a wish that he would die. At length, in 1770, the king, having become supreme in the government, chose as his chief minister a man that he could mold as the potter molds his clay, a man of many noble impulses, but of the class who believed that the king could do no wrong.¹ This man, whose "lazy good nature and Tory principles" led him to defer to the king's judgment rather than to his own, was kept at the head of the government, even against his own will, for twelve years—until the Revolution had been accomplished and America was free. Yet withal, King George has his redeeming traits: he was a man of prodigious industry, he was devoid of hypocrisy, and he led a moral life in the midst of a corrupt court.

At the door of George III must be laid the American Revolution. What the future might have unfolded had not this union been broken when it was must be relegated to the field of con-

¹ But after the Revolution we find North allied with the king's opponents.

jecture; but that this union was severed between the "beautiful mother and the more beautiful daughter" in the last half of the eighteenth century was chiefly the work of George III. He had little to do, perhaps, with the beginnings — with the enforcement of the navigation laws and the writs of assistance of 1761. But after the colonies had once offended him by defying British authority, he pursued them with the same vindictive spirit which he exhibited toward Pitt and other statesmen that he could not control — he determined to humble them at all hazards. He opposed the repeal of the Stamp Act, but his power was not yet great enough to prevent it. When the English merchants made an outcry against the Townshend duties, on account of their loss of trade, it was the king, as stated above, who retained the duty on tea and thus kept alive the embers until they burst forth into the flame of war.

The Americans now refused to purchase tea from England; they smuggled it from Holland. The English then, by an ingenious trick, made their tea cheaper in America than it was in England, or than that smuggled from Holland. They did this by removing the duty always paid at an English port by the tea merchant on his way from the Orient to America. But the colonists still refused to buy the tea. The principle was at stake, — the right of Parliament to tax them at all, — and they were as determined as the English king. Tea-laden ships reached Charleston, Philadelphia, New York, and Boston late in the autumn of 1773. Excited meetings of citizens were held in all these cities. In Charleston the tea was landed, only to rot in storage; the Philadelphians refused to permit the ships to land.

Three ships lay in the harbor at Boston, but the people kept watch day and night to prevent the landing of the tea. The owner of the vessels was informed by the excited people that he must take back his tea to London; but this he could not do, as the governor refused him permission to sail and two of the king's ships guarded the harbor. Meetings were held nightly in Faneuil Hall, or Old South Church, and at length, on December 16, after every legal method for returning the tea had been exhausted, a body of seven thousand men resolved that it should not be landed; and half a hundred men, in the disguise of Mohawk Indians, after giving a war whoop, ran silently to the harbor, boarded the ships, broke open the tea chests, about three hundred

**Boston Tea
Party, Decem-
ber, 1773.**

and forty in number, and threw the contents into the sea. The people looked on from the shore, taking the proceedings as a matter of course. Boston slept that night as if nothing had happened. Who these fifty Indian-garbed king-defiers were is not known; but it is known who instigated the mob, who was the mouthpiece of Boston at this moment, and of Massachusetts, of New England, of America — it was Samuel Adams, the “Palinurus of the Revolution.”

England stood aghast at the temerity of her sometime docile colonists. The irate king, with monumental obstinacy and inability to discern the signs of the times, resolved to humble the Americans once for all; nor did his short-sighted Majesty seem to doubt for a moment his ability to do so. Of the colonists he writes, “They will be lions while we are lambs: but if we take the resolute part, they will undoubtedly prove very meek.”¹ King George now led his Parliament to pass in quick succession four drastic measures against the people of Massachusetts. First, the Boston Port Bill, which removed the capital from that city to Salem and closed the

Four intolerable acts.

port of Boston to the commerce of the world; second, the Regulating Act, which annulled the Massachusetts charter and transformed the colony to an absolute despotism; third, an act providing that persons accused of certain crimes in connection with riots be transported to England, or to some place outside of the colony for trial; while the fourth made it legal to quarter troops in any town in Massachusetts. These were soon followed by the Quebec Act, which extended the province of Quebec to include

Quebec Act. all the territory west of the Alleghanies and north of the Ohio River to the Mississippi — except what had been granted by royal charter. It is supposed that the act was intended to prevent pioneers from settling in the Ohio country, and to win the favor of the French Catholics.

Two years before these acts were passed (1772), Massachusetts, led by Samuel Adams, had made an important move toward concerted action. “Committees of Correspondence” had been appointed in every town in the colony for the purpose of guarding the interests of liberty. The next year Virginia suggested the forming of a permanent Committee of Correspondence to extend to all the colonies. This was gradually done, and the system was very effective in spreading the doctrine of resistance.

Against the drastic British measures Massachusetts now made an

¹ This was quoted by the king from General Gage. See Knight, Vol. VI, p. 58.

appeal for aid, and through these committees the people were prepared for an immediate response. From Maine to Georgia they made common cause with their brethren of the Bay colony, and South Carolina sounded the keynote in these ringing words, "The whole country must be animated with one great soul, and all Americans must stand by one another, even unto death." Washington offered to arm and equip a thousand men at his own expense and to lead them to the relief of Boston. Thomas Jefferson set forth the view in a pamphlet, the "Summary View," that Parliament had no right to any authority whatever in the colonies. Nearly all the colonies joined in an agreement of non-intercourse with England. As the day approached for the Port Bill to take effect, cattle, grain, and produce from the other colonies began to pour into Boston. The day came, and throughout the country it was generally kept as a day of fasting and prayer; the church bells were tolled, and flags were put at half-mast on the ships in the harbors. Had the English king been able to glance over America on that day, he must have abandoned every thought of punishing a single colony without having to deal with them all; he must have seen that but two courses lay before him—to recede from his position, or to make war upon a continent.

THE CONTINENTAL CONGRESS; LEXINGTON

The events above noted gave unmistakable evidence of the unity of American sentiment against British oppression; but something more must be done to bring about united action. There must be some central authority to which all the colonies could turn for guidance. This political union came about in the formation of a Continental Congress. This Congress was the result of a spontaneous and almost simultaneous movement throughout the country. From New York came the first call. Paul Revere had been sent from Boston on a fleet horse to rouse the people of New York and Philadelphia, but ere he reached the former the Sons of Liberty had taken action for a congress. The Massachusetts legislature added its voice in June. Delegates were chosen in all the colonies except Georgia, and they met in Carpenter's Hall, **September 5, 1774.** Philadelphia. Among them we find such leaders as Washington, Lee, and Henry of Virginia, Dickinson of Pennsylvania, Samuel and John Adams of Massachusetts, Roger Sherman of Connecticut.

The Congress was not a constitutional body; many of its members had been chosen irregularly. Its authority was limited to the willingness of the people to respect and obey its suggestions and mandates. The very fact of its existence had a meaning of great significance, but it was too profound for the comprehension of George III. It was less a congress than a national committee, an advisory council of continental magnitude. It attempted no national legislation. It was controlled by conservative men who counseled moderation. They made a declaration of rights, mild but deeply sincere; they prepared an address to the king, disavowing a desire for independence, another to the people of England, and still another to the people of Canada. They also approved the policy of non-intercourse with Great Britain, and formed an association to carry it out. The forming of this association, which at first constituted the revolutionary machinery, was an act of great importance. Its object was to secure a redress of grievances by peaceful methods, by enforcing the non-importation and non-consumption agreement. To carry out this purpose committees were to be formed in every county or township in the colonies. These worked under the guidance of the Committees of Correspondence. The local committees marked out for persecution every loyalist who refused to comply with the recommendations of the Congress. The loyalists made a feeble effort at counter organization; but the patriots were so furious in their opposition that little came of it. Not until the next year, 1775, did the patriots begin to form associations pledged to oppose the aggressions of the king by force of arms.¹

Among other things this Congress indorsed a set of resolutions from Suffolk County, Massachusetts, drawn up by Joseph Warren.

July, 1775. By these it was declared that the king who violates the chartered rights of the people forfeits their allegiance, that the Regulating Act was null and void, and so on. After Congress had adopted them, Massachusetts, in accordance with their spirit, proceeded to set up a provisional government.

This Congress sat for about seven weeks and then adjourned, after appointing the 10th of the following May for a second Congress, in case it was needed. When the addresses issued by this

October 26. Congress reached England, Chatham paid the following remarkable tribute to the men who framed them:—

“When your lordships look at the papers transmitted us from

¹ Van Tyne's "Loyalists in the Revolution," p. 75.

America — when you consider their decency, firmness, and wisdom, you cannot but respect their cause. . . . For myself I must declare and avow, that in all my reading and observation . . . that for solidity of reasoning, force of sagacity, and wisdom of conclusion . . . no nation or body of men can stand in preference to the Congress at Philadelphia. I trust that it is obvious to your lordships, that all attempts to impose servitude upon such men, to establish despotism over such a mighty continental nation, must be vain, must be fatal.”

Chatham's
tribute.

In Massachusetts the summer had been one of unusual excitement. The people set the Regulation Act at defiance and banded together in thousands to prevent its operation. They surrounded the courthouses and forced the king's officers to resign; they refused to serve as jurymen; they met for military drill on the village green of every town. The leaders of the people, in the absence of Samuel Adams, were John Hancock, a man of refinement and culture and the richest merchant in New England, and Joseph Warren, a prominent physician, a man of unsullied patriotism, and the bosom friend of Adams.

General Gage had returned to Massachusetts with an army with which to awe the people, and he was made civil as well as military governor. The people answered these proceedings by organizing into bands of “minutemen,” ready to move on a minute's notice. On one occasion Gage sent a party of soldiers to seize some powder at Charlestown; the rumor spread that they had fired on the citizens, and in less than two days twenty thousand farmers were under arms, marching toward Boston. But the rumor proved false, and they returned to their homes. Late in October a provincial congress met at Concord, with Hancock as president and Warren the chairman of a committee appointed to collect military stores. This congress dissolved in December, and another met at Cambridge in February and proceeded to organize the militia and to appoint officers.

1774.

During the winter and spring of 1775 the estrangement continued to increase, and every index pointed to a conflict of arms. The king and Parliament and Gage had miscalculated when they believed that the presence of an army would awe the colonists and change them from roaring lions into fawning lambs. Nor were the colonists making a leap in the dark; they were strong, and they knew that they were strong. Their bodies had been developed in clearing away

the forest, in tilling the soil, in fishing and shipbuilding; they had become expert marksmen in fighting Indians and wild animals, and many of them had gained an excellent military training in the late war with France. ♦Gage issued a proclamation offering full pardon to all the people, except Samuel Adams and John Hancock, if they would yield to his authority; but the people did not heed him; they only kept on organizing, drilling, and collecting military stores in the towns. Gage had been ordered to arrest Adams and Hancock, who had been elected to the Second Continental Congress, and to send them to England for trial. The two patriot leaders, fearing arrest, were at Lexington in hiding. The British general discovered their hiding place, and, on the night of the 18th of April, sent a body of eight hundred regulars to make the arrest and, at the same time, to move on a few miles farther and destroy the military stores at Concord. Silently in the darkness the troops were rowed across the Charles River, and by midnight they were well on the way to Lexington. Every precaution for secrecy had been taken, but the vigilance of the patriots was too keen to be eluded.

Paul Revere, one of the noblest of the Sons of Liberty, stood by the river, his steed by his side, waiting for a lantern signal from the belfry of the North Church, which would inform him of the direction the troops had taken. The signal appeared, and a moment later he was galloping through the night toward Lexington. At every door, as he dashed along, he shouted the thrilling news that the British were coming. Reaching Lexington, he came to the house of the Rev. Jonas Clark, where Hancock and Adams were sleeping. The door was guarded by minute-men, who warned him not to disturb the inmates with his noise. "Noise!" cried Revere, "you'll soon have noise enough; the regulars are coming!"¹ Hancock, at an upper window, knew his voice and invited him in; and a few hours later, when the enemy came up, the two patriots had quietly proceeded on their way to the Congress at Philadelphia.

The news of the approaching enemy sped on to Concord, and to the surrounding towns and farmhouses; and the men arose, seized their guns, and hastened to the scene of the coming conflict. Colonel Smith, in command of the English, saw but too plainly, by the flickering lights on the hills, by the sound of bells and of signal guns, that his movements were known, and he sent back to Gage

¹ Fiske, Vol. I, p. 121.

for reënforcements while he dispatched Major Pitcairn forward with six companies of infantry to secure the bridge at Concord. Pitcairn reached Lexington at sunrise, and found himself confronted by some forty minutemen under Captain John Parker.¹ With an oath he called upon them to disperse, but they stood as motionless as a wall, and he ordered his men to fire. The soldiers hesitated, and Pitcairn discharged his own pistol, and thus fired the first shot of the war of the Revolution. Again he ordered the men to fire; they now did so, and the volley laid seven of the patriots dead and ten wounded upon the village green. Parker was greatly outnumbered, and, after making a feeble resistance, ordered his men to retire. But the day's business was only begun. The British troops hastened on to Concord and entered the town unopposed, as the minutemen, to the number of two hundred, had withdrawn to the top of the hill beyond the river, taking with them or hiding most of the cannon and stores. The regulars destroyed the little they found, cut down the liberty pole, and set fire to the courthouse. But their work came to an abrupt close. Two hundred of their number had been left to guard the North Bridge that spanned the little river near the village, and on these the patriots, now increased to four hundred, made a descent and opened fire. The firing of both sides, the river flowing between them, was brisk for some minutes and a few of each were slain. This was the first encounter after that on the greensward at Lexington some hours before.

Colonel Smith now understood the peril of his position, and determined to retire. But it was already too late. The whole surrounding country was roused; the farmers and villagers swarmed to the scene, and, without a leader, without order, from every hiding place — trees, fences, thickets, and hillocks, in true **Battle of Lexington, April 19, 1775.** Indian fashion — they poured an incessant fire into the retreating British. The latter were not wanting in courage; they made a brave effort to retreat in order, but the retreat became a rout, and every attempt to halt and form into line was thwarted by the deadly hail of patriot bullets from every side. Many of them fell dead or dying on the road; the rout became a race with death. They had marched all the night before; the day was hot, and they were well-nigh exhausted. The whole force

¹ Parker had said to his men, "Don't fire unless you are fired on; but if they want war, it may as well begin here." Parker was the grandfather of the great New England preacher and abolitionist, Theodore Parker.

would have been killed or captured but for the coming of reënforcements. When they reached Lexington, they were met by Lord Percy with twelve hundred men coming to their rescue. Percy opened his ranks to admit the fugitive soldiers; and they ran in, as a hunted fox finds his den in the mountains, and fell to the ground, with their tongues hanging from their mouths in sheer exhaustion. Percy planted his cannon, and for a time held the Americans at bay; but as he began his march toward Boston they attacked him in ever increasing numbers, and the battle ceased only at nightfall when the British found shelter under the guns of the royal ships in the harbor. The British loss was 273 and the American loss 93.

Thus ended the first armed conflict of the Revolution.¹ That night was one of intense commotion in the vicinity of Boston. The patriots did not return to their homes; they encamped on the ground, and their numbers were rapidly augmented from every hill and valley of New England. Israel Putnam of Connecticut left his plow in the furrow to lead a band of fellow-farmers to Cambridge; Benedict Arnold brought a company from New Haven; John Stark arrived from New Hampshire with twelve hundred men, and Nathanael Greene from Rhode Island with a thousand. Within a few days after the affair at Lexington and Concord, Boston was beset by an untrained army of sixteen thousand men.

The news of the battle soon spread beyond the confines of New England, and the whole country was aroused. The people rose in general rebellion against their rulers, and within a short time every royal government in America had fallen.² In New York the patriots set the royal officials at defiance, and seized the munitions of war; New Jersey and Pennsylvania rejected all overtures of reconciliation and began to train their militia; Governor Dunmore fled from the infuriated people of Virginia; and from the far South the voice of Georgia joined in the general chorus. Exactly three weeks after the Lexington fight the fine fortress of Ticonderoga, which guarded with its two hundred cannon the watershed between the great valleys of the St. Lawrence and the Hudson, was surrendered **Surrender of Ticonderoga, May 10, 1775.** "in the name of the great Jehovah and the Continental Congress" (which met on that day) to Ethan Allen with less than a hundred "Green Mountain Boys"; and on the same

¹ In the wilderness of Kentucky the pioneers were founding a town when the news of the battle reached them, and they named the town Lexington.

² Governors Tryon of New York and Franklin of New Jersey maintained a semblance of power for some months longer.

expedition the fortress of Crown Point fell into the hands of another Vermonter, Seth Warner.

Every indication now pointed to a long and bloody war. Franklin, just returned from England, declared that the colonies were lost forever to the British Crown. Yet the thought of independence had scarcely at that date entered the colonial heart; reconciliation was still possible, but only on the ground that England would yield every point at issue. This the proud, obstinate monarch could not do, and events moved rapidly on till the opportunity was lost.

NOTES

The Hutchinson Letters. — Among the interesting occurrences of this period, not mentioned in the text, was the Hutchinson letter episode. Hutchinson was the royal governor of Massachusetts, and, though a native of the colony, his sympathies were with the king. In a series of private letters written by him and other royal officials (1773–1774) to an under secretary, Whately, of London, the colonial leaders and charters were attacked. Copies of these letters fell into the possession of Franklin, then in London, and he saw in them a conspiracy against his country, and sent them to the Massachusetts assembly. The tempest raised by their publication resulted in a petition for Hutchinson's recall. Franklin was arraigned before the Privy Council for treachery in disclosing private letters, and was denounced by Solicitor Wedderburn with the most abusive and coarse invective. Franklin listened with apparent indifference and never regretted his action, though English writers to this day denounce it as dishonorable.

Burke on the Tea Tax. — The principle for which the colonies contended was not misunderstood in England. In reply to the statement that the tax on tea was trifling, Edmund Burke (April 19, 1768) replied: "Could anything be a subject of more just claim to America, than to see you go out of the plain high road of finance . . . merely for the sake of insulting your colonies? No man ever doubted that the commodity of tea could bear an imposition of threepence. But no commodity will bear threepence, or will bear a penny, when the general feelings of men are irritated, and two millions of people are resolved not to pay. The feelings of the colonists are the same as those of Mr. Hampden when called on for the payment of twenty shillings. Would twenty shillings have ruined Mr. Hampden's fortune? No! but the payment of half twenty shillings, on the principle it was demanded, would have made him a slave."

Samuel Adams and the Election of the First Congress. — The Massachusetts assembly was very anxious to choose delegates to the Congress to meet in September at Philadelphia; but it was known that at the first hint at such business the governor would dissolve the assembly. On June 17, 1774 (made famous a year later at Bunker Hill), the favorable moment came. The door was locked and delegates were nominated. Some of the members were frightened and sought to go out, but Adams pocketed the key. At length one of the loyalist members

pretended to be very ill and was allowed to go. He ran to the governor and told the news. Governor Gage instantly sent his secretary with a writ dissolving the assembly, but the secretary found the door locked. He then read the writ in a loud voice from the steps outside. Meantime the assembly had elected four delegates — the two Adamses, Robert Treat Paine, and Thomas Cushing — by a vote of 117 to 12. — See Fiske, Vol. I, pp. 104–105.

The Mecklenburg Declaration. — The county committee of Mecklenburg County, North Carolina, on May 31, 1775, resolved that as the king and Parliament had “annulled and vacated all civil and military commissions granted by the Crown,” etc., the provincial congresses, directed by the Continental Congress are invested with all legislative and executive power, independent of the Crown, until Parliament should resign its arbitrary pretensions. This was a bold and admirable resolution, and it formed the basis many years later of the so-called Mecklenburg Declaration of Independence, very similar to the great Declaration of 1776. This spurious Mecklenburg Declaration was never published till 1819.

Paul Revere. — One of the most heroic minor figures of the early years of the Revolutionary War was Paul Revere, and his name has received a permanent historic setting in the poem of Longfellow. He was of Huguenot descent; he served in the French War as lieutenant of artillery. By profession he was a goldsmith and copperplate engraver, and he engraved the plates for the “Continental money.” In 1775 he was sent to Philadelphia to learn to make powder, and on his return he set up a powder mill. He also became a manufacturer of church bells and cannon. Revere was forty years old at the time of his famous midnight ride. He was captured by the British while on that ride, between Lexington and Concord, but he was soon set free. He lived nearly forty years after the Revolution, dying in 1818, at the age of eighty-three.

CHAPTER XII

THE REVOLUTION — WAR AND INDEPENDENCE

SECOND CONTINENTAL CONGRESS

It was on May 10, 1775, the day that had witnessed the capture of the powerful fortress at the base of the Adirondacks by the intrepid Allen, that the Second Continental Congress met in Independence Hall, Philadelphia. It was composed of the best brains of the land. Most of the old members of the preceding Congress were present, but some of the strongest men in the body now took their seats for the first time. Among these were Thomas Jefferson, a youthful Virginian whose powers were beginning to unfold; Benjamin Franklin, the only American who enjoyed a world-wide fame; and John Hancock, who was chosen president in defiance of the king's proscription.¹

The Congress was a conservative body. Only a few of the members — the two Adamses, Franklin, and possibly Jefferson and Hancock — honestly believed that a reconciliation with England was past all hope; but even these were agreed that any consideration of the subject was not then in place. This Congress, like its predecessor of the year before, was only a great committee, or a combination of committees, met for the avowed purpose of seeking and, it may be said, demanding a redress of grievances. Yet it was forced by existing conditions to assume some of the functions of a national government. Its most important act was to adopt the straggling army around Boston as the "Continental Army," and to appoint for it a commander in chief. George Washington, at the suggestion of John Adams, was chosen to be commander of the army. As Adams described, in an elaborate speech, the high qualifications necessary to the position and reserved mentioning the name of his choice to the close, Washington sat near and watched his face intently, and hearing his own name mentioned, per-

Washington
chosen com-
mander.

¹ Peyton Randolph was again chosen president, but he was called to Virginia; and Jefferson, who had been elected as an alternate, occupied his seat while Hancock was made president.

haps without any expectation of it, he quickly arose and went into an adjoining room. A recess was then taken that the members might talk the matter over privately; and when they reassembled; Washington was elected unanimously.¹ This choice was made for two reasons. First, the Continental army was thus far a purely New England army, and it was felt that a commander must be chosen from the South in order to secure the more firmly the aid and sympathy of that section and to allay any feeling of jealousy that might arise. Second, Washington was honestly believed to be the best choice that could be made. His military reputation was second to none in the country. The remarkable journey he had made while still a youth through the wilderness of Pennsylvania at the behest of Governor Dinwiddie had not been forgotten; nor his saving of Braddock's defeated army just twenty years before the meeting of this Congress. He was now commander of the Virginia militia, and moreover he was noted for his stanch character, his stalwart, commanding appearance, his marvelous self-control, and above all for his extraordinarily sound judgment.

This Congress, while recognizing a state of war and preparing for its vigorous prosecution, disclaimed any intention of casting off allegiance to the Crown of England. On the contrary, led by Dickinson and Jay, it prepared a new petition to the king, almost fulsome in its tone, and sent it to London by a special messenger, Richard Penn, who was himself a Tory. Addresses were sent to the people of Great Britain, to Ireland, and to Canada. Congress also authorized the issue of two million dollars in bills of credit, or paper money, set apart a day of fasting and prayer, authorized various colonies to form local governments, and did many other things. Thus gradually, as circumstances required, Congress was forced to assume sovereign powers. Meanwhile matters had reached a crisis at Boston, and before the coming of midsummer, before the arrival of the newly appointed commander, the most famous of all the battles of the Revolutionary War had been fought.

BUNKER HILL

Notwithstanding the Lexington disaster, British hopes again ran high in Boston harbor during the spring of 1775. The arrival

¹ Hancock had expected and desired the appointment. Congress at the same time appointed four major generals, Artemas Ward, Charles Lee, Philip Schuyler, and Israel Putnam, and eight brigadiers.

in May of Howe, Clinton, and Burgoyne, with another army, raised the British force to ten thousand men. Gage seemed no longer to doubt his ability to put down the rebellion; and yet, to show his moderation, he issued a proclamation, offering a free pardon to all, except Adams and Hancock, who would lay down their arms and return to their allegiance, while those taken in arms were to be put to death. Gage had possession of Boston, and he might have felt secure but for the menace of the surrounding hilltops from which the enemy might throw shells into his camp and shipping. He therefore determined to occupy some of these hills.

Boston, a city of some seventeen thousand people, was situated on a peninsula jutting northward, while farther to the north, across a narrow channel of water, was the Charlestown peninsula, connected with the mainland by an isthmus known as Charlestown Neck. On the point of this peninsula lay the village of Charlestown, and back of the village rose an elevation called Breed's Hill, while farther back was situated a higher elevation known as Bunker Hill.

The American army occupied the mainland and extended in a grand semicircle for sixteen miles — from Cambridge to the Mystic River. It was under the general command of an honored veteran of the late war, General Artemas Ward, whose headquarters were at Cambridge. Hearing of Gage's intention to occupy the hills above Charlestown, Ward sent a force of twelve hundred¹ men on the night of the 16th of June to fortify and possess Bunker Hill and thus to forestall the English. Under Colonel William Prescott, who had witnessed the dispersion of the Acadians twenty years before, this band of men marched silently to the place. Passing Bunker Hill, for some cause unknown, they reached Breed's Hill at midnight and began to throw up embankments. Faithfully they toiled on till break of day revealed their work to the gaze of the astonished British.

¹ These figures are given by Frothingham, "Battle of Bunker Hill," pp. 17 and 40.

The English guns were soon trained on the works, and the sleeping city was awakened by the boom of cannon. But the men on the hill toiled on, and by noon they were well intrenched behind a strong redoubt. The British meanwhile decided to storm the American works.

The British landed—three thousand of them, led by Howe—about three in the afternoon, and began the ascent of the hill toward the American breastworks. It was a daring thing to do—and not only daring, it was foolish and suicidal. They might have gone round to Charlestown Neck and cut Prescott off from supplies and reinforcements, and eventually have forced his surrender. But here was a sample of the bulldog courage of the Englishman. Up they marched, in line of battle, with undaunted courage. Not a shot was fired from the top of the hill; the Americans were coolly reserving their fire. General Putnam rode along the lines and ordered the men not to fire until they could see the whites of their enemy's eyes. When the British had come within a few rods, a flame of fire swept along the American lines and the front ranks of the enemy were cut to pieces. Another volley followed, and another, until the British fell back in disorder, leaving the hillside strewn with dead and wounded.¹ Scarcely fifteen minutes elapsed before they had re-formed their lines and made another dash up the hill, only to receive again such a murderous fire from the breastworks as no army, however brave, could have endured. Again they rolled down the hill in confusion—except the hundreds who lay dead or wounded on the slope.

More than an hour now elapsed before the English could rally to a third attack, and it was only a blind tenacity of purpose, untempered by wisdom, that led them to make it at all. They had lost near a thousand men, while the Americans had suffered but little. It is true that the latter had almost exhausted their supply of powder, but this the British did not know; and but for this fact any number of assaults would have resulted as did the first two—until the British army would have been annihilated. With wonderful courage they now made a third charge up the hill. The first volleys of the Americans swept down their front ranks as before. But as the assailants neared the crest of the hill, they noted the slackening of the American fire, and Howe determined to charge with the bayonet. Madly the English rushed forward and leaped over the parapet. The Americans were without bayonets to their muskets, and the fight was now an unequal one; but with clubbed muskets and stones

¹ Fiske's "American Revolution," Vol. I, p. 141.

they made a valiant stand against the oncoming enemy. Scores of them were cut down, until Prescott, seeing the folly of continuing the struggle, ordered a retreat, and the British were left in possession of the field.

One of the last to leave the redoubt was General Joseph Warren, who lingered in the rear as though he disdained to fly, and this cost him his life. He had joined the ranks as a volunteer and had fought bravely during the day, but with the last English volley he fell dead with a bullet in his brain. Through his death the American cause suffered the most serious loss in a single life during the war.

**Death of
Warren.**

The victory won by the British at Bunker Hill¹ was a costly one. They lost in killed and wounded 1054 men, one tenth of whom were officers. Pitcairn was among the dead. Howe was wounded in the foot. The victory enabled the English to hold Boston for nine months longer, but the moral effect lay wholly with the Americans, whose loss was 449. At Bunker Hill they had discovered their own prowess, their ability to stand before the regulars; and Bunker Hill became a rallying cry of the patriots in every contest of the war.

WASHINGTON AND THE ARMY

After an overland journey from Philadelphia, that partook of the nature of an ovation, Washington arrived in Cambridge two weeks after the Bunker Hill battle, and the next day, beneath the shade of a great elm tree that still stands as a living monument of that heroic age, he formally assumed command of the Continental army. The new commander was warmly welcomed by the army. The local officers yielded gracefully to his superior authority. Some of them were men destined to achieve abiding fame in the coming war. By far the ablest man among them was Nathanael Greene of Rhode Island. As a farmer boy, and later a blacksmith, he had lacked the means of a classical education, but being fond of books, he acquired much knowledge by private study. He read law, general literature, and especially military tactics. He was a born soldier, and before he knew that he was to spend a portion of his life in the field he was thoroughly familiar with the theory of warfare. He was in most of the battles of the war, and was implicitly trusted by Wash-

¹ Most of the fighting was done at Breed's Hill, but the higher eminence near by gave its name to the battle.

ington, to whom he was scarcely inferior in generalship. Greene was a man of rare sweetness of character and purity of morals. In the later years of the war he became the savior of the Southern states; and after peace had come to the newborn republic, he left his native state to spend the evening of his days among the people of Georgia, who, in grateful remembrance of his services, had presented him with a fine plantation. From the hills of New Hampshire had come two men, opposite in characteristics, both of whom have left a permanent name in the annals of their country — John Sullivan, who represented wealth, refinement, and culture, and John Stark, who had shown his mettle at Bunker Hill, and whose dashing vigor, undaunted courage, and almost fierce patriotism mark him as one of the most heroic figures of the war. Here also was Henry Knox, a Boston bookseller, a corpulent man with a winning smile and a jolly laugh, who soon won his way into Washington's heart, and who many years later became a member of his first Cabinet. But the most picturesque figure of all was Daniel Morgan, the leader of the Virginia sharpshooters. Morgan was a giant in size, genial and affable, but fierce and recklessly daring in battle. In youth he had received five hundred lashes for insulting a British officer, but his spirit was unsubdued. He had escaped a murderous band of Indians on horseback after a musket ball had passed through his neck. He now joined the army of Washington and did valiant service for liberty throughout the war. These and many other Sons of Liberty now made the acquaintance of the commander in chief on the Cambridge Common.

Sir William Howe had succeeded Gage as commander of the British army, and his brother, Lord Richard Howe, was made admiral of the fleet. The contempt that Gage had felt **October, 1775.** for the Americans had worked to their benefit at Lexington and Bunker Hill. Howe seemed now to entertain the opposite opinion of his enemy; he remained inactive during the summer and autumn, and this again proved a great advantage to the Americans, for Washington needed the time to drill and reorganize his army and to secure an adequate supply of ammunition. The new-made soldiers soon grew tired of warfare, and as their terms of enlistment expired they departed for their homes by hundreds. Reënlistments were slow, and it was with great difficulty that Washington kept an army about him. He practically disbanded one army and enlisted another — all within musket shot of the British regiments.

Within this period a remarkable expedition to Canada had been undertaken by General Richard Montgomery. From Ticonderoga Montgomery pressed northward in September with two thousand men, and two months later he had possession of Montreal. The expedition promised success. To join this army in Canada Washington had dispatched eleven hundred men under Benedict Arnold, who, after a march of incredible hardships through the Maine wilderness, reached the valley of the St. Lawrence in November. Arnold, whose name in our history was to become famous, then infamous, was a man of military skill and intrepid courage. With Arnold on this perilous journey was another whose name, like his, was yet to be honored, then dishonored, by his countrymen. The fragments of the two armies met in the valley of the great Canadian river, and together they made a desperate and fruitless assault on Quebec,¹ on the last day of the year 1775. Montgomery was shot dead, and Arnold was wounded; Ethan Allen had been taken prisoner and sent in irons to England; hundreds of the brave Americans perished through cold and hunger and the ravages of smallpox; and, on the whole, the expedition ended the following spring in disastrous failure.

**Expedition to
Canada.**

Aaron Burr.

Washington was severely criticised for his long delay before Boston; but he was wiser than his critics. He spent every day in perfecting his army and preparing to strike a blow. By the 1st of March, 1776, a great many of the cannon captured at Ticonderoga the year before had been drawn on sledges all those hundreds of miles to the Continental army at Cambridge. The commander now determined to wait no longer. He sent two thousand men on the night of the 4th of March to fortify the peninsula south of Boston, known as Dorchester Heights, which commanded the city and harbor even better than did Bunker Hill. During the night the Americans kept up an unceasing cannonade from Roxbury and other points for the purpose of drowning the sound of the pick and the hammer, the noise of the moving wagons, and of the dragging of siege guns; and Howe, all unwittingly, aided him in the good work by replying with his cannon.

**Dorchester
Heights.**

At the dawn of day the British general opened his eyes in astonishment upon the work that had been wrought in the night on the heights of Dorchester. What could be done? Washington could now destroy every ship in the harbor with shells. Howe determined

¹ The city was defended by Sir Guy Carleton.

to storm the works ; but his men remembered Bunker Hill, and the memory left them spiritless. Yet something had to be done, and Howe in desperation set apart three thousand men under Lord Percy to undertake the perilous business ; but a terrific storm swept over the harbor and delayed the project until the morrow. Then it was too late : for the American works had been made so strong that only suicidal folly would attempt their reduction by storm. There was but one thing left for the English to do—to abandon Boston and the Boston harbor ; and ere the end of the month General Howe, with all the British ships, bearing eight thousand soldiers and nearly two thousand American loyalists, launched out upon the deep and sailed away to Halifax. Thus the **Evacuation of Boston, old Bay colony, the home of the Pilgrims and the Puritans, the scene of the opening acts of the Revolution, after six years of incessant annoyance,¹ was set free from the enemy ; and never again, from that day to the present, has a foreign army trod the soil of Massachusetts.²**

This was Washington's first stroke in the war, and it was one of his most brilliant. With little loss he had cleared New England of the enemy, and had sent a thrill of joy over the whole country. In their haste the British left behind more than two hundred cannon and great quantities of muskets and ammunition, all of which became the property of Washington's army. Furthermore, the news of Howe's departure did not reach England for several weeks, and meantime vessels were being sent to Boston to supply the wants of the army—and so they did, but not of the British army. They sailed innocently into the harbor, and were captured, and their contents went to increase the stores of the Continental army.

THE GREAT DECLARATION

Let us now go back for half a year and shift the scene again to Philadelphia, and the scene, covering some eight months, is the most dramatic of all the scenes in the drama. Early in the autumn of 1775 Congress was waiting to hear from the king. In deference to his Majesty, who would not recognize Congress as a legal body, the members had signed their humble petition, not as a body, but separately, as individuals representing their respective colonies.

¹ It was exactly six years (March 5) since the Boston Massacre.

² Except in the district of Maine in the War of 1812.

This alone proves their sincerity, and absolutely disproves any intention to strike for independence at that time. The petition reached London in August. The answer came late in October, and it was a stunning blow, even to the most sanguine. King George had declined to receive the petition, or to see the messenger that bore it! But the king made answer in another way. He thundered forth a proclamation declaring the colonists in a state of rebellion and no longer under his protection. And this was not all. The irate monarch, unable to secure at home the troops needed in America, hired a large number of soldiers from the Landgrave of Hesse-Cassel and other German princes, to fight his subjects in America.¹ These Hessians, as they were called, were for the most part honest, sincere men, and they came to America only because they were sold by their inhuman masters.

**The king's
attitude.**

The news of the rejection of their "Olive Branch" petition, of the king's proclamation, and of the hiring of foreign mercenaries, reached America at about the same time, — the last days of October, — and the sensation created was profound and widespread. It was evident that the king meant to awe the colonists into submission, but this he could not do. He only deepened the resentment against him, and thousands who had been lukewarm were now converted to the cause of the patriots. From this moment Congress assumed a bolder tone. It appointed committees to correspond with foreign nations, advised various colonies to set up governments for themselves, and urged South Carolina to seize all English vessels within its waters. It also opened the American ports to all nations (March, 1776), and advised the colonies to disarm the Tories. No more disclaimers of a desire for independence do we hear, no more talk of reconciliation with the king.

This change of attitude toward the mother land was not confined to Congress. The majority of the people were soon convinced that their sovereign did not love them, and it was not long before the subject of independence, which before had been only whispered in the corner, began to be proclaimed from the housetop. The subject was debated on all sides, and the idea of independence grew steadily during

¹ King George had first applied to Catherine II of Russia for troops, but she declined, and sarcastically asked the king if he thought it compatible with his dignity to employ foreign troops against his own subjects. (See Fiske, Vol. I, p. 161.) The whole number of "Hessians" employed during the war was about thirty thousand. Congress offered them grants of land if they would desert the British, and many of them did so.

the following winter. But the people were not unanimous. A large minority, probably one third of the people, were in sympathy with the English cause to the end, and it is noteworthy that in New England and the South the tendency to make a final break with the king was more pronounced than in the middle colonies. In January, 1776, appeared a remarkable pamphlet entitled "Common Sense," from the pen of Thomas Paine. This was published broadcast, and its concise, simple, and unanswerable style won thousands to the cause.

Up to April, 1776, all the talk of independence had been private talk. This showed the drift of popular feeling, but something more must be done to achieve it. North Carolina won the honor of being first to make an official move.¹ On the 12th of April that colony instructed its delegates in Congress "to concur with the delegates of the other colonies in declaring independence and forming foreign **State move-** alliances." This was a move of the greatest importance, **ments toward** and it was but a short time until Rhode Island and **independence.** then Massachusetts followed the example of their southern sister. The fourth colony to pronounce for independence was Virginia, which went farther than the others by instructing its delegates to propose independence to the Continental Congress. This bold resolution was sent by special messenger to Philadelphia.

Congress during this time was making history rapidly. It had practically assumed sovereign power in its conduct of the war. On the 15th of May, 1776, it passed a set of resolutions, offered by John Adams, authorizing the several colonies to set up state governments independent of the Crown, and several of them, as Virginia and New Jersey, proceeded to do so.² This was altogether an act of sovereignty, and it rendered necessary, as a logical consequence, a declaration of independence of the Crown. But so vast and so vital did this subject seem — the founding of a nation — that Congress felt that it could not grapple with it alone; on this one subject it could act only at the mandate of its master — the People. The majority of the members had come to favor a final break with England. The leader of this party was Samuel Adams, who, like Otis and Warren, was among the few that had aimed at independence from the beginning. The opposite party, led by Dickinson, was equally patriotic, but it counseled delay and a further effort toward reconciliation.

¹ Frothingham's "Rise of the Republic," p. 504.

² New Hampshire and South Carolina had framed constitutions on the advice of Congress (November, 1775) that the colonies set up temporary governments.

The messenger from Virginia arrived early in June. What his message was we have seen. On the 7th of that month Richard Henry Lee, one of the foremost delegates from that colony, rose before Congress and solemnly offered the resolution, in obedience to his constituents, "That these United Colonies are, and of right ought to be, free and independent states, and that they are absolved from all allegiance to the British Crown." The colonies had not all been heard from, and Lee's resolution, after a brief debate, was laid on the table for three weeks. A committee was then chosen to prepare a declaration in a suitable form to be sent forth to the world. This committee was chosen by ballot, and Thomas Jefferson, receiving the highest number, became the chairman of the committee and the writer of the immortal document. By the 1st of July all the colonies except New York had granted the necessary authority to their respective delegations, and on that morning Lee's resolution was taken up. For two days the subject was debated with great vigor, the chief speaker being John Adams. There is no doubt that the speech he made on this occasion was the most powerful delivered on the floor of Congress during the Revolutionary period. Dickinson answered him as best he could, but years afterward he acknowledged that he had been on the wrong side. On the afternoon of the 2d the resolution was passed by the unanimous vote of twelve colonies, New York not voting. Each colony had but one vote, the majority of the delegation casting it.

Jefferson had ere this put the sentiments of Congress into a terse and fitting form; in other words, he had written the "Declaration of Independence" as we know it. This document was now taken up, and, with a few slight changes,¹ was adopted by the vote of the twelve colonies on the evening of the 4th; and this day became the recognized national holiday of the newly founded nation.² New York joined with the twelve on the ninth, and the thirteen colonies were then unanimous. This Declaration practically ignored Parliament and the English people, and laid the entire blame for the dissension on the king.³ In short, nervous, almost passionate sentences, it recounted the political crimes of his Majesty and characterized

¹ Congress made but two changes of importance; a clause condemning the slave trade and another censuring the English people were struck out. The other members of the committee that framed the Declaration were Franklin, John Adams, Roger Sherman, and Robert R. Livingston — no two from the same colony.

² The Declaration was signed by the members at a later date.

³ Winsor, Vol. VI, p. 246.

him as a despot and a tyrant. It pronounced the colonies absolved from all allegiance to the Crown, and invested them with imperial power. The Declaration, whatever its defects (and it is not above criticism), was a true expression of the popular will. The people were not unmindful of the gravity of the step they were taking, of the vastness of the responsibility they were assuming. They knew that a long and bloody war must follow—that it meant untold suffering and sacrifice, vacant chairs at the family fireside, widowed mothers and fatherless children. But they took no step backward; they saw in the dim future a new nation born, commercial and political freedom, self-government. “America was never so great,” says a famous English writer, “as on the day when she declared her independence.”

The news of the great act rang forth to the expectant city in joyful peals of the old bell in the tower of the statehouse, and the people were thrown into a state of delirious joy. Post riders were sent in all directions with the great news, and in many places people abandoned themselves to the most unrestrained enthusiasm. In New York a leaden statue of George III was torn from its pedestal in the public square and melted into bullets. The Declaration was read at the head of each brigade in the army, from the pulpit and the public platform; and it was welcomed everywhere with shouts and processions, with the firing of guns and the ringing of bells, with bonfires and illuminations. For fifteen years—since the granting of the writs of assistance in 1761—the people had borne one indignity upon another; they had groped in the dark, unable to divine the next move on the great chessboard. Now there was a goal, a prize for which they were willing to stake their all—their “lives, their fortunes, and their sacred honor.”

FORT MOULTRIE AND LONG ISLAND

The first day of the memorable year 1776 was marked by two events that are still remembered in Revolutionary annals—the burning of Norfolk by the fleet of Governor Dunmore, who had been driven to the sea by the infuriated people of Virginia; and the unfurling of the flag over the Continental army at Cambridge. Before the close of this same month, January, General Clinton was sent from Boston to hold the colonies of the South. In May he was joined in southern waters by Sir Peter Parker with an English fleet

of ten warships, bearing a body of troops under the command of Lord Cornwallis, who was destined later to be a leading figure in the war. Meantime, in February, a fierce battle had occurred in North Carolina at the mouth of Moore's Creek between a thousand patriots, led by Colonel Richard Caswell, and sixteen hundred Tories, mostly Scots, under the leadership of Donald Macdonald, who had fought for the young Stuart Pretender at the battle of Culloden thirty years before. The patriots were completely successful, routing the enemy and taking nine hundred prisoners, including the commander.¹

The fight at Moore's Creek worked like magic on the people of North Carolina, and in a few days ten thousand men were armed and ready to expel the invaders of their soil. Clinton now decided not to land his troops, as he had intended. After the arrival of Parker and Cornwallis they moved southward for the purpose of capturing Charleston. But in front of the city on Sullivan's Island the Americans had made a strong breastwork of palmetto logs and sandbags, and this was defended by several hundred men commanded by one of the leading heroes of the war, William Moultrie.² The English fleet attacked the rude fort on the 28th of June; but the elastic palmetto logs proved an admirable defense, and a terrific bombardment of ten hours did little damage. On the other hand, the American fire was well aimed, and nearly every shot took effect. The flagship received more than twenty shots and was almost wrecked, while every other ship but one was seriously crippled. The heroism displayed in the defense of the fort, afterward called Fort Moultrie, was equal to that of Bunker Hill or of any other engagement in the war. It was on this day that Sergeant William Jasper, an illiterate youth who could not even read, made a name for himself in the history of his country by an act of momentary reckless heroism. The flagstaff was broken by a cannon ball, and the flag fell outside the fort. Jasper leaped down the embrasure in the face of the enemy's fire, gathered up the fallen banner, and planted it in the sand on the bastion. And the story is still related at the American fire-side as an example of the heroic valor of the men of the Revolution.

¹ Among the prisoners was also Allan Macdonald, kinsman of the commander and husband of the famous Flora Macdonald who had aided the Pretender's escape from Scotland.

² Congress had appointed General Charles Lee to take general command at the South, but Lee did little else than find fault. He would have stopped the proceedings of Moultrie but for the determined interference of Rutledge, the president of the provincial congress.

After spending three weeks in repairing his ships, Clinton sailed for New York, and the South was free from invasion for nearly three years, when it became the scene of the final conflict of the war.

The success of Washington at Boston and of Moultrie at Charleston sent a wave of exultation over the land; but this was followed by a feeling of depression caused by half a year of unbroken disasters. The British had decided to sever the colonies in twain—to cut off New England from the South—by occupying New York City and conquering the Hudson Valley. General William Howe came down from Halifax, and was joined by his brother, Admiral Howe, with a powerful fleet from England; and these were joined in the New York harbor by Clinton and Cornwallis from the South. At the same time Sir Guy Carleton was ordered to descend with an army from Canada, to capture Ticonderoga, and to hold possession of the upper Hudson.

In August the British had thirty two thousand veterans on Staten Island. To oppose this force Washington, who, divining the intention of the enemy to strike New York, had moved his army thither in the early spring, could muster but eighteen thousand men, and many of these were new recruits and in no sense to be compared with veteran soldiers. Before opening hostilities Admiral Howe offered the olive branch, which he had fresh from Lord North, a gracious offer from the king to pardon all rebels who would lay down their arms and assist in restoring order. It was sent by special messenger to “George Washington, Esq.” But as “George” Washington, the citizen and planter, had no authority to deal with national questions, and as “General” Washington had not been addressed, he declined to receive the communication. The next act in the drama was the opening of hostilities. Washington occupied Manhattan Island, and Brooklyn Heights, which commanded the city. He had sent Greene to fortify the latter, and now he manned it with half his army under the command of Putnam. Howe determined to assault Brooklyn Heights. With twenty thousand men the English advanced on the American position by different roads, and in the early morning of August 27, they encountered the Americans whom Putnam had sent out under Sullivan, who had taken the place of Greene, owing to the illness of the latter. Sullivan was first attacked by a large body of Hessians under Von Heister, and scarcely had the fight begun when he was assailed in the rear by the main force. Between two galling fires, it was not possible for the Americans to hold their ground, and nearly the whole force, in-

Brooklyn Heights.

cluding the commander, were made prisoners of war. Another division of fifteen hundred American troops, under Lord Stirling,¹ was now assaulted by General Grant and a little later by Cornwallis. After four hours of desperate resistance, Stirling succeeded in getting his men across a marshy stream to a place of safety, while he himself was taken prisoner, and the struggle known as the battle of Long Island was over. About four hundred had been killed and wounded on each side, and the British had taken some eleven hundred prisoners.

Washington had witnessed the disaster from a distance with deep emotion. "My God," he cried, "what brave fellows I must lose this day." Howe closed in

around the American fortress, and Washington, expecting an immediate storming of the works, brought troops from Manhattan and raised the defense to ten thousand men. But Howe decided to settle down to a siege. The American commander seeing that he could not stand a siege, determined to elude his enemy by night, and this he did with remarkable skill. The night was favorable, as a dense fog enveloped the moving army. Every manner of craft on the East River, from the yacht to the scow and rowboat, was pressed into the service; and on the morning of the 30th, the entire army with its stores and artillery was safe in New York, and Howe had lost the rarest opportunity of his life of crushing the rebellion and ending the war. Had he been quick to surround Washington he could have captured him and his ten thousand; but the delay was fatal.²

August 29.

¹ This American "Lord" was William Alexander of New Jersey. He had inherited a lapsed Scotch title and was always known as Lord Stirling.

² The opinion is held that Howe sympathized with the Americans and did not wish to defeat them. See reference to the subject on a later page.

Lord Howe again made overtures for peace. He sent the captured Sullivan to Philadelphia to make proposals to members of Congress and to request a committee of conference. Franklin, Rutledge, and John Adams were appointed; they met Howe on Staten Island, but as they refused to treat with him, except on the ground of independent America, the conference came to nothing.

After losing Brooklyn Heights, Washington could no longer hold New York, and his next move was to fall back with the army to the heights along the Harlem River. But before Putnam, with the rear-guard of four thousand men, could leave New York, Howe had crossed the East River, and occupied the city. Putnam was in imminent danger of capture, and was saved by the clever strategy of a woman. As Howe reached Murray Hill, the fine country seat of Mrs. Murray, — now a fashionable portion of New York City, — that lady sent him a pressing invitation to stop for luncheon. Howe accepted the kind offer, and while he and his officers spent two hours with their hostess, whom they no doubt supposed to be a loyalist, Putnam made his escape up the Hudson to the main army; but in his haste he left behind his heavy guns and many of his army equipments.

The great object of the British was now to get in the rear of Washington and to cut off his retreat northward. But the Hudson was guarded by two strong forts — Fort Washington on the upper end of Manhattan Island and Fort Lee across the river on the Palisades — and for nearly a month the two armies lay glaring at each other. After a skirmish on Harlem Plains in September, Washington moved his main army to White Plains. Howe followed him, and, despairing of gaining his rear, made an attack in front. This skirmish, known as the battle of White Plains, took place on Chatterton's Hill near the American camp, and resulted in an American loss of nearly one hundred and fifty men, and a British loss of over two hundred. Howe refused to make a second attack, and retired down the Hudson after Washington had taken a strong position at North Castle, near the scene of the battle.

NEW JERSEY AND TRENTON

The remaining two months of this memorable year — save only the final week — must be pronounced the darkest days of the Revolution. A chain of unfortunate events came near bringing ruin upon

the cause of American independence.¹ The officious interference of Congress, a serious blunder by General Greene, and the disobedience of Charles Lee, who had arrived from the South, brought about the famous retreat across New Jersey and produced an appalling depression of spirits throughout the land.

Washington, seeing that the fort called by his name could not prevent the enemy's vessels from passing up the Hudson, decided to abandon it. He urged the matter on General Greene, but left the ultimate decision to the latter's discretion while he made a trip to West Point, which was being fortified by General Heath. Congress now interposed, and resolved that Fort Washington² should not be given up unless through dire necessity. Greene for once distrusted the judgment of his commander and followed the advice of Congress. The mistake was a disastrous and costly one. To hold the fort was impossible; the British army was closing around it and the garrison could not now be withdrawn. On November 17 Howe stormed the fort with almost his entire army, and, after losing five hundred men, forced the surrender. Colonel Magaw, the commandant, had made a valiant stand, but he was compelled to surrender to superior numbers; and he, with three thousand men, together with a great quantity of cannon, muskets, and military stores, so much needed by the Continental army, passed into the hands of the enemy.³ The fall of Fort Washington was a terrible blow to the patriots, and Greene never forgot the costly lesson it taught him.

It was now determined to abandon Fort Lee, on the west side of the Hudson. Ere this was done, however, five thousand British soldiers had scaled the rocky walls of the Palisades, and were ready to dash upon the fort; and the garrison under Greene retreated with such haste as to leave their cannon behind. This was not a serious disaster, but it was the last straw to the disheartened patriot army. For several months one misfortune had borne upon another, and thousands of people now came to believe that the patriot cause

¹ See Fiske, Vol. I, p. 219.

² Fort Washington had been built early in the spring by Rufus Putnam, afterward "Father of Ohio," a cousin of General Putnam.

³ Howe had made a threat that he would put the garrison to the sword if they did not yield without resistance. Magaw answered defiantly and opened the battle. Howe was a humane man and probably had no intention of carrying out his threat. On gaining the fort, however, the Hessians, exasperated at the determined resistance, put a few of the men to the sword, and Washington, viewing the spectacle from beyond the river, burst into tears and sobbed like a child. Fiske, I, p. 220.

was lost. Amid the general discouragement one cannot but note the extraordinary fortitude of Washington. His soul was wrung with grief, but there is no evidence that his faith in ultimate success was shaken. His ability as a soldier was of a very high order. Seldom was his army in a condition to meet the enemy in the open field; but equal if not greater skill is required in conducting a retreat, and in wearing out a large army with a small one; and in this Washington was a master with few equals in history. Washington's diminished and discouraged army now lay at Hackensack, New Jersey, and the troops were leaving for their homes as fast as their brief enlistments expired. The commander had urged upon Congress the importance of long enlistments, and that body had complied, but their action had not yet borne fruit.

He had with him but six thousand men, having left seven thousand with Lee at North Castle, in New York, with orders to cross the Hudson and join him as soon as practicable. But Lee hesitated; and Washington, moving on to Newark with Cornwallis in pursuit, sent messengers again and again, urging Lee to join him with all possible haste. Lee sent excuses, argued, dissembled, pretended to misunderstand, and refused to move; and the commander in chief was forced to his inglorious retreat across New Jersey with but a fragment of his army.

Charles Lee requires a little special attention at this point. He was English born, the son of a British officer, and had entered the army when only a boy. He served in various European wars and in the French and Indian War in America. Having returned to Europe, he again came to America when he saw that the people were about to grapple with the mother country, and offered his services to the patriot cause. But there is nothing in his career to show that he cared for the cause or that he possessed any special ability as a commander. Nevertheless he succeeded, by constant boasting, and by reckless criticisms of military affairs, in making the American people believe that he was a great military genius. Tall, hollow-cheeked, and uncomely, he was irascible, selfish, pompous, and censorious; but these qualities were regarded as but pardonable eccentricities of a great man. All classes, including Congress and the commander in chief, at first greatly overrated Lee. In truth, he was an adventurer, a seeker of fame and fortune, and, as revealed by his private letters unearthed in London nearly a hundred years later, a traitor to the American cause.

While Washington was fleeing before the British regulars and appealing to Lee for the other half of the army, the latter was plotting for the overthrow of his chief, whispering slanders, and writing to governors of states and members of Congress, asserting that the recent disasters were due to Washington's incompetency, and that it would all have turned out differently if his advice had been heeded. To Dr. Rush of Philadelphia Lee declared in substance that he could bring order out of chaos if he were made dictator for one week. Many of the uncritical, in whose minds Washington's star had recently waned, firmly believed Lee to be the greater general of the two. Lee was still lauded throughout the North as the hero and victor of Fort Moultrie, whereas he had done nothing in that noble defense but scold and find fault while beyond the reach of the British guns. Such was Charles Lee, the senior major general of the army since the retirement of Artemas Ward.

The hour was dark and threatening indeed. Half the army was fleeing like a hunted fox across the Jersey plains, while the men were departing for their homes by hundreds, believing the cause to be a lost one; the other half was held inactive by a traitor a hundred miles away. Furthermore, the gloomy outlook had led some three thousand of the leading Jersey farmers to accept Howe's latest offer and to swear allegiance to the Crown. Surely the infant life of the republic quivered in the balance. At this dark hour Congress came to the rescue. Silver and gold it had none; but it could do something, and so it did. It made a master stroke for liberty, and in the same act answered Lee's intrigue and gave to the country its opinion of Washington. It made him military dictator for six months.¹

Washington had reached the bank of the Delaware before Lee moved hand or foot to join him. Then Lee crossed the Hudson and leisurely proceeded westward. But ere the middle of December, after he had spent a night at a village tavern, and just as he was finishing a letter to Gates in which he spoke of Washington as "damnable deficient," a band of British riders did the American people a lasting service by making General Lee a prisoner. Thus a large portion of the army, released from the baneful influence of this designing self-seeker, became again useful to the commander in chief.

Lee's capture.

Howe had fully expected to catch his prey in West Jersey; but

¹ This action was taken the day after Washington's success at Trenton, to be noticed later, though Congress had not yet heard of the victory.

at Princeton, another at New Brunswick; while a larger body, some twelve hundred Hessians under Colonel Rall, occupied Trenton.

But the dawn was beginning to break upon the darkness. The volunteers from Philadelphia arrived in camp; Sullivan came with the troops that Lee had held so long at North Castle; and Horatio Gates joined the army with two thousand men, sent by Schuyler from the upper Hudson. Washington now determined on a bold stroke. He would recross the Delaware by night and attack the Hessians at Trenton. He chose the most opportune time, — the day after Christmas, — judging wisely that after the festivities of the holiday the soldiers would be ill prepared for defense. The whole project was planned and executed by Washington. Gates, who was expected to assist, had gone off to Baltimore to intrigue with Congress; Putnam, who was guarding Philadelphia, could spare no men for the enterprise. Ewing and Cadwalader, who were ordered to cross the river at a lower point and cut off the enemy's retreat, failed to do so on account of the floating ice. But no obstacle could daunt the commander in chief. At the twilight hour, as the earliest stars began twinkling from a clear sky on that cold Christmas night, the little army of twenty-four hundred men began their struggle with the ice floes and the rapid current. Encumbered with their cannon and baggage they occupied many hours in crossing. By midnight the sky was overcast with clouds and the snow was falling, and the remaining hours were intensely dark. But the men labored on with brave hearts and at four o'clock, without the loss of a man, the army was safely landed on the Jersey shore. This was at Mackonkey's Ferry, nine miles **Crossing the Delaware.** above Trenton, and the march down the river was one of extreme suffering, for the snow had turned to rain and hail, and the roads were in a dreadful condition. In two divisions, commanded by Sullivan and Greene, the army reached the little capital by converging roads almost at the same moment, and began a simultaneous attack. The enemy was wholly unprepared. Rall was roused from his bed to take command, but he soon fell mortally wounded. The battle was sharp and decisive, and was all over in three quarters of an hour. The American victory was complete. Less than two hundred Hessians made **Trenton.** their escape; a hundred or more were killed and wounded, while about nine hundred and fifty were made prisoners. Six cannon, twelve hundred muskets, and other stores were also taken. The

American loss was two killed, two frozen to death, and a few dozen wounded.

The victory at Trenton astonished everybody, so closely had Washington guarded the secret of his intentions. As the news spread through the country the rejoicing was loud and unrestrained. The captured Hessians were marched through the streets of Philadelphia to give the people ocular proof of the American triumph. The people thanked God for the victory, and took courage to renew the struggle for liberty. "The Lord of hosts has heard the cry of the distressed," exclaimed the Lutheran patriarch, Mühlenberg, "and sent his angel to their assistance."¹

Cornwallis, on hearing of the American victory, gave up his visit to England and hastened to Trenton. Washington had recrossed the swollen river with his spoils, but a week later we find him again at Trenton with a larger and more hopeful army. The terms of enlistment of a large number of his men expired with the year 1776, but by pledging to them his private fortune (an example followed by John Stark and others) and by the use of \$50,000 placed in his hands by Robert Morris, the great financier of the Revolution, he induced them to remain. Cornwallis had reached Princeton, and on the 2d of January he began his march upon Trenton with eight thousand of his best troops. Washington had taken a stand on the banks of a little river south of the town, the Assunpink. But he saw that his force was much inferior to that of his antagonist, and he dared not risk a battle. The British reached Trenton late in the afternoon. Cornwallis now determined to throw his entire force against Washington, crowd him to the bank of the Delaware, and capture his whole army. But his men were weary and it was evening. He decided to wait till morning, never doubting the success of his plans. He retired in high spirits, saying, "At last we have run down the old fox and will bag him in the morning."² But the fox was too wily to be caught. Keeping his camp-fires brightly burning all night, and a few men busily throwing up embankments within hearing of the British sentinels, Washington silently removed his entire army around the left wing and to the rear of his enemy, and by daylight they were marching happily toward Princeton. As the army neared the town a detachment under General Hugh Mercer encountered some two thousand

**Washington
escapes
Cornwallis.**

² Fiske, Vol. I, p. 232.

British under Colonel Mawhood on their way to join Cornwallis. An immediate conflict ensued. After a fierce opening fire, the British rushed upon the patriots with the bayonet; and the latter, being without bayonets, fled through an orchard, leaving their valiant commander mortally wounded on the ground. As the English were pursuing the fugitives they came to the brow of a hill where they met the main army under Washington, who had heard the firing and was hastening to the spot. The British halted, and the battle became general.

**Mercer
killed.**

At this battle of Princeton Washington signally displayed that marvelous physical courage which characterized him. The Pennsylvania militia wavered and seemed on the point of breaking, when the commander, to encourage them, rode to the front in the very midst of the flying bullets and drew rein within thirty yards of the enemy's lines. One of his aids drew his cap over his eyes that he might not see his chieftain die. Next moment a cloud of smoke enveloped rider and horse and hid them from view. A shiver of dread ran through the patriot ranks, but as the smoke cleared away and the commander sat unhurt, a wild shout of joy arose from the army.

**Battle of
Princeton.**

The British were soon put to flight, and the battle was over. Cornwallis was amazed to discover, on the morning of January 3, that his prey had again escaped him. The distant boom of cannon at sunrise told the story. He broke camp and made a dash for Brunswick to save his stores collected there, while Washington moved northward to Morristown and went into winter quarters in a strong position.

In three weeks Washington had done a marvelous work for liberty. Frederick the Great is said to have pronounced his achievements in those three weeks the most brilliant in military history. In that time Washington, with a small, half-trained, half-hearted army, had won two victories, had taken a large number of prisoners, had greatly increased the size of his army, and, above all, had turned the tide of popular feeling and infused a new and living hope into the hearts of the patriots from Maine to Georgia and from the mountains to the sea. The star of Liberty, that had seemed so near its setting, was mounting again toward the zenith.

NOTES AND ANECDOTES

The Loyalists. — As noted in the text, probably one third of the people of the thirteen colonies remained faithful to the king and opposed armed resistance from the beginning. These are often called Tories, but the term "loyalists" is better, as they were not in full sympathy with the Tory party in England. Usually they were headed by the Episcopal clergy and the officers appointed by the Crown. A large majority of them were native born and were sincere lovers of their country; but their love for the king and their pride in being a part of the British Empire led them to oppose independence. There were loyalists in every part of the country. In New England they were few; in Central New York they were many, but still in the minority; so in New Jersey and Pennsylvania, while in the South, especially in the newly settled parts of the Carolinas and Georgia, at least half the people remained loyal to the king. Many of the loyalists were passive; they wished to be let alone; their attitude was a negative one. But the patriots were aggressive and often violent. In the early years of the war they were usually content with disarming the loyalists and forcing them to make a public disavowal of their allegiance to the king; but as the years passed they became more violent, drove the loyalists from their homes, treated them to tar and feathers, and so on. In Philadelphia two were hanged; in New Jersey several were sentenced to death, but were pardoned by the governor. The loyalists were aggressive also at times. On one occasion they made a plot against the life of Washington. (See Van Tyne's "Loyalists in the Revolution," p. 127.) The Congress and the commander in chief took measures to suppress the enemies of the country, as they were called, and various state legislatures passed test acts requiring all "suspects" to take an oath to aid the cause of the patriots. The states also passed confiscation acts. In New York alone property to the amount of \$3,600,000 came into the possession of the state through the confiscation law. *Ibid.*, p. 280.

Nathan Hale. — After the Continental army had reached Harlem Heights above New York, Washington, desiring to be made acquainted with the force and probable purpose of the enemy, applied to Colonel Knowlton for some capable man who would be willing to attempt the dangerous task. Knowlton chose Nathan Hale, a brilliant young captain, aged twenty-one, a graduate of Yale and, before the war, a Connecticut school-teacher. Hale volunteered his services and crossed the sound at Fairfield in September, 1776, disguised as a school-teacher. He reached New York, made a careful study of the enemy's fortifications, drew plans, and was waiting for the ferry to return by way of Brooklyn when he was betrayed by a Tory kinsman who recognized him. His arrest followed, and Howe turned him over to the inhuman provost marshal, Cunningham, who hanged him the next day without a trial, and even refused him the services of a clergyman or the use of a Bible. Hale's dying utterance is well known: "I regret that I have but one life to give for my country." While Hale was engaged in this business, Colonel Knowlton, who had sent him, was killed in the battle of Harlem Plains.

Washington in Love. — While encamped at Harlem Heights, Washington occupied a house that must have brought him a train of recollections. In 1756

he had been sent from Virginia to Boston to confer with Governor Shirley, and he was received with great respect along the route, for his exploits under Dinwiddie and Braddock were everywhere known. When he reached New York he became the guest of a Mr. Robinson at the latter's mansion. Mrs. Robinson's sister, Mary Phillipse, a beautiful heiress, was staying at the house, and the future father of his country was greatly smitten with her charms. On his return he again stopped at the mansion and remained as long as duty would permit. He wished to make her his bride, but lacked the courage to make the proposal. He confided his secret to a friend in New York, and this friend kept him informed by mail of the movements of the young lady, and at length informed him that she was to be married to Colonel Morris. Three years later Washington married Mrs. Martha Custis, *née* Miss Dandridge. With the coming of the Revolution, Colonel Morris, whose country seat was on Harlem Heights, went with the Tories, and Washington now occupied his vacated house as headquarters.

Israel Putnam. — General Putnam, farmer, innkeeper, and soldier, though almost threescore at the opening of the war, and never a master of military science, was yet one of the most heroic and picturesque figures of the war. He commanded a body of rangers in the French and Indian War, was present at the capture of Montreal, and of Havana, Cuba, and was a colonel in Bradstreet's Western expedition against Pontiac in 1764. In the French War he was taken captive by the Indians, bound to a tree till the battle had ceased, and then taken into the forest to be tortured to death. He was stripped and tied to a sapling; and the fagots piled at his feet were already ablaze when a French officer dashed through the savage horde, rescued Putnam, and carried him to Montreal, whence he was exchanged.

The best known and perhaps the most daring feat in Putnam's checkered life was his riding down a precipice at West Greenwich, New York. He had but one hundred and fifty men, and was attacked by Governor Tryon with ten times that number. Ordering his men to retire to a swamp inaccessible to cavalry, he, on the near approach of the enemy, rode down a hundred stone steps that had been cut into the solid rock for foot passengers.

Captivity of Ethan Allen. — In the early part of the war, and not long after his bold capture of Ticonderoga, Ethan Allen, as stated in the text, was made prisoner and carried in irons to England. His treatment was brutal in the extreme, but his spirit was unconquered. On one occasion he knocked an officer down for spitting in his face. The captain who brought him back to New York, however, was a humane man, and Allen became greatly attached to him, and saved his life by preventing a mutiny among the prisoners on the ship. Allen was released on parole, the condition being that he must not leave New York. Meantime every effort was made to induce him to join the British ranks, but no power could move him. Among other things he was offered a large tract of land in New Hampshire or Connecticut, when the country should be conquered. His answer was characteristic. He said it reminded him of an incident related in Scripture, where the devil took Christ to the top of a high mountain and offered him all the kingdoms of the world, "when all the while the damned soul had not one foot of land on earth."

CHAPTER XIII

THE REVOLUTION—FROM SARATOGA TO MONMOUTH

THE episode in New Jersey, resulting in the retreat of Washington across the state and his later success at Trenton and Princeton, did not belong to the immediate general plan of the British ministry. That body, of which Lord George Germain, the secretary of state, was the mouthpiece and one of the leading spirits, had set its heart on dividing the colonies into two parts by conquering the great valley of the Hudson River. A year had passed since this work begun, and the conquest of Manhattan Island alone had been accomplished, while all the vast region to the north, even to the Canadian border, was still held by the Americans. The British now determined on a desperate and final

STRUGGLE FOR THE HUDSON VALLEY

It was decided that an army should invade New York from Canada, and that it should be commanded by Lieutenant General John Burgoyne, who had succeeded Guy Carleton, the governor of Canada, in command at the north. From this army a detachment of a thousand men under St. Leger was sent by way of Lake Ontario to land at Oswego, to proceed inland, capture Fort Stanwix on the upper Mohawk, sweep down the Mohawk Valley, and eventually join Burgoyne at Albany. From the south, General Howe was to move up the Hudson, destroying every vestige of opposition to the Crown, and at length to join his brethren in the general festivities at Albany. This was the plan for the summer of 1777. It would divide colonial America; it would sever New England from the south, break down the rebellion, and bring back the erring colonists to their former allegiance. And it was perfectly easy to carry out—on paper.

The defeat of the whole enterprise had its origin in a little slip

of the memory amounting to criminal negligence on the part of the one who, above all men, except his sovereign, desired the conquest of America — Lord George Germain. He had sent Burgoyne peremptory instructions to proceed down the Hudson, and the instructions to Howe to move up that river were equally peremptory. But before the latter order was signed he made a holiday excursion to the country, and on his return he forgot all about the paper, which lay in a pigeon-hole for several weeks. The delay was fatal. At length the mistake was discovered and the order sent; but when it reached Howe, late in August, he was far from New York,—he had sailed to the Chesapeake, and was moving northward to meet Washington on the banks of the Brandywine. Who can measure the importance to American liberty of this little blunder? The fate of Burgoyne hung on the coöperation of Howe, and the fate of the Revolution hung on the success or failure of this campaign.

During the closing days of June, 1777, General Burgoyne, with a well-trained army of eight thousand men, was sailing in high spirits up Lake Champlain toward Fort Ticonderoga. Four thousand of these were British regulars, three thousand were Hessians or Germans, a few were Canadians, and some five hundred were Indians.

Burgoyne was a gentleman of culture and education, eloquent, generous, and brave. He was a member of the British Parliament, as were several others in his army. Among his subordinates were, General Phillips, an artilleryist with **Burgoyne.** an enviable reputation; General Fraser, a veteran commander of much ability; and, not inferior to either, Baron Riedesel, who commanded the Germans. The American commander at the north was General Schuyler, who had recently placed Arthur St. Clair in command of Ticonderoga. The garrison numbered three thousand men, and the fort was considered impregnable. But scarcely had the British landed near the fort when they scaled a rocky height—Mount Defiance, as it was afterward called—which commanded the fort, and which had been considered inaccessible. The Americans were completely surprised when they beheld the British and the frowning cannon on the brow of the hill overlooking the fort. The only thing to do was to abandon the **Recapture of Ticonderoga** place with all speed. In the darkness of that night St. Clair embarked his little army upon the lake, and they might have escaped untouched but for the light of a burning house that told the story of the flight. Before the coming of dawn Fraser and

Riedesel were in hot pursuit, and the British flag was waving again over the walls of the noble fort from which it had been so unceremoniously dragged by Ethan Allen two years before. After several days of flight and a few sharp encounters with their pursuers, the Americans joined Schuyler with the main army at Fort Edward.

The news of the fall of this citadel of the Hudson Valley soon reached England, and occasioned the greatest rejoicing among the Tory party. The end of the rebellion was believed to be at hand. The king lost his self-control and, rushing into the queen's apartment, clapped his hands and shouted, "I have beat them! I have beat all the Americans!"¹ On the other hand, the Americans were deeply depressed by the news. Schuyler and St. Clair were fiercely denounced for not having fortified Mount Defiance, and St. Clair was tried the next year by court-martial, but acquitted.

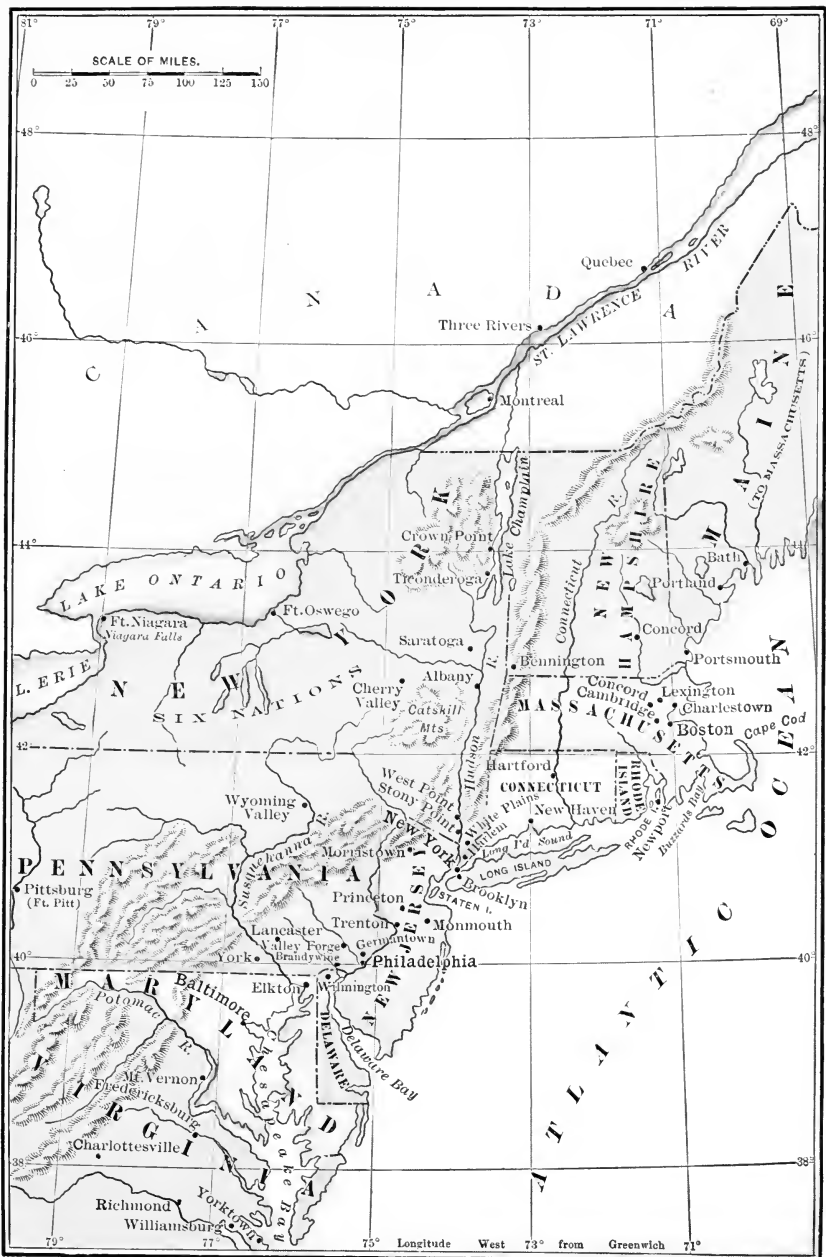

The strange fact remained, which neither the English nor the Americans at that moment saw, that Burgoyne had done nothing toward conquering the Hudson Valley. He had done himself injury rather than good. He had captured the great fort, but the Americans did not need it; and it became a burden to its possessor, as a goodly portion of his army was required to hold it.²

But, what was still more important, the people of New York and New England were aroused as never before since the battle of Lexington, and they soon began pouring into Schuyler's camp by hundreds. Washington sent Arnold and Lincoln with reënforcements and Daniel Morgan with his five hundred Virginia sharpshooters. Schuyler rose to the occasion. He removed all the cattle and provisions from the country round and forced the enemy to draw his daily bread from Canada and England; he felled trees and otherwise obstructed the roads, destroyed all bridges, and placed great stones and logs in the fords of the streams. Thus he obstructed the progress of the enemy, while his own army was daily increasing. Burgoyne was twenty-four days marching twenty-six miles, and every soldier that fell by the way — and they were many — was a net loss, for none could be replaced. It was now the middle of August, and ere the close of that month an irreparable double calamity befell the British in the battles of Oriskany and Bennington.

Oriskany was, without exception, the bloodiest single conflict in the war of the Revolution. It occurred near Fort Stanwix, at the head waters of the Mohawk, and General Nicholas Herkimer was its

¹ Fiske's "American Revolution," Vol. I, p. 271.

² *Ibid.*, p. 272.

SCENE OF WAR IN THE NORTHERN AND MIDDLE STATES.

hero. Herkimer was an aged German resident of that country, a veteran of the French War and now commander of the county militia. Hearing of the approach of St. Leger, he raised an army of eight hundred men for the relief of Fort Stanwix. He started toward the fort and fell into an ambush at Oriskany, about eight miles from the place. It was in a deep ravine crossing the road. Here the army of St. Leger, led by Sir John Johnson, son of the famous Sir William of earlier days, and Joseph Brant, the great Mohawk chieftain, met the army of Herkimer. Nothing more horrible than the carnage of that battle has ever occurred in the history of warfare. Men grappled and shot and stabbed and cursed and dashed out one another's brains. To add to the lurid horror of the scene, a terrific electric storm broke forth, and the thunders of heaven pealed answers to the booming artillery below. The livid lightning lit up the scene in quick flashes, and the rain poured in torrents; but the men fought on like demons. A ball killed Herkimer's horse and gave him a mortal wound; but he placed his saddle at the root of a tree, sat on it, and continued shouting his orders to the end of the battle.¹

**Oriskany,
August 6,
1777.**

At length, when both armies were exhausted and one third of each had been cut down, the British and Indians left the Americans in possession of the field. Two weeks later Benedict Arnold came to the rescue of the fort, and, by a most clever ruse, frightened St. Leger and his Indian allies from the country. So scared they were, it was said, that they scarcely stopped running till they reached Canada.

Burgoyne's army was beginning to suffer from hunger. At the foot of the Green Mountains, in the village of Bennington, were patriot stores and ammunition, and the British commander decided that he must have them. On August 13th he sent five hundred Germans and one hundred Indians with two cannon to make the capture. Perhaps Burgoyne did not know that John Stark was in the neighborhood. Stark had done valiant service at Bunker Hill and Trenton, but he had retired to his Vermont home because Congress had promoted others and not him, as it should have done. But now he redeemed himself, and posterity remembers him more for Bennington than for anything else. His speech to his men is well known, "They are ours to-night, or Molly Stark is a widow"—and so they were, and Molly Stark's husband survived the battle for forty-five years.

The British troops were attacked on three sides, Baum, their

¹ *Ibid.*, p. 290.

commander, was mortally wounded, and the whole force was made captive after a desperate battle. Meanwhile Colonel Breyman had been sent with several hundred men to the rescue of Baum. But at the moment of his arrival Colonel Seth Warner reached the scene with five hundred more Green Mountain boys eager for battle. The fight was renewed and lasted till night, when Breyman, with but sixty or seventy men, escaped in the darkness. The Americans captured in all seven hundred men and a thousand stand of arms. Forty Americans and two hundred of the enemy were killed.

Burgoyne's difficulties were now multiplying. His provisions were well-nigh exhausted, and his ranks were diminishing while those of his enemy were increasing. Now came the news of the disaster at Bennington, and ere he had recovered from the shock he heard of Oriskany and of the disgraceful flight of St. Leger. His only salvation lay in coöperation from the South, and for news from that quarter he waited daily, but he waited in vain.

With sincere regret we must now record an act of Congress by which Schuyler was superseded by Gates in command of the army.

Gates succeeds Schuyler.

The latter was a self-seeker, and his intrigues in Congress had at last been successful. Schuyler was a truer patriot, an abler soldier; but he had enemies, and they now gained the object they had sought. So perfectly had Schuyler managed that the Americans must have won, even without a commander, and Gates came only to receive the laurels that had been gathered by other hands. Schuyler bore the humiliation like a true patriot and offered to serve Gates in any capacity.

Burgoyne's condition grew worse day by day. Lincoln harassed him from the rear, the main army of the patriots confronted him, while the men of New Hampshire "hung," to use his own words, "like a gathering storm on the left." To retreat to Canada was impossible; to risk a battle was perilous, as the Americans now numbered fifteen thousand; and he longed for Howe, — but Howe was far away on the banks of the Brandywine. At length, in desperation, the gallant Burgoyne determined to hazard a battle. He led his army across the Hudson in mid-September, and on the 19th a desperate battle was fought. The Americans were strongly intrenched at Bemis Heights, which had been fortified by the Polish patriot, Kosciusko. Gates had intended to act wholly on the defensive, but the dashing Arnold begged and received permission to advance

upon the enemy. With three thousand men he met the British, at Freeman's Farm.¹ After a sharp fight Fraser attacked Arnold fiercely, and later in the day Riedesel joined

him. Arnold sent to Gates for **First battle of Saratoga**, reënforcements, but the latter, **September 19**, with more than ten thousand idle troops about him, refused; and Arnold, though with inferior numbers, again dashed into the battle and kept it up till nightfall. Neither side could claim a victory; but the advantage lay with the Americans, who had lost but three hundred men, while the enemy's loss was nearly twice that number.²

The conduct of Gates in refusing Arnold reënforcements was outrageous, and can be explained only on the ground of jealousy. In the account of the battle he sent to Congress, Gates took the entire credit to himself, and did not even mention Arnold's name! The army, however, sounded his praises, and this awakened the envy of Gates. A quarrel arose between the two, and Gates dismissed Arnold from his command. The latter was about to leave for Pennsylvania, but his brother officers begged him to remain, and he did so.

Eighteen days after this battle a second took place on the same ground as the first. Burgoyne found that he must cut his way out of the trap in which he was placed, or perish, and he had a little hope of success. He had heard that the dashing Arnold was now without a command, and he had little respect for Gates, whom he called "an old midwife." With fifteen hundred picked men he attempted to turn the American left, but

¹ Of the four names by which this battle is known the reader can take his choice: Saratoga, Stillwater, Bemis Heights, and Freeman's Farm.

² Some writers make the losses much greater.

was driven back at every point by Morgan's sharpshooters and the New England regulars.

Arnold was watching the conflict from a distance and could endure being a spectator no longer; he leaped upon his charger and was soon in the midst of the battle. The men shouted for joy at the sight of their old commander, and from then to the end of the day it was Arnold's voice that they obeyed. The British were thoroughly defeated, and General Fraser, one of Burgoyne's ablest commanders, was mortally wounded. As evening was closing the battle, a wounded German soldier lying on the ground fired at Arnold and shattered his left leg, the same that had been wounded at Quebec. A rifleman who saw the incident rushed upon the German with his bayonet and would have run him through the body, but Arnold cried, "For God's sake, don't hurt him! he's a fine fellow!" and the man was spared. It has been well said that this was the hour when Benedict Arnold should have died.¹ Had it been so, what a name he would have left in the annals of America! but how painful for the historian to record the later career of this daring, brilliant soldier.

The British army was now weary unto death, and a braver army never wielded the sword. The Hudson was guarded at every point by the Americans, who were fast closing around their intrepid foes. The wife of General Riedesel, with her three little children, had followed the fortunes of her husband through the war. For six days she crouched in the cellar of a large house with her children, her maids, and several wounded officers, while the Americans, thinking the place a lodging for officers, trained their guns on the house, and eleven cannon balls passed through it in one night.

General Fraser died soon after the battle. He had requested that his body be buried at the twilight hour on a green hill not far from the river. This was done, and as the little group of officers stood sadly around the grave of their fallen comrade, the scene was rendered more solemn and awful by the peals of the American artillery that mingled with the broken voice of the chaplain.²

What now could the British army do but surrender? It was practically surrounded by the Americans, whose cannonade was incessant, day and night; its supplies were cut off, and there was no

¹ I have borrowed the account of this incident from Fiske.

² Baroness Riedesel's diary.

hope of rescue. Sir Henry Clinton¹ was at last moving up the Hudson with a small army, and had won some successes; but it was not possible for him to reach Burgoyne before the surrender. Had he done so the result might have been the surrender of two British armies instead of one, for the patriots were now twenty thousand strong and were still swarming in from the valleys and the hills.

Burgoyne asked for a conference with Gates on October 12. The latter at first demanded unconditional surrender, but the English general refused and declared that his men would first fall upon their foe and accept no quarter.² Gates then gave better terms. The British were permitted to stack their own arms and were promised transportation to England on the condition that they must not serve again during the war.³ The number of men surrendered was 5799, with all the cannon, muskets, and munitions of war; but the entire British losses from the beginning of the campaign exceeded ten thousand men.

**Surrender of
Burgoyne,
October 17,
1777.**

After the surrender the American army melted away as rapidly as it had assembled, leaving but an nucleus of regulars. The militia returned to their homes, feeling confident (and this feeling was shared throughout the country) that the crisis of the war was past and that the complete independence of America must in the end be achieved.

FOREIGN AID

The crisis of the Revolution had passed before the colonists received any substantial military aid from abroad, and they would probably have won their independence had they been left wholly to themselves. Nevertheless the help that at length came was received most gratefully. France was the first to stretch forth a helping hand. But the motive of the French was not the noblest of motives. It was not a feeling of friendliness that prompted their action; they scarcely knew the Americans except as a foe whom they had met on the field of battle. Nor was it a desire to strike a blow in the cause of Liberty struggling to be born; France was at that moment

¹ Clinton had sent a messenger to Burgoyne with a letter written on very thin paper and encased in a silver bullet. At Kingston the messenger was caught. He swallowed the bullet, but it was recovered by means of an emetic. The messenger was hanged, and Burgoyne waited in vain for the news from Clinton.

² See Creasy's "Fifteen Decisive Battles," "Saratoga."

³ Congress declined to carry out these terms fully. See note at the end of the chapter.

the most king-ridden country in Europe. What prompted the French government to interfere in behalf of the patriot cause in America was chiefly a desire to cripple and wound her old enemy, who had robbed her of her own fair dominion in the New World.

This was the chief motive of the French; but there was another. In addition to a certain romantic interest in the American struggle, felt in the higher circles of French society, there was a spirit of unrest throughout the nation that only waited an opportunity to vent itself. Taught by such men as Voltaire and Rousseau, Montesquieu and Turgot, the French people had come to that state of discontent which first found expression in a desire to aid the struggling Americans, and later in the violent Revolution that swept over their own land.

Scarcely had the breach between England and her colonies begun when the French sought to widen it. Early in the contest Arthur Lee, then living in London as the agent of Virginia, secured from the French government, under the name of a fictitious business firm, military stores to the amount of \$200,000. Congress then sent Silas Deane to join Lee, and it was not long until French vessels had landed in America two hundred heavy guns, four thousand tents, a large supply of small arms, and clothing for thirty thousand men. This was done secretly, as France was not yet ready to break with England.

Soon after the Declaration of Independence had been adopted Congress sent Franklin to join Lee and Deane in Paris. Before the opening of the war Benjamin Franklin alone, of all the American people, enjoyed a fame bounded only by civilization. He had won a great name as a philosopher and a writer of epigrams, and now he was about to prove himself one of the leading diplomats of his generation. Every class of French society, from the nobility to the peasant, now paid homage to the genius who could "snatch the lightning from the sky and the scepter from tyrants."¹ It was certainly a fortunate hour for America when Franklin was chosen for this important mission.

For more than a year he labored with unwearied zeal at the French court to secure the recognition of the United States. At first the French were unwilling to go to such lengths, but Vergennes, the foreign minister, made a secret arrangement to convey to America two million francs a year in quarterly payments, to be

¹ It was Turgot who said of Franklin, *Eripuit celo fulmen sceptrumque tyrannis.*

French sympathy.

Franklin in Paris.

repaid eventually in merchandise. Three ships laden with army stores were also sent; two of them arrived in safety, but the third was captured by the British.

A year passed, and during this time Franklin and his companions were steadily molding French opinion in favor of America. At length, late in the autumn of 1777, the news of the surrender of Burgoyne reached Paris, and the excitement was scarcely less there than in America. The popular enthusiasm reached the court, and ere the close of December the king sent word to Franklin that he was ready to acknowledge the independence of the United States. His haste was doubtless caused by a fear that the English would now offer terms acceptable to the Americans. Negotiations were immediately begun, and on February 6, 1778, a secret treaty was concluded between the two countries—a compact of friendship to be made public, and a treaty of alliance to be made public only when England declared war against France. By this treaty the United States made a solemn agreement not to make terms with England until that country had acknowledged its independence.

And France won the American heart. For long years before the Revolution, the filial love of the colonists for Great Britain was unbroken, while there was a feeling of dislike toward France, the rival claimant of the soil of North America, and toward Frenchmen, whom they had often met on the field of battle. But in the fifteen years following the Stamp Act, this feeling was reversed, and the effects of that change have not been eradicated to this day.¹ It is true that America has come to love old England again, as it should; but France has never been forgotten for her timely aid in this trying hour. And this sympathetic bond is strengthened by the remembrance of the personal service of that brilliant young French nobleman, the Marquis de Lafayette.

At a dinner party in Germany he heard of the revolted colonies battling for freedom in America. His inborn love of liberty was aroused, and he determined to offer his life and his fortune in the glorious cause, believing, as he said, that **Lafayette.** “the welfare of America is closely bound up with the welfare of mankind.” He had inherited a great fortune, and, fitting out a vessel secretly at his own expense, he embarked on the sea and reached the shore of South Carolina—two years to the day after the battle

¹ A monument was recently erected in Washington to commemorate French aid in the Revolution.

of Lexington. Proceeding to Philadelphia, he offered to Congress his services without pay, was made a major general by that body, became a member of the military family of Washington, and soon entered the depths of that great man's heart. Valiantly he served through the war; and he returned, rejoicing at its close, to rejoin his youthful wife in his native land. In the course of our history many other foreigners have won the applause and homage of the American people; but the name of no other stands, or can ever stand, so high as the name of Lafayette.

There were a few others also from foreign shores whose services in the War for Independence cannot be forgotten by a grateful people. Among these was another liberty-loving Frenchman, the Baron de Kalb, who came in the same ship with Lafayette. Faithfully he served as a major general in New Jersey and Maryland and later in the South, where he fell at Camden with eleven wounds, and died soon after the battle. Among the names not to be forgotten is that

Kosciusko. of the Polish patriot, Thaddeus Kosciusko. A youth of twenty years, he joined the army in 1776, and as an engineer became one of the most useful men in the service. At the close of the war he returned to his native land and became the leader of his countrymen against the combined attack of the powers that had determined on the division of Poland. But his little band was routed at Macieowice by a vast army, and Kosciusko fell, covered with wounds, uttering the sadly prophetic words, "This is the end of Poland."¹ Still another brave defender of liberty we must note

Pulaski. from this same unhappy Poland, Count Pulaski, the son of a rich nobleman who perished in the defense of his country. Pulaski made his way to America, became an effective leader of cavalry, and at last, in the siege of Savannah, gave his life to the cause that he loved above all things—the cause of Liberty. One of the most useful of our foreign helpers was the German noble-

Steuben. man, Baron Steuben. He joined the army late in 1777, was made inspector general, and greatly raised the effectiveness of the army, by introducing discipline and drill according to the best European standards. At the close of the war Steuben

¹ To this fall the poet Campbell refers in his couplet:—

"Hope for a season bade the earth farewell,
And Freedom shrieked when Kosciusko fell."

After the downfall of his nation Kosciusko lived quietly in France. He visited the United States in 1797 and received a pension and a grant of land from Congress.

was granted a pension by Congress, and a large tract of land near the site of the battle of Oriskany by the state of New York. On this tract he built a house and lived happily among his servants and tenants until his death in 1794. Among the friends of America at this period we cannot omit the name of Frederick the Great, king of Prussia.¹ Frederick was then the most powerful personage in Europe. He had been greatly aided by England during the Seven Years' War; but he could not conceal his sympathy with the patriots, and he proved it by opening the port of Dantzic to American cruisers and by refusing to permit any more Hessians to pass through his dominions en route to America. He refused, however, to negotiate a treaty at that time with the United States.

Another item of foreign news is very interesting at this point. The astonishing tidings of Burgoyne's surrender spread dismay in the royal party in England, and in February, 1778, Lord North arose in the Commons and proposed that every point for which the Americans contended in the beginning be yielded by Parliament. This humiliating act passed both houses and was signed by the king in March. But it was too late, and the commissioners sent to treat with Congress were received with scorn, as America refused all overtures except on the ground of independence.

Two days after King George had signed this act, the news of the French treaty with America was made known to England, and war was soon declared against France. Lord North then determined to resign his office, and the nation, in its distress, turned to the Great Commoner. It was believed that he and he alone could yet conciliate America. The king, with his usual obstinacy, hesitated to put the government into the hands of his old enemy. He would probably have been forced to do so by public opinion had not death come to his rescue by removing Chatham. The Great Commoner was making his last speech before the Lords, and his subject was that America must not be lost to England. Bandaged in flannels and leaning on crutches, he awakened to his theme, and the light of other days shone from his eyes. He finished, but soon rose again to answer a reply, when he fell to the floor in a swoon. He was carried to his home by loving hands, and a few weeks later he passed away, at the age of threescore years and ten. North was now prevailed on to continue as premier, and the war went on.

¹ The long-current story that Frederick sent Washington a sword is now believed to be mythical. See *Century Magazine*, Vol. XIX, p. 945.

FROM MORRISTOWN TO GERMANTOWN

We must now go back and take up the thread of the story of the war in America. During the year 1777 the military operations were carried on in two parallel lines. The one we have traced to its culmination in the surrender at Saratoga. The other lay in a different field and with different surroundings, and although no brilliant victory rewarded the American commander, his generalship was this year, as usual, superior to that of any of his fellow-commanders.

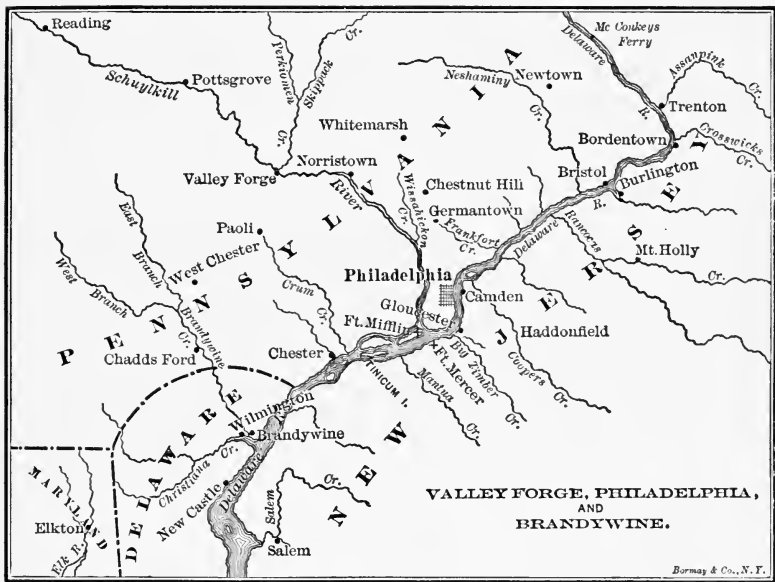

We left Washington encamped for the winter at Morristown. With the opening of spring new recruits began to arrive, and when the commander broke camp on the 28th of May his army numbered some eight thousand men. General Howe had spent the winter at New York, and his plan now seemed to be to dash across New Jersey, capture Philadelphia, and return in time to assist Burgoyne. Washington, divining this, planted his army stubbornly in the way. His army was but half the size of Howe's, and he refused to be drawn into open battle; but he harassed his enemy from every side, and after eighteen days of this watchdog policy, actually drove Howe back to Staten Island.¹ Washington, supposing that Howe would proceed up the Hudson, prepared to coöperate with Schuyler. But Howe embarked upon the sea and sailed for the mouth of the Delaware. Finding that river too well guarded, as he supposed, he sailed around the peninsula and up Chesapeake Bay, landing near Elkton, Maryland, the last of August.

Washington was amazed to discover that Howe had abandoned Burgoyne; such a military blunder was almost inconceivable. And besides, the possession of Philadelphia could be of little advantage to the British, as the city was not a military, nor even an administrative, center. Congress could easily fly to a neighboring town and continue its business. But Howe acted as though the goal of the war was to take the "rebel capital." Soon after he landed at the head of the Chesapeake, however, Washington was there to confront him with an army now raised to eleven thousand. Howe's army was much larger and better drilled, but Washington determined to risk a battle. He was driven to this, it may be said, by public sentiment. The people could not understand the Fabian policy, of

¹ John Fiske, our ablest writer on the Revolution, pronounces this feat of Washington's as remarkable as anything he ever did, and I do not hesitate to agree with him.

which he was such a master; and had he given up Philadelphia without striking a blow, he would have been severely censured by the public. As Fiske says, he saw that it was better to suffer a defeat than to yield the city without a struggle, and he met Howe in southern Pennsylvania, on the banks of the Brandywine.

Washington took a strong position at Chadd's Ford, his center protected in front by artillery under General Anthony Wayne, while Greene remained in the background as a reserve. The right wing

under Sullivan was then thrown up the stream for two miles. A portion of the British army, under Knyphausen, the ablest of the Hessian commanders except Riedesel, occupied Washington's front, while Cornwallis, with great skill, made a flank movement by marching up the Lancaster road, crossing the Brandywine, and striking Sullivan in the rear. Washington had expected this movement, but was thrown off his guard by a false report. Sullivan made a desperate fight at the church, but was slowly forced back. Knyphausen then crossed the creek to attack Wayne, who, fighting as he went, made an orderly

**Battle of
Brandywine,
September
11, 1777.**

retreat upon Chester, as Sullivan and Greene had done. The loss on the American side exceeded one thousand men, while the enemy lost nearly six hundred. The British were justified in claiming a victory, as they drove the patriot army from the field.

Brandywine decided the fate of Philadelphia. Washington knew that the capital must be given up, but he determined to harass and detain the enemy as much as possible, his chief object being to prevent aid being sent to Burgoyne on the Hudson. There were frequent skirmishes, in one of which Wayne lost three hundred men, and a regular battle was prevented at Chester Valley only by a violent storm. So vigilant was Washington in retarding the British that it required fifteen days for them to march twenty-five miles. They entered the capital on September 26. Congress had fled to Lancaster, after again making Washington dictator — this time for sixty days. Howe encamped his main army at Germantown, then a village of one long street a few miles north of Philadelphia; and here, on the 4th of October, Washington again gave battle.

This battle might have proved a glorious victory for the Americans but for an unfortunate accident caused by a dense fog. Washington had planned the battle admirably. His army was to advance by four different roads, and to meet at daybreak and open the battle at different points. Sullivan, in command of the main army, swept down from Chestnut Hill and met the British advance guard at Mount Airy, a slight elevation between Chestnut Hill and Germantown. Joining with Wayne at this point, Sullivan charged the guard, pressing them back on the light infantry, and both were soon put to flight. A portion of the British took refuge in Judge Chew's stone mansion, which the Americans bombarded for some hours without effect. Sullivan had passed on down the main street, and was now supported by Greene, who had come up with the American left wing. The British were thrown into confusion, and there was every promise of a brilliant American victory, when, in the dense fog that enveloped the entire surrounding country, General Stephen, who commanded a brigade of Greene's division, fired on Wayne's men, mistaking them for the enemy. A panic soon spread through the army, and a general retreat was ordered. The British saw their sudden advantage, re-formed, and pursued the Americans for several miles. The latter, however, retreated in good order, saving their wounded and their artillery.

Howe enters Philadelphia.

Germantown, October 4, 1777.

The respective losses were nearly the same as at the battle of Brandywine.¹

This battle, which occurred thirteen days before the surrender of Burgoyne at Saratoga, though resulting in a defeat, came so near being a victory that the American army was rather elated than depressed by the result. The British general, after opening the Delaware to his brother's fleet by reducing forts Mercer and Mifflin at the cost of half a thousand men, settled snugly in Philadelphia for the winter; while Washington, after hovering threateningly about for some weeks, led his army to Valley Forge.

VALLEY FORGE AND MONMOUTH

Every American reader is familiar with the story of the sufferings of the patriot army at Valley Forge. To this valley among the hills that border the winding Schuylkill, some twenty miles from Philadelphia, Washington led his half-clad army of eleven thousand men about the middle of December, 1777. As the men marched to this retreat their route could be traced in the snow by the blood that had oozed from broken shoes. On reaching the place they found it shelterless, and for two weeks they toiled in the bitter weather, building huts in which to spend the winter. Many were without blankets, and had to sit by the fire all night to keep from freezing. Washington informed Congress, on December 23, that he had in camp 2898 men "unfit for duty because they are barefoot, and otherwise naked." The rudely built hospitals were soon crowded with the sick and dying. Some died for want of straw to make a bed on the frozen ground, others for want of sufficient nourishment. "The unfortunate soldiers were in want of everything," wrote Lafayette years afterward; "they had neither coats, hats, shirts, nor shoes, their feet and legs froze till they became black, and it was often necessary to amputate them." Thus that long and dreary winter was spent by the patriots who won for us the independence of America, and the fewness of the desertions of that trying hour attest the depths of their patriotism.

But our pity is mingled with indignation when we consider that most of this suffering arose from mismanagement and the incom-

¹ General Stephen was accused of drunkenness during the battle, was tried by court-martial, and was dismissed from the service. As to the losses at Germantown, as in most of the battles, the records are incomplete, and it is difficult to get at the exact truth.

petency of Congress. The country was full of clothing and provisions; "hogsheads of shoes, stockings, and clothing were lying at different places on the roads and in the woods, perishing for want of teams, or of money to pay the teamsters." Congress had degenerated woefully since the passing of the great Declaration. Franklin was in Paris, Henry was governor of Virginia, Jefferson, Rutledge, and Jay were no longer on the roll. The wily politician was too often chosen instead of the statesman and the patriot, and his baneful influence has not ceased to be felt from that time to the present. Incompetent men were promoted in the army by Congress, in spite of the protests of the commander in chief, and the result was mismanagement and widespread demoralization.

It was during this fateful winter also that the detestable plot known as the "Conway Cabal" took place. Thomas Conway was an Irishman who had long been in the service of France, and was an officer of some reputation. He had been in the battles of Brandywine and Germantown, and was about to be promoted when Washington, believing the movement unwise, protested. Conway was highly offended, and in a short time he had concocted a scheme to overthrow Washington, and to elevate Gates to his place. Conway's chief fellow-conspirators were Thomas Mifflin and Dr. Rush of Pennsylvania, and James Lovell, a member of Congress from Massachusetts. Anonymous letters, attacking Washington and comparing his failure in Pennsylvania with the success of Gates at Saratoga, were spread about, and many of the uncritical were won over. Even Congress seemed to favor the plotters; it reorganized the Board of War, made Gates its president, Mifflin a member, and Conway inspector general of the army. This board was given much power that properly belonged to the commander in chief. Thus matters seemed to be moving to a focus, when suddenly the whole scheme exploded and came to naught. Young James Wilkinson, a member of Gates's staff, while merry with wine, disclosed the secret correspondence between Conway and Gates; and the information reached the ears of Washington, who set about probing the scheme with a quiet dignity that won the admiration of all. In a few weeks public sentiment was so changed that no one could be found who would acknowledge having had anything to do with the plot. Even Conway, being wounded in a duel and expecting to die, wrote Washington a letter expressing his sincere grief at what he had done.

**Conway
Cabal.**

One thing more must be mentioned in connection with this winter at Valley Forge — the coming of Steuben. The army was but half trained until it was taken in hand by this noble old German, who had been schooled on the staff of Frederick the Great. With infinite pains he drilled the men day after day. Losing his patience at times, it is said that he would exhaust his vocabulary of French and German oaths, and then call on his aid to curse the blockheads in English.¹ He acknowledged afterward, however, that the Americans were wonderfully quick to learn; and it is certain that from this time to the end of the war the patriot soldiers could measure up almost, if not fully, to the standard of the British regulars.

**Steuben at
Valley Forge.**

While the Americans were enduring the hardships of Valley Forge, the British were living in luxury in Philadelphia. Most of the patriots had fled from the city, and the loyalists and the soldiers spent the winter in a round of gayeties, — theaters, balls, and parties, — and to these were added gambling, cockfighting, and horse racing. Franklin wrote from Paris that Howe had not taken Philadelphia, but Philadelphia had taken Howe. While the army at Valley Forge was drilling and becoming more inured to the hardships of war, that at Philadelphia was deteriorating through luxury and idleness; and their relative efficiency was greatly changed when they met again on the battlefield.

General Howe had undertaken the task of subjugating the colonies with much reluctance, and he never proved himself a vigorous, dashing commander. Neither his operations during the preceding summer nor his winter of pleasure in Philadelphia was pleasing to the authorities, and his recall was determined upon. Sir Henry Clinton was chosen to succeed him, and he at once decided to evacuate Philadelphia and move his army to New York. Three thousand loyalist residents, afraid to face their countrymen, begged to be taken away, and Clinton sent them to New York by sea, while he proceeded to cross New Jersey with his army. The ever-vigilant Washington was on the alert, and his army, after the long winter of privation, took courage with the dawning of spring and with the glorious news of the French alliance, and came forth with the vigor of a well-trained athlete. It was the 18th of June when Clinton's rear guard left Philadelphia, and before sunset of that day the Americans occupied it; two weeks later Con-

Philadelphia.**

¹ Fiske, Vol. II, p. 54.

gress had returned and was sitting in its accustomed place. But Washington was not content to occupy the city; he determined to strike the British ere they reached New York.

Clinton was greatly encumbered with a baggage train twelve miles long, and Washington soon overtook him. The two armies were about equal in strength, each containing some fifteen thousand men; and for once — thanks to Baron Steuben — the Americans were equal to the enemy in fighting qualities. Clinton would gladly have avoided an engagement, but Washington was eager to attack him. The battle would probably have been the greatest of the war — a fight to the finish between two armies of equal strength — but for the disobedience and treachery of one man, Charles Lee, who had lately been exchanged. As stated before, Lee was a traitor to the patriot cause; but Washington, not suspecting this, gave him his old command as senior major general. Lee now opposed an attack on Clinton and, being overruled, he sullenly refused to lead the attack. Lafayette was appointed to take his place, but next day Lee, professing to have changed his mind, requested to be allowed to lead the charge, as his rank entitled him to do. Washington, with the consent of Lafayette, magnanimously, but very unfortunately, granted the request.

The 28th of June, 1778, became the fateful day of the coming together of the two armies. The British left wing under

Battle of Monmouth. Cornwallis had encamped the preceding night near Monmouth Courthouse, while the right wing under Knyphausen lay near on the road toward Middletown.

In the early morning Washington sent Lee forward to attack Cornwallis in flank, while he, with the main army, would come up and make the attack general. Lee advanced and took a strong position, partially surrounding Cornwallis, when, to the astonishment of the enemy as well as of his own men, Lee ordered a retreat across a swamp. Wayne, who had already begun the attack, was thunderstruck at this command, but could do nothing but obey his superior. Clinton saw the strange movement and was quick to follow up the advantage it gave him. Lafayette was about to dash his force against Clinton when Lee stopped the movement. Everything now pointed to a complete English victory, and so it would have been but for the arrival of the commander in chief. Washington, amazed at hearing of Lee's retreat, galloped to the front, and, meeting Lee at the head of the retreating column, demanded in a terrific voice an

explanation of his conduct. Lee quailed at the impetuous anger of his chief, who was usually so calm and self-contained. He muttered something about his not having favored a general engagement, when Washington, losing all self-restraint, shouted that he must be obeyed. He then wheeled about and put a stop to the disgraceful retreat, and, meeting Lee again, ordered him to the rear and himself took immediate command of the battle.

The mercury mounted to ninety-six degrees in the shade on that scorching Sunday when the battle of Monmouth was fought, and more than fifty men on each side who escaped the enemy's bullets fell by sunstroke. Scarcely fifteen minutes elapsed after Washington reached the front, before the Americans, while under fire, had formed into line of battle. Greene commanded the right wing and Lord Stirling the left, while Wayne held the center, and Knox managed the artillery. The British were soon checked, and then steadily pushed back until the Americans occupied the high ground from which Lee had retreated in the morning. At one time during the conflict the British colonel, Monckton, seeing the necessity of dislodging Wayne, advanced at the head of his troops for a desperate charge with the bayonet; but Wayne's bullets flew like hail, the column was driven back, and nearly every officer, including Monckton, was slain. The battle raged until nightfall, when the darkness ended it. Washington determined to renew the attack at daybreak; but Clinton silently withdrew in the night, and at the coming of dawn was far on his way toward the seacoast.

The battle of Monmouth was the last general engagement on northern soil. English historians have usually pronounced this a drawn battle; but while it was not a decisive victory, the advantage lay clearly with the Americans. The British loss was over four hundred, and exceeded the American loss by nearly a hundred. Within a week after the battle some two thousand of Clinton's soldiers, mostly Germans, deserted him, and most of them became substantial American citizens.

The extraordinary conduct of Lee at this battle can be explained only on the assumption that he was a traitor to his adopted country. Most historians have sought to condone Lee's action and to claim him still among the patriots. This view we would gladly accept were it not for the discovery, many years later, of his private correspondence with Howe, in which he advises the latter as to the best means of conquering the colonies. His aim at Monmouth was, doubt-

less, to compass the defeat of the Americans and to throw the blame on Washington for not taking his advice. If then Congress had honored him for his superior wisdom with the chief command, he would probably have opened peace negotiations with **Charles Lee**. Clinton. But Lee's plan was frustrated, and he soon found himself under arrest for writing an impertinent letter to his chief. A court-martial suspended him from command for a year, and ere its close he got into a broil with Congress and was expelled from the army. Lee retired to a plantation which he had in Virginia, surrounded himself with pet dogs, and lived among them, apart from humanity, until 1782, when he made a trip to Philadelphia, where he suddenly died of fever. He was buried at Christ Church, and thus his last wish, that he might not be buried within a mile of a church, was disregarded.

A few weeks after the battle of Monmouth we find Washington encamped at White Plains, east of the Hudson, while Clinton occupied the city of New York; and here the two commanders remained watching each other for three years while the seat of war was transferred to the South.

NOTES AND ANECDOTES

The Baroness Riedesel.—The wife of Baron Riedesel, one of Burgoyne's ablest generals, who accompanied her husband throughout the memorable Saratoga campaign, was a woman of rare beauty and accomplishments. She kept an elaborate diary that gives a remarkable insight into the daily life of the army. She tells how the soldiers at first were "very merry, singing songs, and panting for action," and how terrible was the suffering just before the surrender. From this diary, describing incidents of the surrender, we take the following: "As I passed through the American [lines] I observed, and this was a great consolation to me, that no one eyed us with looks of resentment; but they all greeted us and even showed compassion. When I drew near the tents, a handsome man approached me, took my children and hugged and kissed them. 'You tremble,' said he, addressing himself to me, 'be not afraid. . . . You will be very much embarrassed to eat with all these gentlemen; come with your children to my tent. . . .' 'You are certainly a husband and a father,' I answered; 'you have shown me so much kindness.' I now found that he was General Schuyler. Some days after this we arrived at Albany, where we so often wished ourselves; but we did not enter it as we expected we should—victors! We were received by the good General Schuyler, his wife, and daughters, not as enemies, but kind friends; and they treated us with the most marked attention and politeness, as they did General Burgoyne, who had caused General Schuyler's beautifully finished house to be burnt. In fact, they behaved like persons of exalted minds, who determined to bury all recollections of their

own injuries in the contemplation of our misfortunes. General Burgoyne was struck with General Schuyler's generosity, and said to him, 'You show me great kindness, though I have done you much injury.' 'That was the fate of war,' replied the brave man; 'let us say no more about it.'"

Arnold's Strategy. — Immediately after the battle of Oriskany, Schuyler sent Benedict Arnold with twelve hundred men to the rescue of Fort Stanwix. While en route he captured several Tory spies, among whom was a half-witted fellow named Yan Yost Cuyler. All were condemned to death. The mother and brother of Cuyler, hearing of this, hastened to the camp to plead for his life. At length Arnold offered him his freedom if he would go to the camp of St. Leger and spread the report that Burgoyne was totally defeated and that a great American army was coming to the rescue of Fort Stanwix. Cuyler agreed, and his brother was detained as a hostage to be put to death in case of his failure. Cuyler did his part well. With a dozen bullet holes in his coat he ran into the British camp and declared that a great American host was close at hand, and that he had barely escaped with his life. He was known to many of the British as a Tory, and they readily believed his story. The Indians instantly took fright and began to desert. The panic soon spread to the regulars, the camp became a pandemonium, and, ere noon of next day, the whole army was in full flight to Canada. See Fiske, Vol. I, p. 294.

The Surrendered Army. — In the convention between Gates and Burgoyne, the former agreed that the British soldiers be transported to England on the condition that they were not to serve again during the war. But ere long the belief gained ground that they would be used in Europe to take the place of other troops who would be sent to America. Congress, therefore, found one excuse after another for not carrying out the convention. First, it demanded pay for the soldiers' subsistence since the surrender, not in Continental money, but in British gold. Congress thus made a spectacle to the world by refusing to accept its own money. It next imposed an impossible condition by demanding that Burgoyne make out a descriptive list of all the officers and men of the army. So in various ways Congress evaded carrying out the agreement. The British soldiers were in fact never sent home. After being kept a year in New England they were sent to Charlottesville in Virginia, making the overland march of seven hundred miles in midwinter. Here a village of cottages was built for them. When, in 1780, Virginia became the seat of war, they were scattered, some being sent to Maryland, and others to Pennsylvania. Meantime their number had constantly diminished by desertion, death, and exchange. At the close of the war most of the Germans remained in America. Burgoyne was permitted to return to England soon after the surrender. He resumed his seat in Parliament, where he proved himself a gentleman of the highest honor. If not an open friend of the Americans, he at least never failed to do them justice.

CHAPTER XIV

THE REVOLUTION — THE FRONTIER, THE OCEAN, AND THE SOUTH

THE story of the Revolution would be incomplete without some notice of the border warfare that raged at intervals through the half-settled wilderness of the frontier. The dreadful massacre of the innocents during that period by the savage natives of the forest is usually laid at the door of George III, and it is certain that the bloody work was approved by him and instigated by his still more heartless minister, Lord George Germain; but in fairness to the British people it must be said that most of them, on both sides of the Atlantic, were not in sympathy with this cruel business. Nor can we believe that the hellish work was carried on usually from a spirit of vindictive cruelty, as many think, but rather to terrify the patriots into submission and to break the spirit of rebellion.¹ The result, however, was favorable to the Americans, for it unified them, and even turned many loyalists against the English cause.

BORDER WAR IN THE SOUTH AND WEST

At the very threshold of the long war, even before the battle of Lexington, there occurred at Point Pleasant, on the Great Kanawha River, near its junction with the Ohio, one of the most desperate battles with the Indians ever fought on American soil. A thousand Virginians lay sleeping under the trees, when at daybreak they were surprised by a larger body of Indians who had crept with catlike tread upon the sleeping army. They were led by the fierce warrior, Cornstalk, and his lieutenant, the famous and eloquent Logan,² chief

¹ The patriots enlisted some Indians also in the war; but in no case are they known to have aided or encouraged the massacre of women and children, as was frequently done by the enemy.

² Logan's famous speech is well known. It was not Colonel Cresap, as he believed, that murdered his family, but a heartless wretch named Greathouse.

of the Mingos. The battle raged till toward evening, when a detachment of the whites gained the rear of the Indians and opened a deadly fire. The Indians, panic-stricken, broke and fled in every direction. About one fifth of each army was slain; but the rout of the red men was complete.

The Indians were now willing to make peace, and five months after the battle, on a sunny day in March, twelve hundred warriors gathered on the green at the white settlement of Watauga; and here they were met by some hundreds of white men, among whom were John Sevier and James Robertson, the great colony builders of the Southwest, and Daniel Boone, the most famous of American pioneers.¹ Here again the children of the forest promised to live at peace with their pale-faced brethren, and they ceded to the latter the broad and beautiful tract south of the Ohio, the paradise of the buffalo, Kentucky. But the peace was short-lived. A month after it was made came the fight at Lexington; the royal governor of North Carolina declared the treaty illegal, and soon again the Indians were on the warpath. A desperate attack was made on the Watauga settlement by the Cherokees and loyalists in 1777, but Sevier and Robertson saved the colony from destruction, and at length forced the Indians to give up all their lands between the Tennessee and Cumberland rivers. A stream of emigration soon began to pour into the great Tennessee Valley, and the memory of General Nash, who perished in the battle of Germantown, has been kept green by the beautiful town founded on the Cumberland, and called, after him, Nashville.

The temporary peace after the Point Pleasant affair enabled Daniel Boone to move into Kentucky with his family, where he founded a settlement and built the fort called Boonesborough. Born and reared in the forest, Boone loved **Daniel Boone.** above all things a wild life in the wilderness, untrammelled by the restraints of civilization. The roaring of the wild beast and the yells of the Indian had no terrors for Boone, and the screaming of the wild bird in the lonely night was music to his ears. He lived in the wilderness because he loved it; and when civilized society grew up about him, he moved farther into the vast solitudes of the unbroken forest. Boone was not a colony builder nor a state founder in the true sense, nor had he a thought, perhaps, of leaving a name in history. He was simply a frontiersman, a hunter, an In-

¹ See Gilmore's "Rearguard of the Revolution," p. 97.

dian fighter; and in these respects, and in woodcraft, his skill was so marvelous as to attract the attention of the world. During the last years of the Revolution Boone figured in various battles with the Indians, the most destructive of which was the battle of the Blue

Blue Licks. Licks, fought on the banks of the Licking River, in August, 1782. Soon after this George Rogers Clark led a thousand men into the Indian country of western Ohio and spread havoc on every hand. So weakened were the Indians by this raid that they never again led an army into Kentucky. But the greatest achievement of Clark, and that which gave him a permanent name in our history, had already been won. Late in the autumn of 1777 the thrilling news of Burgoyne's surrender spread through the South. At this time, George Rogers Clark, a young surveyor, a member of the Virginia assembly, stalwart, brave, and patriotic, conceived the plan of conquering the Illinois country from the British. His plan was approved by Patrick Henry, then governor of Virginia; and in the following May Clark floated down the Ohio, from Pittsburg to its mouth, with one hundred and eighty picked riflemen. After an incredible march across the prairie and through swamps, this little band captured, without bloodshed, Kaskaskia, Vincennes, and adjacent posts, and the country was annexed to Virginia as the county of Illinois. The inhabitants were chiefly French, and they welcomed the change of rulers when they learned of the American alliance with France. This achievement of Clark was of the greatest importance, for it enabled the Americans at the close of the war to claim successfully the vast prairie region of Illinois as a possession of the United States.

THE WYOMING VALLEY AND OTHER VALLEYS

In north-central Pennsylvania there lies a beautiful valley, nestled between two mountain ranges that rise high on either side, as if nature had chosen to guard the lovely spot from the outer world. This valley of Wyoming, watered by the sparkling Susquehanna that winds among the hills like a belt of silver, seems from a distant view like a dream of Eden; and yet this beautiful spot, where "all save the spirit of man was divine," became the scene of the most fiendish massacre of the long and bloody war.

The Wyoming Valley was claimed by Connecticut by right of her charter of 1662, and her people had begun settling there more

than a decade before the war with England began. Pennsylvania also claimed this territory, and there was strife between the sister colonies; but the family quarrel was hushed for a season in the presence of a common foe.

It was midsummer, 1778, less than a week after the battle of Monmouth, when a force of eight hundred Tories and Indians¹ under Colonel John Butler swooped down from New York upon the settlement of New Englanders in the Wyoming Valley. The settlers, dwelling mostly in peaceful hamlets with their schools and churches, numbered something more than three thousand souls; but they were ill prepared for defense, as most of their young men had joined the Continental army. Nevertheless, a force of some three hundred men, commanded by Colonel Zebulon Butler, a resident of the valley, offered battle on July 3, near the site of Wilkesbarre. After an hour of fierce fighting, the Americans broke and fled for their lives, but more than half of them were slain in the battle or in the massacre that followed. The British commander afterward reported the taking of "227 scalps," and of course laid all the blame on the Indians. During the night the Indian thirst for blood seemed to increase, and next day they began anew the massacre. Dreadful was the scene in the Wyoming Valley on that fateful day. The fort in which many had taken refuge surrendered, and the lives of the occupants were spared by the English commander; but the savages put many of the others to the tomahawk. All who could do so fled to the woods, and a large number perished in crossing a swamp, which has since been called the "Shades of Death." Others perished of starvation in the mountains. The country was abandoned for the season, and the blooming valley became a field of desolation.

The barbarities of Wyoming were long attributed to the great Mohawk chieftain, Joseph Brant, whom we have already met at the battle of Oriskany. But he was not present at the Wyoming massacre. Brant, who was known to his own race as Tha-yen-dan-e-gea, was a very remarkable character,² a full-blooded Mohawk, a man of powerful physique, handsome, affable, and well educated. He was a devoted Episcopalian, served for a time as missionary among his own people, and

Wyoming

Massacre,

Joseph

Brant.

¹ Some historians say a thousand or more.

² Fiske pronounces Brant the greatest Indian of whom we have any knowledge; but I cannot agree to place him above, or even equal to, Pontiac or Tecumseh.

translated the prayer book into his native tongue. Brant was passionately devoted to the British cause in the Revolution, but the stories of his heartless cruelty are not generally true. In fact, he spared women and children from the scalping-knife when it was in his power to do so. While Brant was not at the Wyoming massacre, he figured in another scarcely less dreadful at Cherry Valley, Otsego County, New York, in November of the same year. During a heavy storm, a band of Indians led by Brant and of Tories led by Walter Butler, son of the Butler who commanded at Wyoming, fell upon the peaceful settlement without warning. Brant endeavored to save the helpless, but the fiend Butler encouraged the massacre, and thirty-two of the inhabitants, mostly women and children, were barbarously put to death, while sixteen of the garrison had fallen during the siege. After this bloody work was over, the invaders burned the village, drove away the cattle, and carried forty of the people into captivity.

General Washington was exasperated at these continued outrages, and he determined to strike a blow in defense of the northern settlers. He sent General Sullivan into the Indian country with five thousand men. Late in August, 1779, this army met fifteen thousand Tories and Indians, led by Sir John Johnson, the two Butlers, and Brant, at Newtown, on the site of the present city of Elmira. A terrific battle ensued, and the Tories and Indians suffered a fearful defeat, while the American loss was slight. Sullivan then laid waste the country, destroyed the growing crops on all sides, laid more than forty Indian villages in ashes, and returned after a march of seven hundred miles. For two years longer the settlers were harassed by prowling Indian bands, but the Iroquois as a nation never recovered from the scourge of Sullivan's raid. A similar raid in the Alleghany Valley by Colonel Brodhead, with six hundred men, curbed the Indian power in western Pennsylvania, and henceforth the country was comparatively free from border warfare.

WAR ON THE SEA

Let us now take a glance at the naval operations. The United States at first had no navy, but many private vessels were employed as privateers, and the destruction of British merchant shipping was enormous. From nearly all the states privateers were sent against

the enemy, Massachusetts leading with over five hundred, Pennsylvania following with nearly that number. It is estimated that seventy thousand Americans were at one time engaged on the sea against the enemy.¹ In 1775 Congress ordered the building of a national navy, and the following year thirteen vessels were completed. Some of these never succeeded in getting out to sea; most of the rest were captured or burned before the end of the war, but not until after they had done great service for the country.

The men who achieved the greatest success for America were: Lambert Wickes, who made many prizes off the Irish and English coasts, and who was himself drowned off the coast of Newfoundland; Gustavus Conyngham, whose bold captures in the English Channel astonished everybody; and John Paul Jones, who alone of all the naval heroes of the war has left a permanent and conspicuous name in our history. Jones² was a native of Scotland and a resident of Virginia. He became the hero of one of the most famous naval duels in history. With a squadron of **John Paul Jones.** three ships led by the *Bonhomme Richard*³ he met Captain Pearson with the *Serapis* and *Scarborough* conveying a fleet of merchant vessels off the coast of Flamborough Head, Scotland, and at once the two flagships engaged in a desperate conflict. It was the evening of September 25, 1779, when the battle opened, and during the long hours of the night the boom of cannon rolled across the waters. In the midst of the battle Jones ran his vessel into her antagonist and ceased firing for the moment, when Captain Pearson called out, "Have you struck your colors?" "I have not yet begun to fight," was the now famous answer of Jones. At length the two ships were lashed together by the commander of the *Richard*, and the bloody fight went on until the decks of both were covered with dead and dying. The crisis came about ten o'clock, when a hand grenade from the *Richard* was thrown into the hatchway of the *Serapis*, where it ignited a row of cartridges, and in the frightful explosion that followed twenty men were blown to pieces. Still the two commanders doggedly continued the battle until both ships were on fire, and half their crews were dead or wounded, when at last the

¹ Sloane, p. 373.

² His name was John Paul and he added the name Jones in honor of General Jones of North Carolina. After the Revolution he entered the service of Russia, became an admiral, and was knighted. He died in Paris in 1799. His burial place is unknown.

³ French for "Poor Richard" of Franklin's almanac.

Serapis surrendered.¹ Both vessels were ruined, and the *Bonhomme Richard* sank the next morning. Meantime the *Pallas* had captured the *Scarborough*, and the American victory was complete. The news of the victory made a profound sensation on the continent, as it was told and retold in every language in Europe. Nothing before, except the surrender of Burgoyne, had called the world's attention to the rising nation in the West as did this signal victory in sight of the British coast.

The American privateers did immeasurable damage to British shipping, many hundred merchantmen being captured. After the alliance with France the powerful navy of that nation was employed in the patriot cause, and to this was added the navy of Spain, for Spain declared war against England in the summer of 1779. This action of the Spanish government was not taken out of love for the Americans and their cause, nor did Spain make a treaty with the United States. Indeed, a self-governing people in North America would forever be a menace to the peaceful possession of Mexico and South America by Spain; nor had the Spaniards the slightest sympathy with the spirit of religious freedom that prevailed in the United States. Spain declared war in the hope of regaining possession of Gibraltar, and from a feeling of revenge cherished for two hundred years against the island kingdom that had robbed her of her proud eminence as mistress of the seas. Still another was to be added to the enemies of England. Late in the year 1780 war was declared between that country and Holland, and henceforth the Britons had to fight three of the great European powers in addition to America. It was not possible for England to win against such odds, nor to regain her colonies in America, but the courage the British displayed must elicit the admiration of the world.

THE TREASON OF ARNOLD

Two years have elapsed since we left Washington at White Plains, where he encamped soon after the battle of Monmouth. During the two years little was done in the North but watch Clinton, who held the city of New York. A few minor operations, however, were not without significance. Sullivan's raid into the Indian

¹ The *Bonhomme Richard* carried forty guns and the *Serapis* forty-four. Jones towed his prize to Holland.

country we have noticed. Another exploit of this same general, occurring at an earlier date, was less successful. The only part of the United States held by the British in the autumn of 1778, aside from Manhattan Island and a few western **Newport.** posts on the frontier, was Newport, with the island on which it stands. This was occupied by Sir Robert Pigott with a garrison of six thousand men, and Washington determined to make an effort for its recovery. He sent Sullivan with fifteen hundred picked men, who were to cooperate with a French fleet under Count d'Estaing, lately arrived in American waters. Sullivan's army was increased to several thousand by New England volunteers, and success seemed to be in reach when a terrific storm crippled and scattered the fleet, and the project came to naught.

Far more picturesque was the capture of Stony Point the following year by Anthony Wayne. Stony Point is a bold, rocky promontory within a sharp curve of the Hudson River a few miles below West Point. The Americans had deter- **Stony Point.** mined to fortify this gateway to the Highlands, and while they were engaged in doing this Clinton came up the river in May, 1779, and captured it. He then erected powerful fortifications, manned them with six hundred men, and believed the place impregnable. So it might have been by regular sieges; but the Yankee finds the way, if there is a way.

At midnight on July 15, 1779, "Mad Anthony" Wayne, with twelve hundred light infantry, crept stealthily along the causeway that led from the mainland to Stony Point. The assault was to be a pure bayonet charge, and to prevent a possible betrayal by a random shot, Wayne did not permit his men to load their muskets. To guard further against noise, every dog for miles around was killed.¹ The sleeping garrison was awakened by the impetuous rush of the Americans. The British sprang to arms, but scarcely did they fire the first volley when the Americans were at their throats. A fierce encounter ensued, in which fifteen of Wayne's men and over sixty of the enemy were killed. But the British soon gave way, and the fort was surrendered. Washington did not, however, choose to hold the place against an attack that Clinton prepared to make. He ordered the fortifications destroyed and the prisoners, stores, and cannon removed to the Highlands, and Clinton was left to occupy the demolished works at his leisure. Now, with the mere mention of

¹ Fiske, Vol. II, p. 112.

the bold dash of "Light Horse Harry" Lee upon the British fort at Paulus Hook, and his capture of one hundred and fifty-nine prisoners, the mutiny and desertion of thirteen hundred Pennsylvania troops, afterward pacified and sent back to the army, 1781. and a similar movement of the New Jersey troops which resulted in the execution of two of the ringleaders, we pass on to the most painful episode of the Revolution.

We have seen and admired the intrepid Arnold at Quebec and Saratoga. The wound he received at the latter place incapacitated him for a season; but by the time the British evacuated Philadelphia, in the spring of 1778, Arnold had recovered, and he was placed in command of the city. From this moment his downward course seems to have begun. He soon had a quarrel with the state government and another with Congress. He was accused of extravagant living, and even of fraudulent transactions, and was censured for inviting loyalists to his entertainments. Arnold was a high-spirited, sensitive soul, and he chafed under public criticism. At length formal charges were brought against him. He demanded an investigation, which was granted, and he was acquitted by a committee of Congress. But the charges were renewed, other evidence was adduced, and at a second trial by a court-martial he was sentenced to a reprimand from the commander in chief for "imprudence." Washington was a true friend of Arnold, and he carried out the sentence in the mildest manner consistent with the dignity that the case required.

Up to this point our sympathies are with Arnold. We regret with his friends that he did not receive the promotion that was his due; we feel indignant at his enemies that they could so readily forget his noble service to his country, and pursue him with such hatred, when a rigorous court-martial, sitting for five weeks, could find him guilty of only a little imprudence; we rejoice with his friends that Washington administered the reprimand so graciously as to show his confidence at the same moment.

Arnold.

But here we must part company with Benedict Arnold. Whatever his grievances, his means of revenge were altogether unwarranted and utterly to be condemned. His crime is one of the blackest in history. He sought to betray his country into the hands of its enemy, and to do this he must first betray the confidence of the one unswerving friend who had ever trusted him,—the commander in chief.

At what time Arnold contemplated treason is not known, nor can

it be proved that his beautiful loyalist wife, whom he had married in Philadelphia, had anything to do with his perfidy; but it is quite possible that she unconsciously influenced him to take this step. His correspondence with Clinton, under an assumed name, began early in the spring of 1780, and in midsummer he received, at his own urgent request, the command of the powerful fortress of West Point, the gateway of the Hudson Valley. This he determined to hand over to the enemy, together with the great valley for which Burgoyne had fought and lost. No doubt Arnold believed that the possession of the Hudson, with the foothold the British had gained in the South, would speedily terminate the war in their favor, and that he would be the hero of the hour.

On a dark night in September, 1780, Benedict Arnold lay crouching beneath the trees on the bank of the Hudson a few miles below Stony Point, just outside the American lines. Presently the splash of oars from the dark, silent river broke the stillness, and a little boat bearing four men came to the shore. Two were ignorant oarsmen who knew not what they did, the third was the steersman, one Joshua Smith, who lived in the neighborhood, while the fourth was a young and handsome man who concealed beneath his great overcoat the brilliant uniform of a British officer. The young man, Major John André, adjutant general of the British army, was put ashore, and he and Arnold, who had long been secret correspondents, spent the night in the dense darkness beneath the trees. Here the plot to place West Point into British hands was consummated; and at the coming of dawn André did not return, as at first intended, to the English sloop of war, the *Vulture*, which was lying in the river waiting for him, but accompanied Arnold to the house of Smith, the steersman, a few miles away. Arnold returned to West Point, and André waited his opportunity to reach the *Vulture*; but shore batteries began firing on her, and Smith refused to venture out in his little boat. At length it was decided that André return to New York by land. It was a perilous journey, but the first part was made in safety. The lonely traveler was nearing Tarrytown and his hopes were rising, when suddenly three men with muskets sprang from the thicket, stood in his path, and ordered him to stop. One of the men wore a Hessian coat, and André, thinking them his countrymen, frankly informed them that he was a British officer. To his dismay he then discovered that the men were Americans and that

The midnight meeting.

he was under arrest.¹ No offers of money, threats, nor entreaties could move the men, and André was disarmed and searched; and beneath his feet, within the soles of his stockings, were found important papers in the handwriting of Arnold.

Arrest of André. The prisoner was taken up the river to Colonel Jameson, who, all unsuspecting of Arnold, decided to send André to him with an explanatory letter, while the papers found on André were sent to Washington, who had gone to Connecticut for a conference with Rochambeau. Before André under an escort had reached West Point, Jameson was persuaded to recall him. This was done, but the letter to Arnold was allowed to go on its way, and it was this letter that saved the traitor's life. Washington returned from Connecticut sooner than was expected. Near Fishkill he sat down to supper at an inn and chatted with the same Joshua Smith who had but the day before sent André down the river; and he sent to Arnold at the Robinson house near West Point, stating that he and his staff would be there for breakfast next morning. In the morning, however, Washington sent Alexander Hamilton and others of his staff to take breakfast with Arnold, while he stopped to examine some redoubts. Arnold was annoyed at the near approach of Washington, but his countenance remained unperturbed. As they sat at the table a messenger entered and handed Arnold a letter. It was the one sent by Colonel Jameson stating that a British officer had been caught with certain papers in his possession, which had been forwarded to Washington. Arnold showed little emotion; he quietly folded the paper and put it into his pocket without betraying to any of the company that there was anything wrong. He then rose and left the room, saying that he was suddenly called to West Point, but that he would soon be back to meet Washington.

The quick eye of his wife detected something wrong, and she followed him. Going to their bedroom, he informed her that he was ruined and must fly for his life. She swooned and fell fainting in

¹ The names of these men were John Paulding, David Williams, and Isaac Van Wert. Paulding alone could read. Each was rewarded by Congress with a silver medal and an annual pension of \$200, and the name of each was given to a county in Ohio. Mr. S. G. Fisher, in his "True History of the Revolution," asserts that these men were stragglers devoid of true patriotism, and that they held André only because they saw no way of his paying the large sum he offered for his release. André testified at the trial that the men searched him for the purpose of robbing him. The matter was fully discussed in Congress in 1817, when Paulding, then an aged man, was denied an increased pension for which he had applied. See Sargent's "Life of Major André," p. 462.

his arms. He laid her across the bed, called a maid to care for her, kissed their sleeping babe, and a minute later was galloping toward the river.¹ In a few hours he had boarded the British sloop of war, the *Vulture*, having protected himself from the American shore batteries with a white flag made of a handkerchief tied to a cane. The stupid blunder of Colonel Jameson had saved Arnold from the most ignominious death that can come to a soldier — the death of the gallows.

**Escape of
Arnold**

“Arnold is a traitor, and has fled to the British! Whom can we trust now?” said Washington to his officers a few hours later, while the tears rolled down his cheeks. He soon recovered from his emotion and sent officers to intercept Arnold; but it was too late, and the following morning the traitor was safely landed in the city of New York. He received the price of his perfidy — six thousand pounds sterling and a command in the British army.

André was duly tried by a court-martial of which General Greene was president, was convicted as a spy, and was sentenced to be hanged. Clinton exhausted every method in trying to save his brilliant young subordinate. It was intimated that in one way only could André be saved — that he would be exchanged for Arnold. But this Clinton could not in honor consent to, and André was executed. Clinton had instructed André not to go within the Americans lines and not to carry compromising papers of any sort, but André disobeyed and did both, and the forfeit of his life was the penalty. His death was deplored on both sides of the Atlantic, but even British writers generally agree that the sentence was just and necessary. André died like a hero, calling on those about him to witness that he faced death without a tremor. We admire physical courage, especially in a soldier; yet how meaningless and insipid the final request of André when compared with the dying words of Nathan Hale.

**Death of
André.**

WAR IN THE SOUTH

The seat of war was transferred to the South late in the year 1778. Even before the battle of Lexington the strife had begun south of Mason and Dixon's line. There was Dunmore's War, and the battle at Moore's Creek, and the valiant defense of Fort Moultrie. But the foe soon departed and the Southland had rest for nearly three years, when he came again and made it the scene of the final conflict.

¹ See the fuller account of Fiske (Vol. II, p. 216 *sq.*) from which a number of these incidents have been taken. See also Winsor, VI, p. 458 *sq.*

For nearly four years the power of the British had been thrown against the great states of the North. They had destroyed much property and taken many lives; they had overrun vast tracts. But the game had been a losing one; a fine army had been sacrificed in the Hudson Valley, and now at the end of the four years the British commander had not possession of a single foot of territory except Manhattan Island and Newport. He therefore determined, while still holding New York as his base, to send his legions to the weaker communities of the South, to conquer Georgia, then the Carolinas, and perchance the Old Dominion, and to hold these until terms could be made with their powerful neighbors to the North. The plan is supposed to have originated in the brain of Lord George Germain.

In December, 1778, a force of thirty-five hundred British regulars under Colonel Campbell landed near Savannah, Georgia. The American force there, commanded by General Robert **Surrender of** Howe, was less than twelve hundred in number. The **Savannah.** two forces met in battle; the Americans were routed, losing five hundred in prisoners, and the city of Savannah surrendered with its guns and stores. General Prevost soon arrived with British reënforcements from Florida, and he and Campbell pressed their advantage with vigor; they captured Augusta and other points, and within ten days proclaimed their conquest of the state of Georgia. General Benjamin Lincoln was now made commander in the South, instead of Howe. General Moultrie had just won a signal victory in defending Fort Royal, but the advantage was soon lost, for fifteen hundred men under General Ashe, who were sent by Lincoln against Augusta, suffered a crushing defeat at Briar Creek at the hands of the English. Prevost then crossed the Savannah River and began a march toward Charleston, spreading devastation in his trail; but his course was checked in a skirmish with Lincoln, and he turned back. The summer of 1779 passed, and the British as yet had no foothold north of Georgia.

Early in September D'Estaing arrived at the mouth of the Savannah from the West Indies with a powerful French fleet, and American hopes in the South rose with a bound. The first thought was to recapture Savannah, and the siege was begun on September 23. For three weeks, day and night, Lincoln's artillery from the shore joined with that of the French commander from the harbor. But Prevost gave no sign of surrendering the city, and D'Estaing proposed a combined assault. This was made with desperate valor

on October 9, but it failed. The French and Americans lost heavily, and, saddest of all, the brave Pulaski was numbered with the slain. D'Estaing, fearing the October gales, sailed away, and the coast was clear for two months, when another fleet hove into view. This fleet was not that of a friend; it bore Sir Henry Clinton from New York and Earl Charles Cornwallis with eight thousand soldiers for the subjugation of the South.

Clinton landed at Savannah, but his aim was to capture Charleston, the chief seaport of the South. Adding the force of Prevost to his own, he began the march overland to Charleston, which was now occupied by Lincoln with 7000 men. Clinton began engirdling the city about the 1st of April, 1780, and a week later the British fleet ran by Fort Moultrie and entered the harbor. Soon after this Lord Raw-

don arrived from New York with three thousand more troops, and the doom of the southern metropolis was sealed. Lincoln should have fled and saved his army, but he lacked the sagacity of a Washington or a Greene; he prepared for defense, while day by day the coil of the anaconda tightened about the doomed city. Lincoln surrendered, and Charleston, with its stores, its advantages, and the army that defended it, fell into the hands of the British commander.¹

**Fall of
Charleston,
May 12, 1780.**

The fall of Charleston was a sad blow to the patriot cause—the most disastrous event of the war, except the fall of Fort Washington

¹ One regiment, not present at the surrender, was soon afterward captured by Colonel Banastre Tarleton.

on the Hudson four years before. It gave Clinton control of South Carolina as well as of Georgia, and that officer now sailed away for New York, leaving Cornwallis in command with five thousand men. During the following months the scene in the Carolinas and Georgia was one of wild disorder and anarchy. A large portion of the people were loyalists, and scarcely a day passed without hand to hand encounters, bloodshed, and murder. The patriots were without an army, but bands of roving volunteers annoyed the British incessantly.

The most daring and successful leader of these bands was Francis Marion, the "Swamp Fox." With a handful of followers he would creep like a tiger from the coverts of the woods or the fastnesses of the mountains, strike a deadly blow, and disappear again like a shadow. Scarcely inferior to Marion was Thomas Sumter, the "South Carolina Gamecock," who was to outlive all his fellow-officers of the Revolution, and to leave his name upon that famous fort which was destined to be the scene of the opening of that greater war, to be fought by a later generation of Americans. After the war Sumter became a statesman, sat in the United States Senate, was minister to Brazil, and died in 1832 at the great age of ninety-eight years. Next to Sumter must be ranked Andrew Pickens, who also lived many years under the Constitution, and served his state in Congress. These and a few other kindred spirits kept alive the patriot cause in the South after the fall of Charleston, until a new army could be organized.

The summer had not passed before the clouds began to break away. Washington had sent De Kalb, who was hastening southward with over fifteen hundred veterans; the call for militia from Maryland, Virginia, and North Carolina met with a considerable response; and a commander to succeed Lincoln was to be sent from the North. Washington preferred Greene for this responsible duty, but the people called for Gates, "the hero of Saratoga," whom public opinion still clothed with the glamour of a great genius. Gates arrived upon the scene late in July, and again the hopes of the lovers of liberty rose—to be ruthlessly dashed to the ground once more—only once more.

This final disaster was to occur at Camden, South Carolina, whither Gates hastened by forced marches. Reaching a point near the town, he found Lord Rawdon blocking his way with a force smaller than his own. Gates should have struck an immediate blow, but he hesitated for two days, and by that time Cornwallis with

the main army had joined Rawdon. Now occurred an unusual coincidence. On the night of the 15th of August, Gates decided to march through a wood for ten miles and surprise the enemy at daybreak. It happened that Cornwallis, on the same night and at the same hour, began a march over the same route for the purpose of surprising Gates. The two armies met midway and both were equally surprised. They waited till daylight, and then came the battle of Camden. The American force was largely composed of raw militia, who broke and fled at the first fire, throwing their loaded muskets to the ground. The regulars fought with great bravery, but the odds were against them, and the American army was totally routed. The noble De Kalb, bleeding from eleven wounds, fell into the enemy's hands and died soon afterward. Gates was borne from the field in the mad retreat, and he kept on galloping, and by night he had covered sixty miles. But he did not stop here; three days later he was at Hillsborough, North Carolina, nearly two hundred miles from the scene of the battle. His "northern laurels were changed to southern willows," as the cynical Charles Lee put it. Gates made an effort to recruit an army, but with little success. He saw that his career was over, and he made a piteous appeal to the commander in chief. Washington wrote him a consoling letter, expressing confidence, and even suggesting that he might be able to place Gates in command of one wing of the Continental army. The broken old general cherished this letter to the end of his days. The writing of this by Washington, in the face of the memory of the Conway Cabal, displayed a magnanimity with which few of the human race are gifted.

A few days after the crushing defeat of the Americans at Camden, another disaster, but of minor importance, was added to it. Sumter, with four hundred men, had captured a British baggage train, but Tarleton overtook him, recaptured the baggage, and made prisoners of three hundred of his men.

These were the darkest hours of the Revolution, save only the few weeks preceding the battle of Trenton.

But soon the light began to dawn; and never again, from that hour until now, has it been so nearly obscured as in the dark days that followed the battle of Camden. Scarcely had Tarleton won his victory, when Colonel Williams defeated five hundred British and Tories with great slaughter; and a few days later, on the banks of the Santee, Marion, with a handful of men, dashed upon a portion of the British army, captured twenty-six, set one hundred and fifty

prisoners free, and darted into the forest without losing a man.¹ This was a beginning; King's Mountain was soon to follow.

Cornwallis sent Major Ferguson, one of his best officers, with twelve hundred men, five sixths of whom were loyalists, to scour the back country, gather recruits, and strike terror into the hearts of the patriots. The news of his raid spread beyond the mountains, and the frontier settlements were soon roused to fury; and, like the farmers at Lexington and Bennington, these hardy backwoodsmen seized their muskets, and hastened to meet the foe. Without orders, without hope of reward, these men, led by such heroes as John Sevier and Isaac Shelby, William Campbell and James Williams, poured like a torrent from the slopes and glens of the mountains, more than a thousand strong. A motley crowd they were, Indian fighters and hunters, farmers and mountain rangers, dressed in their hunting shirts, with sprigs of hemlock in their hats, fearless and patriotic, and every man a dead shot with the rifle. So eager were they for the fray that the few hundred that were needed to guard the settlements had to be drafted for the purpose.² Ferguson heard of the coming of the "dirty mongrels," as he called them, and he planted his army on a spur of King's Mountain near the boundary between the Carolinas.

The mountaineers, now numbering over thirteen hundred, came upon Ferguson on the afternoon of October 7, hungry and worn with an all-night march. They chose Campbell as their leader, but in truth the battle, like that at Lexington, was fought without a leader. Ferguson had chosen a strong position, but the pioneers were used to mountain climbing. They chose the only plan that could have

**Battle of
King's
Mountain,
1780.**

succeeded: they surrounded the hill and, pressing up the slopes, attacked the British from every side. The latter fought with a courage worthy of a better cause. They fired volley after volley, they rushed upon the foe with the bayonet and pressed them down the hillside. But the Americans instantly re-formed and renewed the attack. At one moment the false cry ran along the American line that Tarleton was in the rear, and about to attack them. It created a panic and several hundred started to run, when John Sevier, whose "eyes were flames of fire, and his words electric bolts," rode among the fleeing men, and, with the magnetic power of a Sheridan, turned them back to duty and to victory. Three times the assaulting columns surged up the hill only to be driven back at the point of the bayonet. But they always

¹ Gilmore's "Rearguard of the Revolution," p. 210.

² *Ibid.*

SCENE OF WAR IN THE SOUTH.

BURNAY & CO., N.Y.

came again, and at length the British were exhausted; they huddled together on the hill, their ranks melting before the sharpshooters' bullets like snow beneath a summer's sun. Ferguson was a man of desperate valor. He refused to surrender. A white flag, raised by one of his men, he struck down with his sword. Then with foolhardy daring he made a dash through the encircling columns for liberty. Five sharpshooters leveled their pieces, and the British officer fell with five mortal wounds in his body. The remnant of the force surrendered; 456¹ of their number lay dead upon the field, to say nothing of the wounded, while but 28 of the Americans were slain.

The battle over, the men who had won it, taking their prisoners with them, hied away again to their crude civilization beyond the Alleghanies, disappearing as suddenly and noiselessly as they came. This was their only service in the war, but it was a noble service. At King's Mountain they turned the tide of the war, and insured the ultimate independence of America.

During the following months Marion and Sumter were extremely energetic in their peculiar mode of warfare, and the latter gained a victory over Tarleton. But this was not all; Daniel Morgan came down from the North, — Morgan, whose romantic career we have noticed, — and at his hands the scourge of the South, Tarleton, was to suffer the most crushing defeat of his life. General Nathanael Greene was appointed to succeed Gates at the South. He arrived in December, 1780, and with the aid of Thomas Jefferson, Governor of Virginia, raised some two thousand men from that state, and these, with fifteen hundred whom Gates had collected after Camden, gave him a respectable army. Greene's first important move was to send the free lance, Daniel Morgan, to raid the back country. Morgan, with nine hundred men, was soon confronted by eleven hundred under Tarleton. The two met at the Cowpens, not far from King's Mountain. Morgan's tactics were perfect; the battle was furious, and Tarleton's army was almost annihilated, he and a few followers alone escaping through the swamps on horseback. Greene had the services of some of the best men of the Continental army — Steuben, whom he left in Virginia to watch the traitor Arnold, Kosciusko, and the brilliant cavalry leaders, Henry Lee and William Washington, the latter a distant relative of the commander in chief. Cornwallis was greatly weakened by the defeat

**Battle of
Cowpens.**

¹ Sloane gives this number.

at the Cowpens, and he determined to strike Greene as soon as possible and revive the waning spirits of the regulars and loyalists. Perceiving this, Greene decided to lure the British general as far as possible from his base of supplies, and then to give him battle. He began an apparent retreat northward. Cornwallis fell into the trap, destroyed his heavy baggage, and followed. The chase continued for two hundred miles. At Guilford Courthouse, but thirty miles from the Virginia border, Greene, having joined Morgan's forces with his own, wheeled about, and, after some days of sparring for position, offered battle.¹ Greene placed his raw militia in front with orders to fire two or three volleys before giving way, after which the brunt of the battle was to be borne by the regulars. This plan had been adopted by Morgan at the Cowpens with great success, and Greene found it highly useful. At one time during the battle the Americans were on the point of being routed when they were saved by a cavalry charge of Colonel Washington. After the battle had continued for some hours the British planted their columns on a hill, from which they fought with great valor and could not be dislodged, and at nightfall they were left in possession of the field. From this cause the battle of Guilford has been considered a British victory. But the real victory lay with Greene. He had lured his enemy far from his base of supplies, and had destroyed one fourth of his army, six hundred men, himself losing but four hundred. Cornwallis saw that he was entrapped, refused Greene's challenge for a second battle, and marched in all haste to the sea-coast, leaving his wounded behind.

By the flight of Cornwallis North Carolina was left in the hands of the Americans, and South Carolina was soon to share the same good fortune; for Greene, instead of pursuing the enemy toward Wilmington, turned to the latter state, and in three months he and his subordinates had driven the enemy from every stronghold — Camden, Augusta, Forte Motte, Orangeburg, Ninety-six — all except Charleston;² and all the energy that the British had expended in two and a half years to possess those states came to naught.

¹ Greene's flight was prompted also by the fact that he did not feel able, without reënforcements, to fight Cornwallis. He offered battle only after making a detour into Virginia and gathering several hundred recruits.

² Colonel Stewart, however, who succeeded Lord Rawdon, remained in South Carolina till September 8, when occurred the battle of Eutaw Springs. This has been pronounced a British victory; but, strange to say, the victors fled and were pursued for thirty miles by the vanquished.

YORKTOWN

On reaching Wilmington, North Carolina, Cornwallis did not go southward and begin a reconquest of the state he had lost; he proceeded, without orders from Clinton, into Virginia, in the hope of conquering that state, and in the belief that if he did so the Carolinas would easily fall again into his possession. Lafayette, with a thousand men, had come down from the North to join Steuben and watch Arnold and Phillips, while Wayne, with an equal number, was moving south from Pennsylvania. With great skill the young French marquis, with an inferior army, held the enemy in check for a month, when he was joined by Wayne. Cornwallis arrived on May 20. Arnold was sent back to New York, and Phillips died of fever. Then began a long series of maneuvers, marches, and countermarches, Lafayette harassing the enemy in every way, but avoiding an engagement. The British general expected to make a brilliant stroke. "The boy cannot escape me," said he; but the boy had been schooled under Washington for four years, and no strategy of Cornwallis could entrap him. In one of Tarleton's raids Governor Jefferson was barely able to escape from his house at Monticello before it was surrounded by cavalry. Lafayette's army steadily increased. Early in August Cornwallis moved down the York River and occupied Yorktown, while the marquis stationed his army at Malvern Hill; and here they remained until the inaugurating of a great and unexpected movement that was to end the campaign and the war.

For three years, since the battle of Monmouth, Washington had held his army as a watchdog, guarding the great valley of the Hudson, while Clinton, in the city of New York, was ever threatening to invade it. Washington longed to attack the enemy in his stronghold, and would have done so during Clinton's brief absence in the South, but for the fact that he had weakened his own army by sending troops southward. During the spring of 1781 this scheme of attacking the city was revived. Count Rochambeau had arrived in Rhode Island the year before with six thousand French troops, and now, after nearly a year of enforced idleness, this army was to be joined to that of Washington for a combined attack. The two commanders conferred with this end in view, when suddenly the news reached them that Count de Grasse, with a powerful French fleet of twenty-eight ships of the line and six frigates, bearing twenty

thousand men, was about to sail from the West Indies to Chesapeake Bay. The whole plan was at once changed. Washington determined to take a French-American army to Virginia, and to endeavor with the support of the fleet to capture the British army.

So necessary was it to deceive Clinton that Washington and Rochambeau kept their plan secret even from their officers until **Washington** secrecy was no longer possible. Leaving General Heath **moves south-** with four thousand men to guard the Hudson, they **ward.** crossed that river with four thousand Frenchmen and two thousand Americans on the 19th of August. Moving down the Jersey shore, they made a feint on Staten Island and led Clinton to believe that the intention was to attack it; but suddenly the army wheeled to the west, and it almost reached the Delaware before the object of the expedition was known. By the time the army reached Philadelphia it was generally known that the aim was to capture Cornwallis, and the rejoicing of the people of the city was loud and long. While en route to the South, Washington made a flying visit to his home at Mt. Vernon, which he had not seen for six years.

Meantime De Grasse reached the mouth of the York River and sent four thousand men ashore to augment the army of Lafayette.

De Grasse. The British also had a powerful fleet in the West Indies, under the command of Admiral Rodney, a very able man; but Rodney returned to England, owing to sickness, and sent the fleet northward under Admiral Hood. Reaching Sandy Hook, Hood joined his fleet to that of Admiral Graves, and the two sailed for the Chesapeake to meet De Grasse. An action took place on September 5 in which several of the English vessels were so damaged that Graves and Hood sailed to New York for repairs and left De Grasse complete master in the Chesapeake. This was a matter of vital importance to Washington, as it prevented the escape of Cornwallis by sea. His only escape lay in a retreat upon North Carolina, but this was prevented by Lafayette, who lay across the peninsula with eight thousand men. Clinton, hearing of Washington's departure for the South, was deeply perplexed. In the hope of luring Washington back, he sent Arnold to harass the coast of Connecticut, but the traitor was driven away by the swarming minute men.

The allied armies reached the vicinity of Yorktown late in August. The approaches were made by means of parallel trenches, the first of which was completed on October 6, when the bombardment of the city began. Side by side labored the French chasseurs

and the American continentals and militia, tightening the coils about the imprisoned British army. On the river bank below the town were two strong redoubts. One of these was captured by Baron de Vioménil, and the other by the youthful Alexander Hamilton, who was destined yet to play a great part in American history. Day by day the British works crumbled beneath the incessant fire of the allied cannon, and on the 17th of October, four years to a day after the surrender of Burgoyne, the white flag was seen waving above the parapet at Yorktown. The cannonade ceased and the surrender was effected two days later, the terms being exactly those accorded to Lincoln at Charleston. And it was Lincoln who was now sent to receive the sword of Cornwallis, who, playing sick, sent it by the hand of General O'Hara. The British arms were soon stacked, and the entire army of more than eight thousand men, including a few hundred seamen, became prisoners of war.

Everybody knew, on both sides of the Atlantic, that this master stroke had ended the war and that America had won. Clinton held New York for two years longer; but hostilities had ceased, and he

only waited for peace to be arranged by treaty.¹ The rejoicing over the surrender of Cornwallis was unbounded throughout America. The news reached Philadelphia in the early morning hours of the 24th, and the German watchman, continuing his rounds, added to

¹ Soon after the surrender Washington returned to the Hudson Valley. The French army embarked for France in December. Guerrilla warfare continued in parts of the South and on the frontier for some time, but Yorktown ended hostilities between the regular armies.

his "Basht dree o'glock," the further information, "und Gorn-val-
 list ist da-ken."¹ Wild scenes of rejoicing greeted the coming day,
 and Congress repaired to the Lutheran Church to thank God for the
 deliverance. When the news reached Paris the victory was cele-
 brated with a brilliant illumination of the city. Even in England
 many of the anti-war party rejoiced; but Lord North, on hearing
 the news, paced the floor of his room, threw his arms wildly about,
 and repeated again and again, "O God, it is all over, it is all over."

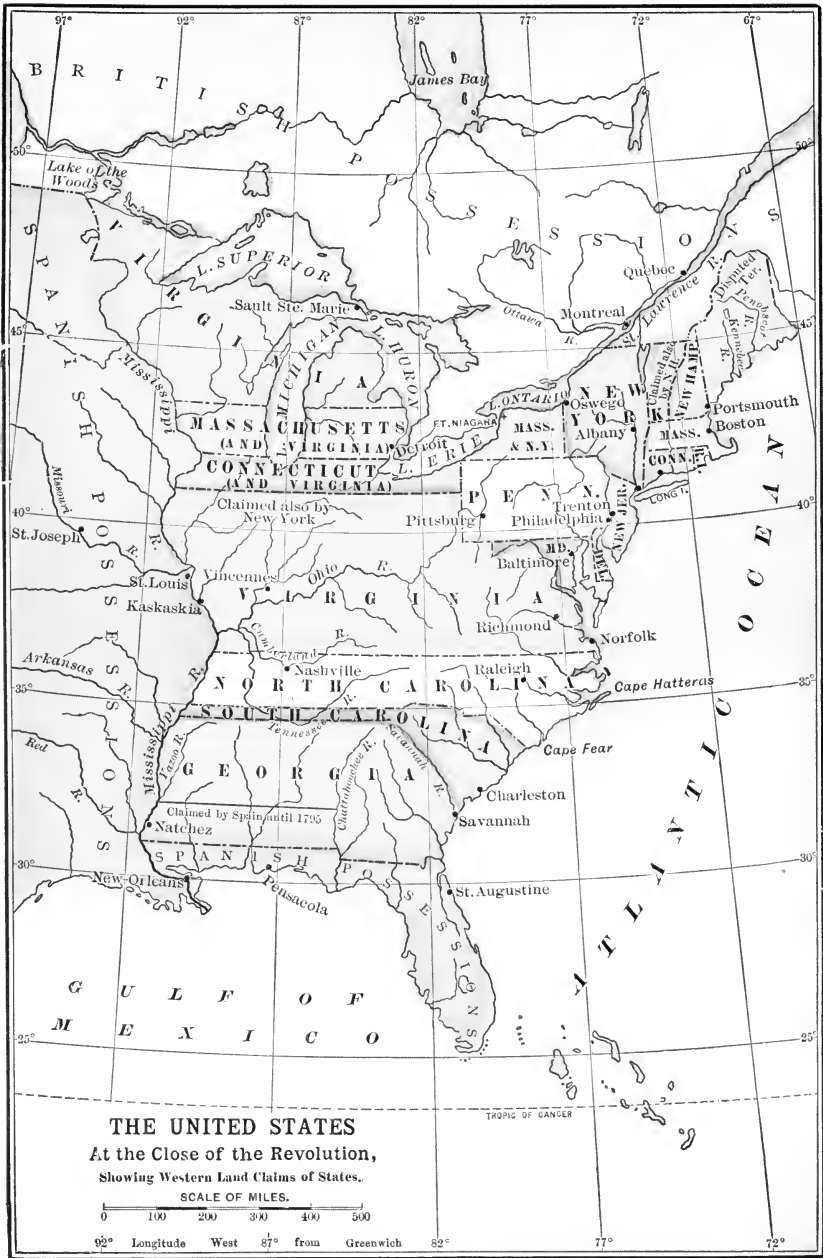

It was not until April 19, 1783, exactly eight years after Lexing-
 ton, that Washington proclaimed the war at an end, and discharged
 the army. Some time later he took impressive leave of his officers
 and retired to his Mt. Vernon home, a private citizen.

The very important business of concluding a treaty of peace
 was now in progress. The treaty was arranged in Paris, and the
 American commissioners were Benjamin Franklin, John Jay, and
 John Adams. Franklin was already in Paris, Jay was at Madrid,
 and Adams was in Holland trying to place a loan. American inde-
 pendence was a foregone conclusion, and every country in Europe
 was pleased with this outcome, except Spain, which foresaw that
 the United States as an independent power would become a menace
 to her American possessions. The North ministry had fallen, and
 the Marquis of Rockingham was now premier, with Shelburne and
 Charles James Fox as members of his Cabinet. All of these had
 been the friends of America from the beginning. In July, 1782,
 Rockingham died, and Shelburne, succeeding him as premier, became
 the one who, through his agents, treated with the Americans. Our
 commissioners had been instructed not to deal separately with Eng-
 land without the consent of France, and by these instructions Frank-
 lin was ready to abide. But Jay discovered, or thought he discovered,
 that the French minister, Vergennes, had proposed secretly to Eng-
 land that the United States be deprived of all the region between
 the Alleghany Mountains and the Mississippi River in the inter-
 ests of Spain, and also that American fishermen be prohibited from
 Canadian waters, and he offered to treat with England secretly with-
 out the consent of France.

The proposition was gladly accepted by Shelburne.
 Franklin did not approve of Jay's course, but Adams, arriving from
 Holland about this time, sided with Jay, and Franklin yielded. They
 therefore arranged with Shelburne a

preliminary treaty, which was signed November 30, 1782, while the definitive treaty was not signed until the 3d of September, 1783, the long delay being caused by the European situation.

By the treaty the independence of the United States was acknowledged, and the boundaries were Florida on the south, the Mississippi on the west, and the southern boundary of Canada on the north. The northern boundary could not be absolutely fixed, owing to imperfect geographical knowledge. This was done sixty years later, and a child born among the New Hampshire hills the same year that marked the signing of the preliminary treaty became the American agent in completing this work that was left unfinished. Webster.

The Mississippi was left open to both American and British shipping; the right of the Americans to fish on the coast of Newfoundland and in the Gulf of St. Lawrence was continued, while British subjects were not granted fishing rights on the coasts of the United States. The other two questions to be disposed of were those relating to the loyalists and to the payment of private debts to British subjects, contracted by Americans before the war. Of these the former is the subject of a note at the end of this chapter; the latter was decided in the only right way to decide such a question — every debt must be paid to its full extent in sterling money. Provisions of the treaty.

The treaty on the whole was a great diplomatic victory for the United States. As Mr. Lecky says, nothing that we could reasonably have expected was denied us. Aside from independence, the one abiding triumph of incalculable importance was the securing the Mississippi, instead of the Alleghanies, as the western boundary of the United States. Of scarcely greater importance was the purchase of Louisiana, twenty years later, than was this first step toward the expansion of the new republic to the western ocean.

OBSERVATIONS

To the "Revolution," by which the war as well as the change of government is often designated, I have given considerable space because of its great importance in the world's history. It gave birth to the greatest of modern nations. It also ended a long and bloodless strife in England between two political parties, or opposing principles of government, and resulted in the restoration of Parlia-

mentary rule as distinguished from that of the royal prerogative. During the war the belief was widespread that the success of the Americans would bring ruin to the British Empire and relegate it to a second place among the powers, but such a result did not follow. England, now in the hands of Parliament and not of the king, rose like a wounded giant and smote her enemies right and left. Admiral Rodney, the greatest of English seamen except Nelson and Blake,¹ in a tremendous naval battle in the West Indies in 1782, destroyed the French fleet and made a prisoner of De Grasse; and before the end of the year the English won a great victory over the Spaniards at Gibraltar. England now became the mother of nations and rose to a greater height than ever before, reaching the acme of her power a generation later at Waterloo.

America was not greatly weakened by the Revolution. It is true that the fishing industry and the shipping business were temporarily destroyed, but in spite of this fact the country continued to prosper during the war, and gained three hundred thousand inhabitants.² In fact, the war did not continue long in any one place. The wealth of the country lay chiefly in its farm products, and so extensive was the territory that the invading armies overran less than one tenth of it during the whole war. When a foreign army was quartered for a long season in any place, it was a benefit rather than a detriment to the community, as the farmers received better prices, and usually in specie, for their products. In short, the country was richer and stronger in resources at the end of the war than at its beginning. Nevertheless, the patriot armies were often barefoot, but half clothed, and actually suffering for food. This arose wholly from a want of government. The country was laden with harvests and fruits, with shoes and clothing; but Congress was powerless,—it could not supply the army, it had no power of taxation. In one way alone, the worst way of all, could Congress tax the people—by issuing paper money; and this it did lavishly. This Continental money depreciated in the hands of the people until it became valueless. A pound of sugar sold for \$10, and a barrel of flour for \$1500. To say that a thing was “not worth a continental” was to express the utmost contempt for its value. This inflation of the currency

caused much annoyance in business, but the people deserved it for their tardy support of the war. Had Congress wielded true governmental powers, or had the people acted all through with the vigor displayed at Lexington, at Saratoga, and at King's Mountain, the war would have been short and the result never doubtful.

As to foreign aid, aside from the moral effect of the French alliance and the individual services of such men as Lafayette and Steuben, it amounted to little until the last campaign. Twice did the French make an honest effort — at Newport and at Savannah — to assist the Americans, but in each case the result was failure. At Yorktown, however, the aid of the French was necessary to success. But for the fleet of De Grasse, Cornwallis would have escaped by sea; and but for the French land forces he might have broken through the encircling lines. For this service the Americans should never cease to be profoundly grateful to France.

Perhaps the greatest mistake made by the British was presuming too much on the strength of the loyalists. There were many, it is true, in northern New York and in the South, but in both sections the patriots outnumbered them, while in New England and Pennsylvania the Tory element was insignificant. Burgoyne seriously miscalculated in expecting the people of the Hudson Valley to rise up for the king, and the same mistake was made by Cornwallis in his hapless, final campaign in Virginia.

Among the British commanders we find no really great soldier. The ablest of them all was Cornwallis, a man of much vigor, honest, conscientious, and not without strategic ability. Had Cornwallis been made commander in chief from the beginning, the history of the war might have been different from what it is. Next to him stands Lord Rawdon; and both of these men afterward rose high in the councils of their nation, each becoming governor of India. Tarleton exhibited much dash and brilliancy, but he was wanting in the humane qualities that usually characterize modern warfare. Gage was incompetent, as British writers acknowledge. Howe was abler, but he was dilatory and never seemed to have heart in the work.¹ Burgoyne and Clinton were men of considerable ability, and

¹ General Howe was accused by his political enemies of not trying to conquer the Americans because of his sympathy with them. To these accusations he made a sweeping denial. Mr. S. G. Fisher, in his "True History of the Revolution" (p. 296 *sq.*), makes a strong argument that Howe was not true to the British cause: that his sailing to Halifax on leaving Boston, instead of going direct to the vicinity of New York; his leaving great stores and many cannon at Boston, when he could

of the most honorable instincts; but while the former in his single campaign had little opportunity to exhibit any great qualities, the latter was usually just too late in making any important movement. Long after the war was over Clinton and Cornwallis had a sharp controversy concerning the Virginia campaign, the sympathy of Parliament remaining chiefly with the latter.

Turning to the American side, we find in George Washington a great military commander. It is true that he actually won but few battles, but this fact will not affect his reputation when one considers the conditions. An army of regulars, of professional soldiers, is worth at least three times its number of untrained militia; and not only was Washington's army composed largely of militia, as against the British regulars, but it was also usually far inferior in numbers, and was badly equipped in comparison. We do not class Washington among the greatest warriors of history; he lacked the brilliant genius of a Hannibal, a Cæsar, or a Napoleon. He is especially remembered for his Fabian policy; and yet his operations at Trenton and Princeton, his well-planned attack at Germantown, so soon after the defeat at Brandywine, and his stealthy march upon Yorktown, — all must be classed among the most brilliant military movements in the history of warfare. Other valiant leaders there were in the field and in the State, but any one of them could have been spared. Not so with Washington. Without him — judging from a human standpoint — the Revolution could not have succeeded.

Next to Washington stands Nathanael Greene. Singular it is that Greene never won a battle; but he always won the campaign, which was the vital thing after all. Lafayette made a name for himself in American history, and his fame will endure for many generations; but he never displayed, in this war or later in life, the qualities of a great military genius. A few of the commanders are famous for some single act — Ethan Allen for the capture of Ticonderoga, Stark for Bennington, and Wayne for his capture of Stony Point; while others, equally deserving, are scarcely remembered

have destroyed them; his failure to capture the American army on Long Island; his loitering on Murray Hill and losing a great opportunity in New York; his sailing for the Chesapeake, when he should have coöperated with Burgoyne, even without instructions, — abundantly prove this. The argument is strong, but as Howe was always known to be a man of the highest honor and probity, and as such a theory impeaches his character and makes him a traitor to his country while pretending to be its friend and defender, the theory is impossible to accept. And yet, as General Howe was a staunch Whig, it can easily be believed that his campaigns were less vigorous than they would have been had he belonged to the opposite party.

by the masses. Among these are Schuyler, who was robbed of his laurels at Saratoga; Knox, whose name was redeemed by his being chosen to sit in the first Cabinet; Daniel Morgan, the hero of many battles and especially of the Cowpens; and Sullivan, who was a conspicuous figure in nearly every battle fought on northern soil.

NOTES

Washington's Farewell. — On November 25, 1783, the British army under Sir Guy Carleton, who had succeeded Clinton, departed from New York, and the same day the American army entered the city. The day was celebrated for many years as Evacuation Day. Nine days after the entrance of the army Washington gathered his officers about him at Fraunce's Tavern and gave them an affectionate farewell. In deep emotion he raised a glass of water with trembling hand to his lips, drank to their health, and said: "With a heart full of love and gratitude I now take leave of you, and most devoutly wish your latter days may be as prosperous and happy as your former ones have been glorious and honorable." He then invited each to shake him by the hand, and as they did so he kissed each one on the forehead. From New York he went to Philadelphia and deposited with the comptroller an account of his expenses during the war (some \$64,000), and then proceeded to Annapolis, where Congress was sitting. In the towns along the route great numbers of people gathered to do honor to the hero and to assure him of their undying devotion. In the state-house at Annapolis, at noon on December 23, Washington appeared before Congress in special session for the purpose, returned his commission as commander of the army to General Mifflin, the president, and uttered a speech full of feeling and wisdom. Two days later, on Christmas, this "Cincinnatus of the West" was resting amid the rural scenes of his Mt. Vernon home.

The Treaty and the Loyalists. — The most serious immediate question before the American people after the conclusion of the treaty was what to do with the Tories or loyalists. In framing the treaty, England had insisted on favorable terms for them; but our commissioners, Franklin, Jay, and John Adams, were inexorable in their refusal. They agreed, however, that Congress recommend that the states deal mildly with the loyalists. Congress did this, but the states paid no heed to the request. Many of them fled the country at the close of the war, some to England, some to Canada, while others found refuge in Florida. Many were reduced to poverty by confiscation. Some in New Jersey were tarred and feathered, while numbers in the South were put to death. One man, named Love, who had been notorious for killing wounded patriots, was tried in Georgia and was acquitted; but the people seized him as he walked out of the court room and hanged him to the nearest tree. A great many of the milder Tories were permitted to remain in the country, and they eventually became useful citizens. It is claimed that about 60,000 fled the country and made their homes in England or Canada. For those who had lost their property and left the country, Parliament appropriated a large sum of money, \$16,000,000.

CHAPTER XV

THE TEMPORARY GOVERNMENT

THE war of the Revolution was now over, and the people rejoiced in their newly won independence; but the more serious problem of self-government was yet unsolved. We have seen how at the beginning of the war the people came together in the common defense, how they created a Congress with undefined powers and through it declared their independence, and how at length they lost interest in it and refused to obey its mandates. It is true that Congress had degenerated; some of the best men of the first Congress had gone into the army, others had become ministers abroad, while still others had accepted office in their respective states. No longer was that body composed of the best men of the country, nor were its motives always above suspicion. The people had learned, through their long experience in colonial days, how to govern their states; but to join them together into a nation was the vital question that had not yet reached a solution.

Nevertheless Congress made an honest effort to form a permanent union. On the same day that the committee was appointed to draw up a Declaration of Independence another committee was intrusted with the more arduous duty of preparing a form of government. The leading man in this committee was John Dickinson, who, one week after the great Declaration had been passed, reported a plan of government. This instrument was taken up and debated at intervals for some weeks, when it was laid upon the table; and there it rested for eight months. In the early spring of 1777 these articles were again taken up, and, after a desultory discussion covering half a year, they were adopted by Congress. This plan of government, or constitution, is known in history as the Articles of Confederation.

The Articles as finally adopted were much weaker than was the original draft of Dickinson, and the weak and inefficient government created by them was little better than a "rope of sand," as it

has frequently been called. The causes which contributed to this result were various. The outburst of national feeling at the opening of the Revolution, born of necessity and of the spirit of rebellion against England, had now subsided, while the feeling of state pride, which had its roots in the far past, was again in the ascendency. The states had moreover formed governments and assumed governmental powers, and they were loath to yield these powers to a general government. They were also jealous of one another, and this jealousy of states and sections played its part in preventing their union into a stronger government. To these causes — excessive state pride and a dearth of national patriotism, the jealousy of the states and unwillingness to yield any of their powers — another must be added, namely, a widespread fear that a strong central government would become tyrannical and oppressive and would eventually subvert the liberties of the people. From these causes our first attempt at national government, under a written constitution, ended almost in failure.

THE "ARTICLES" AND THE LAND CESSIONS

Immediately on adopting the Articles Congress sent them to the various states for ratification. Most of the states ratified them within a year, but a few hesitated, and three and a half years passed before the union was formed. The chief cause for delay is found in the possession of western lands by some of the states and not by the others. Anticipating the cession by Great Britain of all the territory east of the Mississippi from Florida to the Great Lakes, the various states laid claim to it, mostly on the ground of their royal charters.¹ Massachusetts claimed all the lands westward from New York, and Connecticut laid claim to a broad strip south of the Massachusetts line. Virginia, by right of her charters and on the ground of the conquest of the Illinois country by George Rogers Clark, laid claim to almost the entire Ohio Valley and to parts of what is now Wisconsin and Michigan. The claims of the southern states extended from their respective western boundaries to the Mississippi. The claims of New York, however, were the most extravagant of all; and they were not based on a royal charter, but on the possession of the

¹ These charters, extending to the "South Sea," which now became the Mississippi River, had nearly all been canceled by the same power that had issued them, but the states ignored this fact and stuck to their extravagant claims to the western lands.

Iroquois. The Six Nations had deeded all their lands to the governor of New York, and these Indians had pretended to extend their authority over nearly all the tribes between the Tennessee River and the Great Lakes. On this ground New York claimed all this vast region as her own.

It will be seen that these claims frequently conflict, and here lay the seeds of serious future trouble among the states; but happily the discussion of the Articles of Confederation furnished the means of a final settlement. Six of the states — Rhode Island, New Hampshire, New Jersey, Pennsylvania, Delaware, and Maryland — had no claim to western lands, and these now called upon the others to surrender their claims to the general government. Maryland, indeed, made a determined stand, and refused to adopt the Articles and join the Union until the cessions were made. The matter hung fire for several years and began to attract attention even in Europe; but at length, early in 1781, New York generously took the lead and offered to cede her claims to the general government. Some of the others signified their willingness to follow this example, and Maryland signed the Articles in March, 1781.

This experiment in government was the first of its kind in history, and it was not then known, as it now is, that such a confederacy cannot endure. The Articles embodied a few good points, such as the provision that freemen of any state should be entitled to all the privileges and immunities of freemen of any other state, and that the records, acts, and judicial decisions of one state should be valid in all. But on the whole the Articles were exceedingly defective. They left the government without a Supreme Court to interpret the laws, without an Executive to enforce them, and with but one House of Congress, in which each state had one vote, regardless of its size, population, or wealth. Each state had at least two and not more than seven representatives, the majority casting the vote of the state, and no man could represent his state more than three years out of six. Congress had no power over commerce; each state had power to put a tariff on foreign goods, or on goods from the other states. The government acted on the state and not on the individual: thus a citizen had no direct relations with his government, which seemed to him almost as a foreign power; he was responsible to his state, and the state to the general government.

**Land
cessions.**

**Defects in
the Articles.**

The most glaring defect in the Articles lay in the fact that Congress had no power over taxation. It could only apportion to the states the amount necessary for each to raise, and if they refused, as some of them did, there was no power to force them. Eighteen months were required to collect one fifth of the taxes laid by Congress in 1783.¹ It is plain that a government which has not the power to tax its own citizens, or to enforce its own laws, or to regulate commerce, lacks the vital essentials of sovereignty; and in this condition was the United States under the Articles of Confederation.

DRIFTING TOWARD ANARCHY

The Articles of Confederation were perhaps the best attainable at the time of their adoption, as the people were not yet ready for a solid union; and they taught the people as nothing else could have done that a stronger government was necessary. But they were truly "a rope of sand." Any refractory state among the thirteen had the power to nullify a national law. Our agents in Europe made treaties of commerce which could be set at naught by any state in the Union. The European powers did not know whether they were treating with one nation or with thirteen. Matters at home were in a still worse condition. The states habitually violated the Articles and disobeyed the acts of Congress, and they quarreled with one another like petulant children. Pennsylvania and Connecticut came to blows over the Wyoming Valley, until at length the matter was settled by arbitration. Pennsylvania won, and Connecticut went on westward and took a slice out of northern Ohio, now called the Western Reserve. New York and New Hampshire quarreled over the territory of Vermont. Washington became peacemaker, and Vermont afterward joined the Union as the fourteenth state. New York was in dispute with New Jersey and Connecticut concerning trade. Various states kept troops, or entered into compacts in direct violation of the Articles.

The national treasury was in a deplorable condition. A great war debt hung over the country, and the soldiers were clamoring for their pay; but Congress was powerless. In March, 1783, the army was inflamed by a series of articles, known as the "Newburg Addresses," by Major John Armstrong, which set forth the grievances of the army and indirectly counseled

**State
quarrels.**

**Congress flees
from the
soldiers.**

¹ From November 1, 1781, to January 1, 1786, Congress made requisition for more than \$10,000,000 and secured less than one fourth of that sum.

violent measures to obtain redress. The addresses soon bore fruit. In June of the same year a band of eighty soldiers broke camp at Lancaster, marched upon Philadelphia, drew up before the state-house where Congress sat, and demanded their pay at the point of the bayonet. Congress appealed to the state for protection, but neither the state nor the city was able or inclined to furnish it; and this august body of lawmakers, which had raised armies to grapple with the British Empire, had issued the Declaration of Independence, and had concluded treaties with the greatest nations of the earth,—this body now fled from a few of its own soldiers and found refuge in the college at Princeton. Rioting was rampant in many parts of the country. At Concord, Massachusetts, the judges were driven from the court by an armed mob, and the same thing occurred at Northampton and other towns.

The states were supreme. Congress was held in contempt, yet that body made an honest effort to manage the government and to pay the national debt. In 1781 Congress proposed an impost duty of five per cent on certain articles, in order to raise money to pay the public debt. But the consent of all the states was necessary. Twelve consented, but Rhode Island refused, and the project fell to the ground. In 1783 a strenuous effort was made to amend the Articles so as to give Congress the power of laying imposts. Twelve states again consented, including Rhode Island; but New York, swayed by George Clinton, whose statesmanship was too narrow to expand beyond his own state, refused, and again the project came to nothing. A third attempt was made in 1784—an attempt to get the states to give Congress power to exclude from our ports vessels whose respective governments did not have commercial treaties with us; but this effort also ended in failure.

Deplorable indeed was the condition of the country during the years just preceding the breaking of the dawn. Our credit in Europe was dead. Jefferson, who had succeeded Franklin as minister to France, labored in vain to secure further loans and more favorable trade conditions with that country; and John Adams and John Jay had similar experiences at London and Madrid. The half-barbarous hordes of North Africa insulted our flag with impunity, destroyed our shipping in the Mediterranean, and openly sold American citizens into slavery in the markets of Tripoli and Algiers. But Congress could not protect its citizens at home—how could it do so in lands beyond the seas? One

Foreign relations.

of the most serious menaces to the country came from the far Southwest. Spain, through her envoy, Gardoqui, decided to close the lower Mississippi to American shipping; and John Jay, our foreign secretary, after a year's protest, agreed to the project in order to win a commercial treaty from Spain. Instantly the settlers of the great valley were up in arms. The closing of the great waterway, they declared, would ruin them, and rather than submit to it, they would secede from the Union and throw themselves upon Great Britain for protection. But New England wanted the commercial treaty and cared little for the navigation of the Mississippi. That section now talked secession, if the Jay-Gardoqui treaty were not accepted by Congress. Pennsylvania and New Jersey were neutral and held the balance of power, but at length they threw their weight with the South, and the treaty was rejected.

In 1786 the country was again deluged with paper money, issued, not by Congress, but by the several states. The people clamored for it as Israel cried for quail in the wilderness, and the issue was so profuse as to ruin trade and business. Most of the states yielded to the demand of the people; and the refusal of Massachusetts to do so, coupled with a decision to pay her quota to Congress, caused an uprising led by Daniel Shays, known as Shays's Rebellion. Shays had a following of some two thousand men, mostly debtor-farmers, and Governor Bowdoin was obliged to send General Lincoln to disperse them. This rebellion, perhaps, did more than anything else to arouse in the lovers of peace and order a sense of the need of a stronger government.

Such was the condition of national affairs under the Confederation. Congress had but the shadow of power, and the national authority was a dream. But the seeds of discontent were taking root in many hearts. Wise men saw that unless a stronger government were formed, the fruits of the Revolution would be lost and the opportunity of the new civilization in the Western World would be fatally impaired. Washington looked with dismay upon the drifting of the people toward anarchy. As early as June, 1783, he had written a long circular letter to the governors of all the states, in which he urgently recommended "an indissoluble union of the states, under one federal head." But in one thing there was already an important nucleus of nationality; one solid foundation stone had been laid, and that consisted in the possession by the general government of the western lands, a vast tract equal in extent to all the thirteen states

combined.¹ In July, 1787, an ordinance was passed by Congress to govern the Northwest Territory, between the Ohio River and the lakes. This famous "Ordinance of 1787" provided for the government of that region, and for its ultimate division into states, and above all, it excluded slavery forever from the territory.² By this act Congress exercised sovereign power which had not been granted by the Articles, and yet there was no outcry against it. It was one of the signs that pointed to a closer union and a stronger government. This ordinance, which was ratified by the first Congress under the Constitution, has been rightfully pronounced next in importance to the Declaration of Independence and the federal Constitution in its results for the United States.³

THE ANNAPOLIS CONVENTION

While governmental affairs were in this almost chaotic condition, while the country was in a state of distraction over the New England riots, the flood of paper money, and the pending Jay-Gardoqui treaty, — early in the year 1786, — a very important step was taken in the right direction. The legislature of Virginia called a convention to be held at Annapolis — or rather invited the other states to join in such a convention, — for the purpose of considering trade conditions. This call, occasioned by the commercial problem, originated with James Madison, one of the ablest among the nation builders of that period.

At the little city by the Chesapeake the convention met in September, 1786. But twelve delegates were present, representing five states, neither New England nor the extreme South being represented.⁴ The convention, too small to be truly a representation of the whole country, did not discuss the condition of trade, and it would scarcely be remembered but for the one thing it did — it called another convention, to be held the following spring in Philadelphia. The call was drawn up by the brilliant young delegate from New York, Alexander Hamilton.

¹ Not all the states owning western lands had yet ceded them, but they were morally bound to do so, as it was understood that they would follow the example of New York and Virginia. The last cession, by Georgia, was made in 1801.

² A similar ordinance, framed by Jefferson in 1784 for the government of the southwestern territory also, was rejected by Congress on account of an antislavery clause.

³ Channing's "United States," p. 113.

⁴ Delegates from various other states were on their way to Annapolis when they heard that the convention had adjourned.

There was much doubt as to what would be the response to this call, so widespread was the passion for state rights, and so little did the masses realize that the ills of the country were largely due to a want of government. Congress, then sitting in New York, hesitated long before sanctioning the movement, and gave its approval only after six states had elected delegates. Virginia took the lead, and Virginia was led by Madison, who made a master stroke by having Washington put first on the list of delegates. This, it was well known, would give tone and dignity to the movement, as Washington was the popular idol in every state. But Virginia did nothing better than to send Madison himself to the convention. The other states followed her example, until twelve of them had chosen delegates, Rhode Island alone refusing to take any part in the proceeding.

The approach of the time for the Philadelphia convention was marked by a general interest among the people. The convention was called ostensibly to amend the Articles of Confederation; but it was generally felt that it would go beyond its instructions and propose a new government. What would be the outcome no one could surmise. Some favored a monarchy;¹ a larger number preferred that three republics be set up — one comprising New England, a second the Middle states, and a third the Southern states; but the great mass of the people preferred that there be one government, and that a republic. The people were in a quiver of uncertainty as to what would be done or should be done; they only knew that something must be done, and that soon, if the country was to be preserved. Meantime the Constitutional Convention met, and after a four months' labor it gave birth to that great document which still is, and will doubtless be for many generations to come, the supreme law of the land — a document that the great British statesman, Gladstone, pronounced the "greatest work ever struck off at any one time by the mind and purpose of man"; and to the story of the making of this instrument we shall devote the next chapter.

¹ Colonel Louis Nicola, who favored a kingdom, had written to Washington in 1782, urging him to accept the crown at the hands of the American people. Washington answered that the scheme was odious to him, and enjoined Nicola as his friend to mention it no more.

NOTES

Society of the Cincinnati. — The society known as the Cincinnati was first suggested by General Knox, and was organized at the headquarters of Baron Steuben, near Fishkill, New York. Washington was made the first president, and he continued to hold the office until his death. The society was composed of the officers of the Continental army, and its object was to promote friendship and to aid any of the members that might be in want. To perpetuate the society it was provided that the eldest male descendant of each of its members should be entitled to membership. The badge of the order was the figure of an eagle in gold, on the breast of which was a medallion representing Cincinnatus at his plow receiving the Roman senators. There was a great outcry from the people against the Cincinnati. It was believed that this was the beginning of an order of nobility, or at least of an aristocracy that would ever hold itself above the common people. But this fear was all unnecessary, for while the society still exists, it plays but a small part in the social life of America.

State Governments. — The states had been authorized by Congress, as stated before, to form governments; and each had adopted a constitution, except Rhode Island and Connecticut, which merely dropped the king's name from their public documents. The states, thus suddenly clothed with unusual powers, naturally took much pride in their new condition; and this state pride, as noted in the text, made the forming of a union exceedingly difficult. But it is a remarkable fact that in few cases was this newly acquired liberty so abused as to produce anarchy or violence. The cause of this cool-headed, conservative manner in which the states set about governing themselves is twofold: first, the fact that the people had long enjoyed a large measure of liberty and knew how to use it; second, the instinct for order and the reign of law that characterizes the Anglo-Saxon race. The legislative assemblies of the old days were continued by the states, the members representing the counties, except in New England, where they represented the townships. There was also an upper House or Senate (added in Pennsylvania and Georgia a few years after the war) in each state, and a governor, except in a few states where an executive council at first took the place of governor. But in framing their first state constitutions the people remembered their troubles with the old royal governors, and gave the new governors but little power. The judicial systems remained much the same as under the colonies. In every state a property qualification was required of voters, and in many a religious test was applied. Universal manhood suffrage was a gradual growth, and came with a later generation.

CHAPTER XVI

THE CONSTITUTION

THE Constitutional Convention met in the same city, the same building, and the same room from which had issued the great Declaration of Independence eleven years before. It was composed of the best brains of the land, though a few of the leading characters were conspicuously absent. John Adams and Thomas Jefferson were serving their country in Europe; Patrick Henry had been elected, but he refused to serve, so wedded was he to state rights; and we look in vain for Richard Henry Lee, for Samuel Adams, and for John Hancock, all of whom feared a stronger government, lest the sovereignty of the states and the liberty of the people be endangered.

THE MEN THAT MADE IT

An abler body of statesmen has not assembled in modern times than that which made our Constitution in 1787, nor has any assembly met with truer motives, or produced a grander result. The whole number of delegates was fifty-five,¹ and there was scarcely a man among them who had not been distinguished in the state or in the field, who had not been a governor, a member of Congress, or a commander in the army. A few had served in the Stamp Act Congress in 1765, others had set their names to the immortal Declaration in 1776, and one had framed the plan of union at Albany in 1754. Could these men have looked into the future, they would have seen two of their own number become Presidents of the United States, one a Vice President, and many others foreign ministers, members of the Supreme Court, Cabinet officials, and United States senators. These were the men who founded the Republic and started it upon its marvelous course of prosperity.

First among the framers of our Constitution stands Washington, the soldier-statesman, and next to him we must place Franklin, the

¹ A few others had been elected who did not attend.

philosopher and diplomat, and the oldest member of the convention. Among the most conspicuous members was John Dickinson, who was remembered for having honestly opposed the Declaration in 1776, but whose sincere patriotism could never be questioned. The most learned lawyer in the convention was James Wilson of Pennsylvania, afterward justice of the Supreme Court. For profound knowledge of constitutional law few surpassed the youthful Madison of Virginia, who came to be called the "Father of the Constitution"—not that he framed it, for it was the work of many, but because he had perhaps more to do in making it what it is than any other man. Scarcely below Madison stood the still more youthful Hamilton of New York, destined to a brief, brilliant political career, to be ended in its noonday at the hands of the duelist. In this convention we find Robert Morris, the financier of the Revolution, and Gouverneur Morris, the author of our decimal system of money. We find here Edmund Randolph, the popular governor of Virginia, who, as a patriot youth with a Tory father, had run away from his home, joined the army, and served through the war, and who, returning home, had found himself one of the most popular men in the state. He rose to the governorship, and afterward became a member of the first Cabinet in the new government. Here also were John Rutledge, the brilliant orator of South Carolina; Charles C. Pinckney, afterward a member of the famous mission to France and twice candidate of his party for the presidency of the United States; Roger Sherman, the shoemaker statesman from Connecticut; Rufus King, who was yet to spend many years in the forefront of political life; Elbridge Gerry, whose name furnished us with the political term, "gerrymander," who spent many later years in public life, and who held at his death the second official position in the United States. These were the leaders of the notable assemblage that gathered at Philadelphia for the purpose of forming a more perfect union, of laying the foundations of a nation.

BUSINESS OF THE CONVENTION

On May 25, 1787, the convention held its first regular session, though some of the delegates did not arrive for several weeks. George Washington was chosen chairman, and the doors were closed to the public.¹ As was generally expected, the convention made no

¹ The members pledged themselves to secrecy, as they wished to present their work to the public, not in fragments, but as a whole. Madison, however, took

attempt to amend the Articles of Confederation; it proceeded at the outstart to frame a new instrument.

Many of the delegates were ready to temporize, to deal in half measures, to produce an instrument that would "please the people." Others favored doing thorough work, of abolishing the Confederation and founding a federal republic. Among these was Washington; and he carried the day in a brief speech — one of the noblest speeches he or any statesman ever uttered. "If, to please the people," said he, "we offer what we ourselves disapprove, how can we afterward defend our work? Let us raise a standard to which the wise and the honest can repair; the event is in the hand of God."

The Virginia delegates had carefully framed a form of government, which had been drawn up by Madison after consulting with others, and it was presented to the convention by Governor Randolph. This "Virginia Plan" provided for a complete change of government, for the formation of a federal union, with three coördinate branches of government — a legislative, an executive, and a judicial; and, most radical of all, it provided that the individual, and not the state as such, be directly responsible to the general government.

So radical were the changes proposed by this plan that it called forth another known as the New Jersey Plan, or the small state plan. This was presented by William Paterson of New Jersey.¹ It was a mere proposal to amend the Articles of Confederation. It provided for a plural executive and a judicial department, and gave enlarged powers to Congress. But it gave the small states equal power in Congress with the large ones, and continued the old way of making the state instead of the citizen responsible to the nation. This plan, however, was defeated; and the Virginia plan, after many modifications, became the Constitution of the United States.

The long debates, which it is needless for us to follow, often became bitter, and on two or three occasions the convention came near breaking up. So unlike were the interests of the various sections represented that the delegates could agree only by compromis-

elaborate notes of the proceedings, and his notes were published only after his death, fifty years later. Many were the speculations of the people as to what the convention would do, and the members were deluged with letters from their constituents. Would they set up a kingdom? would the country be divided? would Rhode Island be cast out of the Union for not taking part? and many other such questions came from the people.

¹ Two or three other plans, or partial plans, were presented, but not considered. One of these, presented by Hamilton, was almost monarchial in its tendencies.

ing; and our Constitution is founded on three great compromises, the first of which was between the great and the small states.

Under the old Confederation the states had each one vote in Congress, regardless of size, wealth, or population; but the Virginia plan now proposed that the states be represented in the Congress, consisting of two houses, according to population or wealth. Instantly the small states were up in arms. The greatest state, Virginia, would then have sixteen votes, while Georgia or Delaware would have but one. No, they would submit to nothing of the sort; the large states would combine against the small ones, and the voice of the latter would not be heard in national affairs, and they would be reduced to a subordinate position. After a long, wrangling debate on this subject a compromise was reached. It was agreed that in the lower House the representation be based on population, while in the upper House, or Senate, each state be equally represented without regard to its population, wealth, or its territorial extent.¹ Thus each state has two senators, while in the House of Representatives the number of its delegates is determined by its population. The Senate, therefore, was intended to represent the states, and the House the people.

The second compromise was between free and the slave states. The Northern states all had slaves before the Revolution, but they were now obviously drifting toward emancipation, while the institution was strengthening in the far South; and the dispute that arose in the convention over slavery was the beginning of that long and dreadful conflict which covered three fourths of a century and ended in a final appeal to the sword. The quarrel over this point was sharp and passionate, but it ended in compromise. Before it was decided whether to base the lower House on population or on wealth the question arose, Are slaves population or wealth? The northern delegates contended that as slaves had no vote and were bought and sold like other property, they should not be counted in the census that made up the representation in Congress, and in laying direct taxes. The South objected to this, claiming that all the slaves should be counted; and there was a deadlock. Madison suggested that, by way of compromise, three fifths of the slaves be counted. The South agreed to this, and the practice continued to the Civil War.

¹ At this juncture Yates and Lansing of New York, and a little later Luther Martin of Maryland, all of the extreme state rights party, went home in disgust.

The third compromise, between commercial and agricultural states, also touched upon the slavery question. New England desired that Congress be given full control over foreign and interstate commerce. The southern delegates, fearing an export tax on farm products and a prohibition of the slave trade, desired that each state control its own commerce, as under the old régime. Another deadlock ensued. Before this question was settled another arose: Shall the African slave trade be prohibited? A large majority of the delegates opposed the foreign slave trade, and would have shut it off forever; but South Carolina and Georgia objected in thunder tones. They must have a constant supply of blacks for the rice swamps, they said, and they would not join the Union if the question were decided against them. The debates were fierce and the convention seemed on the verge of dissolution, as it had been several times before. Could a union really be formed? Some of the wisest men feared that their efforts would result in failure. Rhode Island had taken no part in the convention; the New York delegates had gone home in anger; Massachusetts was uncertain. If now the Southern states refused to join, it was certain that no union could be formed.

Two important questions were now before the House and again harmony was restored by compromise. The South yielded to New England, and Congress was given control over commerce (except that it was forbidden to lay an export tax); the North yielded to the slaveholders, and the African trade was left open, not forever, but until the year 1808.

**Third
compromise.**

The most arduous work of the convention was now at an end, but many minor matters remained to be settled. The creating of a Supreme Court; the relations of the two houses of Congress to each other and of both to the executive; the powers of Congress, of the executive, and of the judiciary; the length of the various terms of office, — these and many other things were fully debated, and were at length decided as we have them in the Constitution.¹ It was decided that there be but one executive (though some preferred a plural executive), and that he should be styled the President of the United States of America. It was also decided that he be elected by Congress for a term of seven years, and that he be ineligible for reelection. Thus the matter rested for several weeks, when it was again taken up. Many

**Minor
decisions.**

¹ Some of these questions, however, had been debated from time to time, and were decided before the three great compromises were fully disposed of.

objected to the electing of the President by Congress, as he would then be but a creature of that body and subservient to its will. The same objection was urged against his election by the state legislatures. An electing by a general vote of the people was favored by but one state—Pennsylvania. At length it was decided that the President be elected for four years, that he be eligible for reelection, and that the choice be made by an electoral college created for the purpose, and dissolved, after doing its work, into the great mass of the people, so that the President would be responsible to the people alone. This feature was borrowed from the constitution of Maryland.

No part of the Constitution was more earnestly and honestly considered than the method of electing the President, and no part of it is now carried out with such an utter disregard of the spirit and intention of the framers. It was intended that the electors use their discretion in choosing a President; but the people, as they grew more intelligent and divided into political parties, took the business of president-making into their own hands, retaining the electoral college, now a lifeless piece of machinery, only to carry out the letter of the law.

The Constitution of the United States is by far the most important production of its kind in human history. It created, without historic precedent, a federal-national government. It combined national strength with individual liberty in a degree so remarkable as to attract the world's admiration. Never before in the history of man had a government struck so fine a balance between liberty and union, between state rights and national sovereignty. The world had labored for ages to solve this greatest of all governmental problems, but it had labored in vain. Greece in her mad clamor for liberty had forgotten the need of the strength that union brings, and she perished. Rome made the opposite mistake. Rome fostered union—nationality—for its strength until it became a tyrant, and strangled the child Liberty. It was left for our own Revolutionary fathers to strike the balance between these opposing tendencies, to join them in perpetual wedlock in such a way as to secure the benefits of both. A century of experience, it is true, was needed to adjust this balance as we now have it, but the whole substructure to our national edifice was laid at Philadelphia in 1787.

Yet there is little in our Constitution that was created by its framers. Much of it is as old as Magna Charta, says Mr. Bryce. The words of Mr. Gladstone, that it is the greatest work ever struck off

at any one time by the mind and purpose of man, are in one sense misleading. The work was not struck off at one time. The framers of the Constitution gleaned from history, from the mother land, and especially from the various state constitutions. As noticed in a former chapter, the earliest colonial governments were based on the charters of trading corporations; the colonial governments were then transformed into the earliest state constitutions, and these became the basis of the federal Constitution.¹

It will be interesting here to notice the sources of a few of the features of the national Constitution. From the constitution of Maryland we have a small Senate with a long term of service, and the idea of an electoral college for choosing a President and a Vice President;² from the constitution of New York, the periodic readjustment of the representation after each census, and the Vice President's duty to preside over the Senate and to vote only in case of a tie.³ From the constitution of

**Sources of the
Constitution.**

Massachusetts were derived the powers and duties of the two houses with respect to impeachments.⁴ The power of the executive to veto an act of the legislature and the requirement of a two-thirds affirmative vote for its repassage were in use in Massachusetts. A few features, as the judiciary system, the short term for the lower House, and the single executive, were common to nearly all the states. Other features, as army appropriations limited to two years, are analogous to English customs;⁵ while the two-chambered legislature had its models in Parliament, and in all but two states.

We find in the Constitution a few features original with the framers, such as the isolated position of the President, the basing of representation on population, and many minor details. But on the whole the instrument was a compilation, not an original production. It was the culmination of the institutional growth of two centuries — a tree with trunk and branches purely American, grafted on an English root. The framers of our Constitution were very wise — too wise to draw on their imagination, or to base the government of a nation on theory. No man, or body of men, can create systems of

¹ This subject is ably discussed by W. C. Morey in a series of articles in the "Annals of the American Academy of Political and Social Science," Vols. I and IV.

² Maryland chose her senators through an electoral college composed of two persons from each county.

⁵ "Federalist," No. 61.

government. They must grow. Had these men attempted to create a chimerical structure, their work would have been valueless. But they displayed great wisdom in selecting the best things that had been tried and proved, and in but few points did they choose unwisely. Hence their great success. Hence the astonishing fact that this same Constitution is still the supreme law of the land, and is more deeply imbedded in the American heart to-day than ever before.

The new instrument differed from the old Articles chiefly in creating three great coördinate departments — legislative, executive, and judicial; in making the citizen rather than the state amenable to national law; and in withholding from the states, and vesting in the national government, powers the exercise of which pertain to the whole people—to coin money, to wage war, to deal with foreign nations, to lay a tariff, and the like. One of the most important clauses in the Constitution is the “supreme law” clause, by virtue of which the Supreme Court came to exercise the power to interpret the Constitution, and to pronounce upon the constitutionality of the acts of the legislative branch of the government, a remarkable power, enjoyed by no other judicial body in the world.

The great work of the convention was completed, and the document was signed by thirty-nine delegates on the 17th of September. It did not fully meet the ideas of any one; each had yielded his convictions at some point. But it was believed to be the best attainable at the time, and all the delegates except sixteen, all but three of whom had departed for their homes,¹ put their names to it, not one of them perhaps believing that it would stand for half a century.

After providing for amending the Constitution, and for its going into operation when nine states should ratify it, the delegates sent it to Congress, then sitting in New York. That body sent it forth to the various states without a word of approval or disapproval.

THE CONSTITUTION BEFORE THE PEOPLE

The ship Constitution had experienced a rough voyage thus far; but the most dangerous breakers were still ahead. Nearly half the people opposed the new plan of government, and a bitter contest resulted. Those favoring the Constitution called themselves Federalists, while they dubbed their opponents Anti-federalists. The cry of the Anti-federalists was

¹ Randolph and Mason of Virginia and Gerry of Massachusetts were the three remaining delegates who refused to sign.

that the new government would be too strong and too centralizing. There was a vague fear that Congress would become a tyrant, would crush the liberties of the people and tax them without their consent, as England had attempted to do before the war. The farmers cried out that the lawyers and men of wealth would control the government and would swallow the common people like a great leviathan. Among the opponents we find such leaders as Patrick Henry, Richard Henry Lee, and George Clinton; and, in a milder degree, Samuel Adams and John Hancock. These men were sincerely honest in their opposition; but they labored at a serious disadvantage in that their position was purely negative—they had nothing to offer instead of the plan they sought to defeat. The Federalists were not very enthusiastic in their praise of the Constitution; but they asserted that it was the best attainable, that disunion and anarchy would prevail if it were rejected, and that the fears of its opponents were groundless, as the government would still be in the hands of the people. The most powerful argument for the Constitution was brought out in a series of papers, written mostly by Hamilton,¹ and since known collectively as “The Federalist.” On the other side Richard Henry Lee was the foremost writer.

Some of the state conventions, chosen to consider the new plan, wrestled for weeks over the subject, while others ratified it after a few days' debate. Delaware won the honor of being first to ratify it, the action being unanimous. Pennsylvania came second. In this state the people were almost equally divided, but the Federalists held a “snap” convention and won the day, after a fierce contest. New Jersey came third and, like Delaware, ratified the plan by a unanimous vote. These three states had acted in December, 1787, and the new year brought others, month by month, into the Union. Georgia was bounded on the south by troublesome Spaniards, and on the west by hostile Indians. The people of the state therefore gladly accepted the promised protection of a stronger government; they ratified it without division on January 2, and Connecticut followed a week later.

Thus within four months after the breaking up of the convention that had framed it, the new Constitution was adopted by five states. But now came a halt. The Anti-federalists had been half asleep. Now they roused themselves and formed in line of battle for a more determined opposition; and many a time during the coming months it seemed that the new Republic would die while being born. It

¹ Madison wrote several of the papers and John Jay a few.

was left for the great state of Massachusetts to turn the scale. Next to Virginia, her weight was the greatest among the states. Her convention sat for several weeks and discussed the Constitution, article by article, and it would doubtless have been rejected but for two things — the wholesome lesson taught by the insurrection led by Daniel Shays, and the ultimate conversion of Samuel Adams. Adams was extremely democratic in his theory of government. He feared too much centralization of power, and at first opposed the new plan. But he was an honest soul; he reflected that a rejection of the Constitution, with nothing to offer in its place, might be disastrous. During the early weeks of the convention he sat meditative and silent. Many turned to him as children to a father, to decide the momentous question. And further, a committee from a great meeting of artisans, headed by Paul Revere, famous for his midnight ride of years before, came to Adams with a series of resolutions begging him to favor the new government. Adams was deeply moved, and at length he decided for the Constitution. John Hancock experienced a similar conversion, and Massachusetts soon after ratified the

February 6,
1788. new plan by a narrow majority, proposing at the same time a series of amendments in the nature of a bill of rights. Maryland and South Carolina followed late in the spring, and but one state was now wanting to insure the formation of the Union. The Old Dominion, which had called the Annapolis convention and had taken the lead in furnishing the plan of government at Philadelphia, still held aloof. Even more powerful than in Massachusetts was the opposition in Virginia. Arrayed on the negative side we find George Mason, who had helped to frame the Constitution and had then refused to sign it, Richard Henry Lee, who had opposed it from the beginning, and Patrick Henry, the orator of the Revolution. Against these were the weighty influence of Washington, the keen logic of Madison, and the powerful judicial mind of the rising Chief Justice, John Marshall. Jefferson, who was then in France, wavered and hesitated to give his support, and the Anti-federalists were quick to claim him as their own; but, like the great New England democrat, he at length came to favor the Constitution and gave it his hearty support, urging at the same time that it be carefully amended.¹ His letter conveying these views reached Madison early in June, while the convention was in session, and had its weight in the final decision. The vote was taken on June

¹ Fiske's "Critical Period," p. 351.

25, and the new plan received a majority of ten in a vote of one hundred and sixty-eight delegates. But Virginia did not become the ninth state; New Hampshire preceded her by four days. The Union was now assured. The Federalists rejoiced exceedingly. The coming Fourth of July became a day of jollification, especially in Philadelphia, where the street spectacle surpassed any before seen in America.

The importance of New York to the Union was incalculable. It was the commercial center of the country. It alone bordered the great lakes and the ocean. A majority of the people, led by Governor George Clinton, opposed the Union. Hamilton led the other side. For many months it seemed that the state would refuse to ratify the Constitution; but when she was about to be isolated from the rest of the country, her people began to reflect more seriously, and late in July, 1788, the convention was carried by the Federalists. At the same time it called for a new national convention to frame a better Constitution; but little heed was paid to this call, and it came to naught.

Two states, North Carolina and Rhode Island, owing to their paper money heresies, still remained sullenly out of the Union, the former adjourning its convention without action, the latter refusing to call a convention. But at length, after the first amendments to the Constitution had been assured, and after the new government had been organized, and the President seated, and when the United States revenue laws were about to be enforced against them, these states sought admission to the sisterhood, and the whole thirteen became united in one strong government. Never before had any people wrought so great a political revolution without bloodshed. From a loosely bound confederacy that lacked the power of governing, the people, deliberately, thoughtfully, without drawing a sword, with no pressure from without, banded together and founded a nation, and based it on a firm and abiding foundation. Never did the American people so exhibit their moderation, their capacity for self-government, as when they adopted the Constitution.

THE FIRST PRESIDENT

In our days it is not possible to foretell absolutely who will be our next President; only the coming together at the polls of the great political forces of the nation can determine it. In 1789 the

case was different. All eyes turned instinctively to the great chief-tain who had led the armies to victory, and who had shown himself a statesman as well as a soldier. The electoral colleges were made up of men chosen by the different states, mostly by the legislatures. The old Congress had decided that the electors be chosen on the first Wednesday in January, 1789, that they meet and choose a President and a Vice President on the first Wednesday in February, and that the new government go into operation on the first Wednesday in March — which happened that year to be the fourth.¹ North Carolina and Rhode Island had not yet joined the Union; New York had trouble in her legislature and failed to choose electors; the first President was therefore elected by the votes of ten states. Washington received the votes of all — sixty-nine. The rest of the votes were scattered among eleven men, and John Adams, receiving the highest number, thirty-four, was declared Vice President.²

Washington was doubtless ambitious, as other men are; but he had reached the goal. No other man of his age had won so great a fame, and now at the approach of old age he had retired to his rural home on the banks of the Potomac, desiring to spend there the remainder of his days, as his private correspondence shows. But the call of a whole people to this new duty he could not decline.

The 4th of March came, and the boom of cannon and the ringing of bells sounded the knell of the old government that **March 4.** was dying, and announced the ushering in of the one that was being born. New York City had been chosen as the first temporary capital, and thither repaired the newly elected members of Congress. But the distances for many were long, and the roads at that season were wretched. There was not a quorum present on the 4th of March. It was not until the 1st of April that the new House held its first session, the Senate meeting five days later. The first business was going through the formality of notifying the newly chosen President and Vice President of their election. This done, Congress fell to discussing a tariff measure; but the discussion was soon interrupted by the inaugural ceremonies.

Adams, arriving first, was quietly inaugurated on April 18.

¹ A few years later the 4th of March was made the legal inauguration day by act of Congress.

² The Constitution directed that each elector vote for two persons without designating which should be President or Vice President. This was changed by the Twelfth Amendment, of 1804, which provides that the President and Vice President be elected separately.

Washington's journey from his Mount Vernon home to New York was like a triumphal march. The people gathered in uncounted numbers along the route to do honor to the hero. At Philadelphia and Trenton the most elaborate preparations were made for his reception.¹ Reaching Elizabeth Point, in New Jersey, he was met by many distinguished citizens, and with an improvised fleet, Washington in the midst on a barge built for the occasion, they swept up the beautiful bay on that sunny Thursday to greet the expectant city. New York had donned holiday dress. The streets were thronged, and thousands were gathered along the wharf at the Battery, eagerly awaiting the approaching vessels. As Washington stepped from the barge he was greeted with an outburst of welcome, that spread like a rolling billow over the city.

Washington's journey.

One week later, on Thursday, April 30, the inauguration took place at Federal Hall, on the corner of Broad and Wall streets. At noon Washington, accompanied by Livingston and Adams, stepped out on the balcony and stood in the presence of a vast multitude that filled the streets, the housetops, and the windows, and the cheers that arose were deafening. Just behind him stood Hamilton, Roger Sherman, and three Revolutionary generals — Knox, Steuben, and St. Clair, — and these were followed by both houses of Congress. Livingston pronounced the oath of office; Washington bowed and kissed the Bible, and said in a deeply solemn and scarcely audible voice, "I swear, so help me God." His countenance was grave almost to sadness, reported an eyewitness. Livingston turned to the crowd, waved his hand, and shouted "Long live George Washington, President of the United States"; and the voice of the multitude rose in cheer after cheer, the artillery roared from the battery, and bells were rung all over the city. Thus was the United States of America, under its first President, launched upon the ocean of national life.

NOTES

Constitutional Amendments. — The Constitution provides for its own amendment, but the process is so difficult that little short of a great national upheaval can bring about an amendment. At first, however, when nobody was satisfied with the Constitution, the case was different. Seven of the states on ratifying it proposed amendments, in the aggregate over a hundred, many being mere repetitions. These were duly considered by the House, which boiled them down to

¹ For a fuller account see Elson's "Side Lights," Vol. I, Chap. III.

seventeen, and the Senate reduced this number to twelve. These were sent to the states, which ratified ten of them. These first ten amendments were added to the Constitution before the close of 1791. They are practically a bill of rights, and their adoption was a concession to the Anti-federalists. The Eleventh Amendment was adopted in 1798 and the Twelfth in 1804. After this, the Constitution was not amended for sixty-one years, the last three, concerning negro slavery and citizenship, following the Civil War.

Within the first hundred years more than eighteen hundred proposed amendments were introduced in Congress. Aside from the fifteen that were adopted, four others passed both houses, but failed of ratification by the requisite number of states. (Ames, "Proposed Amendments," p. 300.) The difficulty of amending the Constitution has been partially met by its elasticity, by a method of interpretation by which it meets the needs of to-day almost as well as those of the time when it was adopted. This is clearly shown by our method of electing a President. But we are yet without a remedy for the obvious unfairness in counting the minority vote of any state for nothing in a presidential election.

Defects in the Constitution.—A century of experience has taught us that there are some serious defects in the Constitution which cannot be corrected by mere custom, but the machinery of amendment is so difficult to manipulate that we suffer them to remain. One of the most serious defects is that foreigners dwelling within the bounds of a state are subject to the jurisdiction of that state, as its own citizens, while the state has no foreign relations whatever. The most conspicuous example in history was the case of McLeod, a Canadian who was tried in 1841 in New York for destroying the *Caroline*. England was demanding his release of the United States; but the United States had no power to command New York to give him up, and New York had no relations with England. War was averted only by the acquittal of the prisoner. Another example is found in the massacre of a number of Italians in New Orleans in 1891. This defect, which arises from our dual system, could be remedied by an amendment authorizing the national government to take any case of a foreigner, requiring international correspondence, out of the hands of any state. Another defect is found in the clause that requires a majority, instead of a plurality, of the electoral college, to elect a President and a Vice President, and in case of its failure to elect, a majority of the states (each state having one vote) to elect in the House. Were there three instead of two great political parties, both the college and the House might fail to elect, and serious trouble might be the result. If a plurality could elect, a failure would be almost impossible. There are also minor changes that doubtless a majority of the people would like to see brought about, as electing the President by direct vote of the people, giving him a longer term without eligibility for reëlection, giving him power to veto items in appropriation bills, the election of United States senators by popular vote, giving Congress the control of divorce laws, and the like. But many years will probably pass before such changes are made.

CHAPTER XVII

TWELVE YEARS OF FEDERAL SUPREMACY

THE inauguration of Washington differed from all succeeding inaugurations in time, place, and ceremonies. No other was held in New York, no other in April,¹ and no other was attended with such ceremony. Throughout his administration Washington maintained a dignity that at this day would seem ridiculous. When he held receptions or levees, he stood in a large reception room, clad in black velvet, wearing yellow gloves, and knee and shoe buckles, his hair heavily powdered and done up in a silken bag. In one hand he held a cocked hat adorned with a black feather, and at his side he wore a long sword in a white scabbard of polished leather. He bowed stiffly to his guests and did not shake hands with any one. He drove along the streets in a fine coach drawn by four or six white horses, with footmen in bright uniform. Washington's ceremony did not indicate that he desired to hold himself aloof from the common people or to dazzle them with his person. He honestly believed that such a course was necessary to maintain the dignity of his office. Nevertheless, Washington was a natural aristocrat, and it was not difficult for him to assume the dignity almost of a European monarch.

He took the oath of office, as we have stated, in the presence of the multitude, but he read the inaugural address a few minutes later within the senate chamber, and at its conclusion the whole body proceeded to St. Paul's chapel on Broadway for a religious service. A few days later the Senate and House marched in stately pomp to the President's house, and made formal replies to his inaugural. The same practice was followed with reference to the annual message; the President delivered it orally to the assembled Congress, and the latter made a formal answer a few days later. This custom was in vogue for twelve years, when Jefferson abolished it and

¹ Except the accidentals of Tyler and Johnson.

instituted the present method of sending a written message, requiring no answer. The practice of delivering the inaugural address in person and orally has, however, come down to us unchanged.

For a hundred years no President has officially appeared before Congress in person except at memorial services and the like. It was different in Washington's time, and at least on one occasion Washington entered the senate chamber, took the Vice President's chair, and urged the passage of a certain measure.¹

THE FIRST CONGRESS

No Congress in our history, with the possible exception of the one that assembled in 1861, has had devolving upon it such vast responsibilities as that which assembled in the spring of 1789 — the First Congress.

The Constitution was but an outline of a government, a skeleton to be clothed with flesh and blood, and to receive the breath of life. The duty of making the new government a living thing fell largely to the First Congress. Many acts of this Congress were of permanent importance and are still in force, such as the creating of a Cabinet and of the judiciary system, the establishing of a financial basis for the country, and determining the location of the national capital.

The body of men that composed the First Congress was notably inferior to the body that had framed the Constitution two years before. We note the absence of the venerable Franklin, of the President, of James Wilson, of Hamilton — all of whom were leading figures in the Constitutional Convention. Yet there were good men in this Congress.

In the Senate we find Robert Morris, Richard Henry Lee, George Read, and Charles Carroll, signers of the Declaration; Ellsworth of Connecticut, Paterson of New Jersey, Rufus King, — lately from Massachusetts, now of New York, — and General Schuyler. In the House also we find some strong men. There was Madison, who became the leader on the floor. He, a future President, had in a hot canvass defeated another future President, James Monroe, and the latter entered the House soon after to fill a vacancy caused by death. There was Frederick Muhlenberg, the Speaker, son of the famous Lutheran patriarch of Pennsylvania;

**Men in
Congress.**

¹ See Maclay's Journal; Hart's "Contemporaries," Vol. III, p. 265.

Jonathan Trumbull of Connecticut; Sumter, the famous South Carolina fighter; and Fisher Ames of Massachusetts, who was to thrill the nation a few years later with an outburst of eloquence unequalled in that generation.

The first important business of Congress was to frame a tariff measure. The new government had inherited a heavy debt. Under the old Articles, the Congress had made repeated efforts to raise money by laying a duty on foreign imports, but the consent of all the states was needed, and one after another had objected, and every effort came to naught. But now no refractory state had power to thwart the will of the nation. For the raising of revenue, therefore, and for the encouragement of infant manufactories, it was proposed to lay a general tariff on foreign imports. The measure became a law on July 4th, and is known as the Tariff of 1789. With occasional amendments, generally slightly increasing the rates, it was in force until 1812, though inoperative during the embargo. Its duties were low compared with those of our own times, the highest being 15 per cent, with a general average of about 8½ per cent. This tariff proved a boon to the country. In a short time it was yielding \$200,000 a month, a sum amply adequate to cover the expenses of the government, and to pay the interest on the public debt.

The second great act of the First Congress was the creating of a Cabinet. The Constitution made no provision for a President's Cabinet as we now have it; but it recognized that such was to exist,¹ leaving all details to the action of Congress. Three departments were created at the first session of this Congress, or rather, they were continued from the old government under new designations. The head of the department of foreign affairs was called the Secretary of State, that of the department of finance, the Secretary of the Treasury, and that of the war department retained the old name, Secretary of War. Washington had decided not to call any one into his official family who was not well known to the people and trusted by them. Thomas Jefferson, who had been minister to France, was chosen secretary of state. Alexander Hamilton was made secretary of the treasury, and General Henry Knox, secretary of war. These men were not appointed until September, nearly five months after the inauguration. A little later Edmund Randolph was

¹ Art. II, Sec. 2. These were intended to be simply heads of departments, but custom has made them also advisers to the President.

appointed attorney general, and he became the fourth member of the Cabinet.¹

Another act of the First Congress that is still in force was a bill organizing the Supreme Court. It was drawn up by Oliver Ellsworth, who afterward became the second Chief Justice. The first Supreme Court was composed of a Chief Justice and five associates, the first Chief Justice being John Jay of New York. The federal judiciary, unlike the Cabinet, was specially provided for in the Constitution. It was created by an act of Congress, and the members are appointed by the President; but the Court is independent of both, and even has authority to sit in judgment on the constitutionality of their acts.²

Many other measures of this Congress, important at the time, were made into law, and gradually that body won the confidence of the people. Washington made a vacation tour to New England, and another to the South, and was received with universal applause. The crops were abundant, the people were happy, and the nation was rising to a point of respectability. It was left for the second session of Congress, beginning in December, to bring the first hitch in the machinery of government; this came through the treasury report of Secretary Hamilton.

Of the great financiers in the history of our country, the ablest, beyond a doubt, was Alexander Hamilton. By far the most difficult position in the first Cabinet was that of the treasury, and the President made a happy choice in giving it to Hamilton. "He smote the rock of national resources," said Daniel Webster, "and copious streams of wealth poured forth. He touched the dead corpse of public credit, and it stood forth erect with life." But the recommendations of Hamilton awakened much opposition. His report to Congress showed that the public debt amounted to some \$54,000,000, of which about \$12,000,000 were owed to foreign creditors, chiefly to France, the rest to creditors at home who had loaned their money to the government during the war. This seemed a great burden to the young Republic; but the most surprising part was yet to come.

¹ Our present Cabinet is composed of nine members. The Secretary of the Navy was added in 1798; the Postmaster General was admitted to the Cabinet in 1829, though his office dated back to colonial times; the Secretary of the Interior was added in 1849, of Agriculture in 1889, and of Commerce and Labor in 1903. Thus the Cabinet has grown as the business of the country demanded.

² Inferior courts were also organized at this session. These are created by Congress as needed; they do not enjoy the independence of the Supreme Court.

The states had sent forth troops, each at its own expense, to fight the British. They had thus incurred heavy debts. Parts of these had been paid, but there was still unpaid an aggregate exceeding \$21,000,000. Hamilton proposed to add this to the national debt (making \$75,000,000 in all); and recommended that the national government assume the state debts, and thus relieve the states from payment.

There was an immediate outcry against assumption. It arose from two causes. One was that some states had paid a large portion of their Revolutionary debts, while others had paid little. Assumption would therefore be unfair to the former. This objection was superficial; the other was deep, and involved a principle. Assumption of the state debts would belittle the states and rob them of their so-called sovereignty. It would subordinate them and transfer the interest of the moneyed class from them to the general government, for "where the treasure is, there will the heart be also."

This was exactly what Hamilton desired. He cared nothing for state sovereignty — not even for state rights. He wished to centralize and strengthen the general government, and to do this he knew that there was no better method than to enlist the interest of the rich men of the country by making it their debtor.¹ But so great was the opposition that the measure could not pass the House, and before the question was settled another one arose. The other question was, Where shall the national capital be located?

A separate city was desired. The handful of soldiers who, a few years before, had swooped down from Lancaster and driven Congress out of Philadelphia, settled that point. Philadelphia and Pennsylvania had refused, or were unable, to protect the Congress. Everybody seemed to sympathize with the soldiers. A separate city, therefore, governed solely by Congress and not by any state, was necessary. To this all agreed; but where should it be built? The southern members preferred to have it in the South; the northern members wanted it in the North. It was gen-

Locating the capital.

¹ To make this plainer: Suppose a number of brothers, each in business for himself, each owed you a sum of money. You would be anxious that they succeed, because your money was invested. But suppose their father assumed these debts and made himself responsible for their payment. Your interest would at once be transferred to the business of the father. Again, suppose a business man finds it difficult to pay his debts and a rich friend does it for him. He is relieved of his debts, but he loses his independence. Thus the states would lose a portion of their importance if assumption were carried. One of the sources of strength in a government is a moderate national debt.

erally agreed that it should be on the bank of one of the three great rivers — the Delaware, the Susquehanna, or the Potomac. Jefferson favored placing the capital in the South. Hamilton had no sectional pride; his mind was still on assumption. One day he proposed a trade with Jefferson. He offered to favor placing the capital in the South, if Jefferson would favor the assumption of the state debts. Jefferson agreed. Each had a strong following in Congress, and it was not long till both measures were passed. The national government assumed the state debts, and the capital was placed on the banks of the Potomac River.¹

Hamilton also secured the passage of a funding bill, by which the debt was changed into interest-bearing bonds, and with this he secured a guarantee from Congress that all outstanding certificates should be paid at their face value. These had been given out instead of cash during the war to men who furnished the army with supplies and who served in its ranks. During the intervening years many had sold their certificates, from necessity or distrust of the government, at a rate far below the face value. It was objected that the speculators, and not the old soldiers, would profit by this act, if the government paid these at full value.² But Hamilton urged that it was necessary to establish the national credit on an unimpeachable basis, and to teach the old soldiers a lesson — not to distrust their government again. He carried his point, and from that day the credit of the United States was firmly established.

Two more great measures must be attributed to this financial genius — the excise, and the establishing of a United States Bank. The excise, an internal revenue on distilled spirits, passed after a considerable opposition had been overcome. The bank was still more seriously opposed. It was to have a capital of \$10,000,000, one fifth of which was to be subscribed by the government, the remainder by the people in shares of \$400. The bank was to supply the people with a circulating medium, and to loan the government money when needed. The opposition was formidable, but it was borne down and the bill was passed. The bank was chartered for twenty

¹ New York was the temporary capital but one year when the government was transferred to Philadelphia, where it remained for ten years (1790-1800).

² When this act was proposed, and before the news of it reached distant parts, speculators went around and bought up certificates at the lowest possible price, some as low as one sixth of their face value. Hamilton was accused of being interested in this business, but the charge was altogether groundless.

years.¹ Thus within a year and a half Hamilton had secured, in the face of the opposition of the state rights party, the passage of four great measures, — assumption, funding of the debt, the excise, and the bank charter, — all tending to the centralization of power.

The first serious test of the Constitution came in the summer of 1794 in the form of the Whisky Insurrection of western Pennsylvania. This episode would be of slight historic interest but for the fact that it became a test of national strength under the new Constitution. The internal tax on distilled spirits bore heavily on outlying communities, far from the centers of trade. Owing to the long distances and the bad roads it was difficult to take their grain to market, and the people condensed it into whisky. The excise was unfair, they claimed, as it taxed them heavily on the main product of their farms. In various parts of the country the excise was unpopular, and in western Pennsylvania the discontent broke into open rebellion. The people held a great meeting on Braddock's Field, and decided to resist the law by force of arms.²

**Whisky
Insurrection.**

Washington issued a proclamation commanding the malcontents to desist; he also sent a commission to treat with the insurgents and endeavor to induce them to obey the law. These efforts being unsuccessful, the President determined to use force. He called upon the governors of Pennsylvania, Maryland, New Jersey, and Virginia for troops,³ and in a short time fifteen thousand men were marching across the Alleghanies under the lead of Governor Lee of Virginia.

Hamilton accompanied the expedition and was, indeed, the soul of the whole movement. He was very anxious to display the strength of the government, to teach a lesson to all who believed that it could not enforce its own laws. Yet, as he afterward said, he feared at every moment that the militia would throw down their arms and return home. The great question had been, Will the citizens of other states march into a sister state to enforce a national law? The army marched on, however; and on its approach the insurgents

¹ When the subscription books were opened the entire stock was sold within an hour. The bank was situated at Philadelphia, with branches at Boston, New York, Baltimore, and Charleston. Thomas Willing became the first president.

² The afterward famous Albert Gallatin was one of the leaders of the insurrection. He later repented of this "political sin."

³ This call was made with the proclamation, but the militia were not sent till the commission had failed.

dispersed. No blood was shed, and henceforth the excise tax was collected without difficulty. Hamilton was jubilant. The Constitution had borne the strain, and the friends of law and order had won a victory.

RISE OF POLITICAL PARTIES

With a self-governing people political parties are inevitable and, we may say, necessary; for no party, however pure its motives at first, will govern a country long without becoming corrupt or arrogant, unless it has a rival of almost equal power, watching its movements and ready to snatch from it the reins of government.

The Anti-federalist party, if such it may be called, though it was never organized, fell to pieces after the adoption of the Constitution. It had existed for the sole purpose of preventing adoption, and when this was done in spite of its efforts to prevent it, the party ceased to exist. The Federalists, on the other hand, took the reins of government and continued under the old name. In a few years the whole people became friendly to the Constitution; and it is a significant fact that from that time to the present the American people have shown no disposition to cast it aside for another.

In the early part of Washington's administration a question of the utmost importance came up for solution, Shall the Constitution be construed strictly or loosely? On the decision of this question rested the whole trend of the government of the future. It was this question that first divided the people into two great political parties, and it was first brought out prominently in the debate on the bank charter. To construe the Constitution loosely or broadly meant to give the general government larger powers than the letter of that document would indicate; to construe it strictly meant to confine Congress to the strict letter, leaving all other powers to the states or to the people. The Federalist party now became the party of loose construction, and Hamilton was its leader.¹

But there were many thousands of people who were displeased with the policy of Hamilton. They did not like Washington's dignified bearing, his ceremonial receptions, his driving through the streets with such stately pomp. All this savored of monarchy, said they. But it was left for Hamilton's centralizing financial measures to awaken a general alarm. This element soon resolved itself into

¹ The reader will bear in mind that strict and loose construction were not ends but simply indices pointing to a weak or a strong central government.

a political party founded on the policy of strict construction, and the founder and leader of this party was Thomas Jefferson.

The two greatest statesmen of this period were these two members of Washington's Cabinet — Jefferson and Hamilton; and seldom since then has the equal of either appeared on our political stage. The contrast between these two remarkable men is exceedingly interesting to the student of history. Jefferson was born of the highest aristocracy of Virginia, but he was a natural democrat, and he despised the exclusiveness of his class; Hamilton, born of ill-mated parents in an obscure corner of the world, was self-made in the fullest sense, but he became the most conspicuous aristocrat in America. Jefferson was retiring, studious, philosophical, original; Hamilton was a man of the world, brilliant, far-sighted, imperious, but not original, — his governmental policy was borrowed from the English monarchy. Jefferson loved the multitude; he recognized in every man a common humanity with himself. Hamilton stood aloof from the great crowd, which he had no power to win, but he was a superb leader of leaders. These two men were alike in one respect — in patriotism. Each loved his country above all things; but here the parallel must stop. They differed as day differs from night in their methods of construing the Constitution, in their ideas of what the government should be.

Jefferson loved liberty with a passionate devotion, and his faith in the people's capacity for self-government was implicit and abiding. Hamilton loved liberty also, but the first law of his mind was order, and it called for stability of government. Jefferson studied the people, understood them as no other man of his times; he believed in universal education, as that alone would bring intelligent self-government and happiness. Hamilton did not understand the people; he called them "a great beast," he felt that they could be kept within proper bounds only by the strong hand of a centralized government. Jefferson feared that a strong government would endanger liberty. Hamilton feared that a weak government would encourage anarchy. Of Shays's insurrection Jefferson simply stated, "Whenever our affairs go obviously wrong, the good sense of the people will interpose and set them right;" while Hamilton was horrified at that episode, and would have crushed all such rebellions with a hand of iron.

These two men were in Washington's Cabinet. They could not agree. They became political, then personal, enemies, and were con

stantly quarreling across the table of their chief. It was a battle of the giants, and their strife was an unselfish one for the future of a nation, each sincerely believing that the policy of the other would be ruinous to the country. The contest was one of vast importance because it must now be decided how the new Constitution should be operated—whether the country should be strong or weak, should be ruled by the democracy or by an aristocracy. Which of the giants won? Both. Hamilton won first. Jefferson won last. Hamilton's victory resulted in assumption, in the funding of the debt, in an excise tax, in the founding of the bank—all in accordance with his broad constructive theories. This was all done before Jefferson had gathered his forces into battle line. At length Jefferson won a final victory over Hamilton and overthrew his party forever. But it was too late to undo the work of Hamilton. To this day we have liberal construction of the Constitution, and the initiative of this we owe to Hamilton. Even Jefferson, when he obtained control of the government, in his maturer years, had no desire to undo the chief work of his great rival, for he looked upon it and saw that it was good.

Yet Jefferson's victory was greater than that of Hamilton. He retained the nationality of Hamilton, but he infused into it a democracy that destroyed forever the possibility of aristocratic government. We have to this day, except where the political "boss" gains a temporary sway, a rule of the people, a government of the democracy—and for this we are greatly indebted to Jefferson. It required long years for these opposing tendencies to blend together in right proportion. But we have them, not in perfect form, but in better form than the world has hitherto known, and we owe this union, or at least its inception, to the two great rival secretaries of Washington's Cabinet.

Jefferson named his new party "Republican."¹ It is not to be identified with the Anti-federalist party, though many of the fragments of that party were gathered into its fold. Jefferson's following at first was chiefly from the South, but it was not long until he had won Pennsylvania and other northern states.

¹ This was the origin of the present Democratic party. The name "Democratic," borrowed from French politics, was first used by small Democratic societies, as they called themselves, and was applied to Jefferson and his followers by their enemies. Though Jefferson never accepted it, the name encroached on the name "Republican" for more than thirty years, when it was adopted by the party. The official name, however, is still Democratic-Republican.

Jefferson was a leader of marvelous skill. He made a master stroke at the outstart by winning Madison, and the two were ever after the most intimate political and personal friends. He next made a follower of Albert Gallatin, the doughty Swiss who became one of our greatest financiers. But the bulk of the new party was made up of the middle and lower classes, while the majority of the more aristocratic classes remained with the Federalists.

Washington was supposed to be above party lines, and he made some effort to hold a neutral ground, but he could not conceal the fact that his sympathies were generally with Hamilton. His sincere desire was to retire from public life at the end of his first term; but Jefferson and Hamilton both begged him to stand for reëlection, as parties were then in a state so chaotic as to render a national contest injurious to the country, and he alone could be elected without a contest. Washington consented, and he was elected a second time by a unanimous vote of the electoral college. Jefferson left the cabinet early in 1794, and Hamilton a year later; but both continued at the head of their respective parties. Each was an idealist, an extremist, and each made the serious blunder of misunderstanding the other. Jefferson believed that Hamilton was at the head of a great conspiracy, the object of which was to merge the Republic into a monarchy. Hamilton believed that his rival was at the head of a party of fanatics who might rise at any time and seize the government, even with bloody hands, as the people of France had done in that unhappy country, and that Jefferson was capable of encouraging anarchy and disunion. Both were wrong. Both were friends of order and good government, but they differed widely in their methods of administering it.

Washington's second election.

AMERICA AND FRANCE

During the period that we are now treating there was a movement of vast significance in progress in France, one that has no parallel in history, one that shook the throne of every monarch in Europe. It is known as the French Revolution. The peasantry of France had been trodden in the dust for centuries by tyrannical kings and a profligate nobility. At last the worm turned upon its oppressor. The people, driven to madness by tyranny, had risen in their fury, dashed their oppressors to the ground, and taken the government into their own hands.

The French Revolution.

The French Revolution promised at first to be a bloodless one. The States-General met in 1789 for the first time in 175 years. It framed a constitution greatly curtailing the power of the king and changing the government to a limited monarchy. This the king accepted, and all things seemed to promise a peaceful continuance of his reign. But when the other monarchs of Europe banded together and determined to restore the French king by force of arms to his former position as absolute monarch, and to reduce the people to their former condition of servitude, their passion became unbounded. When it was known that the allied Powers had sent the Duke of Brunswick into France with an army to restore the king, and when it was believed that the king himself sympathized with the movement, the people of Paris became delirious with fury. They raised a great army and won a great victory over the Allies; they beheaded their king, destroyed many of the nobles, and proclaimed a republic; they lost all self-control and put hundreds to death on suspicion; they spread carnage on every hand till the whole land of France was drenched in blood.

The French Revolution made a profound impression on American politics. Hamilton was shocked at the lawlessness and excesses of the French, while Jefferson sympathized with them in their struggle for liberty. Jefferson deplored the excesses, for he was not a man of violence; but of the Revolution as a whole he wrote, "Rather than it should have failed, I would have seen half the earth desolated; were there but an Adam and Eve left in every country, and left free, it would be better than it is now."

The Federalists had no sympathy with the violent French. They leaned rather toward the stable monarchy of England, and they came to be called the "English party," while Jefferson and his following were called the "French party." Such was the condition of American politics, the chief issue being foreign, when in the spring of 1793 the new French Republic sent its first minister to the United States.

His name was Edmond Charles Genêt, and his title was "Citizen," for the French had abolished all titles except citizen and citizenship.

Genêt. He was a youth of twenty-eight years, but he had made a record in annexing Geneva to the French Republic. He landed at Charleston in April, and his overland journey to Philadelphia was one unbroken ovation. But he was not surprised; he had expected a warm reception by the sister republic whom France had

aided so generously a few years before. He even expected America to declare war against the Allies in behalf of France. Did not the Treaty of 1778 between France and the United States bind each to become the ally of the other in case of war?

Reaching Philadelphia, Genêt encountered an obstacle, a very serious one, in the attitude of the President. Washington received him without enthusiasm, assuring him of the friendly feeling of America toward France without giving him the slightest hope of assistance in the war. Washington had weighed the matter well. Hearing of the declaration of war between England and France, he had submitted the matter to his Cabinet, and with their approval he had issued his now famous Proclamation of Neutrality.

But Genêt was not discomfited. He had begun fitting out privateers the moment he had landed at Charleston. He pronounced the government "timid and wavering," acted on his own interpretation of the Treaty of 1778, in defiance of the wishes of the administration, and even declared that the President was exceeding his powers in proclaiming neutrality. Genêt had much encouragement. Philadelphia had received him with great applause. Men on fast horses had met him as he approached and had galloped into the city to spread the news of the coming of this true son of liberty. Great banquets were held in his honor. Democratic societies were formed to advocate the French cause, and they rapidly spread over the states. The Republican newspapers not only took the side of Genêt against the government, they also attacked the character of Washington most virulently. It was said that ten thousand men in Philadelphia banded together, determined to force the President to resign his office or espouse the cause of the French; and for the first time since the Conway Cabal, the popularity of Washington suffered a partial eclipse.

The President was greatly annoyed at the attacks upon his character. He declared before his Cabinet that "he would rather be in his grave than in his present situation." But on the question at issue, he was as immovable as adamant. He saw that a crisis in the life of the Republic was at hand, that a precedent for the future must be established. He believed that the Republic would be short-lived if it did not make a stand against taking sides in the wars and political broils of Europe. Yet there was the Treaty of 1778. But that was made with the French monarchy, which had ceased to exist. It was made with the French king, who was guil-

**Proclamation
of neutrality.**

lotined, and who had no successor. The treaty of alliance was also construed to refer only to defensive wars, and France was waging an offensive war. With these considerations Washington determined to make a stand against a French alliance, and the courage required to make such a decision in the face of the popular clamor is not less admirable than that displayed years before by the same noble soul at Princeton and at Monmouth.

Meantime Genêt had overstepped the bounds of public decency. He had sent the *Little Sarah*, a captured British merchantman, now changed to a French privateer, down the Delaware and out to sea, against the protest of Governor Mifflin and of Secretary of State Jefferson. He had threatened to appeal from the decision of the President to the people. He had projected an invasion of Florida from South Carolina and Georgia, and a movement against New Orleans from Kentucky. He had written a dictatorial letter to Washington, and had received a cold reply from Jefferson, stating that it was not customary for a foreign diplomat to have direct correspondence with the President, that the proper channel through which such notes should pass was the secretary of state. The President again called a Cabinet meeting, and they decided that it was unlawful to fit out privateers and take captives in American waters, and they also determined to demand the recall of Genêt.

The popularity of the French minister now took a sudden turn, and collapsed like a punctured balloon. The national pride had been touched, and the public esteem for the hero of Trenton, of Valley Forge, and of Yorktown again approached the zenith.

AMERICA AND ENGLAND; THE JAY TREATY

Our relations with England during the nineties were scarcely better than those with France, and they began to absorb public attention about the time the French craze subsided. The British monarchy had shown little respect for the new nation formed of her sometime colonies. So the Americans felt at least, and they had a series of grievances against the mother country.

First, a source of irritation arose from our trade with the French West Indies. France had thrown open her colonies to the trade of neutrals, — a thing they did not usually enjoy in time of peace, — and our merchants soon had a flourishing trade with the French

West Indies. But Great Britain then, to cripple France and in contempt of the neutrals, revived an old rule known as the Rule of 1756 — that trade which was unlawful in peace was unlawful in war.¹ Several American vessels were seized under an order in council; and when the news reached America, in the spring of 1794, there was an outburst of fury on all sides. The British party sank into insignificance; an embargo laid for thirty days on all foreign-bound vessels was now extended for thirty days more.

Second, the British consul at Algiers had connived with Portugal, now in league with England against France, to turn loose upon the Atlantic a number of piratical Algerine vessels for the purpose of preying on American sailors and shipping, or at least with the knowledge that they would do so.² There was much indignation against England as well as against Algiers. Congress voted to build a navy to send to the Mediterranean, and the work was begun; but peace was soon made with the Dey, and the navy-building was stopped.

In addition to these points of irritation, there were other grievances of long standing against the British. They still held the western posts — Detroit, Michilimackinac, Niagara, Oswego — and refused to give them up; nor would they pay for the slaves carried off at the close of the Revolution. It is true that the laws against loyalists had not been repealed, but Congress had recommended that the states repeal them, as promised in the treaty. As the states had not heeded the recommendation, England still refused to carry out the treaty.

The source of greatest irritation, however, was found in the impressment of seamen. Many English sailors, abandoning their country in time of need, had taken refuge in American vessels. These men were impressed into the British service, frequently from American ships held up for that purpose on the high seas. Some were English born, but naturalized Americans. But England would not acknowledge the right of expatriation. Once an Englishman, always an Englishman, was her motto,³ and she seized these men at every opportunity. And

**Impressment
of seamen.**

¹ England's avowed object in doing this was plausible. The order in council was issued in aid of an expedition to be sent to conquer the French West Indies, but the Americans could see in it only an attempt to cripple their shipping. Strictly speaking, this affair did not come under the Rule of 1756, as France had, in 1784, prior to this war with England, opened the West India trade to United States vessels of sixty tons or over. See "Annals of August," 1794, p. 192.

² Schouler, Vol. I, p. 265.

³ The right of expatriation was not acknowledged by the British government until 1870.

native-born Americans were often taken by mistake. To the protests of our government the English paid no heed, and the people became exasperated at the continued outrages. War seemed imminent. The Federalists began to talk of raising armies and of building a navy. The Republicans were in a dilemma. They heartily disliked England, but they did not desire war, because war meant the raising of armies, and the creating of a navy; these would tend to strengthen the national government; and to prevent this was the chief corner stone on which their party was founded.

Washington greatly desired peace—not to please any party, but because he knew that a disastrous war at that time would seriously injure the country, if not destroy its independence. And here came a rift in the clouds. The British ministry so modified its offensive order as to leave American trade in the West Indies unmolested, except in respect of French products carried to France, or property belonging to French subjects. This concession was probably induced by the threatening attitude of Congress, and by the summary treatment of Genêt. Washington was pleased with this slight concession. He felt that now he could make overtures for an adjustment of the differences without compromising the national honor. He therefore determined to send an envoy to London to frame a commercial treaty on the best terms attainable, and for this difficult task he nominated John Jay, Chief Justice of the United States Supreme Court.

Jay sailed late in April, 1794, reached London early in June, concluded the treaty late in November, and laid it before President Washington in March of the following year. During his absence the two subjects that absorbed public attention were, the Whisky Insurrection, which has been noticed, and the operations of St. Clair and Wayne against the Indians in Ohio, which will be noticed on a future page. At present we must follow up our subject—the famous Jay Treaty.

To make any treaty with the enemy of the French Republic was galling to the Republicans; and to send John Jay, the most pro-British American in the country, except Hamilton,¹ was more than they could bear. They began their tirade as soon as Jay

¹ About this time Washington sent James Monroe to succeed Gouverneur Morris as minister to France, while another future President, the youthful John Quincy Adams, became minister at The Hague.

**Jay's
Mission.**

started for England, and it was evident long before his return that any treaty he might make would be bitterly opposed by them. When they learned that Jay had been well received, they said that he had sold himself for British gold;¹ when it was known that he had kissed the queen's hand, he was accused of prostrating the sovereignty of the people at the feet of majesty.

After a long delay on the voyage the treaty was put into the President's hands in March, a few days after the session of Congress had closed, and Washington called the Senate in secret session to consider it. The Senate met in June, and after a short debate ratified the treaty by a two thirds majority, and not a vote to spare.²

The treaty, which had not yet been made public, was the best attainable from England at that time, and there is not a doubt that Jay had been truly patriotic, and that he had done as well as any other man could have done. Yet the treaty **The treaty.** was not generally an advantageous one to the Americans. The first ten articles were intended to be permanent, the rest of a temporary nature. The western posts were to be evacuated by June, 1796; but not a dollar was to be paid for having held them so long, and the Mississippi River was to be open to British shipping. American citizens were to be indemnified by the British government for recent captures in the West Indies. This was the most favorable stipulation of all, but it was balanced by another binding the United States to compensate Great Britain for confiscated debts. No recompense for the slaves carried off at the close of the Revolution, no redress for the impressment of seamen, nor any promise that the practice should be abandoned, could Jay get into the treaty. Most of the temporary articles dealt with subjects growing out of England's war with France — trade with the Indies, and between the two countries, foreign enlistments, rights of reprisal, and the like — and they were generally unfavorable to the United States. Privateers of nations at war with either of the parties were not to be armed in the ports of the other nor to sell prizes there. The articles pronounced any American citizen a pirate who accepted a French commission against England; they even made the goods of an enemy on board the vessel of a friend liable to capture. This was a terrible blow to the French party, but there

¹ McMaster, Vol. II, p. 213.

² Even Hamilton at first pronounced the treaty "an old woman's treaty." In England it was unpopular for the opposite reason — that it conceded too much to America.

it was in the Jay Treaty. Jay had conceded much — too much for the national dignity. But he did so because he believed this the only means of avoiding war. The treaty could be defended only on the ground that it was preferable to war.¹ Washington disliked the treaty, but his dislike of war at this time was greater, and he signed the treaty and proclaimed it the law of the land.

Meantime the public was anxious to know what was in the treaty, and early in July the Philadelphia *Aurora* obtained a copy, published it in pamphlet form, and sent it broadcast over the land. The wrath of the Republicans was unbounded. **Reception of the treaty.** Jay was denounced as a traitor to his country, and was burned in effigy from Maine to Georgia. At Faneuil Hall in Boston, an immense mass meeting condemned the treaty unanimously. At an open-air meeting in New York, Hamilton was stoned for attempting to defend it.² At Philadelphia a copy of the treaty was burned in the street before the house of the English minister, while at Charleston the British flag, after being dragged through the streets, was burned in front of the British consul's door. When it was known that Washington had set his name to the disgraceful treaty, he was shamefully abused in the Republican press. He was accused of overdrawing his salary, of having retired at the close of the Revolution only because the country could offer him no position that would satisfy his ambition, of being an American Cæsar, a tyrant, and a despot, and of having violated his oath of office.

The treaty was by no means safe because it had passed the Senate, and had been signed by the President. The Constitution gives the treaty-making power to the President and the Senate, it is true; but this treaty required a money appropriation to put it into operation, and the House must originate all revenue bills. **Before the House.** The House at this time was Republican by a small majority. The President laid the subject of the Jay Treaty before it in March, 1796; and one of the greatest constitutional debates ever held in Congress immediately followed. The House, after a three weeks' debate, asked Washington for the papers and correspondence in connection with the making of the treaty, but Washington refused the request. The Republicans were

¹ Gordy's "History of Political Parties" (1st ed.), I, 188.

² Hamilton's wit did not desert him. "If you use such striking arguments, I shall retire," said he, as he left the platform.

staggered at the firmness of the President, but they did not give up; they determined to defeat the appropriation. Their leaders on the floor were Madison and Gallatin. The debate dragged on, and the speeches on either side were many; but there was only one that became famous in our history. It was no doubt the most eloquent speech listened to by that generation of Americans, and it was never equaled in Congress until the rise of Webster. It was made by Fisher Ames of Massachusetts.

Ames was a man of frail body. His life was one long disease, and against the advice of his physician he rose to speak on the great question before the House. He was a Federalist of the Federalists, and he fully believed that a rejection of the treaty meant immediate war with the British Empire, and the dissolution of the Union. He depicted with all his nervous emotion the horrors that would follow a rejection of the treaty. For three hours he held the House and the gallery in the spell of his burning eloquence, and closed with these pathetic words: "Even the minutes I have spent in expostulating have their value, because they protract the crisis and the short period in which alone we may resolve to escape it. Yet I have, perhaps, as little personal interest in the event as any one here. There is, I believe, no member who will not think his chance to be a witness of the consequences greater than mine. If, however, the vote should pass to reject—even I, slender and almost broken as my hold on life is, may outlive the government and Constitution of my country."

**Great speech
of Fisher
Ames.**

The speech of Ames brought tears to nearly every eye. Vice President Adams sat in the gallery, and with tears rolling down his cheeks exclaimed to a friend by his side, "My God, how great he is!" Above all, Ames carried the day. Before his speech the Republicans counted on a majority of six; when the vote was taken the next day the Federalists won by a majority of three.

Thus the Jay Treaty went into effect. It was humiliating to American pride, but necessary. It postponed for sixteen years the inevitable second war with England; had it been rejected, the War of 1812 would have been the War of 1796. But the treaty was staggering to France. The proclamation of neutrality, in the memory of Yorktown, was bad enough, but this treaty was like a blow in the face from a supposed friend; and never again did France presume on the brotherly feeling engendered between the two nations during the Revolution.

RELATIONS WITH FRANCE

Still another serious episode in our foreign relations belongs to this period. France was greatly displeased with the Jay Treaty, and naturally so. James Monroe had been sent as minister to France, but his sympathies were so obviously with the French that he was unable to rise to the dignity of a diplomat. He spoke of France as "our ally and sister republic," and of the "wisdom and firmness" of the revolutionary government at a time when the guillotine was still rolling the heads of the best citizens into the basket. It was at this time that Jay was in England negotiating with Grenville, and the fact caused much unrest in Paris; but Monroe assured the French government that Jay's mission was strictly limited to "demanding reparation for injuries." When at length the Jay Treaty was published to the world, the French were furious; and when, in December, Monroe received word from Timothy Pickering, who had succeeded Randolph¹ as secretary of state, that the treaty had been ratified by the Senate and signed by the President, he was astonished, and his position became embarrassing. He was now instructed to defend a treaty such as he had assured the French government would never be made. He believed that his own government had deceived him and that in consequence he had unwittingly deceived the French.² He now hesitated to follow his instructions, and not until he was informed by the minister of foreign affairs that the alliance between France and the United States was at an end, and that the Directory was about to recall Adet, the French minister to the United States, did he rise to a sense of his duty. He then defended the treaty with vigor. But it was too late. Washington had determined on his recall, and in September, 1796, C. C. Pinckney was appointed minister to France.

Meantime Adet, at Philadelphia, had carried himself with little more dignity than had Monroe at Paris. He was a notable improvement on Genêt, but he stooped to acts that were not expected of one in his position. His chief offense lay in his meddling in American politics. As the presidential election approached, he wrote articles for the Republican press, urging the people to elect a Republican President. And here we must turn aside for a brief account of the first presidential contest in American history.

¹ Randolph had succeeded Jefferson; but after a short service he had resigned, after having been accused of conniving with the French minister.

² Gordy, Vol. I, p. 225.

Washington determined to retire from the great office at the end of his second term, not that he wished to set a precedent for the future, but because he was weary of public life and wished to spend the evening of his days amid the rural scenes of his plantation on the Potomac. Another cause of his retirement, as many believed, was the continued attacks of the opposition press. However, had he desired a third term, he could easily have been elected, but not unanimously, as twice before. For more than forty years from the time that he had carried the message of Dinwiddie through the wilderness of Virginia, with brief intervals, he had been in public life. Retiring now to his country home, he was contented and happy; but less than three years elapsed when he was called to his final home, being in his sixty-eighth year.

**Retirement
of Washing-
ton.**

More than a century has passed since then, and no other American has won the universal love of the people as he did. His popularity, like that of other public men, had its ebb and flow, its light and shadow, but at length it has settled into a steady stream of light which the years have no power to dim. For half a century after his death, Washington was regarded as little less than a demigod, and only through the telescope of modern historic criticism has the real Washington been presented to the world. We now know that he was a man, a real human being, with robust good sense, with much claim to genius, but also with many of the foibles and limitations of other men. He was almost devoid of wit and humor and of personal magnetism. He was a natural aristocrat, and he made no pretense of mingling with the multitude. Possessed of a strong temper, he kept it under masterly control. A few times, however, he lost his self-control, and at such moments his outburst of anger was frightful. Only three or four times in his life was he known to burst into a loud, hearty laugh. He was an avowed Christian, and his deep religious convictions formed the basis of his character and guided his daily life; but he was not demonstrative nor emotional.¹ He had a great, generous heart, and he loved his fellow-men; but he held every friend at a distance, nor would he brook familiarity from any one. Though never familiar, he was always courteous; his manner was dignified and reserved, his face usually calm and reposed. His popularity was won, not by a captivating manner or a conscious

**Character of
Washington.**

¹ Schouler, Vol. I, p. 123.

effort, but by his unswerving devotion to duty and his high, unselfish motives.

What is Washington's rank among the world's greatest heroes? He was a successful commander of armies and he displayed much genius, but among the world's great captains he cannot be placed in the very first rank. As a statesman he must again take a second place. Wherein lay Washington's greatness? He was not dashing nor brilliant nor original. His greatness consisted for the most part in his lofty motives, in his extraordinary sound judgment, and his unlimited courage when standing for a principle that he believed to be right. His patriotism was as pure as sunlight, and no element of selfishness entered into his motives. In all his public career he never made a serious mistake. As our first President he held himself above party lines, and amid the contending tempests of political passion he stood like a mighty oak in a storm; and his conservative strength was essential to the life of the infant Republic.

Washington, while not a very great man, was exactly fitted for the position in which Providence had placed him. Had he been a greater man, he might have misused his power; had he been a weaker man, he could not have succeeded. Had he possessed the ability and ambition of Napoleon, our country would have become a military government and a monarchy; had his ability not exceeded that of Gates, the country might have fallen a prey to foreign powers. Washington was precisely the man the times called for, and he did a service for humanity that deserves the homage of every age and every nation. The candor and the nobleness of his character have attracted the admiration of every people. "No nobler figure ever stood in the forefront of a nation's life," says a British historian;¹ ". . . there was little in his outward bearing to reveal the grandeur of soul which lifts his figure, with all the simple majesty of an ancient statue, out of the smaller passions, the meaner impulses, of the world around him. . . . Almost unconsciously men learned to . . . regard him with a reverence which still hushes us in the presence of his memory." We are all devotees at the shrine of Washington. He has left a record that cannot fade, and his name will ever be dear in the hearts of men who love human rights and human liberties.

We must now return to the presidential election. The Federalist

¹ Green.

leader was Hamilton, but Hamilton was without a popular following. None knew this better than himself, and he made no effort to win the great prize. Jay probably ranked second as a party leader, but the odium of the treaty made him an impossible candidate. John Adams, therefore, became the logical candidate of the Federalists. He was looked upon as an aristocrat rather than a democrat, but he had taken little part in the Franco-English issues that had divided the people. Adams was well known to his fellow-countrymen. He had been in public life more than twenty years; he was the strongest debater in Congress during the Revolution; he had made the motion that placed George Washington at the head of the army; he had become the first minister of independent America to England; and he had now served creditably as Vice President for eight years.¹

Jefferson, the founder and leader of the opposition party, became its logical candidate. The contest was a spirited one, but as several states chose electors by the legislature, the popular strength of the two parties was not fully tested. There is little doubt that a majority of the people were with Jefferson, but there was a silent fear that if he were elected he would not support the Jay Treaty, which would have meant war with England. The people were not ready for war, and they elected Adams by a vote of seventy-one to sixty-eight for Jefferson. The latter, however, receiving the next highest number, became Vice President.

The inaugural ceremonies were scarcely over when the new administration was called upon to face a serious difficulty with our "sister republic" in Europe. The Jay Treaty was deeply offensive to France, and now to this offense was added the recalling of the good Republican Monroe² and the sending of the Federalist Pinckney. This was too much for the Gallican to endure. Pinckney was

¹ Hamilton and his clique of friends had perceived that Adams was of a headstrong nature, and they attempted to compass his defeat by a trick. The Twelfth Amendment had not been added to the Constitution, and each elector was to vote for two men without designating which was to be President or Vice President. Hamilton, seeing that he could not defeat Adams by open opposition, chose Thomas Pinckney, who was very popular owing to his late treaty with Spain, to run on the ticket with Adams, and his plan was to have all the New England electors vote for Pinckney, who, being a Southern man, would receive a larger vote than Adams in the South and thus win first place. The plan did not work. Adams afterward discovered the trick, and from that day forth he was never friendly to Hamilton.

² Washington had recalled Monroe a short time before he retired from the presidency.

rejected, and he took refuge in Holland, where he spent the winter. It was now America's turn to be offended. There was much indignation at the rejection of Pinckney. Adams called an extra session of Congress to meet in May, and his message on its assembling was very positive and pointed. He said that France should be convinced that we are not a degraded people, humiliated under a spirit of fear and a sense of inferiority. He urged Congress to create a navy and to fortify the harbors of the United States, while at the same time he declared his intention to make one more effort for peace by sending a special mission to France to adjust the differences.

After a sharp debate, Congress voted an answer to the President, approving his views and his plans; and before adjourning it passed a bill to appropriate money to fortify the harbors, another apportioning eighty thousand militia to the states, to be ready for action if called for, and one to complete the three new frigates, the *United States*, the *Constitution*, and the *Constellation*.

Meantime three envoys to France had been appointed: John Marshall, the future jurist, Elbridge Gerry, the future Vice President, and Charles Cotesworth Pinckney, who had been rejected as the regular minister by the French Directory. They reached Paris in October, and for several months their experience was an exciting one. A few days after they had arrived and had informed Talleyrand, the minister of foreign affairs, of their mission, they were approached unofficially by a gentleman named Hottinguer, who informed them that a threefold demand would be made upon the United States, and that it must be complied with before the French Directory would receive a minister from the country. First, the President's message to Congress, parts of which were very offensive to the French government, must be modified; second, the wounded feelings of the Directory must be soothed by a gift in the form of a bribe to the amount of \$240,000, and third, the United States must make a loan to France of a large sum of money to carry on her war with England. A little later two other men, M. Bellamy and M. Hauteval, representing Talleyrand, joined Hottinguer and renewed the demand. "I will not disguise the fact," said Bellamy, ". . . you must pay money, you must pay a great deal of money." They further stated that French vessels would be sent to ravage the American coast if their demands were not heeded. To these demands Pinckney is said to have made the famous answer, "Millions for defense, but not one cent for tribute."

Mission to France.

The American envoys were astonished at such a reception. They disclaimed all power of making a loan, and offered to consult with their government; and they laid their correspondence with these three men (designated in the published dispatches as X., Y., and Z.) before the President of the United States. France now added another insult by sending Marshall and Pinckney, who were Federalists, out of the country, and offering to treat with Gerry alone, who was a Republican.

A wave of indignation swept through the country when the President made known the fact that his mission to France had failed. It was the spring of 1798, and Congress was in session.

The radical Republicans in the Senate and the House still determined to avert war with the sister republic. **X. Y. Z. explosion.**

One Spriggs, a member of the House from Maryland, even rose and offered a resolution that "it was inexpedient under existing circumstances to resort to war against the French Republic." The resolution was under discussion and would doubtless have passed when suddenly the whole country was thrown into an uproar by the X. Y. Z. correspondence, which the President now submitted to Congress. When the account of this shameful treatment of our envoys and these impudent demands made on our government was published broadcast, the people fell into a patriotic rage and demanded an immediate declaration of war against France. Such an outburst had not been known since the battle of Lexington. Patriotic songs were written and sung everywhere by the people, and one of these, "Hail Columbia," written by Joseph Hopkinson for a Philadelphia theater, still lives in our literature.

Congress, meanwhile, had caught the spirit of the people. The war feeling was aroused, and all waverers joined the forces of the administration. The same was true throughout the country, and John Adams, for the first time, and it may be said, the only time in his life, found himself on the uppermost wave of popularity. Congress passed in rapid succession the measures he had recommended: for establishing a navy department, for the further defense of harbors, for raising a provisional army of ten thousand men in case of war, for the purchase of cannon and military stores, and for the suspension of all commercial intercourse with France after July 1st.

Everything seemed now to indicate immediate war with the French Republic. And there was much *casus belli*. That country

was displeased with the Jay Treaty, which, however, had been wrung from our government against its will, and which was not intended as an offense to France. On the other hand, France had heaped one insult upon another,—first through the impudence of Genêt before the framing of that treaty, in attempting to dictate our position in European wars, then in the attempt of a later minister to influence a national election. Her privateers had captured scores of American merchant vessels; she had rejected an American minister because he belonged to a party distasteful to the French. Even after all this our President was so anxious to maintain peace that he sent three envoys; and these were kept waiting for six months in the antechamber, hearing the most humiliating proposals, and at length two of them were driven in disgrace from the country. Was not this enough to raise the ire of every true-hearted American?

Great preparations were now in progress for war with France, and the French were thoroughly surprised on discovering the fact. The

War spirit.

French armies had gone forth to war and had conquered a large part of Continental Europe, and now to be defied by the youthful Republic in the western wilderness was, to say the least, unexpected. The truth is, France did not wish to fight America; her sole object had been to win American aid in her European wars; her quarrel was with monarchies alone. When, therefore, the Directory knew of the war spirit they had stirred up, they informed Gerry that they were anxious for peace between the two republics.¹ They withdrew the demand that the President's message be modified, released American seamen, and forbade the further capture of our vessels. They even declared that they did not wish the United States to break the treaty with England, and expressed a willingness to receive a new American minister.

But the war spirit still raged on this side the Atlantic. George Washington was appointed commander in chief of the armies to be raised. He accepted on the twofold condition that he might choose his immediate subordinates and that he need not take the field unless absolutely necessary; and he suggested the appointment of Hamilton, Knox, and C. C. Pinckney as major generals. This order would make Hamilton the senior major general, and the real commander, who would reap the chief honor of a successful campaign. Now, Adams disliked Hamilton. He had not forgotten the trick by which the latter had hoped to cheat him out of

¹ See *The United States Gazette*, September 29, 1798.

the presidency; and besides, the two men were utterly incompatible in spirit. Adams now determined to make Knox the senior major general. But Washington threatened to resign if his wishes were not respected, and Adams yielded the point.

The autumn of 1798 passed, and still the cry was, War with France! A few sea captures had already been made—when in midwinter, suddenly, and to the astonishment of all, President Adams at one stroke ended the whole matter, **Adams's bold action.** and removed all prospect of war—he appointed another minister to France.¹ Adams had heard of the friendly overtures of the French Directory, of their offer to receive a minister, and he made the appointment without even consulting his Cabinet. By this action Adams incurred the wrath of most of the leaders of his party. It was inconsistent with national honor, they said; France, the offending party, should have made the first move toward peace. The friends of Hamilton declared that the chief motive of Adams was to prevent the former from winning military glory. The subject of the motive of the President in doing this bold thing against the wishes of his party was discussed for many years. Adams always defended his action; and nine years after these events he stated in a letter that he considered it the most disinterested and meritorious action of his life, and that he desired no other inscription on his gravestone than this: “Here lies John Adams, who took upon himself the responsibility of peace with France.”

The act of President Adams had two great results: it brought peace and war—peace with France, and that peace has not been broken in a hundred years; and war in the Federal party. It rent the party from the top to the bottom. The wound was fatal, and it rendered impossible the reëlection of the man who made it.

FALL OF THE FEDERAL PARTY

The Federal party reached the acme of power and popularity just after the X. Y. Z. explosion in the spring of 1798. The enthusiasm awakened was, in a great measure, non-partisan, and yet the party in power could have reaped a golden harvest from it, could have strengthened itself powerfully for the future, had it been tact-

¹ William Vans Murray, then minister to The Hague. Two others were afterward appointed with Vans Murray, Chief Justice Oliver Ellsworth, and Governor Davie of North Carolina.

ful and wise; but it was neither tactful nor wise. Instead of taking advantage of the popular wave and building for the future, it stooped to humble some of its old enemies. It enacted a number of obnoxious laws, based on a spirit of revenge, and in this way it drove thousands into the ranks of its great rival.

To raise revenue for the impending war a direct tax on lands, slaves, and houses was imposed. For every slave between the ages of twelve and fifty years the owner must pay fifty cents a year, while the land and house tax was graded according to the value of the property, and the value of a house was determined by the number and size of its windows.¹ These special taxes were unpopular and they chilled the ardor of many a Federalist who owned houses, lands, or slaves. Still less popular was the Naturalization Law, which raised the time of residence for naturalization from five to fourteen years. This was aimed at resident Frenchmen, but it affected equally the foreign-born of other nationalities, and played its part in weakening the party that enacted it. The Federal party might, however, have survived all this had it stopped here. But the over-zealous party now proceeded to enact the famous, or rather infamous, Alien and Sedition Laws.

The Alien and Sedition Laws are usually named together in common parlance, but they were passed separately, though their general object was the same. The most offensive section of the Alien Act gave the President power to banish from the country, without giving a reason, without a trial of any sort, any alien whom he considered a dangerous or suspicious person. A cry instantly arose from the Republican press, denouncing the law as unconstitutional, since it denied trial by jury and usurped a power that belonged wholly to the states.

But a muzzle was soon placed on the Republican press by the enactment of the Sedition Law. The most objectionable feature of this law was that which made it a crime, to be punished by fine and imprisonment, for any one to print or publish any false, scandalous, and malicious writings against the government, Congress, or the President, with intent to defame them, to bring them into contempt, or to excite the hatred of

¹ The farmers of eastern Pennsylvania rebelled against paying the house tax, and several hundred of them assembled under the leadership of John Fries. This was known as the Fries Rebellion. The President sent troops to disperse the men. Fries was captured, tried, and sentenced to be put to death; but President Adams pardoned him.

Slave and house tax.

Alien Law, June 25, 1798.

Sedition Law, July 14.

the people against them, and so forth. This was a blow at the right of freedom of speech and the liberty of the press. It was aimed chiefly at a few reckless Republican editors whose continued attacks on the high officials of the government and their acts were unsparing. Such terms as "scoundrel," "villain," and the like were in common use, and sometimes opposing editors, meeting on the street, would engage in a fist fight. But such terms were not confined to the Republican editors for whom the law was intended. The Federalist editors were equally reckless.

The Alien Act was never enforced. Its enforcement lay wholly with the President, and Adams was not radical; he was one of the very few men in public life in America who were without a French or an English bias. The Alien Law therefore remained a dead letter until it expired, two years after its enactment.

But not so with the Sedition Act; and the first to feel its weight was Matthew Lyon, a member of Congress from Vermont. Lyon was a witty, red-faced Irishman who had come to America when a boy, as a redemptioner, had served in the Revolution, had acquired large property, and now had a seat in the House of Representatives. He was a rabid Republican, and the Federalists, who thoroughly hated him, called him the wild Irishman. With one of their number, Griswold, he had had a rough and tumble fight on the floor of the House. Scarcely had the Sedition Act become a law when Lyon was arrested for publishing a letter in a Vermont paper in which he severely criticised the government for its "ridiculous pomp, foolish adulation, and selfish avarice." He was fined \$1000 and sent to prison for four months. His friends got up a petition for his pardon, but as he refused to sign it, the President refused to pardon him. But he was triumphantly reelected to Congress while still in prison.¹ One editor was fined and imprisoned for stating that the President was "hardly in the infancy of political mistake," another for accusing Hamilton of attempting to purchase a Republican paper in the interest of Federalism. It is plain to be seen that such a law was intended only to vent partisan bitterness, and that in the end its effect would be to injure the party that had framed it. And so it proved.

Late in the year 1798, but few months after this law went into effect, the legislature of Kentucky passed a remarkable series of

¹ Forty years afterward Congress refunded to his heirs the amount of the fine Lyon had paid, with interest.

resolutions, severely arraiging the Alien and Sedition Laws as unconstitutional; and a few weeks later the legislature of Virginia passed a similar series, somewhat milder in tone. Many years later it was discovered that Jefferson had written the Kentucky resolutions and Madison those of Virginia.

The Kentucky legislature modified the original resolves of Jefferson before adopting them, but the next year it incorporated much that had been omitted the year before.¹ These resolves set forth three important propositions: First, that the Constitution is a compact to which each state is a party, that the government created by it has certain delegated powers, and if it assumes undelegated powers, its acts are void, and that the parties to the compact, that is, the states, have a right to judge of its infractions and of the mode and measure of redress. Second, the Alien and Sedition Acts are examined and the conclusion is reached that Congress has exceeded its powers in passing them. In these two features the Kentucky and Virginia resolves agreed in substance. But in the third — the remedy to be applied — they were somewhat different. The second set of Kentucky resolves pronounced nullification the rightful remedy for assumed powers of the government. The Virginia resolutions did not use the word “nullify,” but declared that the states had the right to interpose in case the government assumed a dangerous exercise of powers. The first of these propositions, the compact theory, was one of vast consequence, and sixty years later it became the chief ground on which the Southern states justified their secession from the Union.

These resolutions made a profound sensation throughout the Union, and, though condemned by other legislatures, they did much to awaken the people to the fact that the government had overstepped its rightful authority in passing the Alien and Sedition Laws. Jefferson wrote the resolutions at a moment of intense political excitement, and, as shown by his life and writings, they did not represent his later judgment; the nullification of a national law by a state or the dismemberment of the Union for any cause was no part of his matured political creed.

The dominant party was now called to render an account of itself before the great final American tribunal,—the people,—for the time had come for another presidential election. Not only had the party

¹ Jefferson wrote shortly before his death that he had nothing to do with the second set of Kentucky Resolutions. See Jefferson's “Writings,” III, 429; Benton, I, 149.

offended property owners by its house and slave tax, foreign-born citizens by its Naturalization Law, and many lovers of liberty by its Alien and Sedition Laws; it had also to contend with irreconcilable factions within. Adams had made the serious mistake of retaining Washington's Cabinet entire, and it was composed of men who looked to Hamilton rather than to the President as their political oracle. Indeed, Adams never enjoyed the confidence of this Cabinet, and when he appointed the last mission to France without consulting them they broke into open rebellion. Adams dismissed them and appointed John Marshall secretary of state, and Samuel Dexter secretary of war;¹ but the party was already rent in twain, and in this condition we find it at the coming of the election of 1800. Hamilton went so far as to write a scathing pamphlet against Adams to show his unfitness for the presidency.² And yet Adams, whose Revolutionary services were still remembered by the people and whose rugged honesty could not be questioned, was the only Federalist who could hope for success; and Hamilton at length came to his support "to save us from the fangs of Jefferson." But the mischief had been done. Hamilton's letter had been published broadcast in the Republican press.

The great Republican leader, from the irresponsible watch-tower of the vice presidency, had for four years watched the political chessboard with eagle eye. He had done more. He had guided with an unseen hand the outlying battalions of his army of followers to the remotest corners of the Union; he had set public opinion against the Alien and Sedition Laws without the public's knowing who was its guide; he knew the political complexion of every state legislature, and the approximate political condition of almost every county in the United States. The Republicans had no second choice for the presidency; Jefferson was their *unus solusque*, and they placed Aaron Burr on their ticket for the vice presidency.

The campaign was the most acrimonious in the history of the country. The unpopular Federal laws furnished the chief issue; but, having exhausted their political thunder, both sides stooped to personalities, and Adams and Jefferson were denounced unsparingly

¹ This change, however, was not made till May, 1800.

² His object was to win a larger vote for C. C. Pinckney, who was also on the ticket, than for Adams, and thus to make Pinckney President. Had the Sedition Law not been a purely partisan affair, Hamilton would have been subject to arrest for this letter. See *Aurora*, November 4, 1800.

by their respective enemies. The electoral college was carried by the Republicans, who polled seventy-three votes to sixty-five by the Federalists. But there was no election. Jefferson and Burr had received the full Republican vote, and, as the Constitution did not authorize the electors to choose between them, this duty devolved on the House of Representatives. Here was a dilemma. The House was controlled by the Federalists. Each state had one vote, cast by a majority of its delegates. There were sixteen states, and it required nine to elect. The Federalists might permit the selection of Jefferson or Burr, or they might prevent an election and by act of Congress choose a President *pro tem.* from their own party. This latter scheme was discussed in their newspapers, and had it been carried out civil war would have followed; for the Middle states threatened to arm the moment such a bill should pass.¹

The Federalists then determined to elect Burr, not that they loved him more, but Jefferson less. Their motive was ignoble, and was born of chagrin at their defeat at the polls, a desire for revenge on their successful rivals, and the hope of intriguing with Burr for a share in the offices. Their plea that they regarded Jefferson a dangerous man was insincere, for Burr was no less so, and they knew it. Burr had not been dreamed of for the presidency by his own party. Why should he be thrust upon the party by its enemies?

The House met to decide the momentous question and the country held its breath. On the first ballot Jefferson received the votes of eight states, Burr those of six, while the votes of two, Vermont and Maryland, were a tie. The balloting went on day after day with little change, when the influence of a great man—great in soul with all his faults—came to decide the question. It was Hamilton. He contended that it was dangerous to thwart the will of the people who had carried the election, to thrust upon the country a chief magistrate who had been nobody's candidate. And further, he knew

Election by the House. Burr to be a self-seeker of dangerous ambition. He believed Jefferson to be patriotic and honest, with all his heresies, and preferred to see the country in his "fangs" rather than in those of Burr. "I cannot," said Hamilton, "remain with a party which so degrades itself as to elect Burr." Through the advice of Hamilton the Federalist delegates from the divided states withdrew or voted blank, giving those states to Jefferson, who was elected President on the thirty-sixth ballot.

¹ Schouler, Vol. I, p. 483.

The Federal party took its defeat ungracefully. It spent the last weeks of its power in passing a law, known as the Midnight Judiciary,¹ which every fair-minded student of history must condemn. By this act twenty-three new judicial districts were created, and the outgoing President filled these offices, the only life-tenure offices under the Constitution, with members of his own party. The business of the courts did not call for such an extension, as it came to do in later years, and the object of the Federalists was to intrench themselves in power where they believed their opponents could not reach them.

John Adams now retired from public life, and his remaining twenty-five years he spent as a private citizen at his New England home. He was far less fitted for the great office than either of the men between whose administrations he served. He was honest, upright, and patriotic to the last degree; but he was irascible, suspicious of others, stubborn, and wholly incapable of winning and managing men. In his foreign policy he was broad-minded and intensely American. The motives for his actions could seldom be questioned when fully understood. In one thing, however, in the part he played in the Midnight Judiciary, it is difficult to find a trace of broad-minded statesmanship. And yet at the end of his term² he did a great service for his country, — an act the effect of which is still felt in our government, — he appointed John Marshall chief justice of the Supreme Court.

The downfall of the Federal party was final. This first great political party in America had piloted the ship of state upon a stormy sea for twelve years, but now at the close of the century it suffered an irrevocable overthrow. The Federal party embodied in its doctrine much that is of permanent value in human government; and it did a great service to the country, and was necessary to save the new-born nation from anarchy. But it was too centralizing in its tendencies, and from this cause the party was never popular; for the people, ever jealous of their liberties, feared that the government would become tyrannical and oppressive. Moreover, the party committed the unpardonable sin in passing the Alien and Sedition Laws, and the sovereign people sat in judgment, and passed upon it the sentence of death.

¹ So called because Adams was said to have spent his time signing the commissions till midnight on the last day of his term.

² About six weeks before he retired from office.

But these laws were the occasion, not the cause, of its overthrow. The vital defect lay in its distrust of popular government — its want of confidence in the people. The party “represented the ideals of a bygone age,” but a new century had dawned and had brought with it new ideals with which the old party was unable to grapple, and its fall was inevitable.

But truth cannot die, and the truth embodied in old Federalist doctrine still lives. Not only did the party that defeated it gradually adopt its best principles, but every great party from that time to the present has done the same thing. May the old party ever be held in grateful remembrance by the American people.

NOTES

Citizen Genêt. — This bustling, irascible Frenchman came to America boiling with enthusiasm for the French Revolution and the rights of man, and he would fly into a passion at every obstacle that tended to cool his ardor. In Philadelphia a great banquet was held in his honor, and the head of a roast pig, severed from the body, was named Louis XVI, and passed around the table. Each guest viciously plunged a knife into the pig’s head while uttering some sentiment about liberty and the rights of man. The French craze that spread over the country at the time of his coming was very remarkable. People imitated the French in wearing the cockade, in erecting liberty poles, and in addressing men as Citizen and women as Citizeness. These titles were used on letters, business documents, in marriage and death notices, and were even carved on tombstones. At length the newspapers began to make fun of the craze and it became the subject of many a witticism. One facetious editor suggested Biped as suitable for both sexes. — See McMaster, II, 94.

Genêt never returned to France. The Girondist party that had sent him lost control of the government, and he feared the guillotine should he return. He became an American citizen, married a daughter of Governor Clinton, settled on the Hudson, became a scientific farmer and an ornament to New York society. He died in 1834, at the age of sixty-nine years.

Death of Washington. — On December 15, 1799, one of Washington’s attendants, named Tobias Lear, dispatched a letter from Mt. Vernon to President Adams at Philadelphia, a part of which is as follows : —

“Sir : It is with inexpressible grief that I have to announce to you the death of the great and good General Washington. He died last evening between ten and eleven o’clock, after a short illness of about twenty-four hours. His disorder was an inflamed throat from cold. Every medical assistance was offered, but without the desired effect. (Three physicians, Drs. Dick, Craik, and Brown, were called in.) His last scene corresponded with the whole tenor of his life. Not a groan nor a complaint escaped him though in deep distress. With perfect resignation and a full possession of his reason he closed his well-spent life.”

On the 12th Washington went out to ride about his large farm and was caught in a storm of rain and hail, but he continued his ride for some hours and took a severe cold which soon developed into acute laryngitis. The physicians bled him twice, and they have been severely criticised for this ; but letting blood for almost every ill was common in those days.

Washington was tall and muscular. He wore a No. 13 boot, his hands were large, his hair light brown, his eyes cold gray, and his voice rather weak. He weighed two hundred pounds, could cover twenty-two feet in a single running jump, and was an excellent shot, swordsman, and rider. He was probably the richest of our Presidents thus far. He owned thousands of acres of land in Virginia and at one time twenty thousand acres along the Ohio River. His estate was valued at about half a million dollars, but it consisted of lands, herds, and slaves, and he was at times hard pressed for money. He had to borrow money to take him to New York to be inaugurated President.

The New Capital. — The government began its operations in the city of New York, in the spring of 1789 ; but some months later it moved to Philadelphia, the largest and most important city in the Union, and here it remained for ten years. In the autumn of 1800 the capital was moved to Washington City, and Jefferson was the first President to be inaugurated there. The District of Columbia lay on both sides of the Potomac, and the Maryland side was chosen for the seat of government. The farmers who owned the land deeded it to the commissioners and received in compensation half the unused lots, after the streets, parks, and public building grounds were reserved. Major L'Enfant planned and laid out the city. The corner stone of the Capitol was laid in September, 1793. When the government removed thither, the city was a wilderness. There was but one good hotel. The President's house was in an open field, and this, with the unfinished Capitol and a few scattered houses along the unpaved streets, constituted the town. There was no business and no society. The city grew slowly, and eight years after Congress had removed thither, a proposition to return to Philadelphia was seriously considered. But as the nation grew the city improved, and to-day it is pronounced the most beautiful capital city in the world.

CHAPTER XVIII

JEFFERSON AND THE DEMOCRACY

SCARCELY greater was the Revolution by which the country was wrested from British dominion than was the political revolution of 1800, by which the government passed into the hands of the democracy. And no greater fortune could have come to the young Republic than this political revolution. What the country most needed in 1800 was a national consciousness, and nothing could bring this about so quickly and so well as giving the control of the nation to the party of the masses. The Federal party, however, had done a noble work ; it had laid the foundation of nationality — as essential as was the structure of democracy now to be reared upon it. But as a candle sacrifices itself in giving light, so the Federal party had given its life in laying this foundation, such as Jefferson and his party could not have laid — a foundation which our great government of to-day could not do without.

The America of to-day was not born before 1800. After the Revolution the states had settled back into their old colonial habits, and almost every American ideal up to the end of the century bore the colonial stamp, or that of England or France. Even in politics the chief issues after 1792 were foreign, and not before the dawn of the nineteenth century did there exist a truly American spirit ; and not until after the second war with England did the people fully open their eyes to the vast possibilities that lay before them.

A VIEW OF THE PEOPLE

What we have said in a former chapter of colonial life in 1760 will apply for the most part to the present period. We find still a nation of farmers, bad roads, and poor postal service. In 1790 there were but seventy-five post offices in the United States. Many of the comforts and necessities so highly prized by us were unknown at this period. The application of steam power in our great factories,

the railroad, the steamship, the telegraph, the telephone, the sewing machine, the use of gas and electricity for lighting — all have come into use since the close of the eighteenth century. In nothing has our wonderful progress been more striking than in the means of travel, in which for two thousand years the world had made no improvement. To-day one can take a richly furnished sleeping car at Philadelphia in the evening, be rocked to sleep by the rumbling of the train, and wake next morning at Pittsburg, or Buffalo, or Boston. A hundred years ago such journey made in the stagecoach was long and laborious. But the people traveled little in comparison with the endless hurrying to and fro of all classes in our own times; and of those who sought a home in the great valley beyond the mountains few were ever seen again by friends and kindred who remained in the East. The people away from the seacoast lived in log cabins; their diet was salt pork and corn bread three times a day, with game, poultry, vegetables, and fruit occasionally.

Drinking was universal among men and youths, and every family kept liquor in the house. While drunkenness in its worst form was seldom seen, it was not unusual to find almost any one, even the minister, slightly intoxicated. Gambling was also common in many parts of the country; but the moral standard between the sexes was higher than that of any European people.

The Revolution had not been an unmixed blessing. It had brought political independence; but it had shaken society to its depths, and the immediate effect on religion and education was deleterious. The country had not yet broken away from its European leading strings. It had taken but one great step in advance of the Old World — it “had agreed to try the experiment of embracing half a continent in one republican system.”¹ And this was in itself a source of boundless inspiration. Here was a vast continent with its untold wealth of minerals and fertility of soil. Here, too, was a free people, a self-governing democracy. No royal dynasties here to oppress the people with arbitrary laws and burdensome taxation; no idle aristocracy or profligate nobility to sap the substance of industry and forever to remind the son of toil of his humble social condition. For such there was no room in this liberty-loving land; for here, barring the one great national evil of slavery, every man was a master.

There were some signs of the dawn of a new era in various

¹ Henry Adams, Vol. I, p. 73.

Life in
the West.

spheres of activity. Washington had secured neutrality; Whitney with his cotton gin had removed the great obstacle to the industrial development of the South; John Fitch and James Rumsey had shown the practicability of steam navigation, but years were yet to pass before their ideas were to be developed by Fulton and Livingston; Oliver Evans, the "American Watt," had invented a steam engine, but this too was to be laid aside until a phlegmatic public could be roused to a sense of its usefulness; in the world of art West and Copley were making a name for America in foreign lands; in literature President Dwight, Barlow, Freneau, and Brockden Brown had prepared the way for the greater lights, Irving, Bryant, and the galaxy of New England literati to be born within the first decade of the dawning century; manufactories on a small scale were multiplying, and commerce was swelling in volume. But with all this we look in vain in 1800 for the inventive genius, the unwearied energy, the boundless self-confidence and faith in the future that characterizes the America of to-day.

The census of 1800 showed a population of five and a third million,¹ one fifth of whom were slaves. Virginia still held the first place in population, Pennsylvania the second; but Massachusetts had been outrun by New York, which now held third place, while the old Bay State came fourth. For half a century the increase in population had been a natural increase, for the great tide of immigration that has poured in a steady stream upon our shores for nearly a century had not then made a beginning.² Nine tenths of the population were still to be found east of the Alleghanies; but the course of empire had begun to make its way westward, and more than half a million people had already found homes in the great valley of the Mississippi.

Three great roads led from the seaboard to the region beyond the mountains, — one from Philadelphia to Pittsburg, another from the valley of the Potomac to the Monongahela, while a **Tennessee.** third led from Virginia in a southwesterly direction to the land of Tennessee. The largest of the western settlements was that of Kentucky, which contained upward of two hundred thousand inhabitants; the state had been admitted into the Union as the

¹ 5,308,483.

² For thirty years after the adoption of the Constitution the foreign immigration to America averaged about five thousand a year. It was not till after 1840 that the immigrants reached one hundred thousand a year.

fifteenth. South of Kentucky lay the beautiful valley of the Tennessee and Cumberland rivers. Not until after the French War were permanent settlements made in Tennessee. In 1785 they had grown to many thousands of people, and they sought admission to the Union as the state of Frankland or Franklin.¹ Their effort was not successful, but eleven years later the state entered the Union as Tennessee.

One more new state belongs to this western group that entered the Union at this period. The great stretch of wilderness between Kentucky and Lake Erie, with its wooded hills and fertile valleys, known by the beautiful Indian name of **Ohio.** the river that belted it on the south, was the chief prize for which the French and Indian War had been waged. After this war had given the territory to the English and the Revolution had given it to the Americans, various disputes arose concerning the ownership of the soil. Virginia in giving up her uncertain claims retained a large tract, some three and one half million acres, in the south central portion, known as the Fire Lands,² while Connecticut took possession of an equal portion in the eastern part on the lake shore, known as the Western Reserve. The first permanent settlement was made by Rufus Putnam, "The Father of Ohio," who, in 1788, settled with some forty families at the mouth of the Muskingum River, founded a town and named it Marietta, in honor of the unfortunate queen of France.

But Ohio was not to be won by white men without the most serious conflict with the natives. Two years after the settlement was made by Putnam, General Harmar suffered a defeat at the hands of the Indians of the Northwest, not far from the site of Fort Wayne. President Washington then chose **St. Clair's** General Arthur St. Clair to lead an army against the Indians. **defeat.** St. Clair was the grandson of a Scotch earl; he had reached America in the midst of the French and Indian War; he was with Amherst at the capture of Louisburg; with Wolfe at the fall of Quebec; and later he served valiantly against his native land in the Revolution. After the war he became governor of the Northwest Territory and commander in chief of the army. He gave the growing village in southwestern Ohio the name of Cincinnati. Washington now chose him to chasten the savage natives of the Wabash Valley. With eighteen hundred

¹ Roosevelt's "Winning of the West," Vol. III, p. 144.

² So called because they were set apart for soldiers and others whose property had suffered by fire during the Revolution.

men St. Clair moved to a branch of the Wabash, where he was ambushed by a large body of Indians. His army was cut to pieces, and it escaped by flight into the forest only after leaving nearly half its number dead or wounded on the field. This was one of the most disastrous and crushing defeats recorded in Indian warfare. The people of the country were shocked at the news. St. Clair was severely censured; and he never rose again in public estimation. The President now chose General Anthony Wayne, the hero of Stony Point, to put down the western Indians. Wayne marched into the Indian country late in the autumn of 1793, and the following August he met the allied tribes at a place called Fallen Timbers,

Wayne's not far from the present Maumee City. The battle
victory, 1794. was decisive, and the Indian power was utterly broken. Wayne pushed on to the banks of the Wabash, built a fort, and called it after his own name, and the thriving city that has grown up near the spot has retained the name of Fort Wayne. The territory now filled rapidly, and in 1803 Ohio joined the sisterhood and became the seventeenth state.

A VIEW OF THE LEADERS

Thomas Jefferson was a scion of an old family that belonged to the landed aristocracy of Virginia; but nothing in his appearance or his manner indicated that he had not sprung from the common crowd. He was a democrat in spirit, and no discerning student of history can attribute to him selfish motives in espousing the cause of democracy. He was tall and loosely built, with a sandy complexion, a sunny countenance, a freckled face, and hair tending to red. His manner

Jefferson. was shy and retiring, his clothes ill fitting, his speech loose and rambling, with now and then a brilliant sentiment sparkling from him.¹ Such was the man who stood, almost carelessly, before John Marshall in the Senate chamber on March 4, 1801, and took the oath of office as President of the United States.²

The new President chose as his secretary of state his most intimate friend, his life-long companion, James Madison. For secretary of the treasury he chose Albert Gallatin of Pennsylvania, and these

¹ Maclay's Diary.

² Jefferson had walked quietly to the capital with a few friends. The story that he rode alone on horseback and tied his own horse in order to give an example of democratic simplicity, has long been refuted. See McMaster, Vol. II, p. 533 sq.

three formed the great triumvirate in whose hands lay the fortunes of the United States for years to come. Both Madison and Gallatin were, like their chief, "well born," and they had always moved in the best social circles. Madison was a small, neat, well-dressed man, full of good humor and anecdote. Gallatin, a young man of forty years, was a Genevan by birth, and a slight foreign accent always marked his speech. He, like Madison, was well educated, and was eminently fitted for the great work before him. Never in our history were there three kindred spirits in high public life more truly companionable, more honest, or more sincerely devoted to the public welfare than were Jefferson, Madison, and Gallatin.

Madison and
Gallatin.

The far-sighted Hamilton predicted a conservative administration for his great political enemy. And the latter seemed to give early promise of this. The inaugural was wise and tactful throughout, as well as conciliatory, and the ultra-Federalists, who had expected to hear the wild harangue of an idealist, were not a little discomfited. Jefferson's first ruffle with the opposite party arose from his removal of a few Federalist officials to make room for his own followers. "If a due participation of office is a matter of right," he wrote, "how are vacancies to be obtained? Those by death are few, by resignation none." His party followers had been wholly excluded from the Federal offices, and he felt that it was only fair play that they should be recognized. But he proceeded very moderately, and had no thought of making a clean sweep. During the first fourteen months he removed but sixteen Federalists to make room for Republicans,¹ and he refused to appoint any of his relatives. In 1802 he wrote, "I still think our original idea as to office is best, that is, to depend for the obtaining of a just participation on deaths, resignations, and delinquencies."

Again Jefferson awakened the wrath of his opponents by pardoning the men who were still languishing in prison under the Sedition Law, and by his crusade against a few of the most offensive of the Federalist judges. The judge breaking, however, came near the close of Jefferson's first term. Judge Pickering of the New Hampshire district was removed for drunkenness and incompetency, and

¹ This number is given by Schouler (Vol. II, p. 9). Calhoun in a speech in 1835 gives 42 as the number of Jefferson's removals in eight years. McMaster cites 99 removals for the first year; but many of these were not for political reasons. Fish, in *Rep. Amer. Asso.*, 1899, Vol. I, p. 170, gives total of removals from civil office in eight years as 109, military, 15.

Judge Chase of the Supreme Court was impeached by the House for "offensive partisanship," but was acquitted by the Senate.

On the whole Jefferson's administration started out auspiciously, and thousands of the milder Federalists were won over to the standard of the democracy. This was clearly shown in the state elections in the autumn of 1801, for before the close of the year every governor outside of New England was Democratic, and so was every legislature except that of Delaware, while in New England Rhode Island and the city of Boston had also joined the majority. Jefferson's earnest desire was to cut down the expenses of the government wherever possible. He discontinued the missions to Holland, Portugal, and Prussia, and he would have sold the few vessels of the navy had not a new use for them suddenly developed.

The Moslem powers of North Africa had for some years been pacified with money, until two million dollars had been used to purchase immunity from their piratical vessels. But they became more insolent, and in 1801 Tripoli, to secure a larger tribute, declared war against the United States. This challenge was accepted, and instead of paying further tribute the President sent Commodore Dale with three frigates and a sloop of war to the Mediterranean. A Tripolitan cruiser was captured, and the Barbary states were so overawed that they gave no more trouble for several years.

It was not until after the meeting of Congress in December, 1801, that the new President could show that he was sincerely in earnest in his desire to retrench the expenses and to reduce taxation. Both houses were now Democratic¹ by easy working majorities. But there was no great leader in Congress, nor was one greatly needed, for they had an able master in the President. No other President in American history has so completely directed his Cabinet and the Congress as did Jefferson.

He managed, not by threats nor by violence, nor by a use of the patronage, but in his own deft, quiet way, with that delicate touch at the right place and the right moment, which eludes every attempt to describe. There was no important act of Congress during the first eight years of the century that did not bear the stamp of the genius of Jefferson. And even in the Cabinet, with such leaders as Madison and Gallatin, without one display of temper, with never an angry word, Jefferson was the undisputed master during the eight years.

¹ I shall use this term henceforth to designate the party founded by Jefferson, though he never gave up the term "Republican" as long as he lived.

But few months after Congress had met it passed an act abolishing all internal revenue on distilled spirits, the stamp tax, and the tax on carriages. It also reduced the army to about three thousand, sold some of the vessels of the navy, and lowered the salaries of customhouse officials. These acts greatly reduced the number of officials, and Jefferson further proved the sincerity of his professions by consolidating two or more offices into one wherever the public business would warrant it. Thus the President reduced the patronage at his disposal and weakened his own power in order to carry out a principle, and the example is one of the rarest in history.

Congress next addressed itself to a few of the obnoxious laws made by the Federalists. The Alien and Sedition Acts had expired; but there stood the Naturalization Act and the Midnight Judiciary. The former was remodeled and the time reduced from fourteen years to five, where it still remains.

The Judiciary Act, so distasteful to the Democrats, seemed to interpose an obstacle; but this was soon overcome. The act had been passed by the Federalists after it was known that the Democrats had carried the election, and yet not one of the newly created offices was left to be filled by the incoming administration, and each new judge was supposed to hold the office for life. The Democrats regarded this as a gross abuse of power, and they determined to undo the work of their defeated rivals. A way was soon found. They could not take the man from the office, so they determined to take the office from the man. The Judiciary Act was repealed entire; but many years later, long after the Federal party had passed away, the growing business of the Federal courts demanded an extension of its service, similar to that which was now repealed.

**Repeal of
tax laws.**

**Judiciary law
repealed.**

LOUISIANA

The greatest diplomatic achievement in the annals of the United States was the acquisition of the vast, unbounded region beyond the Mississippi known as Louisiana. This immense territory had been taken possession of by France through the explorer La Salle in 1682. Eighty years later France ceded it to Spain, at the time when she gave up Canada and the Ohio Valley to England. Since then a mighty genius had risen in France in the person of Napoleon Bona-

parte, and through his surpassing skill, aided by the spirit of the Revolution, that country had surged to the front until Spain was a weakling in comparison. At this stage Napoleon, now First Consul of France, looked upon the great Spanish-American

Ildefonso. forest with covetous eyes, and he forced its cession by Spain to himself by a secret treaty at San Ildefonso in the year 1800.

The secret soon became an open one, and when the news reached President Jefferson his keen eye at once detected trouble for his country. To Robert Livingston, our minister at Paris, he wrote: "There is on the globe one single spot the possessor of which is our natural and habitual enemy. It is New Orleans. . . . Spain might have retained it quietly for years . . . the day that France takes possession . . . seals the union of two nations. . . . From that moment we must marry ourselves to the British fleet and nation."

Jefferson had ever been partial to France. What a menace to the country must have loomed before his vision to have wrung from him such a statement as the above. But this was not all. In the midst of the excitement over the retrocession the Spanish intendant at New Orleans closed the mouth of the great river to American trade, in violation of the treaty with Spain of 1795. This brought a cry of rage from the Mississippi Valley. The people of the West had no other outlet for trade. They threatened to march down the river and take possession of New Orleans by force, or to throw themselves at the feet of England, if their own government did not come to the rescue. Jefferson was a man of peace; but the clamor from the western frontier grew louder, and something had to be done. At length it was determined to set apart two million dollars for the purchase of West Florida and the island of New Orleans,¹ and thus to secure forever a passage down the great waterway.

Monroe sent to Paris. James Monroe was then sent to join Livingston at Paris, with power between them to effect the purchase. Jefferson had little hope of success. His object, as he stated privately, was to "palliate and endure," and to quiet the people of the western country until a war should break out between France and England, when he would cast his lot with the latter.

Napoleon had acquired Louisiana for the purpose of colonizing it; but after losing two or three good armies in Santo Domingo, the island of rebellious blacks, he found it difficult to carry out his projects in the lower Mississippi Valley. Furthermore, he expected another

¹ This object was understood, but was not mentioned in the resolutions.

war with England. For this he would need money; and besides, as England was the greater sea power, she might, in case of war, land an army on the coast of Louisiana and hold the territory by right of conquest. Napoleon had little love for the United States; but his love for England was still less, and he was too shrewd to play into the hands of his great enemy. Moreover, Napoleon saw that by a single stroke he could win the good will of America and prevent Jefferson from carrying out his threat of forming an alliance with England. Moved by these considerations, he offered to sell all Louisiana to the Americans. The offer was made to Livingston just before, and repeated soon after, the arrival of Monroe. The price asked was \$20,000,000, and the two Americans had been authorized to offer as much as \$10,000,000 for West Florida and New Orleans. At length a bargain was made by which America was to pay \$15,000,000 for the entire territory. One fourth of this was to be paid to Americans holding claims against France, while the remaining three fourths were to be paid in six per cent bonds. The famous treaty was signed on April 30, 1803,¹ by Marbois for the French, and by the two Americans, subject to the ratification of their government.

The purchase.

The bargain was a great one for America. It not only precluded all possibility of a foreign power getting a footing on the lower Mississippi; it also secured forever the control of the great river and added to the United States a vast, fertile domain of unknown bounds. As afterward ascertained, Louisiana,² contained 1,171,931 square miles — more than all the original thirteen states combined. “You have made a noble bargain for yourselves,” said Talleyrand to Livingston, “and I suppose you will make the most of it.”

Actual possession soon placed our title to Louisiana beyond dispute; but, strictly speaking, the sale was not legal. Napoleon had agreed to convey to Spain a dukedom on the Arno River, for the son-in-law of the Spanish king, in payment for Louisiana; but the price was never paid. The treaty of Ildefonso also stipulated that France should not cede the territory to any foreign power; but Napoleon disregarded this. In point of fact, France, therefore, did not own Louisiana; and even if she had owned it, the cession, according to the French Constitution, could not

Sale illegal.

¹ The English copy was signed a few days later.

² Including Alabama and Mississippi south of 31°. For Louisiana see map following p. 896.

be made without the consent of the Chamber of Deputies, and this the First Consul never obtained and never sought. The French people were astonished at this action of their ruler; but he was the master, and they were powerless.

Far sadder was the wail from Spain. The Spanish government protested feebly, pathetically; but its voice was not heard. The Spaniards believed that they could not hold their American possessions with Louisiana in the hands of the rising free Republic — and they were right. They believed that the news of the cession sounded the death-knell of the Spanish empire — and so it did.

The people of America, on hearing the news from Paris, were astonished at the magnitude of the transaction that gave them such a princely domain. President Jefferson readily saw what the new purchase meant in the future development of America; but, true to his strict construction principles, he pronounced the purchase unconstitutional.¹ This view he expressed by letter to various friends, and he drew up an amendment to the Constitution, giving the government power to incorporate Louisiana with the United States and make it a part thereof, and sent it to his Cabinet. But he was soon alarmed by word from Livingston, who stated that there was reason to fear that Napoleon would change his mind and yet prevent the cession. Jefferson took the alarm and instantly enjoined his friends from saying anything of the constitutional limitations until the transfer was accomplished, after which he advocated that an amendment should be adopted to make the purchase valid. He called Congress to meet in October, six weeks before the usual time, to deal with the great subject. After a brief debate, in which the Democrats took a ground which they would have opposed during the old Federal days, the purchase was ratified, and all thought of amending the Constitution was abandoned.

A formal transfer of the territory was made in December, and before the close of that month a bill for its government was introduced. This bill, which became a law in March, 1804, divided the territory into two parts at the thirty-third parallel. The northern portion, which contained few white inhabitants, was called the District of Louisiana and was put under the government of Indiana Territory, which was governed by the Ordinance of 1787. The southern district, called the Territory of Orleans, contained some fifty

¹ It was not so much the purchase as the provision in the treaty providing for its incorporation as a part of the United States that troubled Jefferson.

thousand people, chiefly French. The inhabitants were given no share in the government. The governor and the secretary were to be appointed by the President for three years, and the judicial officers for four years. This was another long stretch of the Constitution, as Jefferson formerly understood it; but it was practically sustained in 1828 by Chief Justice Marshall when he decided, concerning the inhabitants of Florida, that the people of a territory have no political rights before the territory becomes a state.

**Government
of Louisiana.**

One of the interesting features of the debates on the purchase and government of Louisiana arose from the fact that the Federalists planted themselves firmly on the theory of strict construction, while the Democrats occupied the ground of loose construction, formerly held by their opponents.

While Jefferson was yet in Washington's Cabinet, he proposed an exploring expedition to the great Northwest. When elected President he was still thinking of this, and after the purchase of Louisiana Territory, which extended far up the Missouri, he determined to carry out his project. He chose one of his secretaries named Merriwether Lewis to lead the expedition, and Lewis chose Captain William Clark as his associate. After spending a winter in camp near the mouth of the Missouri, the company, numbering forty-five men,¹ began their ascent of that river in the spring of 1804. They followed the river until late in October, when they encamped for the winter near the site of Bismarck, North Dakota. Early in the spring they resumed their journey, and in May they came for the first time in view of the Rocky Mountains. On reaching the Columbia, that noble river which Captain Grey had discovered fourteen years before and had named after his ship, they floated with its current. Their journey was full of hardship, but they were repaid with many romantic scenes,—cascades of marvelous beauty and snow-capped mountains skirted at the base with gigantic forests. They met and made friends with many Indian tribes.

**Lewis and
Clark
expedition.**

On the morning of November 7, 1806, after a journey of a year and a half through the wilderness, they saw for the first time the blue line in the western horizon which told them that the end of their journey was at hand. It was the Pacific Ocean, that vast watery plain on which Balboa had gazed with a swelling soul, through which Magellan had plowed with his hardy seamen until he had belted the globe.

¹ Sparks, in his "Expansion of the American People," p. 212, gives this number; H. H. Bancroft gives twenty-eight.

After spending the winter on the coast they returned to the United States, reaching St. Louis in September, 1807. In two and one half years they had traversed nine thousand miles of unbroken wilderness untrodden before by the foot of the white man. Their journal, published a few years later, conveyed much important information on the Great West. It was largely on this expedition of Lewis and Clark that our government forty years later based its claim to the Oregon country, when the settlement was made with Great Britain. At this time (1806) Zebulon Pike made a great exploring tour of the middle West, crossing the plains to the site of Denver, thence turning southward to the head waters of the Rio Grande.

BURR AND HAMILTON

The administration party grew steadily in popular favor until, at the close of the year 1803, Federalism was practically dead outside of New England,¹ and even in that section the Democrats had made gains in every state. The leading New England Federalists viewed the impetuous sweep of democracy with alarm. They had expected to see the ship of state founder under the guidance of the mob and the rabble, and themselves to be soon recalled to the helm; but the country was still prosperous and the democracy was strengthening every hour, while they beheld their own party melting away like snow beneath an April sun. The dying party was led by the senators Timothy Pickering of Massachusetts, former member of the cabinets of Washington and Adams, and Roger Griswold of Connecticut. These men were doubtless honest; but they were too narrow to stand aside and say, If the democracy has the ability to rule, and if a majority prefer a rule of the democracy, give it a fair trial. On the contrary, the greater the success of their opponents, the wilder was their cry against the modern evil of democracy.

The Louisiana Purchase was now made the pretext for a conspiracy to dissolve the Union. With this great territory carved into growing states, the West and the South will overshadow and rule the East, said the conspirators, and there is nothing left but to shatter the whole structure and set up a New England Confederacy.² Pickering made known his scheme to

¹ Except in Delaware, Maryland, and South Carolina, where it still held on feebly.

² An admirable account of this conspiracy is given by Henry Adams, Vol. II, Chap. VIII. This historian is a grandson of John Quincy Adams, who was, at the time we are treating, Pickering's colleague in the Senate, but who was wholly averse to disunion.

such Federalists as George Cabot and Fisher Ames; but these men, while also alarmed at the rising tide of democracy, pronounced the scheme of disunion unpracticable. In spite of this discouragement the leaders pressed on, and in addition to New England they decided that they must have New York. But New York was Democratic, and they could hope to win the state only through some disaffected member of that party; and they soon found him in the person of Vice President Burr.

It was an opportune moment to approach Aaron Burr. He was in the midst of a terrific political battle in New York, where the great ruling families of Clintons and Livingstons had combined against him, and to these were added the power of the administration; and Burr saw that the battle was going against him. Burr was a restless soul. His patriotism was shallow. He had no fear of the democracy, and yet, when approached by the Federalists who disclosed their scheme of breaking up the Union, proposed to make him their leader if he would give them New York and, as an earnest of their good intentions, offered to support him for the governorship of that state at the coming election, he fell in with their plans, though cautiously and with few promises. His probable motives were twofold: to gratify his personal ambition, and to be revenged on his political adversaries.

It was believed by many that Burr could be elected, if supported by the Federalists and by his personal following in his own party. And probably he would have succeeded but for one obstacle that proved to be fatal. Alexander Hamilton **Burr's defeat.** was the obstacle. Hamilton was no friend of disunion, though he believed democracy to be a disease; and further, he and Burr had for years been political and personal rivals, almost enemies, and nothing could now persuade him to join a movement which meant to give Burr a leadership over himself. He professed to believe that Burr was a dangerous man; his opinions were published in the newspapers, and they influenced many voters. Burr was defeated by the Clinton-Livingston candidate, and the disunion conspiracy was broken to fragments; but the remaining malcontents, the dregs of a once noble party, continued to rail against popular government of the Jeffersonian type until ten years later, when they met political death by suicide in the Hartford Convention.

Aaron Burr brooded over his downfall. Nothing was more certain than that his political fortunes in New York and in the nation

were shattered beyond repair. He felt that he would have won in this battle had it not been for Hamilton, who prevented his receiving the full Federalist vote. Nor was this the first time that Hamilton had thwarted his ambitions. The more Burr brooded over the matter, the more he blamed Hamilton for all his misfortunes, and he desperately resolved to get rid of his great enemy. He challenged Hamilton to a duel.

The challenge.

Dueling was common in those days. The great public had not yet come to see that the practice is wrong. It smiled on it, applauded it, and branded the man as a coward who refused to meet his antagonist on "the field of honor." And the average man was too much of a real coward to endure being called a coward. Even Hamilton had not the moral courage to defy public opinion and refuse to fight a duel. He accepted the challenge.¹

In the gray dawn of that sultry summer day in July, 1804, the two men with their seconds rowed silently across the Hudson, and as the earliest rays of the rising sun streamed through the trees, they stood face to face on the old dueling ground under the rocky heights of Weehawken. Hamilton seemed undecided and vacillating; Burr was keen-eyed and determined. At the signal to fire, but one shot was heard, and Hamilton fell upon his face, shot through the body. As he fell his pistol was fired into the air some feet above Burr's head, whether accidentally or not was never known. He had said to a friend that he intended to throw away his first fire. His friends now bore the wounded statesman back to his home in the city. Next morning he was dead.

**The duel,
July 11, 1804.**

Among American statesmen Alexander Hamilton must be placed in the first rank. Born in the West Indies in 1757, of Scotch-French parentage, he came to the colonies as a boy of fifteen, seeking his fortune. At the outbreak of the Revolution we find him at King's College, in New York, and he left his course unfinished to join the army. He served throughout the war, a large part of the time on the staff of Washington, and he gave evidence of possessing a high order of military ability; but the war closed while he was still a youth, and never afterward did he have an opportunity to display his military powers. He served a short time in the Congress of the Confederation, helped

**Character of
Hamilton.**

¹ Hamilton claimed that he fought only to save his political influence, but his brain was quite fertile enough to do that without the duel.

to frame the Constitution, and became a member of Washington's first Cabinet.

As a financier no public man in our history can compare with Hamilton, and he was the founder of our present financial system. As a lawyer and an orator he stood in the first class; as a controversial political writer he surpassed all other men of his age. "Any man who puts himself on paper with Hamilton is lost," said Burr, some years before their fatal quarrel. Hamilton did a service for America that will never be forgotten; to him above all men we are indebted for national strength. But his usefulness was marred by his egoism and his want of faith in the good sense and good intentions of the masses. Had he been born to a throne, he would have made a great ruler; but, as he himself acknowledged, he was out of place in this western world, where the voice of the people cannot be stifled and must prevail.

Aaron Burr may have felt a thrill of the joy of victory at the fall of his great rival at Weehawken. He did not foresee that his fatal bullet would add a luster for all time to the name of his fallen victim, and would cover his own with indelible dishonor. He did not foresee that the ghost of Hamilton would pursue him like a Nemesis from land to land, would mark his every project with failure, would hound his footsteps for thirty years, until at last, aged and tottering, he would sink into the grave, the victim and not the conqueror of the fatal duel at Weehawken.

New York and the nation were shocked at the death of Hamilton. The great untrained public had applauded dueling, but it was costly sport when such an intellectual light as Hamilton became its victim. This great giant, the public, like a petulant child that takes vengeance on the plaything with which he has injured himself, felt the wound and grew angry and demanded a victim—and Burr became the victim.¹

When the people of New York learned that Burr had practiced with his pistol for some weeks before the duel, with the evident intention, not of retrieving his honor, but of killing his rival, he was denounced as a murderer. He fled to **Burr flees.** Philadelphia, but here public opinion was equally against him, and he went to the South. Some months later he returned northward, hoping to find public feeling allayed; but not finding it so, he

¹ This does not imply a belief that Burr was blameless, but that he was a natural product of a society that encouraged dueling.

Of Burr's guilt few had any doubt, but for want of proof he was acquitted by the jury. His reputation, however, was utterly blasted, and from this time, if not from the time of Hamilton's death, he was despised above all public men in America. After the trial he went to Baltimore and stayed with a friend, but he fled from the city by night to escape the fury of a gathering mob. Finding no rest for the sole of his foot in America, he took ship for Europe under an assumed name. There he wandered for four years; but his Nemesis pursued him. He found neither friends nor rest, and at times he was in want of the necessaries of life. Returning to his native land in the spring of 1812, he found at last that the public, now about to engage in a war with England, took little notice of him, and he engaged quietly in his profession, earning a fair living until old age and disease disabled him; but he never regained the confidence of the public.

IMPRESSMENT OF SEAMEN

The réelection of Jefferson in 1804 was a grand triumph of the democracy; and yet not wholly this, for Jefferson had already proved himself not only a Democrat, not only a state-rights Republican, but also a nationalist. The purchase of Louisiana was an act of national sovereignty such as the most ardent Federalist would scarcely have dreamed of five years before. By this act, as well as by his conciliatory policy, Jefferson won thousands of his opponents without alienating the members of his own party. Of all the presidential elections save one, since the days of Washington, that of 1805 came nearest being unanimous. Jefferson and his colleague, George Clinton, received all the electoral votes except fourteen, which were cast for the Federalist candidates, C. C. Pinckney and Rufus King. But the trying time in the life of the President was yet to come, and that was in connection with our foreign relations. France had failed to give boundaries to the great tract of land that she had sold to the United States. Livingston was at first chagrined that he had acquired the west bank only of the Mississippi when he had been authorized to purchase the east bank. But he soon found a way out of his dilemma by claiming the east bank, or West Florida, also, as a part of Louisiana. His example was followed by the administration; and thus began a series of negotiations that covered several years. Spain protested vehemently against this claim of the United States, but Spain lay prostrate at the feet of

Napoleon. Jefferson at length abandoned this claim and sought to purchase the coveted territory.¹ Seeing that it was France and not Spain with whom he had to deal, he suggested offering the former a sum of money for the rights of Spain in Florida, with an implied threat of making an alliance with England in case of refusal. Congress voted \$2,000,000 for such a purpose. But suddenly all thought of a British alliance was scattered to the winds. England revived the old rule known as the Rule of 1756.

France and England were again at war, and the former was not permitted by the Mistress of the Seas to trade with her own colonies. France, therefore, threw open her colonial trade to neutrals, a thing she did not ordinarily do in time of **Rule of 1756.** peace. In consequence the Americans built up a great trade with the French West Indies; and as most of the other nations of Europe were embroiled in the war and could not trade under their own flags, the United States became the carrier for the world. But this was all changed by the revival of this old Rule of 1756, by which a neutral was not permitted to enjoy in time of war that which was not permitted it in time of peace. In view of the fact that American ships were supplying the wants of England's enemies, one can scarcely blame England for enforcing this old rule. But it raised a cry of despair in America. Thousands of mariners and merchants suddenly found their occupation gone and themselves face to face with ruin.

But this was not all, nor half. The impressment of American seamen into the British navy was now at its height. This practice had fallen into the background during the short season of peace between France and England that ended in 1803, but with the renewal of the war it had been revived with alarming vigor. The British ministry had refused America's repeated offers to arrange for a mutual exchange of deserters. In the most high-handed manner a British captain would overhaul an American merchantman on the sea or in port, muster the crew before him, and choose whom he would for the British service; and too often native Americans, or men whose speech showed plainly that they were not Englishmen, were seized. Old revolutionary soldiers complained that their sons were thus forced to fight the battles of England. One old soldier, whose sons had been impressed, had served through the war, had

¹ He did not formally or officially abandon the claim, but he practically did so by making this offer.

lain for fifteen months in a British prison, and had lost his estate by means of the war. He wrote a bitter complaint to Congress, stating that if this was the kind of liberty he had gained, he had rather be without it.¹

These two questions — England's decision concerning the trade of neutrals, and the impressment of seamen — called from Jefferson a special message to Congress, reciting these wrongs; and this was followed two months later by a non-importation act, limiting our trade with Great Britain. This measure passed in spite of the determined opposition of the erratic, sarcastic John Randolph, who had broken friendship with the administration. Randolph made a powerful speech, and pointed out one great fact that many had not yet seen, namely, that Great Britain was now really fighting for liberty, that she was the only remaining obstacle in the path of the ambition of that mighty despot who had risen in France.

Even President Jefferson seemed to be cringing before the French Emperor. At Napoleon's command he abandoned the American claims against the court of Spain, and forbade American vessels to trade with the rebellious French colony of Santo Domingo. Why? Not from fear, but because his heart was set on obtaining West Florida, and he knew that Bonaparte alone could grant his wishes or deny them. The latter, knowing Jefferson's desires, played upon this string for several years; when he wished some humiliating service from the American President, he held up the prize before his eyes, then again he would withdraw it.² At length Jefferson grew impatient and threatened an alliance with England, ignoring the fact that the impressment business was increasing. But when the Rule of 1756 was revived by the British government, and when not only our sailors, but even our ships were ruthlessly seized by the British,³ even Jefferson could endure it no longer. And still he was for peace. Instead of threatening war, he quietly sent James Monroe and William Pinkney to London to make a treaty in place of the portions of the Jay Treaty which had expired. A treaty was soon framed, and it reached America in the spring of

¹ Schouler, Vol. II, p. 102.

² A few years later the United States actually seized West Florida; but the occupation was not considered legal by foreign powers. In 1819, when Spain ceded Florida to the United States, West Florida was included in the cession, and the United States accepted it in order to gain a legal title.

³ Within three years, ending with 1807, 349 American ships were captured by the British. Gordy, Vol. I, p. 440.

1807; but as the English ministry had refused to renounce the right of search, — and to secure this had been the chief object in sending the two men to London, — Jefferson rejected the treaty without sending it to the Senate. **Treaty rejected.**

Before midsummer of that year an event occurred that stirred American society as it had not been stirred since the days of the Revolution. It is known as the affair of the *Leopard* and the *Chesapeake*.

Three men had deserted from the *Melampus*, an English vessel, and had enlisted in the *Chesapeake*, a United States frigate of thirty-eight guns, then fitting out for the Mediterranean under Commodore Barron. The British minister, Erskine, requested their surrender; but Jefferson refused, because, first, England had declined to arrange for the surrender of deserters, and second, the three men,¹ as the President believed, and as was afterward proved, were all American born, two of whom had been wrongfully impressed from an American vessel in the Bay of Biscay. Upon this Admiral Berkeley, British commander in American waters, issued from Halifax an order commanding the British captains to search the *Chesapeake* and take the men by force.

A few weeks later the *Chesapeake* dropped down to Hampton Roads and put to sea. At the same time the *Leopard*, an English two-decker of fifty guns, stood out to sea. She then bore down upon the *Chesapeake*, and her commander demanded the surrender of the three deserters, producing at the same time Berkeley's order to search the American vessel in case of refusal. Barron replied that he had no knowledge of such deserters, and that the crew of a United States war vessel could be mustered by their own officers alone. The captain of the *Leopard* then shouted through a trumpet, "Commodore Barron must be aware that the orders of the admiral must be obeyed." Next came a solid shot across the bow of the *Chesapeake*, and another; and these were followed by a broadside. Barron was utterly surprised. He was unprepared to return the compliment, and after twelve minutes of a raking fire, three of his crew lying dead upon the deck and eighteen wounded, he hauled down the American flag and surrendered his vessel. The crew was now mustered before the British officers, and the three deserters from the *Melampus* were secured.²

¹ All three were colored men.

² Two other men, real deserters from the British service, were also taken. One of them, named Ratford, was afterward hanged at Halifax. The colored men were reprieved on their promise to reënter the British service. More than a year

A few weeks later the *Chesapeake* dropped down to Hampton Roads and put to sea. At the same time the *Leopard*, an English two-decker of fifty guns, stood out to sea. She then bore down upon the *Chesapeake*, and her commander demanded the surrender of the three deserters, producing at the same time Berkeley's order to search the American vessel in case of refusal. Barron replied that he had no knowledge of such deserters, and that the crew of a United States war vessel could be mustered by their own officers alone. The captain of the *Leopard* then shouted through a trumpet, "Commodore Barron must be aware that the orders of the admiral must be obeyed." Next came a solid shot across the bow of the *Chesapeake*, and another; and these were followed by a broadside. Barron was utterly surprised. He was unprepared to return the compliment, and after twelve minutes of a raking fire, three of his crew lying dead upon the deck and eighteen wounded, he hauled down the American flag and surrendered his vessel. The crew was now mustered before the British officers, and the three deserters from the *Melampus* were secured.²

¹ All three were colored men.

² Two other men, real deserters from the British service, were also taken. One of them, named Ratford, was afterward hanged at Halifax. The colored men were reprieved on their promise to reënter the British service. More than a year

Hitherto only merchantmen were overhauled at sea by British captains; but here was an attack on a United States war vessel, which represented the sovereignty of the nation. The people of the whole country, including the Federalists, flared up with indignation, and there was scarcely a city or a town in the Union that did not pass resolutions denouncing the attack as a dastardly outrage. Jefferson issued a proclamation ordering all English cruisers to leave American waters, and a demand was made upon Great Britain to disavow the act and to make reparation. The British ministry promptly disavowed the attack and sent George Rose to make reparation; but his instructions were such that the United States refused to treat with him. He was instructed to demand the recall of the President's message and the punishment of Commodore Barron for receiving the deserters. His mission came to naught, and the matter hung fire for several years.¹ Barron was afterwards punished with five years' suspension from service, not for receiving the deserters, but for neglect of duty in not being ready to defend the *Chesapeake*.

FRENCH DECREES AND ENGLISH ORDERS IN COUNCIL

The war now raging in Europe was tremendous. The British nation was superior to the French, and would have crushed it but for the genius of one man, Napoleon Bonaparte. This wonderful man had laid Europe at his feet, and had boasted that his will should be the law of the world. He even had the temerity to dispute the dominion of the sea with the powerful navy of England; but his hopes, in this line, were utterly crushed in 1805 by the victory of Nelson at Trafalgar. Even this seemed not to daunt Napoleon in his vast plans; he rose above this defeat with the audacity of genius. He overthrew the Austrians at Ulm and Austerlitz, and the Prussians at Jena; and he now determined to starve the island kingdom by closing its ports to the commerce of the world. He issued from Berlin, Germany, the "Berlin Decree," declaring the British Isles in a state of blockade, making prize of war all merchandise produced by England or her colonies, and declaring that no ship that before this, a shot from the British ship *Leander*, in the New York harbor, killed a man on an unoffending coaster. This had caused great excitement, but nothing to compare with that caused by the *Leopard*.

¹ Five years after this occurrence the three impressed Americans were replaced on the deck of the *Chesapeake*.

touched at an English port should be admitted to a port of France or her allies.¹

The news of this decree reached England at the moment when Monroe and Pinckney were about to sign their tentative treaty with that country; and the English agents now appended to the treaty a protest against the decree of Napoleon, and reserved the right of the British government to retaliate

Order in Council, January 7, 1807.

in case neutral nations submitted to it. For taking such a position England could not be blamed; but far otherwise was her action a week later. Without waiting to see what "neutral nations," which meant the United States, would do, she issued an Order in Council, closing to neutrals all ports under French control. This order, with the Berlin Decree, struck a terrible blow at American commerce; but this was not all. Late in the autumn of the same year (1807), while the American people were still raving over the *Chesapeake* affair, the English issued an Order in Council which was a violation of international law, and which struck at the very foundations of American sovereignty. By this order any neutral vessel trading at a European port from which British ships were excluded was required first to stop at an English port and pay a duty, and this must be repeated on the return voyage. The object of this order, as acknowledged by the English premier, was not simply to cripple Napoleon, but to protect British trade from the rising commercial power of the United States. No self-respecting people could obey such a decree, and it is certain that this order would not have been issued had our country then been able to protect itself against all comers.

Napoleon waited but a few weeks after this order was issued before sending forth from Milan, in retaliation, one of his famous decrees, declaring that any vessel having been searched or having paid a tax at a British port, might be seized in any French port as a lawful prize.

Milan Decree.

These orders and decrees were aimed at America as the only neutral worth considering; not that either of the great belligerents wished to provoke America to war, nor that either bore malice toward the American people or government. But it is true that each sought to draw the United States into a war with the other, and failing in

¹ This was part of his so-called "Continental System," a combining of the continental powers to break down England. This decree had been preceded by Napoleon's closing the ports of Bremen and Hamburg to British commerce, and by England's declaring a blockade of the coast from Brest to the Elbe, May, 1806.

this each showed a contempt for American rights that would not have been shown toward a first-class power.

What now could America do? Three ways were open: first, to ignore the French decrees and the English orders, but this would have resulted in an alarming destruction of American shipping and practically in sweeping it from the seas; second, to make war on both France and England, the two most powerful nations of the earth, and this might have resulted in the downfall of the Republic while still in its youth; third, to refuse to trade with either of the offending powers, and this at the cost of ruining thousands of our merchants, and throwing tens of thousands of sailors and laborers out of employment. Which road should be chosen? Jefferson was preëminently a man of peace; he had a mortal fear of a national debt and of endangering liberty by strengthening the union. And besides, Jefferson had a theory, an original theory, and here was his opportunity to give it a trial. He believed that the nations of the world would live at peace with us from motives of self-interest; that these two would rescind their hateful decrees rather than lose American trade. Offer a bone to two bull-dogs fighting, and they will take little notice of the bone; they will still fight. So with France and England. Their struggle was a death struggle, and they could not turn aside for the little that America had to offer. Jefferson had this yet to learn, and he had to learn it by experience. He chose the third mentioned of the three ways. He chose not to trade with the offending powers — to lay an embargo on American commerce.

THE EMBARGO

On the 22d of December, 1807, one of the most remarkable measures in the annals of Congress was enacted into law, in accordance with a secret message of the President; and the fact that a measure so undemocratic in its nature and so extraordinary in its requirements passed both houses by great majorities, and almost without debate, showed the wonderful power with which the President still swayed his party. This was the most rigorous and arbitrary piece of national legislation, as regards private property, ever enacted in the United States.¹ By this law an embargo was laid, for an indefinite time, on all foreign commerce, and by it every man in

¹ There were other embargoes at other times, but they were always limited to a definite time, a very few months.

the country engaged in foreign trade was deprived of his occupation. Except among the few remaining Federalists, the embargo was well received at first. But it was not long before the coasting vessels, which were not inhibited by the act, were engaged in smuggling goods into Canada and into Spanish Florida, and indeed many of them sailed to transatlantic ports. This led to a supplementary act in January, by which coasters were put under heavy bonds and made subject to severe penalties. Other supplementary acts were passed from time to time, each more severe than the preceding, until at length all foreign trade by land or sea was made illegal. As the summer of 1808 passed, and the people saw that neither France nor England gave any sign of yielding, the embargo became very unpopular, and they did everything possible to evade the law. They traded with France through Florida and with England through Canada. Barrels of flour in stacks were placed on a hillside near the Canadian boundary line, when "accidentally" they were started rolling across the line until all were safe on Canadian soil. The people, especially in New England, threatened rebellion and disunion. Jefferson exhibited wonderful courage and vigor in carrying out his measure. He placed troops along the Canadian border; he patrolled the Atlantic coast with gunboats and frigates; he enjoined the governors of states to call out the militia to enforce the law where necessary. The scene was a distressing one. Ships lay rotting in the harbors. Wheat, corn, cotton, tobacco, and other articles of produce were piled in the barns of the northern farmer and the southern planter and along the wharves of every seaport.

After the embargo had operated for more than a year, and still there were many evasions of the law, an Enforcing Act was passed by Congress. By this law no coasting vessel could be loaded until the owner had given a bond for six times the value of the ship and the proposed cargo; any produce being moved "apparently" toward foreign territory was subject to seizure, and the officials were to be supported by the army and navy of the United States. Such legislation was drastic in the extreme; yet Jefferson did not shrink for an instant from putting it into operation. But his great popularity was on the wane. The South bore its burden with scarcely a murmur; but in New York and New England, where his hand fell more heavily, the President was denounced as a ruthless tyrant. When the Embargo Act was first passed, the legislature of Massachusetts was Democratic, and it pro-

January 9,
1809.

nounced the act a "wise and highly expedient measure." But the Federalists now had control of the legislature, and it denounced the embargo in unsparing terms. So in Delaware, Connecticut, and Rhode Island.¹ Jefferson was not insensible to these denunciations. His second term was about to close, and he longed for the time when he could lay aside the burdens of public life. The one desire of his heart now was to continue the embargo till the close of his term of office. The country was not ready for war, and to lift the embargo without declaring war was to acknowledge the defeat and failure of the whole scheme. But the pressure was too great, and six days before Jefferson retired from office he signed an act repealing the Embargo Act, and on the day of the inauguration of James Madison the period of the odious law came to an end. In place of it, however, an act of non-intercourse with France and Great Britain was passed.

Most historians regard the planning and carrying out of the embargo the great blunder of Jefferson's life. To this opinion we cannot fully subscribe. It was a drastic measure, it is true, and it scattered to the winds Jefferson's old strict construction theories; it brought ruin to thousands of honest business men; it emptied the treasury, and paralyzed the energy of the nation; it almost overthrew the Democratic party, and threatened the foundations of the Republic; but it was a last resort to avoid war, and with all its disastrous effects it was no doubt better than a war with both France and England. It was an experiment, and experiments are often useful, even though they fail. It taught the people *not* to rely on commercial restrictions, and such a lesson was needed. Jefferson saw many of his best friends alienated; he saw his popularity waning and his fortune in Virginia greatly impaired; but he never wavered in his self-chosen duty.

The effect of the embargo on France was very slight. It even brought from Napoleon the Bayonne Decree, ordering the seizure of all American ships found in French, Spanish, or Italian waters. He explained that, as American vessels were forbidden to leave their own ports, he was only assisting Jefferson to enforce the embargo. As a result of this kindly act, Napoleon was enabled to seize and confiscate over two hundred American ships.

The effect of the embargo on England was more marked, but not so marked as had been hoped. It brought great suffering to the poor

¹ State Documents, edited by H. V. Ames, No. 1, pp. 26-42.

in the manufacturing cities; but it proved an advantage to shipping interests and to land owners, whose crops brought double their usual prices. But England suffered a permanent loss from the fact that the embargo turned the people of New England to manufacturing, and from this small beginning that branch of industry has grown until the New World rivals the Old in manufactories.

CHARACTER OF JEFFERSON

Of all the public characters in our early history, Jefferson is the most difficult to classify. He was many-sided, and his public life was full of contradictions.¹ He had organized a new party as the champion of the people's liberty, and as a state-rights Republican; but no other President interfered so much with personal liberty, and few have come so near to driving the states into open rebellion.² These conditions, however, were brought about by foreign wars, and had no place in Jefferson's original purpose. His enemies pronounced Jefferson a doctrinaire and an impractical idealist, and they were in some measure right. In consequence of his ideals, which he attempted to carry out in practice, he made many blunders. His statesmanship was far-sighted in its ultimate aims, but not always so in its means of attaining an end. His dread of a national debt was almost childish; his no-army and no-navy theories were centuries in advance of his age.

Two theories had this dreamer, Thomas Jefferson. Both were vast in scope and revolutionary in the world of human government. To carry out these two he devoted his life, and on these he staked his reputation. One was his belief that the nations can live in harmony — without war. In this belief he destroyed his ships and disbanded his armies. In this belief he sacrificed his popularity, his fortune, and his friends. What a sublime and admirable confidence in an untried theory! Jefferson failed in this, and the bitterness of his disappointment was known only to his own soul. A century has passed since then, and Jefferson's dream is still a dream. But the time will come — we hope it will come — when human warfare will be a thing of the past; when armies and navies will be needed no longer; when an enlightened race will reject the barbarous methods of a crude civilization of by-gone ages — and then the fame of Jeffer-

¹ Henry Adams, Vol. I, p. 277.

² *Ibid.*, Vol. IV, p. 454.

son will reach its zenith; then he will be remembered as a voice crying in the wilderness.

The other principle to which the genius of Jefferson was devoted may be expressed in the one word — "Democracy." This was his chief idol, and without this his type of statesmanship had no excuse for existing. The claim, made by many, that state rights was a cardinal object of Jefferson's devotion, is erroneous. He was a strong friend of state rights, it is true, not from state pride, nor from a local and limited patriotism; but because he saw, and was the first to see, that the power of the states was the most promising safeguard against the threatened encroachment of the national government. State rights was therefore but a means to an end with Jefferson. Why should he care more for state rights than for county rights or township rights, except in so far as they promoted the great object for which he entered public life — to secure the rule of the democracy?

Again, Jefferson had founded his party on the theory of strict construction, and to this day shallow historians assert that he failed in the great aim of his life, because he gradually abandoned his theory of constitutional interpretation and adopted the old Federal doctrine of loose construction. In sober truth, Jefferson cared nothing for strict construction. It was to him, like state rights, only a tool, a weapon, the means of gaining an end, and that end was the triumph of Democracy. I may even go farther and say that Jefferson was not an enemy to a strong central government. His life-work bears out this statement, though his words often contradict it. He first opposed a strong government because he feared that it would foster class rule, to the exclusion of the masses, and his life struggle was against class rule. No longer did Jefferson oppose a strong government when it was the creation of the people, and existed at their pleasure and for their good; but he was an unrelenting foe to such a government by any power except the power of those who were to be governed. Jefferson studied into the European monarchies till his heart was sick with loathing at their corruptions and their tyrannies. He believed that the human mind was dwarfed by over-government and oppression, and that the remedy lay in self-government.

So great was Jefferson's popularity at times that many were led to believe that his chief object was to win popular applause, rather than to serve his country. Let us examine. If devoted to self-

interest, why did he, an eldest son, abolish the law of entail and of primogeniture in Virginia? Why did he, a slaveholder, oppose slavery all his life? If a seeker of popular applause, why did he appear in no northern city during the last thirty years of his life, including his entire presidency? Why did he suppress the date of his own birth in order to abolish the monarchical practice, as he termed it, of celebrating the birthdays of public men? These are not the acts of a time server or a self seeker.¹

Jefferson, on becoming President, could not always carry out his theories, and he often found himself standing on old Federalist ground. He became nationalized by the responsibility of power. His statement, that the chief object of government was to restrain men from injuring one another, had to be modified; but this did not indicate a change of principles; it was a rising to an emergency, an adjusting of his sails to the veering of the wind. With all his changing he never changed in the one thing, the idol of his heart, the passion of his life, — his desire for a rule of the democracy. To this principle he was as constant as the northern star.

Democracy has won in the United States, and the spirit of its founder lives in all our political parties. He has stamped his individuality on the American government more than any other man. Democracy is supreme in this country. In all matters of government the people rule, except where their own lethargy has suffered the political boss to gain a temporary ascendancy. If combinations of wealth or other interests gain control of the government, it is because the people do not use the machinery that is in their hands. We have also nationality, strong and firm; but this has its being only at the will of the democracy. All constitutions, laws, congresses, and courts are subject to this great, final, national tribunal — the People. No statesman can rise above and disregard this power; no act of Congress is so stable that it may not be ground to powder by the ponderous weight of public opinion. This vast being, the Public, has discovered his strength, and it was Thomas Jefferson above all men who awakened him to self-consciousness.

NOTES

Jefferson's Religion and Learning. — There has been much dispute about the religious belief of President Jefferson. Many of his contemporaries were of the opinion that he was an atheist, or at least an infidel; but this was erroneous,

¹ This thought is suggested by Henry Adams.

and it had its origin in the part he played in disestablishing the church in Virginia, and in certain excerpts from his writings. While Jefferson was a vestryman in the Episcopal church for many years, to the time of his death, he was very broad in his religious views, and made no quarrel with his neighbor for believing "in one God or twenty gods." He had no patience with Puritanism, and his strife with the New England clergy ended only with his public life. There is no doubt that he was sincere and even devout. He pronounced Christianity the purest and sublimest system of morals ever delivered to man. To John Adams he wrote: "An atheist I can never be. I am a Christian in the only sense Christ ever wished one to be." He was probably a Unitarian in belief. He was doubtless a man of pure morals, notwithstanding the attacks of some of his enemies.

Jefferson was very studious. His learning was remarkable for its compass, and could scarcely be equaled in his times. It was said that he "could calculate an eclipse, survey an estate, tie an artery, plan an edifice, try a cause, break a horse, dance a minuet, and play the violin." One of his biographers quotes a northern man who spoke thus of Jefferson: "When he spoke of law, I thought he was a lawyer; when he talked about mechanics, I was sure he was an engineer; when he got into medicine, it was evident that he was a physician; when he discussed theology, I was convinced that he must be a clergyman; when he talked literature, I made up my mind that I had run against a college professor who knew everything." Even Buffon, the naturalist, wrote him, "I should have consulted you before publishing my natural history, and then I should have been sure of the facts."

Theodosia Burr. — There was one pathetic vein that ran like a scarlet thread through the strange career of Aaron Burr — his relations to his daughter. His wife had died young and had left him this beautiful child, Theodosia, who reigned over his home like a princess and grew into a queenly woman. Her mental endowments were unusual. She believed her father the most perfect of men, and never seemed to doubt the honesty and sincerity of his motives. At Richmond she followed the trial with the keenness of a trained lawyer, and won the admiration of every one that came within her influence. When all others execrated her father as a villain, she clung to him with the greater devotion. While he was in Europe, she wrote: "I witness your extraordinary fortitude with new wonder at every new misfortune. . . . My vanity would be greater if I had not been placed so near you, and yet my pride is our relationship." On Burr's return to America, Theodosia left her southern home to fly to his arms. She was in mourning for her only child, a bright and promising boy, who had recently died and, like Rachel, she refused to be comforted. She embarked on the sea at Charleston, and her father watched and longed with painful anxiety for the coming of his one remaining friend, whose faith in him had never faltered. But he waited in vain. The ship was lost upon the ocean, and not a life was saved. When Burr realized that his faithful daughter had found a grave at the bottom of the sea, and his own utter loneliness, his grief was almost unbearable; yet he suppressed it with wonderful self-control. He lived beyond his fourscore years, dying in 1836, and was buried with his fathers at Princeton, New Jersey. His father, the Rev. Aaron Burr, had been president of Princeton

College, and his mother was a daughter of the great Puritan divine, Jonathan Edwards.

Impressment of Seamen. — The insolent methods often employed by English shipmasters in searching American vessels, and their indiscriminate recklessness, which resulted in their seizing many who were not British subjects, were exasperating in the extreme, and cannot be condoned. But it is a mistake to believe that the British government maintained the right of impressing seamen simply to annoy the United States. This is far from the truth. In fact, impressment was almost a necessity to England at this time. She was engaged in a life-and-death struggle with Napoleon. Her sailors deserted in large numbers and engaged with American ships because of better pay and easier service. At one time, complains the English minister, twelve of his Majesty's ships lay at Norfolk, Virginia, unable to move, owing to desertions. Many English sailors, on reaching an American port, would purchase forged papers of American citizenship for a dollar or two, or secure them by perjury before a magistrate. Nevertheless England was much more to blame than America because of her persistent refusal to agree to an exchange of deserters.

Fulton and the Steamboat. — The wonderful revolution in the means of travel and transportation wrought by the use of steam had its most conspicuous demonstration on the Hudson in 1807. Robert Fulton, born in Pennsylvania in 1765, was of Irish parentage. He was an artist, but he abandoned art and became an inventor. The world has chosen to honor him above all others as the inventor of steam navigation. But he only improved on the work of others. In 1786 James Rumsey experimented on the Potomac with a steamboat, and the same year John Fitch made similar experiments on the Delaware. Both were partially successful, but both failed to awaken the interest of the great public. Twenty years later Fulton did this, though Fitch was doubtless a greater genius than he. Fulton's first trial was on the river Seine in France. Here he won the interest of R. R. Livingston, our minister to France, and the two became partners, Fulton furnishing the brains and Livingston the money. Their next trial was on the Hudson. The vessel, named the *Clermont*, after Livingston's country seat, made its first trial in August, 1807, witnessed by a vast crowd of people. The boat, described as "a monster moving on the waters, defying wind and tide, breathing flames and smoke," ran from New York to Albany in thirty-two hours. From this moment steam navigation made rapid strides, until it revolutionized the world of trade and travel.

The Yazoo Frauds. — The Georgia legislature in 1795 sold to a combination of land companies a vast tract of western land owned by the state, thirty-five million acres, for the nominal sum of \$500,000. It was soon found that the members of the legislature had been bribed, and the next year the anti-Yazoo party controlled the legislature and revoked the sale. Many claims then sprang up, and the matter was referred to Congress, as the Georgia lands were afterward ceded to the Union. The matter was not settled till 1810, when the Supreme Court decided (*Fletcher vs. Peck*) that the original fraudulent sale was valid, on the ground that the Constitution forbids a state to impair the obligation of a contract. In 1814 Congress voted \$8,000,000 in land scrip to satisfy the claimants, and the long disturbance was ended.

CHAPTER XIX

THE WAR OF 1812

NOTWITHSTANDING the decline in Jefferson's popularity, many of the state legislatures invited him to stand for a third election. But he declined; not on the ground taken by Washington twelve years before, but because, as he claimed, it was well to establish a precedent for the future. He was the author, therefore, of our unwritten law that no man serve more than eight years in the presidency. He was one of our two or three Presidents who, having served two terms, might have been elected for a third; yet many believed that his embargo would have rendered his election doubtful had he desired a third term. But he did the next thing—he practically chose his successor. It was mainly through Jefferson's influence that his secretary of state was preferred before the other two aspirants, James Monroe and George Clinton. A week after the inauguration Jefferson left the Capital City on horseback "for the elysium of domestic affections." He reached Monticello, March 15, and in the remaining seventeen years of his life he never again passed beyond the bounds of his native state.¹

The little man of quiet, simple manners, who now stood before ten thousand people and read his inaugural address in a "scarcely audible tone," had been a leading figure in public life for many years, and was by training eminently equipped for the great office. James Madison as a framer of the Constitution had done more than any other man in making that instrument what it is; he had been a leader in Congress under Washington, and had now just completed his eight years as chief in the Cabinet of Jefferson. Certainly he knew the inner workings of the government as

Madison. ¹ Jefferson's popularity soon rose to its normal standard, and as long as he lived he was the chief adviser of his party, being in constant correspondence with Presidents Madison and Monroe. After 1812 he became reconciled to his old friend and rival, John Adams, and the two were friendly correspondents as long as they lived, though they never met again. Both died on the national holiday, July 4, 1826, but few hours apart.

few could know them. Moreover, next to his retiring chief, Madison was the ablest man in the country, save one, Albert Gallatin.

The new President's trouble began from the day of his installation. He sincerely desired to make Gallatin secretary of state; but there was a faction of Democrats in the Senate, headed by Senators William B. Giles of Virginia, Samuel Smith of Maryland, and Michael Lieb of Pennsylvania, who hated Gallatin and determined to prevent his confirmation. This faction, encouraged by George Clinton, who was again Vice President, and aided by the Federalists, could control the Senate, and Madison had to yield. Gallatin remained in the Treasury, and Robert Smith, a brother of Senator Smith from Maryland, was made secretary of state. The arrangement was humiliating to the President, who was thus forced to accept for the chief place in his Cabinet a man wholly incompetent, a man in sympathy with a faction that used its power to weaken the administration. For two years this arrangement dragged on, when at last the patient Gallatin lost patience and threatened to resign from the Cabinet. This awakened the slow-moving Madison, and led him for once to play the master. He defied the Senate faction by dismissing Robert Smith and choosing James Monroe as secretary of state. The country and even the Senate sustained him, and a signal victory was gained for the administration.

DRIFTING TOWARD WAR

There was a delicious ray of sunshine that brought joy to many at the beginning of the Madison administration. Mr. Erskine, the English minister at Washington, receiving instructions from Canning, the British foreign secretary, announced that the Orders in Council would be withdrawn on June 10, on condition that the President remove the non-intercourse restriction, in as far as it concerned England. Whereupon Madison made a proclamation suspending the non-intercourse act with England. Great was the rejoicing on all sides. The eastern ports became beehives of industry. Vessels were quickly laden with the long-accumulated produce, and in a few weeks a thousand had launched upon the sea for foreign ports. Madison enjoyed a moment of intoxicating popularity; but it was only a moment. The bubble soon burst. The overzealous Erskine had exceeded his instructions, and he was disavowed and recalled. When the news reached America that

August 9,
1809.

the Orders in Council were still in force, the President issued a new proclamation, reviving the non-intercourse act with Great Britain.

Francis James Jackson was then sent to replace Erskine. Jackson was a man of much pride and little tact, who boasted an acquaintance with "most of the sovereigns of Europe," and felt that he had come to treat with a lot of "savage Democrats, half of them sold to France." He began by accusing the administration of deception in treating with Erskine in the knowledge that he was exceeding his instructions. Madison informed him that such insinuations were inadmissible from a foreign minister dealing "with a government that understands what it owes to itself." In the face of this warning, Jackson, with incredible effrontery, repeated his accusation, and was informed that no further communications would be received from him. Thus ingloriously ended his diplomatic career in America.

Meanwhile our relations with France were approaching another crisis. In the spring of 1810 the American Congress removed the restrictions on foreign commerce, but forbade intercourse with England or France if either continued hostile to our trade. This has been pronounced the most disgraceful act on the American statute book. "When Great Britain and France were raining upon us blows such as no powerful nation had ever submitted to before, we folded our hands and bowed our heads with no word of protest, except to say that if either one of them would cease its outrages, we should resent the insults of the other."¹ Napoleon had issued his Rambouillet Decree, confiscating all American ships found in French waters. But on learning of this act of Congress, he offered to revoke his Berlin and Milan decrees. This was only a contemptible trick by which to draw more of our vessels into his trap, and all that were entrapped were seized in accordance with a secret order.

While our foreign relations continued in this strained condition, an event in the Northwest recalled the attention of the people to important matters at home. The Indians of the Northwest had given little trouble for several years after their defeat by Wayne in 1794. But in recent years they had again become hostile, owing chiefly to the ambition of a great leader, Tecumseh, who belonged to the Shawnee tribe. Tecumseh's ambition was to unite all the tribes of that region into one

¹ Gordy, Vol. II, p. 72 (Revised Ed.).

great Indian nation, and through it to restrict all further encroachments of the white man. He was a man of remarkable eloquence and powers of leadership, and he was assisted in his plans by his twin brother, known as the Prophet.

The governor of Indiana Territory was William Henry Harrison, a future President of the United States. He was a son of Benjamin Harrison, a signer of the Declaration of Independence, a governor of Virginia, and an intimate friend of Washington. At the time of St. Clair's defeat by the Indians in Ohio, young Harrison, a boy of nineteen years, was a medical student in Philadelphia. At the advice of both Washington and Jefferson, he left his studies and went to the West to aid in the war against the Indians. With a brave heart he set out to win glory for himself and honor for his country. In 1801 he became governor of Indiana and superintendent of Indian affairs. In September, 1809, Harrison made a treaty at Fort Wayne with the Delaware, Miami, Kickapoo, and other tribes, by which three million acres on the upper Wabash were ceded to the United States. The twin brothers were not present, nor had the tribe to which they belonged any part in the ownership or sale of the lands. But when they heard of the cession, they were wroth, and declared that the land belonged to all the tribes, and that a part had no right to sell without the consent of all. They pronounced the treaty void and threatened to kill every chief that had signed it. A year passed, and the Indians, while professing friendship for the whites, kept up a series of outrages on the frontier. Harrison advised them that the depredations must be stopped; but they continued, and he prepared for an attack.

With some nine hundred men, General Harrison marched into the Indian country in the autumn of 1811. Tecumseh was absent in the South. His brother, the Prophet, occupied the town of Tippecanoe on the Wabash. Harrison marched on and encamped near the town. The Prophet sent word that he wished a conference with the American general on the morrow. Harrison, suspecting treachery, had his men sleep on their arms, and an hour before day next morning about five hundred Indians, with fearful yells, emerged from the underbrush and made an attack. The soldiers seized their guns, and a desperate struggle raged for two hours, when the Indians broke and fled. They abandoned their village, which the Americans burned, and then hastened

Harrison.

**Battle of
Tippecanoe.**

back to the white settlements. The battle of Tippecanoe did not belong to the war with England that was soon to come, nor had the British much, if anything, to do with inspiring it; but it gave Harrison an excellent military reputation, and it prepared the people for the greater events that were to follow.

The prophetic words of Benjamin Franklin were destined to come true — that the war ending with the surrender of Cornwallis was simply the war of Revolution, and that the war of Independence was yet to be fought. Two events in 1811 hastened the crisis with England, — the withdrawal of our minister from London, and an impromptu duel between two vessels at sea. William Pinkney, one of the ablest diplomats ever sent to a foreign court by the United States, after laboring and struggling in vain for five years with the British ministry, took “inamicable leave.” This event had stirred the ministry a little. It had led them to hasten in appointing a minister to Washington, Augustus John Foster, the first since the inglorious failure of Jackson a year and a half before. While Foster was on the sea en route for his new field of duty, the other event occurred.

On the partial reopening of our trade with France, British armed vessels were again sent to blockade New York, and they amused themselves capturing vessels bound for France and impressing American seamen. One of these ships, the *Guerrière*, was said to have impressed a man named Diggio, and the secretary of the navy sent the *President*, a 44-gun frigate under Captain John Rodgers, not only to rescue Diggio and other unfortunates, but to “protect American commerce,” to “vindicate the injured honor of our navy,” and to support the honor of the flag “at any risk and cost.” This was a new spirit for the nation that had suffered twenty years of the impressment business and had defended itself with protests alone. Rodgers was under full sail from Annapolis to New York, when he sighted a vessel which he believed to be the *Guerrière*; but she showed no colors, and he was not sure. He gave chase, and eight hours later, at nightfall, the *President* was within hailing distance. Rodgers shouted through his trumpet, “What ship is that?” The answer from the stranger was an echo of his own words, and Rodgers asked again, when instantly a flame of fire leaped from the dark hull of the strange vessel, and a shot was lodged in the mainmast of the

Pinkney leaves London. February, 1811.

The *President* and *Little Belt*, May 16, 1811.

President.¹ The lesson of the *Chesapeake* had not been thrown away; the *President* was prepared. In a moment both vessels were throwing broadsides. In fifteen minutes the strange vessel was silenced and disabled. At daybreak next morning Rodgers discovered that he had been fighting the *Little Belt*, a British corvette of twenty guns and about half the force of the *President*. Her encounter with the *President* proved disastrous. Twelve men lay dead and twenty-one wounded on her decks; "all the rigging and sails cut to pieces, not a brace nor a bowline left,"² while one boy was wounded on the *President*. This incident was hailed with delight by the American people as the avenging of the outrage on the *Chesapeake*.

Meantime Foster arrived. Pinkney, while yet in London, had asked the significant question, What was Foster to do when he arrived in Washington? Foster had no power to promise a repeal of the Orders in Council, and the administration would treat with him on no other ground. He offered to settle the *Chesapeake* affair without even demanding reparation for the greater disaster to the *Little Belt*; but even this made no impression. Every subject brought up by the British minister received the same answer, The Orders in Council must be repealed. If America was in earnest, all signs pointed to the same thing, namely, that the United States had at last taken a stand — that if the Orders in Council were not repealed, there would be war. Foster wrote this to his government, but the British Cabinet, led by the short-sighted Spencer Perceval, refused to be moved.

The Twelfth Congress met in December, 1811. It differed greatly from its immediate predecessors. No longer do we find the temporizing spirit; no longer was Congress dominated by the fathers of the Revolution. A new generation had arisen to take charge of public affairs. Especially in the House did this spirit of the rising generation manifest itself. Here were half a dozen young leaders, war Democrats, as they were called, who took control of the House and shaped legislation for years to come. The leaders of this new school were Henry Clay of Kentucky and John C. Calhoun of South Carolina, both destined to spend nearly half a century in the forefront of national life. And these were ably seconded by Felix Grundy of Tennessee, and Lang-

**New spirit in
Congress.**

¹ This account was given under oath by Rodgers and all his crew; but Captain Bingham of the *Little Belt* gave a different account, claiming to have been fired on first.

² From Captain Bingham's report.

don Cheeves and William Lowndes of South Carolina; and closely associated with them was the aged John Sevier, whom last we saw, a third of a century ago, directing the battle at King's Mountain. Henry Clay was elected speaker the first day he entered the House,¹ and this position he continued to hold so long as he was a member of that body. Born in the "slashes" of Virginia, Clay was left fatherless and penniless in childhood. He read law, and afterward migrated westward and made his home in the new state of Kentucky, where he soon rose to fame as a member of the bar. Now he began his remarkable career as a party manager that has few parallels in American history. Under his leadership the Twelfth Congress set itself to restore the sullied honor of the country, and to do this there was no alternative but war.

President Madison still hesitated. He was almost as fondly devoted to peace as had been the great Democrat who preceded him. But a new election was drawing near, and the young leaders in Congress gave the President to understand that he could not have their support for reëlection unless he was willing to declare war. Madison yielded. During the winter Congress sounded the war trumpet; it voted to raise the regular army from ten thousand to thirty-five thousand men, and authorized a loan of \$11,000,000. But these measures were not passed without much debate and strong opposition.² Early in April an embargo of ninety days was laid, as a preliminary to a declaration of war. A little later Congress authorized the President to call out one hundred thousand militia for six months. On June 1 the President sent his war message to Congress, urging an immediate declaration of war. The primary reasons given

Declaration of war, June 18, 1812. were four in number: the impressment of our seamen;

British cruisers harassing our shipping along the American coast; pretended blockades of the European coast, by which American ships had been plundered on every sea; and the Orders in Council.

¹ He had served a short time in the Senate by appointment, but this was his first entrance into the House.

² In the spring of 1812, one John Henry, an Irish adventurer, sold to the administration for \$50,000 certain "disclosures," showing that he had been employed by Governor Craig of Canada three years before (during Jefferson's embargo) as a secret agent to New England to connive with the Federalists with a view of separating that section from the rest of the Union. Madison, believing that these letters proved the British government to have attempted to break up the Union, and that this would be a good war card, purchased them. But there was little in them not before known.

As to this declaration, two things are notable: first, there had been equal *casus belli* constantly for five years, and at certain times greater cause than at this moment; second, France during the same period had offended equally with England, or nearly so. Why declare war now? and why against England and not against France? The first question is answered by our account of the change in party leadership. As to the second, it would have been suicidal to fight both England and France. England was the mother country, and it was more irritating to receive from her such unrelenting harshness than from the free lance, Napoleon, who made little pretense of observing international custom. Another cause of this decision was that France presented no vulnerable point. She possessed no territory to invade on this side of the water, and her navies had been destroyed and her commerce swept from the seas. Yet the war might have been averted. The British ministry was slowly yielding. England did not want war, and would have yielded sooner had she seen that America was in earnest. Even now the yielding process was slow, owing to the obstinacy of Premier Spencer Perceval; but on May 11 Perceval was shot dead in the House of Commons by a lunatic, and the Orders in Council were repealed June 23. But five days before this, and weeks before the news of the repeal had reached America, Madison had set his hand to the declaration of war. The repeal came too late.

HOSTILITIES ON THE GREAT LAKES

The country was ill prepared for war in 1812. The ten old regiments, scarcely half filled, were scattered through the West in garrisons of scarcely a hundred in a place. Detroit, the scene of the desperate and vain efforts of the great Pontiac; Fort Dearborn, where was to rise in the next generation the city of Chicago; Fort Wayne, Fort Harrison on the Wabash, and other posts — each was held by a handful of men who could ill be spared, for the Indians were sure to cast their lot with the British. The seacoast was unguarded. The raising of armies was exceedingly slow work, and the eleven million loan was only a little more than half taken by the first of July. Henry Dearborn, a former member of Jefferson's Cabinet, was made senior major general and commander in chief. The other major general was Thomas Pinckney, who was to command the southern department. The brigadier generals appointed were, James

Wilkinson, formerly connected with Burr's conspiracy, Joseph Bloomfield, ten years governor of New Jersey, Wade Hampton of South Carolina, James Winchester of Tennessee, William Polk of North Carolina, and William Hull, governor of Michigan. These were all elderly men, all had seen service in the Revolution, none had ever commanded a regiment in battle, and most of them had "sunk into sloth, ignorance, or intemperance."¹ But worst of all, the people were not united. The Federalists constituted an anti-war party, and did everything to hamper the administration. They were also gaining at this moment; they had won in the recent elections in

New York and Massachusetts, and even in Congress the Democrats lost one fourth of their strength in the final vote on the declaration of war. Had the vote been deferred a month, as the Federalists urged, the news of the repeal of the Orders in Council would have reached America, and the war may have been averted. After the declaration had been passed, a number of the New England Federalists issued a protest, declaring that the war was a party and not a national war, and disclaiming all responsibility for it.² When Madison called upon the states for militia, the governors of Massachusetts, Connecticut, and Rhode Island flatly refused to send their quota. Thus at the outset the administration was greatly handicapped by the want of unanimity among the states.³

Our navy consisted of six first-class frigates, built in old Federalist days, and twice as many smaller vessels, while England boasted nearly a thousand war ships. Such was the deplorable condition of the United States at the opening of war with the British Empire. But there were a few advantages: England was engaged in European wars; her navy was scattered over the seas of the world; our little navy was in the hands of young and able men; Canada was open to invasion.

At the opening of this war occurred what is considered the most disgraceful event in American history,—the surrender of Michigan Territory without a battle. The invasion of Canada was the first and chief aim of the administration. To this end Dearborn was to

¹ Scott's "Autobiography."

² "Niles's Register," Vol. II, p. 309.

³ There was also some disaffection on the British side. There was armed resistance at Montreal, which was soon put down; 367 Canadians joined Hull, 9 were executed for treason in 1814. See "Cambridge Modern History," Vol. VII, p. 337.

coöperate from the Niagara frontier with an army from Michigan. But Dearborn was incapable of grasping the situation. He spent the summer in Boston and Albany getting ready and doing nothing. William Hull was governor of Michigan. Detroit contained some eight hundred people and a fort, a square inclosure of two acres. Receiving orders to invade Canada from the west, Hull crossed the Detroit River and prepared to besiege Fort Malden, a few miles below. Meantime he wrote Mr. Eustis, the secretary of war, that coöperation from Niagara was absolutely necessary to success; but Dearborn was still loitering at Boston and undecided what to do. The British began to strengthen their fort, and in quick succession news reached Hull of the fall of Michilimackinac, and that a large body of Indians were moving toward Detroit, that his supply train from Ohio had been cut off by Tecumseh, and that a force of British had passed Niagara en route to Detroit. Hull was disheartened. He gave up the siege of Malden and returned to Detroit.

The British forces in Upper Canada had the good fortune at this time to be commanded by a man of remarkable energy and military ability, — General Isaac Brock. When Hull recrossed the river, Brock, with a few hundred men, was hastening with all speed toward Detroit. Reaching Malden, he moved up the river and sent to Hull a summons to surrender the fort with a threat of Indian massacre in case of refusal. The demand was refused, and next morning Brock crossed the river with about seven hundred regulars and militia and six hundred Indians, and moved upon the fort for an attack. Hull was vacillating and utterly discouraged. As the enemy approached, he was greatly agitated; he sat on an old tent with his back against the rampart, moody and uncommunicative. Yet he might have made an immortal name that day. He had two 24-pounders planted so as to cover the road on which the enemy was advancing, and his army almost equaled that of Brock.¹ But Hull imagined the forest swarming with savages, and he thought of the women and children in the fort, among whom was his daughter. His supplies would last but a month, and then at the inevitable surrender, woe to those who remained alive! Hull's former bravery now forsook him utterly, and to the astonishment of friend and foe he surrendered the fort and his army without a

Isaac Brock.

¹ Rossiter Johnson gives Hull's force at one thousand, "War of 1812," p. 35.

struggle—and all Michigan Territory. On the same day Fort Dearborn (Chicago) was burned to the ground by a horde of savages, the garrison having been massacred, the day before, to the last man.

Hull was afterward tried by court-martial and sentenced to death, but was pardoned by the President in consideration of his services in the Revolution. Hull did not play the man on that day at Detroit, and cowardice in a soldier is a crime. But Hull was not alone at fault. He was not properly supported, and part of the blame should have been borne by General Dearborn, by Secretary Eustis, and by President Madison.¹

But one week elapsed after the capture of Detroit when the energetic Brock reached Fort George, at the mouth of the Niagara, with his prisoners. The British government, on repealing the Orders in Council, had requested an armistice between the two countries in the hope of settling the other differences without war. The news of this had not reached Brock when he captured Detroit. But now on his return both sides hesitated for some days—until it was seen that the armistice would come to naught. American troops were meanwhile hastening to the lake region from Pennsylvania, New York, and New England. Commodore Chauncey was building a fleet on Lake Ontario. General Stephen Van Rensselaer commanded the New York militia, and was stationed at Lewiston. General Alexander Smyth was at Buffalo with sixteen hundred men. But these two commanders were each independent of the other, and a rivalry prevented their coöperation. Van Rensselaer then determined to act alone. He would cross the river and attack the enemy on the heights above Queenstown.

Long before the dawn of October 13 several hundred men, under Colonel Christie, embarked in thirteen boats upon the rushing Niagara, and silently rowed for the Canadian shore. Three of the boats lost their way and returned. In one of these was Christie, and the command fell on Captain John E. Wool, who landed safely with the other ten. Up an unguarded path Wool led his men, and at daybreak he attacked an English battery near which stood General Brock, who barely escaped capture by flight. Brock then made an attack on Wool; but an American bullet penetrated his breast,

¹ Henry Adams goes back still farther and holds Jefferson chiefly responsible for this disaster, as he was the author of the system by which the country was left unprepared for war. See Vol. VII, Chap. XVI.

and he fell dead. The British loss in the death of this young and gallant leader was irreparable.

Wool was painfully wounded, but for some hours he held the ground he had won, when Colonel Winfield Scott came and took command. Six hundred American troops now occupied the heights, when early in the afternoon they saw in the distance a large force of the British advancing from Fort George, under General Sheaffe, who had succeeded Brock. Van Rensselaer, who had also crossed the river, now hastened back

**Battle of
Queenstown
heights.**

to Lewiston to bring over the militia, but they refused to cross. The general rode among them and urged them to go to the rescue of their brethren on the hill, but all his efforts were fruitless. The men gave as their reason for not crossing the fact, as they understood it, that they were engaged in a defensive war, and were not obliged to leave the soil of the United States. The true reason was cowardice. The noble six hundred on the heights beyond the river were attacked by more than twice their number, driven back, down the hill, over the precipice to the brink of the river. Here they

found no boats, and nothing was left but to surrender. Nine hundred, including many who had not ascended the heights, were taken prisoners. Though the British won a clear victory this day, their loss in the death of General Brock was far more serious than that of the Americans. General Van Rensselaer now resigned from the army in disgust.

The chief figure in the next scene of the drama was General Smyth. Succeeding Van Rensselaer, he made a feint of invading Canada, and issued a bombastic proclamation; but after a few weeks of bluster he was hissed out of the army, and was dismissed from the service. The year 1812 closed with little encouragement to the Americans except from their success on the ocean, to be noticed later. Hull had surrendered all Michigan; Van Rensselaer, unable to control his militia, had sacrificed an army at Queenstown; Smyth had ended his brief military career in a fiasco. The only American success on land this year was the repulse of about seven hundred British at Ogdensburg, New York, by a force under Jacob Brown, a Quaker farmer, who proved himself the most vigorous American commander yet in the field.

VICTORIES ON THE SEA

In striking contrast with our continued failures in the lake region during this eventful year were the unexpected victories on the ocean. Little was expected of our navy, which was a pygmy compared with that of England; but ere the close of the first year of the war the world was astonished at our naval victories. With no attempt to give a naval history of this war, we must notice briefly a few of the notable sea fights of the year 1812.

The most famous of these naval duels was that between the *Constitution*, a 44-gun frigate, and the *Guerrière*, a British frigate of thirty-eight guns. The *Constitution* was commanded by Captain Isaac Hull, a nephew of the unhappy governor of Michigan. Late in July, while cruising off the Atlantic coast, he came upon a British squadron from Halifax. Hull saw that he and his vessel were lost unless he could escape. He fled, and the squadron gave chase, and for three days and nights the exciting race was kept up, partly by kedging, as there was little wind, when the *Constitution* left her pursuers so far behind that they gave up the chase. The race was one of the most remarkable in naval history, and was very complimentary to American seamanship.

The *Constitution* reached Boston in safety, but soon again put to sea. On August 19 she sighted the *Guerrière*, one of the squadron that had chased her. The meeting was welcomed by *Constitution* both sides. The English ship was inferior to the *and Guerrière*, American as seven to ten, but this counted little to **August 19.** the audacious tar who represented the Mistress of the Seas. A London paper had boasted that no American ship could cope with the *Guerrière*, and her own captain, Dacres, had only a few days before challenged any one of our frigates to battle. Each vessel recognized the other on sight as a mortal foe, and here upon the rolling deep, eight hundred miles from land, they both prepared for an immediate duel to the death. After wearing an hour for position, with an occasional shot, the two ships came within easy range side by side, and each began to pour broadsides into the other. A few minutes after this deadly fire began, the mizzenmast of the *Guerrière* was shot away, and within half an hour the mainmast fell and the vessel, a helpless wreck, struck her colors and surrendered. The *Constitution* was not greatly damaged. Her loss in killed and wounded was fourteen, while the enemy's loss was seventy-nine. Captain Hull set fire to the remnants of the proud English vessel, took his prisoners and hurried back to Boston to receive the plaudits of his countrymen. Even the Federalists joined in the glad shout of victory that spread over the land.¹ Why so much ado about sinking this one ship, when England had a thousand more? The fact is, this victory meant more than appeared on the surface,—it meant the beginning of the end of the impressment of seamen; it meant an awakening in the American sailor, a self-confidence that he had not felt before; it meant a disputing with England the right of way upon the seas where she had reigned, a queen without a rival. "A small affair it might appear among the world's battles," says Henry Adams; "it took but half an hour, but in that one half hour the United States of America rose to the rank of a first-class power."²

The defeat of the *Guerrière*, however, was not the first of our naval victories. Six days before this, the American frigate *Essex*, thirty-two guns, Captain David Porter, had captured the British sloop of war *Alert*, twenty guns.

Next in point of time after Hull's victory came the affair of

¹ The victory of the *Constitution* occurred but three days after the surrender of Detroit, and the news of both reached the coast at the same time.

² Vol. VI, p. 375.

the *Wasp* and the *Frolic*. The former was an American sloop of war of eighteen guns, Captain Jacob Jones. The *Frolic* was a British vessel of almost the same size and equipment. They met five hundred miles off the coast of North Carolina, and one of the bloodiest of naval battles was the result. The sea ran high, and the two ships, riding upon the waves or sunk within their troughs, poured forth their broadsides with deadly ferocity. They drifted so near together that the rammers of the American guns touched the side of the *Frolic*. At length, after Jones had raked the enemy from stem to stern, and less than twenty of the one hundred and ten Englishmen were left alive and uninjured, the Americans, who had lost but ten in killed and wounded, boarded the enemy's deck and hauled down the British flag. The pitching of the vessels in the rolling sea had furnished a fine test of marksmanship, and the result was wholly favorable to the Americans. But they were not allowed to enjoy the fruits of victory, for on the same day the two vessels were captured by the British seventy-four, *Poictiers*, and carried to Bermuda.

Exactly one week after this battle a greater one took place far out on the Atlantic, between the *United States*, one of our largest frigates, Captain Stephen Decatur, and the British frigate *Macedonian*. The two ships compared in size and force in favor of the *United States* about as did the *Constitution* and the *Guerrière*. Again the American gunnery was greatly superior to the English. The battle continued nearly two hours, when the British vessel, after receiving a hundred shots in her hull, surrendered, her killed and wounded being nine times greater than on the *United States*. The *Macedonian* was brought to America, repaired, and added to our heroic little navy.

One more of these brilliant victories closed the year's events. The now famous *Constitution*, "Old Ironsides," had put to sea again, under Captain Bainbridge, who had commanded the lost *Philadelphia* in the Mediterranean, and had lain for a year and a half in a Tripolitan prison. On December 29, Bainbridge encountered the English 38-gun frigate *Java* off the coast of Brazil. A desperate battle of two hours ensued. The *Java* was entirely destroyed, and her captain, with some sixty of his men, were among the slain. Thus ended the wonderful six months' record of our navy. The Americans had won in all these desperate duels on the sea, and in each case the proportion of British loss in

killed and wounded was far greater than the difference in the vessels account for. Meantime, three hundred British merchant ships had been captured, chiefly by privateersmen. The British had also captured many of ours, and in addition to the *Wasp*, as stated above, they had taken two little brigs, the *Nautilus* and *Vixen*.¹

This marvelous showing in our favor created a tremendous sensation in England as well as in America. "It cannot be too deeply felt," said Canning in Parliament, "that the sacred spell of the invincibility of the British navy is broken." But no one expected this to continue, at least no one expected our little navy to triumph in the end over that of England. Congress was so elated with our successes thus far that it voted, early in 1813, to build four new battle ships of the first class, and six frigates and six sloops of war. The honors on the sea for the year 1813 were about even between the two nations.² The first sea fight, between Lieutenant James Lawrence of the *Hornet* and Captain Peake of the *Peacock*, both of twenty guns, resulted as usual. They met in West Indian waters, and after a short, fierce battle the British vessel was destroyed, and her brave commander, Captain Peake, died at his post. So destructive had been the American fire that the *Peacock* sank before all her survivors could be rescued. Nine of her crew and three of the *Hornet's* crew, who had boarded her, went down with the wreck. Congress voted a gold medal to Lawrence, and put him in command of the *Chesapeake*, the famous ship that had been attacked by the *Leopard* six years before.

February 24,
1813.

Now, for a time, our good fortune suffered a reverse. While the *Chesapeake* lay at Boston, she was challenged to a duel by Captain Broke of the British frigate *Shannon*, lying off the harbor. Lawrence accepted the challenge. Gathering his untrained crew, he went out to meet a ship of the same size as his own, but with a crew that had been trained for weeks for just such a purpose. The action was short and bloody. The *Chesapeake*, partially disabled at the beginning, fell afoul of her

Shannon and
Chesapeake,
June 1, 1813.

¹ On the night of December 8 a naval ball was given to Hull in Washington in honor of his victory over the *Guerrière*. While the festivities were at their height a messenger from Decatur entered the ball room with the news that the *United States* had captured the *Macedonian*, and laid the ensign of the latter vessel at the feet of the President's wife. On this the guests broke forth into the wildest enthusiasm. See Schouler, Vol. II, p. 371.

² One reason for the change in our fortunes was that the British admiralty issued an order directing captains not to engage with American ships of superior force.

antagonist, and was raked from stem to stern. Her brave young commander received a mortal wound, and as he was being carried below he cried, "Don't give up the ship," and this became a rallying cry to his countrymen. But Captain Broke and his men had leaped aboard the *Chesapeake*, and she soon became their prize. The killed and wounded on the *Shannon* numbered eighty-three, and on the *Chesapeake* one hundred and forty-six. The prize was taken to Halifax, and Captain Lawrence died on the way. England rejoiced exceedingly over this victory, and well she might, for this was her first naval victory of importance since the beginning of the war.

This disaster was soon followed by another. The American brig *Argus*, one of our fastest sailers, while cruising in the English Channel, captured some twenty merchantmen. One of these *Pelican and Argus*, was laden with wine, and of this the sailors drank **August 14.** freely. Then they set fire to the captured vessel, and the light revealed the *Argus* to the English brig *Pelican*. The two came together in a fierce fight. Many of the Americans were intoxicated with the captured wine, and within an hour the *Argus* struck her colors and became a British prize. Her brave captain, William Henry Allen, who had been an officer on the *Chesapeake* when it was attacked by the *Leopard* in 1807, was mortally wounded.

In September the American brig *Enterprise* captured the English brig *Boxer*, both of fourteen guns, off the coast of Maine. But both commanders were among the slain, and they were buried at Portland, side by side, with the honors of war.

By the end of the year 1813 the English had captured seven American war vessels mounting 119 guns, while the Americans had captured twenty-six British war vessels mounting 560 guns.¹ What a marvelous showing for our little navy! But its power was now exhausted. On the day of the capture of the *Chesapeake* by the *Shannon*, Decatur, with the *United States*, the *Hornet*, and the captured *Macedonian*, was blockaded in the harbor of New London, Connecticut, and, watched by a squadron of British ships, was compelled to remain there to the end of the war. His ships escaped destruction by the protection of shore batteries. Whenever he planned to escape, the enemy was warned by blue lights on shore. This was supposed to have been the work of anti-war Federalists, and hence they received the opprobrious designation of "Blue-light Federalists." Chesapeake Bay, the Delaware River, and indeed every port

¹ Johnson's "War of 1812," p. 206.

and harbor on the entire Atlantic coast, together with the mouth of the Mississippi were blockaded by cordons of British vessels. Admiral Cockburn, who commanded off the southern coast, burned and sacked the towns and committed many unnecessary deeds of cruelty; while Commodore Hardy, who commanded in New England waters, abstained from all such barbarous practices and proved himself a generous foe and a high-minded gentleman.

One of the last of the American vessels to yield was the plucky *Essex*, commanded by Captain Porter. After her victory over the *Alert*, as noted above, she made a wonderful cruise in the Pacific Ocean, capturing many British whalers. In December, 1814, we find the *Essex* blockaded by two English ships, the *Phaëbe* and the *Cherub*, in the harbor at Valparaiso. At length she was attacked by both in disregard of the neutrality of the port, and the battle that ensued was one of the most dreadful in naval history. The odds against Porter were too great, the *Essex* was almost shot to pieces and took fire, after three fourths of her 255 men had been killed or wounded. The battle had been witnessed from shore by thousands of people who had gathered on the heights to view the magnificent spectacle. Among the crew of the captured *Essex* was a boy of thirteen years, whose name was yet to be placed in the first rank of naval heroes. Other naval battles we must leave unmentioned and give a brief notice to the merchant marine.

David G.
Farragut.

The victories of our war ships could do little toward destroying the powerful British navy; it was the moral prestige that they gave the United States that made them important. But it was far otherwise with the inroads of our privateers on the commerce of England. The loss inflicted upon British shipping during the two and one half years of war was incalculable. Congress licensed about 250 ships, and these scoured every sea in search of the defenseless merchantman, and the prizes they took numbered many hundred.¹ Many of the privateers plowed the seas for months in vain; others were extremely fortunate. The *True-blooded Yankee* took a town on the coast of Scotland, burned seven vessels in the harbor, and captured twenty-seven vessels in thirty-seven days. The *Surprise* made twenty prizes in a month. The *Leo* captured an East Indiaman worth two and a half million

¹ It has been estimated that sixteen hundred British merchantmen fell victims to the privateers and the war ships. Many of these were recaptured by British vessels before reaching port.

dollars, but it was recaptured. No English merchantman was safe in the Irish Sea or the English Channel. One American captain issued a burlesque proclamation, declaring the entire coasts of England and Ireland in a state of blockade. The merchandise taken reached many millions in value, and represented the industries of every clime and every seaport on the globe,—sable furs from the Siberian desert, silks and tea from China and Japan, ivory from Africa, Turkish carpets, silks, wines, gold, and diamonds—all kinds of merchandise carried in English vessels became a prey to these bold, insatiable rovers of the sea, the American privateers.

There has been much recent criticism of privateering. The assertion that it is legalized robbery is true; but war itself is worse than robbery. Why should property, especially that which has a military value, be held more sacred than human life? How could a nation without a navy cope at all with a great maritime power except through privateering? Is it less humane to destroy an enemy's property than to destroy the lives of his men? Abolish privateering? Yes, by all means; but abolish war at the same time, and let the nations settle their disputes by arbitration. Had not privateering been permitted in the war we are treating, the English could have disposed of our little navy and then harassed our coasts for indefinite years—until we came to their terms of peace. It is certain that Great Britain would not have been ready to come to peace when she did but for the fearful wounds she was receiving through the privateers.

FURTHER OPERATIONS ON THE LAKES

We left General Dearborn on the southern shore of Lake Ontario in the vicinity of Sacketts Harbor, where Commodore **Surrender of** Chauncey had built a fleet of fourteen vessels. The **York, April** monotony of the winter was broken by sporadic raids; **27, 1813.** but in the spring of 1813 Dearborn planned to capture Toronto (then called York), the capital of Upper Canada. For this purpose he sent General Zebulon M. Pike, the explorer. After a rough voyage in Chauncey's fleet, the troops landed near the town, and were met by an equal number of British and Indians led by Sheaffe. After some hours of sharp fighting the Americans captured the town, when suddenly the ground was shaken by a terrific explosion. The magazine containing five hundred barrels of powder had exploded, and the falling débris killed nearly a hundred men

and wounded twice as many. Among the mortally wounded was General Pike, who was struck by the fragment of a stone wall while sitting on a stump talking with a captured British sergeant. The British claimed that the explosion was an accident, and the fact that nearly half the killed were their own men, seems to justify the claim. It is impossible to believe that they would have engaged in such wanton destruction of life after having surrendered the town. The British flag was hauled down, and General Pike died with it folded beneath his head.

Soon after this, Dearborn sent General Boyd, who had succeeded Pike, to capture Fort George. Boyd succeeded after several sharp skirmishes, and over six hundred of the enemy were made prisoners.

At the same time Sir George Prevost, governor general of Canada, sailed from Kingston in a fleet of nine vessels bearing a thousand men for an attack on Sacketts Harbor. But Prevost was wanting in military skill, and he soon withdrew his ships and returned to Canada. **May, 1813.**

General Dearborn was relieved of his command in June, 1813, and General Wilkinson was called from New Orleans to take command. John Armstrong, author of the famous New-**Chrystler's** burg addresses, had become secretary of war instead of **Field, Novem-** Eustis, and he planned another invasion of Canada, **ber 11, 1813.** with Montreal as the objective point. In the autumn, Wilkinson moved from Sacketts Harbor down the St. Lawrence with an army of seven thousand men, while an additional force under Wade Hampton was to cooperate in moving on the Canadian city. But these old generals were jealous of each other, and Hampton refused to serve under Wilkinson. The latter moved on, passed Ogdensburg, and when within ninety miles of Montreal met a British army and was defeated in the battle of Chrystler's Field. Hearing now that he would not be supported by Hampton, Wilkinson abandoned the expedition. Meantime the British in the Niagara region had rallied and recaptured Fort George. But the Americans, before leaving, had wantonly burned the village of Newark, and the British in retaliation crossed over and burned half a dozen towns, including Buffalo, then a village of fifteen hundred inhabitants.

We now come to the most famous American victory in the lake region during the war. Lake Erie was held by a small English fleet commanded by Commodore Barclay, who had fought with Nelson at Trafalgar. The Americans determined to dispute the control

of its waters, and Oliver Hazard Perry, a valiant young naval officer, sought and obtained permission to undertake the task. The undertaking was prodigious. The timber of the coming fleet was still standing in the woods; the iron works, stores, canvas, and cordage were in New York and Philadelphia, and there was no railroad or canal by which to transport them. So during the winter scores of sleds and wagons struggled through the deep snows of northern Pennsylvania, bearing the necessary equipment; while over fifty ship carpenters at Presque Isle, now Erie, were busy hewing out the timbers. The work was protected by an excellent harbor inclosed by a bar over which the British could not sail. But Barclay would remedy the evil; he would attack the new-born fleet while crossing the bar, and he watched and waited. Perry's work progressed rapidly. He named his flagship *Lawrence*, after the brave commander whose dying words, "Don't give up the ship," now became the motto of the vessel that bore his name. By the end of July the fleet was finished, and fortune favored it from the beginning. The vigilant Barclay lost his vigilance for a day. He accepted an invitation from a rich Canadian to a Sunday dinner, and took his fleet to the northern shore. On August 5. that day Perry's fleet crossed the bar. It was a difficult feat. The larger vessels were lightened and borne up by scows, and after a day and a night of severe toil they were launched on the bosom of the lake, and there they stood defiantly when Barclay returned next morning. The British commander now seemed to have lost his desire to fight, and he wheeled about and fled westward. It took Perry a month to find him; but he did so at Put-in-Bay about sunrise of September 10, and before sunset of that same day Great Britain was without ships or sailors on Lake Erie.

The two fleets were of nearly the same force. Perry had ten vessels with fifty-five guns, and Barclay six vessels with sixty-five guns. Each had about four hundred men. The battle opened at noon, and for some hours there was an incessant roar of artillery. Several of the English vessels directed their fire upon the American flagship, and by two o'clock over two thirds of her hundred and thirty men were killed or wounded. At length the *Lawrence* seemed about to sink, and the undaunted Perry, waving his banner, passed in an open boat in the face of the enemy's fire to his next largest vessel, the *Niagara*. Presently two of the British vessels fouled, and the Americans,

Battle of Lake Erie, September 10, 1813.

taking advantage of this, raked their decks with a murderous fire; but only for twenty minutes, when the British fleet raised the white flag and surrendered.

Perry's laconic dispatch to General Harrison, "We have met the enemy and they are ours," soon became as famous as the noble words of Lawrence, which he had made his motto. This brilliant victory transferred the control of the lake wholly to the Americans, rendered the recovery of Michigan comparatively easy, and gave to the young American commander an undying fame.

Before the battle of Lake Erie the land forces of both belligerents had been gathering in northwestern Ohio. The British and Indians were there under Colonel Henry Proctor and Tecumseh, the Americans under General Harrison, of Tippecanoe fame. The fall of Detroit had roused the blood of the

**The Raisin
massacre.**

young men of the West, and they determined to wipe out the dishonor. Early in the year 1813, General James Winchester was moving through western Ohio with a thousand Kentucky troops, and before the close of January he reached Frenchtown on the river Raisin, eighteen miles from Malden. Here he met Proctor with a large body of British and Indians, and a battle was fought in which the Americans were defeated, and many of them taken prisoners. Then occurred one of those scenes of carnage so common to Indian warfare. Many of the Americans while retreating were ambushed and tomahawked; others were butchered in cold blood after they had surrendered. Next day Proctor started back to Malden with his prisoners, among whom was Winchester, and left thirty wounded Americans at Frenchtown. But ere they had gone far, two hundred Indians turned back and massacred the wounded men and set fire to the buildings. "Remember the river Raisin" became the rallying cry of their surviving comrades in the Northwest. The American loss in this affair was about four hundred killed or wounded, and over five hundred captured.

After this disaster, Harrison with twelve hundred men built Fort Meigs at the rapids of the Maumee. Proctor besieged this fort in vain for some time, and then turned his attention to Fort Stephenson. This fort stood on the site of the present city of Fremont, in northern Ohio, and was held by a hundred and sixty men, commanded by Major George Croghan, a nephew of General George Rogers Clark, whom we have met in the Revolution. Proctor's demand for a surrender of the fort, with the usual threat of Indian massacre, was answered by

the brave Croghan, that every man would die at his post rather than surrender the fort. Croghan had one small cannon, a six pounder, which he masked and placed so as to enfilade a ditch up which the British were approaching. On they came with sublime confidence, and leaped over the pickets, shouting, "Show the Yankees no quarter." Next moment the cannon, loaded with a double charge of slugs, was discharged, and this, followed by a rifle volley, mowed down every man in the ditch. Again the plucky Britons filled the ditch, and again the single piece was discharged, with the same result. It was now night, and next morning the British had disappeared.

As the summer passed the two armies lay watching each other, until on September 12 the Americans were electrified with the famous dispatch, "We have met the enemy and they are ours," which meant that Lake Erie had passed into American hands. But this was not all. Harrison's army was about to be more than doubled. Ohio was yet in its infancy, and the older state of Kentucky was the main dependence of the Northwest. And Kentucky did nobly. Governor Shelby, who had fought by the side of Sevier at King's Mountain, marched northward with thirty-five hundred troops, and Colonel Richard M. Johnson came with a thousand cavalry. Harrison now determined to invade Canada. He sent Johnson to Detroit with his mounted thousand, but the enemy had fled; and Michigan, which Hull had surrendered without a blow, was recovered without a blow. The main army was then conveyed in Perry's fleet to Canada and set ashore below Malden. But Proctor, though he had nearly a thousand regulars and more than three thousand Indians, refused to fight, burned his stores, and abandoned the fort. Tecumseh, who commanded the Indians, was chagrined at the apparent cowardice of Proctor, and compared him to a fat dog that had carried its tail erect till it became frightened, when it dropped its tail and ran.

Harrison moved up the river and was joined by Johnson's cavalry. Proctor continued his flight; the Americans pursued. The pursuit was vigorous and comparatively easy, as Proctor neglected to destroy the bridges across the streams. The British army was overtaken at Moravian Town on the Thames River. Here, it is said, Tecumseh made a stand and informed Proctor that the disgraceful flight should be continued no farther; and the result was the battle of the Thames, and the death of one of the greatest

of Indian warriors. Harrison had little to do with planning the battle; it was the work of Johnson, whose cavalry, aided slightly by Shelby's riflemen, did all the fighting on the part of the Americans. The American loss of life was slight; the British army, after losing nearly twelve hundred in killed and wounded, became demoralized, and almost all the survivors were made captives, Proctor escaping with a few followers by flight through the swamps and wilderness. The Indian leader Tecumseh was among the slain, and he was said to have met his death at the hand of Richard M. Johnson, a future Vice President of the United States. Among the spoils were six brass cannon captured from Burgoyne at Saratoga thirty-six years before and surrendered by Hull at Detroit.

The campaign ending with the battle of the Thames wholly destroyed the alliance between the British and the Indians, killed the most dangerous Indian enemy since the days of Pontiac, and destroyed all hope of an Indian confederation of tribes. It also resulted in the restoration of Michigan, in the capture of a small British army, cleared the entire Northwest of the enemy, and ended the war in that section. Harrison now stationed a thousand men at Detroit under Lewis Cass, disbanded his Kentuckians and sent them rejoicing homeward, and with the remainder of his troops embarked on Perry's fleet for Buffalo.

Two severe battles in the region of the lakes took place the following summer, — Chippewa and Lundy's Lane. In March, 1814, Wilkinson was relieved from the service, and thus ended a long and exceedingly checkered military career. The command now fell to General Brown; and, aided by a few young and vigorous spirits like himself, the ablest of whom was Winfield Scott, he soon infused new life into the army. And it was quite time for such a change; for Napoleon had abdicated the throne of France and retired to Elba, thus setting free a large number of British veterans, who "had not slept under roof for seven years," and fourteen thousand of these were now sent to Canada to fight the Americans.

At the beginning of July, 1814, we find Brown in the neighborhood of the great waterfall with some thirty-five hundred effective men and a few Indians, while General Riall, the British commander at Fort George, had a somewhat larger force, partly on garrison duty at the neighboring posts. On hearing of the American advance, Riall hastened forward

**Battle of the
Thames, Octo-
ber 5, 1813.**

**Battle of
Chippewa.
July 5, 1814.**

with two thousand men and took a strong position at Chippewa, just above the falls. Here he was met by General Scott with thirteen hundred men, and after a fierce battle of one hour the British broke and fled.

This battle of Chippewa is noted as the only one during the war in which two armies of regulars, nearly equal in numbers, fought on an open plain with no advantage of position.¹ Whatever advantage there was belonged to the British; they were slightly greater in numbers, they opened fire first, while the Americans were crossing a bridge, and Scott had to form in line while under fire. The result was wonderfully gratifying to American pride. Not only did the Americans win the battle in less than an hour, but their killed and wounded numbered less than half those of the British.²

Twenty days after this battle the two armies met again, in a more desperate encounter. Riall had taken his stand at Lundy's Lane, within a mile of the boiling Niagara, on the Canadian side, and in easy hearing of the thunders of the mighty cataract. His army was augmented on July 25 by the arrival of his superior, General Gordon Drummond, with a fresh body of troops, many of whom were Wellington's veterans, and the army now exceeded three thousand men. The effective force of the Americans had dwindled to 2644 men. In the evening glow of that broiling summer day the American advance guard of 1300 under Scott met 1800 of the enemy led by Riall, and the battle was immediately opened. Brown heard the firing and reached the field with the rest of the army about dark; the British were reënforced at the same time, and the battle continued. The Americans suffered severely from an English battery on a little hill in the midst of the fighting line. General Brown ordered Colonel James Miller to capture it. "I'll try, sir," was the modest answer, and half an hour later the work was accomplished, every man at the battery having been shot down or having fallen at the point of the bayonet. For five hours in the darkness the battle raged, each army directing its fire by the flash of the enemy's muskets, while the thunder of artillery answered the roar of the falling river in the rear. Three times the British surged up the hill to recapture the stolen battery, but they were always repulsed. Soon after eleven

¹ Adams, Vol. VIII, p. 43.

² In this battle on the American side was the famous Indian, Red Jacket, whom Halleck has immortalized in a poem.

o'clock the firing ceased as if by common consent. At midnight the Americans gathered up their wounded and retired to their camp at Chippewa, leaving the heavy guns to the enemy.

This murderous night battle at Lundy's Lane was an extraordinary one. Brown was wounded, Scott was wounded, and the command devolved on Ripley, one of the brigade commanders. Drummond was wounded, and Riall was wounded and taken prisoner. The total American loss, 853, was about one third of the army. Drummond reported a loss of 878. The American army then proceeded to Fort Erie at the head of the Niagara, and took a strong position. Drummond now committed the most serious blunder of his life. He made a determined night attack on the fort and was repulsed with the loss of over 900 men, while the American loss was but 84. Soon after this the Americans attacked the British in camp, and each side lost several hundred, after which the British withdrew and gave up the siege.

Before these events had fully taken place the British had determined on an invasion of New York from another quarter, and their chances seemed excellent. Early in August eleven hundred more of Wellington's veterans reached Canadian soil, and more were coming. For two reasons the British needed to possess Lake Champlain and northern New York. First, their supplies, cattle and provisions, had been drawn from the unpatriotic residents of New York and Vermont, and Congress was about to make a determined effort to stop this traffic. Second, the British had overrun a large part of the coast of Maine, and had required the people to take the oath of allegiance. This territory England determined to hold at the coming of peace, and to do this a solid military basis was necessary.¹ Hence northern New York must be conquered and held.

At Plattsburg, at the head of Lake Champlain, General George Izard held five thousand men, and on the lake Lieutenant Thomas Macdonough commanded a little fleet of five vessels and a few gunboats. But Secretary Armstrong ordered Izard to Sacketts Harbor with three fourths of the army. Izard obeyed and left General Alexander Macomb at Plattsburg with scarcely fifteen hundred effective men, soon to be joined by several thousand militia from Vermont and New York. While the Americans were in this weakened condition, Sir George Prevost marched from the St. Lawrence Valley at the head of a veteran

**Invasion of
New York.**

¹ Adams, Vol. VIII, Chap. IV.

army of at least twelve thousand men, over the same route taken by Burgoyne thirty-seven years before, and with a larger and better army than that of Burgoyne. Prevost was supported by a British fleet under Commodore George Downie. The attack by land and water was to be simultaneous, and it took place a year and a day after the noble victory of Perry on Lake Erie. The two fleets were nearly equal in force. Downie had little opportunity to show his fighting qualities, as he was killed early in the action. Macdonough has been pronounced by McMaster the greatest naval commander in America before the Civil War. He was but thirty years old, but he had seen severe service in the Mediterranean against the piratical Barbary States. The battle opened fiercely and continued for two hours. It seemed to be going against the Americans, when Macdonough made a move that won him the victory. He had taken the forethought to lay a kedge anchor at each bow of his flagship, the *Saratoga*, by the aid of which, if one broadside were disabled, the other could be turned on the enemy. He now made use of this means and reopened the battle with renewed vigor. Presently the English flagship, the *Confiance*, struck her colors, and finally the whole fleet surrendered except a few gunboats, which escaped.

**Battle of
Plattsburg,
September
11, 1814.**

On the same day Prevost attacked Macomb with a large portion of his army, but the latter defended his position with success. The loss on each side was slight, nor were the killed and wounded in the naval fight nearly so great in proportion to the numbers engaged as in the battle of Lake Erie. Prevost, with no supporting navy, gave up the expedition and returned to his familiar haunts on the St. Lawrence; and the Empire State has ever since been free from invasion by a foreign enemy.

THE WASHINGTON CAMPAIGN

James Madison had been reelected President over De Witt Clinton, who had been supported by the Federalists and the disaffected Democrats. Madison would have made an excellent President in time of peace; but he was ill fitted to manage a war. His first secretary of war, Eustis, displayed a woeful incapacity in military affairs; and his second, John Armstrong, was but a shade better. The Czar of Russia had offered his services in bringing peace; but while Madison eagerly accepted the proposition, and sent Gallatin and James

A. Bayard to join John Q. Adams, minister to Russia, at St. Petersburg, England refused, and the war went on. Nearly a year later England made direct overtures to the United States for peace. The President again accepted, and sent Henry Clay and Jonathan Russell to join the other peace commissioners in Europe; and while the negotiations were in progress, the armies in the field kept on battering one another.

The British government determined to strike the heart of its enemy by attacking our large cities along the coast. The first of these expeditions, under the command of General Robert Ross, who had served under Wellington in Spain, and had stood by the side of Sir John Moore when that hero fell at Corunna, reached the Chesapeake early in August, 1814. The army consisted of thirty-five hundred veterans, soon increased by a thousand marines from the fleet of Cockburn.

For months rumors of the coming of the enemy had been afloat, but almost nothing had been done for protection. The President had urged Armstrong to prepare for defense; but the latter, with singular dilatoriness, had done nothing. At length Madison appointed General William H. Winder to command the defense. Winder possessed little military ability, but he was willing, and with great effort he collected an army of five hundred regulars and fifteen hundred militia. Ross landed at Benedict, on the Patuxent River, some forty miles southeast of Washington, and by easy marches moved northward toward Bladensburg. The inhabitants could easily have impeded his march by felling trees or by burning bridges, but nothing of the kind was done. Commodore Barney, who commanded a flotilla on the Chesapeake, burned his vessels, and, with his four hundred marines joined the army of Winder. The two armies

met at Bladensburg just after noon on August 24, the American army having been increased by militia till it numbered probably six thousand men. The President and his Cabinet were also on the ground at the opening of the battle. Soon after the fighting began many of the militia found safety in flight, and the British would scarcely have been checked but for the brave stand made by Barney and his marines. Barney held his ground till he was wounded and captured.

The battle over, the British rested two hours, when they marched upon the capital, then a village of eight thousand people. The President and Cabinet had returned, and were now fleeing in various directions to escape capture. Mrs. Madison had carefully secured Stewart's famous picture of Washington and the original draft of the Declaration of Independence before leaving the White House. The British army encamped at nightfall within a quarter of a mile of the Capitol, while details of troops, led by Ross and the notorious Cockburn, proceeded to burn the public buildings. It is said that Cockburn, followed by a rabble, entered the hall of the House of Representatives, climbed into the speaker's chair, and put the question, "Shall this harbor of Yankee democracy be burned?" The vote in the affirmative was unanimous, and the torch was applied. The White House was next set on fire, as was also the Navy Yard (by order of Secretary of the Navy Jones), and the triple conflagration lit up the whole surrounding country. All the other government buildings, except the Patent Office, were given to the flames; after which the invading army hastened away and boarded their ships at Benedict.

This destruction of public buildings that had no relation to the operations of war, with many "public archives, precious to the nation as memorials of its origin . . . interesting to all nations, as contributions to the general stock of historical instruction and political science,"¹ will admit of no defense. We are glad to note that no reputable Englishman attempts to defend the outrage. Knight says there was a general feeling in England that the destruction of these non-warlike buildings was "an outrage inconsistent with civilized warfare," and he also points out the fact that from this time to the end of the war the Americans were victorious in every contest.² The first American victory after this wanton destruction of the capital

¹ See Madison's Proclamation.

² "History of England," Vol. VIII, p. 378.

was won at Plattsburg, as we have seen; while the second, almost simultaneous with the Plattsburg victory, was the repulse of Ross's army before Baltimore.

The capture of Washington had been a task so easy that the British seemed confident of making a prize of the larger and richer city of Baltimore. After making a raid up the Potomac, and plundering Alexandria, they sailed up the Chesapeake and anchored off the mouth of the Patapsco, September 11. But the city had not been idle. The fate of the capital had taught the people a much-needed lesson. Led by the mayor, they threw up embankments on all sides, and erected batteries; while the militia poured into the city, till fourteen thousand were present and ready for duty. General Ross, who had boasted that he would make Baltimore his winter quarters, and who "didn't care if it rained militia," landed at the dawn of day — the day after Macdonough had killed Downie and captured his fleet on Lake Champlain — and began his march toward the city. It was fourteen miles, and five were traversed without an obstacle when Ross met General Stricker with three thousand men to dispute the right of way. A hot skirmish, known

**Death of
Ross.**

as the battle of North Point, ensued. The British drove the Americans back; but it took three hours to do this, and it cost three hundred men, and among the dead was General Ross, in whose breast had lodged a musket ball from one of the despised militia.¹

A large fleet under Admiral Cochrane had meantime blocked up the Patapsco, an arm of the Chesapeake; but it failed to pass the guns of Fort McHenry, and hence was unable to throw shells into the city. All day and far into the night the bombarding continued; but at dawn the American flag was still waving from the walls of the fort. On that night the young American poet, Francis Scott Key, had rowed to the British fleet under a flag of truce to beg the parole of a friend, and the British admiral detained him during the night. Eagerly he watched the fluttering banner above the fort, lit by the powder flashes; and when at dawn he found it still waving, he wrote the beautiful national hymn, "The Star-Spangled Banner." The enemy now abandoned the siege, and the soldiers returned to the fleet, which sailed away to foreign waters to return no more.

¹ Two weeks before this Sir Peter Parker had left his ship, the *Menelaus*, in the Chesapeake to dislodge two hundred militia at the mouth of the Sassafras River; but the British were repulsed, and Parker and thirteen of his men were killed.

WAR IN THE SOUTH

Soon after the battle of the Thames, General Harrison resigned his commission; and another future President, one who was to play a great part in American history, was made major general. No other American commander during the war, except, perhaps, Jacob Brown, can be compared in vigor and energy with Jackson. Born in North Carolina¹ a few days after the death of his father, he grew to manhood in poverty and obscurity. At the time of Tarleton's fearful raids through the South we find Jackson, then a boy of thirteen years, among the fighting patriots. He was taken prisoner, and here the spirit of the man appeared in the boy. A British officer ordered Jackson to clean his boots, but Jackson refused, stating that he was a prisoner of war and not a servant; whereupon the officer struck him with his sword, inflicting a wound that left a scar which he carried to his grave. When released from prison, he walked forty miles to his home while suffering with smallpox. He lost both his brothers in the war, and his mother died from exposure while ministering to the wants of the patriots. Thus while yet a boy Jackson found himself without parents or immediate friends. On reaching his majority, after having read law for a time, he migrated to the then far West, and made his home in Tennessee. Here he became successively the public prosecutor, a planter, a storekeeper, a judge, and a member of Congress; and he was now commander of the Tennessee militia. He became the first representative of his adopted state in the Lower House of Congress, and served also a short time in the Senate.

Early in the War of 1812 the Creek Indians became hostile; that they had a grievance against the United States, but through the influence of Tecumseh, who had visited them, and because British agents in Florida had offered them five dollars apiece for scalps of Americans, men, women, or children.² In August, 1813, the most dreadful Indian massacre in

Andrew Jackson.
Massacre of Fort Mims.

¹ The dispute as to whether Jackson was born in North or South Carolina seems to be settled by Parton, his biographer. According to him, the Jackson family lived in South Carolina very near the boundary line between the two colonies. In March, 1767, the elder Jackson died, and his wife, on the day of the funeral, was taken to the home of a relative who lived across the boundary in North Carolina, and here, a few days later, she gave birth to Andrew. Her two other sons, Hugh and Robert, had migrated with them from Ireland two years before.

² Johnson's "War of 1812," p. 179.

American annals took place in southern Alabama. It is known as the massacre of Fort Mims. This so-called fort was a stockade inclosure made for cattle by a farmer named Mims, and to this the settlers came for protection when the Indians became hostile. There were now more than five hundred men, women, and children gathered in the place, when a thousand Creek warriors, led by a half-breed named Wetherford, burst upon them and slew more than four hundred in a few hours. Nearly two hundred of the inmates were volunteers, and so brave was their defense that about half of the Indians were killed.

The country was horrified at the news of the massacre at Fort Mims. Tennessee first came to the rescue; her legislature voted thirty-five hundred men to march into the Indian country under the command of Jackson. With a band of cavalry under General Coffee and a large body of militia, Jackson overran the territory of the Creeks, defeated them with great slaughter at the battles of Talladega and the Horse Shoe, and forced the tribe to sue for peace. It was soon after this that Jackson was appointed major general and given command of the southern military district of the United States; and as the government at Washington had been paralyzed by the invasion of Ross, he was left independent and practically dictator over his district.

In the autumn of 1814 the rumor spread through the country that England was about to send a large fleet to the Gulf of Mexico, with New Orleans as the objective point. The rumor proved true. General Ross of Washington fame was appointed to command the expedition to southern waters; but Ross fell before Baltimore, and General Sir Edward Pakenham, who had won an enviable fame in the Peninsular War, was chosen for the place. Pakenham was a brother-in-law of the Duke of Wellington, and with him sailed Generals Gibbs, Keane, and Lambert, — all famous commanders in their day. The fleet of more than fifty vessels, commanded by Admiral Cochrane, bore at least sixteen thousand veterans and a thousand heavy guns. The avowed object was to "rescue the whole province of Louisiana from the United States"; and so confident were the British of capturing New Orleans that they brought with them a collector of the port and the machinery of city government.

Jackson heard of the approach of the British, and after making an incursion into Spanish Florida he began his long horseback ride through the wilderness to New Orleans, arriving there on the 2d of

December. He found the people in a wild state of excitement and without defense; and great was the commotion when the magic news that Jackson had arrived ran through the city. The British fleet arrived on December 10, entered Lake Borgne, and destroyed the American flotilla of six gunboats. The news of this first blow of the campaign struck terror to the city of New Orleans. Jackson put it under martial law and assumed the power of a dictator. He sent to General Coffee, above Baton Rouge, to hasten to the city with his twelve hundred cavalry, and Coffee made the distance of 120 miles in two days. A brigade of Tennessee militia and another from Mississippi also hurried down the river. There was no time to lose, for sixteen hundred men under Colonel Thornton, who had led the English advance at Bladensburg, occupied the Villieré plantation, but six miles below New Orleans, two days before Christmas. Calling together his regulars, his militia and volunteers, and Coffee's mounted riflemen, Jackson threw them between the enemy and the city. The two armies came together late in the evening, and a severe night battle, similar to that of Lundy's Lane, was the result. Neither side could claim a victory. The British loss was the greater; but the Americans had been greatly aided by the guns of the *Carolina*, a steamer lying near by in the river. On the next day, December 24, as the two armies were recovering from the shock of the battle and laying their plans for another, a different kind of scene was enacted in a far-away village across the sea. On that day the two warring nations, through their agents, signed a treaty of peace; but the telegraph was then unknown, and the war in Louisiana went on.

Withdrawing a mile toward the city, Jackson began to intrench his army between a cypress swamp and the river. So great was his vigilance that for four days and nights he did not sleep, and he took most of his meals while sitting on his horse.¹ Meanwhile the British army was greatly reënfined by the arrival of Pakenham with fresh troops. On the first day of the new year the armies met for an artillery duel. The British used hogsheads of sugar as a breastwork, and the Americans used cotton bales—both of which proved ineffective. The battle lasted for several hours, and the Americans were completely successful, disabling and silencing every English gun. This was the only time during the war in which a fair, even fight with heavy guns took place, and the British

Approach of the British.

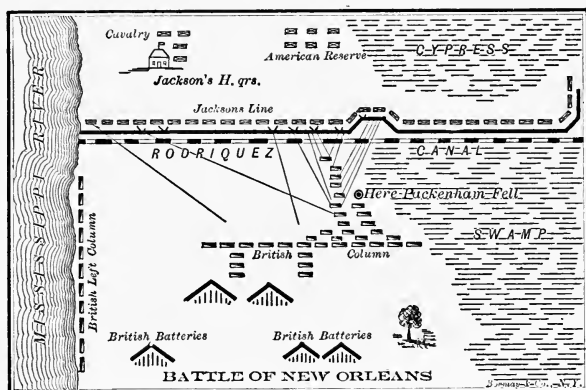

Artillery duel.

¹ Parton, Vol. II, p. 117.

officers frankly acknowledged that their defeat was due to the superiority of the Americans in handling artillery.

These battles were but preliminary. Everybody knew that the decisive battle was yet to come. A week passed, and Jackson spent the time strengthening his embankment. Day and night the work was pushed with the utmost vigor, and there was scarcely a horse, a mule, or an ox in the city that was not pressed into the service. The cotton bales had been discarded and earthworks thrown up.

The fateful 8th of January was now at hand — and the vessel that bore the tidings of peace was battling with the wintry tides in mid ocean. The morning was chill and dense with fog. Long before the dawn the two armies were astir. Jackson rose at one o'clock

and roused his sleeping army, and by four every man was in his place. The British were also in battle array hours before the dawn. Pakenham had intended to make the attack while it was yet dark; but his plans miscarried, and he failed to do so. After detaching twelve hundred men for the west bank of the river, he divided his army, about fifty-five hundred men, into three parts. General Gibbs with twenty-five hundred was to strike the Americans on the left, farthest from the river and near a cypress swamp; General Keane with twelve hundred was to attack the right, along the river bank; while Lambert was to hold the remainder in the center as a reserve. The main attack was that of the British right, to be made by Gibbs. There was some forced merriment along the lines; but the feeling that they were entering a death

Battle of New Orleans.

trap could not be shaken off. Colonel Dale, who commanded Keane's Highlanders, handed his watch and a letter to a friend and said sadly, "Give these to my wife; I shall die at the head of my regiment."

Behind the earthen breastwork crouched the American army, thirty-five hundred strong, with a thousand in reserve. Twelve cannon frowned over the parapet. Soon after daybreak the scarlet lines of the British columns were seen through the fog near the cypress trees. A little later the American cannon opened on the advancing foe, and great lanes were cut through their ranks; but on they marched toward the works until they came within musket range. The musketeers then poured in one murderous volley after another, and the top of the American works for half a mile was an unbroken line of spurting fire. The slaughter of the British was frightful. The killed and wounded fell in heaps. One cannon, loaded to the muzzle with musket balls, mowed down two hundred men at a single discharge. No army, however heroic, could stand before such a storm, and the British columns began to fall back in disorder. At this moment General Pakenham rode from the rear to the head of the retreating column and cried, "For shame, remember that you are British soldiers." Next instant a musket ball shattered his right arm and another killed his horse. He leaped on a second charger and kept on cheering his men, apparently unconscious of his wound. But his time was short. A grapeshot tore open his thigh and killed his second horse, and the two fell together. The wounded general was caught in the arms of friends; but ere they could bear him to the rear, a third shot entered his body, and after gasping for a few minutes his life was gone. Scarcely had Pakenham been borne away when Gibbs received his death wound, and at almost the same moment Keane, who was fighting valiantly on the river bank, was severely wounded; and Lambert became the commander of the army. A very few of the English floundered across the ditch and climbed the American parapet; but none survived except Lieutenant Lavack, who was made a prisoner. Major Wilkinson was one of those who mounted the parapet, but he instantly fell, riddled with bullets. The Americans, struck with admiration at his heroism, leaped forward to save him; but he was dying, and lived only long enough to request that his commander be informed that he died like a soldier and a true Englishman.

Between this main attack made by Gibbs and the river, Keane had made a similar one on the American right and had suffered a

similar repulse, but with less loss of life. A simultaneous battle was progressing on the west bank of the Mississippi. The American loss in the main battle east of the river was but eight killed and thirteen wounded,¹ but including the west side the loss was seventy-one. The British left seven hundred men dead upon the field, and twice as many were wounded. The battle continued for two hours; but the chief attack with its fearful slaughter had occupied but twenty-five minutes. The Americans forbore to cheer at their marvelous victory on account of the appalling scene of death and despair that lay before them, and they did all in their power to aid and relieve the wounded.² Lambert decided not to risk a second attack. He withdrew Thornton from the west side and retreated toward his ships, and on the 27th the whole army reëmbarked and sailed away, and were seen no more on the shores of Louisiana.³

NATIONAL FINANCES

Aside from the passing of necessary laws for carrying on the government and the war, the chief business of Congress and the administration was to wrestle with the financial problem, and the problem proved an insoluble one at the time. Albert Gallatin, the secretary of the treasury for thirteen years, was a great financier; and had not Congress persistently disregarded his advice, the story of the War of 1812 would not be so humiliating to the American reader. It was doubtless the incompetency of Congress that brought about the serious condition during the war — a distrust by the people of the credit of the government. The internal revenue system of old Federalist days had been done away; the embargo and non-importation laws had depleted the Treasury, and Congress, against the advice of Gallatin, refused to recharter the United States Bank at the expiration of the old charter in 1811, thereby cutting off the one sure source of government loans. The members of Congress seemed to think that the people would readily make loans to the

¹ In a letter to a friend in 1839, Jackson stated that in the main battle his loss was six killed and seven wounded. See Parton, Vol. III, p. 633.

² At the close of the battle some five hundred of the British rose unhurt from among the dead and gave themselves up as prisoners. To save their lives, they had dropped down and lain as if dead until the battle was over. Parton, Vol. II, p. 209.

³ Lambert stopped at Mobile and captured a fort; Cockburn ravaged part of the coast of Georgia late in January; and the war on the ocean continued for some months before the treaty of peace became known.

government when not even the interest could be paid except through other loans. But the people were slow to risk their money with their government. The first loan of eleven millions, called for in the spring of 1812, was taken but slowly, as previously stated. The next year a loan of sixteen millions was authorized, and Gallatin succeeded in placing it only with great effort, paying six per cent interest for the greater portion of it, and selling the stock at eighty-eight cents on the dollar. Another loan of seven and one half millions was soon afterward placed, the discount being the same. Only a small portion of these loans was taken by New England, which was still under the sway of the Federalists. At the same time many people of that section actually lent money to the enemy by purchasing British bills of credit, and they also sold supplies to the British and Canadians.

Exasperated at this, President Madison, in December, 1813, recommended that Congress pass an effective embargo act, and it was done without delay. Then arose a mighty cry from New England. In Massachusetts many public meetings were held to denounce the law as unjust and oppressive. Madison was not, perhaps, altogether without a vindictive spirit in this matter. It can be believed that one of his objects was to punish New England for its persistent opposition to his policy. This embargo was removed in March, 1814.

At an extra session of Congress in 1813 the Democratic party departed from another of its theories. It laid a direct tax and an internal revenue tax on the people. It imposed a stamp tax, and laid taxes on salt, sugar, carriages, and the like. Most of the people saw the necessity of these measures, and responded cheerfully. The next year Madison reported that they had paid the extra taxes with the "greatest promptness and alacrity."

In January, 1814, a bill was passed to refill the ranks of the armies, offering a bounty of \$124, in addition to a tract of land of one hundred and twenty acres, to every one who would enlist for five years, or during the war. Another loan, twenty-five millions, was then authorized (March, 1814); but the people were slow to respond. Months passed; Washington was captured by the enemy; the specie of the country drifted to the New England banks. Public credit fell to the lowest ebb; every bank in the Middle and Southern states suspended specie payments; the state banks floated great quantities of paper, and all sorts of corporations issued so-called ticket money, good only in the locality in which it was issued. The country at large

was without a stable and adequate currency, and was on the verge of bankruptcy. The Boston banks would receive the notes of a Baltimore bank only at a discount of thirty per cent, and the treasury notes, issued from time to time, at a discount of twenty-five per cent.¹ It was found that the new loan could be secured only at the ruinous rate of seventy-five cents on the dollar.

At this juncture, Mr. Dallas, who had succeeded Gallatin in the treasury,² recommended that a national bank be established. After months of sparring, Congress passed a bank bill; but Madison vetoed it in the belief that it would not furnish the needed relief. Another bank bill was soon introduced; but before it could be passed the news of peace was received, and a further consideration was postponed.

OBSERVATIONS

The agents of the two belligerents had met at Ghent, Belgium, in midsummer, 1814.³ The instructions from their respective governments were such that it seemed at first impossible to reach an agreement. The English demanded, among other things, that America cede large portions of northern New York and Maine, and set apart a broad tract in the Northwest for the Indians. But when the news of the defeat of Prevost at Plattsburg and of Ross at Baltimore arrived, they abandoned their extravagant demands; while the Americans, on the other hand, yielded on the impressment question. The treaty, as finally arranged, is more remarkable for what it omitted than for what it contained. It was little else than a mutual agreement to stop the war, as both nations were tired of it. The subject of impressment was omitted with the understanding that, as the European wars were apparently over, England would no longer need to follow the practice. There was no cession of territory by either side. The treaty provided for the restoration of boundaries as fixed in 1783, and for peace with the Indians, and left all the old boundary disputes and the fisheries question, as also the British right to navigate the Mississippi, for future negotiation. Both nations agreed to use their best endeavors to promote the entire abolition of the slave

**Treaty of
Peace signed,
December 24,
1814.**

¹ The government issued \$40,000,000 in treasury notes during the war.

² Mr. Campbell of Tennessee served a short time between the terms of Gallatin and Dallas.

³ The American commissioners were Albert Gallatin, James A. Bayard, Henry Clay, Jonathan Russell, and John Q. Adams. The English commissioners were Lord Gambier, Henry Goldburn, and William Adams.

trade. The news of peace and of the victory at New Orleans reached the Northern states at about the same time, and the rejoicing was tremendous.

The dying Federalist party had opposed the war to the last, though many of its members had fought bravely in the armies.

Hartford convention. The legislature of Massachusetts made a call for a convention of the New England states to meet at Hartford in December, 1814. Twenty-six delegates assembled, and they sat for three weeks with closed doors. The fact that the sessions were secret gave ground to the rumor that the assembly was treasonable and sought to destroy the Union. What its discussions were, was never known, except from its report embodying a set of resolutions, afterward made public.

To one who reads this report there can be no doubt that the proceedings of the convention were unpatriotic. "A severance of the Union by one or more states, against the will of the rest," says the report, "and especially in a time of war, can be justified only by absolute necessity." Then it proceeds to show that the necessity had come, averring, however, that absolute proof was not yet conclusive that the time for disunion had come. On state rights we find, "That acts of Congress in violation of the Constitution are absolutely void," and that the "states which have no common umpire must be their own judges and execute their own decisions." Here was a reproduction of the Kentucky and Virginia resolution in a more virulent form. The convention made a demand also on the government for a share of the taxes collected within those states, and it proposed certain radical amendments to the Constitution, urging that the New England states "persevere in their efforts to obtain such amendments until the same shall be effected."¹ The apparent intention was to force these demands upon an unwilling administration while it was hampered by a foreign war, or in case of refusal to make such refusal a pretext for dismembering the Union.

The supposed object in calling the Hartford convention was to protest against the refusal of the general government to bear the expenses of the Massachusetts militia, which the governor had recently called out to protect the state. The report complains bitterly

¹ Among these proposed amendments are these: That no new states be admitted to the Union except by a two-thirds vote of both houses of Congress; that Congress have no power to lay an embargo for more than sixty days; that a President be ineligible for reelection, and that a President be not elected from the same state two terms in succession. See State Documents, No. 2, p. 41, edited by H. V. Ames.

of this, but does not state that the sole reason for this refusal was that the governor refused to place his militia under the command of Federal officers. An additional object of the convention was obviously to hamper and cripple the administration to the last degree, at a moment when the country was overrun by a foreign foe, to overthrow the party in power, or to break up the Union. The men of this convention were among the leading Federalists of the country, and with all their good qualities it is evident that their patriotism was shallow. The very fact that the Democrats had adopted the loose construction theories of the old, the real Federal party is conclusive proof that the Hartford convention acted, not on principle, but from partisan hatred. But its work came to naught. The news of peace that soon reached America rendered the whole proceeding ridiculous; and the members that composed the convention, as well as the party they represented, thus brought on themselves an odium from which they never recovered.

The war on the part of Great Britain was a serious and costly blunder. She did not acquire a foot of land, nor establish a principle, nor win a friend. She might have conciliated America with a few slight concessions, and have made us an ally against Napoleon. She could have dealt that monarch a stunning blow by opening her ports to our commerce, and thus reducing to a nullity all his pretensions to blockade her coasts. But she suffered the dispute with us to come to blows, and thereby lost her monopoly on the sea, never to be regained; sacrificed thousands of lives; and expended money enough to have raised the pay of her sailors to such a figure as to prevent desertions, and to render impressment unnecessary. A remarkable feature of the war is found in the high mortality of British commanders. Seven sea captains were slain in action, besides Generals Brock, Ross, Pakenham, and Gibbs, Tecumseh, and Sir Peter Parker.

On the other hand, the Americans gained greatly by the war, though this did not appear in the treaty, nor at first on the surface. The war had been expensive to the United States also. It had cost thirty thousand lives and a hundred million dollars; the currency had been so debased as to threaten every business interest in the country; the capital had been captured and burned; a portion of the people had been disaffected and had given aid and comfort to the enemy. But with all this, the war had been a successful one to the Americans. It had brought commercial independence and a final

separation from European affairs, so necessary to national development. Europe had decided long before that a republican government could not succeed, and ancient Greece and Rome were always held up as examples; and even France, which had become a republic within that generation, had again relapsed into a monarchy. It was believed that our government would also fail, and great was the contempt across the Atlantic for the United States. But when, without a great leader, we held our own on the land for nearly three years, and more than held our own on the sea against the greatest naval power of the earth, the whole world was astonished. Before this war, the United States was never considered a first-class power; since then it has never been considered anything else. It was then that the nations began to realize that America was a rising giant, and that it demanded their respect; and they have never since withheld it.

In our home relations our success was equally marked. The people for the first time began to feel a national consciousness; they saw with clearer vision than before that the nation had a future, a destiny, that no European interference could disturb. French and English factions in American politics forever disappeared. Soon after the close of the war began that wonderful tide of emigration from Europe that has poured an unceasing stream upon our shores from that day to the present. Then, also, began that wonderful era of prosperity which has swept down through the century like a tidal wave, and which has no parallel in the history of civilization.

NOTES AND ANECDOTES

War in the Mediterranean.—During the war the Dey of Algiers had again practiced his depredations on American vessels. In the spring of 1815 Decatur sailed into the Mediterranean with a fleet of ten vessels. Two days later he fell in with the Dey's finest frigate in search of American merchantmen. In half an hour Decatur had captured her, and a few days later another met a similar fate. Decatur then forced the Dey to sign a humiliating treaty, giving up all his prisoners without ransom, and making indemnities for all his extortions. He then sailed to Tunis and Tripoli and exacted similar reparation; and from that time American shipping was safe in the Mediterranean.

Stories of Tecumseh.—Tecumseh was probably the greatest orator ever known among the Indians. His language was remarkable for poetic beauty. When he addressed an audience, his face shone with a passionate emotion that worked like magic on his hearers. He was a man of sensitive dignity, as shown by the following incident: When he and his warriors held the famous

conference with Harrison, he looked around, after concluding his address, for a seat ; but none had been reserved for him, and he seemed offended. A white man quickly offered him a seat near General Harrison, saying, "Your father wishes you to sit by his side." — "The sun is my father," answered Tecumseh ; "the earth is my mother, and I will rest on her bosom," and he sat down on the ground.

Tecumseh promised Harrison that in case of war between the whites and the Indians he would not permit his warriors to massacre women and children, and he kept his word. At the siege of Fort Meigs, while the Indians were murdering some prisoners, Tecumseh ran between the Indians and the prisoners, and brandishing his tomahawk dared the former to kill another man. Then turning to General Proctor, who had witnessed the massacre without protest, he exclaimed, "Why do you permit this ?"—"Your Indians cannot be restrained," answered Proctor. "Begone," cried Tecumseh, "you are unfit to command ; go and put on petticoats."

At the opening of the battle of the Thames, Tecumseh turned to his friends and said, "Brother warriors, I shall never come out of this battle alive ; my body will remain on the field." He then unbuckled his sword, and, handing it to a chief, said, "When my son becomes a noted warrior, give him this, and go tell my people that Tecumseh died like a warrior and a hero."

Stories of Jackson.— In the early part of the war Jackson raised two thousand troops and was sent down the Mississippi as far as Natchez. But as no enemy appeared, he was ordered, in the spring of 1813, to disband the army. Jackson was very indignant at this order. It was cruel and outrageous, he said, to lead men five hundred miles from home and turn them out without money or food. He chose to disobey the order ; he marched the men back to Tennessee, at his own expense. But the government afterward assumed the expense. The general had three good horses ; but these he gave to the sick, while he walked with the rest. While tramping along, some one said, "The general is tough," and another added, "As tough as hickory." From this he soon came to be called "Old Hickory," and the name clung to him through life.

Jackson engaged in a disgraceful street fight with the future Senator Benton and his brother, and the latter inflicted a terrible wound in Jackson's arm with a pistol shot. The future President was laid up for many weeks. He was still in bed when the Tennesseans were arming to avenge Fort Mims. A friend called on Jackson and expressed his deep regret that the commander of the militia was not in condition to lead the army against the Creeks. Jackson's eyes flashed instantly, and he answered, "The h—l he isn't," whereupon he leaped from his bed, and an hour later he was astride his horse at the head of the army. He carried his arm in a sling during the entire campaign. On one occasion when the soldiers mutinied for want of food and started in a body for their homes, Jackson called on them to halt, and they refused. He then rode in front of the column, and with a volley of oaths and the fire flashing from his eyes, drew his musket with his one well arm, and declared he would shoot the first man that took another step. The men sullenly went back to their duty. After the Creeks had been crushed, Jackson set a price on the capture, dead or alive, of the half-breed Wetherford, who had led the Indians in the campaign,

as also in the massacre of Fort Mims. One day as Jackson sat in his tent a big Indian chief walked in and said: "I am Wetherford. I have come to ask peace for my people. I am in your power; do as you please with me. I am a soldier. If I had an army, I would still fight; but my warriors hear my voice no longer. Their bones are at Talledega and the Horse Shoe. Do as you will with me. You are a brave man. I ask not for myself, but for my people." Jackson was astonished at this visit. He had intended to put Wetherford to death; but now felt that he could not do so. He gave the chief his liberty on his promise to keep peace in the future — and the promise was kept.

Jackson's wonderful nerve and physical courage were never shown to greater advantage than in his duel with Charles Dickinson in 1806. Dickinson was one of the richest men, and certainly the best marksman, in Tennessee. He and Jackson had long been enemies, and he frequently tried to provoke Jackson to a duel with intent to kill him. At last he succeeded by reflecting on the character of Jackson's wife, and the challenge came. The two parties rode north into Kentucky, and at daybreak, on May 30, the duel was fought. Jackson was an excellent shot; but he could not compare with Dickinson, and every one expected that he would be killed. At the word "fire," Dickinson fired instantly, and a puff of dust was seen at Jackson's breast; but he stood like a statue, with clenched teeth. Dickinson stepped back and cried, "My God, have I missed him?" General Overton, Jackson's second, drew his pistol and ordered Dickinson to stand still. Jackson deliberately fired and shot Dickinson through the body. As they went to the inn it was noticed that Jackson's boots were full of blood. "General, you are hit," cried Overton. "Oh, I believe he has pinked me a little," said Jackson; "but don't mention it over there," pointing to the house where Dickinson lay dying. It was found that Dickinson's aim had been perfect, but that his bullet had only broken a rib and raked the breastbone. Jackson, asked how he could stand motionless with such a wound, said, "I should have hit him if he had shot me through the brain." See Parton, Vol. I, p. 299.

Prohibition of the Slave Trade. — As we shall soon have to deal with the great question of slavery, it is well to notice here the national prohibition of the African slave trade. A part of one of the compromises of the Constitution was that Congress must not interfere with the slave trade before 1808. Long before this time, however, the Southern states put an end to the traffic, each within its own bounds. But in 1804 South Carolina reopened it (after it had been closed in that state for fifteen years), and in the remaining four years imported about forty thousand negroes. In 1807, Congress passed a law to take effect January 1, 1808, prohibiting the trade, under severe penalties. In 1820 an additional act made the traffic piracy punishable by death. But in spite of all vigilance of the government, aided by the British government, there continued a smuggling trade up to the Civil War. In all this period there was but one execution for smuggling negroes, and that after the opening of the Civil War.

CHAPTER XX

DAWN OF NATIONAL CONSCIOUSNESS

NOTHING is more interesting to the student of American political history than the gradual change wrought in the Democratic party during the first sixteen years of the nineteenth century. The party had been founded on the principles of strict construction of the Constitution; but it did not gain control of the government until the Federalists had committed the country to a policy of broad construction. Had the early theories of Jefferson on construction been strictly carried out, the Union could not have existed a quarter of a century. Jefferson was wise in being able to see the necessity of abandoning his former theories. His party was founded on the theory of strict construction and state rights, and yet no President ever departed farther from this policy than he in the purchase of Louisiana, and in the laying of an unlimited embargo. He believed that the nations could live in harmony without war; his party waged a foreign war eleven years after it came into power. One of the party's theories was that no navy was necessary; it voted in 1813 to build a navy. Another was its opposition to direct taxes and internal revenue; it established both in 1813. At first the party opposed internal improvements at national expense; in 1806 it passed a law to build the Cumberland Road, and internal improvements have flourished from that time to the present. For years the party opposed a national bank; in 1816 it established one. What, then, can we say of a party that abandons the very foundation stones on which it was built? Simply, that it was wise enough to grapple with new problems, to adapt itself to new conditions. What, then, of Thomas Jefferson, who had been forced to discard, one by one, nearly every plank on which he had stood at his first election to the presidency? As noted on a former page, it was not state rights, nor a weak central government, to which Jefferson gave his lifework. These were but means, which he erroneously believed to be necessary

means, to a sublimer end. The end was the rule of the democracy, a government by the people. And this he won, — not immediately, not fully during his lifetime; but he started the current, which gathered in force and in later years became irresistible.

RECUPERATING

Marvelously soon after the close of the war the people returned to their respective vocations and set about repairing their broken fortunes. But it was the government, rather than the people, that had suffered. The great question now before Congress was that concerning the adjustment of the finances. The money of the country was in a frightful condition. The sources of issue exceeded four hundred in number. Much of the "wild-cat" money, as it was called, was counterfeit; much came from alleged banks that had no existence.¹ Mr. Dallas of Pennsylvania had proved himself an able financier. He now sought to bring about specie payments as soon as possible, and to do this he again urged upon Congress the advantage of chartering a second United States Bank. The charter of the old **United States Bank** founded by Hamilton had expired in 1811, and, **Bank char-** as we have seen, a recharter was defeated in Congress. **tered, 1816.** But now a twenty-year charter for a national bank, with \$35,000,000 capital, was readily obtained. The government subscribed \$7,000,000 of this and the remainder was taken by individuals and corporations. The bank paid the government a bonus of \$1,500,000 for the charter. It had a wonderful effect in restoring confidence, and in a short time the national debt was steadily decreasing, while the people were busy and prosperous and happy.

To the two great industries of the country, agriculture and commerce, a third, manufactures, was now added. The temporary suspension of commerce, through Jefferson's embargo and the war,² had forced the people to begin manufacturing on a large scale to supply their own wants. Before the embargo all the cotton and woolen cloth, tools, china, glass, and the like were brought from England; but at the close of the war hundreds of manufactories, encouraged by societies formed for the purpose, by prizes and by special acts of state legislatures, had sprung up, and most of these articles were made at home.

¹ McMaster, Vol. V, p. 307.

² During the war the duties on foreign imports had been doubled.

Soon after the coming of peace the country was flooded with all manner of merchandise from England, and the people, seeing their new industries threatened, called upon Congress to protect by tariff laws what the embargo and the war had protected for them before. The response was the tariff of 1816, fathered by William Lowndes of South Carolina. By this tariff duties were raised to an average of about twenty per cent,¹ and this not only greatly increased the revenue, but proved ample for protection; and the business of manufacturing increased and flourished throughout the land.

**Tariff of
1816.**

There was little speculation as to who would succeed Madison to the presidency. It seemed to be generally understood that James Monroe would be chosen, the only objection being that he was a Virginian, and Virginia had furnished all the presidents thus far except Adams. Monroe, however, would have been eclipsed, and would probably have been beaten, by the more brilliant De Witt Clinton of New York, but for the fact that Clinton had bolted the regular party candidate four years before, and had permitted himself to be the candidate of the anti-war Democrats and the Federalists. He never rose again to national favor, and Monroe now had clear sailing. The Federal party was no longer formidable. The war, which the party had so diligently opposed, had ended happily, and this continued opposition, with the odium of the "Blue Lights" and of the Hartford convention, was a burden too heavy to be borne; and after casting 34 electoral votes for Rufus King against Monroe's 183, the party disappeared from national politics. Daniel D. Tompkins, the vigorous war governor of New York, was chosen Vice President.

**Monroe
elected
President.**

The time for retiring, after a long and useful public career, now came to James Madison. With his accomplished wife, known as "Dolly" Madison, he retired to his rural home at Montpelier, Virginia, and there he grew old gracefully amid the scenes of his young manhood. He was the last survivor of the illustrious band that had framed the Constitution, dying in 1836, after twenty years in private life. No President in his declining years ever enjoyed a deeper reverence of the whole people than did Madison.

Monroe has been called the last and least of the great Virginians. He was less original than his great predecessors, it is true, nor was he brilliant nor dashing in any sense; but none was better fitted for

¹ Tausig's "Tariff History," p. 19.

the presidency at this moment than he, for the people were now dreaming of national greatness, and were not in the mood for hero-worship. Monroe had made few enemies. He was so open-hearted, generous, amiable, and industrious that he had won the confidence of all classes. "If his soul were turned inside out," said Jefferson, "not a blot could be found upon it." Soon after the inauguration the new President made a tour of the country, ostensibly "to inspect the national defenses," but in fact to strengthen patriotism, to win over disaffected elements, and to obliterate party lines. And his tour was eminently successful. In New England the remaining Federalists vied with the Democrats in doing honor to this "last of the revolutionary fathers." In every town he was met

**Monroe's
tour.**

by the leading men, and was cheered by thousands of school children, and by young men and women of every walk in life. It was said that the farmer left his plow in the furrow, the housewife left her clothes in the tub and her cream in the churn and hastened to the towns to see this real President of the United States. While the presidential party was in New England a Boston newspaper gave rise to the well-known expression, "Era of good feeling," which is still used to characterize the administration of Monroe. From New England the President passed through northern New York, to Sacketts Harbor, Niagara, and thence to Detroit, returning through Ohio, Pennsylvania, and Maryland. This tour, covering three and a half months, was followed by another to the South, and their great usefulness in cementing the Union and awakening a livelier sense of patriotism was denied by no one.

Monroe had chosen a strong Cabinet. John Quincy Adams became secretary of state, William H. Crawford, secretary of the treasury, Crownshield of Massachusetts, secretary of the navy, while John C. Calhoun took the war department and William Wirt became attorney general. Of these five men, three — Adams, Crawford, and Calhoun — were yet to become important figures on the political stage.

One of the most notable episodes of this quiet administration was that known as the Seminole War, notable mainly because it brought prominently before the public, for the second time, a remarkable character, a future President — Andrew Jackson. The Seminole Indians, a wandering portion of the Creeks, together with some Spaniards and negroes escaped from their masters, kept stirring up

trouble with the Americans along the northern border of Florida, which then belonged to Spain, and Jackson with fifteen hundred men was sent against them. He was successful at every turn, and the war was soon over. In this brief campaign Jackson showed that spirit of lawlessness so characteristic of him through life. Monroe was careful not to offend Spain, and through Calhoun, his secretary of war, he instructed Jackson not to lead his army on Spanish soil. But the general thought he knew best, and he led the army across the border without ceremony.¹ He captured St. Marks and Pensacola, both on Spanish territory, and even sent General Gaines against St. Augustine, which was not at all concerned in the war; but Calhoun recalled Gaines, and the town was not taken. Again Jackson exhibited his lawless propensities in dealing with two English captives—Ambrister and Arbuthnot. Ambrister was a young Englishman, who was taken in the act of leading the Indians against the Americans. Arbuthnot was an old Scotch trader suspected of stirring up the Indians. A court-martial sentenced both to death; but it reconsidered the decision in the case of Ambrister and gave him a lighter sentence. But Jackson, believing both men to be guilty, reversed the second decision of the court and ordered both men to be put to death, and it was done. Great was the indignation in England against Jackson when the facts became known. He was denounced as a murderer all over England; but Parliament was more considerate and decided not to allow the matter to make trouble between the two nations, as it was evident that the two men had violated international rights. A British statesman, however, said that if the ministry would but raise a finger, all England would rush to arms at a moment's notice.

But Jackson's trouble was not over. He made enemies in Washington. There were several secret cabinet meetings in which his conduct was discussed. All the cabinet were against him except John Quincy Adams; but none wished to become his open enemy, so the meetings were kept secret. Now Jackson thought that Calhoun

Seminole
War, 1818.

¹ Jackson always claimed that he had secret orders from the President, through John Rhea, a member of Congress, to conquer Florida. Jackson had said, in a letter to the President, "Let it be signified to me through any channel (say Mr. John Rhea) that the possession of the Floridas would be desirable, . . . and in sixty days it will be accomplished." This authority he and Rhea claimed to have received; but Monroe always denied having given it. In 1830 the subject came up again, and the aged ex-President, under oath, declared that he had not granted the authority. Whether Jackson and Rhea were right and Monroe had forgotten, was never known. See *Magazine of American History*, October, 1884.

was his warmest friend and most faithful defender in the Cabinet; but Calhoun made the remark in one of these meetings that Jackson ought to be court-martialed. This was the costliest sentence ever uttered by John C. Calhoun, as will be shown in a later chapter. Many of the people denounced Jackson, and he was wroth; but Monroe skillfully soothed his feelings, gave up the Spanish forts, and avoided war with Spain. And yet Jackson's tribulation was not at an end. Congress took up the matter. Jackson had enemies in Congress, and a motion was made in the House to censure him for hanging the two Englishmen, and was debated for three weeks, much to the chagrin of the administration; for Monroe had already settled the matter, and England demanded nothing. The war being over, Jackson came to Washington and remained during this strange debate. At length he was acquitted and came out with flying colors.¹ He then made a tour through the North, and was received with great demonstration everywhere. An immense banquet was given in his honor in New York City. This was on Washington's birthday, 1819, and on that very day, John Quincy Adams, secretary of state, and Don Onís, minister from Spain, signed the treaty conveying Florida from Spain to the United States.²

THE MISSOURI COMPROMISE

We must now introduce the reader to a great public question, which first became prominent at this period, and which thereafter, with brief intervals, was the most overshadowing public issue for half a century — the slavery question. It first came up as a sectional question in connection with the admission of Missouri into the Union, and resulted in the Missouri Compromise. The rising West had been rising with great rapidity. Streams of emigration from the East had poured into the great valley of the Mississippi, and one new state after another had joined the famous sisterhood. Louisiana had been admitted in 1812, and four years later her northern sister of kindred name, Indiana, became the nineteenth state. Indiana was the first of six states to be admitted in six successive years, the others in order being Mississippi, Illinois, Alabama, Maine, and Missouri. It was the last of these that brought up the momentous issue that was destined to shock the country almost to its destruc-

¹ In this debate Clay denounced the conduct of Jackson, and thus incurred his everlasting enmity.

² See note at end of chapter.

tion, and to be settled at last in blood. The Missouri Compromise was purely a slavery question, and a rapid glance at the existence of slavery in America before this date is here in place.

The enslavement of the African race for commercial purposes had its beginning in southern Europe about half a century before the discovery of America by Columbus. It was transplanted to Central and South America by the Spaniards, and it existed there for a hundred years before being introduced into the English colonies of North America. Soon after the small beginning made in Virginia the institution grew and spread to other colonies as they were founded; and at the opening of the Revolution there were about six hundred thousand slaves in the colonies. The slave-traffic during the colonial period was very lucrative and was carried on chiefly by English traders. At various times the colonies attempted to restrict the evil, but in each case the attempt was crushed by the British Crown, simply because the trade was profitable. As early as 1712 Pennsylvania passed a law to restrict the increase of slaves, but it was annulled by the crown.¹ Virginia made a similar attempt, a few years later, by laying a tax on imported negroes. South Carolina attempted to restrict the trade in 1761, as did Massachusetts a few years later; but in each case the effort was summarily crushed by the Crown. As late as 1770 King George wrote the governor of Virginia, commanding him on pain of the royal displeasure "to assent to no law by which the importation of slaves should be in any respect prohibited or obstructed." Thus while the mother country prohibited slavery on her home soil, she not only encouraged but enforced it in her colonies.² But the colonists were in part to be blamed, for they purchased the slaves; otherwise the traffic would have died out.

Slavery in
the colonies.

Slavery in the colonies was first opposed by the Quakers and Pennsylvania Germans in the latter part of the seventeenth century. John Wesley, the great founder of Methodism, visited the South in later years and pronounced the institution the "sum of all villainies." At the opening of the Revolution all the colonies had slaves; but the Northern states soon began to emancipate, not so much from motives

¹ Wilson's "Rise and Fall of the Slave Power," Vol. I, p. 4.

² Before 1772 slaves were held in England. In that year Chief Justice Mansfield decided, in the famous Somerset case, that it was illegal to hold slaves in England, and that decision, which freed about fourteen thousand blacks, has never since been reversed.

of morality as because the institution was unprofitable. Massachusetts abolished slavery by a decision of the courts; Pennsylvania provided for gradual emancipation in 1780; New Hampshire, Connecticut, and Rhode Island in 1784; New York in 1799; New Jersey in 1804, and so on. There were a few left in New Jersey as late as 1850. Jefferson inserted a clause against the slave trade in the Declaration of Independence, but it was struck out. The Ordinance of 1787 kept slavery out of the Northwest.¹ The law of 1808, prohibiting the slave trade, brought relief to all opposers of the institution, for it was generally believed that the artery of slavery was now severed, and that it would eventually die out in the South, as it had in the North; and little was heard on the subject during the next ten years. But this hope was a delusion. Whitney's cotton gin, a simple machine for separating the seed from the fiber, which enabled one man to do the work of three hundred before its invention, brought cotton to the front and rendered it eventually the chief agricultural staple in America. More slaves were needed to raise cotton in the growing states along the Lower Mississippi, while some of the Eastern states had more than they needed, and hence was established the interstate slave trade. Meantime slavery was fastening itself upon the South with a firmer grasp, and at the same time the conviction was slowly taking possession of the northern heart that the whole system was wrong and should be checked. On both ethical and economic grounds the North came to oppose the extension of slavery. The South was quick to see that the only way in which to prevent future legislation unfriendly to slavery was to increase the number of slave states, and thus to increase its representation in the United States Senate.

A vast region was added to the United States by the Louisiana Purchase, and as the time approached for this to be carved into states, the all-important question arose, Slavery or no slavery in the great West? Missouri was the first of the trans-Mississippi terri-

¹ In 1784 Jefferson introduced an ordinance for the government of the Southwest, the territory "ceded already or to be ceded" to the United States, afterward Kentucky, Tennessee, Mississippi, etc., in which a clause prohibited slavery in the territory after the year 1800; but this clause was struck out by a majority of one. Had it been carried and been effective, slavery would have been confined to a few Atlantic states in the South, and would doubtless have died a natural death. But a certain member from New Jersey, who would have voted for it, was absent on the day when the vote was taken. Thus the entire course of American history was changed by the absence of one man from Congress on a certain day in 1784. See Greeley's "American Conflict," Vol. I, pp. 38-40.

ories to apply for statehood, and on its application the first great battle between the North and the South was fought. The slaveholders had stolen a march by settling in Missouri with their slaves; and when the application for statehood came to the Fifteenth Congress, it provided for slavery in the new state. But it was clearly seen that if Missouri were admitted with slavery, it would be very difficult to keep it out of any part of the Louisiana Purchase. Slavery in Missouri must therefore be opposed, and the man for the occasion was at hand.

There was a young man in the House from New York, named James Talmadge, who now rose and moved to strike out the slavery clause in the Missouri bill, or, more exactly, that there be no further introduction of slavery into Missouri, and that all children born in slavery after the admission of the state should be free at the age of twenty-five years; and his speech in support of the motion was the most eloquent heard on the floor of Congress since the time of Fisher Ames. Talmadge was powerfully aided by John W. Taylor, also of New York, and the two succeeded in defeating the Missouri bill with slavery. But the Senate rejected the House measure, and it was left over till the next Congress. During the interval the subject was discussed on all sides, and the agitation was intense; but the people could do but little, as the next Congress had already been elected.

Talmadge
and Taylor.

The Missouri question was not only an ethical and an economic one, it involved also a deep constitutional principle. Had Congress the power to lay restrictions on new states that were not laid on the original thirteen? Would the new states be coequal with the old if admitted under such limitations? The members from the South took the ground that the Constitution gave Congress no such power. They argued also that the treaty ceding Louisiana to the United States contained the express provision that all property rights must be protected by the United States. Those from the North, with some exceptions, contended that as Congress had full control in governing the territories, it had the power to place conditions on their admission as states.

One notable feature of the debate was that no one from either section stood up for slavery as a moral or an economic benefit to the country; all agreed that it was an evil. But the South contended that making a slave state of Missouri would simply scatter and lessen the evil without increasing it.

The Sixteenth Congress, ever memorable for the Missouri Compromise, met in December, 1819, and this great question soon came up for a final solution. As Talmadge was not a member of this Congress, Taylor was the champion for free Missouri. The leaders on the other side were Henry Clay, the speaker, John Tyler, a future President, Charles Pinckney, a framer of the Constitution, and William Lowndes. Again the House adhered to its antislavery position, and again the Senate disagreed. In the Senate the debates even surpassed those of the House, the leader for slavery in Missouri being William Pinkney of Maryland, with Rufus King of New York as his leading opponent. The Senate was balanced, half from slave states and half from free states; but there were a few northern senators who, from constitutional grounds, or from a desire to please the South, voted with the southern members. One from Indiana, and both from Illinois, now voted with the South, and the two houses again reached a deadlock.

It happened that at this time Maine, which had belonged to Massachusetts from colonial days, was asking for admission as a separate state; and the Senate, acting on a suggestion made in the House by Mr. Clay, brought in a bill to admit Maine, and to this bill they attached the one to admit Missouri, with slavery. This was passed February 16, 1820, whereupon Senator Thomas of Illinois made a motion to amend the bill by annexing a clause prohibiting slavery in all the remainder of the Louisiana territory north of thirty-six degrees and thirty minutes north latitude, the southern boundary of Missouri. This became the famous compromise line. It was adopted by the Senate, but the House rejected it; and still again each House voted to stand its ground. Then a joint committee was appointed, and this committee agreed to admit Maine and Missouri separately, leaving the Thomas amendment to the Missouri bill. This report was adopted by both houses; and Missouri, with the Thomas compromise line, was admitted as a slave state. President Monroe signed the Maine bill on March 3, and the Missouri bill March 6, 1820.

But this did not end the strife concerning Missouri. The act of March, 1820, was simply an act enabling the territory to form a constitution for statehood. When the people of Missouri adopted a constitution, they inserted a clause making it the duty of the legislature to exclude free negroes and mulattoes from the commonwealth. This brought on another great debate in Congress. The objection to

**Great
debates.**

this clause was based on the ground that the Constitution guarantees to the citizens of any state all the privileges and immunities of the citizens of the several states. The two houses again failed to agree, and again the decision was made through a joint committee. Henry Clay was the mover and the chairman of this committee, and from this fact he became known as the author of the Missouri Compromise.¹

This committee reported a bill to admit Missouri on an equal footing with the original states, on the condition that its constitution should never be construed so as to authorize any law by which a citizen of any other state should be excluded from the privileges which he enjoyed in other parts of the Union; and that the legislature of Missouri should pass a solemn act declaring its consent to this condition. This was accepted by both houses, and became a law on the 28th of February, 1821; Missouri accepted the condition and became a state in the Union.

The Missouri contest had far-reaching results. It has generally been considered a victory for the South, in that Missouri was actually admitted as a slave state. But the compromise on the line of thirty-six thirty probably brought equal or greater advantage to the North. This part of the act was repealed thirty-four years later; but meantime it did great service in keeping slavery out of Iowa and other portions of the Northwest.

But there was a deeper principle involved in this decision. The fact that a compromise line had been agreed on, thus giving Congress power over slavery in the territories, and that Missouri was admitted with a condition which was not imposed on the original states (both in accordance with broad construction), opened the eyes of the South to the fact that broad construction had taken deep root in the Democratic party, and to the further fact that the status of slavery would, in a great measure, rest henceforth on the will of Congress. As Professor Burgess has pointed out,² this new revelation to the South brought about within the next ten years a division in the Democratic party. The portion more favorable to non-interference with slavery, which became the Democratic party of Jackson, went back, to some extent, to the early doctrine of Jefferson, and became strict constructionists, the chief object being to protect

¹ Clay had appointed the House members of the committee that arranged the first compromise of the year before, and his selection of men favorable to the compromise aided also in crediting him with being the author of it.

² "The Middle Period," p. 104.

slavery from Congress, which, in the Lower House, must ever be dominated by the North. The other portion of the party at length became the Whig party, under the leadership of Clay. These mighty political forces were set in motion by the Missouri Compromise.¹

MONROE'S SECOND TERM

James Monroe was elected to the presidency a second time by a unanimous vote, save one.² This unanimity indicated, not the overshadowing greatness of the President, nor his inherent power to draw all men unto himself, but rather that party lines had been extinguished, that no other aspirant had secured a following, and that this mediocre President was considered a safe man, and was trusted and loved by all the people.

In December, 1823, President Monroe set his hand to a document that has made his name more famous in foreign lands than that of any other of our early presidents except the name of the Father of his Country. In his annual message to Congress that year he laid down a principle of foreign policy to which the government has adhered with the utmost tenacity from that time to the present, and this policy took the name the world over of the Monroe Doctrine. This "doctrine" grew out of the rebellion against Spain of her possessions in the New World. When, in 1808, Napoleon put his brother on the throne of Spain, Mexico and the Spanish colonies of Central and South America rebelled, and won a temporary freedom; but on the restoration of the old monarchy they returned to their old allegiance. When, however, Spain attempted

¹ The aged ex-President, Thomas Jefferson, was one of the first to see the deep significance of the Missouri question. Though unfriendly to slavery, he favored its extension into Missouri, as it would dilute and scatter the evil without increasing the number of slaves. Jefferson was alarmed at the rise of parties on geographical lines. To John Adams he wrote concerning the Missouri debate (December 10, 1819): "From the battle of Bunker's Hill to the Treaty of Paris we never had so ominous a question. . . . I thank God that I shall not live to witness the issue." Jefferson was greatly alarmed for the future of the country. After the compromise line had been settled, he wrote: "The question sleeps for the present, but is not dead," and, "This momentous question, like a fire bell in the night, awakened me and filled me with terror. I considered it at once as the knell of the Union." But he seems later to have regained hope. On December 26, 1820, he wrote to Lafayette, "The boisterous sea of liberty, indeed, is never without a wave, and that from Missouri is now rolling toward us; but we shall ride over it as we have over all the others."

² An elector from New Hampshire, claiming that Washington should stand alone in being unanimously chosen to the great office, voted for John Q. Adams.

to reimpose on them her old colonial system, after this taste of liberty, they again rebelled, and declared their independence. After six years of warfare, Spain being too weak to subdue them, the United States acknowledged their independence. In 1823 the king of Spain invoked the aid of other European powers (the same that had formed the "Holy Alliance" a few years before) to aid him in putting down a rebellion at home, and presumably to aid him in subduing his rebellious American colonies. England had built up a flourishing trade with South America, which she wished to maintain, and Mr. Canning, the British premier, now suggested that England and the United States join in aiding these new-born republics to maintain their freedom. But the United States preferred to act alone, and its action consisted in a simple declaration by the President, in part as follows:—

"The occasion has been judged proper for asserting as a principle . . . that the American continents . . . are henceforth not to be considered as subjects for future colonization by any European powers. . . . We should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety." The message further states that the United States would not interfere with any existing possessions in America of the countries of Europe, but as to those which had won their independence, "we could not view **Monroe Doctrine.** any interposition for the purpose of oppressing them, or controlling in any other manner their destiny, by any European power, in any other light than as the manifestation of an unfriendly disposition toward the United States."

This is the famous "doctrine," the language of which is said to have been written by Secretary Adams; but, being embodied in the message of Monroe, it took his name, and has thus been known ever since. The first part, as quoted above, was directed chiefly against Russia, as that country had taken possession of Alaska, and was extending its settlements down the Pacific Coast. By this a stand was taken against further colonization in America by European powers. The second part was intended to protect republican government in South America.

This doctrine was not new with Monroe. Its roots may be found in the neutrality proclamation of Washington, in his farewell address, and in Jefferson's warning against "entangling alliances." This attitude of non-interference in European affairs expanded until

it resulted in a determination to oppose all European interference in matters wholly American. It was a settled policy of the government for years before being officially proclaimed by Monroe. It was now eminently effective. Russia ceased her encroachments on the Pacific coast, and the European alliance abandoned all intention of aiding Spain against her former colonies. On various occasions since then has this doctrine been called into operation, the most notable being in 1865 against France in Mexico, and in 1895 against England in Venezuela.¹ The twofold object of the Monroe Doctrine is to guard against that which may be "dangerous to our peace and safety," and to protect republican government in the Americas. The Monroe Doctrine is not a part of international law, nor has it been placed on the statutes of our country; it is simply a policy, a declaration of an attitude taken by the Executive of this government with reference to the relations of the European powers to the republics of this hemisphere. It is a mistake to believe that the doctrine is becoming obsolete; it is more firmly embedded in the American heart at this time than ever before. A still greater mistake is the opinion held by some that the ultimate object of the United States is to absorb the republics south of us into our own government. Nothing is farther from the truth. What the future attitude of the United States on this subject may be, we do not pretend to prophesy; but for the present it is safe to say that if any South or Central American state were to seek admission to our Union as a state, or even as a dependent territory, the united voice of our people would be against it.

One of the great subjects that attracted the attention of Congress during the administration of Monroe was that of internal improvements. In the last week of Madison's administration a bill was passed to set apart the bonus received by the government from the bank, and also the proceeds of the shares held by the government, for the purpose of constructing roads and canals. The leading advocate of this bill was John C. Calhoun, and in the light of subsequent events it is interesting to note that at this period no statesman had broader national views than Calhoun. He not only claimed that internal improvements were constitutional under the "general welfare" clause, but that they

¹ For a fuller account of the Monroe Doctrine in operation, see Elson's "Side Lights," Vol. I, Chap. IX.

would go far toward strengthening the government and counteracting all tendencies toward sectionalism and disunion. But there was much opposition to the bill on the old strict construction grounds, and among its opponents was President Madison, who, on the day before retiring from office, vetoed the bill.

Five years later, in 1822, a bill to repair and operate the Cumberland Road, which it will be remembered was authorized in 1806, was passed by Congress and vetoed by President Monroe. Two years later, however, an act for making surveys, plans, and estimates for national routes became a law. This was a second entering wedge, the first being the authorizing of the Cumberland Road nearly twenty years before. After this the government set apart money from time to time for internal improvements; but the coming of the railway rendered the constructing of roads and canals less urgent, and national aid in later years was confined chiefly to the improvements of rivers and harbors.

Closely associated with the subject of internal improvements was that of the tariff, which received much attention at this period. Notwithstanding the tariff of 1816, the people suffered a money panic two years later, caused chiefly by the reaction from the disturbed condition during the war, and by the inflation due to the springing up of several hundred local banks. Most of the people, however, believed that a higher rate of protective duties would prove a cure-all for the ills of the country. Led by Henry Clay, who had now become the champion of the "American System" of protection, this party passed a tariff bill in the House in 1820 which was defeated in the Senate by a single vote. But the people continued their clamor for higher protection, and in 1824 the second general tariff of the century was enacted into law. By **Tariff of 1824.** this tariff the duties on wool, iron, hemp, lead, and many other articles were increased, and an average scale of about thirty-three per cent was reached. This tariff was not a sectional measure.¹ Among its opponents were Daniel Webster, Mr. Cambreling of New York City, and several leading men from the South. The North and the border states, led by Clay, were its chief supporters.

The Seventeenth Congress, expiring in 1823, had done nothing, almost nothing — except to intrigue and plot and counter-plot concerning the presidential succession. Monroe's term was passing into history; somebody must succeed him, and for the first time the whole

¹ See Burgess's "Middle Period," p. 115.

country was at sea concerning the choice of a candidate. The Federal party had disappeared, and the Democratic party had absorbed the whole people; but this did not bring political harmony. Four candidates early loomed up on the political horizon, each with his personal following, and each claiming to represent the true democracy: Henry Clay, the man of the people, the idol of the House of Representatives; John C. Calhoun, the brilliant young South Carolinian, able, far-sighted, patriotic; John Quincy Adams, son of former President Adams; and William H. Crawford of Georgia, ex-minister to France, now secretary of the treasury, and, as many believed, a designing, intriguing politician. Crawford was Monroe's chief rival for the nomination in 1816, and so sure did he feel that he would succeed Monroe that in 1820 he piloted an act through Congress known as the "Crawford Act," which gave greater power to the president in the appointment of civil service officials. By this act, which stands on our statutes to this day, the tenure of civil service officials was reduced to four years, whereas before this such officials had been appointed without a definite time limit. This gave an immense appointive power into the hands of every incoming President. Eight years were yet to elapse before the national party convention was to come into existence; the congressional caucus still assumed the right to name candidates. But the caucus for this purpose had lost its force with the people. The last of these was held at this period, and it nominated Crawford; but it was attended by less than half the members of Congress.¹ The other candidates were nominated by various state legislatures.

As the canvass progressed, another star was added to the constellation; and now there were five. As near the close of the War of 1812 a star had risen in the South that soon outshone all the others, so it was now, and it happened to be the same star, — Andrew Jackson. The rude but virile state of Tennessee had, as early as 1822, boldly put forward this grim old hero of New Orleans, who was now nearing the completion of his three-score years; and great numbers of the people, weary of the intrigues of the trained politicians, turned instinctively to this "man of the people" and made his cause their own. But the constellation was soon again reduced

¹ About this time Crawford suffered a severe stroke of paralysis, from which he never fully recovered; but during the campaign his friends kept the fact from the public as best they could.

to four, as Calhoun quietly dropped out and accepted second place on the ticket. The election came; the people spoke through the electoral college, electing Calhoun Vice President, but failing to choose a President; and for the second time in our history, and the last thus far, this momentous duty fell to the House of Representatives. Jackson had received the highest number of electors, ninety-nine; Adams came next with eighty-four, Crawford securing forty-one, and Clay thirty-seven. The Twelfth Amendment provides that the House may vote for the three highest only, and this shut Clay out, as he was fourth in the list. But for this, Clay might easily have become President, had he chosen to vote and to work for himself, for he was speaker of the House and was very popular in that body.¹ The House dallied with the great subject, and before it came to a vote every member turned aside to pay homage to a stranger who appeared upon its floor. He was an aged, thin-faced, kindly man, whom every American revered as a father, — Lafayette, the friend of liberty.

In the dark days of the Revolution, when in the bloom of his young manhood, this doughty Frenchman had left his youthful wife and his luxurious home to offer his life and his fortune in the holy cause of liberty; and now at the end of half **Lafayette.** a century he returned to visit the land he had never ceased to love. And never in the history of the United States has any other foreigner received the glad welcome, the universal homage of the people, as he did. Lafayette had greatly changed. His love of liberty was still warm and young; but the blithe step was gone, his hair was silvered, and his brow was furrowing with age. But greater was the change in the land that his eyes now looked upon, — then a few distracted colonies struggling toward the light, now a nation that commanded the world's respect, with its rising cities, its opening industries, its continental domain.

General Lafayette arrived in New York in August, 1824. As he traveled through the country, men and women of every rank hastened to the towns to see this hero of a past generation and to join in the universal shout of welcome. He visited every state in the Union, and spent the winter in Washington. Congress voted

¹ Again, Clay would have been third on the list instead of Crawford, but for a trick played on him in Louisiana. When the legislature of that state chose electors, it did so when two or three of Clay's friends, who held the balance of power, were absent, and thus the state voted for Jackson and Adams instead of Clay.

him \$200,000 and a township of land in Florida, which he was asked to accept, not as a gift, but as a partial recompense for his Revolutionary services; and this came good indeed during the remaining nine years of his life, for he had lost his fortune in the various changes of the French government. In June, 1825, he was in Boston, on the greatest gala day that Boston ever saw, and laid the corner stone of Bunker Hill Monument, on the fiftieth anniversary of the famous battle. After a visit of nearly fourteen months the nation's guest departed for his native land in the *Brandywine*, named for the battle in which he had been wounded, in southern Pennsylvania.

We return to the presidential election. The eyes of the nation turned to Henry Clay. His power in the House was so great that it was generally believed that he held the election in his hand. Clay was no friend of Jackson, nor of Crawford; and even he and Adams were not, and had never been, close political friends. But a choice must be made, and one of these three must be chosen. At length Clay announced that he would vote for Adams; his adherents followed his example, and Adams was elected, receiving the votes of thirteen states, while seven states voted for Jackson and four for Crawford.

Adams made Clay secretary of state, and the Jackson party raised the cry that there had been a bargain, a corrupt bargain, between Adams and Clay. This cry was kept up for four years, and it played an important part in the next presidential election.¹ Clay got into trouble with John Randolph about the matter. Randolph was a remarkable man in many ways. He had entered Congress in 1799, when scarcely more than a boy, and had soon attracted attention by his tall, awkward appearance, his ungovernable temper, his keen wit and biting sarcasm. During his long career in Congress he made many an enemy quail, when the object of his sarcasm and pointed out by his long, bony finger. As a wit he has never been equaled on the floor of Congress. He usually talked as he chose about any one; and on this occasion he referred to Adams and Clay as "the Puritan and the Blackleg." Clay was angry when he

¹ Through Adams's Diary we learn that some of Clay's friends did approach Adams on this subject before the election; but there is not the slightest proof that Adams made any promises. The cry of corrupt bargain had, in fact, been raised before the election in the House in the hope of coercing Clay to vote for Jackson. Clay's acceptance of a place in the Cabinet was a blunder that he should have avoided.

heard this. He had chafed restively under public accusations. Now he could contain himself no longer. He challenged Randolph to a duel. Randolph was not angry with Clay. He had called him a blackleg; but he often used such terms without expecting them to be taken too seriously. But Clay was not to be appeased, and the two men met on the field with loaded pistols. They each fired once without effect. Clay fired again, the bullet passing through his antagonist's coat. Randolph then fired into the air, threw down his pistol, and stepped toward Clay with extended hand. This was too much. Clay's face changed in an instant; he threw his pistol to the ground and ran to meet Randolph, and the latter said with mock seriousness, "Mr. Clay, you owe me a new coat."—"I'm glad the debt is no greater," said Clay; and the two men indulged in a long, fervent handshake.¹

**Duel between
Clay and
Randolph.**

JOHN QUINCY ADAMS

As a boy of seven years John Quincy Adams had stood with his mother and viewed the famous battle of Bunker Hill from afar; and this may be considered the beginning of the longest public career in American history. Two years later this boy, who never knew a boyhood, was a regular postrider making daily trips from his village to Boston. At the age of eleven he accompanied his father to France and began a course of severe study. At fourteen he was a private secretary to our minister at St. Petersburg. At eighteen he had visited every country in Europe; and, returning to his own land, he was graduated at Harvard two years later. No American statesman ever lived a more strenuous life, none had a more varied experience, and none a cleaner record. When elected President in 1825 Adams had been a professor at Harvard, and a practicing lawyer in Boston. He had served in the legislature of Massachusetts and in the United States Senate. He had aided in framing the Treaty of Ghent, had been minister to five European courts, and had completed his eight years as secretary of state. No man in America was by training better fitted for the presidency than Adams; and few were less fitted by natural temperament.

No President ever entered upon the great office with a clearer sense of duty, or with nobler motives than did Adams. But like his father before him he was wanting in tact, in the ability to

¹ For a full account of this, see Benton's "Thirty Years' View," Vol. I, pp. 70-77.

manage men. He was a man of the sternest puritanic integrity; he subjected himself to severe discipline in his private life and public duties. He judged other men by his own high standard of morality, and saw their faults rather than their virtues.¹ His manner was cold and repelling, and with all his wide acquaintance he had no intimate personal friend, nor did he make any effort to win friends. He enjoyed little popularity among his own class, and still less among the masses of the people. As Ezekiel Webster wrote his brother Daniel, Mr. Adams's support came "from a cold sense of duty, and not from any liking of the man." On the whole, Adams was, with all his defects, one of the most admirable public characters in our history; and his greatest service was rendered in the House of Representatives, where, after his term as President, he spent seventeen years of his old age.

The single presidential term of Adams may be recorded in small space, as both Senate and House were against him, and they refused to pass any administration measure of importance. In his first message the President recommended a system of internal improvements on a far larger scale than had been hitherto undertaken; but Congress opposed such extensive improvements, and Adams was left powerless to carry out his projects.

Early in this administration the Panama Congress, a convention of the American republics to be held at Panama, became the prominent public question. The object was to deliberate on a continental policy concerning commercial intercourse, to restrict the extent of blockades, to establish firmly the Monroe Doctrine, and the like. Clay was its chief promoter in the United States. His object was to organize the Americans against Europe for commercial advantage and self-protection. He won Adams and the Cabinet to favor sending delegates, and Adams announced in his message that this would be done. But the Senate was obstinate, professing to fear "entangling alliances," though its real object was to thwart the administration. At length, however, after long delay, the bill passed. But the victory of the President was a barren one, for the Panama Congress had adjourned before our delegates reached the place.

The only other matter of national importance — except the "Tariff of Abominations," to be noticed later — that belongs to Adams's term of office, was that concerning the Indians of Georgia. When Georgia

¹ Schouler, Vol. III, p. 400.

ceded her western lands to the United States in 1802, the latter engaged to remove the Indians from the bounds of the state when it could be done peaceably. Various treaties and purchases were made subsequent to this, but in 1824 the Indians declared they would sell no more land. The white people of Georgia became enraged at this and demanded that the government carry out its contract. A treaty was made at Indian Springs, in 1825, ceding the Indian lands; but the tribes refused to accept it, and put to death the chiefs who signed it. President Adams then notified Governor Troup of Georgia that he was expected to discontinue his survey of the Indian lands until the United States government had completed its negotiations with the Indians.¹ Whereupon the governor became frantic, and blustered and fumed against the United States to his heart's content. President Adams was not appalled by the irate governor; he sent General Gaines to Georgia with instructions to prevent the survey of the lands, by force if necessary. The next year, 1826, another agreement with the Indians was made by the United States government. By this agreement a large portion of the Indian lands were secured to Georgia. But the Georgians were not content with the incompleteness of the work, and the governor was again defiant, and even prepared to resist the power of the United States.

**Georgia and
the Creeks.**

President Adams, while careful to uphold the dignity and authority of the government, was unwilling to allow the matter to come to blows without being sure of the support of the country. He therefore laid the subject before Congress; but Congress refused to give the matter serious attention. This encouraged the Georgians in their attitude toward the Creeks, and they also laid claim to jurisdiction over the lands occupied by the Cherokees within the state. In 1827 the legislature passed a law in accordance with this claim, though the lands had been solemnly guaranteed to the Indians in a treaty in 1785; but Governor Troup declared this treaty not binding on the state, on the ground that Georgia and the United States were equal and independent powers! The Indians appealed to President Adams for protection in their rights; but he, about to retire from office, chose not to embarrass his successor by committing the government to any policy in the matter.

By anticipation it may here be stated that the trouble with the Cherokees continued under Adams's successor. Georgia claimed

¹ See Ames's State Documents, No. 3, pp. 25-36.

jurisdiction over their lands; they resisted and appealed to the President, who refused to aid them. The matter came before the United States Supreme Court, and was decided, in 1832, against the Georgians.¹ But President Jackson sympathized with the state and refused to enforce the decision of the court. At length, a few years later, some sort of agreement having been reached, the Cherokees, who had made commendable progress in agriculture and education, were removed to the Indian Territory, beyond the Mississippi, where they still remain. The action of Georgia throughout was little short of nullification.²

As this presidential term drew to a close the country prepared itself for a fierce contest. Adams was a candidate for reelection, with Andrew Jackson as his opponent. Unlike Adams, Jackson was popular; he could win friends and he could win crowds. He had risen from the lower walks of life, and the people regarded him as one of themselves. Adams was looked upon as an aristocrat, and, moreover, he refused to turn a hand to secure his own election. Many of the public servants who held their offices at his discretion, including some of his own Cabinet, were openly working for Jackson, but he refused to notice the fact. Even those who worked for his election received no word of gratitude or encouragement from him. He took the high ground that the influence of the office should not be used to further an election. One would think that such fidelity to duty would have been rewarded; but it was not. Jackson was elected by a large majority of the popular vote, as well as of the electoral college.³

MEANS OF TRAVEL AND INVENTION

Nothing impresses the student of the history of this period more than the progress made in the invention of machinery and in the means of travel. We have noticed the great flow of humanity across the Alleghanies to the valleys of the Ohio and Mississippi, and the consequent admission in rapid succession of five new states of the West and South. This movement of the population from the seaboard to the interior of the continent awakened an intense desire for better modes of travel. The first important advance in this line came

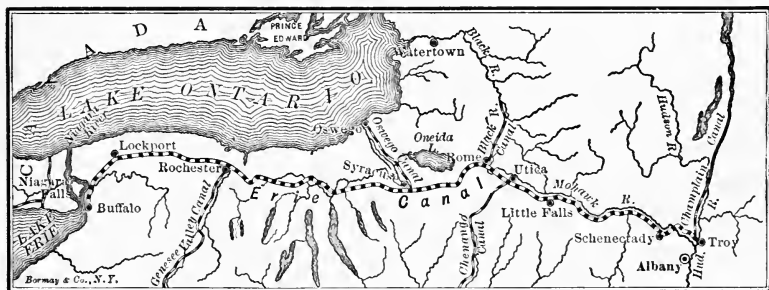

¹ Worcester *vs.* Georgia.

² See Ames's State Documents, No. III, p. 36 *sq.*

³ All the states except two, South Carolina and Delaware, now chose electors by a popular vote; these two still retained the old system of choosing by the legislature.

through the general use of the steamboat. By the time of Monroe's second election the western rivers, as well as those of the East, were covered with steam craft. These were not to be compared with the river steamer of the present day. It required thrice as many hours to run a hundred miles upstream as to return with the current, but the improvement over the flatboat of earlier days was very marked. So it was also along the seacoast. All the leading ports were now connected by lines of steam vessels, and a journey from one coast city to another became a pleasure trip, and consumed far less time than in the old days of the stagecoach.

But this was not enough for the rising West. The mountain walls that nature had thrown between the Eastern states and the valley of the great river must be overcome, if in the power of man

THE ERIE CANAL

to accomplish it. The great conestoga wagon still lumbered across the mountains and the valleys, from Philadelphia to Pittsburg. But relief was soon to come, and it came in two forms, — the railroad and the canal.

The first great canal to be completed in America was the Erie Canal from Albany to Buffalo, 363 miles, — often called Clinton's Big Ditch, as Governor De Witt Clinton was its chief projector. In October, 1825, after eight years' toil of **Erie Canal.** thousands of men with pick and spade and wheelbarrow, the great work was finished, and Governor Clinton led a tandem fleet from Buffalo to Albany amid the acclamations of the multitudes that gathered along the banks. The motley fleet bore a bear, two eagles, two Indian boys, and other things typical of the land before the

coming of the white man,¹ and its coming was announced by a continuous line of cannon placed along the route. From Albany Clinton proceeded down the Hudson, and, pouring two kegs of Lake Erie's water into the sea, pronounced the communication between "our Mediterranean seas and the Atlantic Ocean accomplished."

The Erie Canal proved a wonderful boon to New York. The cost of transporting merchandise from Albany to Buffalo had been over \$100 a ton; now it fell to one tenth of the former price, and this opened a vast market to the merchants and manufacturers of New York City, which soon became the chief metropolis in America. Farmers hastened from all sides to purchase farms along the canal, and the price of land rose rapidly. But not only was New York benefited by the canal. The farmers of Ohio, Indiana and Illinois could now purchase their axes, plows, and other utensils for a fraction of what they had formerly paid for them, and indeed the business of the entire country was affected by this great improvement.²

One of its effects was to cause a rage for canals to spread over the country. Philadelphia saw its western trade threatened with ruin. This led the people of Pennsylvania to decide on digging a canal between their two chief cities, and the work was soon begun.³ The great Ohio Canal joining Lake Erie with the Ohio River, from Cleveland to Portsmouth, was begun in 1825. The Chesapeake and Ohio Canal extended from Pittsburg to Washington. Many other canals of smaller pretensions were built, and many were begun and never finished, for another and far superior mode of inland transportation was now attracting the attention of the people.

The vast network of railroads that now covers the United States had its beginning at the time we are treating. John Stevens, an inventive genius of the highest order, who had done almost, if not fully, as much as Robert Fulton for the steamboat, was now the chief advocate of steam railways. A road was soon built from Philadelphia to the Susquehanna, but the cars first used were drawn by horses. The action of Pennsylvania in projecting canals and

¹ McMaster, Vol. V, p. 132.

² It is interesting to note that in 1903 the people of New York voted to expend \$101,000,000 for the improvement of the Erie Canal.

³ This was never completed; or rather, when it was completed, it was part railroad.

railways alarmed the people of Baltimore lest Philadelphia steal its western trade, and they decided to build a railroad to some point on the Ohio River. Work on it was begun in July, 1828, and this was the origin of the Baltimore and Ohio Railroad. The first steam locomotive was brought from England in 1829, where experiments in steam railways had been in progress for over ten years, but it proved a failure. In 1831, however, a locomotive was successfully used in South Carolina, and within a few years others were in operation in various parts of the country.

Railways.

But for years after this beginning many of the cars, even on the steam roads, were still drawn by horse power. The roads were owned by the state and the cars and engines by individuals or corporations. Any one owning a car or an engine had the use of the road. The engines were rude machines compared with those of our own times, but they went faster than the horses, and this caused much confusion. Eventually the railroads passed into the hands of private corporations, and horses were everywhere supplanted by the steam engine.

Some of the greatest inventions of our modern civilization belong to this period. The rapid progress in steam navigation by land and water brought about a wonderful stimulus in manufacturing and created a great demand for labor-saving machinery. Hence came the sewing-machine, the threshing-machine, the mower and reaper, and a few years later the telegraph and many other inventions of great usefulness. The first flannel made by machinery was produced in Massachusetts in 1824; the first illuminating gas was made from coal in New York in 1827. Thus one invention followed another, and they played a great part in laying the foundations of our present industrial prosperity.

Inventions.

In books and literature the country was making a famous beginning. The newspapers, numbering two hundred at the beginning of the century, seventeen of which were dailies, had now greatly increased in number; but their subscription rates were still high, as printing was a cumbersome business, the modern steam press being yet a thing of the future. The majority of the people did not take a newspaper. The postmaster was often the only one in a town who took a paper, and on its arrival the villagers would gather about him to hear him read the news.

Some of the most famous American authors were writing during

this period. To the older set belonged Washington Irving,¹ James Fenimore Cooper, Fitz-Greene Halleck, William Cullen Bryant, and Noah Webster.² These were all famous before the close of the first quarter of the century. Next came the galaxy of literary men born in the early part of the century: Henry W. Longfellow, Edgar Allan Poe, John G. Whittier, Oliver Wendell Holmes, Ralph Waldo Emerson, Mrs. Sigourney, and N. P. Willis, — each of whom had published one or more books by 1830. Many of these books, as well as their authors, are world-famous, and have taken a permanent place in our literature. Henceforth the curt remark of Sidney Smith, “Who reads an American book?” could be readily answered in a single word, — everybody.

NOTES

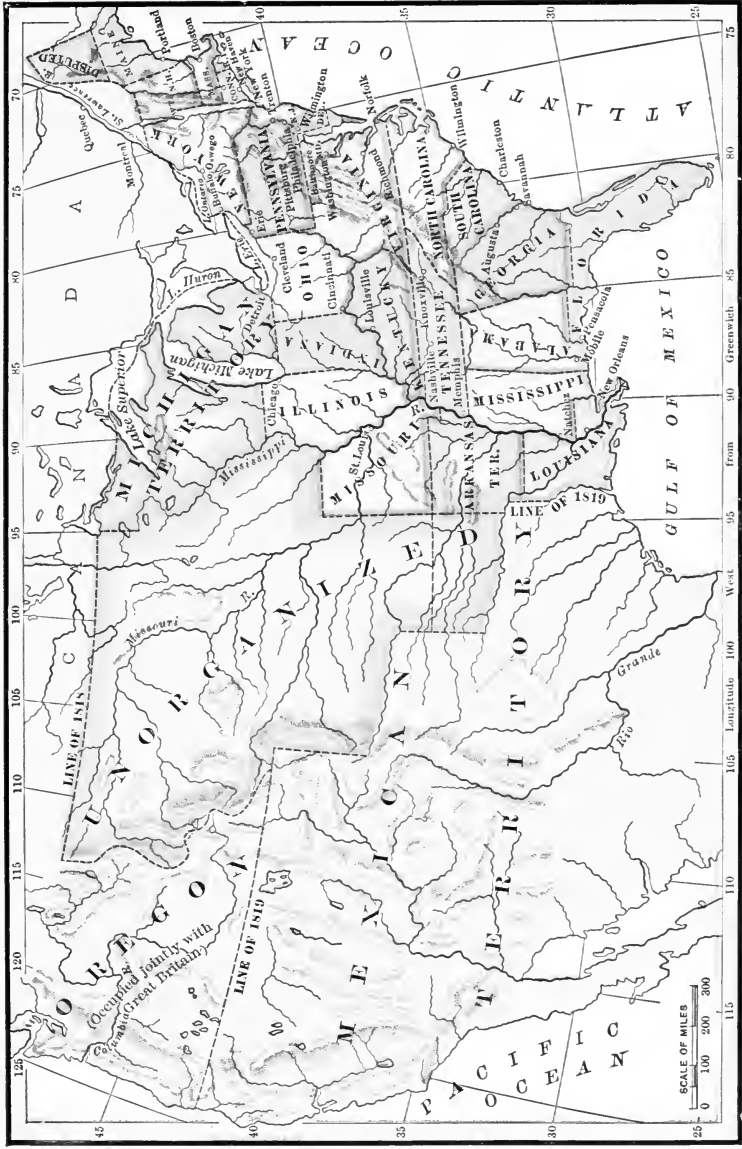

Boundaries. — Two important boundary lines were agreed on while Monroe was President. The boundary between the United States and British America west of the Great Lakes was fixed in 1818. From the Lake of the Woods the forty-ninth parallel was made the boundary westward to the summit of the Rocky Mountains. West of this lay the Oregon country extending to the Pacific and claimed by both the United States and England, and it was decided that both occupy it jointly for ten years; but twenty-eight years elapsed before the ownership was settled.

In 1819 the United States purchased East and West Florida from Spain for \$5,000,000. Before this the United States had claimed that Texas was a part of the Louisiana purchase; but this claim was now given up and the boundary decided on was as follows: The Sabine River from the Gulf to 32° and thence northward to the Red River, up the Red River to the one hundredth meridian, north to the Arkansas River, up this river to the crest of the Rocky Mountains, north to 42°, and west on this parallel to the Pacific. Thus the United States did not reach the Pacific at any point. The Pacific slope north of 42° belonged to the Oregon country, and south of 42° were the possessions of Mexico, known as the California country. The United States did not take possession of Florida until 1821, when Andrew Jackson became the first governor.

Migration to the West. — A wonderful movement of the population to the West began soon after the war with England had closed. Every road leading westward from the East was covered with lines of moving wagons, plodding their weary way over hills and mountains, streams and valleys. At Haverhill, Massachusetts, 450 emigrants passed through the town in thirteen days. At Easton, Pennsylvania, 511 wagons, bearing over 3000 persons, passed in one month. These were moving to the great valley of the Ohio River, and in the

¹ Irving was born in 1783, on the day that Washington made his triumphal entry into New York, and was one of the first to receive his name.

² Webster published his Dictionary in 1828.

THE UNITED STATES, 1830

South a similar movement to the new states of Alabama and Mississippi was going on.

A farmer wishing to better his worldly condition would sell all his goods that he could not take with him, and provide himself with a strong, light wagon, covered with canvas. In this he would pack his goods, leaving only room enough for himself and his family. Thus equipped they would bid adieu to old neighbors, friends, and kindred, often to meet them no more in this life, and start out upon the long and toilsome journey of hundreds of miles through the wilderness. Sometimes whole communities went together and settled in the same neighborhood in the West; but more frequently they moved by isolated families. Arriving in the western wilderness, the pioneer would purchase a quarter section of land of the government, of some land company, or of some settler who had preceded him and failed, paying two or three dollars an acre, on the installment plan. If the land were wholly unimproved, the family would live in the moving wagon until a cabin could be built. The cabin was made of logs, notched at the ends so as to fit at the corners, and laid one above another until the house was about ten feet high. There was but one room, one door, and one window. The door was made of rough boards swung on leather hinges, and opposite the door was left an open space on the ground for a fireplace, the chimney being built outside of flat sticks like laths, and plastered with mortar. The floor was made of planks hewn out with the ax, and the roof of lighter planks resting on rafters made of saplings. In such a home many a good family lived for ten or twenty years, the ancestors of many of the leading men of the nation to-day. The cabin built, the pioneer would begin battling with the forest, clearing a few acres each year, carrying his grain perhaps twenty miles on horseback to the nearest mill. Soon his land would become more productive; and at length, if thrifty and industrious, he would build a good house and abandon the cabin. Other movers would settle near, then a town would be founded, and another, and another, and eventually a railroad would be built through the new settlement. The community is transformed in twenty-five years; the markets are near, the comforts of life have multiplied, the farm of the first settler is now worth thousands of dollars, and he has added other hundreds of acres to it. His children settle on the farm or enter the business or the professional world, and the "old settler" spends his declining years amid peace and plenty; and he gathers his grandchildren about him and tells of the days of long ago, of the long journey in the moving wagon, and of the time when the forest frowned on every side and the wolves howled about his lonely cabin in the wilderness.

CHAPTER XXI

THE REIGN OF JACKSON

AMERICAN LIFE IN 1830

THE census of 1830 footed up nearly thirteen million people, scattered over about half the present limits of the United States. West of the Mississippi River was a vast unbroken wilderness, save for Missouri and some parts of Louisiana and Arkansas. Texas and California still belonged to Mexico, and the ownership of Oregon was unsettled. Little else than a wilderness were Michigan, Illinois, and large tracts of other fast-growing states east of the Mississippi. The great cities of the West are all of recent growth. Cincinnati was then a considerable town and was called the "Queen City of the West"; but Chicago was a rude wooden village, and the buffalo still roamed over the sites of Omaha, Denver, and San Francisco.

Changes were rapidly going on in the East. Virginia was no longer the first state in population, nor even second. New York was now first, Pennsylvania still held second rank, while Virginia was relegated to the third place. The three leading cities each boasted a millionaire of untold wealth—Girard of Philadelphia, Astor, the New York merchant-prince, and Lawrence, the founder of the Boston cotton mills.¹ The telegraph was unknown at this day, and our present vast network of railroads was just making a beginning. The old stagecoach days were not yet over, and their relics are still to be found in various parts of the United States. Any one who travels through the country will find here and there a house very different from the ordinary farmhouse. These are usually large stone buildings, two stories high, with spacious rooms and halls, situated in old towns or on the main roads, twenty miles or more apart, and are always old. They are relics of the stagecoach period, and were called inns or taverns. In some neighborhoods the

¹ Schouler, Vol. IV, p. 6.

aged people still remember and eagerly tell of the good old days when travelers from all parts of the country would lodge there; or when political meetings were held at the inn, and the people would come together to discuss public questions and sing their political songs over the social glass; or when the young people from far and near would assemble and spend the night in carousal and merry-making.

The American of that day was known abroad as the Yankee. Every country has its typical citizen, and the typical American, whose likeness has been preserved to us in the well-known picture of "Uncle Sam," was tall, lean, wiry, and awkward. He had a roving, keen, inquisitive eye, and no stranger could escape him without gratifying his appetite for news. He was the keenest bargain driver in the world. To foreigners he was courteous, but he would flare up in an instant, if any one spoke against his country.

The typical American.

There were few rich men and almost no poverty. The chief subjects that engaged attention were religion, politics, and money-making.¹ The great majority of the people were religious, though the intolerant spirit of colonial days had passed away. Nearly every man was interested in politics. He took pride in the fact that he was part of the state, and had a voice in shaping the laws. But the most conspicuous characteristic of the Americans was the widespread desire to become rich. In wealth there is power, and here were no social castes to keep a man down, however humble his birth; and the American sought wealth, not only for the distinction and comfort that it brings, but also that he might give his children advantages that he did not have in his youth.

Democracy reigned supreme by 1830. "The principle of the sovereignty of the people," says De Tocqueville, "has acquired in the United States all the practical development that the imagination can conceive. The people are the cause and the aim of all things; everything comes from them and everything is absorbed by them."² The Declaration of Independence had set forth the dogma that the rights of man are inherent and the gift of nature; but half a century passed before that principle became triumphant. It reached high-water mark in American history at the time of Jackson's presidency. The principles of Federalism were wisely retained in the general government, but the current of democracy, set in motion

¹ Schouler, Vol. III, p. 4.

² "Democracy in America," Chap. IV.

by Jefferson in the closing decade of the eighteenth century, had swollen into a tidal wave, and Federalism existed now only at the will of the democracy. Nothing illustrates this triumph of the people more than the rapid spread of the suffrage and of religious liberty. When the Constitution went into operation a property qualification or a religious test was required in nearly every state, and probably not more than one hundred and fifty thousand of the five million people could vote.¹ The new states forming constitutions, with rare exceptions, recognized manhood suffrage without the religious or property test. The old states brought about the same results by amending their constitutions, and by 1830 the suffrage of the adult white male population was almost universal.

**Triumphant
democracy.**

THE PEOPLE'S PRESIDENT

Andrew Jackson, "the people's man," was now President. He was the first of our Presidents, but not the last, to rise from the ranks of the common people; all his predecessors were from the so-called higher class of society. Until long past middle age, Jackson had shown no inclination toward a political career. If he had any ambition beyond the quiet life of a planter, it was a military ambition. Twice he resigned from the United States Senate before finishing his term. He made little impression in Congress, and seemed to dislike public life. Thirty years after his first service in the House, he was recalled by Gallatin as a tall, lank, uncouth frontiersman, with long hair gathered in a queue and tied at the back with an eelskin. After resigning from the Senate in 1797, he lived an obscure life till the battle of New Orleans, when he suddenly sprung into a world-wide fame. As above stated, he did not like public life, and there is reason to believe that his candidacy for the presidency annoyed rather than pleased him² until it reached a certain point, until he believed himself to have been defeated by a corrupt bargain between Adams and Clay. Then the contest assumed a different form, a victory to be won, and his old warrior spirit arose, and he left no stone unturned until he was seated in the presidential chair.

¹ Thorpe's "Constitutional History of the American People," Vol. I, p. 97.

² "Do they think," said Jackson, in 1821, "that I am such a darned fool as to think myself fit for the presidency? No, sir; I know what I am good for. I can command a body of men in a rough way, but I am not fit to be President." Parton's "Life of Jackson," Vol. II, p. 354.

The outgoing President refused to attend the inaugural ceremonies, as his father had done twenty-eight years before. He felt that he had good grounds for taking such an attitude. The facts in brief are these: During the campaign in the preceding summer, Jackson's wife was shamefully attacked, and the poor woman, who was doubtless innocent, died a few weeks before the inauguration. Jackson believed that her death was partially due to these attacks, and he felt very bitter against every editor who had published them. The administration organ at Washington had copied them, and Jackson, believing that Adams had something to do with their publication, and also remembering the "corrupt bargain," refused to call on Adams, according to custom, when he reached the Capital City some days before the inauguration; and hence Adams refused to attend the ceremonies. He remained in the city for a week, then quietly left for New England.

The inauguration of the new President was a grand affair; the day was fine, and the crowd was vast. The people had flocked from every point of the compass to see the people's man made President. Jackson, despite his want of early **Inauguration of Jackson.** training, was capable of assuming the manners of the most highly cultured. He was not in the least overawed by the presence of the great, nor did he affect to show contempt for the refinements of social life. His address to the great audience that now stood before him revealed no tendency to cringe, nor was it marred with a taint of bravado. "His manner was faultless," writes an eye-witness who was not his political friend,¹ "not strained, but natural. There was no exhibition of pride or ostentation—no straining after effect or false show." The ceremonies over, a great public reception with refreshments was held at the White House, and the rabble had full sway. They trampled the fine carpets with their muddy boots, stood on chairs and upholstered furniture, and among other things smashed an immense, costly chandelier. "Let the boys have a good time once in four years," said Jackson,—and nothing he ever said gives a deeper insight into the cause of his popularity.

Jackson chose as his secretary of state the rising, smooth-tongued Dutch politician of New York, Martin Van Buren, who a few months before had been elected governor of his state. Samuel D. Ingham was made secretary of the treasury, and John H. Eaton

¹ Thompson's "Recollections of Sixteen Presidents," p. 146.

secretary of war. The Cabinet was now increased to six members, the postmaster-general being admitted to it, and the first incumbent of the new office was William T. Barry of Kentucky.

During the early months of 1829 an affair at Washington, known as the Eaton Scandal, created much public excitement. This matter would not merit the notice of serious history but for the permanent effect it had upon the administration.

The Eaton Scandal.

Many years before this time, a William O'Neal had kept a tavern at Washington, and his house became the lodging place of many of the government officials. Among the boarders was Senator John H. Eaton from Tennessee. O'Neal had a daughter, a witty young beauty, known over the city as Peggy O'Neal. She was quite free with the inmates of her father's house, and especially with Mr. Eaton, — until the gossips were set going and her name became tainted. At length Peggy O'Neal married a Mr. Timberlake of the navy, but he died by suicide in the Mediterranean; and in January, 1829, Mr. Eaton, who was still in the Senate, married the widow. Mrs. Eaton now set out to gratify the ambition of her life, — to become a leader in Washington society. But her former history was exhumed, and most of the society ladies of the city refused to recognize her. This was the state of affairs when Jackson arrived in the city. Eaton had been one of his chief campaign managers, and the O'Neals had a warm place in Jackson's heart, as he also had been their guest while serving in the Senate a few years before.

Remembering the slanders against his own wife, now deceased, believing Mrs. Eaton to be innocent, and believing also that the gossip about her was inspired by Henry Clay with the object of ruining her husband, Jackson determined to espouse the cause of the Eatons. He appointed Mr. Eaton to his Cabinet, and did everything in his power to clear the name of his wife, and to give her a standing in society. He wrote scores of letters, he called Cabinet meetings, he attended stately dinners — all for Mrs. Eaton. But the women who held the key to the inner sacred circle declined to open the door to Mrs. Eaton. General Jackson now practically informed the members of his Cabinet that their political fortunes depended on the recognition by their wives of Mrs. Eaton; but these men were powerless; their wives simply refused, and that was the "end on't." Even the President's niece, the mistress of the White House, made a stand. "Anything else, Uncle, I will do for you,

but I cannot call on Mrs. Eaton." "Then go back to Tennessee, my dear," said the President, and she went back to Tennessee.¹ Thus the hero of New Orleans, the old iron warrior who had never known defeat in battle, was completely defeated by the women. The Cabinet was now inharmonious in the extreme, and after hanging together till the spring of 1831, it broke to pieces and a new Cabinet was formed.²

Aside from disrupting the Cabinet, the Eaton Scandal had another and still more marked effect on American history. It built the fortunes of the secretary of state. Martin Van Buren was at this time a widower and without daughters, and he could well afford to give his energies to the cause that was so dear to his chief. He called on Mrs. Eaton; he arranged balls and dinners for her; he spoke of her virtue in every social circle; he sought out the British and Russian ministers, both bachelors, and secured their aid in pushing Mrs. Eaton to the front. And he succeeded, not in having her recognized in Washington society, but in intrenching himself in the heart of General Jackson. Never from this moment was there a break between the two, though as unlike they were as winter and balmy spring. It was soon after this time that Jackson decided to name Van Buren as his choice for the presidential succession, and his decision was final, for his party was all powerful, and he swayed the party as Jefferson had done thirty years before.³

**Strategy of
Van Buren.**

The chief members of the new Cabinet were Edward Livingston, secretary of state, Lewis Cass, secretary of war, and Roger B. Taney, attorney-general. Here may be mentioned also Jackson's "Kitchen Cabinet," composed of a few of his intimate friends, private advisers, but not members of the real Cabinet. These men were said to meet the President in a private room, which they reached by means of the back door, hence the name. Chief among them were Francis P. Blair, editor of the

**The Kitchen
Cabinet.**

¹ Six months later, however, this niece, Mrs. Andrew Jackson Donelson, was reinstated in the White House.

² Mr. Eaton was sent as minister to Spain. He died in 1856; but his famous wife lived to be very old, dying long after the Civil War.

³ In a letter dated December 31, 1829, to Judge Overton of Tennessee, Jackson adroitly names Van Buren for the succession. This letter was to be used in case of Jackson's death, and his health was then frail. But he grew stronger, and the letter remained a secret for nearly thirty years. See Parton, Vol. III, p. 294. But Parton wrongly gives the date as December, 1830. See Von Holst, Vol. VI, p. 163.

Globe, founded in opposition to the *Telegraph*, which was under the influence of Calhoun; William B. Lewis, who had managed Jackson's first campaign and was a master politician; and, above all, Amos Kendall of Kentucky, afterward postmaster-general. Kendall was a strange character. Silent, wiry, seedy, and slovenly in appearance, he glided in and out of the President's private room more like a spirit than a man. But withal he was frugal and honest, and was possessed of remarkable political sagacity. He devoted all his powers to upholding the name and fame of the President, and was content to remain almost unknown himself. It is believed that Jackson owed more to Amos Kendall than to any other man for the successes of his administration.

THE CIVIL SERVICE

For three things the "reign" of Jackson will ever be remembered in our history: The radical changes made in the civil service; nullification in South Carolina; and Jackson's crushing the life out of the United States Bank.

Andrew Jackson was a man of intense patriotism, and he did much for which the country should hold him in grateful remembrance. But for one thing he deserves no credit, and that was his debauching the civil service, his introducing, or permitting to be introduced, the spoils system into national politics. Before the advent of Jackson civil service officials usually held office for life or good behavior. The Crawford Act of 1820, limiting an appointee to a four years' tenure, had not been enforced. During the forty years preceding Jackson's term but few public officials had been dismissed; but Jackson ignored all precedent and removed clerks, postmasters, and customhouse officials by scores and hundreds, for purely political reasons. This "spoils system" had been in practice in New York and Pennsylvania state politics. It was the spirit of triumphant democracy that brought it into national politics. Jackson could have crushed, or at least deferred it, but did not do so.¹ The system, the motto of which was "To the victors belong the spoils," took a powerful hold on the country and was followed by Jackson's successors for many years; each became a victim to the system whether he would or not; and it is only in recent years that the movement known as Civil Service Re-

¹ See Sumner's "Jackson," p. 147; Von Holst, Vol. II, p. 14.

form has in part brought us back to the old practice of the early Presidents.¹

JACKSON AND CALHOUN

Now in addition to the line by which we have traced the career of Jackson to this point, let us follow another, almost parallel with this one for a long distance, when they diverge never to meet again. In this second line we trace the life of another of the most striking figures in American history. Von Holst, the German historian, pronounces the life of Calhoun more tragical than any tragedy ever conceived by the imagination of man.

John C.
Calhoun.

The points of resemblance in the lives of Jackson and Calhoun are very remarkable. They were both of Scotch-Irish descent, born in the Carolinas, of revolutionary Whig parentage, and each was left fatherless at an early age. They were both tall and spare in frame, of pure morals and undaunted courage, and each was a born leader and commander of men. They both entered Congress at the early age of thirty years and were leaders in the same great political party. In 1824 they were both candidates for the presidency, one withdrawing and accepting second place, the other being defeated; they were elected four years later, President and Vice President on the same ticket.²

But these two lines are not wholly parallel; there is here and there a notable divergence. Jackson was entirely without a higher education; Calhoun was a graduate of Yale. Jackson disliked the tedious work of lawmaking; he was sent to Congress three times, and resigned each time without finishing his term; but he was a superb commander on the battlefield. Calhoun, on the other hand, never took the field, but he was a leader in Congress from the time he entered it in 1811 to the end of his long political career of thirty-nine years, with the exception of the few years when he was not a member.

¹ Would that all our Presidents had the conception of the great office held by Washington! Here is an extract from a letter he wrote to a friend concerning another friend who had applied for an office: "He is welcome to my house and to my heart; but with all his good qualities, he is not a man of business. His opponent, with all his politics hostile to me, *is* a man of business. My private feelings have nothing to do in the case. I am not George Washington, but President of the United States. As George Washington I would do this man any kindness in my power—as President of the United States, I can do nothing."

² This parallel is adapted from Greeley, "American Conflict," Vol. I, p. 88.

For many years Jackson and Calhoun were fast friends. Calhoun aided Jackson to the presidency in 1828. Jackson gave as a toast at a banquet, "John C. Calhoun, an honest man, the noblest work of God." The great ambition of Calhoun's life was to become President of the United States. It was almost a passion with him, and entered into all his political acts. But Jackson had gained such a powerful hold upon the Democratic party that no one could be elected without his support, and any one he might name was likely to become his successor; yet it was believed from one end of the land to the other that Calhoun would be the fortunate one upon whose shoulders the mantle of Old Hickory would fall.

But an evil day came. Calhoun's hopes were blasted forever, and he became a changed man, so changed that the Calhoun of later years could scarcely be recognized to be the same man as the brilliant young patriotic leader of his earlier years. It happened on this wise: It will be remembered that Jackson in the Seminole War of 1818 caused trouble by trespassing on Spanish soil. Calhoun was at that time secretary of war in the Monroe Cabinet. The subject was discussed in secret cabinet meetings, and in one of these meetings Calhoun suggested that Jackson be subjected to a court of inquiry with a view to his punishment. At the same time Jackson believed that Calhoun was his warmest friend and most faithful defender in the Cabinet. It was soon after this that Jackson had toasted Calhoun as an honest man, the noblest work of God. Their friendship thus continued for many years longer when, in 1830, Jackson heard of the attitude Calhoun had taken in the Monroe Cabinet. Jackson was dazed at the information. He at once wrote Calhoun asking if it could be true. In vain did Calhoun assert that he had never questioned Jackson's patriotism or honesty; in vain did he explain that whatever he may have said in Monroe's Cabinet was in accordance with official duty, and never intended to mar their personal friendship. But Jackson was unable to distinguish between personal and political friendship. He denounced Calhoun most bitterly, and gave him to understand that their friendship was forever at an end. And so it was; they were never after reconciled.¹

A breach between two political leaders is not an unusual occurrence, and may often be passed over as of little importance. Sometimes, however, such a quarrel may change the entire working

¹ This incident was not the origin or the sole cause of the rupture between Jackson and Calhoun. They had been growing apart for some years.

machinery of the government. This quarrel and permanent breach between Jackson and Calhoun became a momentous turning point in the life of the latter. Calhoun's great ambition to become President was now blasted. He was a disappointed man, and the effect of his disappointment can be traced through his entire subsequent course. He was a national man, with broad national views, and one of the most brilliant and attractive men in the nation till this time. After this change came over him he was a sectional man and gave his great talents to the interests of slavery as long as he lived.¹ Slavery during its career in America had many champions of admirable talents, but no other compares at all in ability with Calhoun. The one weapon which he constantly used in dealing his powerful blows was state rights, or, more properly, state sovereignty. And this brings us to the notable outbreak of the time, a product of this doctrine, —

Calhoun's
change of
heart.

NULLIFICATION IN SOUTH CAROLINA

The grievance that caused the outbreak in this little state by the sea had been brewing for ten years, and especially for six years — since the defeat of Jackson for the presidency by John Quincy Adams. It had its origin, not in the quarrel between the President and the “great nullifier,” nor even in the tariff, as is generally supposed, but in a growing discontent of the people, a feeling that the interests of the North and the South were not identical, and that the government was falling into the hands of the North.² This feeling was intensified by the tariff of 1828, and a few years later it broke into open defiance. During the ten or fifteen years preceding this the North and the South had changed places on the subject of the tariff. At the close of the recent war with England the South was more favorable than the North to a protective tariff. One cause of this was, it is claimed, that the South at first expected to work its own cotton; but this it could not do. Slave labor had not the intelligence to manufacture; white labor could not flourish by the side of slave labor, and the cotton mills were built in New England and Liverpool. Since, therefore, the South could only raise cotton for sale, it came to prefer a low tariff so that it might purchase manu-

¹ I would not be understood to mean that the quarrel with Jackson was the sole cause of Calhoun's change of heart; but without this quarrel he might have become President, and remained broad and national in his sympathies.

² See Harvard Historical Studies, No. III, p. 5.

factured articles more cheaply, and through fear that a high tariff would disturb the cotton market in England. New England, on the other hand, was at first so wedded to commerce as its chief industry that it favored free trade or a low tariff. But as its manufactories grew and clamored for more protection, and as it was further discovered that protection did not seriously injure commerce, that section came to favor a high protective tariff. Thus in the years following 1816 the two sections veered around and exchanged places on this great national question.¹

The duties of 1816 were raised in 1824, and these again in 1828. This last measure was called the "Tariff of Abominations." It was supported by the free traders and made as obnoxious as possible by them in the hope that the country would become surfeited with protection; but New England swallowed it. This tariff gave occasion for the pent-up feelings in South Carolina to find an opening; but before continuing the subject, let us turn aside to notice an episode, indirectly connected with it, which brought on the most famous debate that ever took place in the United States Senate.

It was in January, 1830, that Senator Foote of Connecticut introduced a resolution to limit the sale of public lands, or rather to inquire into the expediency of doing so, and from this arose the great debate which took a wider range, lasted over two months, and covered nearly every great question that had agitated the government since its foundation. At length, however, the debate narrowed down to the great rising issue between the North and the South, with slavery as its background, and threats of nullification and disunion as its immediate exponents—and it culminated in the famous oratorical contest between Robert Y. Hayne and Daniel Webster.

Senator Hayne was a man of finished education and of refined and fascinating manners; he was as pure as a child in morals, as charming and unassuming in his ways;² he had a soft, winning voice, was an able lawyer, and was possessed of much oratorical ability. And yet Hayne would scarcely be known to our national history but

¹ It must be stated, however, that South Carolina was an exception in the South from the beginning. In this state high protection was never popular. In 1789 Senator Pierce Butler from that state "flamed like a meteor" against the proposed tariff, and charged Congress with "a design of oppressing South Carolina." In 1816, when Calhoun supported the protective tariff, he did so against the wishes of his constituents and was censured for it. He afterward came to agree with his constituents.

² Sargent's "Public Men and Events," Vol. I, p. 171.

for the fact that he drew from the greatest of American orators the greatest oration of his life. The speech of Hayne was one of the notable speeches of the period. It covered two days, and was made to a crowded chamber. In it Hayne advocated with much power the right of a state to render null and void an unconstitutional law of Congress. The Southerners gathered around him at the close to show their delight at having a champion, as they believed, who was more than a match for Webster.

**Robert Y.
Hayne.**

On the next day, with but one night for preparation, Webster rose to reply. He took the floor like a gladiator entering the arena; his appearance, always impressive, was especially so that day. He was at the prime of life, forty-eight years of age; and his raven black hair, high forehead, shaggy brow, broad shoulders, and deep, melodious voice made an impression on the audience never to be forgotten. Webster's argument was that the Constitution is supreme, the Union indissoluble, and that no state has the right to resist or to nullify a national law. His well-known closing peroration, ending with the words, "Liberty and Union, now and forever, one and inseparable," is one of the most eloquent passages in the English language.

**Webster's
great speech,
1830.**

This great oration awakened the people to the fact that a new prophet had arisen among them — and so he was, a prophet of nationality. The old Federalist party had originally stood on the ground of extreme nationalism; but that party had ceased to be, and the Democratic party had now been in control for thirty years. This party was equally patriotic with its predecessor, but less pronounced on nationalism, and had some great upheaval occurred within these thirty years, who can tell what might have become of the Union? But now at this new menace to the integrity of the Union the new champion of the old doctrine of nationality arose in the person of Webster.

**The new
prophet.**

But Federalism had not been dead, nor even sleeping, nor had it hovered as a disembodied spirit during those thirty years. Not only had its best principles been in a great measure adopted by the democracy; but a bridge of living Federalism had spanned this chasm of thirty years, from Hamilton to Webster, in the person of the great interpreter of the Constitution, John Marshall. It was Marshall above all men who gave to the Constitution the meaning that it has

to-day.¹ And now as the great jurist was grown old and ready to close his earthly labors, it was Webster who took up the cry of nationality and sounded it forth with a trumpet sound; and it took hold on the national mind, and increased more and more for thirty years, when it was strong enough to put down the mighty rebellion against the Union in the sixties.

But Webster was not the only one, not even the chief one, to whom the nation owes its preservation in the thirties. This honor must be awarded the Democratic President. Webster was only a voice, and the case required action. Webster's doctrine was too new to take immediate hold upon a people who had so long been schooled in the doctrine of state sovereignty. The condition required action; it required one with power, and Jackson had the power. Had he the inclination, the will to do it? That was the great question in the spring of 1830.

The muttered rumblings of nullification were increasing in South Carolina. There was much dissatisfaction with the tariff of 1828 in other states, and some were belligerent in their utterances,² but no other except South Carolina was so audacious as to defy the government. But what will Jackson do? He was a southern man. Would he decide against his own section and espouse the cause of the Union, the doctrine of this rising sun of Massachusetts? In a unique way it was decided to discover the views of the President on this great subject. A banquet was to be held in Washington on the birthday of Thomas Jefferson, the great apostle of democracy, April 13, and Jackson was invited to be present and to give a toast on a subject of his own choosing. He readily saw that the general object was, not so much to honor Jefferson as to foster nullification and disunion and to make Jefferson the "pedestal of this colossal heresy," and the immediate object to discover his own views on the subject. Jackson attended. Many toasts were given, all bearing on state rights, and savoring of nullification.³ Jackson was then called on for a volunteer toast. He arose amid profound silence, for his views on the exciting subject were unknown. He announced his subject: "The

¹ Marshall, in his great constitutional decisions, did an incalculable service to the country during this formative period; first, in strengthening the national government; second, in sustaining the power and dignity of the Federal courts; and third, in restricting the power of the states.

² See the case of Georgia, Ames's State Documents, No. IV, pp. 14-16.

³ Benton.

Federal Union; It must and shall be Preserved;” and he denounced as treason all movements toward nullification and disunion. His speech fell like a bomb in the ranks of the South Carolinians; they saw that they could get no sympathy from Jackson, that he was for the Union at all hazards. This occurred two and a half months after the great debate between Webster and Hayne, and a month before the final break between Jackson and Calhoun.

Notwithstanding the ominous warnings, the South Carolinians rushed on where angels might have feared to tread. Their state was in great turmoil; but it was in Washington that the seeds of disunion were nourished into growth under the leadership of Hayne. But Hayne was not the real leader; those who looked deeper than the surface could see the master hand of Calhoun beneath it all. Again in 1832 some tariff duties were raised, and South Carolina grew desperate. In November, 1832, the crisis came. A convention with the governor of the state as chairman, met at Columbia, and solemnly decided the tariff of 1828 and that of 1832 null and void in that state after the first of the following February, authorized the calling out of the militia, forbade any appeal to the Supreme Court, and declared that if the government attempted to use force, the state would set up a government of its own. This was the famous ordinance of nullification. It was a bold and daring step for the little state to make, especially with such a man as Jackson to deal with at Washington. A few weeks after this the President came out with his famous December proclamation to the people of South Carolina, in which he showed them the folly of their action, appealed to them to pause in their madness, and warned them that if they went on the soil of their beloved state would be drenched in blood; for the general government could not and would not yield to their demands.¹

The government, however, did yield to a compromise, the author of which was Henry Clay. By this compromise the duties above twenty per cent were to be reduced gradually for ten years, when the uniform duty should be twenty per cent. It was agreed to by Calhoun, but was signed with reluctance by the President, as it was a partial yielding to the hotspurs of

¹ To this the legislature of South Carolina made a rather defiant answer, and solemnly declared that any state had the right to secede from the Union. Ames's State Documents, No. IV, p. 43.

South Carolina. At the same time, however, he had put through Congress the so-called Force Bill, which enabled him to send troops to South Carolina to enforce the collection of the revenue. This he did under General Scott; but no blood was shed and all was soon peaceful. South Carolina had made one serious miscalculation from the first. She expected other cotton states to follow her example; but instead of doing so, nearly all of them condemned her action. This fact doubtless explains her willingness to yield to compromise.

THE REELECTION AND THE BANK

When Jackson first became President he had no thought of a second term, but at the urgent request of his friends, he decided to stand for reelection, and Van Buren, whom the Senate had rejected as minister to England, was elected Vice President. From Jackson's private correspondence we learn that he would have preferred to spend the remainder of his days at the Hermitage, near the grave of his departed wife, and that with all his successes and with all his friends and admirers, he was a "sad and lonely old man." His chief object in consenting to serve a second term, if elected, was to carry out his designs against the United States Bank. His leading opponent was Henry Clay, whose party used the name National Republican.

There was another party also in the field in this election of 1832 — the Anti-Masonic party. It arose in the following way: A man named William Morgan of New York published a book disclosing the secrets of Freemasonry and in so doing awakened the implacable hostility of the Masons. One day he was abducted at Canandaigua, carried away in a closed carriage to Fort Niagara, and was never afterward seen or heard of by his friends. It was believed that he was sunk into the depths of Lake Ontario, and the deed was ascribed to the Masons. A violent wave of indignation against the Masonic fraternity spread through New York and adjoining states. Anti-Masonic societies were formed on all sides and they resolved themselves into a political party and entered the arena of national politics for the election of 1832. This party nominated William Wirt, twelve years attorney-general of the United States, for President, and carried one state, Vermont, in the election. The party soon dissolved, and it would scarcely be remembered but for the fact that it introduced into national politics three

The Anti-Masons.

statesmen destined to great renown in the coming generation, — William H. Seward, Thurlow Weed, and Thaddeus Stevens, — and the more important fact that it instituted the national nominating convention, an example soon followed and still followed by all other parties.

But the real contest in 1832 was between Jackson and Clay; and there was but one prominent issue — the United States Bank.¹ Jackson was hostile to the bank and sought to destroy it. Clay was its friend, and he made a bold move, which proved to be a blunder. He had put through Congress, in the midst of the campaign, a bill to recharter the bank. The old charter had four years yet to run, and there was no need of such haste; and Clay's sole object was to force the issue by forcing the President to sign or to veto the bill, and it was sent to him on the 4th of July.

The country waited in deep anxiety for the action of the President. The test was a severe one. Jackson was known to be altogether hostile to the bank; he had thundered against it in his first annual message in 1829, and again in 1830. He had said again and again that Nicholas Biddle, the bank president, and the directors were using their influence and the bank's money to corrupt the people and carry the elections, and that no such corporation should exist in a free government. Could he sign the bill in the face of all that? But could he veto it and risk awakening the wrath of the people within four months of the election? The money of the country was still good, and there were yet no signs of corruption. What could Jackson do? Whatever Jackson may have been, he was no coward. He waited six days and then vetoed the bank bill. As the news of this veto spread, the majority of the people were struck with consternation, for most of them had come to believe that the bank was necessary to the prosperity of the country.

The issue of the campaign was now settled — it was the bank and nothing but the bank. The great trio in the Senate, Clay, Webster, and Calhoun, combined against Jackson, and the bank officials, led by "Nick" Biddle, were active in assisting them. Their claim was that the financial equilibrium was so disturbed by the veto that widespread ruin must result. On the other hand, Jackson railed against the bank; his followers took up the cry, and erelong the whole Democratic press was accusing the bank of corruption, and

¹ For an account of the bank see *supra*, p. 452.

they kept it up until the masses of the people believed that there was truth in the accusation — and so there was.

For some time before the election the popular tide set toward Jackson, and Clay received but forty-nine electoral votes out of two hundred and seventy-five.

This appeal to the people sustained Jackson on the question before the country ; but the old bank had four years yet to live ; and the next year Jackson made the boldest stroke ever made by a President of the United States. He removed the government deposits from the bank, on his own authority. He had determined to destroy the institution, and fearing that by his death or through some great change in Congress, the bill to recharter it might yet become a law, he decided to ruin the bank by withholding the government moneys on which its life depended. Calling his Cabinet together, he made known his purpose. But the entire Cabinet, except Mr. Taney, the attorney-general, disapproved. It was believed that such an act would ruin the business of the country by ruining this great fiscal corporation, which had practical control of the finances of the nation, and hundreds of smaller banks dependent on it. But Jackson believed the bank to be corrupt and even insolvent, and he was determined on his course ; nothing could stay his hand. By the charter no one but the secretary of the treasury had power to remove the public money from the bank. Jackson ordered his secretary of the treasury, Mr. Duane, to do this ; but Duane refused and was immediately dismissed from the Cabinet. Taney was then transferred to the treasury, and he immediately proceeded to obey his chief.

Little can we realize at this day the excitement into which the people were thrown by this action of the President. Public meetings were held in every part of the country to protest against it. Thousands who had voted for Jackson the year before now believed that he had gone entirely too far. Petitions came from all sides praying that he replace the bank funds.¹ Jackson, when approached on the subject, would become furious ; he would walk the floor like a caged lion. “Go to the monster, Nick Biddle,” he

¹ The government deposits in the bank, amounting to near \$10,000,000 at this time, were removed gradually in the course of business. The accumulating surplus was placed in “pet banks” to the amount of \$11,000,000, when Congress passed a law loaning the unused surplus to the various states. But after three quarterly payments, aggregating some \$28,000,000, had been so distributed, a financial crash, to be noticed later, put a stop to them.

would say, "he has millions; it's all a job of the politicians; I will not yield a hair's breadth."¹ And he did not yield.

But the trouble did not stop here. In a few months the business of the country was greatly disturbed. Banks closed their doors and manufactories were shut down. Distress meetings were held in every center of trade, and they poured their memorials into Congress by the hundreds. Congress met in December, and the Senate debated the subject for weeks amid the wildest excitement. The leader against Jackson was Clay; but Clay had been so recently defeated by Jackson that personal grievance was thought to have something to do with his opposition. Clay's right-hand man was Calhoun; but his recent quarrel with the President weakened him also with the people.

Jackson was not without friends in the Senate, the ablest and most devoted of whom was Thomas H. Benton, thirty years a senator from Missouri. Benton was a national character, known as "Old Bullion," from his hard money proclivities. Many years before he and Jackson had been enemies and had fought an impromptu duel,² but all this was changed, and with unwearied effort and much ability he now defended Jackson against the combination in the Senate. He claimed that the sudden distress of the country had been caused by the willful designs of the bank directors with a view of overthrowing Jackson's popularity and forcing him to replace the deposits. The bank refused its accustomed loans to business men, and had forced smaller banks to the wall by demanding immediate payment in coin of all debts due it. Benton also showed that the old bank in 1811, in order to force the government to grant a recharter, had brought on the country a temporary distress of the same kind and in the same way. He drew from this a strong argument against the existence in a free country of a corporation so powerful as to be able to do this. His points were well taken, and in the end had great effect on the people.

The fury of the Senate against the President did not abate; but that body was powerless. It was under the magic spell of Clay, and would have impeached Jackson beyond a doubt, but the Constitution gives all power of impeachment to the House, and the House was Democratic by a majority of fifty. The Senate, however, rejected Taney as secretary of the treasury, and adopted strong resolutions of censure against the President; who in turn sent a long written

¹ Schouler, Vol. IV, p. 161.

² See note on p. 449.

protest, which the Senate refused to receive. Benton then gave notice that he would move to expunge the resolutions of censure from the Senate journal, and that he would succeed in this or keep up the subject to the end of his official life. He did succeed about three years later, after the Senate had changed political complexion.

FOREIGN RELATIONS AND INDIAN WARS

So great were the domestic achievements of the Jacksonian epoch that little notice, usually, is given to foreign affairs; yet these were important, and in every dispute with a foreign power, as well as in his contests at home, the old warrior President was successful in the end. First came a wrangle with France. The United States held a claim of \$5,000,000 against that country for spoliations of American shipping after 1803. In a treaty of 1831 Louis Philippe, the newly crowned King of France, acknowledged the claim. But three years passed and the money was not forthcoming, whereupon Jackson came forth in a vigorous message in which was couched a menace. This offended the French Chambers, and they refused to pay the claims unless the President would modify his message. This attitude brought from Jackson a second message, threefold more offensive than the first. In this message he threatened reprisals on French commerce. Congress then took up the matter; but the French government soon ended the trouble by paying the claims. The administration demanded and received payment also of long-standing claims against Spain, Denmark, and the Sicilies. These things touched the popular heart and strengthened the administration. But still more were the people pleased with the opening of the West India trade. Great Britain had closed the ports of the West Indies to American ships some years before. The Adams administration had sought with unwearied effort to have this trade reopened, but in vain. Jackson renewed the negotiation through his secretary of state, Van Buren, and by making some concessions to British commerce, won a complete victory.

Our relations with Mexico were strained during the whole of this administration, and so continued for more than ten years longer. Mexico emancipated her slaves in 1827, but her northern province, Texas, refused to do so, and soon afterward revolted under the leadership of Sam Houston. Jackson sent an army under General

Gaines to the gulf coast "to keep Texan Indians off our soil," but in fact to connive with Houston. Gaines's troops deserted freely and joined Houston, and received no rebuke from the government. Jackson even demanded damages of Mexico and threatened reprisals, when the damage claims should have come from the other side. Nothing was plainer than that, contrary to his usual honesty, Jackson was unfair in his dealings with Mexico.

Two Indian wars marked the administration of Jackson. The first occurred in the Northwest and is known as the Black Hawk War. Black Hawk, a former pupil of Tecumseh, who had, like that great chief, espoused the cause of the British in the War of 1812, was now chief of the Sac and Fox tribes. His war with the whites in 1832 arose from the usual cause of Indian wars—land cessions. General Gaines, and later General Atkinson, were sent against him. Black Hawk was defeated and at length taken captive. He was then taken East that he might see the greatness of the United States. He called on the President at Washington and visited most of the great cities of the East. He was highly honored in this tour, thousands of people swarming to the towns to see this monarch of the forest. While bearing himself with the dignity of a ruler, Black Hawk was deeply impressed with the white man's government, and returning to his western home, was faithful to his promise to keep the peace in future.

**Black Hawk
War, 1832.**

Far more formidable was the war with the Indians of the South, beginning in 1835, and known as the Second Seminole War, the first being that of 1818 with Jackson as the chief figure. The various southern tribes had been slow to remove to the lands allotted to them west of the Mississippi, and in 1834 the President sent General Wiley Thomson to Florida to urge their departure.

But the Indians, led by the strong chieftain, Osceola, rose in rebellion. In December, 1835, Major Dade and a hundred soldiers whom he led were ambushed and massacred in a Florida swamp; and on the same day Osceola, with his own hand, assassinated and scalped General Thomson, while the latter was sitting at the table dining with friends. These acts stirred the government to vigorous action. General Scott was sent to take command, and he soon subdued the Creeks, and removed thousands of them to their new home. But the Seminoles were still hostile, and they extended their forays into Alabama and Georgia, attacking mail carriers, stagecoaches, and even towns, from which the people

**Seminole
War.**

fled for their lives. General Jessup commanded in Florida. He made a treaty with the Indians, but Osceola trampled it under foot and refused to be bound by the most sacred promises. Hundreds of the troops perished in the swamps of fevers and of the bites of venomous serpents. At length Osceola came to General Jessup under a flag of truce, and was detained, sent to Charleston, and confined in Fort Moultrie. Jessup was severely censured for violating the sanctity of a flag of truce; but he explained that as this was the only way in which he could stop the career of this treacherous chief who violated every obligation, he felt justified in doing as he did. Osceola died of fever at Fort Moultrie in 1839. But the war went on, continuing in all about seven years, and costing the United States \$30,000,000.

October,
1837.

CHARACTER OF JACKSON

The student of history must search long to find a parallel to this remarkable man, who has been pronounced "the incarnate multitude," and whose will dominated the government of the United States for eight years. The period was noted for its great men, and yet Jackson stood alone as the transcendent figure of the times. Such leaders as Clay, Webster, and Calhoun were powerless while Jackson occupied the political stage. His popularity in his party was unbounded. The people came to believe that he could do no wrong, and that he stood like an angel with a flaming sword, guarding their interests against the designs of the politicians. It is difficult to rate Jackson as a statesman. He had little training in statecraft, but he was gifted with an intuition that proved remarkable for its accuracy. His insight into human nature was almost unerring.¹

The most conspicuous element in Jackson's character was his will. This was as inflexible as steel. He usually reached his conclusion on a great subject without apparently considering the matter, and then, deciding on his course with equal suddenness, he bent every energy to attain his object and trampled every foe and every obstacle that came in his way. No expostulations of friends or threats of enemies could change his marvelous will. He had a Cabinet, it is true, but no real advisers. He called his Cabinet together, not to seek advice, but to inform them of his intentions, and

¹ He could be imposed on, however, by artful politicians. But with the exception of Swartwout, who stole a million dollars as collector of the port of New York, and a few others, his appointments were generally commendable.

to bid them what to do. Some of them had ten times his experience as statesmen, but they sat in his presence as children with their schoolmaster, and none that crossed his will or refused to humor his foibles or to bend to his purpose could remain long in his favor.¹ Jackson held his party in a grasp of iron, and his discipline was that of a general commanding an army. He was not a partisan in the ordinary sense; he was simply master. Every contest with him was a battle, and every battle brought him victory. It is a remarkable fact that, except in the case of the Eatons, Jackson gained every important object on which he set his heart during his entire administration. His few apparent defeats were more than victories in the end. He nominated Van Buren minister to England. The Senate rejected his nominee, and Jackson made him Vice President and then President of the United States. He then named former Speaker Stevenson for the place. The Senate again refused its consent, and Jackson left the office vacant for two years, and again sent the same name to the Senate, and it was confirmed. His appointment of Taney to the treasury was also rejected, and he made Taney Chief Justice of the Supreme Court. The Senate at last seemed to gain a crowning victory over the President — by passing its resolutions of censure. This annoyed him exceedingly; but his friends, after laboring for three years, succeeded in expunging the hated censure — and Jackson was ahead again. Both Clay and Webster were so wearied at their successive defeats at the hands of this untutored President, that they determined to abandon public life,² and would doubtless have done so, but for the retirement of their unconquerable enemy.

Andrew Jackson had faults — glaring faults. One was his lawlessness. He was a law unto himself, and was impatient of the restraints of civil law. This was shown in his Seminole campaign, as we have noticed. When President he refused to be bound by the Supreme Court, on the ground that he would sustain the Constitution as he understood it, and not as it was interpreted by others. For example, when Georgia had trouble with the Creeks, she condemned a half-breed named Tassells to be hanged. Tassells appealed to the Supreme Court, and the decision was reversed, and the state was cited on a writ of error. But Georgia was defiant, and refused to be bound by this decision. It was now Jackson's plain duty to enforce the decision of the Supreme Court, but he refused to do so.

¹ Schouler, Vol. IV, p. 266.

² Sargent, p. 344.

“John Marshall has made his decision,” he is reported to have said, “now let him enforce it”—and Tassells was hanged. Very similar was his action in the case of Georgia and the Cherokees, as noted on a preceding page.

Jackson was a man of quarrels. He couldn't be happy without one. He loved his friends and hated his enemies. He was not able to distinguish between a personal and a political enemy, nor was he broad enough to give an opponent credit for honestly differing from him in opinion; but he never grew weary of showering favors on his devoted followers.

Now a hurried glance at the other side of his nature. It has been truly said that Andrew Jackson, with his vast power, could have done his country irreparable harm, had he been a bad man; but this he was not. He was a true child of nature, born with an unhappy temper, of which he never had the good fortune to become master; while the half-civilized society of the frontier had set its mark indelibly upon his life. But his heart was right. No trace in him of selfish ambition of the Aaron Burr type; no enemy, even, could accuse him of dishonesty, or couple his name with political corruption. His devotion to his country was equal to that of Washington. His unjust dealing with Mexico arose from his too great love of country—his longing to see Texas a part of the Union. When he disobeyed orders while a commander in the field, it was because he thought he knew best. When he quarreled with enemies, he doubtless thought he was right and they were wrong, and compromise was a meaningless word with Jackson.

The story of Jackson's home life is scarcely credible to the reader who knows him only in the hurricane of battle, and in the caldron of political strife. In the domestic circle Jackson was the gentlest and most lovable of men. His servants, white and black, revered him as a father. His devotion to his wife while she lived, and to her memory after she was gone, was rarely beautiful. For years after her death he would place her picture in front of him on the table before retiring at night, and alternately look at it and read from the prayer book that she had given him, and late in life he fulfilled his promise to her that he would become a member of the Church. In morals he was as chaste as a child, and one of his striking characteristics was his courtesy and chivalry to women. In appearance he was tall and thin, with an erect military bearing, his iron-gray hair thrown back in ridges from his forehead, while in his eye was

a "dangerous fixedness," and down his cheeks deep furrows ran. The prevailing expression of his face showed energy and will power. He would be singled out, even among extraordinary men, says an English writer, as a man of superior cast.

The most serious accusation brought against Jackson was that his want of respect for law would infuse a similar spirit into his followers; but it cannot be shown that any such result followed.

The political influence of Jackson upon the country, especially upon the northern Democrats, was very great. At the time of his power the murmurs of sectionalism and disunion were distinctly heard from the South; but Jackson, while a strong friend of state rights, was an unrelenting foe to sectionalism and disunion. He was national in the broadest and best sense, and this spirit he infused into the multitude. Above all men of his times Jackson was the idol, the oracle, the teacher of the great unformed democracy, the untutored masses, many of whom had but recently received the franchise. What they needed above all things was a lesson in nationality — and they received it from Jackson. Through him vast numbers of men came to love the nation above the state, and it was largely through the memory and influence of Jackson that the northern Democrats came forward in 1861 to aid in saving the Union, which he, through their fathers, had taught them to love.¹

While we cannot sympathize with the spoils system of Jackson, nor with his harsh treatment of the Seminoles, nor his double dealing with Mexico, nor his belligerent propensities in general, it cannot be denied that he was a true patriot and an honest man. In ability he was almost a Cæsar; and while it is perhaps well that the American people are inclined to place few Cæsars in the presidential chair, may it be hoped that whenever they do they will choose as honest and unselfish a one as was Andrew Jackson.

MARTIN VAN BUREN

The administration of Van Buren properly belongs to the Jackson epoch; but the term "reign" can be used no longer, as the new President lacked the dictatorial power and the popularity of his predecessor. It was the intense desire of the outgoing President that his favorite from New York become his successor. His wishes were respected by the party, and Van Buren became President — but

¹ This thought is brought out by A. D. Morse, in an able article in the *Political Science Quarterly*, Vol. I, p. 154 sq.

not without a contest. A new political party had been born. Henry Clay, who had served with the Democrats for twenty years, but who was now at variance with them at all points, determined after his defeat by Jackson in 1832 to break away entirely from the old party. And while casting about for a party name the old Revolutionary name Whig was decided on, and was first used in 1834. The Whig party absorbed the National Republican party, the name by which the opposition had been known for some years past. As the old Whig party in England and the colonies had opposed the high prerogative of the King, the new party now opposed the encroaching power of the Executive. The Whigs did not expect to win in 1836, nor was their party sufficiently united to concentrate on one man. Their aim was to throw the election into the House. Their votes in the electoral college were scattered among four men, William H. Harrison of Ohio, Judge White of Tennessee, Daniel Webster of Massachusetts, and William P. Mangum of North Carolina. Their combined vote, however, reached but 124, while Van Buren received 167. The electoral college made no selection for Vice President, and Richard M. Johnson of Kentucky was chosen by the Senate.

As it was at the inauguration of 1797, so it was now — the eyes of the multitude were turned toward the setting rather than the rising sun. The quick-moving, smooth-shaven little man who read his inaugural on that bleak March day in 1837, and promised to tread “in the footsteps of his illustrious predecessor,” won little applause from the vast crowd compared with that given the aged specter by his side. Now for the last time this old warrior, who had been dictator of American policy for eight years, leaning heavily upon his staff under his burden of three-score and ten and the ravages of long disease, came forth and received the homage of the masses. A few days later he departed for his southern home, and the troubles of the new President began.

Martin Van Buren, the son of an innkeeper and small farmer of New York, had been initiated into politics by Aaron Burr, and he was a prominent lawyer before the War of 1812. He was a man of greater individuality and ability than is generally put to his credit by historians. In 1821 he entered the United States Senate and was the leader in that body during the administration of Adams. On the death of De Witt Clinton in 1828 Van Buren was easily the foremost man in the Empire State. Resigning the governorship of that state

to take the chief place in the Cabinet of Jackson, he was by no means a figurehead even there; for it was largely due to his skill that Jackson made the two brilliant strokes in his foreign policy — opening of the West India trade and settling the French spoliation claims. But with all this, Van Buren could not have become President without the aid of his powerful friend; and while he inherited the office without the popularity of Jackson, he also inherited the evils of Jackson's administration.

Van Buren has been pronounced the cleverest political manager in American history, and no other man has held so many high national offices. He was small in stature, had a round, red face and quick, searching eyes.¹ He was subtle, courteous, and smooth in conversation. His enemies charged him with being noncommittal on all subjects. At a great tariff meeting in Albany he was invited to make a speech; he did so, and at its close not a man, woman, or child in the audience could tell whether he was for or against a high tariff.² For two things the administration of Van Buren is prominent in history: First, the panic of 1837; and second, the establishing of the independent treasury.

THE PANIC AND THE INDEPENDENT TREASURY

This panic was probably the most disastrous that the American people have yet experienced. Every bank in the country suspended specie payments, thousands of leading merchants and manufacturers were forced to the wall, and the business of the country was utterly demoralized. As to the cause of the panic, there are various versions. The Whigs were prompt to put all the blame on the Democrats. It is not unusual in American politics for the party out of power to arraign the party in power, guilty or not guilty, for every disturbance in financial and business circles. Few statesmen have risen above this practice, especially when their own advancement depended on it — and in that degree a statesman becomes a demagogue.

¹ Schouler.

² One day Van Buren handed an official paper that he had written to a clerk to be criticised, and the latter declared that he couldn't tell what it was about. "Very well," answered Van Buren, "it will answer, then." A member of Congress, it was said, made a bet with another that if Van Buren were asked if the sun rose in the east or the west, he would not give a direct answer. The question was asked, and his answer was, "My friend, east and west are altogether relative terms." The reputation of being a wily politician rather than a statesman was very annoying to Van Buren all through his public career.

This panic, like most of its kind, was the resultant of various causes, some of which elude the pen of the wisest political economist.

Causes of the panic. A few of the causes, however, are not far to seek. Jackson's specie circular, by which payments for public lands were to be made in coin, when the people had but little coin, hastened the crisis. Another cause was the act of Congress distributing the surplus of the treasury to the various states. This made the states reckless in spending money, and when the payments were withheld, the states found themselves with many expensive projects in hand which they could not carry out. But the chief cause of the panic was the wild spirit of speculation that had seized the people. The national debt was paid, banks everywhere flooded the country with paper money far beyond their ability to redeem in coin; and moreover, English capital poured into the country at this time and played its part in throwing the people off their guard.¹ The wildest schemes of speculation were set on foot. Prices rose and work was plentiful at high wages. Great manufactories were begun and never carried out. Scores of towns were laid out in the West, many of which are not built up to this day. The sale of public lands, which had often fallen below \$2,000,000 a year, ran up to \$24,000,000 in 1835. Banks sprung up on all sides, and they inflated the country with worthless paper money. Railroads, canals, and all manner of internal improvements were projected. Men were intoxicated with their dreams of growing rich in a night; and the crash came, as it always will under such conditions.

The panic reached its height soon after Van Buren became President, and he was besieged from every part of the country by delegations representing mass meetings, which had condemned the government for bringing about the hard times. The people raged and clamored, and begged the President to bring back their good times, of which they seemed to think he had robbed them.

Van Buren's bearing was courteous and firm. His position was very difficult, but he faced the storm with great courage and for once evinced statesmanship of a high order. He assured the people that the object of government was not to manage the private affairs of

¹ Von Holst shows that English capital, which was at high tide at this time, also flooded other countries and produced a similar effect. This is conclusive proof that the panic in the United States was not wholly caused by the administration. The President's annual message of 1839 says that \$200,000,000 of foreign capital were then afloat in the United States. See "Jackson's Administration," p. 173.

the people, and that frugality and industry with careful management of business would alone bring prosperity. The President, however, yielded to popular clamor in so far as to call a special session of Congress to meet in September, 1837; and in his message to Congress at this session, a very able state paper, he urged with much force the one and only great measure of his administration — the establishing of the Independent Treasury, which, from its many subordinate branches in the various cities, has come to be known as the "Subtreasury." This is simply a special place or places for the funds of the government. Thus the government becomes the custodian of its own surplus and is divorced from all dependence on the banks. The measure, as urged by the President, was ably discussed during this extra session, and again at the regular session. It was bitterly opposed by the Whigs and by many Democrats. It passed the Senate in June, 1838, but was defeated in the House. The administration, however, did not give the matter up, and in 1840 the bill for an independent treasury passed both houses, was signed by the President on the 4th of July, and became a law. A year later the Whigs had control of the government, and they repealed the act. But the Democrats still clung to their favorite measure, and in 1846 the law was reënacted. From that time to the present, this law has been in force, and as all parties now favor it, it seems to be a fixture in our government.

THE HARRISON CAMPAIGN

The most remarkable presidential contest in our history was that of 1840. In spite of anything that the Democrats could do, they steadily lost ground during the administration of Van Buren. This was largely because of the reiterated cry of the Whigs that the party in power had brought about the great industrial depression known as the Panic of 1837. Every sign seemed now to point to a Whig victory in 1840. That party held its convention at Harrisburg in a newly erected Lutheran church, almost a year before the election. Three prominent candidates were before the convention — Henry Clay, William Henry Harrison, and Winfield Scott — all born in Virginia, but now of different states.

Scott was widely known for his deeds at Queenstown Heights, at Chippewa and Lundy's Lane; but the greatest work of his life — his march upon Mexico — was still in the future, and he was not seriously

considered by the convention. The real contest lay between Clay and Harrison. Against Clay many forces were at work. He had been in the forefront of public life for thirty years, and his outspoken manner had made him enemies; his views on the tariff were not popular in the South, and moreover he was a Freemason. This was his weakest point, for the Anti-Masonic party had dissolved, most of its members had joined the Whigs, and they would not have given Clay a hearty support. Harrison, on the other hand, had been out of public life for many years. His views on the great questions of the day were scarcely known, and this, according to our anomalous American politics, was considered a point in his favor as a vote getter. But Harrison had a record. He was the son of a "signer"; he was the hero of Tippecanoe; he had done valiant service in the Northwest during the war with England. He had also served in both houses of Congress, and had been sent by John Quincy Adams as minister to Colombia, South America. After a brief service he was recalled from this mission by Jackson, when he settled down to the quiet life of a farmer at North Bend, an Ohio village near Cincinnati.

The majority of the delegates to this convention preferred Clay; but the leaders, led by that master political manager of New York, Thurlow Weed, and the rising young editor of the same state, Horace Greeley, determined to secure the nomination of Harrison if possible. They succeeded by skillfully manipulating the committees. Clay was disappointed. True, he had written his friends to withdraw his name, if in their eyes it seemed the right thing to do; he had also about this time given rise to the oft-quoted statement, "I would rather be right than be President." Nevertheless he was disappointed at the outcome, and so were his friends. One of these whose heart was set on Clay burst into tears, it was said, when his favorite was set aside. This was John Tyler of Virginia.

Harrison's friends now determined to conciliate the Clay people by offering to place one of their number second on the ticket. When looking about for a suitable choice—behold John Tyler in tears! and he was straightway nominated for the vice presidency.¹ But Tyler was not a cipher. He had attracted attention in Congress away back in the days of the Missouri Compromise. He had been governor of Virginia and a United States senator. For many years he had been a Democrat, but revolting against the iron rule

¹ This nomination, it should be stated, was declined by two or three others among Clay's friends before it was offered to Tyler.

of Jackson, he became an ardent supporter of Clay. His selection was a concession to southern Democrats who had broken with Jackson.

The Democrats met in Baltimore and renominated Van Buren. They put forth a platform of principles, pronouncing against a United States Bank, internal improvements at national expense, a high tariff, and the like. The Whigs had no platform, and they made no avowal of principles; their sole cry during the campaign was, in substance, Down with the administration.

The wild enthusiasm of the Whigs increased in volume during the summer and autumn. Harrison was known by his popular military name of Tippecanoe, and the shouts for "Tippecanoe and Tyler too" were long and lusty. A Baltimore paper having suggested that Harrison was more in his element in his log cabin with his barrel of hard cider than he would be in the White House, the Whigs took up the cry of "Log Cabin and Hard Cider," and made these the emblems of the campaign. Horace Greeley started a newspaper in New York which he called *The Log Cabin*, and it bounded into great popularity.¹ The Whig mass meetings were vast beyond any before known in the country. Men would come for many miles in farm wagons, bringing their families, and remaining whole days and nights at these great meetings. At first the people were counted at these gatherings, but as the crowds grew larger counting became impossible, and they were measured by the acre by surveyors brought for the purpose. The most notable feature of the campaign were the songs,² written for the occasion, and learned and sung by the shouting multitudes. As Clay remarked, the country was "like an ocean convulsed by a terrible storm."

The Democrats affected to treat the Whig enthusiasm with contempt, but in reality they were very angry, and very much alarmed.³ They too held meetings, but these fell far short of those of the Whigs in numbers and enthusiasm. They attempted to reason and argue; but the people preferred to sing and shout. And the result was a crushing defeat for Van Buren. He received but sixty electoral votes to 234 for Harrison.

NOTES

Minor Events. — Imprisonment for debt by the United States courts was abolished in 1833, chiefly through the efforts of Richard M. Johnson, the slayer

¹ The *Log Cabin* was merged into the *Tribune* in September, 1841.

² For samples, see Greeley's *Log Cabin* or Elson's "Side Lights," II, p. 234.

³ Stanwood's "History of Presidential Elections," p. 136.

of Tecumseh. The states soon followed the example of the general government, and the barbarous practice became a thing of the past. — The death of some of the most prominent men occurred within this period. Ex-President Monroe died on July 4, 1831, in the city of New York. The last signer of the Declaration of Independence, Charles Carroll of Carrollton, died in 1832 at the great age of ninety-two years; and James Madison, the last of the framers of the Constitution, died in 1836. John Marshall, America's greatest jurist, and Lafayette, the most highly honored in America of all foreigners, both passed away in 1835. — In January, 1835, President Jackson narrowly escaped assassination. While attending the funeral of a member of Congress, a man from the crowd in the rotunda of the Capitol snapped two pistols at his breast. Both missed fire, and the President rushed upon the man with his cane. The man was arrested and was found to be a demented Englishman named Lawrence. He was sent to an insane asylum. The President's escape was very narrow, as both pistols were afterward fired at the first trial.

The Caroline Affair. — In 1837 a portion of the people of Canada, led by William Lyon MacKenzie and Louis J. Papinau, rose in rebellion against British rule in the province with the view of setting up a republic. After a few sharp skirmishes the insurrection was put down, and many of the insurgents took refuge on Navy Island, in the Niagara River. The *Caroline*, a little steamer owned by a citizen of the United States, was employed in carrying supplies to the island, and the British determined to destroy her. On the night of December 29, 1837, a flotilla of five boats set out for this purpose, but not finding her here, they searched until they found her moored at Grand Island, which is part of the territory of New York. The British boarded the vessel, overpowered the crew, killing one man, set the boat on fire, and sent her burning over the falls. The American government then made a demand on the British government for reparation; but the matter was left unsettled for several years, and was at length dropped by the United States.

Meantime, one Alexander McLeod, a worthless resident of Ontario, made the boast that he was with the party that destroyed the *Caroline*, and had himself killed one of the Yankees. One day while in Buffalo he repeated his boast, and was instantly arrested and clapped into prison. The British government now made a demand that he be released, and the President would gladly have released McLeod, but he was in the hands of New York State, and she refused to give him up. Great Britain began to mobilize armies and prepare for war. New York, meantime, having no foreign relations, calmly held the prisoner and had him tried before a court at Lockport for murder and arson. It all turned out to be ludicrous in the extreme. It was proved that the blustering braggart, McLeod, had not been present at the destroying of the *Caroline*. His boast was an idle and a false one. He was acquitted, and all signs of war disappeared. Nothing in our history shows more clearly how a trifling matter may disturb the peace of two great nations, and how the defect in our dual system of government, state and national, may prove disastrous to the peace of the country. For a fuller account of the *Caroline* affair, see Elson's "Side Lights," Series I, Chap. XI.

CHAPTER XXII

RISE OF THE SLAVERY QUESTION

TWENTY years had passed since the adoption of that famous compact known as the Missouri Compromise. That measure was expected to give peace to the land, and so it did for about ten years. Nevertheless the debates on it left a sting, a wound that could not altogether heal; and they also awakened here and there a moral consciousness that eluded the grasp of the lawmaker, that could not die; it could only slumber.

During this period there were a few, a rare few, who, like the ancient prophets of Israel, ceased not to cry out day and night against the evil of the land. First among these was Benjamin Lundy. A saddler by trade, he worked for many years at Wheeling, Virginia, until his interest in the black man became so overmastering that he determined to give his life to the cause of emancipation. Abandoning his occupation, leaving his wife and his children behind, he traveled over the country making speeches and organizing societies. He traveled in nearly all the states of the Union, in Canada, Mexico, and the West Indies, in the interest of the cause he had espoused. In 1821 he established *The Genius of Universal Emancipation*. In one of his tours to New England, Lundy met at a boarding house a young man of ardent spirit, **Lundy and Garrison.** who became a convert and a co-worker with him in the cause — William Lloyd Garrison. Together the two men went to Baltimore and became joint editors of an antislavery journal. But they soon parted. Garrison now became the leading Abolitionist in the country, and after serving a time in prison for his violent utterances, went to Boston.¹ Here in 1831 he founded *The Liberator*, and in it he denounced all slaveholders with unsparing severity. He demanded the unconditional emancipation of all slaves, and pronounced the Constitution, for permitting slavery, “A covenant with

¹ Burgess says if a name, a date, and a place must be given the new movement, the name is Garrison, the date is 1831, and the place is Boston. “Middle Period,” p. 246.

death, an agreement with hell." Another noted agitator was the Rev. E. P. Lovejoy of St. Louis, who, after publishing an anti-slavery paper for several years, was murdered in November, 1837, by a proslavery mob at Alton, Illinois. Antislavery societies were formed in various states; but they were composed chiefly of the poorer classes, and had little effect on public opinion. And besides, the violence of such men as Garrison produced among lovers of peace, even in the North, a proslavery reaction. This was intensified by a slave insurrection in Virginia, led by Nat Turner, a negro, in which sixty-one whites, mostly women and children, were killed. This incident sent a shiver of horror throughout the South. It showed what might occur, if great numbers of the bondsmen should rise against their masters. At this moment slaveholding Virginia, through her legislature, seriously considered the subject of emancipation in that state. And here the institution was denounced as it had seldom been denounced at the North. "Tax our lands," said one speaker, "vilify our country, carry the sword of extermination through our defenseless villages, but spare us, I implore you—spare us the curse of slavery, that bitterest drop from the chalice of the destroying angel."

There was a rising sentiment against slavery in the North, but it was not yet strong nor widespread. Two or three incidents will readily show that the sympathies of the people were generally with the slaveholder, whose desire was to keep the black man in ignorance, that he might not become dangerous. In 1831 it was proposed to found a school for colored children in New Haven, Connecticut, but a town meeting declared against it as "destructive of the best interests of the city." Two years later Prudence Crandall, a school-teacher of the same state, was cast into prison for admitting colored girls into her school, and the school was broken up by a mob. A similar occurrence took place at Canaan, New Hampshire, in 1835, and in New York the endeavors to suppress the Abolitionists caused serious riots.

The cloud that presaged the coming storm seemed as yet no larger than a man's hand, but its increase, though slow, was steady and irresistible. The antislavery societies numbered three hundred and fifty in 1835. Such men as Dr. Channing, the famous Boston divine, and Wendell Phillips began to defend the Abolitionists, and these were afterward joined by Emerson, John G. Whittier, Theo-

Nat Turner,
1831.

Violence at
the North.

dore Parker, and Henry Ward Beecher. And further, there was a little political party founded in the North, known as the Free Soil party. In 1840 it cast but seven thousand votes, but in 1844 the number was increased to sixty-two thousand; still small, it is true, but the increase showed the direction of the political wind. The South now became thoroughly alarmed. Before this most of the southern leaders had frankly confessed that slavery was an evil, and had deplored its existence; but this growing abolition feeling crystallized the South against abolition. The antislavery societies in that section soon dwindled away, and at length the whole South, led by Calhoun, took the ground that slavery is a good—a positive good.¹

But this new attitude of the South was not caused wholly by the opposition of the Abolitionists. It accepted Calhoun's views partially from economic grounds. The southern people had come to believe that slavery was indispensable to their social and economic welfare, and, believing this, they could not do otherwise than defend it. This new position taken by the South, that slavery is a positive good, together with the fear of insurrection, led that section, including non-slaveholders, to unify in the defense of slavery.

Not long could this great question be kept from the halls of Congress, and in two ways it came to be forced upon the government—through petitions to Congress and the use of the mails for distributing Abolition literature. For **Antislavery petitions.** many years an occasional petition had come in, chiefly from Quakers, for the abolition of slavery in the District of Columbia. About the time Garrison began his agitation these petitions began to come rapidly. For some years after this the custom of both Senate and House was to receive all such petitions and refer them to a committee, in which they were quietly strangled. This refusal of Congress to consider the petitions did not discourage or quiet the Abolitionists. The petitions increased in numbers, and at length the southern members became irritated at this continuous goading. In 1834 sharp debates began to be heard in the House on the subject, and in March, 1836, a resolution was adopted to lay all such petitions on the table, and that no further notice be taken of them. This action only stirred up the Abolitionists to greater efforts, and during the two years following the adoption of this rule the number of petitions increased tenfold. In January, 1840, the House went

¹ This new doctrine was first set forth by Calhoun in the Senate in 1836.

still further. It adopted a standing rule that no petitions or memorials concerning the abolition of slavery or the slave trade in any part of the country "shall be received by this House, or entertained in any way whatever." This was known as the "gag rule."

The Senate had arrived at a practice similar to that of the House, and the condition in both was brought about by the radical men of the South. These men felt that they had won a victory; but quite the opposite was true. The Constitution guarantees the right of petitioning the government, and refusing to receive a petition implied a denial of the right to make it. This attitude of Congress drew the attention of the whole country; it led the people to identify the denial of the constitutional right with the interests of slavery; it awakened sympathy with the Abolitionists and made many converts to their cause.

Most of the petitions that came to the House fell into the hands of the venerable John Quincy Adams, who now became the champion of the right of petition. With infinite moral courage he bore every insult, and waged unceasing war on the gag rule in the House, and after continuing his efforts for nearly ten years he won the victory of his life by securing its repeal. When the vote was counted, and Adams saw that he had won, he sank back into his chair and exclaimed, "Blessed be the name of God."

**Adams and
the gag rule.**

The southern resistance to the use of the mails for the distribution of Abolition literature in the South furnished another cause for national commotion. In July, 1835, a mob of respectable citizens broke into the post office at Charleston, South Carolina, seized a bag of Abolition pamphlets and burned it in the street. The matter was soon brought before the postmaster-general, Amos Kendall, but his decision was undecisive,¹ and in December President Jackson in his message recommended that Congress pass a law refusing the use of the mails to "incendiary publications intended to instigate the slaves to insurrection." This would probably have been done but for the fact that Calhoun took the extreme state rights ground that each state should decide the matter within its own bounds. Thus

¹Mr. Kendall wrote the postmaster at New York City, who had asked his opinion after excluding Abolition matter from the mails, "The postmaster-general has no legal authority to exclude from the mails any species of newspapers." And he adds, "If I were situated as you are, I would do as you have done." To the postmaster at Charleston he wrote, "We owe an obligation to the laws, but a higher one to the communities in which we live."

the South lost the aid of the government in its first battle with the Abolitionists.

These early contests concerning the right of petition and the use of the mails had a profound effect on the future of the country. They directed the eyes of the people to the Abolitionist party, raised it to national importance, and vastly increased its power. They awakened the South to a sense of the fact that an ever increasing party in the North existed for the purpose of attacking slavery at every point, and from this time forth the North and the South drifted steadily apart.

HARRISON'S BRIEF TENURE

The joy of the Whigs at their great victory over the Democrats was little short of delirium. The winter following the election was one long jollification, and little did they dream of the disasters that were before them. General Harrison reached Washington, after a week's toilsome journey, on the sixty-eighth anniversary of his birth. Inauguration day was dreary and cold; a chilling northeast wind blew all day, yet the new President rode on horseback in a procession for two hours without overcoat or gloves. He then stood for another hour in the open air to read his inaugural address. It was believed that the President in exposing himself thus without an overcoat, sought to dispel the floating rumor that he was in poor health. He recovered, however, from this exposure, and the administration started out on a promising voyage, with Daniel Webster at the helm as secretary of state.

The President, used to the easy life of his rural home, now entertained visitors till long after midnight every night.¹ In the morning he rose at a very early hour and, against the advice of his friends, took long walks in the chilly air. Moreover, the office seekers clamored by the hundreds for positions; and the President was a man of such kindness of heart that it pained him deeply that he could not gratify them all. His health bore this strain but three weeks when he fell ill; and half an hour after midnight on the 4th of April, an exact month after the day of his inauguration, President Harrison was dead.

The nation was shocked at the sudden death of the President. He was not a great statesman, as compared with some of his con-

¹ Sargent, Vol. II, p. 114.

temporaries, nor a party leader in any sense; but he was a sincere, honest man, and he had won the esteem of all parties. Sadly and slowly moved the funeral pageant through the city to the beat of the muffled drums and the mournful wail of the trumpet. The casket in which the dead President lay was enwrapped with the American flag, and the funeral car with nodding plumes was drawn by six white horses, and followed by a vast multitude of sorrowing friends. The body was laid to rest in the congressional burying ground, but in the summer it was taken to the West and was placed in its last resting place at the little town where the President had lived, on the bank of the river Ohio.

TYLER AND THE WHIGS

The Whigs were dismayed at the death of their President. Fifty years had passed since the inauguration of Washington, and no President had before died in office, and the Whigs had not taken such a possibility into account. Tyler at once became President, it is true, but the Whigs were not sure of Tyler. He had been placed on the ticket with Harrison to console the Clay men and to win, if possible, a floating vote from the South. He had been a Democrat until within recent years, and his views on the great issues between the two parties were not known. He had been simply known as "Tyler too," and now for the first time people began to inquire who he really was. One thing, however, was known of Tyler. He was a southern man to the core; he believed in state rights in the narrow sense and not in the broad Jeffersonian sense; he alone of all the senators cast his solitary vote against forcing South Carolina at the time of her nullification.

Congress had been called, by the late President, to meet in May for the purpose of dealing with the finances. In the campaign of the preceding year it was generally understood, though little had been said on the subject, that if the Whigs elected a President and gained control of Congress, they would establish a national bank similar to one that Jackson had killed, and to do this was the chief object in convening Congress in extra session. Accordingly Mr. Clay proceeded, soon after Congress met, to frame a bank bill. But rumors were soon going around that Tyler was not in favor of a national bank and also that a rupture between him and Clay was imminent. These rumors proved to be well founded. Tyler, it

seems, had determined to rid himself of the influence of the great Whig leader. The bill creating a "Fiscal Bank" was passed by both houses, and was sent to the President early in August. He returned it in a few days with his veto. The Whigs were highly indignant and chagrined at this action of the President, whom they had elevated to power. But the Democrats were elated with the veto, and in the evening of the day of its reception many of the Democratic senators and representatives, headed by a future President, James Buchanan, marched to the White House to offer him their congratulations.

The Whigs were discouraged, but a gleam of hope returned to them when the President caused the word to go out, through his Cabinet, that he would sign a second bank bill, if purged of the features to which he had objected in the first. A second bill creating a "Fiscal Corporation" was therefore passed, and was sent to Mr. Tyler in September. Whig hopes now trembled in the balance, for they distrusted their President despite his promise. Five days of suspense passed when the bill was returned to the House with a veto.

The Whigs now burst forth in an uncontrollable storm of wrath. The entire Cabinet, except Webster, resigned. Clay denounced Tyler and his "corporal's guard" of advisers in unsparing terms, while the friends of Tyler pronounced Clay the self-appointed dictator of the Whig party. Tyler claimed to have vetoed the bill on the pure ground of conscience and his ideas of the public good. This may have been true, but he was utterly in the wrong, nevertheless. That the chartering of the bank would have been a serious blunder few will now venture to doubt, but there was no excuse for Tyler. If he were not a Whig at heart, he should have come out in his true colors before the election. He permitted himself to be elevated to the great office and then he turned traitor to the party that had elected him.¹

The breach between President Tyler and the Whigs was now irreconcilable. The leaders of the party met in solemn conclave and deliberately read the President out of the party, putting forth

¹ The opinion of some that the action of President Cleveland in 1896 in opposing his party on the silver question was similar to that of Tyler is entirely erroneous. Free silver was not a tenet of the party when he was elected, and when it became such he had as much right to his convictions on the subject as any other man in the country. Had he been elected on a free silver platform and then turned against it, his case would be parallel to that of Tyler.

at the same time a manifesto to the Whigs of the country. In this they set forth the hopes of the party and disclaimed all responsibility for the acts of the administration. In consideration of the fact that three and a half years of this presidential term yet remained, and of the vast patronage at the disposal of the President, this action of the party was a bold stroke, and admirable for its courage. There was now presented a spectacle, unknown before — a President without a party — and such a creature is almost as helpless in shaping legislation as the commonest laborer in the street.

The President had evidently hoped to win the Whig party from Clay and to become its head, but that matchless leader held the party in a grasp that could not be broken. Tyler then attempted to form a new party of the milder Whigs and Democrats. Not succeeding in this, he used his utmost efforts to win the Democratic party and to become its standard bearer. He called Democrats into his Cabinet and filled many of the best offices with them. But the Democrats, while they accepted these favors and rejoiced that Tyler had foiled the bank measure, at heart despised the man. They refused to make a man the leader of their party who had been a traitor to his own; and Tyler was left without a party to the end of his term.

When the Cabinet resigned, Webster, as stated above, remained, his avowed object being to conclude a treaty with England which was then pending. This treaty, fixing the eastern boundary of Maine, was arranged with Lord Ashburton, and is known as the Webster-Ashburton Treaty. Webster, however, continued in the Cabinet for nearly a year after this treaty was concluded, and he was severely criticised by his fellow Whigs. The fact is, Webster and Clay had not been on the most friendly terms for some years, and had Tyler succeeded in forming a new party, Webster would no doubt have gone with him. But the President, failing in this, at length came to desire the retirement of the great New Englander from his Cabinet; not on personal grounds, but because he had now set his heart on a great project, and Webster was not the man to carry it out. His project was the annexation of Texas.

THE STORY OF TEXAS

As stated on a preceding page, when Mexico emancipated her slaves, in 1827, Texas refused to do so, and there was strife from

this time forth between the mother country and her northern province. In 1836 Texas declared its independence, and it was afterward recognized by the United States and by several European powers as a separate nation. This same year, 1836, witnessed the massacre of the Alamo, in which the famous Davy Crockett was killed, and the battle of San Jacinto, in which Santa Anna was routed by General Sam Houston, former governor of Tennessee. Texas desired, however, not to lead a separate existence, but to join the Union as a state. Of the sixty men who signed the declaration of independence, fifty-three had been born in the United States, and this fact explains why Texas soon afterward knocked at the door of the Union for admission. But Texas lay in the slave belt and, if admitted, would become a slave state; and on this ground its admission was sure to awaken strong opposition at the North. President Jackson, with all his courage, hesitated to risk a party rupture by coming out openly for annexation, though he greatly favored it. The matter then rested till the time of Tyler, who, having now alienated his party, had nothing to lose, and he boldly decided on annexation as the great measure of his administration. His hope was to win the South for the coming presidential election.

But he must get rid of Webster, and this he did by simply freezing him out of the Cabinet. Webster was made to see that his counsels were not wanted, and that he was in uncongenial company, and in May, 1843, he resigned from the Cabinet. Mr. Upshur of Virginia became secretary of state. Upshur was a man of much ability and was fully in sympathy with the interests of the slave power. He would no doubt further the President's project with the utmost vigor; but suddenly the whole project was thrown out of balance for a time by a calamity such as no human eyes can foresee.

One bright day in February, 1844, a gay company of about a hundred persons made an excursion down the Potomac River in a war vessel. This distinguished company included the President, his Cabinet, and many members of Congress with their families, and also the former queen of the White House, the aged Mrs. Madison. One object of the excursion was to witness the working of the great gun, the Peacemaker, which threw a 225-pound ball. Several times the gun was fired without incident, but on the return, as they neared the city, a heavy charge was put into it for a final salute, and it exploded with a terrific noise. When the smoke cleared away a dozen persons lay

dead or dying on the deck. Among the dead were Mr. Upshur, secretary of state; Mr. Gilmer, secretary of the navy; and Mr. Gardner, whose daughter was soon to become the wife of President Tyler. Senator Benton and others were knocked senseless, while the President had a narrow escape, he having been playfully called below by Miss Gardner a moment before the explosion took place.

The President now chose John C. Calhoun secretary of state. The great South Carolinian was not desirous of the honor, but, seeing that he could do a real service for the South, he accepted. With remarkable energy he took hold of the business, and a secret treaty of annexation was arranged with the Texan government. This treaty, sent to the Senate by President Tyler on April 22, 1844, met with fatal opposition. Instead of receiving the two-thirds vote necessary to ratify, the treaty was rejected by a two-thirds vote.¹ This was a shock to the administration. The Texan question was thus left over, and it became the most vital issue in the

PRESIDENTIAL ELECTION OF 1844

The Whigs were united in 1844. Clay was the all in all to the Whig conscience in this campaign. The vagaries of Tyler had cemented the party and it suffered with remorse that the noble "Harry of the West," the "Mill Boy of the Slashes," had not been chosen four years before. The Whig convention now nominated him by acclamation and without a dissenting voice, while Theodore Frelinghuysen was placed second on the ticket.

The Democratic convention met a few weeks later in the same city, Baltimore, and attracted far greater interest because of the uncertainty of the outcome. Van Buren was supposed to be the coming man. More than half the delegates had been instructed for him; but there were forces working against him. The chief of these was his attitude on the Texan question. His enemies, by a decoy letter, had obtained from Van Buren a statement that he was opposed to immediate annexation, and this greatly injured him in the South. Other candidates were, James Buchanan of Pennsylvania, who, however, withdrew his name; Calhoun, who followed the example of Buchanan; Lewis Cass of Michigan; and Richard M. Johnson of Kentucky.

¹ Some voted against the treaty because they did not approve of the method of annexing Texas. They thought it should be done by a vote of both houses.

The two-thirds rule was adopted, and the balloting began. Van Buren led with a good majority over all others, but fell a little below the required two thirds. Again on the second and third ballots, and so on till seven ballots had been taken, Van Buren kept the lead; but he lost a little each time, and it became evident that his nomination was impossible. There was a man from Tennessee who had been timidly mentioned for the second place, — James K. Polk, — but on the eighth ballot he received a few votes for first place. And then, by one of those strange stampedes that sometimes take possession of such a body, the convention nominated Polk on the ninth ballot by a unanimous vote. The news was flashed to Washington by telegraph. This was the first practical use of that marvelous invention by which time and space are reduced to nothing in the transmission of news, by which a man can converse with his brother man with a thousand leagues of rolling sea between them.

Polk nominated by the Democrats.

Polk was the first “dark horse” candidate, that is, an unexpected candidate, one not put forward by any party before his nomination.¹ Polk had been governor of Tennessee, and had served fourteen years in Congress, being four years Speaker of the House; but he was not a well-known statesman nor a national party leader, and the question arose on all sides, “Polk, — who is Polk?” The convention, after nominating George M. Dallas of Pennsylvania for the vice presidency, adopted a strong platform, pronouncing for the immediate occupation of Oregon and the annexation of Texas.

A third convention was held in the same city during this same week. President Tyler had attempted to win the Whig party from Clay, but had failed. He then made efforts to divide the party and failed again. After this he cast every Whig from his Cabinet and courted the Democrats, equally without success. But even now he did not despair. He set out to create a Tyler party, and to build it up he used the government patronage for all it was worth; yet with all this immense power his converts were few. Nevertheless he sent a band of his office-holders to hold a so-called national convention at Baltimore. They nominated him without division, and “Tyler and Texas” became their party slogan. The Tyler party presented a sorry spectacle indeed, but the oversanguine Tyler still had hopes. He seemed to think that the misguided people would yet see their folly and flock

The Tyler convention.

¹ Other “dark horse” candidates were Pierce, Hayes, Garfield, and Bryan.

to his standard — but they failed to do so. At last the President awakened to the fact, which everybody else knew long before, that he had no following, and he withdrew from the field in August.

There was one man in America who was alarmed at the work of the Democratic convention at Baltimore, and that was Henry Clay. Clay had counted on Van Buren as his antagonist, and as he and Van Buren stood together in opposing the immediate annexation of Texas, that all-absorbing question would have been thrown out of the canvass. But Polk with his vigorous Texas-Oregon platform was stunning to Clay, who well knew that the prospect of acquiring Texas would please the South and that the Oregon plank would please the North, while his own platform dealt with such tame subjects as a protective tariff and the distribution of the land sales. The campaign, as it progressed, waxed hot. The Whigs at first felt confident; but as the summer passed they realized that the fight would be a close one. Clay and Polk were as unlike as two men could be. Clay was the brilliant leader who for many years had been the idol of a great party; Polk was plodding, sturdy, and straightforward. The Whigs ridiculed the idea that their fine thoroughbred could be beaten in the race by the unknown pack horse. But in the fact that Polk was an unknown quantity lay his greatest strength.

In the South the Democrats laid great stress on the acquisition of Texas; in the North it was Oregon, and the boundary must be 54° 40' north latitude; and "Fifty-four Forty or fight" became a campaign cry. But the Democrats needed Pennsylvania, and Pennsylvania cared less for Texas or Oregon than for a protective tariff. The Democrats therefore preached protection throughout the state. Mr. Polk wrote a letter to a Mr. Kane of Philadelphia in which he pronounced himself in favor of moderate protection. This was taken up by the Democratic orators and they brazenly pronounced Polk "a better tariff man than Clay"; they even circulated the statement that Clay had become a free trader and that the only salvation for the iron industry lay in the election of Polk — and by this means they secured the vote of Pennsylvania. Clay felt himself on the defensive. He wrote letters and letters, defining his position. These did little good or harm until his "Alabama letter," written to a friend in that state, came out in July. In this letter Clay dealt with the Texan question, stating that he had no personal objection to annexation, that if it could be accom-

plished without dishonor, without war, on just and fair terms, *he would be glad to see it*. This sentiment was directly opposite to that expressed in his well-known "Raleigh letter," and to the equally well-known position of the Whig party on this great subject. It was intended to do good at the South, but in this it failed, and it did immeasurable harm at the North. Clay's friends were thunderstruck; they were chilled to the bone when this letter was published over the land. The Democrats rung every change on the phrase, "He would be glad to see it," repeating it over and over from every platform to show that Mr. Clay stood on no real principle, but would hedge on any issue to win the election. In vain did the Whig orators and editors attempt to explain; in vain did Clay write additional letters declaring that he still stood by his Raleigh letter. It was too late; the mischief was done; Clay had signed his political death warrant in writing his Alabama letter, and from this moment the cause of the Whigs slowly declined.

Clay's fatal
letter.

There was a little party at the North known as the Free Soil or Liberty party, and James G. Birney was its candidate. It held the balance of power in a few Northern states, notably New York and Michigan. This party had no hope of success, and many of its members were inclined to vote for Clay, as the less of the two evils. But when his Alabama letter came out they turned fiercely against Clay and supported Birney, who drew enough votes from the Whigs to throw New York and Michigan to Polk and to give him the election. The election was held on different days in the various states, and the excitement became intense as the long-drawn-out returns came in. At length New York cast her vote for Polk, owing to the fact that many former Whigs voted for Birney, and decided the contest; but Massachusetts, faithful old Whig state that she was, cast her vote for Clay after it was known that he was defeated.¹

This was the third time that the great Kentucky chieftain made a fruitless race to win the glittering prize of his life's ambition; and it was the last. He had passed the meridian of life, the youthful luster of his eye was fading, and never again could he hope to make so strong a race as he had now made, for the time was near when the destinies of the nation must pass into younger hands.

¹ When Congress met a few weeks later it passed a law fixing a uniform day for the presidential election in all the states, and it has continued in force from that time.

NOTES

Morse and the Telegraph.—Samuel F. B. Morse had labored for years on the telegraph, and had almost reduced himself to penury. In 1842 he was granted the privilege of setting up his telegraph in the lower rooms of the Capitol. The experiment was successful, and the members of Congress could hardly believe their senses as Morse enabled them to converse with one another from the different rooms. And yet when he asked an appropriation of \$30,000 to establish an experimental line from Washington to Baltimore, there was much opposition. Many were the shafts of ridicule thrust at the new invention. One member moved that half the appropriation be used to experiment in mesmerism; another, that an appropriation be made to construct a railroad to the moon. One prominent member pronounced all “magnetic telegraphs miserable chimeras, fit for nothing.” Another lost his seat in the House at the next election because he voted for the appropriation. While the debate was in progress, Morse stood leaning against the railing in the House in great agitation. A friend went to console him, and Morse, placing his hand to his head said, “I have an awful headache. . . . I have spent seven years in perfecting this invention, and all that I had. . . . If the bill fails, I am ruined. . . . I have not money enough to pay my board bill.” He was greatly relieved soon after by the passing of the bill. His fortune was made, and the name of Morse must forever be inseparable from the telegraph. See Sargent’s “Public Men and Events,” Vol. II, p. 193.

The Creole Affair.—The *Creole* was a slave ship. While on a voyage from Norfolk to New Orleans in November, 1841, with 135 slaves, a portion of them rose in mutiny, killed the masters of the vessel, and steered to a British port in the West Indies. Here, according to the laws of England, they were free. The slaveholders in Congress determined that a demand be made on England that the slaves be given up, and many from the North agreed with them. At this point a young representative from Ohio, Joshua R. Giddings, rose and made a strong speech in favor of the slaves, claiming that they had a right to use any means in their power to gain their freedom, and that, being on the high seas, their masters had no longer the right to hold them in bondage. Giddings was at once censured by a vote of the House, whertupon he resigned his seat, bade his friends adieu, and repaired to his home in Ohio. His constituents held an election and reelected him by three thousand majority. He returned to Congress, and from that time to the Civil War he was a leading opponent of the slave power.

The Dorr Rebellion.—Rhode Island, after the Declaration of Independence, retained its charter government, and many of the people were dissatisfied at the limited suffrage. In 1842 a portion of the citizens rose in an effort to secure a new constitution, and they were led by Thomas W. Dorr, a young lawyer. A new government was set up, but the insurgents were dispersed by national aid, and Dorr was taken captive. He was tried for treason, and sentenced to prison for life, but was afterward pardoned. Dorr’s principles prevailed in the end, and were embodied in the new constitution.

CHAPTER XXIII

THE MEXICAN WAR AND THE COMPROMISE OF 1850

THE lonely administration of Tyler came to an end unwept and unsung. The few friends who had fawned upon him because favor followed fawning, now melted away rapidly since his power to bestow offices on them was drawing to an end, and the last weeks of his term were spent in solitude. Tyler was a man of sanguine spirit and of abounding faith in himself, and not until near the close of his official life did he see that he had failed to impress himself upon the country and that the Tyler party could be expressed by zero. He returned to his home in Virginia and soon disappeared from public notice; but sixteen years later, at the outbreak of the Civil War, he reappeared at Washington **1861.** as president of the "Peace Congress." This came to nothing, and Tyler cast his lot with the South and became a member of the Confederate Congress; but he died the next year. Of the fact that it is perilous for an American public man to betray the party that gives him his power, John Tyler is a conspicuous example—and no one envies him his memory.

James K. Polk, born in North Carolina, was the son of a sturdy farmer and the eldest of ten children. Polk was a serious man, able, industrious, and religious. His defects lay in his narrow partisanship and his tendency for political intrigue. He could see no good in the creed of the Whig party and nothing but good in the creed of his own, nor was he scrupulous as to his methods in winning an election. His Cabinet was a strong one and included at least four men well known to fame. James Buchanan, the bachelor statesman of Pennsylvania, became secretary of state; William L. Marcy of the "Hunker"¹ faction in New York and author of the

¹ The Democrats of New York were at this time divided into two factions, the "Hunker," or conservatives, or old-time Democrats, and the "Barnburners," the progressive, antislavery Democrats. The latter, it was said, were ready to destroy the Union in order to get rid of the evils such as slavery, and they were compared to the Dutchman who burned his barn to get rid of the rats—hence the name. The origin of the word "Hunker" is unknown.

well-known phrase in our political parlance, "To the victors belong the spoils," secretary of war; Robert J. Walker of Mississippi, who was to find his political grave in "bleeding" Kansas in the following decade, secretary of the treasury; and George Bancroft, America's leading historian, secretary of the navy.¹

The chief issue of the campaign of the preceding summer had already been settled. Arrangements had been made in the last days of Tyler's administration by which Texas in the following months became a member of the Union. The new state was annexed by a joint resolution of Congress. This raised a cry of "unconstitutional" among northern Whigs, and from the Massachusetts legislature. Little heed was paid to this protest, and a half century later, when Hawaii was annexed by a similar joint resolution, little opposition to the method was awakened. A vast and fertile domain is Texas, an empire in extent, with unbounded resources for agriculture and grazing. Every American rejoices that this broad, fair land is part of our glorious Union, but no one takes pride in the political intrigues by which it was secured.²

But there was an abundance of business left for the Polk administration. "There are four great measures," said the new President with great decision, "which are to be the measures of my administration;" and these were a reduction of the tariff, the reestablishment of the independent treasury, the settlement of the Oregon boundary, and the acquisition of California. The first of these, the reenactment of the independent treasury bill, was accomplished in 1846, as stated on a preceding page. The second, the reduction of the tariff, dates from the same year. In spite of the plaintive protests from Pennsylvania, the state that had given its

**The Walker
Tariff, 1846.**

vote to Polk because he was "a better tariff man than Clay," the "Walker Tariff of 1846" was enacted. By it many of the higher duties of the "Whig Tariff of 1842" were lowered. This tariff was in force for eleven years, and it became popular with all classes. Again the tariff question ceased to be a party measure, and, owing to a surplus in the treasury, the duties of the Walker Tariff were reduced still further in 1857, with the

¹ After a short service Bancroft resigned and became minister to England. Another literary appointment of Polk was Nathaniel Hawthorne as collector of the port at Salem, Massachusetts.

² The term "reannexation" was constantly used, because, it was claimed, Texas had been a part of the Louisiana Purchase, but had been ceded back to Spain in part payment for Florida.

consent of all parties; and there was no further tariff legislation till the opening of the Civil War.

OREGON AND CALIFORNIA

The remote, unpeopled region in the Northwest known as Oregon lay between 42° and $54^{\circ} 40'$ north latitude, and extended from the crest of the Rocky Mountains to the waves of the Pacific. The ten-year joint occupation between the United States and England had been extended indefinitely, either country to give a year's notice to have it discontinued. This notice was given by the United States in 1846. For some years before this it was seen that Oregon was about to become the home of civilized man. In 1835 Marcus Whitman, with a few companions, crossed the mountains and entered the Columbia Valley as a missionary to the Indians. A few settlers arrived in the following years. In 1842 Whitman came east on business connected with his mission work, and on returning he was accompanied by a train of moving wagons leaving Missouri for the Columbia Valley. It was a long and weary journey, but others soon followed, and within three years some ten thousand Americans had settled in the Oregon country.

The whole of Oregon was claimed by each country. The American claim was based on the discovery of the Columbia River by Captain Grey in 1792, on the explorations of Lewis and Clarke, and on the actual settlements.¹ President Polk had said in his inaugural address that our right to all of Oregon was indisputable, and this he reiterated in his first message to Congress. But England had no thought of giving up all her seacoast on the Pacific. Yet neither country wished to go to war, and it was decided to compromise, to split the Oregon country in the middle, each to take half.

A few Democratic hotspurs in Congress still shouted for $54^{\circ} 40'$, but while this was a good campaign cry, it could not now be adhered to. England at length offered to extend the boundary line of 49° to the Pacific, retaining for herself the whole of Vancouver Island. President Polk could not accept this without abandoning his former position, and that of the platform on which he was elected. But he could not do otherwise without risking a war far greater than that now brewing on the South, and to

**Compromise
on Oregon.**

¹The English claim was based on the discoveries of Mackenzie and on the occupation of the country by the Hudson Bay Company.

let himself down as gracefully as possible, he shifted the responsibility to the Senate by asking the advice of that body. The Senate advised that the British offer be accepted, and 49° was made the boundary between the United States and British Columbia. Our portion of Oregon, some three hundred thousand square miles, includes the entire Columbia Valley, and is of far greater value than that retained by the British. The people of the North were especially pleased with this new acquisition, for it balanced the recent extension of slave territory through the admission of Texas.

This brings us to the last of the four great measures — the acquisition of California. Why should the American President put this in his programme? California belonged to another nation, a sister republic. It was the boundless region in the Southwest out of which four or five states and territories have since been carved. Mexico had refused to sell it. By what means, then, could the acquisition be made? By simply conjuring up a quarrel with Mexico, “conquering” the uninhabited territory, and then holding it by “right” of conquest. And a good *casus belli* was at hand. Texas claimed all the territory between the Nueces River and the Rio Grande, which was also claimed by Mexico. But Congress had ignored the claim of Mexico, and had passed an act extending the revenue laws to the disputed territory. Mexico could not give this up without fighting. Here, then, was cause enough for war.

And yet Polk did not want war. His honest desire was to avoid it. He professed to believe that Mexico would not fight on account of Texas, though all diplomatic relations had ceased at the time of annexation; or even on account of the disputed boundary line, and he congratulated Congress and the country on having acquired the new territory without bloodshed. He apparently expected to acquire California by negotiation or purchase, and he sent John Slidell to the Mexican capital with full power to settle all differences and to offer a good round sum for California; but Slidell was not received by the Mexicans. In his anxiety to avoid war the President made

a serious blunder at the beginning. He restored Santa Anna. Santa Anna, who was living in exile at Havana, to his Mexican home. Santa Anna was one of the noted characters of his time, imperious, deceitful, revengeful, yet not without bravery and military skill. He was a typical revolutionist of the Latin American states. As early as 1833 he became President of Mexico, and at various times thereafter; but usually after a brief service the people

rose against him and sent him for a time into exile. His most recent banishment took place in 1845. President Polk now sent a war vessel to convey Santa Anna back to Mexico, in the hope, first, that he would overthrow the new President, Paredes, which he did; and second, that he would treat with the United States for peace out of gratitude for the favor — which he did not.¹ Polk mistook his man. Santa Anna was not a man of gratitude. On reaching Mexico, he discovered that he could best restore his popularity by making war against the United States, and he instantly set about doing so.

ZACHARY TAYLOR IN MEXICO

President Polk, with all his avowals that there would be no war, had taken the precaution to send General Zachary Taylor to the disputed territory with an "Army of Occupation" and a fleet to the Gulf of Mexico. The ownership of this territory should have been settled by treaty, if possible, and its occupation in this high-handed way pointed clearly to the fact that, if California could not be had for gold, the feeble sister republic must be goaded into war. But Mexico had also invited hostilities by placing an army at Matamoros. The Army of Occupation moved on to the mouth of the Rio Grande, and the Mexican general, Arista, crossed the river to meet it. The two armies came together on two successive days, and the so-called battles of Palo Alto and Resaca de la Palma were fought. The Mexicans were worsted, but a **May 8 and 9, 1846.** few Americans were killed, and this was enough.

President Polk at once sent a message to Congress declaring that "American blood had been spilt on American soil," that Mexico had struck the first blow,² and that a state of war existed, "notwithstanding all our efforts to avoid it!"

But war, righteous or unrighteous, will always stir the people to action. Congress voted supplies and called for fifty thousand volunteers. Many of the northern Whigs opposed the war, but few of them were willing to go on record as voting against its prosecution.³ The people quickly responded, and the war was vigorously

¹ It is believed that Santa Anna promised that if, on being restored, he again got control of Mexico, he would cede California to the United States for a sum of money, but his word was worthless.

² This referred to the capture of a few American scouts before the battles above mentioned had taken place.

³ "The Biglow Papers," written by James Russell Lowell, humorously set forth the opposition of the Whigs.

prosecuted. Taylor's little army was augmented, and he crossed the Rio Grande, occupied Matamoras and relieved Fort Brown. During the summer he advanced up the river, taking one point after another, and in September captured Monterey after a bloody siege. Polk had assured his friends that the war would not continue longer than three months, but even with the capture of Monterey, the chief stronghold in northern Mexico, the Mexicans refused to give up, and Taylor was instructed to press the war to a finish.

There was one man in Washington all this time who was very impatient and restless. General Winfield Scott was the commander in chief of the armies, next to the President, and he felt that he ought to be sent to the front to take general command of the war. But the administration held him back for no given reason. The true reason, however, is not far to seek. The President, as above stated, was a narrow partisan. Scott was a leading Whig and had been an aspirant to the presidency. If now he were sent to the front, he might win such laurels as would make him a dangerous candidate for President. Hence he was kept at home. But another horn to the dilemma appeared. Taylor was also a Whig, or was supposed to be, though he had never voted, and his victories in Mexico were now giving him a name among the greatest heroes of the age. He even began to be mentioned as the coming Whig candidate. Something must be done to head off Taylor, and at length the authorities decided to send Scott to share the laurels —not that they loved him more, but Taylor less. Scott was now ordered to proceed to Vera Cruz by sea, to capture that port, and to march overland to the Mexican capital. Taylor was not only to have a rival in the field; he was ordered to send a large portion of his army to Scott. This he did like a true soldier, though it was a bitter medicine to take. Taylor was thus left in the midst of a hostile people with but a fraction of his former army; but strange to say, his greatest victory was yet before him.

Santa Anna had landed at Vera Cruz from Cuba but a short time before the siege and fall of Monterey. Hearing, late in the autumn, of Taylor's weakened condition, he gathered an army of twenty thousand men and marched against him. Taylor was joined by General Wool, who had recently led an army into Mexico, and his force was thereby raised to five thousand men. He took a position in a mountain defile near the fine estate of Buena Vista, and awaited his foe. On the 22d of

Scott sent to Mexico.

Battle of Buena Vista.

February, 1847, the enemy had almost surrounded the Americans, and the Mexican general sent word to Taylor that if he wished to save his little army from being cut to pieces and captured, he could do so by surrendering at discretion. "General Taylor never surrenders," was the laconic answer, and the battle of Buena Vista was fought. It began on the morning of the 23d and raged all day. Toward evening Taylor saw the Mexicans waver, and his order, "Give 'em a little more grape, Captain Bragg," was vigorously obeyed, and by nightfall the Mexicans were fleeing in confusion. The Mexican loss, including prisoners, reached nearly two thousand, while the American loss was about seven hundred and fifty. Among the slain was a son of Henry Clay. This battle closed the career of Zachary Taylor in the Mexican War; but his fame was now secure. He returned to his native land some months later to receive the highest honors that can be awarded an American citizen. General Scott was now to take the helm and to win even greater achievements than Taylor had done, though not an equal reward. But before recounting the deeds of Scott, let us take a brief note of

THE CONQUEST OF CALIFORNIA

The Mexican War was waged by the United States, not on account of a boundary dispute, as the world was made to believe, but because Ahab coveted Naboth's vineyard, because the slaveholder cast his eyes over the vast, fertile Southwest and desired it for his own. More tempting by far than Oregon was this beautiful land of perpetual summer, where "the flowers ever blossom, and the beams ever shine." It was this garden of the West that must now be secured as the chief prize of a victorious war. General Stephen W. Kearny was sent with a competent force at the opening of hostilities to secure this golden fleece. He entered New Mexico, and, capturing the ancient town of Santa Fé without firing a gun, raised the American flag and took possession of the province in the name of the United States. Kearny was then ordered to proceed to California and to take possession of the country, as he had done in the case of New Mexico. Arriving at Los Angeles late in December, he met the explorer, John C. Frémont, who, with Commodore Stockton,¹ had already taken possession of California. Frémont, for whom

¹ Stockton had succeeded Commodore Sloat, who had captured the Mexican towns on the California coast.

there was much notoriety yet in store, had attracted attention by his daring exploits in this far western country, and by his romantic marriage with Jessie Benton, daughter of the famous Missouri senator. The Mexican general, De Castro, had moved against the

**John C.
Frémont.**

settlers of the Sacramento Valley, who then rallied to the camp of Frémont. In several skirmishes Frémont beat De Castro, at length capturing Sanoma Pass and nine cannon. The Mexicans were driven out of the country and the American settlers chose Frémont governor of the province — all this before it was known that war existed between the United States and Mexico.¹

Thus the immense region from the Cordilleras to the sea, on which the President had looked with covetous eyes, fell into his hands like mellow fruit, and almost without bloodshed.

THE GREAT MARCH UPON MEXICO

From this moment to the end of the war the chief military glory centers about one man — General Winfield Scott. It had been confidently believed at Washington that Mexico would yield after our first hostile demonstrations, but the Mexicans were defending their country with desperate valor; and now it was seen that nothing short of striking the heart of their republic and humbling them to the dust could subdue them. Accordingly General Scott was borne

**Vera Cruz,
1847.**

by sea with twelve thousand men to Vera Cruz, where he entered upon one of the most successful military campaigns of modern history. Arriving on March 9 at the entrance of the harbor, the Americans beheld the old town nestled quietly between the mountains and the sea, and presenting anything but the aspect of war. On a little island at the entrance of the harbor stood the ancient castle of Ulloa, while in the background rose in lonely majesty the lofty peak of Orizaba, its snow-covered summit buried in the skies.

Scott landed his army without incident or opposition. The town and castle were garrisoned by some five thousand Mexicans under Juan Morales. The demand of Scott that the town surrender was declined, and he opened a tremendous cannonade on the city and its defenses. Hundreds of shells fell and exploded in the streets and

¹ H. H. Bancroft, Vol. XVII, p. 208. Frémont and Kearny had a quarrel over the governorship, and Frémont was court-martialed and dismissed from the service, was but pardoned by the President.

on the housetops, causing great destruction of life and property. For five days and nights the continuous roar of artillery resounded from the besieging army, from the fleet of Commodore Conner in the harbor, and from the answering guns of the besieged city. Scott is said to have thrown half a million pounds of metal. Many Mexicans and a few Americans were killed. On the 29th of March the Mexicans surrendered the city and the garrison marched out with the honors of war.

Scott now prepared for his great overland march to the interior of Mexico. Sending his advance column under Generals Twiggs and Patterson by way of the road that winds among the mountains to Jalapa, Scott joined them by the middle of April, and here amid the rugged steeps that frowned from every side, he was obliged to fight a desperate battle. Santa Anna, after his disastrous encounter with Taylor at Buena Vista, had collected an army of about ten thousand men, and he met the advancing Americans in a mountain pass near the village of Plan del Rio and under the shadow of a lofty hill called Cerro Gordo. The Mexican commander had chosen his position with admirable skill. The tops of the surrounding hills, save one, were planted with cannon, while the main army occupied a level place between a dashing mountain stream and a rocky wall a thousand feet high. But Santa Anna left one lofty eminence unoccupied, believing, as he said, a goat could not approach him from that point. Scott detected the omission, and while he engaged the enemy in front he sent a detachment to scale the unoccupied height and to command the Jalapa road above the Mexican army. This was done by Twiggs with no less energy and success than the Heights of Abraham at Quebec had been scaled by Wolfe nearly a hundred years before. Santa Anna saw his mistake when too late to correct it; yet the Mexicans fought bravely, and yielded only when all hope of success had vanished. A thousand of them were killed or wounded and three thousand were taken prisoners. Santa Anna started to flee in his carriage, but it was

**Battle of
Cerro Gordo.**

overturned, and he escaped astride a mule, leaving with his carriage a large quantity of gold, his private papers, and his wooden leg.¹ The American loss slightly exceeded four hundred.

The American army swept on like a tidal wave, capturing everything before it. Jalapa, Perota with its impressive castle, and Puebla fell successively into the hands of the Americans. In mid-summer they reached the summit of the Cordilleras, eight thousand feet above the sea, and here they opened their eyes upon one of the sublimest scenes in the world — the panorama of the Mexican Valley, hemmed in by mountain walls with here and there a snow-capped peak gleaming in the sun; the long slopes covered with the luxuriance of a tropical summer; the sleeping valley with its glittering, sunlit lakes, and the ancient city of the Montezumas nestled in the midst.

The 20th of August, 1847, was a great day in the Mexican War. Scott had advanced slowly from Puebla toward the capital city. His four divisions were commanded respectively by Generals Worth, Twiggs, Pillow, and Quitman, and Franklin Pierce, who was soon to outdo his military chief in a presidential race, arrived early in August with twenty-five hundred fresh troops. The army now numbered eleven thousand, and Scott pressed on toward the doomed city as relentlessly determined on its fall as was the inexorable Cortez who had marched over the same route for the same purpose more than three hundred years before. The ever sanguine, irrepressible Santa Anna had gathered another army, much larger than before.² On this fateful 20th of August Generals Twiggs and Pillow

Contreras. with forty-five hundred men made a wild, tumultuous dash at daybreak upon the strong Mexican camp at Contreras, held by General Valencia with seven thousand men. In less than half an hour the place was carried and three thousand Mexicans with most of their artillery were captured. A few hours

San Antonio. later the strongly garrisoned village of San Antonio was taken. The Mexicans now rallied in great numbers at the village of Cherubusco with its great stone citadel, a fortified convent. This was within four miles of the city gates. After a fierce bombardment of some hours the outer field works were carried. But the convent—from its loopholes bristled many cannon, and numberless sharpshooters plied their deadly work from its walls. War knows no religion, and the American guns were trained

¹ He had lost a leg in battle in 1837.

² Scott estimated the number at 27,000. See "Memoirs," II, p. 487.

on the sacred edifice. After a short, terrific bombardment, the white flag was seen waving above the somber walls of the convent. The Americans had lost a thousand men on this day, and the Mexicans four times that number in addition to the prisoners taken in the morning. The way was now open for the invading army to march upon the city of Mexico.

President Polk had sent the chief clerk of the state department, Nicholas B. Trist, to arrange for peace, and two weeks were spent in negotiation. This came to naught, and hostilities were resumed. On September 8 General Worth made an assault on the near-by village of Molino del Rey to destroy a cannon foundry; but from a stone castle on the hill of Chapultepec near the town Worth was assaulted with great vigor, and the proportion of American loss was greater than in any other engagement during the war. Some days later the castle of Cha-

Cherubusco.
Scott enters Mexico.

pultepec was taken by storm, and on the 14th of September General Scott marched at the head of his victorious army into the city of Mexico.¹ A few hours later the stars and stripes were waving from the walls of the ancient palace of the Montezumas. The war was over; and it is notable from the fact that the Americans won every battle. The Mexicans had fought nobly, but they were wanting in scientific training, and moreover many of them were half-breeds — a cross between the Spaniards and the ancient Aztecs — and were no match for the more virile Anglo-Saxon; and now at the close of a brief war of a year and a half, not only their proud city, but their whole land lay prostrate at the feet of the conquerors from the North.

RESULTS OF THE WAR

A view of Congress during the progress of the war reveals a state of agitation unequaled since the debates on the Missouri Compromise in 1820. The chief result of the war, as every one foresaw, would be the addition to our national domain of the immense region in the Southwest; and the question rose spontaneously in every mind, Will it be free soil, or slave soil? Aside from the moral aspects of the question, the South had the right of priority of claim, for it was the South that had brought about the war, and its chief object was

¹ Santa Anna had fled in the preceding night with a large part of his army, after setting free and arming about two thousand criminals from the prisons. These men attacked the invading army from the housetops, but were soon put to rout.

to extend slave territory. In another sense the North had the first right, for this land had already been dedicated to freedom by Mexico. The Louisiana Purchase was wedge-shaped, the larger end lying north of 36° 30'. The South had used up its smaller end beginning with the admission of Louisiana in 1812, and ending with the admission of Arkansas in 1836. There remained to the South Florida and the Indian Territory, and now came Texas; but these were no match for the vast territory in the Northwest to be carved into free states. Almost from the beginning of the government the states had been admitted in pairs, one in the North and one in the South, so as to preserve equal power in the Senate between the free and the slave states. The South now began to view with alarm the exhaustion of its territory, while that of the North seemed inexhaustible. Hence came the Mexican War.

But the South had not clear sailing; there were breakers ahead. A great majority of the people of the North opposed the further extension of slave territory, and this feeling found expression in the national legislature. The storm broke forth when, in August, 1846, a young Democrat in the House, from Pennsylvania, having been chosen for the purpose, made the motion that slavery be forever excluded from the territory about to be acquired from Mexico. His motion, known as the **David Wilmot** Proviso, was an amendment to a bill for the appropriation of \$2,000,000 for settling the difficulties with Mexico. The whole South flared up in a moment in fierce opposition. The proviso did not become a law, but the principle it involved became the apple of discord between the two sections for years, and even threatened the foundations of the Union.

The treaty of peace, signed at Guadalupe Hidalgo, conveyed to the United States the territory which has since become the states of California, Nevada, and Utah, part of Colorado, and the largest parts of the territories of New Mexico and Arizona.¹ Mexico gave up the territory with reluctance, but she was prostrate and powerless. She feebly requested, however, that slavery be not established in the ceded territory; but Mr. Trist, who acted for the United States, refused even to mention the subject to his government.

¹ Five years later the United States purchased from Mexico the Messilla Valley, about forty-five thousand square miles of southern Arizona, for \$10,000,000. The purchase was arranged by Captain Gadsden, and is known as the Gadsden Purchase. See map following p. 896.

No true American is proud of the Mexican War. The ceded territory is vastly better off, it is true, in industrial development and in civil and religious liberty, than it could have been had it remained a part of Mexico; but the means by which it was acquired were out of harmony with the general policy of the United States in its dealings with foreign nations, and we rejoice that this innovation did not intrench itself in the national mind and become the settled policy of our country. One honorable thing, however, we did in the matter. We paid Mexico \$15,000,000 for the land ceded, and this of our own free will, for Mexico was powerless and could not have resisted had our government chosen to pay nothing. This great acquisition of territory, if Texas be included, aggregated about 850,000 square miles, — more than the whole United States at the close of the Revolution.

Little did Mexico dream of the hidden wealth that lay beneath the surface of the lands she ceded to her great rival. Nine days before the treaty was signed the discovery of gold was made in California. Some years before this the enterprising Swiss, John A. Sutter, had settled in the beautiful valley of the Sacramento, had possessed himself of several thousand acres of land, and had built a fort, which he called after his own name. He owned many thousand head of sheep and cattle, had several hundred men in his employ, and was truly a prince in the western wilds. In the employ of Sutter was a carpenter from New Jersey named James Marshall, and it was he who first made the discovery. Marshall was superintending the building of a mill on a branch of the American River near the base of the Sierra Nevada Mountains, when he observed little shining particles in the mill race that proved to be gold. The news soon spread to the surrounding settlements, but the people were slow to believe.

At length, however, with the opening of spring, the conversion of the coast was complete. The village of San Francisco went wild over the great discovery. Many sold all their possessions and hastened to the gold fields. All other business came to a standstill. The judge abandoned the bench, and the physician his patients; the town council was broken up for want of a quorum; farms were left tenantless, and waving fields of grain were allowed to run to waste.¹

The news that gold had been discovered in California spread slowly at first, as the railroad and the telegraph had not reached the

¹ H. H. Bancroft, Vol. XXIII, p. 62.

**Discovery of
gold in
California.**

remote regions west of the Rocky Mountains; but at length it reached the East, spread across the Atlantic to Europe, and was published in all the leading newspapers of the world. Great was the excitement in every land, and ships from every clime were diverted from the channels of trade and headed for the Pacific Coast. Many came by way of Cape Horn; others braved the deadly climate of Panama, while thousands from every part of the Union crossed the western plains in moving wagons. Long trains of wagons wound their way across the plains and over the mountains toward the setting sun. Many were the perils of this long and weary journey—the wild animal and the wild Indian, exposure to the mountain snows, and, above all, the cholera. The cholera attacked these west-bound trains, and many a weary traveler never reached his El Dorado, but found a nameless grave, far from home and kindred, in the vast and trackless regions of the West. It was in the summer of 1849 that this tide of humanity from afar began to pour into the Sacramento Valley—a few to realize the dream of wealth, more to gain a modest competence, but the majority to meet disappointment, to return broken in health and spirits, or to fill an unknown grave in the wilderness.

California was peopled as no other colony or territory in the Western World had been, and in less than two years after the golden discovery, the number of inhabitants exceeded a hundred thousand; and it was this discovery that came to the rescue of Congress in deciding the great question involved in the Wilmot Proviso. But before disposing of the subject we must stop and note the election of a new President.

Strange as it may seem, the Democrats slowly lost in power during the Polk administration. A great movement usually wins friends as it proves its ability to succeed, but not so with the Mexican War. The reason of this change of heart was that many of the people lost interest in the war and in the party that had waged it, when they saw that the chief object was to humble a weak sister republic for the purpose of robbing her of her territory. Moreover, the slavery question played its part. The North feared that the newly acquired lands would, and the South feared that they would not, become slave territory; and for these opposite reasons the interest waned on both sides of Mason and Dixon's line. Much would depend on the next President. Who would he be? This was the absorbing question of the moment.

The Whigs were hopeful; their star was rising. From three prominent candidates they were to make their nomination — Henry Clay, “the same old coon,” as the Democrats put it, and the two successful generals of the war. But Clay was rapidly growing old, the great questions with which he had been identified were now settled, and more than once he had led the party to defeat. His star was visibly waning, and no longer could the magic name of Clay awaken the enthusiasm of bygone years. Of the two military commanders, Taylor had a clear advantage over Scott. His achievements in Mexico were no greater than those of Scott; but he won his laurels while the war was still popular and the eyes of the country were riveted upon it. Scott’s victories came later, when the people had begun to compare the war with a fight between a big bully and a child. Scott therefore never received the honor accorded Taylor. But the respective personalities of the two men had something to do with deciding the contest. Taylor was wanting in education and social polish; he refused to wear the uniform, and cared little for his personal appearance. He received the sobriquet of “Rough and Ready.”

**Taylor and
Scott.**

These qualities appealed to the masses. Scott, on the other hand, was highly cultured, urbane, self-conscious, and dignified. He was exceedingly exact in his dress, speech, and actions. He was nicknamed “Fuss and Feathers.” Taylor had the further advantage of being new to fame, while Scott had been in the public eye for nearly forty years, and he was almost as much a politician as a soldier.

When Taylor was first informed that he was spoken of for the presidency he was astonished; then he laughed at the ridiculous idea. But as the months passed and the newspapers were full of the subject, he began to take it seriously. Clay wrote him suggesting that he withdraw his name, but this the old hero refused to do, and he entered the lists, determined to win if he could.

Taylor received the nomination at the Whig convention in Philadelphia. Clay was disappointed and refused to support him. Webster pronounced the nomination one “not fit to be made.” Horace Greeley and Thurlow Weed held aloof till late in the fall, when they came into line. But Taylor had won the great popular heart. As Taylor was a resident of the South and a slaveholder, it was necessary to give the second place to a northern man, and Millard Fillmore of New York was nominated.

The Democrats met in Baltimore and nominated General Lewis

Cass of Michigan for President, and William O. Butler of Kentucky for Vice President. Cass was a man with an interesting record. We first meet him in the War of 1812. He was a young officer under Hull at the surrender of Michigan, and rather than surrender his sword to the British officer, he broke it across a stone. After

the war he became governor of Michigan Territory and **Lewis Cass.** held the post for eighteen years. Seeing that Detroit would grow into a city, he purchased a large farm just outside the village, and as the town expanded the farm grew in value until its owner became a millionaire.¹ Next we find Cass in the Cabinet of Jackson, then minister to France, and finally in the United States Senate. But Cass lacked one of the most essential qualities of the modern politician — he was, like General Scott, self-conscious, urbane, and he held himself aloof from the vulgar crowd. Nevertheless Cass would probably have been elected but for the defection of his old enemy and rival, Martin Van Buren. The Democrats of New

Van Buren. York were divided into two factions, the Hunkers and the Barnburners. The latter were not in sympathy with the slave propagandists; they refused to support Cass, joined the Free-soilers, and nominated a third ticket with Van Buren at its head. Van Buren did not love Cass, nor had he forgiven the party for choosing Polk instead of himself four years before. But at that time his great benefactor of Tennessee was still living, and this fact probably held the New Yorker in line with his party. But now Jackson was dead, and Van Buren took the opportunity to take vengeance on the party. He was quite successful. His personal following in his own state was sufficient to split the party almost in the middle and to give the electors to Taylor; and New York was again the pivotal state and decided the election.

ZACHARY TAYLOR

Zachary Taylor was a soldier and only a soldier. Of the wiles of the politician, of the wonderful machinery of party organization, he was as ignorant as a child. Of the vast responsibility of the presidency he knew almost nothing. But withal he was a rugged, powerful, honest personality. He loved his country above all things,

¹ Had Cass been elected, he would be, thus far, our only millionaire President. It is a significant fact, in this age of colossal fortunes, that we have never had a very rich President.

and his motives were without a flaw. The son of a patriot who had fought in the Revolution, he was born in Virginia the year after General Clinton had evacuated New York. At an early age he entered the army and saw service through the War of 1812, and the Black Hawk and Seminole wars. Humbly he served his country for forty years, wholly unknown to fame until his sudden bound into prominence in the war with Mexico.

Scarcely was Taylor installed in the great office when the whole country turned to him for a solution of the momentous issue on which neither party had dared give expression in the campaign of the preceding year — that involved in the Wilmot Proviso. California was now knocking for admission into the Union — as a free state. As stated above, the discovery of gold had aided in settling the slavery question for the Southwest. The men who went to the mines were not slaveholders, though many were from the South. The slave owner must remain with his plantation and his family. The men who flocked to the coast were, for the most part, laborers, nor could they endure the thought of inviting the black bondsmen into their midst to become their comrades in the field of toil. When, therefore, the Californians, in the autumn of 1849, framed a state constitution, they excluded slavery from the soil by a unanimous vote. At this the South was deeply stirred. The war had been pressed to a finish by a southern President and by a Congress dominated by the South; the chief object had been to extend slave territory; and now to have the fairest portion of the newly acquired land snatched forever from their grasp was more than the slaveholders could bear. They turned with hopeful eyes to the new President. What would he do? He was a southern man, and he owned a large plantation and several hundred slaves in Louisiana. On this the hopes of the South were based, though Taylor had said that he would not be a sectional nor a partisan President. At length all doubts were set at rest when the President proved that his patriotism towered above his sectional or partisan feeling by recommending that California be admitted as a free state.

The slave power now became enraged; it demanded that California be divided in the middle and that the southern half be made a slave state, or that the Missouri Compromise line be extended beyond its original limits, the Louisiana Purchase, to the Pacific Ocean. Threats of destroying the Union began to spread through the South. Alexander H. Stephens

**Unrest of the
South.**

wrote in December, 1849, that the feeling among the southern members for a dissolution of the Union was becoming far more general. Robert Toombs declared in the House that he did not hesitate "to avow before this House and the country, and in the presence of the living God, that if by your legislation you seek to drive us from the territories of California and New Mexico . . . I am for disunion." Calhoun, the greatest of southern leaders, had made artful efforts to unite all slaveholders in Congress to demand concessions from the North and to foster the spirit of disunion, if their demand was refused. Such was the condition of the country—California knocking for admission as a free state, the South demanding that it be divided in the middle, the North in equal turmoil, many of the people ready to yield to southern demands for the sake of peace, but a greater number declaring frantically that slavery should encroach no farther on free soil—such was the condition at the opening of that memorable year in American history,

EIGHTEEN HUNDRED AND FIFTY

From the time of the launching of the government under the new Constitution to the Civil War the darkest year of all was 1850. There could be no doubt that the threat of wholesale secession was serious. A convention of leading southern statesmen met at Nashville in June, 1850, and solemnly declared that a state had the abstract right to secede from the Union. Not one lone state, as in 1832, but most of the slave states seemed to contemplate taking the fatal step.¹ Had secession now been accomplished, our glorious Union would probably have perished. Jackson was in his grave and Lincoln was unknown; nor was there any great political party, as ten years later, pledged to the maintenance of its integrity.

While the country was in this state of unrest the Thirty-first Congress met. The House chose Howell Cobb of Georgia speaker, after a wrangle of three weeks. The Senate was the ablest that ever sat in Washington. Here for the last time was the great triumvirate,—Clay, Webster, and Calhoun,—all of whom had figured in every great governmental movement for forty years. Here, too, were Benton, serving his thirtieth year in the Senate, the stentorian Hale of New Hampshire,

¹ Benton took the ground, however, and with some show of reason, that the bluster would subside, and that there was no serious danger to the Union.

Stephen A. Douglas from Illinois, and Jefferson Davis of Mississippi; Seward of the Empire State, and the powerful pair from Ohio, Salmon P. Chase and Thomas Corwin. Early in the session Clay assumed the leadership, as always, and he brought forward a series of compromise measures which he hoped would restore harmony between the warring sections. These are known as the Compromise Measures of 1850, or the Omnibus Bill. In this famous bill were eight items, the most important being the first, which called for the admission of California as a free state; the sixth, which prohibited the slave trade in the District of Columbia; and the seventh, which called for a new fugitive-slave law. These measures absorbed the attention of Congress for more than eight months. The bill was eventually torn to pieces and passed in sections. Clay was the champion and leader throughout. He had passed his seventy-second year, and his health was broken; but the fire of his eloquence still glowed with the luster of former days. Clay was the most national, the broadest in his sympathies, of all men in Congress at this time. A resident of a border state and the owner of slaves, he was as truly a northern as a southern man. When Jefferson Davis declared in the Senate that the Missouri line must be extended to the Pacific, Clay's instant retort was that he could never agree to it, that the Southwest was free territory and must remain so, that we justly reproached our British ancestors for introducing slavery on this continent, and he was unwilling that the future inhabitants of California and New Mexico should reproach us for the same offense. Clay announced that on a certain day in February he would speak on his bill, and thousands of people, many from distant cities, came to hear this last great speech of this most magnetic of American orators.

Clay's
compromise.

In March three speeches of much historic importance were delivered in the Senate, by Calhoun, Webster, and Seward. Calhoun was slowly dying; but his unconquerable will fought down disease until he had prepared an elaborate speech on the compromise measures. Supported by two friends, he tottered into the senate chamber; but he was unable to read his speech, and this was done by another. The utmost attention was paid to this final word from the greatest of the living sons of the South. In front of the reader sat, with half-closed eyes, in rigid silence, the ghost-like form of the author. Calhoun was an honest man, and in this speech he gave expression to the honest convictions of his soul. He

showed how the North, in his belief, had encroached on the rights of the South until the Union was in danger, — how the great Protestant churches had separated into northern and southern branches, — how one cord after another that bound the two sections of the country together had snapped, and soon there would be none remaining. He appealed to the North to consent to amend the Constitution so as to give the South the power to protect herself.¹ Thus ended the public career of the great South Carolinian. He died on the last day of March.

Calhoun's last speech. It is not true that Calhoun sought a dissolution of the Union. He probably loved his state and section more than the Union; and, believing that slavery was necessary to the welfare of his section, he espoused the cause of slavery. But as well say that Chatham, in defending the rights of the colonies, ceased to be a loyal Englishman, as that Calhoun no longer loved his country. And nothing in his life showed more conclusively that he still loved the flag than did this last great speech of his life, in which he pleads from the depths of his honest soul for the removal of the evils that in his judgment menaced the perpetuity of the Union.

Many and able were the other champions of the slave power during the generation preceding the Civil War; but Calhoun towers above them all. His prophetic vision exceeded that of any of his contemporaries. He saw the gathering storm, the implacable strife between the slave states and the free, long before it assumed threatening proportions. He saw, too, that the little, despised Abolition societies of the North would, by their unceasing cry against slavery, eventually mold the conscience of millions, and he called for their suppression by legislation. Calhoun was right in believing that if the moral consciousness of the nation opposed slavery, slavery must fall. But he made mistakes. He was wrong in believing that human legislation can govern the conscience of the people; wrong in predicting that the Union could not survive a bloody war; and strangest of all, he and all his brethren were wrong in their claim that social conditions in the South would be unendurable, if the black man were given his freedom.

The next great speech of the month was made by Daniel Webster,

¹ It was not then known to what Calhoun referred in this suggestion; but his posthumous papers explained that he would have the Constitution amended so as to elect two Presidents, one from the slave states, and one from the free states, each to have a veto on all national legislation.

but three days after that of Calhoun, and it is known as his "Seventh of March Speech." A voice from this great son of New England had been eagerly awaited. Since his reply to Hayne in 1830 Webster had easily held the palm as the greatest orator in America. As an intellectual giant Webster surpassed all men of his generation. As he stood before an audience the sweep of his eloquence, like a rushing river, bore everything before it. His mind grasped underlying principles, and these he made so clear that the unlearned man could readily comprehend them. Webster has often been compared to Edmund Burke; and the speeches of both have the rare distinction of holding a permanent place in the literature of their common language. **Webster.**

Twenty years had now passed since the mighty voice of Webster had spoken for nationality in tones that stirred the world. Old age was now creeping upon his frame and his powers were beginning to wane; but he roused himself like a Hercules for this one powerful final effort. The country was in deep agitation. The North had shown even greater inclination to rebel against the proposed Fugitive Slave Law than the South had done against free California. But all waited eagerly to hear from Webster, the greatest representative of the North. There was a feeling of uncertainty among his friends, and not without reason. At various times Webster had shown his independence of party or sectional adherence. He had acted with the Democratic President in 1833; he had sided with the South in the Creole affair of 1841; and above all he had abandoned his party while a member of the Tyler Cabinet. But these episodes had only temporarily broken the magic spell in which he held the northern heart. It was left for this Seventh of March Speech to shatter the idol that the people had worshiped so long. The speech he made on this day was one of the greatest of his life. His constitutional discussion of the slavery question was learned and profound, and for the most part pleasing to his constituents. **His great speech.** But his views on the Wilmot Proviso and the Fugitive Slave Law caused great offense. It was needless, he claimed, it was a "taunt and reproach" to the slaveholders to exclude slavery by law from California and New Mexico, as the laws of nature had already done this. "I would not take pains, uselessly to reaffirm an ordinance of nature, nor to reenact the will of God." He also declared that the North had lacked in its duty to the South in the matter of runaway slaves, that the South had just grounds of com-

plaint; and he went out of his way to denounce the Abolition societies of his own section.

This oration of Webster created consternation throughout the North and brought the severest denunciations upon the head of its author. He was condemned on every side as a traitor to the cause of liberty. Giddings declared that the speech had struck a blow at freedom such as no southern arm could have given. Horace Mann said that Webster had played false to the North, that he was a fallen star, a Lucifer descending from heaven. Whittier, in the little poem "Ichabod," mourned the fall of one in whom honor and faith were dead. At a great meeting in Faneuil Hall Theodore Parker compared the action of Webster to that of Benedict Arnold, and declared that Webster was only seeking southern support for the presidency. In the course of a few months, this wave of indignation spent itself to some extent; but never again did Webster regain the popularity that he lost on this fatal day. It is difficult for us to understand at this day how Webster's apparently moderate statements could have raised such a storm, but it must be remembered that the country was greatly excited over this all-absorbing slavery question.

On the 11th of March Seward delivered in the Senate the third of the great speeches of the month. Seward had been twice governor of New York; his fame was national, and he was looked on as one of the leaders in political thought. His effort on this day fell far below that of Webster in rhetorical finish, but it made a profound impression upon the country; and from that moment Seward became the leader of northern thought on the great subject that disturbed the harmony between the two sections. This leadership continued to the opening of the Civil War, when a greater than Seward laid his hand upon the helm.

In this discourse of March 11 Seward took strong ground against the pending Fugitive Slave Law, declaring that public sentiment at the North would not support it, and that no government could change the moral convictions of the people by force. He also stated that there was a "higher law than the Constitution," and this maxim became the ground on which the people of the North resisted the law, afterward enacted, for the capture of fugitive slaves. He further advanced the opinion that the fall of slavery in the United States was inevitable, evidently by peaceful means, as he disclaimed all belief in secession or disunion. By this speech

Seward assumed the leadership that would have remained with Webster had the latter not taken a position at variance with the prevailing sentiment at the North.

The debates on these great measures continued for many months, sometimes reaching a state of extreme acrimony. In April Senator Benton almost came to blows with Senator Foote of Mississippi. Benton came from a slave state, but his views for the most part coincided with those of the North, and the southern members considered him a renegade and lost no opportunity to taunt him. Foote was making some caustic and insulting remarks about Benton, when the latter rose from his seat and advanced toward the speaker in a hostile attitude; whereupon Foote drew a loaded revolver. At this Benton became greatly excited and cried to his friends, who were attempting to restrain him: "I am not armed; I disdain to carry arms. Stand aside and let the assassin fire." A committee of investigation afterward reported that no similar scene had ever before been witnessed in the Senate. But the matter was dropped and nothing further was done.

**Benton and
Foote.**

The measures under discussion were at length referred to a grand Senate committee of thirteen, with Clay as its chairman. This committee soon made its report, which differed little from Clay's compromise measures offered in January. President Taylor openly opposed the measures as a whole, and especially the Fugitive Slave Law and the offer to pay Texas a large sum of money for her claims on New Mexico. His sympathies were evidently with the northern Whigs. But his course was run. The hero of many battles at last met a foe that he could not conquer.

On the 4th of July the President attended a mass meeting at the laying of the corner stone of the Washington Monument, and he sat for several hours in the broiling sun. Partially overcome by heat, he returned to the White House, drank large draughts of iced milk and ate iced fruits. That evening he was taken ill with cholera morbus. In a few days it merged into typhoid fever, and on the 9th of July Zachary Taylor was dead. Sadly the funeral procession moved through the streets of the capital city, and not the least impressive feature was "Old Whitey," the faithful steed that General Taylor had ridden through the Mexican War, now led behind the casket, bearing an empty saddle. Thus for a second time the unfortunate Whig party had lost its President by death. The ultra-southerners received the news of

**Death of
President
Taylor.**

the President's death with complacency ; in the North the mourning was sincere and widespread. Strange too, for the dead President was a southern man and the incoming President a northern man. But the former was broad and national in his views ; the latter was " a northern man with southern principles."

Millard Fillmore, born in the wilderness of northern New York in 1800, was a self-made man in the fullest sense of the term. He

Fillmore. picked up a meager education as best he could, became a leading lawyer of Buffalo and a member of his state legislature, and served for several years in the Lower House of Congress. As a member of the House he was noted for his conservatism and for painstaking industry. For several years he labored shoulder to shoulder with John Quincy Adams for the right of petition, and it was not until the higher honors of the presidency came to him that he became known as " a northern man with southern principles." Even then he was not a radical, and his favoring the compromise measures, contrary to the Whig sentiment of his own section, was doubtless based on an honest desire to do the best in his power for his country. The President tendered the position of secretary of state to Webster, who accepted it; and this fact, since it was known that Webster favored the compromise, and the further fact that four of the six other members of the Cabinet were from the South, revealed to the country that the new President held different views on the great questions of the day from those held by his predecessor. The advice of Seward, who had been the chief counsellor of President Taylor, was now no longer sought. Seward men were removed from office and their places were filled with conservative Whigs, and it was plain that the administration intended to use the patronage wherever possible to unify the party on the compromise.

The great debates went on, and soon the fruit of the long toil began to appear. Before the end of August the Senate had passed the bill settling the boundary of Texas and giving that state \$ 10,000,000 for the relinquishment of her claims on New Mexico,¹ also the bill admitting California, another organizing New Mexico as a territory without the Wilmot Proviso,² and, most important of all, the Fugitive Slave Law.

¹ This act brought forth grave accusations of jobbery. Texas scrip, which had fallen to one sixth of its face value, now rose to par, and it was believed that many speculators in this scrip made fortunes by this act of Congress.

² A similar act concerning Utah had passed on the last day of July.

The bill abolishing the slave trade in the District of Columbia passed the Senate in September. All these measures passed the House in September with little debate, and all were signed by the President.

From the foundation of the government there had seldom been a measure enacted into law of more far-reaching consequence than were some of the enactments of this Compromise of 1850. The measures were non-partisan; they were sectional. The Democrats and Whigs of the North joined in opposing the Fugitive Slave Act, while both parties at the South joined in opposing free California and the abolition of the slave trade in the District of Columbia. For some years the two great parties had grown nearer together, and now their chief cause of rivalry was based on a desire for supremacy.¹ The great questions of the times were sectional and not partisan, and the fact that the two great parties now stood on common ground and no longer represented opposing schools of thought explains in great part the dissolution of the one in the near future, for in the world of politics the coexistence of two of a kind is impossible. But this must be noticed later.

The compromise measures were on the whole favorable to the North rather than to the South.² Two items in this famous mid-century legislation were of momentous interest to the nation. One, the admission of California as a free state, was deeply offensive to the South, but there it stood on the statutes, a permanent fact that could never be undone. The other, the Fugitive Slave Law, was equally offensive to the North; but it was not an abiding fact; it was a temporary measure, and its enforcement depended largely upon its individual reception by the people of the North. Moreover, it worked irretrievable injury to the slave power by awakening an antislavery sentiment in the North as nothing else could have done. The vicious law for the rendition of runaway slaves had been forced upon the North for other reasons than the desire to recover lost property.³ It was not the border states, but the cotton states of the far South, from which few of their bondsmen escaped, that were most instrumental in placing this law upon the statutes. Their motive was to humble the North for having forced upon them the

¹ Von Holst, Vol. III, p. 102.

² If we include the admission of California as part of the compromise; but more strictly speaking it was not, as this item had previously been decided by the people of California.

³ See Rhodes, "History of the United States from the Compromise of 1850," Vol. I, p. 187.

bitter medicine of free California. Neither section was pleased with the compromise. The great mass of conservatives was desirous that the agitation be stopped, but the radicals of both sections were again ready to throw down the gage of battle.¹ In Mississippi and South Carolina many of the leaders threatened secession. The Southern Rights Association held a convention at Charleston in May, 1851, and declared that South Carolina could no longer submit to the wrongs and aggressions of the federal government. But in an election to a secession Congress the following autumn the secession party was defeated. In Mississippi a similar result was reached when Foote, who represented the Union sentiment, was elected governor over Jefferson Davis, who represented the radical party. In the North we find great discontent in the ultra-antislavery districts.² Massachusetts rebuked Webster by placing Charles Sumner in his seat in the Senate, elected by Democrats and Free-soilers wholly on account of his antislavery position. On the same ground Ohio sent the rugged, heroic Benjamin Wade to the Senate. In Congress the southern radicals gave notice that all was not settled, that they must have Cuba and more territory from Mexico when needed, while the northern radicals, led by Seward, Sumner, and Giddings, declared that the Fugitive Slave Act could not be enforced. Meantime the great body of conservatives fondly hoped that the compromise would be accepted as a finality and that the hated slavery question would trouble them no more for many years to come. At length the southern leaders, with rare exceptions, came to this view: they agreed to accept the compromise as a finality, on the one condition that the North would honestly enforce the Fugitive Slave Law. The northern politicians would doubtless have agreed to this; but the enforcement of that law rested with the conscience of the people, not with the politicians, and it remains for us to notice

THE FUGITIVE SLAVE LAW IN OPERATION

It has been said, and truly said, that Millard Fillmore, when he signed the Fugitive Slave Law on September 18, 1850, signed his own death warrant as a national statesman. By this little act he covered his name with dishonor, and no subsequent show of patriotism could redeem it; by this he offended the great section of the country to which he belonged, and for this he is remembered in

¹ "Seward's Works," Vol. III, p. 446.

² *New York Tribune*, May 13, 1851.

American history. Yet it is difficult to see how Fillmore could have done otherwise than he did, as the South had been so deeply offended over free California that a rejection of the Fugitive Slave Law would probably have brought immediate secession.

The Fugitive Slave Law was a vicious and inhuman measure, to say the least. When captured by the pretended owner or his agent, the alleged runaway was carried before a magistrate or commissioner who should hear and determine the case. The law was so framed as to work against the prisoner at every point. The oath of the owner or agent (and the agents were often coarse, brutal men whose better instincts were smothered by years of slave driving) was usually sufficient to decide the matter. The black man could not testify in his own behalf. The benefit of a jury was denied him. Even the commissioner was bribed by the law, for if he awarded the captive to his captor, he received ten dollars as his fee; if he set him free, he received but five. The worst feature of the law was that it compelled any bystander to assist in making a capture, if summoned to do so by the slave catcher. This was revolting to the average citizen of the free states, for the impulse was to aid the fleeing man in making his escape rather than to aid his pursuer.

Could such a law be enforced? Thousands of people throughout the North believed that a man held in bondage for no crime — simply on account of the accident of his birth and the color of his skin — had a right to escape if he could. Conscience demanded that they aid him in his flight; the law demanded that they aid his pursuer; and many decided to obey the “higher law” of conscience rather than this law of their land. It is easy to see with what difficulty a law could be enforced when opposed by the moral consciousness of the people in the midst of whom it is expected to operate. From thousands of pulpits, from a large portion of the northern press, and from mass meetings held for the purpose, the Fugitive Slave Act was denounced as an unjust and wicked measure.¹ This feeling of the people was reflected in the state legislatures. Michigan, Wisconsin, and all the New England states passed personal liberty laws, for the protection of free blacks; and most of them made laws to regulate the business of the slave catcher, such as denying him the use of the jails and other public

Great opposition to the law.

¹ Wilson's “Rise and Fall of the Slave Power,” Vol. II, p. 305. The conservatives also held meetings in the large cities of the North, and demanded that the compromise be accepted in good faith and that the Fugitive Slave Law be enforced.

buildings, while a few states demanded a jury trial for the alleged fugitive.¹ These items show the general reception of the Fugitive Slave Law at the North, but this may be shown still more vividly by citing a few examples of its practical operation.

There were probably twenty thousand negroes in the free states who had at some past time escaped from slavery. Many of these were quiet, industrious people, earning an honest living for their families; all were liable to be dragged back to slavery by this law.² Scarcely had the law gone into effect, when many parts of the North were overrun by man hunters. Many of the fugitives residing in the free states now hurried off to Canada, where the laws of England made them free; others remained in the hope of escaping detection. Sometimes the fugitive was caught and taken back to his former master; sometimes he was killed in the chase; but usually he made good his escape, owing to the aid and sympathy he received from the people of the North.

One of the first instances to attract attention was that of William Smith of Columbia, Pennsylvania. Many years before this law was passed Smith had escaped from slavery, had settled in this quiet town on the Susquehanna, and was now an industrious laborer, supporting a wife and family. He knew that he might be taken back to slavery at any moment under this law of 1850, but he hoped to remain undiscovered. One day while working on the streets he saw some slave hunters approaching him. He threw down his tools and started to run, but he was shot dead by his pursuers. Another instance in this same county (Lancaster, Pennsylvania) attracted far wider attention, and turned out very differently. Near the village of Christiana lived a colored man named William Parker, himself a fugitive, and his house became a place of refuge for other fleeing negroes. It was learned that he was harboring two men of his race who had escaped from their master, a Baltimore physician named Gorsuch. In September, 1851, Gorsuch, with a party of armed men, including his son, entered the town and demanded his property. The party surrounded the Parker house; the colored people of the neighborhood were summoned by the sound of a horn, and in the fusillade that ensued Gor-

¹ Vermont, Michigan, and Massachusetts demanded a jury trial. This was a practical nullification of the national law. Most of these laws were enacted after the passage of the Kansas-Nebraska Law in 1854.

² The law was retroactive, and it was denounced as unconstitutional by its enemies, who claimed that it was *ex post facto*.

such was killed, and his son severely wounded. This affair attracted the attention of the country. President Fillmore sent a body of marines from Philadelphia to the scene of the riot. Thirty-five persons were arrested,¹ but no jury could be found to convict them, and all were released. The two fugitives were never captured.

Another incident, known as the "Jerry rescue," that took place at Syracuse, New York, attracted much attention. Jerry McHenry, an industrious mechanic, who had worked at his trade for some years at Syracuse, was claimed, under the Fugitive Slave Law, by a man from Missouri. Jerry was found and captured by the slave hunters. He was imprisoned to await trial the next day. Before morning a large party of men, led by Gerrit Smith, a wealthy member of Congress, and the Rev. Samuel May, went to the prison, battered down the door, rescued the prisoner, and, after concealing him for a few days, sent him off to Canada. The leaders of this rescue openly proclaimed their part in it, but none of them was punished.

Many of the runaway negroes did not go to Canada, but settled in the Northern states, as far as convenient from Mason and Dixon's line. At Young's Prairie, in Cass County, Michigan, a considerable colony had located, and here they lived in contentment in the little houses they had built. But their location was discovered by their various masters, and a party of thirty armed men rode from Kentucky to capture the fugitives at Young's Prairie. The party separated, and made several simultaneous attacks on the negro village at dead of night. Awakened suddenly from sleep, the blacks fought bravely for their liberty, but in a short time most of them were overpowered, fettered, and thrown into large wagons brought for the purpose. But one woman, while her husband was fighting in the only door of their cabin, escaped through a back window and gave the alarm to some white neighbors. In a few minutes a white man was galloping about the country on a fleet horse, giving a general alarm. By daylight the whole neighborhood was aroused, and a band of two hundred men, led by Bill Jones, a brawny-armed blacksmith, were dashing to the rescue of the blacks. They fell upon the Kentuckians, arrested them for kidnaping, and lodged them in the county jail to await trial. At the trial they were acquitted; but they returned to their homes empty-handed, after all their trouble and expense, for while the trial was pending, the colored colony was transferred to Canadian soil.²

Young's
Prairie.

¹ Siebert's "Underground Railroad," p. 280. ² Coffin's "Reminiscences," p. 366.

Usually the slave hunter failed to secure his runaway; and, even when he succeeded, the expense was often so great as to render the undertaking unprofitable. The most famous case that came under this law was that of Anthony Burns, a colored waiter in a Boston hotel. He had escaped from his Virginia master, and he was now arrested as a fugitive. When the people of the city heard of the arrest, they were soon wrought up to a wild state of excitement. A great meeting held at Faneuil Hall was addressed by Wendell Phillips and Theodore Parker, and late at night it practically resolved itself into a mob and proceeded to the courthouse where Burns was confined, to attempt his rescue. Here was found another band of infuriated men, led by Thomas Wentworth Higginson, battering at the doors. The mob was driven back by troops called out by the mayor, one man was killed, several were arrested, and Burns was not rescued. A few days later he was remanded to slavery. The people made no further attempt to effect his rescue; but fifty thousand of them lined the streets hissing and jeering as the negro was led to the revenue cutter in the harbor, guarded by the police force of the city and several thousand soldiers armed with muskets and artillery. The South had won its victory, but it was an expensive one, for public feeling against the Fugitive Slave Law was roused throughout the North as never before, and the *Richmond Enquirer* was led to say, "A few more such victories and the South is undone."¹

Scarcely less than the excitement over Burns was that over the "Glover rescue" in Wisconsin in the spring of the same year. Joshua Glover was a black man who lived near Racine, Wisconsin. He was claimed by a man from St. Louis, and was captured, knocked down, bound, carried in a wagon to Milwaukee, and lodged in jail. The people of Racine soon heard of the proceedings, and held a mass meeting which declared the Fugitive Slave Law "disgraceful and repealed." About a hundred men then proceeded to Milwaukee and on arriving found the city in a wild tumult. The excitement gained in volume, and the authorities called on the militia to quell the riot, but the militia refused to respond. At length the crowd became dangerous, and when it surged upon the jail and demanded

¹ Siebert's "Underground Railroad," p. 331; Wilson's "Rise and Fall of the Slave Power," Vol. II, pp. 435-441. Burns was afterward purchased by friends at the North and sent to Oberlin College, in Ohio, but he died a few years later. The judge who awarded him to his captors was removed from the bench through a petition of the people.

the prisoner, there was nothing to do but to give him up. Glover was soon landed in Canada, and the people returned quietly to their homes. Nearly every newspaper in the state applauded the Glover rescue, and the leaders of the riot, afterward arrested, were acquitted by a decision of the supreme court of the state on the ground that the Fugitive Slave Law was unconstitutional. The examples above mentioned are but a few of the most conspicuous out of hundreds. A half-witted person could have seen that the Fugitive Slave Law could not be enforced in most sections of the North; and any slaveholder could have seen, and most of them did see, that the law was doing irreparable harm to the institution of slavery by unifying the North against it.

THE UNDERGROUND RAILROAD

For more than half a century before the Civil War there was an ever increasing stream of slaves fleeing from their masters into the free states. In the years immediately preceding the war the number was estimated at about a thousand a year. It is true that many of the slaves were so well treated by their owners, or so grossly ignorant, that they had little or no desire to escape. But there were others, and their name was legion, in whose bosom burned a longing for liberty, so natural to the human heart. Especially was this true of those who had picked up the rudiments of an education. Many in the far South knew only that freedom lay in the direction of the North Star, that the distance was great, and that the way was fraught with unknown perils. The fugitives usually traveled by night and secreted themselves in the mountains or thickets during the day. Most of them came from the border states, and they comprised the most intelligent of their race. Some fled because of cruel treatment, but with the great majority it was the fear of the dreaded auction block that drove them to seek the land of liberty. However kind the master might be, however reluctant to part with his servants, his death or business reverses might at any time send them to the great cotton plantations or to the rice swamps of the far South, the most dreadful calamity that could come to a border-state slave. When once a slave was carried by a trader to the southern market, it was seldom that he was again seen or heard of by his friends and kindred.

The fleeing black man was often recaptured before reaching the free states, after which his condition was made worse than before.

But thousands succeeded in crossing the border line and in breathing the air of freedom. But even then, after the Compromise of 1850, their chances of evading capture would have been very meager but for the aid rendered them by persons living along their route. There were hundreds of people in the free states, some colored, but most of them white, who were systematically engaged in giving aid, comfort, and advice to the fleeing slave. These lawbreakers were for the most part respectable and, in other respects, law-abiding citizens. They acted on principle: they believed in a higher law than any framed by human legislators; they believed that a man held in bondage by no fault of his own had a right to his freedom, if he desired it, and they felt it a duty to aid him in gaining it, if in their power. But, in addition to the pleasure of relieving the sufferings of the fleeing slave, there was in the business of aiding the runaway "the excitement of piracy, the secrecy of burglary, the daring of insurrection."¹ The work was carried on with the utmost secrecy and in the most systematic manner. The system was known as the Underground Railroad.

It consisted of many different routes across the free states. The "stations," twenty miles or more apart, were usually private homes in the garrets or cellars of which, or in nearby caves or haymows, the fugitives were kept and fed during the day, and from which they were sent on their way at nightfall. Many of those who engaged in the work did so at their own peril and often at great self-sacrifice, for the law was persistently against them. Mr. Rush Sloane of Sandusky, Ohio, paid \$3000 in fines for assisting runaways to Canada; Thomas Garrett of Wilmington, Delaware, assisted twenty-seven hundred fugitives and paid \$8000 in fines for violating the slave laws. Calvin Fairbank spent seventeen years in the penitentiary for similar offenses.²

One of the most active workers in connection with the Underground Railroad, and the reputed president of the system was Levi Coffin, a prosperous merchant who managed the station at Newport, Indiana, for twenty years. During this period he and his faithful wife, who were Quakers, harbored at least one hundred fugitives each year. The story in "Uncle Tom's Cabin" of the slave woman crossing the Ohio River on the floating ice with her child was a true story, and after this woman reached the home of the Coffins,

¹ Hart's Introduction to Siebert's "Underground Railroad."

² Siebert's "Underground Railroad," pp. 110, 159, 254, 277.

Mrs. Coffin gave her the name "Eliza Harris," and Mrs. Stowe used this name in her novel.¹ The largest number ever harbored by Levi Coffin in one night was seventeen. For this he was arraigned before the grand jury. He was known to be a man of great probity, and nothing could lead him to speak falsely. When arraigned and asked under oath if he had harbored fugitive slaves, he answered that he had no legal knowledge that he had done so; he admitted having received and ministered unto certain persons who had come to his house destitute and homeless. He had done this in obedience to the injunctions of the Bible. These persons, it is true, had said they were fugitive slaves; but he had nothing but their word for it, and as the testimony of a slave could not be received in court there was no proof of his guilt.² Mr. Coffin was released.

One of the most active of the underground workers was William Still, a free colored man of Philadelphia, who served for many years as chairman of the Vigilance Committee of that city, and who after the war published a large volume giving the experiences of the fugitives as related by themselves. No career in the underground work was more picturesque and romantic than that of Harriet Tubman, herself a fugitive from Maryland. She was almost white, was very religious and intelligent, and she earned the name of "The Moses of her People." With Philadelphia as her headquarters she would collect money from sympathizers and make a journey to slave land. After collecting a company of her people, she piloted them across the border and sometimes accompanied them to Canada. She would quiet babies with drugs and have them carried in baskets. She is said to have made nineteen excursions into the slave states and to have abducted three hundred slaves without detection.³ Josiah Henson, also a fugitive, founded a colony and a school in Canada, and made various journeys to the South, abducting in all 118 slaves.⁴

One of the most powerful agencies in shaping the political conscience at the North during the decade preceding the war was "Uncle Tom's Cabin," by Harriet Beecher Stowe. This novel cannot

¹ Coffin's "Reminiscences," p. 113.

² Coffin, p. 192.

³ This woman was employed as a scout and spy in the Civil War. She is still living (1903) near Auburn, New York.

⁴ It has been estimated that as many as sixty thousand or even seventy thousand colored people, a large majority of whom were fugitives, resided in Canada in 1860. Many of them purchased small farms and built houses; others hired out as farm laborers, lumbermen, etc. Family life soon became far more regular than in slavery, and the moral condition was greatly improved.

be named among the greatest works of genius. The narrative shows much bias in the writer, and she is often unfair to the South; but as a series of pictures of slave life, colored with a profound human sympathy, the book attracted and held the attention of readers of every class. It sprung into immediate popularity; three hundred thousand copies were sold within the first year after publication; the sales soon exceeded a million; the book spread over England and her colonies, and was translated into twenty languages. The political effect of this novel did not appear at first, but it eventually became an important agent in the world of politics.¹ The story appealed particularly to the young, and thousands of the boys who in the fifties laughed at Topsy, loved little Eva, wept over the fate of Uncle Tom, and became enraged at the brutal Lagree, were voters in 1860; and their votes, as determined by that book, which led them to believe that slavery was wrong, became a powerful element in effecting the political revolution of that year.

SLAVE LIFE IN THE SOUTH

A hundred years ago the universal verdict of the American people was that slavery was an evil. Such leaders as Washington and Jefferson, themselves slaveholders, deplored the existence of the institution as long as they lived. In later years, when slavery became the chief political issue, almost the entire South, following the lead of Calhoun, pronounced slavery in the United States a positive good. This change was partially due to conviction; but undoubtedly it arose in part from the fact that the slaveholder grew weary of defending what he confessed to be an evil, and, in answer to the cry of the Abolitionist, he veered around, took the offensive, and pronounced slavery a good thing. The question was also, as we have seen, an economic one. If slavery was an economic good, as the people of the South believed, it must also be a moral good; and if both, it ought to be defended and extended. In these latter days, since the institution is a thing of the past, the universal verdict is that which antedated the career of Calhoun — that slavery was an evil, an unmitigated evil.²

¹ Rhodes, Vol. I, p. 284.

² That slavery was a great drawback to the South, from an economic standpoint, is shown very forcibly, with many statistics, in the first chapter of Helper's "Impending Crisis." This book, written by a southerner and published in 1857, was an unanswerable arraignment of slavery.

Nevertheless there were pleasant features in connection with slavery, especially in the border states, where it existed in a mild form. Many a slave was better kept by a humane master than he could have kept himself had he been free. In many a home the attachment between the owner and his slave was a sincere one; the slave was educated and taught religion, and was practically a member of the family. Many of this class had little desire for freedom. But the great majority of slaves were not of this class. Except the house servants, coachmen, and the like, the slaves of the cotton states were toilers in the field. They spent their lives in unrequited toil; and to one who had a spark of the consciousness of manhood or womanhood, what a dreary, cheerless, hopeless life it must have been!

On the great plantations the negroes lived in filth and wretchedness in villages of huts. Their clothing was made of "negro cloth," the cheapest and coarsest material that could be had; their food was almost exclusively corn meal, which they prepared in addition to the day's toil, often exceeding fifteen hours, in the field. Meat was occasionally allowed to those engaged in the most exhausting labor. And yet, where the conditions were at all favorable, the slave was a happy creature. This was due to the inherent quality of the race, and to the fact that he had no care of his own, no anxiety for the morrow. The chief punishment of the negro was flogging, and this was often administered with great severity, not only for insubordination, but for failure to perform the allotted task of labor. If a slave turned against his master, or attempted to escape, he was shot, or he received other punishment that often resulted in his death. There was no law against killing a slave for such provocation; but the willful murder of a negro was a crime in all the Southern states. If, however, a negro was killed by a white man, it often happened that there were no witnesses, or none but slaves, whose testimony was not good in law, and for this reason punishment seldom followed.

The slave lived in gross ignorance. Nearly all the cotton states forbade the teaching of slaves to read or write. In Virginia the owner alone was permitted to do this; in North Carolina the slaves might be taught arithmetic.¹ The Episcopal bishop of Louisiana, Leonidas Polk, who afterward became prominent in the Civil War, owned four hundred slaves, and he had them carefully trained in

¹ Rhodes, Vol. I, p. 327.

religion. But he was a rare exception. Many of the large slaveholders cared little for the moral training of their servants. In morals the average slave was utterly wanting. The women were without a vestige of womanly chastity, and the men were almost universally dishonest. This may have been partly due to the natural tendencies of the race; but it was in a great measure due to the evils of the system. A woman who felt herself owned absolutely by a master could hardly be expected to take an interest in herself, or to cherish a feeling of womanhood. A man who did not and could not own property, not even himself or his children, could not have much idea of the rights of property.¹

The most revolting feature of slavery in America, one that the historian blushes to record (but history must deal with facts), was that too often the attractive slave woman was a prostitute to her master, that her children bore the stamp of his countenance; and yet according to the inflexible rule of the slave states, they shared the condition of the mother, and were sold by their own father. This evil was widespread at the South, as the mixed condition of the black race to-day will testify. A sister of President Madison declared that though the southern ladies were complimented with the name of wife, they were only the mistresses of seraglios. A leading southern lady declared to Harriet Martineau that the wife of many a planter was but the chief slave of his harem. Some slave owners, however, could not bear the thought of selling their own children, and they planned for their ultimate freedom. But the death of the master often caused his plans to miscarry. An extreme example from Coffin will vividly illustrate this point.²

A Virginian owned a beautiful octoroon who became the mother of a son in whose veins flowed the blood of the master. No one could detect a trace of African blood in the child. When still a child the father sent him into another state to be educated and taught a useful trade. He grew to manhood, married a white woman, had a family of five children, and was a highly respected citizen. Neither he nor his friends had the remotest knowledge that he had been born of a slave woman. Meanwhile his father died, and the heirs in settling the estate remembered the beautiful

¹ Some humane masters, however, permitted their slaves to spend their leisure hours in earning money for themselves. Coffin reports that one man and wife saved \$300, which they used in escaping to Canada and setting up a home.

² "Reminiscences," p. 28 sq.

white child that had been sent away many years before. Knowing that he was now a valuable piece of property, they resolved to find him, and did so after a long search. They sold him to a trader without his own knowledge. He had spent many vigilant nights at the bedside of a sick wife, but one night, as she seemed better, he intrusted her with friendly neighbors and retired for a much-needed rest. That night the trader with a gang of ruffians burst into the house, seized their victim while sleeping, and bound him. He demanded the cause of the seizure and was informed, for the first time in his life, that he was a slave. His captors took him from the neighborhood, and to make him look less like a white man, they washed his face in tanooze and tied him in the sun, and seared his hair with a hot iron to make it curly. He was sold to the far South, but some months later he made his escape and returned to his former home. His wife had died of the shock when informed of his capture, and his children were scattered. Again the slave catchers were on his trail, with bloodhounds. He eluded the keen-scented animals by wading through a mill pond and spending a night in the branches of a tree. He now sought counsel, and determined to make a legal fight for his freedom; but his health was broken from exposure, and he died before the next term of court. Such was one phase of slavery in America.

Another feature of the institution that brought it general condemnation was the interstate slave trade, with the evils that grew out of it. This did not exist in colonial days, when the African trade was open; it belonged wholly to a later period. The great cotton belt of the South and the rice swamps were always in want of more slaves, while the border states had more than they needed; and hence was established the interstate slave trade. This brought on two evils that must be condemned by every unbiased observer: the separation of families and the breeding of slaves for the market. It is no doubt true that the negro, especially while in bondage, did not experience in the same degree those intense family ties which are characteristic of our own race. But that the black race was not devoid of these finer feelings was shown by many heartrending scenes at the auction block.¹ To sell a man and his wife and children to different masters, living hundreds of miles apart, when there was

¹ John Randolph, once asked to name the most eloquent speech he ever heard, answered that it was made by a slave-woman, and her rostrum was the auction block. She was pleading for her children.

no hope of their meeting again, was legalized cruelty that finds few parallels in history.

From this brief glance at slave life as it existed before the war any one can see why the national conscience was disturbed, why the voice of the Abolitionist arose from the North and increased more and more, and why that voice could not be stifled until the system itself was swept away. But, withal, it was the misfortune rather than the crime of the South that this baneful system had taken such a relentless hold upon its life. While the conditions at the North were unfavorable to slavery and the institution in that section slowly loosened its hold and disappeared, it was otherwise with the South. Here its roots had struck deeply into the soil; its branches had spread like the arms of an octopus until they embraced everything southern in their fatal grasp. From far back in colonial times the monster had been tightening its coils from year to year and from generation to generation. And now at last this blighting institution had become so interwoven with the political and social fabric of the South that the South no longer had power to deliver itself from the cruel bonds. While the leaders of the slave power cannot be held guiltless at the bar of history, it is certain that the South as a whole was the victim of this curse of slavery, bequeathed to it by former generations.

NOTES AND ANECDOTES

The Clayton-Bulwer Treaty. — This subject has been relegated to a note, not because it is of minor importance, but because it did not exactly fit in our slavery discussion. John M. Clayton was secretary of state under President Taylor. He arranged with Henry Lytton Bulwer, the British minister at Washington, the famous treaty that bears the name of both. The object of this treaty was to facilitate and protect the construction of a canal at Nicaragua between the Atlantic and Pacific oceans. By this treaty both countries pledged themselves never to obtain exclusive control over said proposed canal, nor to erect fortifications commanding it, nor to colonize or exercise dominion over any portion of Central America. They further agreed to protect any company that should undertake the work, and to facilitate its construction, and they guaranteed the neutrality of such canal when completed. But few years passed after the consummation of the treaty before it became the object of serious discussion, the provisions being differently construed in the two countries. At length the canal question subsided, and for many years it attracted little attention. Meantime the Pacific Coast of the United States became filled with people, the relative interests of the two countries were greatly changed, and it was evident that the terms of the treaty were disadvantageous to the United States.

After many years' negotiation, the Clayton-Bulwer Treaty was abrogated by a new treaty (1902), known as the Hay-Pauncefote Treaty, by which the United States secures full power to construct and to operate the proposed canal.

Louis Kossuth. — In that great year for revolutions in Europe, 1848, Hungary made a brave effort to cast off the Austrian yoke, and might have succeeded but for the interference of Russia. Louis Kossuth, the governor of Hungary, and one of the most remarkable men of his time, took refuge in Turkey, on the failure of the Hungarians to win their freedom. From Turkey he was conveyed in a United States war vessel to New York in 1851, and was received with demonstrations accorded to no other foreigner that ever visited America, except Lafayette. His reception by the administration and by both houses of Congress was extremely cordial. He traveled through the country and spoke in many cities, having an excellent command of the English language, and being possessed of extraordinary powers of eloquence. But on the whole his visit was a failure. His object was to secure the intervention of the United States in behalf of his downtrodden country. But the government could not see its way clear to suspend its traditional attitude of neutrality in European affairs. Kossuth then sought private contributions for the cause of his people, but even in this he was not very successful. He returned to Europe in July, 1852.

Anecdotes of Clay. — No man ever in public life in America had greater power in winning personal friends than Henry Clay. When John Randolph, who had been Clay's political enemy for many years, and with whom he had fought a duel, visited Washington in the last year of his life, he called on Clay. Clay received him very kindly, and asked about his health. Randolph replied, "I'm dying, Clay, I'm dying." — "Why, then," asked Clay, "do you venture so far from home? Why did you come here?" — "To see you," answered Randolph; "to see you and have one more talk with you."

When Clay made his famous farewell address to the Senate in 1846, he brought tears to every eye. At the close of the speech, as he was passing out of the chamber, he came face to face with Calhoun. They had been enemies, and had not spoken for five years, but at heart each really loved the other. Now, at this meeting, all animosity was forgotten, and without a word they fell into each other's arms and wept silently. On one occasion when Clay was making a tour through the South, there was on the same train a farmer, an old-school Democrat, who was invited to step into the next car and meet Clay. "No," he answered, "I would not be seen shaking hands with Henry Clay, the old Whig." He was informed that his idol, Van Buren, had often done so. The farmer declared that he did not believe it, that Van Buren would never do such a mean thing. He offered to make a bet that he was right and agreed to let Clay himself decide the bet. They came to Clay's seat and stated the case. "Yes," answered Clay, "Van Buren is a good friend of mine, and he made me a visit at my home in Lexington. Setting aside his bad politics, he is an agreeable gentleman and a right clever little fellow." The man paid his bet, and went away muttering that if that is the way the great men acted they might fight their own battles hereafter, he didn't believe they were in earnest anyhow, only pretended to be so as to set others by the ears. See Sargent's "Public Men and Events," Vol. II, p. 221.

Clay was a man of ready wit, and he often astonished his friends by his quick answers. The following is a sample: One day while at a Philadelphia hotel, he was called on by John W. Forney, editor of the *Press*, in company with Forrest, the actor. It was just after the great debates in the Senate on the Omnibus Bill, and these debates soon became the topic of conversation, especially the opposition Clay had encountered from Senator Soulé of Louisiana. Whereupon Clay exclaimed, "Soulé is no orator, he is nothing but an actor, a mere actor." No sooner had he said this than he realized the presence of Forrest, the actor, and turning to him, added, "I mean, my dear sir, a French actor, a mere French actor." Forney's "Anecdotes of Public Men."

Anecdote of Cass. — General Lewis Cass was, as stated in the text, a dignified, urbane man, who could brook no familiarity from his inferiors. The following incident, given by Forney, will illustrate the point: One of the leading hotels in Washington at this period was Guy's Hotel, and here many of the leading government officials, including General Cass, stayed while at the Capital. It happened that General Cass and Mr. Guy, the hotel keeper, both large, corpulent men, looked very much alike, and each was often mistaken for the other. One day a western man came to the hotel and met General Cass on the porch and, taking him for Guy, slapped him on the shoulder and began, "Here I am again, old fellow; last time I hung up my hat in your shanty, they put me up on the fourth floor. Want a better room this time. How about it, old man?" Cass braced himself up with great dignity and answered: "Sir, you've committed a blunder, I'm General Cass of Michigan," turned about, and walked off. The man stood and looked after him, dazed at his mistake. Presently Cass walked around that way again and the man again took him for Guy and exclaimed: "Here you are at last; I've just made a divil of a blunder. I met old Cass and took him for you, and I'm afraid the old Michiganander has gone off mad." Just then Guy appeared on the scene.

Items of Interest. — The coming of Jenny Lind, the "Swedish Nightingale," in 1851, served, like the visit of Kossuth, to divert public attention from the all-absorbing slavery question. Her tour of the United States, Canada, and Mexico, managed by Mr. P. T. Barnum, was a brilliant success, the receipts exceeding \$600,000.

The reduction of postal rates in 1851 was an event of historic interest. There had been two reductions before this, and at this time the rate for a letter weighing a half ounce or less was five cents for three hundred miles or less; over three hundred miles, ten cents, and to the Pacific Coast by way of Panama, forty cents. The rate was now made three cents for three thousand miles or less, and six cents for more than that distance. This act continued in force until 1883, when two cents was made the letter rate.

In 1849, and again in 1851, Narcisco Lopez led a filibustering expedition to Cuba for the purpose of rescuing the island from Spanish control. The expedition was supposed to be in the interests of the slave states with the annexation of Cuba to the United States for its ultimate object. But the Cubans did not join Lopez as the latter expected. His company was routed by the Spanish soldiers in 1851, and he himself was taken captive and was garroted in the public square in Havana.

CHAPTER XXIV

THE GREAT POLITICAL DUEL BETWEEN THE NORTH AND THE SOUTH PRECEDING THE CIVIL WAR

THE PRESIDENTIAL ELECTION OF 1852

THE excitement over the compromise measures had scarcely subsided when the quadrennial election of a President claimed the country's attention. Seldom had the political sky been less clear. The advantage seemed to lie with the Democrats, not that their party had been wiser than the opposite party, nor that it had done anything to deserve the support of the country, but because it had been out of power and was less responsible than its rival for the fierce agitation over the Omnibus Bill.

The Democratic convention met in Baltimore on the 1st of June. Four notable aspirants for the honor were prominently spoken of: General Cass, the stalwart and dignified leader; James Buchanan of Pennsylvania, Stephen A. Douglas, "The Little Giant," and ex-Governor Marcy of New York. But each had his element of weakness, and after many ballots it was seen that none of these four could command the necessary two thirds, and the convention cast its eyes about for a dark horse.

**Democratic
aspirants.**

The mantle fell on the shoulders of Franklin Pierce of New Hampshire. Pierce was the son of a soldier of the Revolution, and he learned his first lessons of patriotism while sitting at his father's hearthstone listening to the stories of that long and dreary war, told over and over again by his father and the comrades who often gathered at his fireside to talk of the olden days.

**Nomination
of Pierce.**

The son grew to manhood, became a leading member of the bar, and served in both houses of Congress. He declined an invitation to enter the Cabinet of President Polk, but he volunteered his services to the Mexican War, and, though he knew little of military affairs, the favor of the President soon made him a brigadier general. In no sense was Franklin Pierce a great man. He had

not won great distinction as a lawyer, nor as a statesman, and still less as a soldier.

But Pierce possessed some of the needful qualities of a successful candidate. He was hale and jovial, and he won friends on every side. Being a secondary man in public life, he had awakened few antagonisms. Moreover, he accepted unreservedly the Democratic platform, the chief plank of which was that indorsing the compromise measures, including the Fugitive Slave Law. A wave of disappointment spread over the party at the nomination of Pierce. Why should the great party leaders, who had spent their lives in the forefront of battle, be set aside for this mediocre man? But this feeling subsided and the party was soon united as one man for its candidate.

The Whig convention met ten days after the adjournment of the Democrats, in the same hall of the same city. The party was hopelessly divided; it was little more than a disorganized mass, and the herculean efforts of the leaders to bring harmony proved fruitless. The chief candidates for the nomination were three: Winfield Scott, Millard Fillmore, and Daniel Webster. But the rock that threatened to wreck the party was the platform, rather than the choice of candidates. The southern wing of the party demanded that the convention indorse the compromise measures as a finality. Such an

**Whig
convention.**

act would be equivalent to a promise to agitate the subject no more, and to aid in the enforcement of the Fugitive Slave Law. How could the Seward Whigs do this? How could the men who had fought that measure in Congress, or those who had been enraged at the seizure of Anthony Burns, had exulted at the rescue of Joshua Glover — how could they now pronounce that hated law a final settlement of the great question?

Yet the southern Whigs were inflexible in their demand that the convention indorse this measure, as the Democratic convention had done. Many Democrats had also opposed the passage of this law; but most of these had reëntered the party fold; a few had swung away into the ranks of the Free-soilers. The defection in that party was not serious. It was like a tiny satellite cast off from the major planet. But it was different with the Whigs. Under the powerful leadership of Seward nearly half the party was ready to resist the demands of the South. At length, however, the Seward people, after coming to a tacit understanding with some of the southern delegates that the northern wing should name the candi-

date, yielded the point, and the Fugitive Slave Act was indorsed as a finality by the convention. Yet it was with exceeding difficulty that Scott was nominated. The South objected to Scott because he stood too near to Seward, the originator of the higher-law doctrine, because he refused to express himself on the compromise, and because he had written a letter some years before which seemed to indicate that he desired the ultimate extinction of slavery.¹ The South wanted Fillmore, a northern man, it is true, but he had signed the Fugitive Slave Law and had shown great vigor in enforcing it.²

Winfield
Scott.

Then there was Webster, who fondly hoped that the prize would fall to him. But Webster was the idol of no great section. He had a few faithful friends, but he had forfeited the allegiance of the North by his Seventh of March Speech. Whatever may have been his motives in making that speech, whatever may be the judgment of history in regard to it, it is certain that his contemporaries could not shake off the belief that he was bidding for southern support in the presidential race, and that thenceforth he was classed with the northern men of southern principles.³ But the South would not support Webster. He was too new a convert to win their confidence. They remembered him as the author of the mighty speech against Hayne, as the reviver of the doctrine of nationality; and if now he would barter the convictions of a lifetime to win the favor of the South, what might he do, if he became President, to regain the favor of his own section? No, the South could not trust the great New Englander with the sacred interests of slavery, and in all the fifty-three ballots of the convention he received not one vote from that section.⁴

Scott was nominated on the fifty-third ballot; but this did not bring harmony to the party. His name awakened little enthusiasm

¹ Von Holst, Vol. IV, p. 160.

² The Fillmore followers were called "Silver Grays."

³ Horace Mann declared that if President Jackson, to win a third term, had defended the United States Bank and made Nicholas Biddle his bosom friend; if Clay had abandoned his protective principles and become a free trader; if Calhoun had raised the standard of immediate emancipation—none of these changes would have furnished such material of contradiction and amazement as that of Webster. "Mr. Webster espouses doctrines more southern than South Carolina, and becomes Calhouner than Mr. Calhoun."—*Congressional Globe*, 1st Session 32d Cong., App., p. 1079.

⁴ It is said, however, that the southern delegates promised Webster their votes if he could come down to Mason and Dixon's line with forty. But this, as they probably knew, he could not do.

in the North and still less in the South. Alexander H. Stephens, Robert Toombs, and other leading southern Whigs put forth a manifesto declaring that they would not support Scott. Such was the condition of the Whig party when it went before the people asking their suffrages in 1852. Twice had the Whigs won by choosing a soldier to head their ticket, and now they had chosen a third, greater than either; but the times had changed. Scott lost ground throughout the campaign, and carried only four states in the election.¹ The victory of Pierce was more sweeping than any since the second election of Monroe, though the campaign was notable for the extreme apathy of the people. William R. King of Alabama, who had served many years in the Senate, was elected Vice President.

The cause of the great Democratic victory was the fact that the party was unanimous and doubtless sincere in its promise to leave the slavery question undisturbed, a matter on which the Whigs, notwithstanding their forced platform, were yet divided. The people, especially the business men of the country, were utterly weary of the agitation, and they gave their suffrages to the party that promised them rest.²

DEATH OF CLAY AND WEBSTER

While the Whig convention sat in Baltimore, the founder of the party lay on his deathbed in Washington. But once since the opening of Congress had Clay been able to go to the Senate. He was dying, and the summons came ere the close of the month that had witnessed this last national convention of the party in which he had so long been the leading figure. His end was peaceful and calm; he passed away with sincere confidence in the Christian religion. Few men have been so deeply mourned by the whole nation as was Henry Clay. The solemn funeral procession passed through various cities of the North before crossing the Alleghanies; and, as it moved to the mournful music, the evidence of sorrow, shown by the vast crowds that gathered, betokened the love in which the deceased was held.

Henry Clay possessed some great qualities. As a parliamentary leader he has no equal in American history. As a party leader, as

¹ Vermont, Massachusetts, Kentucky, and Tennessee. See Stanwood's "Presidential Elections," p. 191.

² The Free Soil party had also its ticket in the field, headed by Senator John P. Hale of New Hampshire; but it carried no state, and its popular vote was much lighter than in 1848, when Van Buren headed the ticket.

an idol of the people, he stood in the highest rank ; and indeed, but three men in our history — Jefferson, Jackson, and Blaine — can be classed with him in this respect. Clay was a man of definite party principles and aims, but at a time of imminent peril he would waver and stoop a little below his ordinary level to carry his ends. This is shown by his Alabama letter, and by his hedging on the tariff in the campaign of 1844. As a statesman Clay cannot be placed in the very first rank. He lacked the broad, analytic mind of Jefferson, the deep foresight of Hamilton, and the prophetic intuition of Jackson. His judgment was too often at fault. Some of the greatest achievements of his life proved to be political blunders, notably his forcing the bank charter through Congress in 1832.

Character of Clay.

Clay has been called the great compromiser, though he was the author of but two compromises in his long career : first, that of 1833 on the tariff, and second, the Compromise of 1850.¹ But the wisdom of both of these is open to question. The compromise measures of 1850 may have been necessary to avert greater dangers ; but its author did not foresee that he was sacrificing his own beloved party upon the altar, and that the evils he sought to avert were only postponed for a very few years. But Nature kindly spared him from seeing those evils, and Henry Clay, after a long public career, strangely mingled with light and shadow, laid aside his staff “like one that is weary,” and his ashes were laid to rest in his own beloved Kentucky.

Daniel Webster, a few years younger than Clay, was associated with him in public life for nearly forty years, and their names are frequently linked together in history. They were leaders in the same great party ; usually, but not always, they were personal as well as political friends. But the two men were so unlike that it is difficult to find a point of resemblance. As a party leader Clay stood far above Webster ; as a giant in intellect Webster overshadowed Clay. Clay won the love of the people ; Webster won their admiration and praise. Clay made many warm friends, and had bitter enemies ; Webster had fewer friends, and almost no personal enemies. Both were intensely American, and the passionate desire of each was to become President of the United States. With Clay this longing covered most of

Clay and Webster compared.

¹ Clay has often been called the author of the Missouri Compromise ; but aside from the second compromise concerning the admission of free blacks into Missouri, he had no more to do with it than some of his colleagues.

his political life; with Webster, only a few of his latter years. Both failed, but each made a permanent name in American history far above that of the average President.

As an orator Webster holds the first place in our history; as a constitutional lawyer he stands without a peer, and he was singularly powerful in developing a constitutional principle. But he was not painstaking; he disliked the routine work of Congress, and one of his lifelong drawbacks was indolence. Webster was not without faults, the most notable of which was a want of thrift. His income from his profession was large, but he had no power to keep out of debt, and his life work would have been thereby weakened but for the aid of some of his rich friends, who now and then came to the rescue. The last years of Webster's life were weakened by his inordinate desire to be President; but he always fell far short of receiving the nomination of his party. He was more popular with the masses than with the politicians, but not even among the people was there any great desire for his candidacy. He had never been a party leader, nor had he proved himself a safe party man; and, as above stated, he appealed to the intellect rather than to the heart. The last great effort of his friends to secure his nomination at Baltimore in 1852 proved a disastrous failure.

Webster's grief and disappointment at this crushing defeat furnish the saddest incident in his great life. The account of his interview with his friend, Rufus Choate, the great Boston lawyer, after the convention had adjourned, is inexpressibly sad, and Choate afterward referred to it as the most mournful experience of his life.¹ A few months later the great New England statesman sank down into the grave, denouncing the pursuit of politics as vanity of vanities, and advising his friends to vote for the Democratic candidates. Thus the most brilliant star in the political firmament, after waning from the passing of its zenith, was obscured at its setting by a dark cloud.²

But Webster's final days were days of peace. As he lay at his Marshfield home waiting for the final call, he seemed to have forgotten all about the turmoils of political strife, and his mind soared through the realms of the unknown. He spoke of the wondrous works of God; he requested that on his tombstone be inscribed a statement of his profound belief that the Gospel of Jesus Christ

¹ Harvey, quoted by Rhodes, Vol. I, p. 260.

² See Von Holst, Vol. IV, p. 204.

must be a divine reality; he discussed the gradual steps of dissolution with his physician, and said that no man who is not a brute can say that he is not afraid of death. "I shall die to-night,"¹ said he to his physician, as the sun rose on the last day of his life. It was on one of those dreamy October days, known as Indian summer, when Nature invites everything that hath breath to love her and to praise the Lord, that the great man cast his eyes for the last time on her changing forms, that he heard for the last time the murmuring waves of the Atlantic through his open window, that he called his family one by one and bade them farewell. At nightfall he sank into a gentle slumber. Waking after midnight, he said, "I still live," his last intelligible words. In the early morning his life went out with the ebbing of the tide.²

The mourning for Webster was widespread and sincere. The attitude of the South at the Whig convention had caused a reaction throughout the North. Boston had given him a grand reception in July, and now Massachusetts was heartbroken at the death of her great son.

All human talents and virtues have their limitations. Nature is not uniform in distributing her gifts. When she makes a man great in this or in that line, she often leaves him in other respects, like Samson with the shorn locks, as weak as other men. Webster's life was a great life; but he was weak in some points. Strange that such a man should pine for an office that so many smaller men had filled. Strange, too, that he could not see, as we now see, that the presidency, had he attained it, would not probably have added a jot to his illustrious name in American history. But we must remember Webster, not by the weaknesses of his later years, but for his whole life, especially for the principle of nationality of which he was our greatest exponent, a principle epitomized in his own undying words: "Liberty and Union, now and forever, one and inseparable."

FALL OF THE WHIG PARTY

We have taken leave of the two great leaders of the Whig party; we must now give a parting word to the party itself. But a few weeks after the death of the great New England statesman at Marshfield the party to which he belonged received a blow at the polls from which it could not recover. This was the last national

¹ Curtis's "Life of Webster," Vol. II, p. 696.

² *Ibid.*, 697-701.

campaign of the Whig party. The structure was tottering to its fall, and ere the return of the next quadrennial election the story of its existence was history. Of the many political organizations in our history the Whig party was one of only four that became so powerful as to secure control of the government; and it differs from the other three in that it has left us no legislation of permanent value, by which to enrich our national life and to distinguish its name in history.¹ During the twenty years of its existence it had but one rival, the Democratic party, and by that party it was beaten in all its great measures. It will be remembered that the compromise measures of 1850 were sectional and not partisan in their nature, and while most of the country seemed disposed to accept them as a finality, they awakened the lasting opposition of many, and the odium had to be borne by the Whig party. Many Democrats had supported the measures, but they were fathered by the great Whig leader and signed by a Whig President, and the resentment they awakened north and south was visited upon that party. On this rock the party became hopelessly divided, and these measures are usually regarded as the cause of its downfall. But there were other causes.

The old Federal party had been overthrown because it was too aristocratic and centralizing in its tendencies, because it differed too widely from its Democratic rival. The Whig party's downfall was due in part to the opposite reason — it had become too Democratic. It had yielded to the Democrats on all the great issues between them: the bank, the independent treasury, the tariff, and at length the issues of the Mexican War. Not one of these did the Whigs attempt to disturb when they regained power in 1848; and the only other great question before the country, slavery, was sectional and not partisan. After 1850, therefore, the two great parties stood on common ground. No longer were there principles to fight for — only spoils. And since, as before stated, in the world of politics two of a kind cannot exist together, one of these two parties must disappear.

But the Democratic party was no better than the Whig. Why then did it survive while its rival perished? Because, first, its traditions and history, almost coexistent with the government, appealed to the sentiment of its adherents; second, it had held a steady course while the Whigs had yielded every important issue

¹ See Schouler, Vol. IV, p. 261.

between them; and third, it escaped the odium of the compromise. Thus, from various causes, the Whig party passed into history, and by so doing it made way for another that was soon to be born, one destined to do a mighty work for the nation which the old party could not have done.

Millard Fillmore, the last of the Whig Presidents, was a man of sincere and honest motives. The odium of signing the Fugitive Slave Law he could not outlive; but, as before stated, there is little doubt that he meant it for the best, and it is difficult to see how he could have done otherwise without bringing disaster on the country. He was the victim of conditions that he could not control.

THE KANSAS-NEBRASKA BILL

Franklin Pierce was the youngest man ever made President up to that time.¹ His inaugural address was generally well received; but the statement that new territory should be acquired (and this meant Cuba) confirmed the belief that in the great controversy that had convulsed the country the sympathies of the new President were with the South. And so it proved; whenever it became the duty of this northern President to show his hand on the slavery question, he invariably decided with the slaveholder.

In his cabinet we find three men of national fame. Marcy of New York, who had served in Polk's cabinet, became secretary of state; Jefferson Davis of Mississippi, secretary of war; and Caleb Cushing of Massachusetts, attorney-general. **The Cabinet.** Marcy had for many years been a leader in New York, had been governor of the state and senator in Congress. His famous phrase "To the victors belong the spoils," has been quoted by unnumbered millions — at first as a happy statement of a policy accepted by all; now, only to be condemned. Davis had risen rapidly in public life after the Mexican War, in which he had proved himself a brave and skillful officer. But his strange career was only begun, and we leave a further account of him to a later page. Cushing was one of the most learned men ever in public life in America. He had been a Whig in ante-Tyler days, had performed a most useful service as commissioner to China, and on his return had

¹ Mr. King, who had gone to Cuba for his health, was there sworn into office as Vice President. He returned to his Alabama home a few weeks later, and died on April 18.

joined the little Tyler party; but on its collapse he refused to return to the Whig fold, and joined the Democrats. It was said that Cushing's linguistic knowledge was so extensive that he could converse with every foreign minister at Washington in the latter's own language. The other members of the Cabinet were inconspicuous, and even their names would not interest the reader. This Cabinet is the only one, even to this day, that remained unbroken during an entire presidential term.

Not long had Pierce been President when his popularity began to wane, and so it continued steadily to the end of his term. It was evident that he lacked executive ability and firmness. He received every office seeker with suavity of manner, and led him to believe that he would receive the desired appointment. But many had to be disappointed, and this failing gave the President much trouble and made him many enemies. But with all his vacillating he was constant in one thing—his desire to please the South and to crush the Abolitionists.¹ To annex Cuba was the first great aim of the administration.² To further this end Buchanan was selected as minister to England, Mason to France, and Soulé to Spain; all of whom were determined advocates of the project. These three ministers, directed by the President to meet at a convenient place to consider the subject, met at Ostend, a little town in Belgium, and issued an address, known as the Ostend Manifesto. In this they urged the transfer of Cuba to the United States, by purchase if possible, by force if necessary. This was not acted on by the administration.

Ostend Manifesto, 1854.

In his inaugural address President Pierce had promised the country a rest from the distracting slavery question, and this promise he renewed in more emphatic words in his first annual message to Congress. And the people were pleased; the compromise as a final settlement was taking a firmer hold upon the public mind. The North had even become quiescent on the Fugitive Slave Law.³ The country

¹ Cushing, who was, in an extreme sense, a northern man with southern principles, stated in a letter that the administration was determined to crush out abolitionism in every form. Cushing, as well as Pierce, came to sympathize with secession in the sixties.

² Our filibusters had awakened apprehension in Europe, and in 1852 England and France had proposed a tripartite agreement with the United States to disclaim all intention to get possession of Cuba; but the United States declined to enter the agreement.

³ Sumner had made a powerful speech in the Senate, calling for the repeal of the law (July, 1852); but the effect of this had largely subsided.

was prosperous; railroad systems were extending in every direction; manufacturing and commerce were at high tide; the national treasury was full to overflowing. Moreover, the Democratic party had a powerful hold upon the country. Not only the President and both houses of Congress, but also the governor and legislature of nearly every state, were Democratic. Surely the party had every promise of another long lease of power. Such was the condition of the country and the party at the opening of the year 1854, when suddenly there broke forth from the political sky a storm more terrific than any that had preceded it in the history of the government. It came in the form of a legislative act, and its author was Stephen A. Douglas.

Douglas was one of the most brilliant and ambitious men in public life. Though less than forty years old, he had vied with the old leaders of the party for the presidential nomination in 1852, and had received nearly a hundred votes. His support, however, had come from the North, and it was necessary in those days for a candidate to win southern support in order to gain the presidency, or even the nomination of either of the great parties. Cass, Marcy, Cushing, Buchanan, Fillmore, Pierce, and even Webster had shown themselves ready to aid the slave power in its contest with the rising abolitionism of the North; but Douglas had done nothing to win the favor essential to the realization of his ambition. He was now chairman of the Senate committee on territories, and here was his opportunity.

The northern part of the Louisiana Purchase, a vast uninhabited region of nearly half a million square miles, lay northwestward from Missouri and extended to the boundary of British America. The territory was known as Nebraska. Douglas now brought a report before the Senate to give this region territorial organization. In this report were two statements of far-reaching importance: first, that the provision in the Compromise of 1850—that Utah and New Mexico be organized with no decision for or against slavery—was designed to establish certain great principles, namely, that all other territories be organized in the same way—that is, the subject of slavery in each must be decided by its future inhabitants; second, that in the opinion of eminent statesmen Congress had no authority to legislate on the subject of slavery in the territories, and, therefore, the eighth section of the Missouri Bill of 1820 is null and void. Now the eighth section of the Missouri Bill is that which established the compromise line of 36° 30'.

**The first bill,
January 4,
1854.**

In few words the above meant this: first, that Congress in deciding in 1850 to keep its hands off the slavery subject in Utah and New Mexico, meant that this decision should apply to all future territories—which every intelligent man in and out of Congress knew to be false; and second, that the Missouri Compromise was unconstitutional.

Douglas professed to believe that he had found a way by which to secure eternal rest for the country on the subject of slavery in the territories, by relegating the matter to the territories themselves. But Douglas knew better. He must have known that his bill, if it became a law, setting aside the Missouri Compromise, though not actually repealing it, would be sternly resisted at the North. The Congress of 1820 had no power to bind its successors; but that solemn agreement between the North and the South that slavery be forever prohibited north of $36^{\circ} 30'$ in the Louisiana Purchase, made when Douglas was a toddling child of seven years, had received the sanction of the greatest statesmen of the time, and had stood like a wall for thirty-four years. It was more than an act of Congress. It was an agreement, almost as binding as a treaty, between two great sections of the country. What Mason and Dixon's line was to the East, the line of $36^{\circ} 30'$ was to the West. Could Douglas now suppose that he could set aside this compact, and enable the slaveholders to fill the heart of the continent, even to the Canadian border, with their human property, without raising a storm of indignation? But the end had not yet come. Douglas knew that his report would please the South, though he had consulted with no southern men in its framing. Scarcely, however, had **Dixon's amendment, January 16.** the country caught its breath when Dixon, a Kentucky Whig who was filling the unexpired term of the lamented Clay, arose and offered to the Nebraska Bill an amendment actually repealing the Missouri Compromise. This was startling to the Senate and especially so to Douglas. He had not intended to go to such lengths; but seeing that, if he rejected the amendment, he would displease the South and lose all credit for what he had done, he embodied the amendment in his report.

The rising storm of indignation at the North was now swelling in volume, and it threatened to become a resistless hurricane. Douglas saw that to escape being overwhelmed he must secure the support of the administration. President Pierce was known to disfavor the Dixon amendment,¹ nor was Douglas in intimate relations with the

¹ This was shown by the Washington *Union*, the organ of the administration.

President. But he knew that the secretary of war, Jefferson Davis, belonged to the inner circle of the President's counselors, and he believed that Davis could not oppose a measure so favorable to the South. Douglas therefore sought Davis, and Davis sought the President. The three men had a long conference on Sunday, January 22. The vacillating Pierce soon yielded, and the three agreed that the Missouri Compromise ought to be repealed. Only a few months before Pierce had renewed his promise that the repose of the people should suffer no shock during his official term, if it were in his power to prevent it. Here was the opportunity of a lifetime, not only to keep a solemn pledge, but to show himself capable of making a stand on principle, and thus to do his country a great service and to make for himself a name in history. The opportunity was lost. Pierce desired the support of the South in the next presidential race; this fact would explain his action; so with Douglas. Of the three men Davis alone acted on principle and conviction.¹

On the day following this conference Douglas offered a second bill in the Senate, embodying the substance of the first, with the addition that it provided for the repeal of the Missouri Compromise² by declaring it inoperative, and divided **The second bill.** the territory into two parts to be known as Kansas and Nebraska. The Illinois senator defended his bill with great power; but he had not smooth sailing. There were strong men in his own party whom he could not control. Before the close of January a protest known as an "Appeal of the Independent Democrats in Congress to the People of the United States," written by Chase and signed by the Free-soil Democrats, was published and sent broadcast through the North. This was a powerful arraignment of the proposed law, pronouncing it a "gross violation of a sacred pledge, a criminal betrayal of precious rights, . . . an atrocious plot to exclude from a vast unoccupied region immigrants from the Old World and free laborers from our own states." The Appeal was

¹ The view of Professor Burgess, that Douglas may have been actuated by his exaggerated notion, as a radical Democrat, of the virtues of the western people and of the importance of local autonomy, should not be wholly rejected. But this view cannot alone account for Douglas's extraordinary action.

² In actual practice the Missouri Compromise had been violated. By act of Congress in June, 1836, a large tract of land lying north of the Missouri River and belonging to the territory of Nebraska was incorporated into the state of Missouri. This was soon occupied by slaveholders with their slaves; but the matter attracted little attention at the time.

published in all parts of the free states, and the response of the people was astonishing for its suddenness and its vehemence.

Chase led the opposition, and his speech, on February 3, revealed his powers and stamped him as one of the strongest men of his time. Chase was followed by Seward, Wade, Sumner, and Edward Everett, all of whom took strong ground against the proposed legislation. Douglas's management of his bill in the Senate showed him a master parliamentarian. At length the time came that the final vote was to be taken. It was near midnight on the 3d of March when the Little Giant rose to close the debate. Small of stature,

Douglas was nevertheless impressive in appearance, and as he rose on this occasion his face shone with animation and conscious power. Never before had he spoken with such force as he did that night. The Senate chamber and the galleries were crowded, and, though Douglas spoke all night, the audience remained to hear the last word. Douglas knew that the bill would easily pass the Senate, but he also knew that the North had condemned him, and this was his great opportunity to vindicate himself before the people. The burden of his speech was an endeavor to show that the repeal of the Missouri Compromise, of which his critics had made so much, was only an incident of the bill before the Senate; that the main object was to establish the "funda-

**Douglas's
great speech.**

mental principle of popular sovereignty," to relieve Congress and the country in future of all trouble about slavery in the territories, and to remove the vexed question from politics by leaving the whole matter to the inhabitants of the respective territories.

The sleeping city was roused that morning by the boom of cannon that announced the passage of the measure. As Chase walked down the Capitol steps, he exclaimed to Sumner, "They celebrate a present victory, but the echoes they awake will never rest until slavery itself shall die."

The bill then went to the House. Here the opposition was formidable, and the bill passed only after a fierce debate, amid some of the wildest scenes ever known in the House of Representatives. Among the negative votes was that of the sturdy old Missourian, Thomas H. Benton, who, having lost his seat in the Senate because of his independence on the slavery question, had become a member of the House.

The reception of the Kansas-Nebraska Act at the North was such as to make the politicians stand aghast. The voice of the people began to be heard while the measure was yet pending. It came through the press and the pulpit, and through great mass meetings in the large cities. A majority of the northern state legislatures recorded their disapproval.¹ Douglas was denounced on every hand as the betrayer of his country, the Judas Iscariot, and a society of women in Ohio sent him thirty pieces of silver. His middle name, "Arnold," was emphasized to connect him with the archtraitor of the Revolution. Attempting to speak in his own city of Chicago, he was hooted off the stage. By his own statement he "could travel from Boston to Chicago by the light of his own effigies."

Douglas had made a frightful blunder. He and his followers had enacted into law a measure of vast moment, without having made it an issue in any campaign, without consulting their masters, the people. However popular, however powerful a political leader may be, if he presume too far on the rights and the patience of the multitude, he will find himself crushed by the ponderous weight of public opinion. Douglas was no doubt an honest man at heart. But in this daring play in the presidential game he had failed to count the

Opposition at
the North.

¹ A few of them took no action. Illinois alone of all the Northern states approved the measure by a small majority of the legislature. The bill was received with great applause at the South.

cost. Brilliant, popular young leader that he was, he had won the American heart as few had ever done; but now he overstepped the bounds of public forbearance, and he soon found himself dashed to the ground like a broken toy, and his presidential prospects forever blasted.¹

The promoters and friends of the Kansas-Nebraska Act could hardly have been sincere in their claim that it would take the slavery question out of national politics. Any one might have foreseen that if the people of a territory had this matter to decide, and the friends of slavery and of freedom would meet on the ground, each aiming to gain the mastery, there would be a clash. And yet by this law Congress had bound itself not to interfere. The one and only instance in which this law was put into operation was in Kansas, and a sorry exhibition it was, as will be shown hereafter. Again, the seeds of endless strife were sown with the very inception of this bill. The South chose to understand it to mean that a territory has no right to prohibit slavery from its bounds, that it can do this only on becoming a state. On the other hand, the people of the North, including Douglas, took the ground that the people of a territory had the power to vote on the subject of slavery among them at any time during the territorial state. This point of contention alone proved that the Kansas-Nebraska bill had settled nothing.

This act had never been equaled in results by any legislation since the foundation of the government. It gave the finishing blow to the dying Whig party by a final alienation of its northern and southern wings. It brought disruption to the Democratic party, alienated the German vote, hitherto almost solidly Democratic, sacrificed the prestige of the party in New England, in Pennsylvania, and in the Northwest, and it marked the beginning of the end of the long lease of Democratic rule, which had begun with the century under Jefferson. It opened the way for the founding of another great political party with antislavery extension as its corner stone.²

FOUNDING OF THE REPUBLICAN PARTY

The powerful revulsion in Democratic ranks, occasioned by the Kansas-Nebraska bill, would not subside. Thousands of men who had adhered to the party of Jefferson for a lifetime, men who had stood

¹ Douglas now enjoyed popularity at the South; but this, as will appear later, he had to sacrifice in order to win back the North.

² Rhodes, Vol. I, p. 490.

by Jackson on the bank issue, by Van Buren on the subtreasury, who had adhered to the policy of Polk on the tariff and the results of the Mexican War, men who frowned on abolitionism and made no quarrel with the Fugitive Slave Law—thousands of such men found the Kansas-Nebraska Law unendurable, and they broke away from the party of their fathers and wandered homeless, seeking a political fold. Then there were the northern Whigs. Their party was shattered to fragments, and its future was hopeless. Some of them joined the Democrats, but the great majority were deterred by prejudice, by conviction, or by the Kansas-Nebraska Law. The old Free-soilers were also ready for some new movement.

A third element of homeless wanderers came a little later from the American or Know-nothing party, to which it is now time to give a moment's notice.

From far back in the thirties a strong feeling of nativism, aimed against foreigners, and especially against Roman Catholic foreigners, showed itself in different parts of the country, and it often resulted in riots. In 1841 a state convention in Louisiana founded the American Republican party, afterward called the Native-American party. This movement, whose chief principles were to put only native born Americans into office and to extend the naturalization period to twenty-one years, soon spread to the North. It elected a mayor in New York City in 1844, and had half a dozen members of Congress the following year. But as the Mexican War and slavery came to absorb public attention, the movement subsided, and not a member did the party send to the Congress that met in 1849. But the upheavals in Europe in 1848 and the discovery of gold in California caused a rush of emigrants from Europe greater than ever before to the shores of America.¹ This reawakened the old anti-foreigner feeling, and in 1852 the Know-nothing party, based on the principles of the old Native-American party, was founded. At first it was a secret, oath-bound organization, and when its members were asked on what the order was based and what it stood for, they answered, as their oath required, "I don't know;" hence the name Know-nothing. The movement spread like a conflagration. Many joined it, not because they were in sympathy with it, but because, as Von Holst says, they were ready to grasp, "with impatient and uncritical zeal, the first new thing" that pleased their fancy.² After the Compromise of 1850, and the

¹ McMaster's "With the Fathers," p. 97.

² Vol. V, p. 82.

crushing defeat of Scott in 1852, a great number of Whigs, no longer interested in their own party, joined the Know-nothings. The secret vote of the party determined many local elections and upset all calculations of the politicians.

As the Know-nothings grew to national dimensions, they threw aside their secrecy, and nominated their own candidates for office. In 1854 they carried the elections in Massachusetts and Delaware. The following year, when the revulsion against the Kansas-Nebraska Democrats was at its height, the Know-nothings carried a majority of the Northern states and a few in the South. But the party could not endure as a permanent political factor. It lacked the moral background, the broad, fundamental principles necessary to the governing of the nation. Moreover, it refused to express an opinion on the greatest issue of the times, the extension of slavery into the territories. Most men had positive convictions on this question, and they would remain with a party that refused to take one side or the other only so long as there was no better one to join. The party began crumbling before the close of the year 1855, and in consequence a vast number of voters was free to join the new political party that was about to be formed.

With all this material at hand—the anti-Nebraska Democrats, the old line Whigs, the Free-soilers, and the fragments of the dissolving Know-nothing party—the time was ripe for the formation of a new political party. In the early spring of 1854 the rumor was rife at Washington that a new national party would be formed on the basis of non-extension of slavery; but some of the northern leaders, including Seward, were not favorable to the new movement. Seward took the ground that the Whig party should be reorganized on the slavery subject, and continued under the old name. There were several objections to this, the chief of which was that the Democrats who wished to join the movement were loath to unite with their old political rival. Meantime, while the politicians were undecided, there was a movement of the people. As early as March 20, 1854, in the little town of Ripon, Wisconsin, several hundred citizens met in the townhall, and passed resolutions declaring that a new national party should be formed, and they suggested the name Republican. A similar movement in Vermont followed a few days later. On the 6th of July a great mass meeting was held at Jackson, Michigan, and in the

Decline of the Know-nothings.

Beginnings of the Republican party.

resolutions adopted amid the greatest enthusiasm it demanded the repeal of the Kansas-Nebraska and the Fugitive Slave laws, pronounced slavery a "moral, social, and political evil," and agreed, under the name Republican, to oppose the extension of slavery. On the 13th of July anti-Nebraska state conventions were held in Wisconsin, Indiana, Ohio, and Vermont. Nothing was easier to see than that the North was on the eve of an unusual uprising of the people.

The temperance question also received much attention at this period. In 1851 Maine passed her anti-liquor law, which is still in force. The movement spread through the North, and resulted in the enactment of prohibitory laws in Michigan and in most of the New England states. The temperance movement was therefore a powerful political factor at the moment when the new party was coming into existence, and the leading temperance men were, for the most part, among the leaders against the extension of slavery.

Soon came the autumn elections, and the anti-Nebraska people were successful in almost every northern state. They won their victories under different names, such as Fusion, Whig, anti-Nebraska, and the like, the name Republican not having come into general use, but the slavery question was the chief issue in every case. The House of Representatives that passed Douglas's famous bill was Democratic by a majority of eighty-four; in the next House the Democrats were in the minority by seventy-five. The party had lost in the North above three hundred and forty thousand in the popular vote. This was the preliminary answer of the North to the repeal of the Missouri Compromise; but this was only a beginning.

The Thirty-fourth Congress met in December, 1855. In the House the Democratic majority had been swept away, but the opposition was a motley crowd. There were Whigs, anti-Nebraskas, Know-nothings, and Republicans, all commingled, and while they were easily able to prevent the election of a Democratic speaker, they found it very difficult to concentrate on a choice of their own. At length their attention was turned toward Nathaniel P. Banks of Massachusetts. Banks was a man of commanding presence and of fluent rhetoric. He had been elected to the preceding Congress as a Democrat, but, having now joined the Republican movement, he stood for the restoration of the Missouri Compromise. After a most exciting contest of two months, the House having decided that a plurality should elect, the prize

Banks elected speaker.

fell to Banks. This election was pronounced by Greeley the first victory of freedom over slavery in the memory of living men.

We return to our subject, the formation of the Republican party. During the speakership contest, the opposition was often spoken of as "Republican." This the Democrats did not like, as it was the old name used by Jefferson to designate their own party in its youth. They suggested, therefore, that the new organization be termed "Black Republican," as it persistently favored the black man. The Republican party, however, had as yet no official existence. The movement had been spontaneous, and had spread over the entire North, and it was left for Pittsburg to become the official birthplace of the new party. But three weeks after the election of Banks, a national convention met in that city, and all the free states except California were represented. Francis P. Blair, the former friend and confidant of President Jackson, was made chairman, and the address was drawn up by Henry J. Raymond, editor of the *New York Times*. Here the Republican party was officially founded, with the non-extension of slavery as its chief corner stone. Meeting on Washington's birthday, the convention called for another national convention of the newly founded party, to be held in Philadelphia on the anniversary of the battle of Bunker Hill, for the purpose of nominating candidates for President and Vice President. This brings us to the

PRESIDENTIAL ELECTION OF 1856

On the same day of the meeting of the Pittsburg convention the American or Know-nothing party held its national convention in Philadelphia. The keynote of its platform was that Americans must rule America. It nominated former President Fillmore for President, and Andrew Jackson Donelson of Tennessee for Vice President. Before adjourning, however, this convention suffered a serious disruption. The northern delegates demanded an expression on the slavery question, and, on being refused, they, to the number of seventy-one, seceded from the convention. They afterward met and nominated Speaker Banks; but he declined, and they joined the Republicans. The scattered remaining fragments of the Whig party ratified the nominations of the Know-nothings, in a convention held in Baltimore in September.

The Democratic convention, which met at Cincinnati on the 2d of June, directed all eyes to itself. Three prominent candidates had been freely talked of for several months — Douglas, Pierce, and James Buchanan. The support of Douglas and Pierce came chiefly from the South. But there were grave fears that neither could carry a single northern state. The call for Buchanan came from the North, and for two reasons he was a far stronger candidate than either of the others: first, he had spent the preceding three years in England and was the only leading man in the party who was not tainted with Kansas-Nebraskaism; second, he was probably the only Democrat who could secure the vote of Pennsylvania, which was considered essential to success. Buchanan, though not the choice of the South, was not unacceptable to that section, for in his long congressional career he had never given a vote contrary to southern interests. He was expected, however, to give an expression on the repeal of the Missouri Compromise; and this he did by stating that it met his approval.¹ For this the northern Democrats forgave him, as well as for the part he had taken in the Ostend Manifesto; and the convention nominated him on the seventeenth ballot.

John C. Breckenridge of Kentucky was nominated for Vice President. The platform adopted declared the satisfaction of the party with the Kansas-Nebraska Law, and pronounced against all attempts to agitate the slavery question, "under whatever shape or color" the attempt should be made.

The Republican convention met in Philadelphia at the appointed time. No party was ever founded on purer motives than was this new-born party. No convention was ever composed of more unselfish, true-hearted, patriotic men than was **Republican convention.** this convention; and yet, strange to say, no great convention ever made a greater blunder in the selection of a candidate than did this one.² The serious defect in the party was its want of a national leader. Seward was the leader of Republican thought, and was the logical candidate, but he had not identified himself with the party at its founding; and although he had now done so, he refused to come forward, or to have his friends put him forward, as an aspirant for the nomination. Chase was second in importance. He

¹ Buchanan had expressed this sentiment in a letter some months previously. This letter was now published.

² See Rhodes, Vol. II, p. 182.

had been elected governor of Ohio the preceding year by a majority of seventy-five thousand. But he had long been known as a Free-soil Democrat, and for this and other reasons he failed to secure a large following. Lincoln of Illinois had met the arguments of Douglas the year before with unanswerable logic on the great question before the country; but he was little known out of his own state, and his name was not proposed for the first place on the ticket. The aged Judge McLean, a man of spotless integrity, was seriously considered by many. He had served in the cabinets of Monroe and John Quincy Adams, and had been appointed to the supreme bench by Jackson. But all this was against him. The party was newly born. It was filled with young blood; it stepped forth in the consciousness of the strength of youth. To bury the past, to grapple with the things of to-day and of the future, became its unwritten motto. And this feeling led to a desire for a candidate without a political past, one who would inspire the youth; and the party found its man in John C. Frémont of California.

We have noticed on a preceding page how Frémont had won public attention by his romantic love affair and marriage with Jessie Benton, by his daring explorations in the wild regions of the Rocky Mountains, and by his driving the Mexicans out of California. These things had cast a glamour of romance about the name of Frémont — and that was all. If he were more than an adventurer, the world had not discovered the fact. Of a knowledge of statesmanship he had developed no symptoms. If he were a man of character, and were capable of assuming responsibility, the public had not yet found it out. And yet this great convention, composed of wise, educated, experienced men, at a moment when a great crisis in the government was seen to be approaching, nominated Frémont for President on the first ballot by an almost unanimous vote. Nor was he a dark horse; his candidacy had been deliberately discussed for months. But perhaps this was all the work of a Providential Hand. Had Seward, or Chase, or McLean been nominated, he might have been elected, and the Civil War might have come too soon. The new party needed four years more to solidify, and it needed a mighty man at the helm, who was to develop within the four years.

The convention chose William L. Dayton of New Jersey for second place on the ticket. It adopted a platform whose keynote

was a demand that Congress prohibit in the territories those "twin relics of barbarism, polygamy and slavery."

The campaign was almost as remarkable as that of 1840. There was a deep and irreconcilable difference between the northern and the southern Democrats concerning their different interpretations of the Kansas-Nebraska Law. This it was tacitly decided to suppress, though four years hence, when this difference could be smothered no longer, it tore the party to pieces.

The Democrats mercilessly probed the character of Frémont, accusing him of corrupt dealings in California; nor were these charges ever successfully answered. Buchanan, on the other hand, was a man of unassailable character, and the conservative men of the country felt that the nation would be safe in his hands. In many of the Republican meetings they shouted lustily for "free speech, free soil, and Frémont"; but in the main the great issue of slavery was discussed, rather than the candidate.

Before the close of the campaign many thoughtful Republicans began to feel that their convention had made a mistake. The South was free in threats to secede, if Frémont were elected.¹ These threats the Republicans refused to take seriously, but the events of four years later proved the depths of their foundation. But the calamity was averted. Buchanan was elected, and the dragon was left to slumber four years more.

Buchanan secured the votes of all the Southern states, save one, of Pennsylvania, New Jersey, Indiana, Illinois, and California, while Frémont carried all the rest of the North, and Fillmore the solitary state of Maryland.² The charge against the Republican party, that it was sectional and not national, was shown by the returns to be true. In eleven Southern states not a vote was cast for Frémont, and in none of the remaining four did his vote reach four hundred.³ The subsequent career of Frémont showed the wisdom of the country in not electing him President in 1856. All parties now turned to the President elect. Would he lean toward the North or the South? A neutral ground was hardly possible. He professed to believe, as was shown by his inaugural address, that slavery agita-

¹ Ex-President Tyler wrote that "the success of the Black Republicans would be the knell of the Union." Governor Wise of Virginia wrote that if Frémont were elected, the Union could not last a year.

² The electoral vote was Buchanan, 174; Fremont, 114; and Fillmore, 8.

³ See Stanwood, p. 210.

tion was approaching its end, whereas it was only approaching its worst stage. Four of the new Cabinet were from the slave states, the ablest of whom was Howell Cobb of Georgia, secretary of the treasury; and three, with Cass as secretary of state, were from the free states. There was one subject, which we must now consider, the most exciting question of the times, to which the new administration must give immediate attention.

THE STRUGGLE FOR KANSAS

We must now go back a few years and take up the tragic story of Kansas. No other state in the Union, not even those bathed in the blood of the Indian wars of colonial days, can surpass this state in the fierce contests of its early years. While this book makes no pretense of giving state history, the early history of Kansas must be narrated, as the subject belongs to national history. The territory of Kansas comprised the vast undulating prairie, covered with Indian reservations, extending westward from Missouri to the base of the Rocky Mountains.¹ Scarcely had the Kansas-Nebraska bill become a law, in 1854, when the people of western Missouri began pouring into the territory and taking up claims with the avowed purpose of making it a slave state. Kansas was a prize of unmeasured value to the South. The balance in the Senate had been broken by the admission of California. If now the slave power could regain its equal representation by making Kansas a slave state, if the balance could be thus restored, never again would a free state be suffered to enter the Union without its being offset by the admission

of a slave state. So reasoned the slaveholders. They believed further that Kansas was the key to the whole Southwest. "If Kansas is abolitionized," wrote Senator Atchison, "Missouri ceases to be a slave state, New Mexico becomes a free state, California remains a free state; but if we secure Kansas as a slave state, Missouri is secure; New Mexico and southern California, if not all of it, becomes a slave state; in a word, the prosperity or ruin of the whole South depends on the Kansas struggle."² Hence we see the vital importance to the South of securing Kansas to slavery, whatever the cost. This explains the early rush of the Missourians into the territory.

¹ Since cut down to 81,700 square miles. It then comprised 126,000.

² *New York Tribune*, November 7, 1855.

Meantime the people of New England, hearing of this action of the Missouri people, determined to make a bold, extensive movement toward claiming Kansas for freedom. Eli Thayer of Massachusetts, a shrewd, practical Yankee, had in the early spring organized the Emigrant Aid Company for the purpose of planting free labor in Kansas. He soon enlisted the interest and aid of such public-spirited men as Charles Francis Adams, Amos A. Lawrence, Edward Everett Hale, and Horace Greeley, raised a large sum of money, and by July he had a company of emigrants moving toward Kansas. This company, led by Charles Robinson, who had become inured to frontier life in California, was augmented along the way, and by December, 1854, several thousand settlers from the free states had pitched their tents on the rich bottom lands of the Kansas River. They founded Lawrence, Topeka, and other towns, and gave every indication that they had come to stay. The Missourians, who had founded Atchison, Lecompton, and Leavenworth along the Missouri, determined to drive the free-soilers from the territory.

President Pierce had appointed Andrew H. Reeder of Pennsylvania governor of Kansas. Reeder was a positive Democrat, in full sympathy with the Kansas-Nebraska Law, and a strong friend of the South. The interests of slavery were thought to be safe in his hands. But Reeder was honest, and when he reached Kansas and witnessed the violence of the Missouri people and their determination to make Kansas a slave state by fair means or foul, his soul revolted against such proceedings, and he resolved to see fair play. The election of a territorial legislature brought matters to a crisis. On election day five thousand Missourians, led by United States Senator Atchison, came across the border armed with muskets, pistols, and bowie-knives.¹ This invading force drove out or intimidated the election judges who were not favorable to them, and carried the election in the most high-handed manner. A recent census had shown that there were but 2905 voters in the territory, but over six thousand votes were cast.

When this legislature met it proceeded to enact a code of laws that may be classed among the curiosities of modern literature. A few specimens are as follows: "Any person . . . convicted of rais-

¹ Atchison had been chosen president of the Senate on the death of Vice President King, and for several years there was but one life between him and the presidency of the United States.

ing a rebellion . . . of slaves, free negroes, or mulattoes in this territory shall suffer death." "If any free person shall, by speaking, writing, or printing, advise, persuade, or induce, any slaves to rebel, etc., . . . such person shall suffer death." It also provided the death penalty, or ten years' imprisonment, for any one who should aid in the escape of a slave, and that no person opposed to slavery should sit on a jury in the prosecution for the violations of the above-mentioned laws. An imprisonment of two years was imposed for any one who denied the legal existence of slavery in the territory! All these acts were vetoed by Governor Reeder and passed over his veto. The laws, it will be noticed, took no account of the popular sovereignty, advocated by Douglas, but assumed that slavery already existed in the territory;¹ and this without putting the subject to a vote of the people. At this moment there were less than fifty actual settlers in the territory who owned slaves; more than nine tenths of the people were devoted to freedom. The bias of Governor Reeder was wholly with the proslavery party when he went to Kansas; but he had an honest desire to be fair to the other side. This was wholly displeasing to the proslavery party, and they besought the President to recall him. Mr. Pierce, who was now notoriously subservient to the slave power, heeded their wishes, dismissed Reeder and appointed Wilson Shannon, a former member of Congress from Ohio, to fill the place. But Reeder did not return to the East; he became a resident of Kansas and joined the free-state party. His instincts of a lifetime on the slave question had been revolutionized by a few months among the border ruffians in Kansas.

The ostensible reason for dismissing Reeder was for speculating in land; the real reason was that he did not please the proslavery party.

The free-state settlers were not disposed to sit idle in the face of the usurpation of the Missourians. Led by Robinson, they called a convention to meet at Big Springs; they repudiated the spurious legislature and its infamous laws, nominated Reeder for Congress, and fixed October 9, 1855, as election day. The proslavery party set October 1, as election day, and nominated Whitfield, one of their number, for Congress. Thus the two parties voted on different days; each elected its man, to be sure; both men went to Washington, and both were refused admission to the House. But the free-state settlers did not

**Rival govern-
ments.**

¹ Von Holst, Vol. V, p. 159.

stop at this. At the election of October 9 they chose delegates to a constitutional convention. This convention met at Topeka the same month, framed a constitution making Kansas a free state, and, after its ratification by the people at an election in December, at which the proslavery party refused to vote, applied for admission into the Union.¹ Under this constitution Robinson was chosen governor. But in January President Pierce, in a special message, denounced the whole Topeka movement as rebellion, and declared his intention to put down all such proceedings with national troops. The Topeka legislature again met, and was dispersed by United States troops, and Robinson, Reeder, and others were indicted for high treason.

**Attitude of
the President.**

Such was the condition in Kansas at the opening of the presidential year of 1856, and it became one of the leading issues of the campaign. The whole country was aroused over reports from Kansas, and it was impossible that such a question remain long out of the halls of Congress, notwithstanding the claim of Douglas that his famous bill would remove the slavery question from national politics. In May, 1856, Senator Sumner made a powerful speech on "The Crime against Kansas." The speech was a fearful arraignment of the slave power. But the speaker went out of his way to abuse certain senators whom he did not like, especially Senator Butler of South Carolina, who was then absent from the city, and who had made no special personal attack on Sumner.

**Speech of
Sumner.**

Charles Sumner, with all his learning, was a narrow-minded man. He was opinionated, egotistical, and incapable of giving credit to another for an honest difference of opinion. But he was sincerely honest and courageous.² His espousal of the cause of the slave when that cause was very unpopular rose from the innermost depths of his soul. His furious attack on Butler was occasioned by the indignation expressed by the latter at the audacity of the Topeka convention in applying for statehood. But Sumner suffered severely for his extravagance. Two days after making this speech, as he sat at his desk

¹ The impression that the free-state people were abolitionists was erroneous. This free-state constitution forbade free negroes, as well as slaves, from entering the state. The Abolitionists of the Garrison type would have nothing to do with the Kansas movement from the beginning.

² While he was uttering this speech, in which he attacked Senator Douglas also without mercy, the latter said to a friend: "Do you hear that man? He may be a fool, but I tell you that he has pluck." Poore's "Reminiscences," Vol. I, p. 461.

writing, after the Senate had adjourned, he was assaulted with a cane by Preston Brooks, a member of the House and a relative of Senator Butler. Brooks rained blows on Sumner's head with great ferocity. Sumner sat so near his desk that he had no chance to defend himself; but at length he rose, wrenching the desk from its fastenings. Brooks then grappled with him and continued his blows until Sumner fell bleeding and unconscious to the floor.

So great were the injuries of the Massachusetts senator that he did not fully recover for four years; and indeed, never after this assault was he the powerful, robust athlete that he had been before. No incident in many years revealed more vividly the vast gulf between the North and the South than did the different manner of their receiving the news of this assault on Sumner.¹ Throughout the North the deed was denounced as a cowardly outrage, unworthy of any but a bully and a thug. At the South, where Sumner was hated above all men, the verdict was that he received only the punishment he deserved. Brooks was hailed as a champion and a hero, and was presented with many canes. He resigned his seat in the House because of a majority vote — not the necessary two thirds — for his expulsion; but he was immediately reelected by his district.²

Meantime matters were growing worse on the plains of Kansas. On the day that intervened between the closing of Sumner's speech and the assault by Brooks the town of Lawrence was sacked by a mob. The House of Representatives sent a committee of three to Kansas to investigate matters and report. This committee, composed of William A. Howard of Michigan, John Sherman of Ohio, and Mordecai Oliver of Missouri, after examining several hundred witnesses, reported in July. Howard and Sherman reported favorably to the free-state party, but agreed that the election of Reeder to Congress, as that of Whitfield, was illegal. Oliver made a minority report favoring the southern view.

With the attack on Lawrence the Civil War in Kansas may be said to have begun. Soon after this occurred the massacre of Pottawatomie, the leader of which was John Brown. Brown had come from the East to join his sons, who had been among the early settlers of Kansas. He was an ascetic and a fanatic. He had come to Kansas to make it a free state at any hazard. He regarded slavery

¹ Rhodes, Vol. II, p. 143.

² Brooks died the following January, and Butler in May of the same year.

with a mortal hatred, and while his courage was unlimited and his intentions upright, his soul was too utterly narrow to see a thing in its true light. He believed that the only way to free the slaves was to kill the slaveholders. "Without the shedding of blood, there is no remission of sins," said John Brown.

A few free-state men, one of whom was a neighbor of Brown, had been killed by the opposite party, and Brown determined that an equal number of them should suffer death to expiate the crime. He organized a night raid—his sons and a few others—and started on his bloody errand. They called at one farmhouse after another and slew the men in cold blood. He did not inquire if they were guilty or not guilty; enough if they belonged to the opposite party. One man was dragged from the presence of a sick wife. Her pleadings that he be spared were not heeded. He was murdered in cold blood in the road before his house. Before the end of that bloody night raid Brown's party had put six or seven men to death—for no crime except that they belonged to the opposite party and had made threats—an offense of which Brown's party were equally guilty. When the news of this ghastly work was flashed over the country, the people in general refused to believe it; and to the credit of the free-state people in Kansas, they repudiated it as wholly unwarranted.

The war went on in Kansas. Armed guerrilla bands traversed the country, and fought when they met opponents. About two hundred people were killed in one year. But it is needless to give further details. Governor Shannon, on coming to Kansas, was even more favorable to the South than Reeder had been; but even he grew weary of the demands and the methods of the slavery party, and resigned the office. John W. Geary of Pennsylvania was appointed the next governor. Geary had been in the Mexican War, and was the first commander of the City of Mexico after its surrender. He was afterward the first mayor of San Francisco, but had returned to the East. He accepted the governorship of Kansas, arrived in the territory in September, and soon had a semblance of order among the people. Geary was a strong executive, and, like Reeder, he honestly desired to do justice to both sides. The emigration from the North and the South still continued; but the North had a great advantage over the South. In the North there was a large floating population who found it easy to

**Pottawatomie
massacre.**

**Geary gov-
ernor, 1856.**

pack their goods and go to the West; but the slaveholder was also a land owner. He found it unprofitable, almost impossible, to migrate to the new territory; and if he induced the poor whites of his section to go, they were apt to espouse the cause of the free-soilers. It was now believed throughout the country that Kansas would become a free state. But the Missourians had not given up. They soon came to dislike Governor Geary. They threatened to assassinate him, and they made his duties so uncomfortable that he resigned the position on the 4th of March, the day on which James Buchanan became President of the United States. Behold, the third of the Kansas-Nebraska bill Democrats who had gone west to put that popular-sovereignty law into operation — and all had turned free state or had resigned because they could not endure the methods of the slavery party.

James Buchanan, during the campaign of the preceding summer, had promised that Kansas should have justice if he were elected.

Walker
governor. Many supported him on this promise. We shall see if he kept his word. He chose for governor Robert J. Walker of Mississippi, his life-long friend, his fellow-member of the Polk Cabinet, and the author of the Walker Tariff. Walker accepted with much reluctance, only after the President had promised to sustain him in dealing justice to both sides. Arriving in Kansas late in May, 1857, he pronounced his inaugural, a document that the President and Douglas had read and approved. Walker was a slaveholder and a Democrat of the old school; and he had hoped to see Kansas a slave state. But he was honest to the core; and when he looked over the field and saw that three fourths of the people were of the free-state party, and that Kansas could not be made a slave state by fair means, he determined not to undertake the task. Furthermore, he determined to resist the Missourians if they attempted to use fraud. An election was called for June 15, to choose delegates to a constitutional convention. The free-state people were suspicious, and they refused to vote; the other side elected the delegates. The governor had promised that any constitution framed should be submitted to a vote of the people. The convention met at Lecompton in September, and it soon brought forth the notorious Lecompton constitution.

When it became known to the southern leaders at Washington that this Lecompton convention was composed of proslavery men, a movement was set on foot to have the territory apply for immediate

statehood under this proslavery constitution which they produced. But the people of Kansas were clamorous in demanding a vote on their constitution. Governor Walker had promised them this right. James Buchanan had written him, as late as August 12, that he would sustain him. "I am willing to stand or fall, on this question of submitting the constitution to the *bona fide* settlers of the territory," wrote the President. This promise was doubtless honestly given; but in the following months the President experienced a change of heart. He fell under the spell of the southern leaders as completely as Pierce had done, and he determined to force the admission of Kansas under the slavery constitution framed at Lecompton.

**Lecompton
convention.**

Meantime the proslavery leaders in Kansas, to make a show of fairness, decided to submit their constitution in part to a vote of the people, and by an ingenious method they would save the constitution. The vote was to be for the Lecompton constitution *with* slavery, or for the constitution *without* slavery. No opportunity was given to vote *against* the constitution. But the whole arrangement was a farce and a snare; for if the constitution without slavery was adopted, it still contained the clause, "the right of property in slaves now in the territory shall in no measure be interfered with," and Kansas would practically become a slave state. The free-state settlers therefore refused to vote at all. This scheme did not originate in Kansas; it was hatched in Washington, in the brain of the southern politicians. But this fact is less strange than the fact that this President from Pennsylvania espoused the cause and sacrificed himself and his party in attempting to carry it out. Governor Walker stood aghast at these proceedings, which he could not prevent. A minion of the slave power approached him and declared that if he would espouse the cause of the Lecompton constitution, the presidency of the United States lay open to him.¹ But Walker spurned the offer, pronounced the scheme a "vile fraud, a base counterfeit," and declared that he would break with the administration rather than take a hand in the dastardly business. So much for Robert J. Walker; but James Buchanan —

**Buchanan
and the
Lecompton
constitution.**

On the 2d of February, 1858, President Buchanan did the chief historic act of his long, public life. Fillmore had signed the Fugitive Slave Law because he could scarcely help doing so — the coun-

¹ Rhodes, Vol. II, p. 279.

try was in danger. Pierce had agreed to the Kansas-Nebraska bill because he hoped thereby to make his reelection sure. Both are unforgiven by the American people. But Buchanan did worse than either. There was no danger of secession at this moment. Buchanan had declared that he would not be a candidate for reelection. He had nothing to lose. Now was his opportunity to make a stand for the right, to cover his name with honor and to make himself a hero in the eyes of future America. But he lacked the requisite backbone; his subserviency to the hypnotic influence of the slave power was complete, he threw away the opportunity of a lifetime.

On the 2d of February he sent to Congress a copy of the Lecompton constitution, which he knew to have been conceived in iniquity and born in sin, and urged that Kansas be admitted under it, declaring that Kansas is "at this moment as much a slave state as Georgia or South Carolina." The most astonishing thing about this was the striking example it gave of the power of the South over its devotees from the North. Buchanan was not at heart an unjust man, and yet no living man to-day can believe that in this case he acted on principle. He was the victim of hypnotism.

Now for a second time another great figure takes the center of the stage—Stephen A. Douglas. Four years ago Douglas, standing in the same place, had pleaded for a bad cause—the repeal of the Missouri Compromise. Now he stands for a principle, for justice; and the millions that execrated him then now admire and applaud him to the echo. He had shown himself a giant then; now he becomes a hero. There is no love stronger than the love for an old enemy who has become a friend. What were the feelings of Douglas when he saw the miserable failure of his boasted popular sovereignty, we know not. He owed the country much for his, possibly unintentional, deception; and he partially paid the debt. Buchanan might truckle to the slave power without a visible reason. Not so with Douglas. Buchanan was a follower; Douglas was a leader. He had sacrificed much to win the South in the hope of gaining the presidency. That hope gone, he was ready to be himself, to break with the South for the sake of justice.

Douglas saw that the Lecompton constitution was the product of fraud, and determined to oppose it. Calling on the President some time before the sending of the message of February 2, he declared his intention to oppose the Lecompton constitution in the Senate, unless it were honestly submitted to the voters of Kansas.

The President became enraged; he warned Douglas that no leading Democrat ever broke with the administration without being crushed. Douglas answered defiantly and went his way. Soon after this the subject came before the Senate, and Douglas took the floor against the Lecompton constitution. His speech was great. Never before had he displayed his powers to greater advantage. "The administration and the slave power are broken," wrote Seward to his wife, "the triumph of freedom is not only assured, but near." Douglas won, and the Lecompton constitution was defeated, not in the Senate, but in the House. And Douglas won more; he re-won the laurels he had lost in the North, and became again the Democratic idol in that section, so to remain to the last moment of his life. But Douglas had not espoused the cause of the slave, nor even that of free Kansas. He had no apparent convictions on slavery, and professed not to care if it was "voted down or voted up." He simply stood for justice in Kansas, and it was only justice that the North was now demanding.

Our story of "Bleeding Kansas" is near its end. The people of the territory eventually did vote on the Lecompton constitution and defeated it by more than ten thousand majority. Congress had meantime passed the "English bill," introduced by W. H. English, a member of the House from Indiana, by which Kansas was offered a large grant of public land, if the people would adopt the Lecompton constitution. But this bribe was rejected also; and the South now abandoned all hope of making Kansas a slave state. At length Kansas entered the Union on the eve of the Great Rebellion as a free state. Buchanan's policy cost his party dear. It swept New York, New Jersey, and even Pennsylvania into the Republican column.¹ And it cost *him* dear. This act concerning Kansas did more than all else to place the name of Buchanan among the least honored names of American Presidents.

DRED SCOTT DECISION

Two days after Mr. Buchanan became President the most famous Supreme Court decision in the annals of the United States was announced to the country.

Dred Scott was a negro slave owned by Dr. Emerson, an army surgeon in the employ of the government. For some years the doctor was stationed in Illinois, then at Fort Snelling in the

¹ Forney's "Anecdotes of Public Men," Vol. I, p. 120.

territory that afterward became Minnesota. Here he held his slave for two years, when he returned to his home in Missouri. Meantime Dred Scott had married a woman of his own race, owned by the same master, and they had two children. After their return to Missouri, and after they had been sold to another master, Dred Scott brought suit for his freedom and that of his family, on the ground that they had been illegally held in bondage in a territory dedicated to freedom by the Missouri Compromise. He won in a St. Louis court, but the decision was reversed by the Supreme Court of Missouri, after which the case was carried to the United States Circuit Court, and then to the Supreme Court of the United States. The case in itself was of little importance, but for the deep constitutional questions it involved. At first the Supreme Court intended to confine itself to the simple case in hand; but here was an opportunity to make a decision on the constitutionality of the Missouri restriction of 1820, and the opportunity was not thrown away. As five of the nine justices were from slave states, it was believed that the court would pronounce in favor of the doctrine of Calhoun, which had taken a powerful hold on the southern heart; namely, that Congress has no power to prohibit slavery in any United States territory.

The opinion rendered by Chief Justice Taney was the one that attracted general attention, though six of his fellow-justices pronounced similar decisions, while two, Justices Curtis and McLean, dissented. In this decision the chief justice not only remanded Dred Scott to slavery;¹ he went out of his way to solemnly pronounce the Missouri Compromise line null and void (though this point had not been considered by the lower courts), and he denied the right of Congress or of a territorial legislature to make any restrictions concerning slavery in any territory. He also affirmed that no slave or descendant of slaves had the right to sue in the courts. He declared that no negroes born of slave parents were citizens of the United States at the time of forming the Constitution, nor had Congress or any state the right to make them or their descendants citizens. He quoted with apparent approval the prevalent feeling, as he claimed, of earlier times, that the negro had no rights that a white man was bound to respect, and asserted further that at the time of the adoption of the Constitution "the unhappy black race was never thought of or spoken of except as property."

¹ Dred Scott and his family were afterward set free by their owner.

In this last statement the chief justice was woefully in error. Even before the Revolution Lord Mansfield had rendered his famous decision which forbade slavery on English soil and lifted the black man to the level of other men before the law; in our own country most of the leading men of the early period — Washington, Jefferson, Franklin, and others — strongly favored the ultimate emancipation of all slaves. Jefferson, when President, demanded the return of the three black men who had been seized on the deck of the *Chesapeake*; and even the Constitution itself speaks of *persons* bound to service, referring to the negroes, and provides that three fifths of them be counted in making up the census.¹ How can Taney's statement that the black man was considered only as property stand before such facts as these? The assertion that a slave or a descendant of slaves had no standing before the law must fall before the patent facts of history, for, as Justice Curtis pointed out, in five of the thirteen states at the formation of the Union colored men had the right to vote. The decision that the Missouri restriction was invalid rendered the repeal of that measure in the Kansas-Nebraska Law superfluous, and annihilated Douglas's theory of popular sovereignty. The Republican party, which had carried eleven states in the recent election, had been founded on the principle of congressional prohibition of slavery in the territories, which the court now pronounced forever beyond the power of Congress.

This extraordinary decision pleased the ultra-slaveholders of the South, and it stunned the North. But it had defenders at the North, led by Stephen A. Douglas, who took much pride in the fact that the Missouri Compromise, which his bill had repealed, had now been pronounced null and void by the highest tribunal of the land; but he failed to comprehend that this same decision had rendered his boasted popular sovereignty a dead letter. The great body of the people of the North, however, condemned this unjust decision of the court.

Roger B. Taney had succeeded the great jurist, John Marshall, having been appointed by President Jackson as a reward for faithfulness in removing the deposits from the United States Bank. Taney was a man of singularly pure and upright life; he was also a great lawyer and jurist; he served his country long and faithfully; but the great public of to-day remembers him only for the odious Dred Scott decision, and with this his name is and must ever be inseparably linked.

¹ See the opinion rendered by Justice Curtis.

Yet he probably did what he believed to be right; he simply voiced the sentiment of the slaveholding interests to which he belonged.

Could the people continue to revere that august tribunal which had never before ceased to command their profound respect? Must they accept this decision as the final word on this great question on which the country was divided? If so, the Republican party must disband or at least abandon the fundamental principle on which it was founded, and millions of men and women must give up their political conscience of a lifetime. But no such result followed. The fact is that Taney had descended from giving a judicial decision to a discussion of a political question from a partisan standpoint. He had grappled, for partisan reasons, with constitutional questions on which he had not been called to make a decision. If, then, the esteem in which the court had hitherto been held was lessened by this decision, the fault lay wholly with the court. It must not be forgotten that, though the Supreme Court passes judgment on matters of the people, the people as a whole sit in judgment on the court, and the latter exists for their good and is their servant.

The Dred Scott decision brought forth severe criticisms from the North. Many were fierce with anger. The slave power was aggressive as never before. It had full control of the government. Would it become national and overspread the whole land? The Kansas-Nebraska Law was audacious; it threw the country into a state of exceeding disquiet. Now came the Dred Scott decision, and this was followed by the attempt of the administration to force the Lecompton constitution on Kansas. These powerful blows were dealt, not by the people, but by the politicians. The great public writhed like a wounded giant, conscious of superior strength, but undecided what to do. But every blow dealt by the slave power contributed to its downfall in the end, — merely awakened the greater fury and hastened the final appeal to the sword.

THE LINCOLN-DOUGLAS DEBATES

The second senatorial term of Stephen A. Douglas was drawing to a close. The legislature to be chosen in Illinois in 1858 must name his successor. He was again popular throughout the North. When it was seen that his popular sovereignty would make Kansas, and of course all territories north of it, free states;¹ when it was seen that Douglas, by his admirable courage in the face of an angry

¹ This was before the Dred Scott decision was rendered.

administration, had saved Kansas from the Lecompton abomination, his star again rose to the zenith. Many Republicans now joined in applauding him, and the leading eastern members of that party favored his return to the Senate, in the hope that his fight with the administration would redound to Republican advantage.

Douglas was one of the most striking figures of his generation. Born among the New England hills two months before the death of his father, he migrated to the prairied West in early manhood. Settling in Illinois without money and without friends, he taught school and read law. He soon found the field for which above all else he was fitted — the field of politics. After serving in various official stations in his adopted state, he entered the lower House of Congress in 1843. At first he was uncouth in manners, but he quickly adapted himself to the ways of polite society and soon became a central figure in the highest social circles. "To see him threading the glittering crowd with a pleasant smile or a kind word for everybody, one would take him for a trained courtier."¹ But he was in his real element among men. He would stand in the midst of an adoring throng and entertain them with a western story or with his flashing wit, or he would stand on the rostrum in the presence of thousands and hold their unbroken attention for hours with his melodious eloquence. He was hale and winning, cordial and full of good cheer. Forgiving and generous, he never sought revenge on an enemy. In 1847 Douglas was promoted to the Senate, and in a few years he was an acknowledged leader and the readiest debater on its floor. His wonderful power over men was shown by his putting the Kansas-Nebraska bill through Congress in the face of the mighty hurricane of criticism that was rising against him; and he showed equal power in regaining his lost laurels in the North. His sway in the West was undisputed until the rise of a rival who was soon to outstrip him.

The Republicans of Illinois were unwilling to follow the advice of the eastern leaders and help reëlect Douglas to the Senate. Douglas had been their political foe from far back in old Whig days, and they could not be persuaded to make him their champion. They produced their own candidate for the Senate in the person of Abraham Lincoln.

Lincoln was a still more striking figure than Douglas. Born in the slave state of Kentucky, among the lowliest of the lowly, his

¹ Forney's "Anecdotes," Vol. I, p. 147.

**Early life of
Douglas.**

early life was spent in poverty and want. His mother was a woman of excellent good sense, and, it is claimed, of strong intellect. His father, who belonged to the class of poor whites, was a carpenter by trade, but was usually out of employment. He was shiftless, lazy, and ignorant, and he scarcely provided his family with the necessaries of life. All rules and theories of heredity are scattered to the winds in attempting to account for the genius of Lincoln. While he was yet a child his mother died. The father moved with his family to southern Indiana and married a widow with several children, and the double family spent ten years in a miserable hut in the wilderness. Meantime Lincoln, being intensely anxious to educate himself, though he attended school only a few months during his boyhood, studied diligently the few books that came within his reach. He became a deep student of the Bible and of Shakespeare, and he mastered the books of Euclid. Removing to Illinois at the age of twenty-one, he became in turn farmer, rail splitter, storekeeper, postmaster, surveyor, and river boatman, and he served a few months in the Black Hawk War in 1832, though he was not under fire.

Lincoln felt that he was destined to do something in the great world of which he yet knew so little. He was unsettled and discontented; he flitted from one thing to another. The years passed, and at the age of twenty-five he had not settled in a permanent vocation. He loved to mingle with men; he was exceedingly popular among his fellows, was full of droll stories, loved the horse race and the cockfight; but withal, his face was set with a melancholy that nothing could remove. This may have been caused in part by his long years spent in physical toil in the frowning forest, while his soul was longing for light, for knowledge, for opportunity.¹ His marriage was an unhappy one, and the want of domestic pleasure threw him the more among men, and fitted him the better for his great life work. He served in the Illinois legislature, read law, and was admitted to the bar at the age of twenty-eight. In 1846 he was elected to Congress, and after serving one term in the House, in which he always cast his vote with the Whigs or the Wilmot Democrats, he returned to his law practice at Springfield. He had almost lost interest in politics, as he said, until the passage of the Kansas-Nebraska Law. This roused him as nothing had done before, and within a few years he was the

¹ See Burgess's "Civil War and the Constitution," Vol. I, p. 6.

acknowledged leader of his party in Illinois. Few outside of his state knew of the latent power of Lincoln, but Douglas knew him well, and when he heard that Lincoln was to be his opponent in the senatorial race, he said: "I shall have my hands full. He is the strong man of his party—full of wit, facts, dates, and . . . the best stump speaker in the West; he is as honest as he is shrewd."¹

The principals who were about to engage in this intellectual duel had much in common. Each had been born in poverty in another state; each had made the broad-prairied West his permanent home, and had begun his career without money, friends, or influence. They had served together in the Illinois legislature, had eaten at the same table, had attended the same horse races, and had loved the same maiden. For many years they had been personal, but never political friends. Both were courteous, honest, fearless, jovial, and companionable. Both were sanguine and keenly ambitious to rise in public life, and each had the rare quality of winning a large circle of followers. But the contrast was still more notable.

Douglas was below the average stature of men; Lincoln was above it. Douglas was compactly built, graceful, and polished in manners; Lincoln was the opposite of all these. Douglas had a deep, musical voice, and could hold an audience unwearied for hours; but his logic was faulty, and his conclusions often superficial. Lincoln's voice was high-pitched and rather unpleasant, but his form of speech was so terse, epigrammatic, and logical, that even his great opponent, with all his powers of casuistry, could not escape its force. Douglas had reached the zenith of his power, and for four years past had held his lofty position amid adverse political winds only by his marvelous courage and audacity; Lincoln was just emerging from obscurity, and was soon to become the leading American of his time.

These two giants were to stand together on the same platform in seven different Illinois towns and address the same audiences on the great questions of the day. And it is a curious fact that Lincoln then attracted national attention only because of his connection with the world-famous Douglas, while in our own day Douglas is remembered in history more for his connection with Lincoln than for any other event of his life.

The campaign opened in June, when the Republican convention nominated Lincoln at Springfield. The address to the delegates by

¹ Forney, Vol. III, p. 179.

Lincoln and
Douglas
compared.

their candidate was masterful; but it was radical. In it he used the famous expression, "A house divided against itself cannot stand. I believe this government cannot endure permanently half slave and half free. . . . It will become all one thing or all the other." No prominent Republican had advanced such radical doctrine before. Seward's famous "irrepressible conflict" was not uttered for some months after this. Lincoln's friends urged that he omit this part of the speech, but he declared that he would rather be defeated with that statement in his speech than win the election without it. He further stated in answer to the eastern Republicans who desired to see Douglas returned to the Senate: "They remind us that he is a great man and that the largest of us are very small ones. Let this be granted. . . . How can he oppose the advance of slavery? He does not care anything about it. . . . Our cause must be intrusted to its own undoubted friends . . . who do care for the results. . . . Clearly he [Douglas] is not with us—he does not pretend to be—he does not promise ever to be."

Soon after the campaign had opened, Lincoln, through his managers, challenged Douglas to a joint stumping tour, a series of joint debates. It was a daring thing to do. Douglas was reputed to be the ablest orator in the nation. He had no rival in the United States Senate. He had measured arms with Seward, Chase, Corwin,

**The
challenge.**

and Sumner, and had surpassed them all. The eyes of the country were now turned toward the prairie state. The two rivals met in various towns.¹ The crowds, composed of both parties, were too great for the public halls, and they met in open groves. There was but one great, vital subject to be discussed,—slavery in the territories. The speakers were courteous to each other, but merciless in their political arguments. Lincoln's disadvantage, especially at first, was in the opposition of the leaders of his party; but Douglas's disadvantage was still greater in the opposition of the Buchanan administration, for after the Lecompton struggle he and the President had never become reconciled.

The chief feature of this remarkable debate was the questions publicly asked by each speaker of the other. Douglas began this, and by so doing he set a trap for himself from which it was impossible to escape. Lincoln's fatal question was this: "Can the people of a United States territory, in any lawful way . . . exclude slavery from its limits, prior to the formation of a state constitution?"

¹ These debates began August 24 and ended October 15.

The deep significance of this question is seen only by remembering that it involved the irreconcilable difference between the Democrats of the North and those of the South in their interpretation of the Kansas-Nebraska Law. This question placed Douglas in the most trying position of his life. He was an aspirant for the presidency; he knew that his audience in these debates included the whole United States, and to answer this question on which his party was divided would, as he well knew, offend one section or the other; and yet to refuse to answer would be childish and cowardly. Six days elapsed between the propounding of this question and the next meeting, to be held at Freeport. Meantime Lincoln's friends begged him to withdraw it, as they claimed Douglas was sure to answer in accordance with the feeling at the North, and, if so, he would win the senatorship. "I am after larger game," answered Lincoln; "if Douglas answers as you say he will, he can never be President, and the battle of 1860 is worth a hundred of this."¹

Douglas answered in accordance with the northern view. This opinion became known as the "Freeport doctrine." It was discussed by all the leading newspapers of the United States. By many the author was scored without mercy, and most of all by Lincoln, who showed, with unanswerable logic how inconsistent with this view was the Dred Scott decision, which Douglas professed to accept as sound Democratic doctrine.

Douglas won the senatorship, though Lincoln had a majority of the popular vote. The result was due to the fact that of the twelve hold-over senators, eight were Democrats.

Douglas was the apparent winner in this great contest, though in the light of subsequent events the world must render a different verdict. This campaign proved a turning point in the fortunes of both contestants, but, like Pharaoh's chief butler and chief baker, their fortunes moved in opposite directions. Lincoln soon became the foremost man of his age. Douglas never again stood on the pinnacle he had occupied before. His Freeport doctrine had mortally offended the South. His Lecompton revolt was a venial offense compared with this;² and two years later the South refused to accept him as their candidate, the Democratic party was severed in twain, and the Republicans carried the election.

¹ The truth of this incident has been questioned by some writers; but it is given by Hernden, Lincoln's law partner, and is probably true.

² Nicolay and Hay, Vol. II, p. 163.

JOHN BROWN AND HARPERS FERRY

On the morning of October 17, 1859, the country was startled by the news flashed over the wires that the United States arsenal at Harpers Ferry, Virginia, had been seized the night before by a band of Abolitionists and negroes, and that the slaves of Virginia were rising against their masters. In the North the news created intense excitement; in the South it created rage and terror, for in that section the belief quickly took possession of the public mind that a great northern conspiracy had been set afoot with the object of exciting slave insurrections throughout the South. There is little wonder that such a belief awakened intense feeling at the South, for a widespread slave uprising would have been a calamity of the most awful consequences; it would have subjected the women and children to nameless horrors and would have destroyed the very foundations of society.

But the report proved exaggerated. The arsenal at Harpers Ferry, an insignificant village at the point where the Potomac and Shenandoah rivers join their waters and break through their mountain barriers, had been seized. But there was no uprising of slaves, nor was the number of men engaged in the insurrection by any means so great as was at first reported. In fact, there were but nineteen, and these, led by an elderly man with a long flowing white beard and with a strange, unfathomable eye, had stealthily entered the town by night, extinguished the lights, cut the telegraph wires, made prisoners of the guards, and taken possession of the armory. Soon after daybreak the people of the neighborhood began to rise against the invaders, and a desultory fire was kept up during the forenoon, a few being killed on either side. Soon after noon a hundred militia arrived from Charlestown, and others poured in rapidly. Thousands of shots were exchanged during the day. In the evening Colonel Robert E. Lee arrived with a body of marines, but he made no attack until the following morning. He then sent his aid, J. E. B. Stuart, who had been in Kansas, and who was to become the famous Confederate cavalry leader, to demand a surrender. Stuart, on seeing the aged leader, exclaimed, "Why, aren't you old Pottawatomie Brown of Kansas?"¹ And thus it first became known to the public that the leader of this extraordinary movement was John Brown.

John Brown was a descendant of one of the Pilgrims who had

¹ See *Century Magazine*, June, 1885.

come in the *Mayflower* in 1620. During the War of 1812 his father had been engaged in furnishing cattle for the American armies. John usually accompanied him as a cattle driver, and in this capacity he witnessed the surrender of Hull at Detroit. It was about this time that he became a rabid abolitionist. He was staying, for a time, with a slaveholder who owned a negro boy about Brown's own age and apparently his equal in every way, and while he, Brown, was treated with the utmost kindness, the black boy was beaten and maltreated for little or no cause. This incident fixed in the youthful soul of John Brown a hatred of slavery that increased in intensity to the end of his life. Many years later, when the father of a growing family, he, in imitation of the ancient Carthaginian commander, had his sons take a solemn oath that they would join with him in devoting their lives to making relentless war on slavery.

Early life of
John Brown.

The stormy career of John Brown in Kansas we have noticed. This he closed by making a wild raid, with a few followers, into Missouri, and capturing a dozen slaves, whom he escorted to Canada. In the spring of 1859 we find him again in New England plotting his last and most famous exploit. His intention was to lead a band of men into the Virginia mountains, to call upon the slaves to flock to his retreat, to arm them against recapture, and to extend his operations over the entire South. In short, his plan was to lead the slaves to freedom through a general, violent uprising.

Late in the summer of 1859 Brown rented a house a few miles from Harpers Ferry, where, under the name of I. Smith and Sons, he received boxes of arms and ammunition. Everything was done with great secrecy. No one suspected that this gray-haired stranger and his numerous sons had other designs than to purchase a farm, as they pretended, and to become stock raisers. After some weeks of preparation they threw the whole country into a state of consternation, as we have seen, by their night attack on Harpers Ferry. Of Brown's followers, three were his own sons and five were colored men. Most of them did not know of his intention to seize the arsenal till near the time of making the raid. They then attempted to dissuade him, urging that the undertaking would be most dangerous. But his iron will was unmoved; he quietly answered, "If we lose our lives, it will perhaps do more for the cause than our lives could be worth in any other way."¹ He ordered his men not to take

¹ Sanborn's "Life and Letters of John Brown," p. 542.

life, if they could possibly avoid it, and not a shot was fired until they had been in possession of the arsenal for three hours.

At any time during the forenoon of the 17th Brown might have escaped to the mountains, as he had intended to do after supplying his party at the arsenal with a stock of arms for his expected recruits; but this he failed to do until it was too late. Six of his men, including one of his sons, were out scouring the country for slaves, and these for the time escaped.¹ His other two sons were killed. But few of the little band remained alive when at length the besiegers broke into the engine-house and took them captive. Brown himself was severely wounded by a bayonet thrust.

Brown's composure throughout the siege was a matter of astonishment to those who witnessed it. With one son dead at his side and another mortally wounded, he felt the pulse of his dying son with one hand and held his rifle in the other while he commanded his men with the utmost composure.² Brown was duly arraigned for treason and murder, was given a fair trial in the Virginia court at Charlestown, and was sentenced to be hanged. He spent the period between the time of receiving his sentence and the execution in the utmost serenity of mind, never exhibiting the slightest fear or regret except for the loss of life that he had occasioned. To a friend he wrote, "It is a great comfort to feel assured that I am permitted to die for a cause"; to his wife, "My mind is very tranquil, I may say joyous"; to his children, "I feel just as content to die for God's eternal truth on the scaffold as any other way." On the day of execution he walked out of the jail "with a radiant countenance and the step of a conqueror," said an eyewitness. He mounted a wagon and sat upon his coffin to the place of execution, and without a tremor or a sign of fear he stepped upon the gallows and was swung into eternity. Governor Wise, fearing an attempt to rescue Brown, had called out several thousand troops and had planted cannon around the place of execution; but no such attempt was made, and Virginia, which had been wrought into a high state of excitement, breathed freer when old John Brown was dead.

It is even at this day too early to make a final historic estimate of John Brown. Throughout the South he was denounced as the

¹ Most of these were captured and put to death; but Owen Brown, son of the leader, was never taken, and he lived for many years afterward in New York.

² Sanborn, p. 572.

blackest of villains, while many at the North pronounced him a saint and a martyr. Emerson was led to say that Brown's death made the gallows glorious like the cross. Victor Hugo pronounced Brown an apostle and a hero. The general sentiment at the North, however, condemned the deed of Brown, while the greatest sympathy with the doer was expressed on every side. Brown was a man of intense religious convictions; but he drew his inspiration from the Old Testament rather than from the New; his models were Joshua, Gideon, and Jephthah.¹ He brooded over the condition of the black man until his judgment became warped and distorted. He was utterly impractical. No man with robust common sense, with well-balanced mental powers, would have regarded his attack on the United States arsenal as other than suicidal folly. And yet we must pity rather than blame John Brown. By the technical letter of the law he was a criminal; by the motives and intents of his heart he was not. His supreme self-command, his heroic courage, his readiness to sacrifice his home, his family, his life, for a cause, must elicit our admiration. But we cannot place him among the saints, or the great heroes of history; he was an honest, but sadly misguided fanatic; on this one subject he was probably insane.

**Character of
Brown.**

No great political effect of Brown's raid was felt. Congress met soon after the execution, and great efforts were made to saddle the whole affair on the Republican party. It was found that Brown had been furnished with money by a few northern friends headed by Gerrit Smith, the wealthy New York philanthropist; but the most searching inquiry by a Senate committee failed to prove that the great Republican leaders, Seward, Greeley, Lincoln, and Chase, had anything whatever to do with Brown's movements, or any knowledge of the raid till after it had been made. Brown's raid, however, had some effect in consolidating the South against the North.² A son of Governor Wise has recently written that the attitude of the North surprised the South and did more to open its eyes to the gulf between the sections than anything else. The great majority of southern voters were non-slaveholding poor whites. Vast numbers of these would probably have cast their lot for the Union in 1861, but for their fear of a slave insurrection. The southern leaders rung many changes on the Brown raid to show that such an insurrection was

¹ Rhodes, Vol. II, p. 161.

² See Burgess's "Civil War and the Constitution," Vol. I, p. 43.

possible and that the North was capable of encouraging it. This doubtless had much to do with unifying the South under the banner of the slaveholders at the outbreak of the war.

THE PRESIDENTIAL ELECTION OF 1860

Scarcely had the country recovered from the excitement of John Brown's raid, when it was called to face another presidential election — the most momentous of all since the overthrow of the Federalists in 1800. Great changes in the political world had been going on for several years. The Kansas-Nebraska bill, the Dred Scott decision, and the troubles in Kansas had shaken Democratic power to its foundations. The Republican party was irresistibly fastening its hold upon the North. Thousands of Democrats who had adhered to the party of their fathers with all its faults could now endure it no longer, after the ignoble attempt of their President to force the Lecompton fraud upon Kansas; and they were warmly welcomed into the Republican fold. Nevertheless, the Democrats would doubtless have again elected their President but for the fatal split within their own ranks. Early in February, Jefferson Davis of Mississippi introduced in the Senate a series of resolutions which were intended to set forth the Democratic doctrine of the South, and which were meant as an ultimatum to the northern wing of the party. In these he set forth the extreme doctrine of Calhoun that the states were sovereign, that the general government was subordinate, and that neither Congress nor the territorial legislatures had the power to prohibit, but the government must protect, slavery in the territories. These resolutions were debated for many weeks, but ere they came to a vote the Democratic party had met in national convention at Charleston, South Carolina.

The Charleston convention was inharmonious. The spirit of discord that had so long distracted the country now threatened the one last great bond between the North and the South — the Democratic party. Many looked with awe upon the gathering storm, when they realized what its meaning might be to the Federal Union. For long years the North and the South had been growing farther and farther apart. The Whig party had destroyed itself in attempting to cater to both sections; the religious bonds, the industrial and social bonds between them had for the most part been severed.

Nothing was left to hold the North and the South together peacefully except this great political party whose representatives were now gathering at Charleston; and this bond was about to be broken.

Douglas was again the Democratic idol of the North. But he had re-won his northern laurels only by sacrificing his popularity in the South; and while he was now the first and only choice of the northern wing of the party, the South refused to accept him. But it was the platform, and not the candidate, on which the convention divided. The committee that framed the platform was composed of one delegate from each state. There were eighteen free states and fifteen slave states; but as the delegates of two free states, California and Oregon, voted steadily with the South, that section had a majority in the committee. The committee, therefore, adopted a platform, based on the Davis resolutions in the Senate, embodying the extreme southern doctrine on the subject of slavery in the territories; namely, that no power could exclude it, that Congress must protect it. **The Charleston convention.** The northern delegates could not accept this doctrine without sacrificing the vote of every northern state in the election. In vain they pleaded with their southern brethren to yield and save the party from disruption; the southern delegates were inflexible. Douglas meantime declared that he would refuse to be a candidate on such a platform. But the convention was not obliged to accept this platform dictated by the committee. The South had a majority in the committee, but not in the convention; and now, for the first time in the history of Democratic national conventions, the northern delegates made a determined stand, refused the dictation of the South, cast aside its proffered platform, and adopted another, brought in by a minority of the committee. By this platform as adopted the status of slavery in the territories was to be determined by the courts.

The next act in the great drama immediately followed. The Alabama delegates rose and seceded from the convention, and they were followed by those from Mississippi, Louisiana, South Carolina, Florida, and Arkansas. **Split in Democratic convention.** The remainder of the convention then began balloting for a candidate, and after fifty-seven fruitless ballots the convention adjourned to meet on June 18 at Baltimore, while the seceding faction decided to meet at Richmond, Virginia.

The adjourned convention met at the appointed time and place. Every reason now existed for a reunion of the factions. The Repub-

licans had met in the meantime, and had placed their candidates in the field; and every index pointed to a Republican victory unless the Democrats would unite. But this was impossible. The North could not, and the South would not, yield. Had the North yielded the point at issue, the Democratic party north of Mason and Dixon's line would have been destroyed. The northern delegates held their ground, and in consequence most of the delegates from the South who had not withdrawn at Charleston now did so, and they met in another hall. The convention then nominated Douglas for President and Herschel V. Johnson of Georgia for Vice President. The seceding faction, joined by their brethren from Richmond, nominated John C. Breckenridge of Kentucky for President and Joseph Lane of Oregon for Vice President, and the severance of the Democratic party was complete. Thus the great political party that had been founded by Jefferson, that had governed the country for half a century, had successfully carried on two foreign wars, and had acquired Florida and every foot of our public domain beyond the Mississippi,—this great party had at last quarreled with itself and invited its own destruction.

The Republican convention met in the fast growing city of Chicago on the 16th of May. The convention was rendered an object of intense interest by the fatal disagreement at Charleston; for the belief was widespread that here would be named the next President of the United States. A great "wigwam," seating twelve thousand people, was built for the purpose, but this could accommodate only a fraction of the gathering clans that poured into the city from all points of the compass. The convention gave little evidence of being the exponent of a new-born party founded on a great moral principle; it was less orderly and seemed much less serious than the one that had met at Charleston. The streets of the city were filled with noisy multitudes shouting for this or that candidate. No longer did the leaders of the party hold aloof, as four years before at Philadelphia, when they willingly let the prize go to a romantic adventurer of the West. Now the best men of the party stood ready and eager to receive the honors of the convention.

The acknowledged leader of the party was William H. Seward of New York. His claims were strong. He was the chief originator of Republican doctrine, and for years before the party was born he had stood in the forefront in battling against the encroachments of the slave power. But he had weak points. He was thought to

be too radical by many; he was the author of the "higher law" doctrine, and this, with his "irrepressible conflict," was not popular in the great conservative states that bordered on slave land. Another element of weakness in Seward was the fact that when governor of New York he had offended the Know-nothings on the school question. These had now for the most part become Republicans and were willing to accept any candidate except Seward.

Republican convention.

Next to Seward in the great contest stood Abraham Lincoln of Illinois. Lincoln was past fifty years of age, but, until his famous debate with Douglas two years before, he was scarcely known to the great public. The prominence of Douglas had led the people to look upon his daring antagonist, and the vital question at issue had led them to read his speeches. These were found to equal the proudest efforts of Sumner, of Chase, or of Seward. Again, Lincoln had recalled public attention to himself by a powerful speech at Cooper Union in New York City, by which he displayed anew his masterly grasp of the great questions of the day. None could now deny that in the political sky he was a star of the first magnitude.

Cooper Union speech, February, 1860.

Below these two leaders stood Edward Bates of Missouri, whose chief claim lay in the fact that he was from a slave state and that his nomination would in part answer the charge that the party was a sectional one; Salmon P. Chase of Ohio; and Simon Cameron of Pennsylvania. But none of these had any chance of receiving the nomination unless the convention failed to choose between the two leading candidates, Seward and Lincoln. The Seward men felt confident; but the Lincoln shouters made the greater noise. It was said that two men, whose voices could be heard above the most violent storm (and one of them was a Democrat), were hired to lead in the shouting for the Illinois candidate.

On the first ballot Seward led, with Lincoln second. On the third Lincoln was nominated. The cheers for the "rail splitter" were tremendous. So great was the uproar of the convention that the boom of cannon on the top of the wigwam could scarcely be heard within it. Chicago was delirious with delight; but the Seward men were deeply dejected, and their leader, Thurlow Weed, burst into tears. Hannibal Hamlin of Maine was nominated for Vice President, and the work of the convention was over.

Lincoln nominated.

Outside of Illinois and a few adjacent states the name of Lincoln created little enthusiasm. Why set aside the great New York statesman for this untried newcomer in public life? At first a feeling of depression swept over the party. It was feared that the convention had made a mistake, as its predecessor had done at Philadelphia in 1856. But the convention had builded wiser than it knew.

The platform adopted by the convention pronounced for a protective tariff, condemned indirectly the John Brown raid and the Dred Scott decision, while it left unnoticed the Fugitive Slave Law, and the abolition of slavery in the District of Columbia. But it was very decided on the greatest question of the times — slavery in the territories. It pronounced slavery an evil, and while denying any intention of the party to interfere with it in the states where it existed, it denied the authority of Congress, of a territorial legislature, or of any individual to give legal existence to slavery in any territory of the United States, and demanded that Congress prohibit the institution in the territories.

Still another party entered the field in this great contest. It was composed of old line Whigs and others who could find no political resting place with the extremes represented by Lincoln and Breckenridge, nor on the middle ground occupied by Douglas. It called itself the Constitutional Union party, adopted the terse platform "The Constitution, the Union, and the enforcement of the laws," which, in the apt words of Horace Greeley, meant anything in general and nothing in particular, and nominated John Bell of Tennessee for President and Edward Everett of Massachusetts for Vice President. Thousands of citizens voted with this party simply because they could not decide which side they were on.

The campaign was less boisterous than many of its predecessors. Issues rather than men were discussed — or rather, one issue, the same that had been before the country for several years — slavery in the territories. Outside of Pennsylvania, where the tariff received a large share of attention, this great subject absorbed the public mind. The issue was squarely drawn between the Lincoln and Breckenridge extremes. The Republicans took the positive ground that, as slavery was a moral and political evil, it should be permitted to spread no farther, and that Congress should prohibit it in the territories. The Breckenridge Democrats took the equally positive ground that, as slaves are constitutional property, their possession in the territories must be

**The three
platforms
compared.**

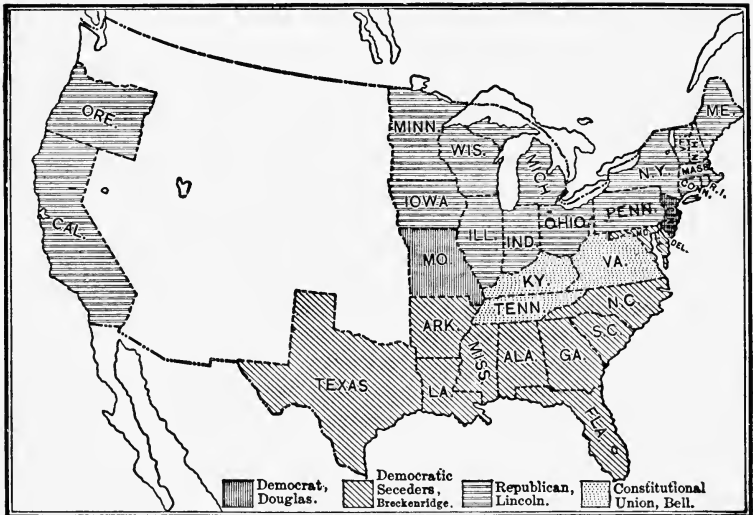

protected by Congress. The Douglas Democrats took the middle ground that Congress must keep its hands off, and that the people of a territory must decide for themselves whether slavery should exist among them. If the Douglas party should win, the great subject would simply be left unsettled; if Lincoln or Breckenridge should carry the election, the issue would be squarely joined and the defeated party must yield to the majority, or resist by violence. Threats of dissolving the Union, in case of Lincoln's election, were freely made in the South; but in the North it was not generally believed that such a step would be taken. Had the North fully realized the gravity of the situation, the election of Lincoln would have been doubtful; for the people, a great many of them, whatever their hatred of slavery, dreaded still more a dissolution of the Union or civil war. Douglas made a noble fight. He spoke in many states; but with all his tireless energy and eloquence, the tide against him was too great to be overcome. Nor could Breckenridge hope to carry a northern state, and, as all the southern electors were not enough to make a choice, his election was impossible. Bell could not dream of carrying more than a few states. This left Lincoln as the only candidate whose election was possible, and in case of his failure the election would go to the House. But the House was hopelessly divided, no party controlling a majority of the states.

The Republicans, however, felt confident. If the Democrats had united at any time during the summer or early autumn, with Douglas as their candidate, they might possibly have carried the election; but not after the October elections in a few of the Northern states. When Pennsylvania voted in October and was carried by the Lincoln party, electing Andrew Curtin governor by thirty-two thousand majority, the last hope of successful opposition was crushed. Nothing under heaven could now prevent the election of Lincoln. This fact almost pleased the extreme South. The slaveholders preferred the election of Lincoln to that of Douglas; for if Douglas were elected, the great question would remain unsettled; if Lincoln were successful, the South would become united against the North and would have an adequate pretext for disunion.¹

The great battle of the ballots was fought on November 6. Lincoln received the votes of all the Northern states except New Jersey, and in that state he won four of the seven electors, the other three going to Douglas through a fusion arrangement. Lin-

¹ Greeley, Vol. I, p. 329.

coln's electoral vote reached 180, while 152 were sufficient to elect. Breckenridge received seventy-two electoral votes, Bell captured three slave states, Virginia, Kentucky, and Tennessee, thirty-nine electors, while Douglas, whose popular vote was far greater than that of Breckenridge or Bell, received but twelve electoral votes — those of Missouri and three from New Jersey. The secessionists of the South were extremely chagrined at the fact that Bell, who stood on a distinctively union platform, had polled over half a million votes, almost as many as Breckenridge. This want of southern

ELECTION CHART OF 1860.

unity might have proved very embarrassing to the disunionists the following year, but for the fact that Bell, and most of his followers, probably on the issue of coercing a state, cast their lot with them.

The meaning of the result of this great election was plain to the world. It meant that the voice of the people in all the Northern states pronounced slavery an evil and forbade its further spread in the United States. For many years a few thousand slaveholders had dominated the government, had dictated every presidential policy, had laid down the law for the millions. But at last the multitude had risen in its might and declared that this condition should endure no longer.

NOTES

The *Black Warrior*. — In the early spring of 1854 an incident known as the *Black Warrior* affair threatened the peaceful relations between the United States and Spain. The *Black Warrior* was a merchant steamer plying between New York and Mobile, usually stopping at Havana. On February 28 this vessel was seized and declared confiscated with its cargo by the Spanish authorities at Havana, on the pretense that she had violated the trade regulations of the port. Her captain abandoned the vessel and appealed to the United States government for protection. President Pierce and his Cabinet made a demand that Spain make proper reparation, and communicated with Soulé, our minister at Madrid, to that effect. But Soulé exceeded his instructions, offended the Spanish government, and received a haughty reply. Soulé and the slaveholders now hoped for a war with Spain, that the United States might acquire Cuba, but northern sentiment refused to support this project. The *Black Warrior* was at length released, and the war spirit subsided. This affair had something to do with bringing out the Ostend Manifesto a few months later. See p. 572.

The Nicaragua Filibusters. — In 1854 William Walker of California proceeded with a band of reckless men to Nicaragua, and allied himself with one of the warring factions of that country. In a short time he had possession of the city of Granada and proclaimed himself President of Nicaragua. Soon after he had succeeded in usurping the power, he issued a decree reëstablishing slavery in the country, where it had not existed for many years. This revealed the true object of his expedition — to secure Central America for slavery, and eventually to add those states to our Union in the interests of the slaveholders. After he had held the country for two years, a coalition against him drove him out. Twice afterward he made attempts to regain his hold on Nicaragua; but on the last of these trips he was overpowered, captured, tried by court martial, condemned, and shot to death.

CHAPTER XXV

AN ANTE-BELLUM VIEW

A HURRIED view of the great people that were now about to engage in the bloodiest of all civil wars in the annals of history will here be appropriate. Soon after the second war with England the people of the United States began to feel a consciousness of national greatness and power as never before, and the marvelous development of the country in the half century that followed gave evidence that this national pride rested on a sound basis. Within that period the population was greatly increased; the nation took its place among the greatest of manufacturing and commercial peoples; in literature, education, and invention it more than kept pace with the world's advancing civilization. A few of these developments may be described under separate heads, beginning with

INVENTIONS AND DISCOVERIES

No other country ever gave to the world in the same length of time such a series of useful inventions as did the United States in the thirty years ending with 1860. First among them in importance is perhaps the electric telegraph, the patent for which was granted to Samuel F. B. Morse in 1837, though twenty years passed before it came into very general use. In 1858 the first Atlantic cable was laid through the efforts of Cyrus W. Field. It reached from Newfoundland to Ireland, a distance of seventeen hundred miles; but after it had been in operation for three weeks, several hundred messages having been exchanged, the cable parted, and eight years passed before another was successfully laid. To show how this wonderful invention has made the world akin, a comparative illustration is useful: I have before me a New York newspaper dated August 4, 1815. Its chief foreign news item is an account of the great battle between the French and the allied powers at Waterloo in which Napoleon was overthrown. This was the first

news to reach America of that famous battle, which had been fought on the eighteenth of June, nearly seven weeks before, and several weeks were yet to pass before it could reach the interior of the country. How great the contrast with the following: The Coronation of King Edward VII of England took place on August 9, 1902, at noon, and some hours before noon of the same day the account of the event was read on the streets of the American cities. Hand in hand with the telegraph came the cylinder press, first operated in 1847, by which, with all its improvements to this day, the news received from the wires and put in type, is printed and folded in newspaper form at the rate of forty-eight thousand an hour.

**Cylinder
press.**

Among labor-saving machines the mower and reaper, patented by Cyrus McCormick in 1831, and the sewing machine, invented by Elias Howe in 1846, must be placed in the first rank. The reaper which enabled one man to do the work of many, made possible the great wheat farms of the West and cheapened breadstuffs throughout the world. Before the invention of the sewing machine woman was a slave to the needle; but with the coming of that exceedingly useful machine woman was set free in a great measure and enabled to read, travel, and become interested in public questions.¹ This invention also reduced the price of clothing and shoes for all classes.

**Mower and
reaper.**

**Sewing
machine.**

Among the other discoveries and inventions of this period was the discovery of ether, or rather of its application as an anæsthetic,² which has proved one of the greatest boons to suffering humanity. By its use the patient sleeps like a child while undergoing a surgical operation. Another discovery of a very different nature was made in western Pennsylvania in 1859. A company of men, boring into the earth some seventy feet, "struck oil," which flowed at the rate of a thousand barrels a day. The news awakened the greatest enthusiasm, and through this and similar discoveries in other parts of the country and in Canada the petroleum business has become one of the greatest industries of the world. Another remarkable discovery dates from this same year, 1859. Some miners were digging along the eastern slope of the Sierra Nevada Mountains, in what is now

Ether.

Petroleum.

¹ See Thorpe's "History of the American People," p. 429.

² By D. W. T. G. Morton of Boston.

the state of Nevada, when they discovered a silver mine. It was soon found that not only that region, but also various other parts of Colorado, Utah, and Arizona were rich in silver ore, and the mining of silver soon became one of the great industries of the West.

The inventions resulting in the steam railway belong to an earlier period; but the development of the railway belongs chiefly to the

Silver. period we are treating. Not until the middle of the nineteenth century did the extension of railroads really

Railways. have a beginning in the United States. In 1850 one could travel by rail between the chief cities of the East, but the rising West as yet had few railroad advantages. Before 1860, however, several great trunk lines extended from the eastern seaboard to the valley of the Mississippi, the increase in mileage within the ten years being five-fold — from six thousand to thirty thousand miles. But railways had reached no such degree of perfection as in our own day, and accidents with fatal results were very common. The same was true in a still greater degree of steamboats. The loss of life from these two

Steamboats. sources was so great as to raise a loud protest from the people and the press. Congress passed a law in 1852 (still on our statute books) to regulate steamboat travel. It provided for the careful inspection of steamers, for small boats and life-preservers to be carried on each, and made the owners responsible for accidents arising from a neglect of the provisions of this law.

In the cities great changes had taken place since the first quarter of the century had closed. The principal streets were now paved with stone and lighted with gas. Fire engines took the place of the old hand bucket about the middle of the century. Omnibuses and horse-car lines were introduced back in the thirties; and waterworks, one of the greatest of city improvements, came into general use at about the same time. The attractions of city life had its effect on the population; the percentage of the people who lived in the cities was now far greater than it had been in earlier times.

The material prosperity of the country during the decade ending with the panic of 1857 was amazing. Manufactories were multiplied on every hand, and our commerce whitened every sea. Webster wrote in 1850 that "our foreign commerce was hardly exceeded by the oldest and most commercial nations." The *New York Herald* stated in 1853 that in "both sailing and steam vessels we have surpassed the whole world." James Buchanan declared in 1854 that

"our mercantile marine is the largest in the world."¹ It is greatly to be regretted that all this was changed by the shock of civil war, and that, owing to our narrow navigation laws, we have never regained our prestige on the sea.

EDUCATION AND LITERATURE

All the states had established free-school systems by 1860. In the Western states a certain portion of the public lands was set apart for school purposes, and as this grew in value the educational fund was greatly swelled. The rural schools **Schools.** were usually ungraded, as many of them are to this day, but the rudiments of an education were within reach of all classes. It has been noted by foreigners that no armies ever before went forth to battle composed of men so universally intelligent as those of the Civil War.² The colleges were also growing and multiplying, but their efficiency by no means approached that of the present day.

In literature America was coming to the front with rapid strides. The historians took the lead. Before 1860 George Bancroft had done most of his great work on Colonial and Revolutionary **Historians.** history; Prescott had written his charming histories, "The Conquest of Mexico," "The Conquest of Peru," "Ferdinand and Isabella," and "The Reign of Philip II"; while Parkman had produced most of his no less charming works. Richard Hildreth completed his history in six volumes in 1852, and Motley his "Rise of the Dutch Republic" four years later. Nearly all these historical works will live in our literature.

In the field of poetry, Longfellow, Whittier, Bryant, Lowell, Poe, and Holmes, had reached the zenith of their powers before the Civil War. In fiction this period furnishes us with but one great name, that of Nathaniel Hawthorne, **Poets.** who as a writer of romance stands alone in American literature and has no superior in any age or language. The novels of James Fenimore Cooper and of William Gilmore Simms were very popular in their day and are still read by many, **Novelists.** and the same is true of Harriet Beecher Stowe, whose greatest work has been mentioned. As miscellaneous writers Ralph Waldo Emerson and Washington Irving stand above all others, with Thoreau closely following.

¹ See Rhodes, Vol. III, p. 8.

² See Goldwin Smith's "United States."

There were many other writers of those days who attracted wide attention, but they served their day and generation only, and most of them are now forgotten. Were we called on to name the American authors of this period whose works, in our opinion, have a permanent place in the world's literature, we would name (not considering the historians) but two — Emerson and Hawthorne. Next to their writings we might name the works of Irving, the poetry of Poe, and the single poem of Bryant, "Thanatopsis." Aside from these are separate works which will probably survive, not for their literary value, but owing to their historic interest — such as "Evangeline," "The Biglow Papers," some of Whittier's poems, and "Uncle Tom's Cabin."

The religious growth of the country had been quite equal to its material growth. Before 1860 the leading Protestant bodies —

Religion. Baptists, Congregationalists, Episcopalians, Lutherans, Methodists, and Presbyterians — had become powerful organizations; each was vigorously engaged planting missions and building churches in the new settlements, in founding schools and colleges in the older states; and each had begun to send missionaries into foreign fields. The Roman Catholics had also made commendable progress. Many of the foreign immigrants were of this faith, and the Church put forth great efforts to supply for them schools and churches in the various parts of the country where they settled.

One of the strangest of American religious phenomena is the rise of the Mormons. As early as 1820 Joseph Smith of New York, a native of Vermont, began to have visions and to dream dreams. In 1827 he claimed to have found some golden tablets, revealed to him by an angel, the inscriptions of which he published in 1830 as a new revelation from heaven. He called it "The Book of Mormon," or "The Golden Bible." This book had been copied, as the weight of evidence clearly indicates, from a manuscript in a Pittsburg printing office by an employee of the office named Rigdon, who was now in league with Smith. It had been written by Solomon Spaulding of Conneaut, Ohio, and was a fanciful history of the ancient inhabitants of America, who were claimed to be descendants of the ten lost tribes of Israel.¹ On the publication of "The Book of Mormon," Smith had his "Three Witnesses," who solemnly declared that an angel had revealed to them also that the new religion now preached by Smith was the true and only religion;

¹ See Linn's "Story of the Mormons," Chap. VII.

but these men afterward quarreled with Smith and declared that their testimony was false and the whole scheme a fraud. But Smith continued to preach his new religion, and soon had a few converts. He claimed to receive new revelations from time to time. In one of these he was directed to move with his followers to Kirtland, Ohio, which he did. Here they remained for some years, when they removed to Independence, Missouri; but so undesirable were they that the other residents drove them from the state, and they settled in Illinois and built the city of Nauvoo. The converts now numbered several thousand, and Smith was autocrat. In 1843 Smith claimed that he had received a new revelation making it lawful for a man to have more than one wife. This was the origin of polygamy among the Mormons, or "Latter-day Saints."

The people of Illinois soon grew tired of the Mormons. Smith came into conflict with the authorities and was lodged in jail, where, in 1844, he was set upon by a mob and shot to death. Brigham Young, one of the "twelve apostles," now became the leader, and in 1847 the whole body of Mormons moved across the western plains to Great Salt Lake and built Salt Lake City. They called the place Deseret, but the United States government organized it into a territory under the name of Utah. In 1857 the Mormons rebelled against the United States authority. Troops were sent to Utah, and they soon put down all opposition, after which a "Gentile" governor was appointed to succeed Brigham Young, who had been governor. The Mormons have made many converts among certain classes, and their Church has shown an unexpected growth in the Rocky Mountain region. The whole number of Mormons in the world at this time is estimated at about three hundred thousand, probably ninety-five per cent of whom are in the United States.

POPULATION AND IMMIGRATION

In 1860 there were thirty-three states in the Union, and the population was 31,443,321, an increase during the preceding ten years of nearly nine millions. Eighteen were free and fifteen were slave states. The population of the free states was a little over nineteen millions and of the slave states above twelve millions. About one fourth of the southern population (3,954,000) was African slaves; and this left the white population of the South at something over eight millions — less than one half that of the North.

During the decade a steady stream of emigrants from the eastern states had poured into the Mississippi Valley. The gain in the state of Illinois alone reached almost nine hundred thousand in the ten years. In all the states along the upper course of the great river there was a rapid increase of population; the prairies were cut up into farms, and the forests were hewn down to make way for civilization. The Pacific Coast was filling rapidly, more than three hundred thousand people having settled in California within the ten years between 1850 and 1860, while some fifty thousand found a home in Oregon and Washington. Between the Pacific Coast and the Mississippi Valley lay a vast mountain region nearly a thousand miles wide and extending from the sunny lands of Mexico to the snows of British Columbia. This region was unpeopled except by Indian tribes, the Mormons of Utah, and here and there a mining camp or a trading post, and it was generally believed to be uninhabitable by civilized man. But in the years following the war the population began to press up the mountains from either side, and it has been discovered that this great mountain region is not only exceedingly rich in precious metals, but that it has also, through irrigation, great agricultural resources.

In the East the changes were less marked. In some of the great states of the East, such as New York and Pennsylvania, the multiplying industries, notably mining and manufacturing, and the growing cities, held the population and attracted many foreign immigrants; but in most of the older states the increase was slow, owing chiefly to the movement of the people westward. In the Southern states the growth of population was far less marked than in the North and West. In no slave state, except Missouri and Texas, was the increase much over one fourth as great as that of New York, or one third that of Pennsylvania. This wide difference was due wholly to the institution of slavery, which repelled the free home seeker who must earn his living by his own toil.

Foreign immigration continued in an ever increasing stream, which was still more increased by the discovery of gold in California and by the revolutionary movements in Europe during and after the year 1848. The immigrants, in the order of numbers, were Irish, Germans, English, French, and Canadians. The Irish settled mostly in the eastern cities and became a strong factor in the industrial life of these centers. The Germans and English became for the

**Western
population.**

**Changes in
the East.**

most part farmers in northern New York, Pennsylvania, and the states lying farther west, and their descendants still constitute one of the stanchest elements of our agricultural strength. Many of the Canadians also became farmers, but a larger number were engaged in the great northern pine forests as lumbermen.¹

It is notable that the foreign immigrants settled in the North and West, and almost none of them went to the South. The natural advantages of the South are quite equal to those of the North, but home seekers found little to attract them where slave labor was supreme and where their social standing would not be above that of the poor whites. And further, the slaveholders did not encourage free men to settle among them, for they well knew that every increment to the free labor in their section would tend to weaken the institution of slavery.

¹ See Thorpe's "History of the American people," p. 426.

CHAPTER XXVI

DRIFTING TOWARD HOSTILITIES

CAUSES AND PRELIMINARIES

MANY causes have been given by various writers as bringing about the Civil War; but after all there was only one cause—slavery. Let us go back for a hurried glance at the great events of forty years that pointed toward war. It is true that there were muttered rumblings, arising from the slave question, since the founding of the government, but there was no general aligning of the North and the South on opposite sides until the great agitation of 1820 that resulted in the Missouri Compromise. This compromise, though it doubtless aided in keeping slavery out of the Northwest, was an immediate victory for the South.

Then came the Texas question. The South longed for Texas. The North objected, but only feebly, and Texas came in as a slave state. Hard on this came the Mexican War. Its **Remote causes.** object we have noticed in a former chapter—more slave territory. Another victory for the slaveholder? Not exactly; for it happened that the people and not the politicians had it to decide whether California should be a slave or a free state, and they decided for freedom. Next followed the Compromise of 1850, and this was a victory for the South; for the one feature objectionable to the slaveholder—the admission of free California—had already been decided by the people and was therefore not a part of the compromise, and the other feature to attract the chief attention—the Fugitive Slave Law—was forced by the slaveholder upon the North.

Four years then passed, when the slaveholder scored his greatest victory thus far in the Kansas-Nebraska bill, repealing the Missouri Compromise. By this he received back what he had paid for Missouri. This might have troubled his conscience a little—for he still kept Missouri—until the highest tribunal in the land decided, through

the Dred Scott case, that the slaveholder had been too good to his opponents in granting the Missouri Compromise line, that he had exceeded his powers, like a son bartering away an entailed estate, which he had no power to sell—in other words, that the bargain had been null and void all along. This was hardly fair to the North, for the slaveholder had eaten his cake,—he had settled Missouri with slaves,—and yet he took back the price he had paid for the privilege.

This ended the victories of the slaveholder. He made one more terrific struggle—for Kansas—but he lost. Why? Because, as in California, the people had the matter to settle. It is a very notable fact that in all these minor struggles antedating the war the South won in each case, except in those of California and Kansas; and in these two only had the people an opportunity to decide. All the others were decided by the ruling class, so-called.

From these facts we reach the twofold conclusion: first, that the slaveholder dominated the government for many years before the war; second, that the people in general were not in sympathy with him. If then the people, the source of all power, did not approve the slaveholder's rule, why did they not take matters into their own hands, as they had the right and the power to do?¹ It may be answered that they did this eventually. First they defeated the Democratic party for waging the Mexican War; then they slew the Whig party for the compromise measures. But such mild treatment was ineffective in dealing with such a powerful, audacious, determined oligarchy as the slave power of the South. Seeing that heroic measures were necessary, the people therefore founded a new political party, based it on the non-extension of slavery, and elected their President.² This was a notice that the extension of slavery must cease; and this the slaveholder could not endure—hence came the war.

The cause of the war was slavery, and slavery alone. Some say that the war arose from the different interpretations of the Constitution on the question of state sovereignty, miscalled state rights. But what caused this difference of interpretation? Slavery. State

¹ One cause of the people's tardiness was their indifference. It required many years for the North to learn that the Union could not continue half slave and half free.

² It is true that fewer than half the people voted for Lincoln; many were too timid to vote their convictions, others could not break away from the historic party of their fathers; but it is certain that by 1860 a large majority of the people of the country opposed the further extension of slavery.

sovereignty was but a weapon, the most convenient and effective, with which the slaveholder battled for his favorite institution. Why should he wish to destroy the Union which his fathers had helped to form? Why should he be less loyal than the New England manufacturer, the Pennsylvania miner, or the Ohio farmer? It was not so at the beginning of the century; it is not so to-day, since the apple of discord has been removed. For sixty years no state or statesman had threatened the Union through state rights *per se*. In every case, when so used, it was some grievance that led to the use of state rights as the handiest effective weapon.¹ When Jefferson abandoned his extreme state rights views for a stronger union, the status of that doctrine would have been settled except on account of other grievances for which it was made a mask. But for slavery state rights would have adjusted itself; and this it was doing, for it was less prominent in 1840 than at the beginning of the century. State rights in the abstract had nothing to do with bringing on the war.

Others say that secession caused the war. Very true; but what caused secession? Slavery. Still others will say that the election of Lincoln brought about secession and war. But why was Lincoln objectionable to the South, except on account of his views and the attitude of his party on slavery? The Kansas-Nebraska Law, the Dred Scott decision, the border strife in Kansas,—each played its part in hastening the war, but they were all slavery questions. In short, all the various causes that converged to bring about the dreadful conflict may be summed up into one sweeping cause of causes—slavery.

In a remoter sense, however, climatic and economic conditions, which rendered slave labor remunerative at the South and not at the North, may be said to have caused the war; but these conditions would have brought no war without slavery. The Northern states emancipated soon after the Revolution, not that the people were more righteous than those of the South, for they were not, but

¹ New England had a quarrel with the government during the War of 1812, and appealed to state sovereignty; Pennsylvania had a similar experience in 1808, Ohio in 1820, South Carolina in 1832. As Alexander Johnson truly says: "*Almost every state in the Union in turn declared its own sovereignty, and denounced as almost treasonable, similar declarations in other cases by other states.*" But the doctrine was given up in other sections while it was retained in the South because of the peculiar institution. Thus at the South the generation preceding the war was thoroughly indoctrinated with state rights, and it was this that led such men as Robert E. Lee to side with the South. But this condition was brought about wholly by slavery.

because slavery had not taken such a hold on the North. Slavery in the one section and not in the other brought about a growing difference in social, economic, and political conditions, and the two sections drifted apart for many years. The statement that the causes of the war were "numerous and varied"¹ is misleading if unexplained, for every cause had its root in slavery. It is morally certain that there would have been no war but for slavery — unless it must be admitted that no people are capable of adjusting in right proportion the relations of the great opposing tendencies, Nationality and Democracy, without bloodshed.

The slaveholder was remarkably shrewd, but he made blunders. One was his forcing the Fugitive Slave Law upon the northern conscience. This led the northerner to see slavery in its ugliest form. The pleasant relations between the master and slave he did not see; he saw only the fleeing black man and heard his tale of woe; again, he saw the fugitive seized and dragged back to the land of bondage. Such scenes awakened in the people of the North a moral resentment against slavery as nothing else could have done.

The most serious blunder of the slaveholder was his forcing the war by an attempt to break up the Union. This was a daring leap, and it proved to be a fatal blunder. He had been protected by the Constitution and by his influence over the northern politicians; now he shattered the Constitution and alienated his northern friends; he appealed his case from the lower court, the Constitution and the government, to the higher tribunal, the people. Had he not learned by the fate of California and Kansas, by the rough handling of the Whig party and of the Kansas-Nebraska Democrats, that the people were not with him? The slaveholder knew that the North was immeasurably stronger than the South; he certainly knew that in an exhausting war, a fight to the finish, between the Union and the slave power, both could not survive. Did he underestimate the Union sentiment, the love for the old flag at the North? Did he expect to be permitted to depart in peace? Or did he rely on foreign recognition and aid? The slaveholder was admirably brave and daring, but in some ways he miscalculated, and he made a fatal blunder in permitting his cause to be appealed to the sword.²

The slaveholder's blunder.

¹ Macy's "Political Parties," p. 117.

² The line of discussion in this section is similar to that of Chapter IV of my "Side Lights," Series II.

SECESSION

The news that Abraham Lincoln had been elected to the presidency, though not unexpected, fell like a pall upon many parts of the South. Many of the radicals, it is true, professed to rejoice at the result; for now, they claimed, they had sufficient cause for secession; but with the great majority the feeling was one of awe and of evil forebodings. The threat to secede from the Union was as old as the century; it had been indulged in by many states North and South, and it usually awakened little fear. But in this case the South was in deep, deadly earnest. The ground on which the South based its right to secede was that the Union was a confederation of sovereign states, each of which had the legal power to withdraw from the compact at pleasure. The pretext for secession at that time was, as shown by the "declaration of causes" issued by South Carolina, that thirteen of the Northern states had passed "personal-liberty laws" in violation of the Constitution, that the antislavery agitation of the North had rendered property in slaves insecure, and that a man whose "opinions and purposes were hostile to slavery" had been elected President of the United States. It was also claimed that the South had been taxed by high tariff duties for the benefit of northern interests.

Causes of secession.

South Carolina took the first step toward dismembering the Union. Even before the election Governor Gist of that state sent a circular letter to the governors of the other cotton states inquiring if they were ready to take the decisive step in case of Lincoln's success. From most of them the answer was rather discouraging. North Carolina and Louisiana were unwilling; Alabama and Georgia hesitated; Florida alone gave a hearty affirmative response. But the impetuous South Carolina would wait for none of them. Her legislature met on November 5 to choose presidential electors, for in this state alone the electors were still chosen by the legislature, and not by the people. This was the opportunity. The legislature remained in session till the news of Lincoln's election had caused a whirlwind of disunion enthusiasm to sweep over the state. Now was the time to strike, for a few weeks of reflection might cool the ardor of the people. The legislature lost no time in calling for the election of a secession convention. This election was held on December 6, and the convention met on the 17th.

The short campaign was marked by the wildest enthusiasm.

Without party division the best men of the state were chosen; five had been governors of the state, and many had served in Congress. By the time this convention met the people had been wrought up to fever heat. "The excitement of the people is great under the sense of deep wrongs," wrote the newly elected governor. There can be no doubt of their sincerity. They honestly believed that the continued agitation of the North against slavery threatened the peace and happiness of their homes, and would, if continued, render life unendurable at the South. For many years they had been taught to love their state above the Union, and now it was easy for them to decide on the one remedy for their wrongs, as they believed, — secession.

The demeanor of the delegates was grave. They seemed to feel a deep sense of their responsibility. Their "Declaration of Independence" was solemnly read to the assembly. The ordinance of secession repealed the act of 1788, by which the state had adopted the Constitution, and pronounced the union between South Carolina and the United States of America dissolved. The vote was unanimous, and the state thus "resumed her sovereign powers." Excited throngs had gathered outside the convention hall; the streets of Charleston were filled with an expectant multitude. When the word was passed to the waiting crowds that the ordinance of secession had been passed, they broke forth into uncontrollable cheers, the cannon boomed, the bells rang, and palmetto flags were waved in exultant joy throughout the city. The South Carolinians compared themselves with the heroes of 1776; they seemed never to doubt that a new nation was then and there born, and they rejoiced at being witnesses of the mighty event. The state then issued an address to the other slave states urging them to leave the Union, and to join with her in forming a southern confederacy.

**Secession of
South Caro-
lina. Decem-
ber 20, 1860.**

Within one month after the secession of South Carolina four other states had followed her example, — Mississippi on January 9, Florida on the 10th, Alabama on the 11th, and Georgia on the 19th. In each of these secession was accomplished through a convention elected for the purpose, but in none was the seceding ordinance submitted to a vote of the people. Had this been done, the ordinance would doubtless have passed in each state, but in each, except perhaps Mississippi and Florida, a strong minority vote would have been recorded against disunion,

**Other states
secede.**

and this would have disclosed a weakness of the movement which the leaders were unwilling to reveal.¹ In Georgia, the Empire State of the South, the feeling against secession was strong. Alexander H. Stephens, who led the faction opposed to disunion, declared that the state would have refused to take the step but for the cry, "We can make better terms out of the Union than in it." This was doubtless true, and it proves that Georgia meant to leave the Union only temporarily for the purpose of making terms with the North. Even then the convention recorded 89 votes against the ordinance in a vote of 297. Louisiana was the next to follow, on January 26, and Texas seceded on the 1st of February. The faithful old governor of Texas, Sam Houston, did all in his power to prevent secession, but the legislature usurped the power and called a convention. This state was the first of the seceding states to submit the ordinance of secession to a vote of the people. It was carried at a popular election, but there was a considerable vote recorded against it.

These seven seceding states comprised the great cotton belt of the South. On February 4 they joined their fortunes and formed the Southern Confederacy.² A joint convention met for this purpose at Montgomery, Alabama, adopted a temporary constitution, and chose a provisional President and Vice President.

This provisional Constitution was supplanted by a permanent one, adopted by Congress on March 11, 1861. Having been ratified by the states it went into effect in February, 1862. A brief comparison between this and the Federal Constitution is interesting. The Confederate Constitution was modeled closely after that of the United States, the term "Confederate States" being used instead of United States, and "Confederacy" for Union. In the preamble we find, "We, the people of the sovereign states," instead of "We the people of the United States." In some points in which this Constitution differs from our own, the changes may be pronounced improvements, such as: The President was to be elected for six years and was not to be eligible for reelection; he was empowered to veto items in an appropriation bill while approving the remainder of the bill; members of the

¹ It must be remembered that the Federal Constitution had been adopted by the various states through conventions, and not by direct vote of the people. The South, therefore, is not open to criticism for following the precedent.

² The Texas delegates had not yet arrived. They came soon afterward.

Cabinet were to be entitled to a seat in either house of Congress for the discussion of matters pertaining to their respective departments. Other changes were: A protective tariff was made illegal; internal improvements were confined to aids to navigation, which were to be repaid by duties on the navigation so aided; the postal system was to be self-sustaining after March 1, 1863. True to the theory of state sovereignty, a state legislature by a two-thirds vote could impeach a national official acting within the state. A slaveholder was permitted to travel in any state with his slaves.

Provision was made for the admission of new states; but it is notable that no provision was made for secession from the Confederacy. The most striking feature of this Constitution was that it forbade the reopening of the foreign slave trade. The meaning of this clause has been construed in two ways: as a respectful recognition of the enlightened public opinion of the world, or as a bid for the border slave states to join the Confederacy; for if the foreign trade were not reopened, the border states might retain the market for their slaves, by joining the Confederacy.

For chief magistrate the whole South turned to Jefferson Davis of Mississippi. We have met Mr. Davis in the Mexican War, in the United States Senate, and in the Cabinet of Pierce. He was a native of Kentucky, had migrated to Mississippi, had espoused the cause of the slaveholder, and had risen in public and private life until he was the recognized leader of the far-famed aristocracy of the South. He was a graduate of West Point and was thoroughly trained in military, as well as in political, life. A nominal Democrat, he was in reality just the opposite; he was an aristocrat of the old school, typically represented in the preceding generation by John Randolph. Davis was a sincere, honest man, dignified, conservative, and intensely devoted to duty as he saw it.¹ He was the chief, though not the most radical, representative of the ultra-slaveholders, and, after the death of Calhoun, the ablest leader in the South.

For Vice President, Alexander H. Stephens of Georgia was chosen. Though he was a man of strong intellect, the choice fell upon him rather because of the elements he represented. He had been a Whig, and had joined the disunionists only out of loyalty to his state. It was believed that his selection for the second office would attach to the southern cause the former Whigs and those who had reluctantly joined in the disunion movement. Mr.

¹ Burgess, Vol. I, p. 17.

Davis chose a Cabinet of six members, one from each of the seceding states except his own.¹ There were but two really strong men in this Cabinet,—Robert Toombs of Georgia, secretary of state, and Judah P. Benjamin of Louisiana, attorney-general.

Thus within three months after the election of Lincoln, and one month before his inauguration, seven of the Southern states had withdrawn from the Union, and had set up a government of their own,—on account of anticipated evils,—and this in the face of the repeated statements of the Republicans that they had no intention of interfering with slavery where it already existed, and in the face of the fact that they could not do so if they would, because both houses of Congress were still Democratic. As to the constitutional right to secede, the question is theoretical, and no amount of discussion would settle it in the minds of all. One point, however, may be mentioned. It is certain that the framers of the Constitution never meant that violent secession from the Union they formed should be possible. The Articles of Confederation provided that the Union formed by them should be “perpetual”; and while the Constitution, which supplanted them, does not mention this, it does provide for “a more perfect union” than the one that it replaced. How could a “more perfect union” be less enduring than the “perpetual” Union it was intended to supplant? And besides, as President Lincoln argued, it is beyond the bounds of reason that any government would provide for its own destruction.

But there is another light in which the unbiased historian must view this matter. Assuming that slavery is right, that the North was wrong in condemning it, the South was right in its desire to separate from the Union. A separation by violence, as Mr. Lincoln said, would have been an irreparable blow to popular government, but a peaceful separation by mutual agreement, had such a thing been possible, would have been immeasurably better than for the two sections to remain together and keep up forever the distressing quarrel that had distracted the country for so many years. With all our intense pride of nationality, it is a mistake to believe that the inclusion of the vast domain of the United States under one government is absolutely essential to the advance of modern civilization. It were better far that the country be divided into two friendly rival powers than that it remain under one government in

¹ More accurately, President Davis did not name the Cabinet, but left the selection from each state to the delegates in the convention from that state.

perpetual warfare with itself. But, as is now acknowledged by all, slavery was a blighting evil to the country, a blot on the civilization of the nineteenth century; and, viewed in this light, the secession of the South may be considered a blessing, for it brought about the ultimate destruction of slavery.

THE WINTER IN WASHINGTON

President Buchanan was greatly perplexed at the rash and precipitate action of the cotton states. A true unionist and an honest man at heart, his sympathies were nevertheless at first with the South. He firmly believed that the South had reason to be exasperated at the continued antislavery agitation at the North. In his annual December message to Congress he openly expressed this sentiment, but advised against disunion, as the election of an anti-slavery President did not afford just cause for dissolving the Union, especially as it was the result of "transient and temporary causes, which may probably never again occur." He also reminded the South that, with the exception of the Missouri Compromise, now repealed, Congress had never enacted a law that was unfavorable to the interests of slavery. What an admission from such a source! The message also denied the power of the **Attitude of Buchanan.** President, or even of Congress, to prevent secession.

Mr. Buchanan intended, no doubt, to conciliate the South by the tone of his message, but this he failed to do. On the other hand, the slaveholders were greatly encouraged in their work of destroying the Union, for now they were assured that there would be no forcible opposition to their course during the remainder of Buchanan's term. But Buchanan was not alone responsible for this message. Aside from the powerful influence of the southern members of his Cabinet over the mind of the President, he had received from his attorney-general, Jeremiah S. Black of Pennsylvania, an official opinion on the subject of secession, and on this opinion his message was largely based.

The North received the message of the President with astonishment. The press was severe in its criticisms, and the effect was soon felt in the Cabinet. General Cass resigned his position as secretary of state because he could not agree with the President on the subject of secession,¹ and Mr. Black became his successor. A

¹ Notably on reënfencing the forts in Charleston harbor.

few days later South Carolina passed its ordinance of secession; and this, with the rising sentiment at the North, wrought a sudden change in the attitude of Black. He now took a determined stand for the Union, and it was he that influenced the President not to recognize the South Carolina commissioners who came, a short time afterward, to treat with the government. But Black was not alone.

New Cabinet. Edwin M. Stanton, who became attorney-general, and Joseph Holt, the secretary of war, were staunch defenders of the Union cause, and these three soon gained the ascendancy over the vacillating President. In January General John A. Dix of New York was called to the treasury department, and his ringing dispatch to the treasury agent at New Orleans, "If any man attempts to haul down the American flag, shoot him on the spot," had a magic effect in stimulating the North. Buchanan from this time forth was in full agreement with his reorganized Cabinet, though he still claimed that the executive had no power to coerce a seceding state. In a special message on January 8 he declared it the duty of the President to collect the public revenues and to protect the public property in all the states, and to use force in so doing if necessary. So different was the tone of this message from that of December that it was difficult to realize that they had emanated from the same pen.

No President had ever been placed in a more trying situation than was James Buchanan. He has been severely censured for his southern sympathy in the autumn of 1860. But it must be remembered that his most intimate lifelong associates were southern statesmen, that he was deeply grieved at the recent defeat of his party, and that the revolt in the South was a revolt against the success of his political enemies. Could he now suddenly break the instincts of a lifetime, come out openly against his old friends, and espouse the cause of Republicanism? And further, it is almost certain that he believed at first that secession would be a temporary thing, that the Southern states would soon become quiescent, and that the fright given to the people of the North by the southern outbreak would be a good lesson for them. Again, it must be remembered that Buchanan was not a leader of men; he had little executive ability; he was cautious almost to timidity; he was not an originator of great movements, nor capable of standing out for a principle. For his attempt to force the Lecompton constitution on Kansas a few years before, Buchanan stands unforgiven at the bar of history; but for his action in this great crisis near the

**James
Buchanan.**

close of his public life, the unprejudiced American must deal gently with his memory.

The agitation in the North during this fateful winter was almost equal to that of the South. But there was little spirit of defiance; it was rather one of conciliation. Meetings were held in New York, Boston, and Philadelphia, which expressed sentiments of conciliation for southern ears. At Philadelphia George William Curtis, who had been a strong antislavery advocate, was forced to cancel a lecture engagement for fear of a riot, and the Republican mayor of that city declared in a public speech that the criticisms of slavery from the pulpit, the lecture room, and the press should cease and must be "frowned down by a just and law-abiding people." A reaction against Republicanism was visible on all sides, and thousands regretted having voted for Lincoln,¹ not that their sentiments on slavery had changed, but because they preferred the old régime to war or disunion. This feeling of the people was reflected in Washington, and the whole winter was spent by Congress in considering how the southern discontents might be conciliated.

**Political
reaction.**

A so-called Peace Congress met in Washington on the day of the meeting of the Confederate Congress at Montgomery. It was called by Virginia, and all the Southern states that had not seceded, and most of the Northern states, responded. Among the delegates to the Peace Congress we find some of the leading men of the country — William P. Fessenden of Maine, George S. Boutwell of Massachusetts, Wilmot of Pennsylvania, Chase of Ohio, Reverdy Johnson of Maryland, and the venerable ex-President Tyler of Virginia, who was chosen chairman of the Congress. After three weeks' deliberation this "Congress" sent its recommendations to Congress; but they came to nothing, and it is needless to discuss them.

**Peace
Congress.**

The Senate had been deeply engaged in the discussion of the "Crittenden Compromise," so called from its author, John J. Crittenden of Kentucky. This aged senator, who had devoted a long and useful life to the service of his country, was perhaps better fitted than any other to adjust the relations between the two sections, had such a thing been possible. He not only represented a border state that hung in the balance; he was also himself a political neutral. Formerly a Whig, he did not, at the fall of his own party, join the

¹ Blaine, Vol. I, p. 273.

Republicans or the Democrats, but occupied a middle ground; and he was now fitted above all men to view both sides with the unprejudiced eye of a jurist. Crittenden introduced his plan of compromise to the Senate on December 18, and two days later a committee of thirteen was appointed to consider the grave questions it involved.¹ This committee was composed of the best talent in the Senate, and represented all parties. With the venerable Crittenden at its head, with Seward, Wade, and others representing the Republicans, Jefferson Davis and Robert Toombs the extreme South, and Douglas the Democratic medium, the committee began its work in earnest. The great subject was slavery in the territories and Crittenden proposed that the line of 36° 30' be restored and extended to the Pacific Ocean; that Congress have no power to interfere with slavery in any state or territory south of that line; and that these provisions be added to the Constitution in an amendment which no future amendment could have power to affect. They were supported by the Democrats, but the Republicans and the extreme southern men voted in the negative and defeated the amendment. It afterward became known that the southern members would have voted for them, but for the stand made by the Republicans, and the latter have been censured for not having prevented the Civil War by making this concession. But their party had been founded, and their victory at the polls had been won, on the principle of non-extension of slavery in any territory. How could they make a concession that would destroy the foundation on which their party was built? On the last day of December the committee reported its inability to agree.

The House meantime was laboring to the same end through a committee of thirty-three. This committee formulated a series of resolutions, embodying in substance the Crittenden Compromise; but they failed of passage. The House, however, adopted one resolution forbidding Congress or the people for all future time to molest slavery in any state where it existed, without the consent of the state. In other words, it made slavery perpetual in the United States. This moral, social, and political evil of the land, this darkest blot on American civilization, was to be entrenched forever in the organic law of the country. Such an amendment to the Constitution would have struck a blow at modern progress from which the country

¹ More than two hundred proposals of amendment were offered at this session, but this one received the chief attention. See Ames's "Proposed Amendments," p. 194.

could not have recovered in a hundred years. And yet it was supported by many leading Republicans, and it passed the Senate, as well as the House, by the necessary two-thirds vote, and was sent to the states for ratification. But even such humiliation on the part of the North could not arrest the coming conflict; and the amendment, though later ratified by three states, Ohio, Maryland, and Illinois, fell to the ground, the whole question having been transferred meantime to the battle field.

But Republican humiliation went still farther. Congress organized the three territories of Colorado, Nevada, and Dakota without a word concerning the prohibition of slavery within them. No one of course believed that these territories would become slave states, but in admitting them without mention of slavery the sole object was to avoid irritating the South. In this act the Republican party took the very same ground that Webster had taken in his Seventh of March Speech in 1850, and for the very same reason. These acts were passed, as well as the proposed amendment, after both houses had become Republican by the withdrawal of the representatives of the seceding states.

From the House of Representatives these members withdrew gradually as their respective states seceded, most of them quietly and without a word of bravado or defiance. The senators were less reticent. Most of them made parting speeches, the general tenor of which was a censuring of the North for its antislavery agitation and its electing of a Republican President, a warning to the North that any attempt at coercion would be met by force of arms, and an expression of general satisfaction in their hope of peaceful and pleasant relations between the two nations. If one of them had a doubt that the South would be able to maintain its independence, such doubt found no place in his speech. Nothing seemed more grotesque than the effort of the senators from Florida and Louisiana, which had been purchased by the United States government, to explain that their respective states had now "resumed" their sovereign capacity. The most serious of these valedictories was that of Jefferson Davis. Assuming a plaintive and pathetic strain, he begged to be forgiven if he had pained any one in the heat of discussion; he expressed his sincere belief in the right of secession, and his regret that his state could no longer enjoy the benefits of the Union. So touching and mournful was this address of Davis that his audience was moved to tears. That

**Republican
humiliation.**

**Withdrawals
from
Congress.**

night the great southern leader is said to have wrestled with God in prayer for peace. He was one of the few southern leaders who did not believe that the North would stand by and see the Union dismembered without war.

As the people of the North saw with chagrin that all their overtures for reconciliation during this fateful winter were ignored by the South, as they beheld the property of the United States — forts, arsenals, and munitions of war — taken possession of by the seceding states, their feeling of conciliation began to change to one of resentment. Many at first believed the secession movement to be the usual wolf cry to frighten the North. As the affair grew more serious, public opinion was divided; some were for coercion, others claimed that disunion was preferable to war. Among these latter was Horace Greeley, who advised that the southern sisters be permitted to depart in peace.¹ This attitude was taken by Henry Ward Beecher and by many other men of influence. Then came the period of conciliation; but as this failed, the inclination to preserve the Union by force gained ground rapidly. Greeley and Beecher were won to this view, and even President Buchanan was not averse to it, but he professed to want the authority. It is possible that Buchanan might have nipped secession in the bud by reënforcing Charleston harbor, but he declined to do this lest he should irritate the South to further violence.

Charleston harbor was the center of public interest during the winter. Fort Moultrie was occupied by Major Robert Anderson with a handful of men; but, deeming it unsafe, he dismounted his guns, burned the carriages, and quietly moved to the stronger fort, Sumter, near by in the harbor. This act was irritating to South Carolina, as it indicated that the forts, which the "sovereign" state claimed as its own, were not to be given up without a struggle. Still greater was the irritation when President Buchanan sent the *Star of the West* to relieve the fort with supplies. As the little vessel steamed into the harbor (January 9), it was fired on from shore batteries and driven from the harbor without having accomplished its mission. These were the first shots of the Civil War.

Before the close of Buchanan's presidency the Confederate government had seized every fort, navy yard, mint, post office, and customhouse within the bounds of the seven states — except Fort

¹ *New York Tribune*, November 9, 1860.

Sumter, Fort Pickens, Key West, and the Dry Tortugas. General Twiggs had also surrendered to Texas a large portion of the regular army which was then in that state.¹ This seizure of public property was looked upon by the North as robbery, while at the South it was considered but a fair division.

The slave power seemed bent on its own destruction. It ignored every effort of the North to bring about a reconciliation. Every index seemed to point unerringly to war—a weak and vacillating President, the blind precipitancy of the South, the seizure of the forts, the firing on the *Star of the West*, the refusal of the South to listen to the friendly call for her to return. The lovers of peace looked with dismay on the rushing torrent of events, all pointing to dreadful, internecine war. The religious world cried unto the heavens in a wailing, piteous prayer for peace; but its prayer seemed unheard.

We now understand it all. Slavery was the blight on American civilization. The spirit of modern progress demanded its removal. In the course of human events nothing could do this but war. The nation must rise in its might and strike down this ungodly foe to its progress and development, and that meant war.

THE NEW ADMINISTRATION

The time was now at hand for the installation of the new President. The moment was an ominous and fearful moment. Deplorable was the condition of the country. Seven states had left the Union and had organized a government of their own. They had seized United States property worth \$30,000,000. Other states were on the verge of secession. The glorious Union for which Washington had fought, which Jackson had preserved, which millions of Americans loved better than life, seemed on the verge of falling into fragments. Society was broken to pieces; men were hurrying to and fro with hot faces, not knowing what to do. Would the South yet return to its allegiance? It had answered, No. Would the Union be dismembered, or would there be war?

The answer was still locked in the bosom of one man, one of whom the world as yet knew but little. He had entered the capital by night and by stealth, for fear of the assassin's bullet. He stood now before the multitude and outlined the policy of the nation on

¹ The arms and equipment were seized, but the soldiers were permitted to return to the North.

the most momentous question that a great and free people were ever called on to decide. Never before and never since has a word fallen from a President's lips so eagerly awaited by the millions as was this inaugural address of Abraham Lincoln.

The inaugural was exceedingly moderate in tone. In spite of the failure of Congress in its conciliatory measures, he again held out the olive branch. He declared that he had no purpose, directly or indirectly, of interfering with slavery where it existed, and affirmed his belief that he had no lawful right to do so; he expressed his willingness to abide by the Fugitive Slave Law, and he went so far as to give his approval to the unchangeable amendment to the Constitution, making slavery perpetual in the United States. Could the spirit of compromise go farther than this? Lincoln had been elected on a platform based on the non-extension of slavery, but not a word of this do we find in the address. He dealt only with the larger subject of preserving the Union.

But the iron hand was incased in the velvet glove. The speaker went on to declare that the Union was older than the Constitution, that the Constitution was adopted "to form a more perfect Union," that "no state upon its own mere motion, can lawfully get out of the Union," and that all ordinances to that effect were legally void. He declared the Union still intact and indissoluble; he declared his purpose of executing the laws in all the states, and that the Union would defend and maintain itself. The meaning of this was as clear as daylight. If the seceding states would not retrace their false step, there would be war. "The ills you fly from," said the speaker, "have no real existence. In your hands, my dissatisfied fellow-countrymen, and not in mine, is the momentous issue of civil war. . . . You can have no oath registered in heaven to destroy the government; while I shall have the most solemn one to preserve, protect, and defend it."

This remarkable address was weak at one point, to say nothing of its approval of that inflexible amendment to the Constitution. The speaker promised that there should be no "invasion" of any state, as if it were an "invasion" for the United States to send troops to any part of its own soil. He also asserted that it were better to leave the Federal offices unfilled for a time than to force "obnoxious strangers" upon a people who were hostile to the government. This was a plain avowal by Lincoln that he would follow Buchanan's policy for the time in his attitude toward secession.

**Lincoln's
inaugural.**

The Cabinet chosen by the new President was, William H. Seward, secretary of state; Salmon P. Chase, secretary of the treasury; Simon Cameron of Pennsylvania, secretary of war; Gideon Welles of Connecticut, secretary of the navy; Caleb B. Smith of Indiana, secretary of the interior; Edward Bates of Missouri, attorney-general, and Montgomery Blair of Maryland, postmaster-general. Two of the Cabinet, it will be noted, were from slave states, but none of them held slaves. The Cabinet was not harmonious on the great question before the country, nor had its members yet learned that, in addition to their ordinary department duties, they were only an advisory body, that the new President was their master, and that his judgment and not theirs would shape the policy of the nation. The general belief was that Seward would be the power behind the throne, that this unsophisticated President from the western prairies was fortunate in having such a genius to shape his policy and to guide his administration — and none believed this more firmly than Seward. A month had not passed when Seward offered to the President a memorandum,¹ outlining a policy for the government and at the same time offering himself as the agent to carry it out. Mr. Lincoln dismissed the subject with the quiet remark, "If this must be done, I must do it."

A week after the inauguration two commissioners from the South, John Forsyth and Martin J. Crawford, sent by President Davis, submitted to Secretary Seward a paper requesting an interview for the purpose of adjusting the questions growing out of the political separation of the two governments, and expressing their desire that a peaceful settlement would be reached. To these Mr. Seward, without ascertaining the views of the President, is said to have given some encouragement, leading them to believe that Fort Sumter would not be reënforced; but Lincoln decided otherwise, and his decision was final.

FORT SUMTER

The immediate attention of the country was attracted to the Charleston harbor. The defenses of the harbor had fallen into the hands of South Carolina, except Fort Sumter, still held by Major Anderson. This little morsel became the first object of contention, the means of precipitating the conflict of the giants. Fort Sumter

¹ Nicolay and Hay, Vol. III, p. 445.

was necessary to the Confederacy; it was the key to the harbor of the chief seaport of the South, save New Orleans. And yet the North could not yield up the fort without acknowledging the independence of the Confederacy. The provisions in the fort were running low, and if not relieved, Anderson must abandon it. The South intimated that an attempt to supply the fort would be considered an act of war. The matter was the subject of much negotiation at Washington. Five of the seven members of the Cabinet opposed an attempt to relieve the fort, and at length Lincoln promised not to do so without first notifying the governor of South Carolina. On the 8th of April this promised notice was given, and vessels were laden with provisions for Fort Sumter. General P. G. T. Beauregard, who had resigned from the United States Army to join the Confederate service, had command of the forces about Charleston. He telegraphed to Montgomery the news of Lincoln's intention.

President Davis called a Cabinet meeting to decide the great question. He and Lincoln both well knew that war was now inevitable, but each was loth to strike the first blow. Davis's secretary of state, Toombs, declared that it would be fatal to fire on Fort Sumter. "At this time it is suicide," said he, "murder, and will lose us every friend at the North. You will wantonly strike a hornet's nest which extends from mountain to ocean, and legions now quiet will swarm out and sting us to death."¹ But other counsels prevailed, and the order was wired to Beauregard to demand the surrender of the fort, and, in case of refusal, to reduce it. Beauregard made the demand, and it was refused. On the morning of April 12, some hours before daylight, the Confederate general sent word to Major Anderson that fire would be opened on the fort in an hour; and at the appointed moment a shrieking shell from Sullivan's Island announced to the world that the day of compromise was past, and that the most stupendous tragedy in modern history was begun.²

Fifty cannon were soon pouring their deadly missiles into the walls of the doomed fort. As the morning arose the people of Charleston gathered along the wharf in thousands to witness the spectacle. Anderson and his little band returned the fire with vigor. The

¹ Stovall's "Life of Toombs," quoted by Rhodes, Vol. III, p. 347.

² Anderson had said that he must abandon the fort by noon of the 15th, if no supplies reached him. The decision to fire was made by Beauregard's four aides, who had discretionary power. Had Davis or Beauregard known the exact intention of Anderson, it is possible that the fort would not have been fired on.

walls of the fort were soon shattered and crumbling; the barracks and woodwork were set on fire, and only by the greatest effort did the men save all from being consumed. They rolled nearly a hundred barrels of powder into the sea to prevent explosions. So stifling was the air with smoke, dust, and cinders, that the men lay upon their faces and breathed through wet cloths. After the bombardment had continued for thirty-four hours the little band¹ surrendered and marched out with the honors of war, and Fort Sumter passed into the hands of the Confederacy. This was considered the first blow of the Civil War, for the little matter of the *Star of the West* had been forgotten. At the fall of Sumter Charleston gave itself up to the same unrestrained, delirious joy that had marked the passing of the secession ordinance four months before.

The bombardment.

The effect of the attack on the fort was magical throughout the North. If the shot was not "heard round the world," it certainly echoed from every hill and reverberated in every valley from the New England coast to the shores of Oregon. "Fort Sumter crystallized the North into a unit, and the hope of mankind was saved," said Emerson. The North had hesitated all through the winter. Millions were undecided what to do; but now this attack on a United States fort awakened their resentment with a unanimity that was surprising. Two days after the fall of Sumter President Lincoln issued a call for seventy-five thousand militia, and the response from every section of the North was most gratifying. Not only the adherents of his own party, but all classes of citizens forgot their party differences and rushed to the defense of the country. Mr. Buchanan came out strongly for the Union. "The North will sustain the administration almost to a man, and it ought to be sustained at all hazards," wrote the ex-President to a former member of his Cabinet.

Call to arms.

But most notable of all was the action of Douglas, to whom a parting word is now due. If there was a man in the North, aside from the President, in whose hands the fate of the Union rested, it was Stephen A. Douglas. The Republican party could not have won in the gigantic struggle but for the aid of the northern Democrats. More than a million men at the North looked to Douglas as their political leader, and his influence

Stephen A. Douglas.

¹ Anderson had one hundred and twenty-eight men, including non-combatants. It is a strange fact that not a life was lost on either side in this bombardment.

was at least coördinate with that of the memory of Jackson. What a power for good or for evil rested with this man! and the use he made of this power must lead posterity to condone every error of his earlier life. Not only did Douglas powerfully defend the President's inaugural in the extra session of the Senate, but on the day that intervened between the fall of the famous fort in the Charleston harbor and the call to arms, Douglas called on the President, and in a long, confidential interview pledged his support and offered his services in the cause of the Union. Next morning the press of the North published the President's call for troops, and in the same edition an account of this interview with Douglas. The effect on the followers of Douglas may be imagined. Southern hopes of a divided North vanished like a mist. Lincoln was greatly pleased with this attitude of his former rival, and, it is believed, would have offered him some high position of honor, had his life been spared. But Douglas was soon called to pay the debt of Nature; in June of this same year he was gathered unto his fathers.

The fall of Fort Sumter had an effect on the South quite equal to that on the North. This first blow struck by the South had the effect, as we have seen, of crystallizing the North against disunion, and it unified a large portion of the South on the opposite side. Four slave states that had hesitated for months now proceeded to pass ordinances of secession, and thousands who had favored preserving the Union till that moment readily joined the forces of secession. This is explained, not only by the fact that the firing on the fort was a notice that the day of negotiation was past, but by the further fact that President Lincoln's call to arms that soon followed indicated his policy of coercion — a thing most distasteful to the South.

If there was one man in the South who could have prevented the secession of these four states it was John Bell of Tennessee. For many years he had stood high in the councils of his state and of the nation. He and Douglas had received a combined vote in the South a hundred thousand greater than the vote of Breckenridge. He could have held for the Union not only many of the old Whigs who had voted for him, but also the Douglas Democrats — probably half a million men; he might have been able to prevent secession in Tennessee and North Carolina; and Virginia never would have seceded if cut off from the cotton states by these

Effect on the South.

John Bell.

two.¹ But this man, who had stood on a "Constitution" and "Union" platform, now, probably because of his dislike of coercion, trampled the Constitution in the dust and gave his voice for disunion.

Virginia was the first to join the procession. Her convention had been sitting for weeks, and as late as April 4 had voted by two to one against secession. But Richmond was full of conspirators who labored night and day to get the Old Dominion into the Confederacy. Now the hour had come; the state could swing in the balance no longer; and she cast her lot with her slaveholding sisters. But two days after Lincoln's call to arms the Virginia convention passed a secession ordinance. It then provided for submitting the ordinance to a popular vote; but this election would be dignified by calling it a farce. The convention proceeded to put the Virginia troops into the hands of Jefferson Davis, to send delegates to the Confederate Congress, to invite the Confederate government to make Richmond its capital, and to officially proclaim the commonwealth a member of the Confederacy, — all before the people had voted on the ordinance. Then they voted, and ratified it by a substantial majority. There was nothing else to do but to "get out of the state," as Senator Mason put it. Before the secession of Virginia was proclaimed, movements were set on foot to seize the United States arsenal at Harpers Ferry and the government Navy Yard near Norfolk with its immense military stores, including two thousand cannon. Both were in the hands of the state authorities before the end of April. These were worth \$10,000,000; all the seizures by the South put together reached the grand total of \$40,000,000.

**Virginia
secedes.**

North Carolina and Arkansas seceded in May, and Tennessee in June. This made eleven, and here the process of secession stopped. Every effort was made by the Confederacy to win the four remaining slave states, — Delaware, Maryland, Kentucky, and Missouri; but though the governors of Missouri and Kentucky did everything in their power to lead their respective states to secede, their efforts were fruitless. Even in the seceded states the disunion sentiment was not unanimous. In eastern Tennessee thousands of the mountaineers opposed secession and remained true to the Union during the

**North Caro-
lina, Arkan-
sas, and Ten-
nessee secede.**

¹ Virginia preceded these in seceding, but Virginia was morally sure that North Carolina and Tennessee would follow her. See Blaine's "Twenty Years of Congress," Vol. I, p. 311.

war. The same was true in western Virginia, where the people, repudiating the action of the state, broke away from it and formed the state of West Virginia. For thirty years the South had been united on the great questions growing out of slavery, while the North was always divided; now this condition was reversed — the North (save an isolated individual here and there) was united, not on the slavery question, but on the issue of preserving the Union, while the South was hopelessly divided.

NOTES

Lincoln's Journey to Washington. — Lincoln's journey to the capital was roundabout. He passed through most of the large northern cities, and in his brief addresses he seemed to treat the grave state of the country too lightly, declaring that there was no need of fear that there would be any bloodshed. When in Philadelphia on February 22, he received letters from Seward and General Scott advising that his published programme be changed, as there were serious threats of assassinating him when he passed through Baltimore. To this he refused to agree. "I cannot consent to it," said he. "What would the nation think of its President stealing into the capital like a thief in the night." He went to Harrisburg that morning, and there it was determined by his friends that it was needless to endanger his life, and that he should go to Washington *incognito* during the coming night. Lincoln yielded; but he ever afterward regretted having done so. Colonel Scott, president of the Pennsylvania Railroad, took entire charge of the project. He cut all the telegraph wires leading out of Harrisburg, and sent Lincoln with a single companion, Colonel Lamon, to Philadelphia to catch the night train to Washington. Everything went smoothly, and after the friends of Lincoln had spent a sleepless night at Harrisburg, the wires being repaired about daybreak, they received the cipher telegram previously agreed on, "Plums delivered nuts safely," and Colonel Scott threw his hat into the air and shouted, "Lincoln is in Washington." See McClure's "Lincoln and Men of War Times," p. 45 *sq.*

Douglas at Columbus. — A few days after the fall of Fort Sumter, Stephen A. Douglas, in journeying eastward to Washington, stopped to spend a night at Columbus, Ohio. The people of the city soon learned of his presence, and a large crowd gathered in the dim-lighted street about his hotel and called for an expression from him on the great question before the country. The crowd, composed of all parties, was not noisy; it was earnest, serious, and thoughtful. Douglas had not thought of making a speech, but he went half dressed to the unlighted window, his form appearing in dim outline to the waiting crowd. Then he spoke solemnly in slow, measured sentences, his deep, musical, sonorous tones rolling over the crowd — a veritable voice in the night. Here the great Democratic leader declared for the preservation of the Union at all hazards, for the crushing of insurrection, and pledged himself to the support of the Lincoln administration in the great crisis. "The people scarcely cheered," says an eyewitness, "and the silence seemed as a deep religious Amen from the multitude." See Coxe's "Reminiscences of the Civil War," pp. 5-6.

CHAPTER XXVII

BEGINNINGS OF THE GREAT WAR

A VIEW OF THE BELLIGERENTS

THE United States was now divided into two hostile sections ready to spring at each other in deadly combat. The North, including the border states and the newly admitted Kansas, was composed of twenty-three states, the South of eleven; the population of the North exceeded twenty-two millions, while the population of the seceding states was about nine millions. According to these figures it would seem that the North must win in the great contest that was before them. But in some respects the South had the advantage of the North. One of these was its unanimity. We have noticed that the slave states were geographically divided, that four of them refused to secede, and that two, Virginia and Tennessee, experienced a revolt against secession; but aside from these exceptions, the oneness of spirit in the slave states was remarkable. This seems the more surprising when one considers that in the entire Confederacy there were only about eight thousand large slaveholders, and that not more than three hundred and fifty thousand held slaves at all. These represented a population of less than two millions. More than five millions of the southern whites therefore were absolutely without interest in slave property; and yet these were as faithful as their slaveholding neighbors to the southern cause.

The North, on the other hand, was less unanimous after the first year of the war, when it became an abolition war, as well as a war against disunion. The firing on Fort Sumter, as aforesaid, swept the free states with one grand, patriotic impulse; but before the close of the great contest partisanship rose again to the surface, and the administration was often handicapped by a want of hearty support. This was shown by the draft riots in New York, by the adverse result of the elections in many states, and by the severe criticisms of the methods of conducting the war, from within as well as from without the dominant party.

Another advantage of the South was found in its better trained men. The slaveholders were men well trained in the use of fire-arms and in horsemanship, while no such a class could be found at the North outside the regular army. The southern armies therefore were more efficient at first than their opponents from the North.

Advantages of the South. A third advantage of the Southerners was found in the fact that they fought on their own soil, and had the sympathy and support of the people. After secession had been accomplished they felt that the United States was a foreign nation, that its armies were invading their soil and destroying their homes for the sole purpose of conquest and subjugation. Such a belief infuses into men a desperate valor that nothing else can produce.

The advantages of the North, however, were greater than those of the South. First, it had more men and more money. The proportion of men was about as five to two, and this difference became very marked in the latter part of the struggle. In wealth the North far surpassed the South. At first the credit of the United States was low, but soon after the Midas touch of Secretary Chase began to be felt, our bonds found a ready sale. A brilliant stroke was the establishing of the national banks in 1863, by which the government became responsible for the issue of local banks, and by thus laying its hand on the people's money, it restored confidence on all sides. The credit of the nation was far better at the close of the war than at its beginning.

The Confederacy had little specie, and it issued large quantities of paper money; but as the years passed and its cause seemed hopeless, its bills fell steadily in value until they became worthless.

Another advantage of the North lay in its foreign relations. Nothing is more essential to our modern civilization than foreign relations and foreign commerce. It was important to the United States to maintain its cordial relations with other powers, and it was absolutely essential to prevent the recognition by foreign countries of the independence of the Confederacy. Had any of the great European powers recognized the South, the blockade of the southern ports could have been broken in an hour, and the South could have sold its cotton, while food, clothing, and munitions of war would have poured into its ports in endless quantities. But the Confederacy fought the war through under the incalculable disadvantage of being without foreign relations, and the fact is due chiefly to the diplomatic skill of Lincoln's administration.

The North, however, might have won in the great struggle though its foreign relations had been suspended, as it had unbounded resources and the ability to use them. This brings us to the chief advantage of the North over the South — its ability to manufacture its own materials. Every soldier in the northern armies could have been fed from the northern farms, clothed from the northern mills, and fully equipped from the northern foundries. But the South was purely an agricultural region. Slave labor was incapable of manufacturing; it could only delve the soil; nor could the skilled workman be induced to go to the South and work among slaves. Hence its rich minerals, its vast and inexhaustible resources, were left in the earth. It raised cotton, rice, tobacco, and cereals, sold them abroad, and purchased almost every manufactured article from the North or from Europe. When the war came, this trade was all shut off, and it was then too late to build factories; the men of brains were in the armies. This want of ability to manufacture, occasioned by slavery, was a source of fatal weakness to the South, and insured its ultimate defeat. Thus slavery not only brought about secession and the war, but, the war once begun, it brought about the defeat of the South.

EVENTS OF APRIL

The month of April, 1861, was exceedingly eventful in American history. We have noticed the fall of Fort Sumter, the secession of Virginia, the seizure of Harpers Ferry and of the great Navy Yard at Gosport near Norfolk, and have referred to the President's call to arms. Then came the great uprising of the North, the attack on the troops in Baltimore, the marshaling of southern armies, the proclamation of the blockade by President Lincoln — all within one week after the attack on Sumter. The President's call for troops was met throughout the North with a ready response. The farmer left his plow and the artisan his workshop, the merchant abandoned his store, and the banker his countingroom to answer the call to save the Union. Congress, it is true, has sole power to create armies and navies, but this call for militia was based on a statute of sixty-five years' standing, by which the President was enabled to call the militia in any numbers into the service of the Union when necessary for the public safety. The object, as stated in the proclamation, was to put down insurrections in certain states, which were mentioned by name, and to repossess the forts and other places that had been seized.

All mention of the Confederacy, and even of the states as units of insurrection, was avoided. Secession was not therefore recognized as the action of a state, but as the unlawful proceeding of certain disaffected classes within it.

The President's call was addressed to the governors of all the states North and South, except those in which rebellion existed.

The response from the North was hearty and unanimous. **Response to call to arms.** The solitary Democratic governor in the North (in Rhode Island) marched at the head of his militia to the battle field. From the lower South favorable answers were neither expected nor received. The answers showed a spirit of defiance and a decisive refusal to send troops for the "wicked purpose of subjugating the Southern states." From the four border states that did not secede the answers were far from satisfactory. The governors of Kentucky and Missouri flatly refused, while those of Maryland and Delaware delayed and did nothing.¹

As the Massachusetts troops were passing through Baltimore on the 19th of April, they were attacked by a mob of southern sympathizers. The mayor did all in his power to preserve order, but the mob could not be restrained; it attacked the troops with pistols and missiles, and they were obliged to open fire in self-defense. Four of the soldiers and probably a dozen of their assailants were killed. This was the first bloodshed of the Civil War.

If anything more was needed to fire the northern heart after the attack on Sumter, the work of the mob in Baltimore supplied the deficiency. President Lincoln dealt with the matter in great moderation. He did not lose his temper; he quietly decided to avoid further trouble by bringing his troops to the capital by way of Annapolis. Baltimore remained in a state of great commotion for three weeks, when General B. F. Butler of Massachusetts took military possession of the city.

This 19th of April was to receive still another mark as a historic date. It was on this same day that witnessed the first bloodshed of the Civil War, the anniversary of the first bloodshed of the Revolution, that the American President issued a proclamation of unmeasured importance. He proclaimed a blockade of the ports of the seceded states.² This seemed an audacious utterance indeed. The United

¹ Governor Hicks of Maryland raised some troops after long delay.

² The ports of Virginia and North Carolina were not included in this proclamation, but these were included in an additional one issued on the 27th.

States Navy was composed of but forty-two wooden vessels, and more than half of these were in foreign waters, while the blockade covered three thousand miles of seacoast. Was the new President a dreamer or a genius? The world had not yet taken his measure, and knew not how to classify him. At first the blockade amounted to little; but ere long the vessels began to arrive from afar, merchant vessels were turned into ships of war, the northern shipyards were kept busy day and night, one southern port after another was shut in by a cordon of war vessels, and long before the close of the war the South was hemmed in and isolated from the rest of the world. Great stacks of cotton piled along the seaboard could be bought for four cents a pound, while it was worth \$2.50 at Liverpool. A ton of salt worth \$7 or \$8 at Nassau, was worth \$1700 in gold at Richmond before the close of the war — all because of the blockade. The South was in the direst need of arms and clothing, but it could purchase nothing from abroad, owing to the blockade. Had the southern markets been open to the world, the conquest of the Confederacy would have been almost impossible. Scarcely more did the northern armies toward compassing the collapse of the rebellion than did the blockade.

The spirit of secession in Maryland was not confined to the city of Baltimore; it swept in a sudden wild, enthusiastic wave over the state. But it was short-lived; it was the cry of a vigorous minority. Before the close of April the sober second thought began to assert itself; two thirds of the people were found to be for the Union, and the legislature decided by a large majority to cling to the old flag. And yet Maryland did not rush to the defense of the Union. As the state lay between the two great sections, the people halted between two opinions. The legislature voted to take a neutral ground as to actual hostilities, and sent an embassy to Montgomery, and another to Washington, to implore the respective Presidents to cease the unholy war. In the course of the war, however, many Marylanders fought in the Union armies, while others took the side of the South.

In the other two great border states, Kentucky and Missouri, there were similar struggles, with the same result as in Maryland. It happened that in Missouri both the governor, Jackson, and the legislature were favorable to secession. In January a call was made for the election of a convention to decide the great question, and to the chagrin and surprise of the authorities a large majority of the

delegates so elected were Unionists. Governor Jackson, however, did everything in his power to lead the state into secession and to seize the United States arsenal at St. Louis. But St. Louis at this moment contained a staunch defender of the Union in the person of Francis P. Blair, Jr., a brother of Mr. Lincoln's postmaster-general. The governor found his plans foiled at every point by the ever watchful Blair. Captain Nathaniel Lyon, who had command of the arsenal, worked hand in hand with Blair to save the state and the arsenal. Governor Jackson was busy organizing the forces of secession: he established "Camp Jackson" in the suburbs of the city, and sent to President Davis for arms and ammunition. These arrived on May 8, and two days later Lyon marched out with six thousand men, surrounded the camp, and forced its surrender without bloodshed.

This was a great blow to the secession cause in Missouri, but the trouble did not end here. The whole state was in turmoil, and the scenes of a few years before in Kansas were repeated. Governor Jackson and Sterling Price, his chief lieutenant, demanded as a condition of peace that Federal troops should not be stationed within the state, nor be permitted to pass through it. Blair and Lyon refused to agree to this, and their decision was construed by Jackson and Price as a declaration of war upon the state. Jackson issued a call for fifty thousand volunteers to defend the state. This was a challenge, and Lyon, so accepting it, sailed up the Missouri in June and took possession of the capital. Thus Missouri became one of the first battlefields of the war, as we shall notice on a later page; but at this point we turn to take a view of her sister south of the Ohio.

President Lincoln was extremely anxious to save Kentucky for the Union, not simply because of its strategic importance, which was great, but also because it was his native state and he regarded it with peculiar affection. Governor Beriah Magoffin was a decided secessionist, as was also the foremost man in the state, John C. Breckenridge; but their combined influence was not great enough to control the people of the state, or even the Democratic legislature. Governor Magoffin used every effort in his power to lead the legislature to call a secession convention and to arm the state under Simon B. Buckner, a known secessionist; but that body answered him by passing a law requiring an oath of allegiance to the Union. However, Kentucky, like Maryland, failed to hasten to the aid of the Union at the President's call;

Kentucky.

it decided on a neutral ground towards the war.¹ President Lincoln tacitly consented to the neutral position of Kentucky, on the supposition that the soil of the state would soon be invaded by Confederate armies, when the people would gladly welcome Federal troops to expel them; and this is exactly what came to pass. On the 20th of June the state voted for members of Congress, and to the lasting joy of the administration the Union party polled nearly three votes to one for the secessionists, electing nine out of ten members by a combined majority of 55,000. Thus ended the hopes of the disunionists for Kentucky, though the state, like Maryland and Missouri, furnished many soldiers for each side in the war.

OPENING OF HOSTILITIES IN VIRGINIA AND MISSOURI

President Lincoln's call for 75,000 men and for an extra session of Congress was answered by President Davis by a call for 100,000² men and for an extra session of the southern Congress. The Confederate Congress met on the 29th of April, authorized the raising of \$50,000,000, forbade the payment of all debts due from the southern people to individuals or corporations in the free states, admitted Virginia, North Carolina, Tennessee, and Arkansas to the Confederacy, and moved the capital to Richmond.

Lincoln, on May 3, called for 42,000 more volunteers for three years unless sooner discharged, for an increase of the regular army by 22,714 men, and for the enlistment of 18,000 seamen for the navy. It was now plain that both sides were preparing for war in earnest. The great immediate concern of the Lincoln administration was to make safe the city of Washington. Soon after the fall of Sumter a member of Davis's Cabinet had boasted that by the first of May the Confederate flag would float over the capital at Washington. This threat was published throughout the North, and it caused much fright among the people. The fear was greatly increased by the knowledge of the gathering of the Confederate armies in northern Virginia and the inability of the northern troops to pass through Baltimore on their way to the defense of the capital. No attempt to take the city was made by the Confederates, but had such an attempt been

**Peril of
Washington.**

¹ Nevertheless the Confederate Congress went through the farce in December, 1861, of admitting Kentucky into the Confederacy.

² Or rather, he stated in his message that such an army was being raised under authority of a preceding act of Congress.

made before the 25th of April, it might have succeeded. But all fears were scattered on that day by the arrival of two New York and Massachusetts regiments. And others were coming. Before the end of May 50,000 troops had gathered in the city, and they crossed the Potomac and took possession of Alexandria and of the famous heights of Arlington.¹ Here they paused; and the Confederate army, scattered from Harpers Ferry to Norfolk, also remained inactive.

Meantime the war had actually begun in another quarter. Early in May Governor Letcher of Virginia called for the militia of that state to assemble under arms for the purpose of repelling an apprehended invasion from the "government at Washington." This meant nothing less than an enlistment in the Confederate service. But the people living beyond the Alleghanies, throughout that section of Virginia bordering on Ohio and Pennsylvania, were not in sympathy with the rebellion. They had few slaves, and their interests lay with the North. Why should they take up arms against the Union and the flag which they loved? They refused to do so; they held mass meetings in Wheeling and other cities, and declared their adherence to the Union. Some forty counties, including a few east of the mountains, held a convention in June, and the delegates were almost unanimous in their desire to have the western counties break away from the old state and form a new one. One of the chief objects of the convention was to bring about a division of the state. The convention chose Francis H. Pierpont governor, not of the proposed new state, but of Virginia, taking the ground that the loyal citizens of the state truly represented it, and that the disunion government at Richmond was illegal. It was this government that applied to Washington for a division of the state. Some time later senators and representatives were sent to the Congress — not at Richmond, but at Washington. A constitution was framed for the new state, and was ratified by the people in May, 1862.

The following year West Virginia became a state in the Union, Congress agreeing with the loyal citizens that they legally represented Virginia. The clause in the Federal Constitution forbidding the division of any state without

¹ As Colonel Ellsworth, the commander of the New York Fire Zouaves, entered Alexandria he saw a Confederate flag flying over a hotel, and, mounting the stair on the inside, he hauled it down. As he came down the stairway he was met by the hotel keeper, who shot Ellsworth dead on sight. The next instant the hotel keeper was shot by one of Ellsworth's men. See Greeley, Vol. I, p. 533.

its consent was overcome on the ground that, as secession was illegal and void, the West Virginians represented Virginia, and their consent to the division was deemed sufficient.

Governor Pierpont had applied to President Lincoln for assistance in driving out the secessionists. The request was granted, and western Virginia became the first battle ground of the Civil War; and the first hero of the war, aside from Major Anderson, was George B. McClellan, a young army officer who had resigned his commission and was now president of a railroad company and residing in Cincinnati. His first serious work was to clear western Virginia of Confederates, and he addressed himself to the task with great vigor.

In a series of skirmishes, covering but a few weeks, he drove the enemy entirely out of that part of Virginia. The Union loss, according to McClellan's report, was twenty killed and sixty wounded, while the loss of the enemy was about twenty times as great, with a thousand taken prisoners. This preliminary work was very important in its results. It saved that entire section for the Union, reestablished the broken railroad lines westward from Washington, and pointed toward McClellan as the coming man in the great war that was to follow.

While these things were going on, conditions were maturing in eastern Virginia for the first great battle of the war. Public opinion at the North was impatient at the inaction of the army along the Potomac. Why not strike a blow for the Union? This was the cry all over the North, and though General Winfield Scott, the commander in chief, did not favor giving battle at that moment, the pressure was too great to be resisted. General Irvin McDowell held 45,000 men on the Potomac opposite Washington; General Butler, who had been transferred from Baltimore, occupied Fortress Monroe with 10,000, while General Patterson marched from Pennsylvania into Virginia with 20,000 men. Opposed to these were General J. B. Magruder, facing Butler with about the same force; General Joseph E. Johnston with some 12,000 men, who had retreated from Harpers Ferry to Winchester at the approach of Patterson; while opposite McDowell, with his base at Manassas, Beauregard,¹ who in former years had been a classmate of McDowell at West Point, held the main Confederate army of about 20,000 men. Such

¹ Beauregard had resigned from the United States army, as had also many of the Confederate officers, some two hundred in all.

was the military situation in eastern Virginia when the administration decided on a general advance for the purpose of offering battle.

On the 16th of July McDowell moved forward with 30,000 men, to attack Beauregard at Manassas. Every indication pointed to a northern victory. McDowell was a good strategist.

**McDowell's
advance.**

The plan of the coming battle was his own, though the general movements were directed from Washington by General Scott. The North was in high spirits in anticipation of the battle. Many members of Congress drove out from Washington to receive the earliest word of the expected victory of the "Grand Army." And it would have been realized but for the unaccountable action of General Patterson, who failed to detain Johnston at Winchester as he was ordered to do. Instead of doing this he withdrew to Charleston, twenty-two miles away, and Johnston hastened to join Beauregard with the major part of his army. Patterson was a veteran of the War of 1812 and of the Mexican War, and though he was a Breckenridge Democrat in the campaign of 1860, there is little ground to question his loyalty to the Union. His costly blunder was the result of incapacity. He was speedily relieved of his command, and Nathaniel P. Banks was appointed in his stead.

McDowell had planned the battle with reference to Beauregard's army alone, and did not know of the arrival of Johnston till after the battle. He decided to make the attack on Sunday,

**Battle of
Bull Run.**

July 21, and before three o'clock in the morning his army moved from Centreville in three columns under Generals Tyler, Hunter, and Heintzelman.¹ Tyler was to make a feint on Beauregard's left; the other two were to make a long detour and cross Bull Run at Sudley Ford and make the real attack. Hunter's division met the enemy at ten o'clock and opened fire. In a short time the Confederates were driven back a mile and a half to a plateau where General Thomas J. Jackson stood with a brigade awaiting the Union forces. At this point the Confederate General Bee, who was mortally wounded later in the day, is said to have exclaimed to his men, "Look at Jackson, there he stands like a stone wall!"—and from that time this remarkable commander, whose powers were yet to be revealed, was known as "Stonewall" Jackson.

The firing was heard by Beauregard and Johnston, then four miles away, and they galloped to the scene of the conflict. Johnston

¹ Two other divisions, under Miles and Runyon, were left to guard the base at Centreville and the communications with Washington.

was the ranking officer, but he approved most of the plans of Beauregard, and the two worked in harmony during the day. They arrived on the field at noon and ordered an immediate renewal of the fight. The battle raged for three hours longer. The divisions of Tyler and Heintzelman having joined that of Hunter, the Union forces surged up the slope and gained possession of the hill. They were driven back by Jackson at the point of the bayonet; but they rallied and regained their ground, sweeping the Confederates from the field. Such was the condition at three o'clock. The Union troops began to rejoice in their victory.

But at this moment the Confederates began to cheer and to move forward with great confidence. Why the sudden change? General Kirby Smith had just arrived with the remnant of Johnston's army, over twenty-five hundred men. These fresh troops were joined to the army of Beauregard and the whole force moved impetuously against McDowell. The word now flew through the Union ranks that Johnston's army had arrived, and the untrained militia were seized with a sudden fear.¹ They began to waver, to retreat down the slope; and in a little time they were a panic-stricken, disorganized mass, fleeing for their lives across the Virginia plains. In vain did McDowell and his officers attempt to rally the frightened men. They believed the Confederates were pursuing them (which was not true), and they fled on and on till late in the night, many of them never stopping till they reached the heights of Arlington or Washington, thirty miles from the scene of the conflict. Thus ended the famous, disastrous battle of Bull Run.

The news of the defeat at Bull Run caused deep depression and indignation at the North. McDowell was severely censured, but he had done nobly, and deserved no blame. The army was denounced as a band of cowards, but unfairly and unjustly. Most of them were untrained in military affairs; they had enlisted in the war through a patriotic impulse, with little knowledge of the real character of war. They had been thrown into a panic, had lost their heads and become uncontrollable through a sudden fright. Such an experience might come to any body of raw militia, but it would hardly be possible with regulars.

¹ They had not yet learned that Johnston with most of his army had arrived on Saturday. The Union loss in this battle was 481 killed, 1011 wounded, and about 1300 prisoners, many of whom were wounded. The Confederate loss was 387 killed, 1582 wounded, and a few prisoners. The Union army also lost 28 cannon, 5000 muskets, and half a million cartridges.

The battle of Bull Run was in the end a great lesson for the North. It misled the South by giving the people a false sense of security, a belief that ultimate success was certain. The North, on the other hand, after a few days of depression and discouragement, arose to the gravity of the situation. People realized for the first time that a long and bloody war was necessary to save the Union; and the slight wound received at Bull Run awakened the mighty energy that was essential to success.

Next to Virginia, Missouri became the earliest battle ground of the war. As we have noticed, Governor Jackson and the legislature made the most desperate efforts to lead Missouri into secession, but the people thought otherwise. They elected a Union convention which declared the office of governor and other offices vacant, and appointed Union men to fill them. These appointments were ratified by the people. But the discredited governor and a fragment of his discredited legislature met in November, and boldly set forth a declaration of independence and pronounced the state out of the Union. This movement proved a fiasco; it had no influence with the people.

We left General Lyon at Jefferson City, whence he removed to Springfield to join his forces with fifteen hundred men under Colonel Franz Sigel. The Missourians under Sterling Price had meantime been joined by General Ben McCulloch with a force from Texas and Arkansas, raising the entire army to nearly twelve thousand, while that of Lyon was not over six thousand. On the 9th of August Lyon advanced from Springfield to the banks of Wilson's Creek, ten miles from the town, where Price and McCulloch were encamped. Sending Sigel with twelve hundred men around the enemy's right to strike from the rear, Lyon commanded the main army and advanced to attack in front. The two attacks were made, front and rear, at almost the same moment, about five o'clock in the morning. Sigel made a desperate charge but was driven back with a loss of two thirds of his men. In front the battle continued for some hours, Lyon leading his men with great gallantry. Twice he was wounded, and his horse was shot under him; but while the blood was streaming from a wound in the head, he mounted a second horse and shouted to his men to follow him in a final attack; but at that moment he received a fatal shot in the breast. The death of Lyon, one of the bravest and most skillful officers in the service of the

Missouri.

**Battle of
Wilson's
Creek.**

**Death of
Lyon.**

government, was a national disaster. After his death the little army, under Major Sturgis, fought on valiantly for an hour longer, when it retreated in good order to Springfield and thence to Rolla. The total Union loss in the battle of Wilson's Creek slightly exceeded twelve hundred, while the Confederates sustained a loss of about eleven hundred and fifty.

THE EXTRA SESSION OF CONGRESS

Before the battles of Wilson's Creek and Bull Run the Thirty-Seventh Congress had met in special session at the call of the President. Two notable leaders of the Senate, Seward and Chase, were now in the Cabinet, and the seat of the latter was filled by John Sherman, whose six years' service in the House had prepared him for a long and useful career. Of the twenty-two senators representing the eleven seceded states, all had left that body save Andrew Johnson of Tennessee, who alone remained true to the Union. But many able leaders yet remained. New England was represented by Sumner and Henry Wilson of Massachusetts, Jacob Collamer of Vermont, Fessenden of Maine, and John P. Hale of New Hampshire. From Pennsylvania came David Wilmot; from Ohio, Benjamin Wade; from Illinois, Lyman Trumbull; from Kentucky, John C. Breckenridge, and from far-away Oregon, the popular English-born soldier-statesman, Edward D. Baker.

The leader of the House was Thaddeus Stevens of Pennsylvania, who held the leadership throughout the war, and whose sympathy with the slave almost led him to dislike his own race. Among the ablest men in the House were George H. Pendleton of Ohio, Elihu B. Washburn of Illinois, and George S. Boutwell of Massachusetts. Galusha A. Grow of Pennsylvania was elected Speaker.

Mr. Lincoln's message was a remarkably clear statement of the condition of the country, the purpose of the government, and the importance to the world of saving the Union. "This issue," he stated, "embraces more than the fate of the United States. It presents to the whole family of man the question whether a constitutional republic or democracy — a government of the people by the same people — can or cannot maintain its territorial integrity against its own domestic foes. . . .

**Lincoln's
message.**

Must a government be too strong for the liberties of its own people, or too weak to maintain its own existence?" That the President

no longer thought of compromise is clear from his statement that "no popular government can long survive a marked precedent, that those who carry an election can only save the government from immediate destruction by giving up the main point upon which the people gave the election." As to the criticisms of the President for having in April suspended the writ of Habeas Corpus,¹ he shows how this apparent violation of one law was to enforce all the others that had been violated at the South, and disposes of the matter in a stroke by saying, "Are all the laws but one to go unexecuted, and the government itself go to pieces lest that one be violated?" He confessed in this message that he had surpassed his constitutional powers in his call of May 4 for an increase in the regular army and of the navy; but he showed the public necessity for these acts and asked Congress to ratify them. He also called for four hundred thousand men and \$400,000,000 to prosecute the war.

The session was in full swing when the news of the Bull Run defeat reached the members; but this only stimulated them, as it did the entire North, to the greater determination to put down the rebellion at all hazards. One of the first important acts was to authorize the President (July 25) to call out five hundred thousand volunteers for three years, or for the period of the war; and a few days later another act was passed largely increasing the regular army and the navy. The finances were also well taken care of. The secretary of the treasury was authorized to borrow \$250,000,000 by issuing bonds and treasury notes; duties on certain imports were greatly increased; an annual income tax of three per cent was laid on all incomes exceeding \$800. Finally, on August 6, the last day of the session, the earlier acts of the President in augmenting the navy and army were ratified, and he was authorized to seize and confiscate any property used or intended to be used against the government of the United States. After having thus put the country on a war footing, Congress adjourned, leaving the President practically military dictator.

The session was remarkable for its rapid dispatch of business and for the adoption of the following resolution, offered by the venerable Mr. Crittenden of Kentucky: "That . . . Congress, banishing all feeling of mere passion or resentment, will recollect only its duty to the whole country; this war is not waged . . . in any spirit of oppression, nor for any purpose of conquest . . . but to preserve

¹ For the suspending of Habeas Corpus, see note at end of chapter.

the Union with all the dignity, equality, and rights of the several states unimpaired; and as soon as these objects are accomplished, the war ought to cease." By this resolution it will be seen that the war was not a war against slavery at this time; but nothing could long keep the slavery question out of Congress; this was shown in December of the same year, when Congress, called upon to vote on a resolution similar to the above, defeated it by a large majority. Even in this extra session an act, known as the Confiscation Act, was passed, by which freedom was given to any slave who should be employed in any way against the government of the United States.

THE TRENT AFFAIR

The "Trent Affair" played an important part in our foreign relations during the early portion of the war period; but the account of it must be preceded by a hurried glance at the relations that led up to it.

It was impossible that a prolonged civil war should be carried on in America without profoundly affecting the civilized world; and the attitude of Europe, especially of England, was a matter of deep concern to the American people at the beginning of the great struggle. Never before had a more friendly spirit existed between England and the United States than in the autumn of 1860. Seldom had a year passed from the founding of the United States government seventy years before, without a dispute of some kind with the mother country; but in December, 1860, President Buchanan could truthfully say in his message to Congress that as "two dangerous questions arising from the Clayton-Bulwer Treaty and from the right of search" (which had come up for the last time in 1858) had been amicably settled, our relations with Great Britain were of the most friendly character. Lord Lyons, the British minister at Washington, pronounced this message the most cordial that had ever appeared in such a communication. Moreover, the young Prince of Wales had just visited our shores, bearing the good will of his royal mother to our government and people, and receiving from them the most unfeigned expressions of the nation's friendship. The *London Times*, commenting on the planting of a tree at the tomb of Washington by the prince, said: "It seemed, when the royal youth closed the earth around the little germ, that he was burying the last faint trace of discord between us and our great brethren in the

West." But all this was soon changed by the rising war cloud in America.

The nation looked to England for sympathy in its struggle for life; the southern Confederacy appealed to England's commercial interests, for it was the South that supplied the material that moved the machinery of the great cotton mills of Liverpool, of Manchester, and of Leeds. How would England decide between the two sections? On the one hand were the friendly relations with the United States; on the other, the want of cotton, which could be had only by breaking the blockade and thus making war with the United States. An independent South meant free trade with the cotton states in future, and the bait was an alluring one to the English. But another consideration it was that probably prevented an early recognition of the Confederacy by Great Britain. Slavery was the acknowledged corner stone of the Confederacy, and the English disliked slavery. From the time of Lord Mansfield's famous decision in 1772 slavery had not been permitted on the home soil, nor in the English colonies after 1833. How could the English aid in establishing a nation founded on slavery?

But commercial interests are powerful, and the sympathies of the higher classes in England were at first almost wholly with the South?¹ The press and the great quarterlies of England favored the South. "We believe the conquest of the South to be a hopeless dream," said the *Quarterly Review*. "The Federal government can never succeed in putting down the rebellion," said Mr. Gladstone.² Early in March a motion was introduced into the House of Commons for the recognition of the independence of the South. Commercial interest, however, was not perhaps the solitary cause of this feeling. There was a general fear on the other side of the Atlantic that the American republic was growing too great. This was voiced by Sir Edward Bulwer Lytton, who said in an address,³ "I believe that such separation will be attended with happy results to the safety of Europe and the development of American civilization. . . . America would have hung over Europe (but for its being divided by the Civil War, which

The English press.

² In 1896 Mr. Gladstone, in his old age, wrote in his diary that his offense was grossly improper in giving this opinion in 1862. See Morley's "Life of Gladstone," Vol. II, p. 81.

³ Before the agricultural society of Hertford County, September 25, 1861. Quoted by Harris, "The Trent Affair," p. 27.

the speaker assumed to be already accomplished) like a gathering and destructive thunder cloud." This feeling was natural in Europe, nor is it a just ground for present-day resentment in America. Europe foresaw that the United States, if they remained together, would grow into a vast power of unmeasured strength, but did not foresee that we would be a conservative people who love peace far better than war. To become a military bully because of conscious power is utterly foreign to the American spirit, nor can such a condition ever be possible without a complete revolution in public opinion, of which there is yet no tendency.

Before the close of Buchanan's administration Secretary Black had written an order to our foreign ministers that they use every effort with the respective countries to which they were assigned to prevent a recognition of the Confederacy. This was repeated in a more emphatic way by Secretary Seward soon after the inauguration of Lincoln. Most countries made favorable answers; but England, through her foreign minister, refused to commit herself one way or the other. Early in May, Charles Francis Adams, son of John Quincy Adams, embarked for England as minister to that country from the United States. On the day of his landing and before he had met the British officials, the queen's proclamation of neutrality was made public. This accorded to the South the same belligerent rights, the same war privileges, that international law accords to a sovereign power. This hasty action of Great Britain, which was soon followed by France and most of the other European governments, was looked upon by the American people as showing an unfriendly spirit. It is true that the United States was forced a few months later to do this very thing—to acknowledge the belligerent rights of the South, not openly, but by its treatment of Confederate soldiers according to the rules of war—but why should a foreign power do this first, before a state of war actually existed, and in the face of our protest? As John Bright said in the House of Commons, "It was done with unfriendly haste."¹

The queen's
proclamation, May 14,
1861.

¹ Speech of March 13, 1865. British writers have justified the action of the queen by taking the ground that President Lincoln had in substance acknowledged the belligerency of the South by his blockade proclamation of April 19, and that a foreign power could not respect the blockade without recognizing the state of war. But there is no international rule of this sort. For example, Russia blockaded her own ports on the Black Sea for five years succeeding 1831, as they were in the hands of the Circassian rebels. England recognized this blockade without acknowledging the belligerent rights of the rebels. See Harris, p. 51.

In a few months, however, when it was seen that the British government was not inclined at that time to acknowledge the independence of the Confederacy,¹ the feeling of bitterness awakened by the proclamation was greatly softened. There was also a reaction in England. Public opinion veered around and in some degree came to favor the North. This change was partially due to a series of articles describing slavery in the South, published in the *London Times* from its special correspondent who was traveling in the Southern states.

Meantime the Confederate government was industriously seeking recognition from foreign powers, especially from England. The southern leaders believed that cotton would eventually unlock the doors that were at first closed against them. "We do not like slavery," said Lord Palmerston, the British Premier, to an American in London, "but we want cotton, and we dislike very much your Morrill tariff."² While refraining from recognizing the South as a nation, the British government seemed to be preparing for some unusual movement. Twenty-five thousand fresh British troops were stationed along the Canadian border, in the fear that the Americans "might do something," as the English foreign minister said to Mr. Adams. Accordingly Secretary Seward addressed a circular letter to the governors of all the states along the northern border and the New England coast, suggesting that they, in conjunction with the Federal government, put the ports and harbors in the best state of defense. This circular caused much unfavorable comment in Canada and England.

Scarcely had this circular reached the respective governors when occurred the episode known as the Trent Affair, which strained the peaceful relations between the United States and the British Empire almost to the breaking point. President Davis had determined to send two men of established reputation to represent his government at London and Paris. James M. Mason of Virginia and John Slidell of Louisiana were chosen. Mr. Mason belonged to one of the most prominent families of Virginia; he had served for many years in the United States Senate, and was the writer of the Fugitive Slave Law of 1850. Slidell had also served in the Senate. Both were secessionists of the ultra type.

¹ The motion to recognize the independence of the South introduced in the Commons in March, was withdrawn in June.

² See Rhodes, Vol. III, pp. 431, 433.

At midnight of October 12, 1861, Mason and Slidell escaped from Charleston Harbor in an armed blockade runner and reached Havana in safety. On November 7 they embarked from that port for Southampton, England, on the British mail steamer *Trent*. At about noon of the next day, as the *Trent* was steaming through the Bahama Channel, she was hailed by an American sloop and ordered, by a solid shot across her bows, to heave to. Disregarding this, the *Trent* was brought to a stop by a shell that exploded in front of her. The American vessel proved to be the *San Jacinto*, a screw sloop of fifteen guns. Captain Charles Wilkes was her commander. Wilkes was known as a skillful naval officer, but he was better known as a scientist and an explorer. He had made a famous voyage to the Antarctic seas, where he discovered and gave his name to that dreary, unpeopled land which is marked in our geographies as "Wilkes Land." Hearing that the two southern envoys had embarked on the *Trent*, Wilkes determined to make them his prisoners. The English captain was highly indignant at the demand, but he had no power to resist, and after Mason and Slidell and their two secretaries had been transferred to the *San Jacinto* the *Trent* was permitted to proceed on her way. The two men were carried to Boston Harbor and confined as prisoners of war in Fort Warren.

The seizure,
October 13,
1861.

The news of Wilkes's capture produced the first hearty rejoicing of the war throughout the North. The press and the people raised a shout of joy over the clever capture. Captain Wilkes was given an ovation in Boston, another in New York, and he became a popular hero of the day. Congress tendered him a vote of thanks, and the Cabinet, except one member, joined in the general chorus of rejoicing. But there was one man, the wisest and farthest-sighted of them all, who did not join in the general joy. This was President Lincoln. On the evening of the day that brought the news of the capture, he said that he feared the captives would prove white elephants, and declared that "we fought Great Britain for insisting by theory and practice on the right to do precisely what Captain Wilkes has done." He foresaw that the attitude of England in the matter must be reckoned with, and Postmaster-General Blair shared his views.

When the news of the capture reached England, a universal outburst of anger overspread the kingdom. As the American public had rejoiced without considering the gravity of the situation,

so the English people were equally thoughtless in flying into a passion. They ignored all precedents arising from their own claim of the right of search, and saw in the act of Wilkes only the violation of the British flag. The law officers of the Crown decided that the act of Captain Wilkes was illegal because he did not take the *Trent* into port and subject his capture to the decision of a prize court. The war spirit rose to fever heat, and the government began making immediate preparations for war. Great quantities of cannon, muskets, and ammunition were loaded on shipboard for Canada. Thirty thousand men were sent to Halifax, in the belief, however, that they were going straight to Charleston to join the Confederate armies.

With great promptness the British ministry framed a formal demand on America for reparation. This was sent to the queen for her approval, and Prince Albert wrestled with it a whole night, greatly modifying the harshness of its tone. This was the last official writing of the Prince Consort; his health was rapidly failing, and within a few weeks he was dead. But seven days were allowed in which to return an answer to the British demand. When this became known to the American people, there was a cry of rage against England. It was believed on all sides that England would have made no such demand had we not been embarrassed at home by a great civil war—that she would have been willing to discuss the merits of the question, to cite precedents, and to leave the matter to arbitration. All this was refused in the peremptory demand. Public opinion was divided, but not equally. The great majority wanted war at any cost. Seward believed—and he had many followers—that we could defeat England and put down the rebellion at the same time. Others drew a darker picture—the destruction of our seaboard cities, the annihilation of our navy, and the breaking of the blockade; the loss of trade, the vast expense in money and human life, and the coalition of England with the South! And yet many who saw this awful picture still raised their voice for war rather than submission. Others said, “Let us yield now from necessity and be revenged hereafter.” John W. Forney, one of the leading newspaper men in the country, said in the Philadelphia Press: “Let us swear, not only to ourselves, but to our children that come after us, to repay this greedy and insolent power with the retribution of a just and fearful vengeance.” But most of the people refrained from the use of such extravagant language.

Meantime the momentous question had to be decided. The seven days had almost expired. Every eye was turned toward Washington, and at length the answer came. The government astonished the public and the world, disappointed the South, and averted a great war by quietly yielding the point — releasing the prisoners and disavowing the act of Wilkes.¹ Why this submission of a proud and mighty people, who believed themselves in the right? The answer is simple: We could not then afford another great war. The decision probably saved the life of the nation, and the nineteenth century can furnish few greater strokes of statesmanship. It was chiefly the work of one great soul, the greatest genius of his generation — Abraham Lincoln.

America
yields.

The consensus of European opinion on the Trent Affair was favorable to the British view; and this was practically the view taken by Mr. Seward in his elaborate answer to Lord Lyons. Seward acknowledged that Wilkes had committed an error, but declared that he had acted with the single idea of serving his country, and without the slightest intention of offending the British flag. Great Britain was wholly in the wrong in working herself into a war fever without waiting for a word of explanation or asking if we meant to offend her, in sending an ultimatum, a demand for immediate redress, while mobilizing armies, and in refusing to discuss the merits of the subject at all.

NOTES

The Writ of Habeas Corpus. — In May, 1861, a serious dispute arose between the President and Chief Justice Taney concerning the suspension of the writ of Habeas Corpus. The Constitution provides that the writ may be suspended only in case of rebellion or invasion, but by whom is not stated. President Lincoln took the responsibility of suspending the writ, and caused the arrest of one John Merriman, for recruiting a Confederate force in Maryland, and imprisoned him at Fort McHenry. Merriman applied to the chief justice for a writ of Habeas Corpus and Mr. Taney issued it, on the ground that Congress only had the right to suspend the writ. But President Lincoln refused to be bound by the decision of the chief justice, and applied for the opinion of his attorney-general, Mr. Bates, who sustained the President. The Constitution, interpreted by the correct principles of political science, could not deny to the President the power of suspension of this writ, as Congress might not be in session at a time

¹ Mason and Slidell proceeded to Europe, but they accomplished nothing. They received no public welcome in London. The *London Times* said, "We should have done just as much to rescue two of their own negroes."

of sudden invasion, and on the President would devolve the responsibility of maintaining public order.

Belligerent Rights.—This matter was settled by the battle of Bull Run. President Lincoln had stated in his blockade proclamation that Confederate privateers when captured would be treated as pirates. Early in June the privateer *Savannah* was captured by the United States war vessel *Perry*, and the crew were taken to New York City and lodged in jail for trial. But soon after Bull Run, President Davis put some of the prisoners taken in that battle in chains, and sent word to the authorities at Washington that he would deal with them in the same manner as the United States government should deal with the crew of the *Savannah*. This led Mr. Lincoln to recede from his position, and the crew were exchanged as prisoners of war. From this time the United States, in practice, though not in theory, accorded belligerent rights to the South.

CHAPTER XXVIII

THE CIVIL WAR — THE FIRST YEAR'S CONFLICT

THE Federal disaster at Bull Run was better than a victory for the North, for it roused the whole people to a sense of the magnitude of the task before them. It led hundreds of thousands of determined men to leave their homes and take up arms in defense of the Union; while the South was led by its victory to a false sense of security, to a belief that secession had succeeded, and that the war was practically over. The uprising of the North was on a grand scale. Every city, village, and hamlet was astir with martial activity, and within a few months after Bull Run more than half a million men had joined the northern armies.¹ These were stationed at various points along the border line, from the coast of Virginia to the plains of Kansas. The largest army was that before Washington, and the young leader who had won the admiration of the country in the mountains of western Virginia was called to its command. McClellan took control the last week in July, leaving General W. S. Rosecrans at the head of the forces in West Virginia. General John C. Frémont was appointed to the military district of the West, and he reached his headquarters at St. Louis near the close of July. General Robert Anderson of Fort Sumter fame was placed in command at Louisville, and General Benjamin M. Prentiss at Cairo. These commands were all changed within a year or two, as we shall notice in the course of the narrative.

The preparations for war were less vigorous at this time in the South than in the North. The Confederate president, who did not share the belief of his countrymen that Bull Run had ended the war, employed all his personal and official influence to awaken the people to the belief that a long and bloody war was before them. At the beginning of July the South had about 112,000 men in the

¹ The December reports of the secretaries of war and the navy show that there were at that time in the service of the government 640,637 volunteers, 20,334 regulars, and 22,000 marines.

field, stationed chiefly in Virginia, Tennessee, Arkansas, and southern Missouri. On the 8th of August the Confederate Congress, led by Mr. Davis, authorized the enlistment of 400,000 men for three years, and the work of raising and organizing this force continued through the autumn and winter; but there was no such universal, spontaneous movement as characterized the North, and at the close of the year 1861 scarcely one fourth of this number had been raised.

In the matter of army equipment the South was at first fairly well supplied, owing partly to the thoughtful foresight of Mr. Floyd, Mr. Buchanan's secretary of war, who, in apparent anticipation of war between the sections, had removed great numbers of muskets from northern to southern arsenals. The seizure of Harpers Ferry and Norfolk and the muskets captured at Bull Run were of great service to the southern armies. The North, though badly armed at first, began at once the manufacture of arms and other munitions of war on a large scale, and after the first year of the war there was an adequate supply for all demands. The Confederates also set about manufacturing powder and arms, but the supply was never adequate, and the southern cause suffered constantly from this defect. For some months after Bull Run and Wilson's Creek there was no battle or military movement of importance; we turn therefore to a notice of

THE FIRST NAVAL EXPEDITIONS

At a notable gathering of the European powers at Paris in the spring of 1856 it was decided, among other things, that privateering be abolished. The United States was requested to join in this agreement, but it refused. A few months later, however, the United States government offered to accept the Paris agreement, if the powers would add another article exempting all private property from capture by an enemy at sea. But to this they refused to agree. Had the United States foreseen the fearful retribution that would be visited upon it within the coming decade on account of the first refusal, there is little doubt that the original agreement would have been accepted.

One of the first acts of the Confederate president was to authorize privateering — the preying of Confederate cruisers on the merchant marine of the United States. This was a vital spot at which the South could strike without fear of retaliation, for the wealth of the South in shipping could be rated at zero. Confederate privateering

was begun early in the struggle, and it was partly to intercept the blockade runners that the first Federal naval expeditions along the Atlantic coast were undertaken.

On the 26th of August, 1861, General B. F. Butler embarked in a small improvised fleet from Fortress Mouroe for Hatteras Inlet, on the coast of North Carolina. Two days later the fleet was throwing shells into the newly built forts, Clark and Hatteras, at an opening of Pamlico Sound, and in twenty-four hours both forts had surrendered, with nearly seven hundred men, a thousand stand of arms, and thirty-five cannon.

**Butler's
expedition.**

A more pretentious expedition was that of General Ambrose E. Burnside, who sailed from Fortress Monroe in January, 1862.¹ His fleet numbered eighty vessels, large and small, mounting ninety-four guns, and bearing an army of twelve thousand men; the naval commander was Commodore L. M. Goldsborough. The destination was the eastern coast of North Carolina, where at Hatteras Inlet the small force left by Butler some months before still held its ground. The object of the expedition was to blockade and to gain possession of Pamlico Sound and the adjoining coast.

The fleet arrived, crossed the bar into Pamlico Sound, and proceeded northward to Roanoke Island, which lies between Albemarle and Pamlico sounds. The Confederate forces on this island, about three thousand strong, were in command of Henry A. Wise, whom we have met as governor of Virginia, at the time of the execution of John Brown. The Union fleet landed seventy-five hundred troops on the island on the evening of February 6. Next morning they floundered through marsh and bog till they reached the enemy's breastworks, which, after firing several volleys, they scaled in one impetuous rush, making prisoners of the whole force of the enemy. This was a victory of much importance, as Roanoke Island stood at the gateway of both great sounds east of the main coast of North Carolina.

**Burnside's
expedition.**

Burnside gave his army a few days' rest; and then, leaving an adequate force to hold the island, he set out for new victories. He determined on the capture of New Berne, a little city on the Neuse River which flows into Pamlico Sound, and next to Wilmington the most important seaport on the North Carolina coast. The capture was effected after a dreary march through the mud, and a sharp, decisive battle.

¹ See Burnside's account in "Battles and Leaders," Vol. I, p. 660 *sq.*

Still another important victory was to be scored by this army. Soon after the capture of New Berne, Burnside sent General Parke against Fort Macon, forty miles to the southeast on the coast. Fort Macon was an old and strong stone fort, and had been the property of the Union. Parke demanded a surrender, and when this was refused, he trained his guns upon the works and bombarded them for one day, when the fort, with its contents, including its five hundred brave defenders, was delivered into his hands. The Burnside expedition was a very successful one, and the coast of North Carolina was held to the end of the war by the Union armies. Burnside, however, was ordered northward in midsummer, 1862, to join the Army of the Potomac under McClellan.

One more successful naval expedition belonged to this early period of the war. Some time before the expedition of Burnside a fleet of fifty ships left Hampton Roads under Admiral **Dupont's expedition.** S. F. Dupont.¹ General Thomas W. Sherman had command of the land force, some twelve thousand men. The commanders of the vessels were ignorant of their destination; but each had sealed orders to be opened at sea in case the fleet became scattered. When they were off Cape Hatteras a tempest swept the sea, and the fleet was soon scattered far and wide. The sealed orders were then opened and each commander discovered that he was going to Port Royal, on the coast of South Carolina between Charleston and Savannah. Several of the vessels were lost or disabled. The rest met at the designated place early in November. The sound on which Port Royal is situated is almost shut off from the open sea by Hilton Head Island and Phillips Island, separated by a narrow channel. Two forts, Walker and Beauregard, stood guard on either side of the channel. The Confederate commander was General T. F. Drayton, whose brother, Captain Percival Drayton, commanded a vessel in Dupont's approaching fleet.² A small fleet within the sound was commanded by Commodore Tatnall, a veteran of the War of 1812 and of the Mexican War, and late of the United States Navy.

The cannonading, which began on November 7, was very heavy, and the roar was distinctly heard at Fernandina, seventy miles

¹ At the opening of the Civil War the highest rank in the navy was captain. In July, 1862, Congress created several rear admirals, of whom Dupont was one.

² There were various other instances where brother fought against brother in the Civil War.

away. Within six hours both forts were silenced, the Confederates fled, and the stars and stripes were hoisted over the ruined walls. Tatnall set fire to his fleet and escaped, leaving the harbor of Port Royal in the possession of Dupont and Sherman. Thus another important harbor came under the control of the government. This victory, with those of Butler and Burnside above mentioned, was of great value to the Union cause. They greatly revived the spirit of the northern people after the disasters of Bull Run and Wilson's Creek; they had a salutary moral effect on Europe; they rendered the blockade effective almost throughout the entire coast from Virginia to Florida, and they furnished admirable bases for future operations during the war.¹

THE DUEL OF THE IRONCLADS

The most famous of all naval duels, and one of the most important in the world's history, was that between the *Monitor* and the *Merrimac* at Hampton Roads on Sunday, March 9, 1862. But four years before this time France had built the first ironclad; England soon followed her lead and built two, and these three alone existed at the opening of the Civil War. But none of these had come into action, and it was left for the United States, in its unnatural contest with itself, to furnish the world with the first battle between ironclads.

On abandoning the navy yard near Norfolk in April, 1861, the Union forces burned what was combustible, including the steam frigate *Merrimac*. The vessel when partially consumed sank beneath the waves. A few months later the Confederates raised it and converted it into an ironclad.

The work progressed for many months, until March 8, 1862, when this new ironbound monster, now called the *Virginia*, steamed down the Elizabeth River toward Hampton Roads, where lay at anchor several of the finest United States warships.

Meanwhile the Lincoln administration, knowing of the building of the *Merrimac*, was preparing to meet her with a vessel of her own class. A contract for an ironclad was made with John Ericsson, the Swedish inventor. Ericsson ignored the French and English models and built a vessel on a plan of his own invention. Day and night the work was pushed at the Brooklyn shipyard, and the new ironclad, named the *Monitor*, was finished almost at the same hour

¹ " Battles and Leaders," Vol. I, p. 682.

as was the *Merrimac*. But she had much further to go, and the *Merrimac*, under Captain Buchanan, reached the scene of action some hours in advance of the *Monitor*; and memorable hours they were in American naval history.

The *Merrimac* steamed slowly up the harbor toward Newport News on that calm afternoon of March 8, on her mission of destruction. When she came within three quarters of a mile of the *Congress*, a fine frigate of fifty guns, opened fire on her, as did also the *Cumberland*, a sloop of thirty guns; but the strange-looking monster held her peace. At length, when she came within easy range, she fired into the *Cumberland* with fearful effect, then she raked the *Congress* with a broadside. After this, steering direct for the *Cumberland*, she rammed that vessel, and the impact stove in her side, making a hole "wide enough to drive in a horse and cart." The *Cumberland* filled rapidly with water, but the gallant crew kept working their guns to the last. The vessel sank with a final roar, and the mast, still protruding above the water, marked with its fluttering pennant the burial place of a crew as brave as any that ever died in their country's cause. For an hour longer the *Congress* continued the struggle, when she surrendered; and the Confederates burned her in the evening. During this contest the shore batteries at Newport News poured volley after volley into the *Merrimac*, but neither their shots nor those from the vessels seemed to affect the iron pachyderm. The *Minnesota*, seeing the distress of her unfortunate sisters, had steamed down the channel to take part in the battle, but she ran aground and stuck fast. Here she lay helpless in the middle of the channel and might have become an easy prey to the *Merrimac*. But it was late in the afternoon, and the captain of the *Merrimac* decided to wait till the following morning to complete his destructive work. The delay was fatal.

The news of this fearful day's work was flashed northward, and it created consternation. Mr. Lincoln held a Cabinet meeting to discuss the new terror.

"The *Merrimac*," said Secretary Stanton, "will change the whole character of the war; she will destroy, *seriatim*, every naval vessel; she will lay all the cities on the sea coast under contribution." The greatest anxiety prevailed in government circles; but the next day brought different news.

On that night the *Monitor* arrived from New York, commanded by Lieutenant John L. Worden. Steaming up the mouth of the

James by the light of the burning *Congress*, she hove to near the grounded *Minnesota* and waited for the morning. Early in the morning the *Merrimac* stood for the *Minnesota* and opened fire—but here was the new enemy to deal with. **The Monitor.** The *Monitor* instantly threw herself before the *Minnesota* and engaged the *Merrimac*. The two vessels were alike only in being ironclads. The *Merrimac* was a clumsy, unwieldy vessel of thirty-five hundred tons, and carried eight heavy guns and seven small ones. She was aptly described as “a huge, half-submerged crocodile.” The *Monitor* was a small vessel of but nine hundred tons and carried two eleven-inch Dahlgren guns in a revolving turret, twenty feet in diameter, and gave the appearance of “a cheese box on a raft.” It seemed like the fight of a pygmy and a giant.

For several hours these two vessels fought like demons, sometimes but a few yards apart. The *Merrimac* attempted to ram her antagonist, but the *Monitor* skillfully avoided the blow and escaped injury. One double shot from the *Monitor* forced in the sides of the *Merrimac* several inches, knocking the crew off their feet with the concussion and causing every one to bleed from the nose or the ears.¹ At length, when the ships were but ten yards apart, a shell from the *Merrimac* struck the pilot house of the *Monitor*, and exploded directly over the sight-hole. Commander Worden, who was standing just back of this spot, was stunned and his eyes were utterly blinded with burning powder. He then ordered his vessel to retire that the extent of the injury to the pilot house might be ascertained. The *Merrimac* then steamed back to Norfolk, and the battle was ended. The fight was terrific and grandly picturesque, but there was no loss of life, and only a few were wounded on the *Merrimac*, and but one, Lieutenant Worden, on the *Monitor*. The battle was a draw; but in its effects it must be regarded a victory for the *Monitor*, for the *Minnesota* and the other Union vessels were saved, the power of the *Merrimac* was destroyed, and two months later, when the Confederates abandoned Norfolk, she was burned.²

This first fight of ironclads had the effect of revolutionizing naval warfare throughout the world. All the navies of the world

¹ “Battles and Leaders,” Vol. I, p. 702.

² The *Monitor* was wrecked the following December off Cape Hatteras, and sank with nine of her crew. Lieutenant Worden was carried to Washington for treatment. He recovered his eyesight and was soon back in the navy; he was afterward made a rear admiral.

were composed of wooden vessels, and here in Virginia waters it was demonstrated that no wooden ship could stand before an ironclad. The day of the "ship of the line" of the "oak leviathan" was over from this hour. "Whereas," said the *London Times*, "we had one hundred and forty-nine first-class warships, we have now two. . . . There is not now a ship in the English navy apart from these two that it would not be madness to trust to an engagement with that little *Monitor*." Every maritime power in the world began from this date to reconstruct its navy on the basis of the ironclad.

OPERATIONS IN THE MISSISSIPPI VALLEY

The North had expected to hear ere this of some notable achievement of the Army of the Potomac; but McClellan was still unready, and while he continued his preparations various movements took place in the great central valley of the continent. The people of the upper Mississippi Valley had a twofold reason for rising against the rebellion of the South. First, they would save the Union, and second, they would save the river. Their second reason was partly commercial and partly sentimental. They could not endure the thought of this great artery of trade, this opening to the world's markets for all their products, this their own majestic, beloved river — they could not endure its flowing for a thousand miles through a foreign land. To prevent such a condition the men of the West rose in arms to save the Union.

The comprehensive, twofold object of the Union armies in 1862 was to take the Confederate capital and to open the Mississippi River. To accomplish these ends it was important that the forces east and west work in harmony, and to do this they must be directed by one brain, by a commander in chief. But here the government was at a loss. General Scott had long passed the prime of manhood, and was in no way fitted for the great task. For a short time McClellan was made commander in chief, and then W. H. Halleck;¹ but both proved unsatisfactory, and, until the last year of the war, the armies east and west of the mountains acted, in a great measure, separately, without any effective common commanding authority, save that of the President, who laid no claim to military knowledge.

So numerous were the battles and skirmishes in the West, as well as in the East, that we must leave many of the minor ones

¹ Halleck was nominal commander in chief from July, 1862, till March, 1864.

unnoticed, and give our attention to the larger movements which contributed most to the final outcome of the war. We left two small opposing armies in southern Missouri after the Battle of Wilson's Creek in August, 1861. For many months thereafter no important movement occurred in that section. John C. Frémont had been put in command of the department that included Missouri, and his headquarters were at St. Louis. But ere long he was charged with incompetency and flagrant misuse of his authority — with corruption in giving out contracts, with bearing himself like an Oriental nabob, with keeping men waiting for days to see him on pressing business of the department, with throwing men into prison without a cause, and with general incompetence. These charges were brought before the President, who, investigating them with the utmost care, found them to be true, and Frémont was removed. What a comment on the narrow escape of the country in electing James Buchanan President instead of Frémont in 1856!

John C.
Frémont.

Before Frémont's removal he had issued a proclamation, for the purpose, as some thought, of calling public attention from the charges against him, confiscating the property and setting free the slaves of all persons in Missouri who had taken up arms against the government, or who should do so in the future. This was by far the most radical move that had yet been made against the slaveholder. When Mr. Lincoln heard of it he saw at a glance that the order, if sustained by him, would seriously impair the Union cause in Kentucky. He accordingly ordered Frémont to modify his proclamation so as to conform to the recent Confiscation act of Congress.

This incident is memorable from the fact that it caused the first serious disaffection in the Republican party. A great many of the radical antislavery members of the party, including such leaders as Charles Sumner, openly favored Frémont. In the Middle West, especially in Ohio, Lincoln was denounced most vigorously, and was accused of trying to suppress Frémont because he feared him as a rival for the presidency. When a little later Lincoln removed Frémont from his command, the radicals, not knowing the true cause, were furious. But the President preserved his usual calm, and time has fully vindicated his course.

At the beginning of the year 1862 the Confederates held the southern part of Kentucky, the line between the opposing forces passing through Mill Springs, Bowling Green, Fort Henry on the

Tennessee, and Columbus on the Mississippi. To break this line and push it farther south, and if possible to rescue the Unionists of eastern Tennessee, was the first object of the Federal armies. Accordingly General W. H. Halleck, who now commanded in the West, sent General George H. Thomas¹ with some ten thousand men to open a way. Thomas met a force of five or six thousand men under General George B. Crittenden, a brother of the Union general, Thomas S. Crittenden,² at Mill Springs, Kentucky, and a desperate battle ensued. The Con-

federates fought bravely during the day, but they were completely routed, and at nightfall they fled toward Nashville. Meantime Colonel James A. Garfield had driven General Marshall from the mountainous region along the Virginia border. The way was now open to eastern Tennessee; but owing to the scarcity of provisions and the badness of the roads, the project was given up, and Thomas rejoined Buell.

Kentucky was now occupied by three armies, with another at

¹ It was Buell who sent Thomas, but Buell was at this time subject to the orders of Halleck.

² These two brothers, who took opposite sides in the war, were sons of the famous Kentucky senator, J. J. Crittenden.

Cairo, Illinois, hovering on its border and about to enter the state. General Albert Sidney Johnston, then reputed the ablest commander of the South, held an army at Bowling Green, and General Leonidas Polk, the Episcopal bishop of Louisiana, who was also a soldier and a graduate of West Point, commanded a force at Columbus. Opposed to these were a Union army at Louisville under General Don Carlos Buell¹ and the army at Cairo under General U. S. Grant.

General Grant had seized Paducah in Kentucky, and had made in the preceding autumn an expedition down the Mississippi to Belmont, Missouri, where he had a sharp fight with General Pillow. Grant bore down on the Confederate position, captured the camp, and drove the enemy to the bank of the river. But General Polk, who held Columbus, across the river from Belmont, sent an additional force, and also threw shells from the heights of Columbus to Belmont. The result was that Grant and his forces fled precipitately to their transports and returned to Cairo.

Western Kentucky is traversed by two parallel rivers that empty into the Ohio near together. The larger of these, the Tennessee, takes its rise in the foothills of the Alleghany Mountains in southwestern Virginia, makes a grand detour southward into northern Alabama, crosses the state of Tennessee twice, and flows into the Ohio near its confluence with the Mississippi. The Cumberland, much smaller than the Tennessee, rises in eastern Kentucky, sweeps in a great curve through northern Tennessee, and flows northward into the Ohio within a few miles of the mouth of the Tennessee. These two rivers, which were navigable for hundreds of miles, furnished the southern armies with invaluable means of transportation, and the Union commanders conceived the idea that the evacuation of Kentucky could best be forced by operating up these two rivers.

General A. S. Johnston was now the commander of all the Confederate armies west of the mountains, except in the extreme South. He saw too late that while the Mississippi had been strongly guarded by heavy batteries — at Columbus, Island No. 10, Memphis, and

¹ General Anderson, who was first in command at Louisville, was relieved, owing to failing health, by General William Tecumseh Sherman. Sherman stated to some Cabinet officers that it would require two hundred thousand men to clear Kentucky of the enemy. So extravagant seemed this statement that Sherman was considered insane, and was so characterized in the newspapers throughout the country. He was relieved by Buell in November, 1861. His statement evinced his foresight and judgment, as events proved. See McClure's "Lincoln and Men of War Times."

Vicksburg — the two inland rivers had been neglected. Two small forts, Henry and Hieman, on the Tennessee, were now quickly strengthened, and also a far more formidable one on the Cumberland — Fort Donelson. In order to protect Nashville, Johnston, at the beginning of February, made the fatal blunder of dividing his force of thirty thousand men, placing fourteen thousand in Kentucky to watch Buell and sending sixteen thousand to Fort Donelson. Early in February General Grant captured Forts Henry and Hieman, most of their garrisons having fled to Fort Donelson.

Fort Donelson at this time was the scene of great excitement. The garrison knew that the Union army had invested Fort Henry, twelve miles across the country on the Tennessee. They knew also that it was only a matter of a few days till their own fort would be surrounded by gleaming bayonets and frowning cannon. Fort Donelson was admirably situated on a plateau a hundred feet above the river, and covered about a hundred acres. It had several heavy guns, and was held by eighteen thousand men under command of General John B. Floyd, late secretary of war in the Cabinet of Buchanan. Beneath the bluff on the river bank were two powerful batteries commanding the approach of the river.

While Flag Officer Foote with his seven gunboats steamed up the Cumberland, Grant was busy moving his army from Fort Henry to

Fort Donelson. His army, in two divisions, under command of General John A. McClernand, the Illinois congressman, a lawyer and not a soldier by profession, and General Charles F. Smith of the regular army, began closing in around the doomed fort. But before the battle began General Lew Wallace, the future author of "Ben Hur," arrived from Fort Henry with a third division. Pickets were thrown forward, and the sharpshooters hunted their holes among the rocks and trees.¹ The chief action of the day, aside from the continuous firing of artillery, was an assault on some rifle pits on a hillside, ordered by McClernand. Colonel Morrison, with an Illinois brigade, led the charge, and a braver one never was made during the war. The men surged up the hill amid a tempest of bullets and were driven back, leaving many strewed along the hillside. Again, and still again, they dashed toward the rifle pits, picking their way among dead and dying comrades, until at last, the leaves on the hillside being set on fire, they sullenly retreated, and "their souls were riven with the shrieks of their wounded com-

¹ See "Battles and Leaders," Vol. I, p. 407.

rades, whom the flames crept down upon and smothered and charred where they lay."¹

Thus ended the 13th of February. There had been no general engagement. Foote arrived that night with his seven gunboats, four of them ironclads. Next day his guns were trained on the batteries on the river bank. The Confederate reply was terrific. Foote was severely wounded; two of his boats were disabled, one being struck fifty-nine times, and drifted helpless down the stream, and the others followed until they were beyond the range of the enemy's guns. That night the two armies lay crouching so near together that neither dared light fires. The Confederates were cheered at the defeat of the gunboats and at their success of the day before; but the next day would tell the story.

Grant's army, including those on guard, was about twenty-seven thousand strong, exceeding that of the enemy by at least six thousand.² Floyd knew this, and in consultation with his two chief lieutenants, Pillow and Buckner, he decided to attack the Union right at dawn and hurl it upon the center, and thus to open a way out to the road that leads to Nashville. The night was spent in preparing for this, and in the early morning Pillow with ten thousand men fell upon McClernand, and Buckner soon joined him with an additional force. For some hours the roar of the battle was tremendous. Toward noon many of McClernand's men ran short of powder and he was forced to recede from his position. Pillow seems then to have lost his head. He felt that the whole Union army was defeated, and though the road to Nashville was open, the Confederates made no attempt to escape. Just then General Grant rode upon the scene. He had been absent all the morning down the river consulting with Foote, not knowing that the enemy had planned an escape. This moment, says Lew Wallace,³ was the crisis in the life of Grant. Had he decided other than he did, the history of his life would have closed at Donelson. Hearing the disastrous news, his face flushed for a moment; he crushed some papers in his hand. Next instant he was calm, and said in his ordinary quiet tone, to McClernand and Wallace, "Gentlemen, the position on the right must be retaken." Then he galloped away to General Smith. In a short time the Union lines were in motion. General Smith made a grand assault

¹ Lew Wallace in "Battles and Leaders," Vol. I, p. 412.

² Livermore's "Numbers and Losses of the Civil War," p. 78.

³ "Battles and Leaders," Vol. I, p. 416.

on the enemy's outworks and rifle pits. When his lines hesitated, Smith waved his cap on the point of his sword and rode in front, up the hill, in the hottest fire of the enemy, toward the rifle pits — and they were carried. At the same moment Lew Wallace was leading his division up another slope with equal gallantry. Here again the Confederates fled within the fort, and the road to Nashville was open to them no longer. Furthermore, Smith held a position from which he could shell the fort on the inside, and nothing was left to the enemy but surrender or slaughter on the morrow.

A council was held by Floyd, Pillow, and Buckner. Buckner, who was the ablest soldier of the three, declared that he could not hold his position for half an hour in the morning. The situation was hopeless. Floyd was under indictment at Washington for maladministration in the Buchanan Cabinet. He declared that he must not be taken, and that he would escape on two little boats that were to arrive from Nashville in the morning. He passed the command to Pillow, and Pillow, declaring that he too would escape, passed it on to Buckner. Floyd and Pillow with fifteen hundred men made good their escape; so did Colonel Forrest, the cavalry leader. He led his cavalry, some eight hundred strong, along the river bank and reported some days later at Nashville.

In the early morning Buckner sent a note to Grant offering to capitulate. The answer is well known. Grant demanded "Unconditional surrender," and added, "I propose to move immediately on your works." Buckner was too good a soldier to sacrifice his men to needless slaughter. He accepted the "ungenerous and unchivalrous terms," as he pronounced them, and surrendered Fort Donelson and the army, consisting of at least fourteen thousand men, with all its stores and ammunition. The Union loss was over twenty-eight hundred men.

The loss of Donelson and this gallant army was an irreparable blow to the South. The way was now open for the Federal armies to penetrate the heart of the western South. The reproach of the disaster fell on the shoulders of Albert Sidney Johnston, who had unwisely divided his army. This was the first great victory for either side in the war. The North was electrified by its grandeur and magnitude, and the eyes of the country were turned for the first time upon General Grant. His laconic "Unconditional Surrender" caught the public fancy. He was a graduate of West

Point, and had served through the Mexican War. After that he was stationed at Detroit, at Sacketts Harbor, and finally on the Pacific Coast, leaving his family in the East. In 1854 he resigned from the army and settled on a little farm owned by his wife near St. Louis. Here he hoed potatoes and hauled cord wood, but failed to earn a living. He tried the real estate business, and again failed. At length, deeply in debt, he applied for assistance to his aged father, who owned a leather store at Galena, Illinois. His life seemed hopelessly wrecked. He accepted a position in his father's store at a small salary, and here we find him at the outbreak of the war. The governor of Illinois placed Grant at the head of the Illinois volunteers. Next we hear of him at Cairo, at Belmont, at Donelson. Up to February 16, 1862, the name of Ulysses S. Grant was utterly unknown to the great world. Now he became famous; and his rise in the next six years is the most extraordinary in the history of America.

On the minor movements of the armies and the petty disputes among the generals that followed Donelson we have no time to dwell. Suffice it to say that Polk abandoned Columbus, Kentucky, and A. S. Johnston left Bowling Green with the few thousand troops that he had retained. Buell advanced from Louisville and occupied Nashville, after its vast Confederate stores had been destroyed, while Grant's army was moved piecemeal farther south on the Tennessee. By the first of April Grant had an army of forty thousand at Pittsburg Landing. This was an obscure stopping place for boats in southern Tennessee, not far from the northern boundary of Mississippi; but the name means more now than a mere landing for river craft. The army was divided into six divisions, under the command, respectively, of McClelland, B. M. Prentiss, W. T. Sherman, Stephen A. Hurlburt, C. F. Smith, and Lew Wallace; but Smith being ill at Savannah, eight miles down the river, his command devolved on W. H. L. Wallace. The President had in March limited the authority of McClellan to the Army of the Potomac, and Halleck was placed in superior command in the West, including the division of Buell, whom he now ordered to join Grant at Pittsburg Landing.¹

**Pittsburg
Landing.**

The Confederate clans were gathering in great numbers at Corinth, Mississippi, some twenty miles southwest from Pittsburg Landing.

¹ The mountain department, from Knoxville, Tennessee, to the boundary of McClellan's authority, was assigned to Frémont.

Here had come Polk from Columbus, General Braxton Bragg from the far South, Beauregard from the East, and Albert Sidney Johnston, commander over all, from Bowling Green. Johnston's army was about equal to that of Grant, some forty thousand strong; and nothing was more certain than that the two would soon come together in a terrific contest for the possession of the region of the upper Tennessee. Through this region ran the Memphis and Charleston Railroad, from Memphis by way of Corinth to Chattanooga, where it connected with the lines to the seaboard. This railroad was of immense importance to the South, and to save it from falling into Union hands a great battle must be fought and won by the Confederates. Grant fully believed that the enemy would await an attack in his intrenchments at Corinth, and in this belief he left his army entirely exposed. Not an earthwork was thrown up, and the blunder, if such it may be called, no doubt cost a thousand human lives. Johnston had determined to move his army stealthily from Corinth and to fall upon his enemy in a sudden, impetuous dash at Pittsburg Landing.

It was Saturday night, and the Union army lay shivering on the damp ground. Only the dull tread of the sentinel could be heard, and the plashing waters of the streams overflowing with recent rain. Only a mile away lay the army of Johnston, waiting to spring on the foe in the morning. At break of day magnificent battle lines emerged from the woods in front of the Union camps, and in a few minutes the roar of artillery announced the opening of the greatest battle ever before fought on the western continent. Halleck, Grant, and the division commanders stoutly insist that they were not surprised. Be that as it may, the fact remains that no intrenchments had been made, and that Grant, without the slightest anticipation of an engagement, had spent the night at Savannah, and learned of the opening of the battle only by hearing the sound of the heavy guns. Buell had not yet arrived from Nashville, and Lew Wallace and his division were at Crump's Landing, five or six miles from the scene of the battle.

Grant hastened up the river, and when he arrived on the field he found a tremendous battle raging all along the Union front. He spent the day riding from one division commander to another, directing them and urging them to their utmost efforts. The heaviest attack of the morning fell upon the Union right under Sherman, and on the division of

**Battle of
Shiloh, first
day, April 6.**

McClelland which was next to that of Sherman. These divisions were composed for the most part of raw troops, but the superb bearing of the commanders inspired the men with confidence, and they fought like veterans. At various times during the day the whole Union front was pressed back, and in one of these movements Prentiss did not fall back with the rest, and he, with twenty-two hundred of his men, was captured by the enemy. On one occasion Hurlburt took a strong position and held it for five hours against the most terrific onslaughts of the enemy. The fighting raged part of the time around a little log church called Shiloh, which has given its name to the battle. Southern hopes were high that day. The fearful Confederate charge of the morning was sustained almost without cessation, and the battle raged till darkness overspread the valleys and the hills.

Whatever of victory there was at the close of this first day's fight at Shiloh belonged to the southern army. The Union army had been pressed back little by little for more than a mile, and now occupied a few hundred acres around the landing, while the ground and the tents which it had occupied the night before were in possession of the enemy; but the end had not yet come, and the weary legions of both sides sank down for a few hours' rest, knowing that the final struggle would come on the morrow.

The Union army had been stunned and wounded, but not disabled. The losses on both sides had been exceedingly heavy, especially on the southern side, for it had lost its noble commander, Albert Sidney Johnston. About the middle of the afternoon, while riding amid the tempest of bullets cheering his men, he was struck by a Minie ball, and an artery of his thigh was severed. The wound was not a fatal one, and his life might have been saved; but the hero thought only of victory. He continued in the saddle, cheering his men above the din of battle, until his voice grew faint and his face grew deadly pale. Then he was lifted from his horse, but it was too late; in a few minutes he was dead.¹ The command of the Confederate army then passed to Beauregard.

¹ The Federal general W. H. L. Wallace was also killed in this battle, and General Smith died a short time afterward at Savannah. The death of Johnston, it is believed by some, prevented the utter rout or capture of Grant's army on the night of the 6th. "Johnston's death was a tremendous catastrophe," wrote General Gibson, one of his subordinates. ". . . Sometimes the hopes of millions of people depend upon one head and one arm. The West perished with Albert Sidney Johnston, and the southern country followed." "Battles and Leaders," Vol. I, p. 568.

Had neither side been reënforced, the South would probably have won a signal victory on Monday. But early on Sunday night the thrilling news ran along the Union lines that Buell had arrived from Nashville. Lew Wallace was now also on the ground and ready for the next day's conflict. Wallace's forces and those of Buell, twenty-five thousand fresh troops, were to be hurled against the weary army of Beauregard in the morning. Beauregard looked longingly toward the West, hoping for the coming of General Van Dorn, who had an army in Arkansas and was marching with all speed to join him; but Van Dorn was still far away, and a week must elapse before the two armies could be united.

Before the rising of the sun on the morning of the 7th the two armies were again engaged in battle, but the contest was now an unequal one. Buell and Lew Wallace had come, but Van Dorn had not. Yet the Confederates fought with great valor, yielding their ground slowly, till an hour after noon, when Beauregard ordered a general retreat, and this was accomplished in good order. The army retired, battered and bleeding, to Corinth.¹ The result of the battle was a Federal victory, but not a decisive one. The people of the North did not rejoice greatly over it, and General Grant, who had loomed into public favor so suddenly at Donelson, was now severely criticised for having left the army unprotected and for spending the night of the 5th away from the field. One result of the battle was the development of W. T. Sherman. Nothing was plainer than that he was the strongest of the division commanders. Several horses were shot under him, twice he was wounded, but his demeanor was so cool, so reassuring, and so inspiring that his men were spurred to their utmost effort. Born in Ohio in 1820, Sherman graduated from West Point, and served in the war against the Indians of the South, but resigned from the army and became a broker in California. Next we find him in Kansas as a practicing lawyer, and later he was superintendent of a military academy in Louisiana. He resigned the position on the secession of that state, reëntered the United States army and commanded a brigade at the battle of Bull Run. After Shiloh, his star rose steadily to the end of the war, when it outshone all others at the North, save

**Second day at
Shiloh.**

**W. T.
Sherman.**

¹ The losses as given in "Battles and Leaders" are: Union, 1754 killed, 8408 wounded, and 2885 captured or missing; Confederate, 1728 killed, 8012 wounded, and 959 missing.

that of Grant; and many believe that as a military genius he was superior to Grant.

The Federal victory at Pittsburg Landing was supported by another, a far more decisive one, in the capture of Island No. 10, some forty miles below Columbus, in a great bend of the Mississippi. The Confederates had fortified the island, and it was held by General McCall with seven thousand men and large army stores. Early in March, General John Pope was sent with a large army from Cairo against the Island. Flag-officer Foote was in command of the river squadron. After capturing New Madrid, Missouri, on the opposite shore, a terrible bombardment was opened in which they "threw three thousand shells and burned fifty tons of powder" with little effect. Next, they cut a canal twelve miles long across the peninsula made by the bend of the river, so as to get the transports below the enemy's work, and forced the surrender of the island on the 7th of April, with its whole force and military stores. This loosened the grasp of the Confederacy on the Mississippi from Cairo to Memphis.

**Surrender of
Island No. 10.**

Some weeks before this great double victory at Shiloh and Island No. 10, another desperate battle had been fought which resulted also in a Union victory. This occurred among the hills of Arkansas, and is known as the battle of Pea Ridge. After the battle of Wilson's Creek the preceding

**Battle of Pea
Ridge,
March 7.**

August, the operations in southern Missouri were disturbed on the one side by the removal of Frémont, and on the other by a dispute between the Confederate commanders, Price and McCulloch. At length General Samuel R. Curtis was put in command of the Union forces west of the Mississippi, and General Earl Van Dorn of the Confederate forces. The two armies met in northern Arkansas. The Confederate forces, though outnumbering the enemy, became divided during the battle, and this fact, together with the death of General McCulloch, gave the victory to the army of Curtis, whose ablest subordinate was General Sigel. Van Dorn then led his forces eastward to join the main Confederate army at Corinth, but did not reach that point till after the battle of Shiloh. The status of Missouri on the subject of secession was settled at Pea Ridge. No longer was there any fear that the state would join the Confederacy. The battle of Pea Ridge was conspicuous in one respect—it was the only important battle of the war in which Indians played a part. In this battle some thirty-five hundred Indians under General

Albert Pike fought on the Confederate side; but their methods of warfare differed so greatly from those of the white men that their aid was little felt.¹

FARRAGUT AND NEW ORLEANS

To these four Union victories in the West within a few months (Donelson, Pea Ridge, Shiloh, and Island No. 10,—five, if we include that of Thomas at Mill Springs) another must be added, the most important of them all, the opening of the mouth of the Mississippi and the capture of the greatest seaport of the South. For the accomplishment of this great work, the country was indebted to David Glasgow Farragut, the ablest naval commander in the Civil War. Farragut had been in the naval service from childhood. As a boy of twelve years he had witnessed the terrible sea fight between the *Essex* and the two British vessels at Valparaiso, South America. He had been sent by Andrew Jackson to enforce the national laws at Charleston at the time of South Carolina's Nullification. He was a native of Tennessee, and every effort was made by his fellow southrons to induce him to join the secession forces; but he refused, with the well-known answer, "Mind what I tell you; you fellows will catch the devil before you get through with this business," and they never caught what he said more decisively than at New Orleans and Mobile. Farragut was now intrusted with the most important naval expedition of the war.

From the spring of 1861 there had been a few Federal vessels along the gulf coast for the purpose of enforcing the blockade; now an attempt was to be made to get control of the lower Mississippi, but no serious attempt to open the great mid-continent waterway was made till the spring of 1862. The object was to sever the Confederacy in twain, to cut off the supplies to the Confederate armies from Texas, Arkansas, and Louisiana, and to get possession of the cannon foundries of New Orleans. General B. F. Butler was put in command of the land force, thirteen thousand strong, and the fleet of bomb vessels and

¹ The strength and losses in this battle, as given in "Battles and Leaders" were: Union strength, 10,500; losses at Pea Ridge, 1384 killed, wounded, and missing. Confederate strength, 16,200 (exclusive of Indians); losses about 1300 killed, wounded, and missing.

frigates accompanying Farragut's squadron were commanded by Captain Porter. On the 16th of April, 1862, the fleet, composed of forty-seven armed vessels, eight of which were powerful sloops of war, had crossed the bar with the utmost difficulty at the mouth of the Mississippi, and was ready to begin operations.

The Confederates had heard of the coming fleet, and had not been idle. Two powerful forts, Jackson and St. Philips, each garrisoned by about seven hundred men, guarded the river, one on either side, some seventy miles below New Orleans. These had been greatly strengthened, and they now mounted 126 heavy guns, and were commanded by General Johnson K. Duncan. The Confederates had also

**Forts Jackson
and St.
Philips.**

built ironclad gunboats, rams, and various river craft with which to defend their beloved city. The naval forces were under the control of Commander John K. Mitchell. The bombardment of the two forts was begun on the morning of the 18th, and they answered with great fury. For five days and nights the earth shook with the artillery duel; the Union fleet in that period threw 16,800 shells. On the morning of the 24th, some hours before dawn, Farragut's memorable passage of the forts was accomplished.¹ The scene of this passage of the forts has been pronounced one of indescribable grandeur by those who saw it. The burning of fire rafts, sent among the vessels, lit the heavens with a lurid glare,

¹ A great chain that had been stretched across the river to prevent the passage had been broken on the 20th.

while the shells from the fleet, the forts, and the shore batteries, bursting in mid-air as they crossed each other's path, gave the appearance of a battle in the sky.¹ A fire ship with a streaming blaze a hundred feet in the air floated against the flagship *Hartford* and set her on fire. Farragut, standing on the deck, remained unperturbed. He called on his men to do their duty, and while some put out the fire and saved the ship, others kept working the guns as if nothing had happened. Before the coming of day, the fleet had passed the forts; then came the encounter with the enemy's vessels above them. These were dispatched, one by one—destroyed, disabled, or driven away; and the proudest city of the South lay at the mercy of the Federal fleet. A few days later Fort Jackson surrendered to Commander Porter, and Fort St. Philips to General Butler.

New Orleans was under martial law, with General Mansfield Lovell in command. For weeks before the passing of the forts the city was gay, except that a minor strain ran through every song after the news came from Shiloh. But the city was defiant. One newspaper expressed the fear that the Yankee invaders would not come for the warm reception prepared for them. But here they were at last; here were the frowning cannon at the very gates, and here was the inflexible Farragut. Now all was changed; the city was seized with a panic of fear; ten thousand children ran screaming through the streets; the women sobbed and wailed and wrung their hands. Wild disorder and panic reigned everywhere. The thousands of cotton bales along the wharf were set on fire, and so were the boats, lest they fall into the hands of the enemy; and the miles of flame set men and women weeping thirty miles away.² Lovell fled with his army, leaving the city to its fate; \$4,000,000 in specie were carried away. The crowds that remained howled and yelled with rage and despair, as they saw the last hope of defending the city disappear. Such was the condition of New Orleans, when, on the first day of May, Butler with his army arrived up the river, took possession, and waved the flag of the Union over the historic city of the Creoles.

¹ See Admiral Porter's account in "Battles and Leaders," Vol. II, p. 47.

² See description by George W. Cable in "Battles and Leaders," Vol. II, p. 14 *sq.*

THE PENINSULAR CAMPAIGN

What we call the Public, or Public Opinion, is a gigantic personality with his likes and dislikes, his passions, his virtues, and his foibles. In our great Republic he is the universal master; he elects our presidents and congresses, and shapes our legislation. This vast personage is long-suffering, but he may become angry or excited; then he is dangerous. At heart he is honest and his motives are sincere; he is usually wise, but now and then his judgment is sadly at fault — and yet he is absolute master, and none can dispute his sway. He may be trained, educated, persuaded, but never coerced. The strongest man cannot withstand or defy him, and no sane man would attempt it. It was this mighty giant, usually designated Public Opinion, that forced the battle of Bull Run. He grew impatient and demanded that a battle be fought, against the judgment of the military leaders. The result was disastrous, as we have seen, and the Giant, half ashamed of what he had done, remained quiet for some months. Meantime he fondled his newly-found hero — for at times he is like a half-grown child; he must have his toys, his heroes, and his villains, whom he changes at will.

George Brinton McClellan was then the popular hero. General Scott had long passed the meridian of his powers, and he failed to grasp the magnitude of the situation. McClellan was young, handsome, valiant. He was thoroughly trained; he had been graduated at West Point and had served in Mexico; he had studied war in the Crimea but a few years before, and above all he had just completed a bold, successful campaign in western Virginia. The public was thoroughly pleased when, just after Bull Run, Mr. Lincoln called McClellan to take command of the Army of the Potomac. McClellan had his shortcomings, as events proved; but in one respect he was very strong. He lacked the bulldog tenacity of Grant, the strategy of Sherman, the impetuous dash of Stonewall Jackson; but as a military organizer he was superior to them all. When he took control of the army it was a great disorganized mass, untrained, discouraged, but possessing the one supreme virtue — patriotism. In four months McClellan had made of this crude mass a trained, disciplined, and organized army equal to any that ever trod American soil. No such work had been done on this side of the Atlantic since the days of Steuben at Valley Forge. “Had there been

**Autumn of
1861.**

**George B.
McClellan.**

no McClellan," said General Meade in after years, "there could have been no Grant; the army made no essential improvement under any of his successors."

The summer of 1861 passed, and the autumn. The star of McClellan was still rising; on the 1st of November the aged Scott was retired on full pay, and McClellan was made commander in chief of all the armies of the United States. This again pleased the public; but it wrought some change in the plans of operation, and caused further delay, and at length McClellan decided that it would be unwise to undertake a winter campaign in the Virginia mud. Meantime a new disaster, known as the battle of Ball's Bluff, played on the feelings of the public.

This affair took place on October 21, exactly three months after Bull Run. A small Confederate force under Colonel Evans was posted at Leesburg, near the Potomac above Washington, and McClellan directed General Charles P. Stone to keep a lookout on Leesburg. Stone sent Colonel Devens with eight hundred men to destroy a camp near Leesburg. Devens was unexpectedly attacked near the rocky heights called Ball's Bluff. Colonel E. D. Baker, United States senator from Oregon, was sent across the Potomac to his assistance with a thousand men. The fight was sharp and murderous. The Unionists were beaten and driven down the bluff, where many were shot by the pursuing enemy, made prisoners, or drowned in attempting to cross the river. At least a thousand brave men were lost. Colonel Baker, who had ranked Devens, had charge of the battle; his decision to fight then and there was very unmilitary, and he paid the penalty with his life. The public was shocked at this disaster. Who caused it? The blame must be fixed on some one, for the Giant demanded a victim to appease his wrath. Colonel Baker was the chief blunderer; but he was lying dead with a bullet in his brain. McClellan and Stone may have been somewhat careless; but McClellan was still the popular idol, too sacred to be assailed, and the popular wrath fell on Stone. The administration could not ignore the clamor for a victim, and Stone was sacrificed. He was arrested and imprisoned for six months, and then released without a vindication or a trial; but history has pronounced him blameless. So much for the tyranny of Public Opinion. This great Master is sometimes a tyrant, and he makes blunders; but we must overlook all that, for he always means well, and in this great government it would be utterly impossible to get along without him.

General McClellan was doubtless right in deciding not to undertake a midwinter campaign, but he erred in other respects. He constantly magnified the power of the enemy and underestimated his own. He believed that Johnston had 150,000 men at Manassas, when in fact he had but little over one third of that number. At length the public became impatient with the long inaction; so with the administration. President Lincoln ordered a general advance for the 22d of February; but the army was not ready and did not move. Then McClellan disclosed his latest plan, viz.: to transfer his army to the mouth of the James and move upon Richmond from the peninsula formed by the James and York rivers. The President did not approve of this; but at a council of generals he was overruled, and he yielded the point. Now came word that Johnston had retired from Manassas to the banks of the Rappahannock, then to the Rapidan, and this caused a further change of plans and more delay. At about the same time McClellan was relieved of the duties of commander in chief, and his authority was confined again to the Army of the Potomac. Now he will certainly move, thought every one; but he continued to organize and drill. Perhaps he was doing the very best thing, but he was at fault in presuming too much on the public patience. The people could not understand why the army must be held so long in idleness, and the general should not have lost sight of the fact that he was responsible to them. He might have done something to quiet public feeling, but he ignored it, and suffered the penalty — his popularity waned during the winter.

McClellan's
delay.

But McClellan was not alone to blame. President Lincoln was at fault in not giving McClellan a free hand. When he approved the general's plan of operating from the peninsula, he waited nearly a month before giving the order to furnish transportation for the army. Mr. Lincoln's interference arose partly, as he acknowledged, from "pressure," that is, pressure from the politicians who knew nothing of military affairs. He should have given his general full control of the army or asked his resignation.

The reader should remember that the change in the plan of operation was an important one. Manassas was but thirty miles across the country from Washington, while the "peninsula" was two hundred miles away. Fortress Monroe, near which the famous duel between the *Monitor* and the *Merrimac* had taken place a few weeks before, was at the apex, and was to be the base of the opera-

tions. At length, on the 17th of March, the great movement was begun. Four hundred vessels of all sizes were employed, and in something over three weeks the army of 121,000 men, 15,000

Transfer to the peninsula. horses and mules, with wagons and other munitions in like proportion, was safely landed at Fortress Monroe.

For economy and celerity of movement the expedition was said to be "without a parallel on record." At last McClellan was ready to begin operations. The objective point was Richmond, seventy-five miles up the James. The army began its march up the peninsula; but a Confederate army of 11,000 men under General Magruder lay intrenched across the peninsula from Yorktown, the town that had witnessed the closing scenes of the War of the Revolution. The Union general was about to make an attack when he received an order from the President detaching McDowell's corps, some 25,000 men, to join the defenses of Washington.¹ This embarrassed McClellan, and had Mr. Lincoln had a military training he would

Yorktown. doubtless have seen that nothing would draw the Confederates away from Washington so effectually as an advance with a large army upon their own capital. But McClellan still had a large army, and might easily have broken through Magruder's thin lines, had he chosen; but he settled down to a siege of Yorktown, spent a month erecting batteries and digging trenches, and when at last he was ready to open his guns, he found that the enemy had retreated toward Richmond.

A vigorous pursuit was ordered, and the Confederates were overtaken near Williamsburg, twelve miles up the peninsula from Yorktown. Before the town stood Fort Magruder, which became the Confederate base, and here on May 5 occurred the first battle between

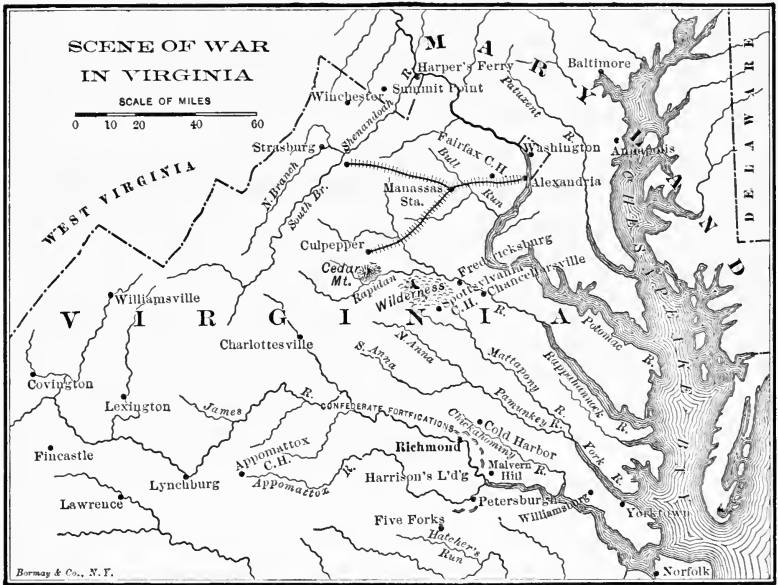

Battle of Williamsburg. the enemy and the army while under McClellan, though he had been commander since the preceding July.² The battle continued throughout the day, and when night closed the conflict the Confederates took advantage of the darkness to continue their retreat toward Richmond. This battle took place

¹ This corps, with the other forces left to guard the capital, under Generals Banks and Wadsworth, aggregated at least sixty thousand men. McClellan's army was divided into four corps, commanded respectively by Generals McDowell, Sumner, Heintzelman, and Keyes. These had not been selected by McClellan; they had been appointed by the President. But McDowell, as we have seen, was retained at Manassas.

² A portion of the army under Banks, however, had had several skirmishes in the Shenandoah Valley with a detachment of Johnston's army under Stonewall Jackson. In one of these, on March 23, General James Shields, whom Banks left in charge, defeated Jackson in a sharp battle at Kernstown, near Winchester.

within five miles of the site of historic Jamestown, the first permanent white settlement on the soil of the United States.

After this battle McClellan moved his army up to the head of the York River to White House, where he established his base. He preferred to approach Richmond up the James. But President Lincoln preferred that he hold the Grand Army between Richmond and Washington, and promised to send him the corps of McDowell, which had now been swelled to forty thousand by a detachment from Banks's

army on the Shenandoah. McClellan was delighted with this prospect of reënforcement; he moved across the peninsula to the banks of the Chickahominy, where he arrived on May 21, having sent Stoneman's cavalry to clear the way for the advance of McDowell; but his hopes were suddenly dashed to the ground by a sudden turn of events.

It will be remembered that Banks had a small army in the Shenandoah Valley and that Frémont had another thirty miles westward across the mountains. President Lincoln and Mr. Edwin M. Stanton, who had in January succeeded Simon Cameron as secretary of war, con-

ceived the plan of having Banks and Frémont join to crush Jackson. But the plan was entirely frustrated by a brilliant piece of strategy, the author of which was Jefferson Davis. The Confederate President divined the purpose of the Washington authorities, and he quietly sent Jackson a detachment of Johnston's army, raising his force to twenty thousand men. With this force Jackson prevented the union of Frémont and Banks, defeated the latter at Winchester on May 25, and swung so near to Washington as to create great excitement in that city. This action led the President to send McDowell in pursuit of Jackson; but that wonderful strategist kept the three armies of McDowell, Banks, and Frémont apart, and left them groping among the mountains while he returned to join the main Confederate army near Richmond. The movement was brilliant in the extreme, and it is quite possible that it prevented the capture of Richmond in the summer of 1862.

Before the arrival of Jackson at Richmond, however, the battle of Fair Oaks, or Seven Pines, had been fought. McClellan was deeply dejected at the turn affairs had taken. He would have approached the Confederate capital by way of the James, but for the arrangement that McDowell should join him. It was now too late to change his plans, and he determined to fight with the force at his command. He threw his left wing, composed of the corps of Heintzelman and Keyes, across the Chickahominy to a place called Seven Pines. The keen eye of Johnston detected the weak position of McClellan's army, and he determined to attack the two corps that had crossed the river. On the morning of May 31 Johnston sent D. H. Hill with a strong force to make the attack. Longstreet supported Hill, and in a short time the battle was raging furiously between the village of Seven Pines and the railroad station of Fair Oaks. The whole Union force on that side the river, some twenty-five thousand men, was soon engaged with a much larger force, Johnston having joined in the battle with two thirds of his army. The Federals were slowly pressed back, and utter defeat seemed staring them in the face, when Sumner, the most energetic, though the oldest, of the corps commanders, suddenly appeared on the scene. He had pushed across the swollen river at great peril on a dangerous bridge of his own making, and now he rushed to the attack, threw Johnston's army into confusion, and drove it back with great slaughter. Johnston himself

was severely wounded, and was carried bleeding from the field. Next morning the fight was renewed, but the Confederates soon withdrew from the field. The battle of Fair Oaks, in which the Union loss was about five thousand and the Confederate loss exceeded six thousand, was a fair victory for the Grand Army of the Potomac, and completely retrieved the wounded honor of ten months before at Bull Run. The chief honor of the victory belonged to Sumner. McClellan has been severely criticised for not following up the victory and capturing Richmond at once. The city was but six miles away, and its spires could be seen from the battle ground. But the great swamps of the Chickahominy Valley rendered such a sudden stroke at this time impracticable. McClellan, however, was very much at fault for having his army thus divided, and but for the valiant Sumner the result would have been disastrous.

THE SEVEN DAYS' FIGHT BEFORE RICHMOND

Joseph E. Johnston was severely wounded at Fair Oaks. He could not again take the field for many months, and the command of the Army of Northern Virginia passed into the hands of his classmate at West Point, his lifelong friend, Robert E. Lee. Of all the sons of the South brought into prominence by the Civil War, Lee stands first. He was a son of "Light Horse Harry" of Revolutionary fame. He had married a wealthy and accomplished wife, the daughter of the adopted son of George Washington, and at the opening of the war he lived in unostentatious affluence at beautiful Arlington, the ancestral inheritance of his wife, **Robert E. Lee.** on the banks of the Potomac River. He was a man of the highest culture, of quiet, sincere life, of noble impulses, of perfect morals. He loved the Union and opposed secession, but he loved his state still more. He would have been chosen chief commander of the Union armies, but he could not turn his sword upon the state that had given him birth; and at the secession of Virginia he resigned his commission and retired into private life, declaring that if the Union were dissolved he would share the miseries of his people, and, save in defense, draw the sword on none. Soon, however, he was chosen commander of the Virginia forces, and accepted the position; next he became military adviser of President Davis. When Johnston was disabled at Fair Oaks, Lee was made commander of the chief southern army, and so he continued to the end of the war.

Lee was the ablest commander of the South, and many believe that he had no equal on the side of the Union.

McClellan rested for nearly four weeks after Fair Oaks, sending to Washington almost daily dispatches saying that he would move as soon as the Chickahominy, which was overflowing its banks from recent rains, should subside. During this period Lee was very active. He drew reënforcements from North Carolina, Georgia, and from the Shenandoah Valley, until his effective army almost reached ninety thousand. To aid the movement of Stonewall Jackson to Richmond, Lee sent the daring cavalry leader, J. E. B. Stuart, with fifteen hundred cavalry to make a complete circuit of the Union army; and to prevent McDowell from joining McClellan he sent General Whiting with a division to threaten Washington. The ruse was successful. Lincoln and Stanton failed to see that the object of these threats was to prevent the reënforcement of McClellan.

McClellan had now to fight both Lee and Jackson. His army numbered about a hundred thousand, and he addressed himself to the great task before him with skill and vigor. The **Mechanicsville, June 26, 1862.** first of the seven days' battles was at Mechanicsville on Beaver Dam Creek, a small stream that flows into the Chickahominy. In this battle Lee made the blunder of dividing his army, and in consequence suffered a stinging defeat, losing about fifteen hundred men, while the Union loss was less than four hundred.

The next day witnessed a still greater battle near Gaines Mills, and not far from the village of Cold Harbor.¹ Here in a grand semicircle General Porter, commander of the Union right **Gaines Mills, June 27.** wing, disposed his troops. Early in the afternoon he was attacked by General A. P. Hill, but Hill was driven back with much loss. Lee now sent for Jackson to hasten to the scene, and Jackson arrived late in the afternoon. The Confederates then made a grand assault with this double force, aggregating nearly sixty thousand men, while Porter had less than forty thousand. The Union troops fought with the utmost courage, but the odds against them were too great; and but for the coming of two more brigades from the main army Porter's corps might have suffered a most serious disaster. The Confederates then halted, and ere they could attack again it was night. The weary Union legions welcomed the

¹ It was on this same ground, two years later, that the Union army suffered a terrible defeat in what is known as the battle of Cold Harbor.

darkness, and ere the coming of the dawn of the following day they had joined the main army on the south bank of the Chickahominy. Neither side ever made an official report of the total losses at Gaines Mills; but it is believed that each side lost about eight thousand men.

There is no doubt that McClellan could now have captured Richmond by a bold dash. He held the Grand Army but five or six miles from the city, which had been left in charge of Magruder with twenty-five thousand men, while Lee and Jackson were more than a full day's march to the northward. The people of the city were greatly alarmed, and President Davis had the public archives packed, ready for instant removal. But there was nothing to fear. McClellan had no thought of attacking the city. His genius was methodical and cautious, and was not equal to a bold, sudden movement of such magnitude. But in one point McClellan outwitted both Lee and Jackson. They believed that if he were forced to retreat he would go back by the same route by which he had come, and all their movements for several days were made on that supposition. McClellan quickly comprehended their mistake and skillfully kept them deceived for some days, meantime massing his army south of the Chickahominy. His object was to form a new and better base of supplies on the James River, and he made the change with great skill. But little fighting was done on June 28 and 29, and McClellan improved the time in moving his immense army train over White Oak Swamp to his new base on the James. It was a great task; he had four thousand wagons, five hundred ambulances, three hundred and fifty cannon, and twenty-five hundred live cattle. Nothing but his clever deception of Lee and Jackson saved his trains from capture. Not until the morning of the 30th did the Confederates come up with the retreating army, and on that day three heavy battles were fought.

The first of these occurred between Franklin's corps and the army of Jackson at White Oak Swamp. Jackson, with thirty thousand men, attempting to cross the swamp, was attacked by Franklin with scarcely half the number. Franklin's attack was made with great courage, and it prevented Jackson from joining the main army. About two miles from this place occurred the battle of Glendale, or Frazier's Farm.

Here the divisions of Longstreet and A. P. Hill, accompanied by Lee and Jefferson Davis, attacked two Federal divisions. The

**McClellan
moves his

**Frazier's
Farm.**

afternoon was marked by a succession of fierce charges by the Confederates, and the battle continued till late in the night. A third battle of this eventful day occurred at the foot of Malvern Hill, and was of much smaller dimensions. General Wise made a bold but unsuccessful attack on Porter and Keyes.¹ McClellan now had his army well in hand, and during the night he concentrated his entire force on Malvern Hill to await the fearful battle of the next day which was to close the campaign.²

Malvern Hill is a low plateau more than a mile in diameter, near a great bend of the James River. Here McClellan placed his army in a position so strong that twice the force of Lee could not have dislodged him. The army was arranged in "a grand semicircle, with tier after tier of batteries . . . rising in the form of an amphitheater." The crest of the hill bristled with cannon, so placed that their fire could be concentrated on any point of attack. McClellan had the further advantage of being supported by his gunboats from the river. General Lee would have made no such blunder later in the war as he now made in attacking McClellan. For the first time each commander had a united army, and had the advantages been equal, a fight to the finish might have taken place.

The morning was spent in an artillery duel. Lee had decided to attempt to carry the hill by a grand bayonet charge along his whole line. But the signal was not properly given, or it was **Battle of Malvern Hill, July 1, 1862.** misunderstood, and the various divisions charged singly. First, D. H. Hill, then Magruder, then Huger, made a determined rush up the slope; but in each case the steady hail of musketry and the concentrated fire of the cannon from the crest of Malvern drove them back, leaving thousands dead and wounded in their trail. The battle raged till an hour after dark, the lurid glare of the powder flashes pointing out to each side the location of the enemy. At the close of the battle every Confederate assault had been repelled, every battery disabled, while not a line or a column of the Army of the Potomac had been broken. Lee's loss exceeded five thousand men, McClellan's loss was not one third as great.

McClellan then settled down at Harrison's Landing on the bank of the James, Lee withdrew his army to his intrenchments at Rich-

¹ The losses of this June 30 are not known, but Longstreet and the two Hills reported their losses from the 27th to the 30th as 12,458.

² His supply train had now reached Haxall's Landing on the James, just below Malvern, and was under the protection of the fleet.

mond, and thus ended the memorable peninsular campaign. The losses of the Federal army during the entire campaign were officially given at 15,249; the Confederate losses were slightly above 19,000.

McClellan now determined on a new campaign against Richmond. He had chosen an admirable position from which to operate: his base of supplies on the James was much nearer than his former one on the York, and was protected by the fleet in the river. His plan was to cross the river to Petersburg and to operate from there; but this was disapproved at Washington, and McClellan yielded the point, reoccupied Malvern Hill, and was ready to begin the new campaign, when all unexpectedly he was ordered to abandon the peninsula and return with his army to the vicinity of Washington. This was certainly an unfortunate move for the Union cause, for with a reënfacement of twenty or thirty thousand men, which had been promised him, McClellan could surely have captured Richmond within the next two or three months. He was not a very great commander, it is true, but he was safe. He was slow to strike; but when he struck, he struck with power. His movement of his base from the York to the James, deceiving both the great Confederate generals, was accomplished with consummate ability. The campaign, it must be confessed, had failed in its intended object — the capture of Richmond. But the army had vast obstacles to overcome — endless swamps and swollen rivers, with a powerful and ever vigilant foe in front. It suffered great losses, but it inflicted greater losses on the enemy. For seven days it had fought nearly every day and had marched through the swamps at night; and yet with all this the army was not in the least demoralized. Its organization was as perfect after the battle of Malvern Hill as it was before the battle of Williamsburg, and, above all, it was intensely devoted to its commander. In view of these facts it is difficult to see why McClellan should have been recalled at this moment and his army scattered and merged into another. The answer to this question remains among the unfathomable political mysteries of Washington.

NOTES

Indians in the Civil War. — At the close of Buchanan's administration nearly all the United States Indian agents were secessionists, and they did all in their power to lead the Indians to favor the South. Agents were sent among the Indians to organize them against the Federal government; but they were not always successful. An aged chief of the Creeks of the Indian Territory, for example,

took strong ground for the Union, and he had many followers. Against this chief, Colonel Douglas Cooper, a white man, organized a force in the autumn of 1861, and the Indians, after being defeated in two minor battles, fled in midwinter to Kansas for refuge. There were various other small engagements among the Indians, usually under white leaders. Many of the Indians preferred to occupy a neutral position, but they found this difficult to do. On the whole, more of them sympathized with the South than with the North; but only at Pea Ridge were they engaged in battle on a large scale. The Indians made poor soldiers as compared with white men. They clung to their ancient methods of warfare, and failed wholly to grasp modern scientific methods.

General Butler in New Orleans. — The people of New Orleans yielded with ill grace to the occupation of the city by the Union forces, and Butler in governing the city found his path a thorny one. As he walked along the streets his ears were greeted by such calls as, "There's the old cock-eye," "Beast Butler," "Let me see the d—— rascal," "Hurrah for Jeff. Davis," and the like. The soldiers were repeatedly insulted in the streets by the crowds, and especially by women who belonged to the higher social classes. One day a woman passing two soldiers deliberately spat in their faces. Butler could bear this no longer, and issued his famous order declaring that if in future "any female shall, by word, gesture, or movement, insult or show contempt for any officer or soldier of the United States, she shall be regarded and held liable to be treated as a woman of the town plying her avocation." This order had the desired effect, but it brought fierce condemnation on its author throughout the South and in parts of the North, and was even referred to with "deepest indignation" by Lord Palmerston, the British Premier, in the House of Commons. Butler hanged William B. Mumford for hauling down the American flag from the roof of the Mint. He took possession of a large district southwest of New Orleans and sequestered all the property for the benefit of the army and of the destitute slaves, and made himself unpopular in many ways. In December of the same year he was superseded by General N. P. Banks. Jefferson Davis then issued a proclamation declaring Butler an outlaw and a felon, and directing any Confederate officer to kill him on sight. To this a rich South Carolinian added an offer of a reward of \$10,000 for the capture of Butler dead or alive. See Greeley's "American Conflict," Vol. II, p. 96 *sq.*

Lincoln and McClellan. — An endless controversy arose after the close of the peninsular campaign concerning the merits of the relations between President Lincoln and General McClellan. Many take the ground that McClellan was incompetent and should have been recalled sooner than he was, while others claim that the administration did not support the army properly, and actually desired McClellan's downfall. There was merit and blame on each side. McClellan was utterly in the wrong in believing that Lincoln did not wish to sustain him. He was wrong also in overestimating the force of the enemy; but he accepted the reports of his spies, who, some have believed, were in sympathy with the enemy, and purposely deceived him. The claim of some that Lincoln, believing that McClellan had aspirations to the presidency, was jealous of him and wished to degrade him, will seem absurd to any one who studies Lincoln's whole life. But Lincoln was at fault in urging McClellan to begin great opera-

tions in midwinter. He simply reflected the impatience of the great untrained public. His proclamation ordering the army to move on the 22d of February is pronounced by Ropes, one of our profoundest military critics, "a curious specimen of puerile impatience," as war orders and proclamations "will not make roads passable." McClellan was quite right in deciding not to move till spring, but he was wrong in ignoring public opinion. He should have made minor movements here and there, as he could easily have done, to quiet public feeling. Again, when he saw that there was a frantic fear that Washington would be captured, he should have done more than he did to allay it, though he did not share it. Lincoln was greatly handicapped in two ways: First, his want of military training, and, it may be added, his commonplace native judgment in military matters; and second, his inability to extricate himself from the all-powerful political influence at the capital. Many of his appointments were based on political grounds. Here is an example: McClellan urged (see "McClellan's Own Story," p. 226) that the defenses of Washington be put into the hands of one of the ablest men of the army; but Lincoln appointed to this important post General Wadsworth, a politician wholly without military training or experience. The secret of the appointment is shown in a letter to McClellan from the secretary of war. "Wadsworth," wrote Stanton, "had been selected because it was necessary for political reasons to conciliate the agricultural interests of New York," and he declared that it was useless to discuss the matter, as in no event would the appointment be changed. No ill effects came of this; but had a Confederate army attacked Washington the result might have been disastrous. Lincoln was a victim of this political monster, which, in our government, is so strong that the strongest man cannot wholly prevail against it.

CHAPTER XXIX

THE CIVIL WAR—WAR ON A GRAND SCALE

A YEAR had now passed since the first great clash of arms at Bull Run. It was a momentous year in American history; it had brought the marshaling of vast armies and a few tremendous battles. Neither side had yet much to boast of. The North was as determined as ever to preserve the Union; but the Confederacy seemed unshaken. Yet it had visibly lost ground—not in the East, save along the coast of the Carolinas, but in the valley of the great river. Missouri had been saved to the Union; so had Kentucky; the South had lost Arkansas at Pea Ridge, and Tennessee at Pittsburg Landing. The mouth of the Mississippi had been seized, and the greatest port of the South had fallen before the armies from the North. But the year ending with July, 1862, with all its great events, was surpassed by the year that followed it. The whole land was now astir with the spirit of war. No longer did any one dream of compromise; the two mighty powers had grappled in mortal strife, and only when one had slain the other could the contest end. Which would win no one could yet say. Certainly the North, if Europe would keep quiet; otherwise, the outcome was uncertain.

THE CONFEDERATE GOVERNMENT

At this point a rapid view of the Confederate government is in place. We have noted the forming of the provisional government at Montgomery, Alabama, in February, 1862, the election of a provisional President and Vice President, the adoption by the Congress of a permanent Constitution in March, and the removal of the capital to Richmond, Virginia. The provisional government continued for one year, its Congress consisting of but one House, when it gave way to the "permanent" government, in which the Congress consisted of two houses, similar to those of the Union.

The laws of the United States in force at the time of secession continued to operate until repealed.

On November 6, 1861, an election of President and Vice President for the full six years was held, and Davis and Stephens were reelected by a unanimous electoral vote. The inauguration took place on February 22, 1862.

Under the permanent Constitution two congresses were elected. The period of the first was from February 18, 1862, to February 18, 1864, four sessions being held. The second Congress began at the expiration of the first and continued till it was unceremoniously broken up, on March 18, 1865, by the proximity of General Grant's army. Thomas S. Bocoek of Virginia was the Speaker of both congresses. In the first Congress there were delegates from the non-seceding states of Missouri and Kentucky, elected by rump conventions or by soldiers in the field. The highest number in the Confederate Senate was twenty-six and in the House one hundred and six. The Congress held most of its sessions in secret. It was not free in its acts; it was dominated by President Davis, and its main business was to register laws prepared by him. Davis soon had quarrels with the leading members of Congress as well as of the army. Toward the close of the war the Congress began to wrest itself from the control of the President. As early as December, 1863, Foote of Tennessee stated on the floor of the House that President Davis "never visited the army without doing it injury — never yet, that it has not been followed by disaster." The only known instance, says Alexander Johnston,¹ of entirely independent action in an important matter by the permanent Congress was that of 1865, when it voted that Davis's incompetency was the cause of Confederate disaster, and made General Lee commander in chief with unlimited powers. Certainly the presidency of the Confederacy was a thorny road to travel.

The suspending of the writ of *Habeas Corpus* was practiced in the South, as in the North; and there also it awakened much opposition, especially in Georgia and North Carolina. In the matter of conscription the South dealt more drastically than the North. An act of the Confederate Congress, February 17, 1864, declared all white men in the Confederate states, between the ages of 17 and 50 years, in the military service for the period of the war.

Little was the opportunity of the people of the South to show

¹ Lalor's "Cyclopedia," Vol. I, p. 570.

their capacity for self-government, which, with their many trained statesmen, they no doubt had in a high degree. The brief period of the Confederate government was one of unceasing warfare with a mightier power, and its game was a losing one throughout. Little could its Congress do but pass war measures, dealing with the raising of armies and the distressing subject of finance. From the beginning the government relied chiefly on loans. It hoped to refrain from internal taxation, and the blockade prevented an income from foreign trade. The first issue of bonds, in February, 1861, was for \$15,000,000, and this was realized in specie; but the second, three months later, for a hundred millions, was raised partly by accepting farm produce, by which the government became the possessor of vast stores of cotton. This produce loan system was continued through the years 1862 and 1863, and even the states followed the example and borrowed cotton by the issue of bonds.¹

As the raising of money by bond issues grew more difficult, the government came to rely on the issue of treasury notes, or paper money. The issue was at first meager; but it increased rapidly, and by the close of the war there was probably \$1,000,000,000 of Confederate money afloat. This of course decreased in value until it became worthless. The government at length resorted to internal taxation; but as the taxes were paid in its own depreciated notes, it provided for produce taxation, and the farmer paid his tax with the products of the farm. On the whole the struggle of the Confederacy for life was one of the most heroic in history.

POPE'S CAMPAIGN IN VIRGINIA

The almost unbroken successes of the Union armies in the Mississippi Valley created a feeling that their leaders were superior to those of the East. The latest of these western men to call attention to himself was General John Pope, a Kentuckian by birth, a graduate of West Point, and a veteran of the Mexican War. Pope's signal victory at Island No. 10 gave him national fame, and in June he was called east and given command of the forces under McDowell, Banks, and Frémont, and the combined army, some forty thousand men, was named "The Army of Virginia."² The following month

¹ See "Cambridge Modern History," Vol. VII, p. 610.

² Frémont refused to serve under Pope, and General Franz Sigel was appointed in his stead.

General Halleck was called east and made commander in chief of all the armies of the United States. Soon after this, McClellan was recalled from the peninsula, and a large part of his army was given to Pope, who was directed to make an aggressive campaign in the vicinity of Manassas. Pope started out with a bombastic proclamation, almost as turgid as that of General Smythe before Niagara in 1813.

The first serious encounter took place at Cedar Mountain, a few miles south of Culpeper. The corps of Banks, about eight thousand men, fought with more than twice their number under Jackson. Banks rushed upon the enemy's lines with great fury and threw them into disorder, and had not Jackson received reënforcements he might have been routed, though his loss was much less than that of Banks.¹ The next few weeks were occupied in skirmishes, marches, and countermarches. On one occasion Stewart with his cavalry cut Pope off temporarily from his base of supplies at Manassas and captured his private papers; and on the 27th of August Jackson captured the great Federal stores at Manassas. Lee had now moved forward with most of his army to the aid of Jackson. Pope had also been reënforced from the Army of the Potomac, but his force was still inferior to that of Lee.

On August 29 occurred the sanguinary battle of Groveton. Pope was anxious to crush Jackson before he could be reënforced by Longstreet, who was fast approaching. He ordered McDowell to fall back toward Gainesville, and from here he arranged his whole army in a semicircle, several miles long, to Bull Run. But Longstreet had arrived, and the battle was general all along the line—a series of heavy skirmishes rather than a pitched battle. The fight, especially in the afternoon, went against the Federals. Pope blamed Fitz-John Porter for this. He had sent Porter word to support McDowell, but, as Porter claimed, the word did not reach him till night.² Pope had been worsted on

¹ Sigel and his corps were only a few miles away, but through some misunderstanding he failed to go to the aid of Banks. The Union loss at Cedar Mountain, says Livermore, was 2353; Confederate loss, 1338.

² For not obeying this order Porter was court-martialed, dismissed from the service, and disqualified from holding any office of trust or profit in the United States. The matter became the subject of long controversy. In 1882 General Grant reviewed the case and decided that Porter was innocent. His disability was removed that year, and in 1886 he was restored to the army and retired.

this day, but he prepared for a new attack the following morning. Lee's whole army was now in his front. He imagined Lee to be in retreat, and sent McDowell to follow him; but McDowell was driven back, and Porter, who charged Jackson's right repeatedly, was driven back with great loss. The Federals were at length forced back over Bull Run toward Centreville. This battle, in which Pope was again defeated, has been called the second battle of Bull Run, as it was fought on almost the same ground as that on which the Army of the Potomac was defeated thirteen months before.

Two days later another fierce battle occurred, known as the battle of Chantilly. Lee had sent Jackson around Centreville to the north, and the divisions of Hooker, Reno, and Kearney were sent against him. The Federals were at length forced to retire, and the brave General Kearney, who had lost an arm in the Mexican War and had just passed through the peninsular campaign, was among the slain. Pope now led his army back to the defense of Washington. The campaign had cost him at least fifteen thousand men; the Confederate loss was probably above ten thousand. If McClellan had failed on the peninsula, Pope, with all his glowing promises, had made a far more dismal failure. On the same day that he reached Washington he was relieved of command at his own request, and McClellan was restored to the command of the Army of the Potomac.

ANTIETAM

When, on September 2, 1862, President Lincoln called in person on General McClellan and requested him to resume command of the army, McClellan accepted the heavy burden without a murmur concerning the past, and the soldiers sent up cheer after cheer at the return of their old commander. The army at that moment was shattered and demoralized, but in a few days the magic hand of McClellan effected a new organization.

Lee was elated at his recent successes, and resolved to make an immediate invasion of Maryland. In a few days his army was on its way toward Harpers Ferry. McClellan at the same time moved his army up the north bank of the Potomac. He was uncertain as to the intentions of the Confederates until, on the 12th of September, Lee's order of the campaign fell into his hands. By this

he learned that Jackson had gone to Sharpsburg, between the Potomac and Antietam Creek, that Longstreet was to halt at Boonsboro with the supply trains, and that McLaws was to occupy the heights above Harpers Ferry. This information was of great advantage to McClellan. When Lee entered Maryland he called upon the people to rally to his standard, to throw off the foreign yoke, and to restore the independence and sovereignty of their state; but the people failed to respond, and the southerners found only closed doors and frowning looks. The Union army, on the other hand, was welcomed with open arms.

The first encounter, a double one, took place at two passes in the South Mountain, a continuation of the Blue Ridge north of the Potomac. General Franklin, who had been sent to relieve Harpers Ferry, met a Confederate force at Crampton's Gap, and defeated it in a sharp battle of three hours. At the same time the main army under Burnside and Reno encountered a stronger force at Turner's Gap, seven miles farther up. The battle here continued many hours, till late in the night, and the Union troops were victorious, though General Reno was killed, and Lieutenant-Colonel R. B. Hayes, a future President of the United States, was among the wounded. These two actions are known as the battle of South Mountain. The Federals won a decisive victory in both, with a loss of twenty-one hundred men,¹ but they failed to save Harpers Ferry. On the next day Jackson on the one side and McLaws on the other looked down from the heights on Harpers Ferry, where Colonel Dixon S. Miles had twelve thousand men and vast stores of arms and ammunition. With inexplicable stupidity he had remained in the trap when he should have led his men to one of the heights and held the enemy in check until the arrival of Franklin, whom he knew to be but a few miles away. Scarcely had the bombardment begun when he raised the white flag and surrendered his army and the great stores to the enemy. Miles's action arose probably from want of capacity, rather than of patriotism. Yet he would doubtless have been severely dealt with but for the fact that a stray Confederate bullet, after the surrender, laid him dead upon the ground.

Jackson and McLaws now hastened to join the main army, which

¹ Lee's loss was nearly twenty-seven hundred, eight hundred of whom were prisoners. Livermore, p. 91.

**Battle of
South Mountain,

**Capture of
Harpers
Ferry,
September 15.**

had taken a strong position on the south bank of Antietam Creek, a little stream that flows into the Potomac above Harpers Ferry. It was evident that a battle of vast magnitude was imminent, one that must decide the issue of Lee's campaign. If Lee won, he would push northward into Pennsylvania, or strike Baltimore; if he lost, he must return to Virginia. After an artillery duel at intervals, and a sharp attack by Hooker on Lee's left wing, the two great armies bivouacked on the field for the night and sought a little rest and strength for the fearful business of the coming day. At sunrise of the 17th Hooker, who commanded the Union right, opened his cannon on the enemy's left under Jackson. Jackson answered with fury,

**Battle of
Antietam,
September
17, 1862.**

but an enfilading fire from Hooker's batteries pressed his lines back, when he received fresh masses of troops and was about to drive Hooker from his position. Hooker was painfully wounded and was borne from the field, and Sumner crossed the creek and threw his corps into the contest. Thus for hours the Union right and the enemy in its front surged to and fro, and human blood flowed like water. Meantime the left and center under Burnside and Porter remained inactive till afternoon, when Burnside charged upon the enemy. As evening approached the two armies ceased fighting as if by mutual consent. Both had suffered severely. More than 23,000 men lay dead or wounded on the field, divided almost equally between the two armies. This day has been pronounced the bloodiest day in American history. McClellan reported a loss of 12,640. For twenty-four hours the two armies rested, glaring at each other. McClellan meant to attack on the second day, but during the preceding night Lee escaped across the Potomac in the darkness. Antietam was a drawn battle; but in another sense it was a complete victory for McClellan, for it ended Lee's proposed invasion of the North. Lee had started north with a fine army of over 50,000 men just two weeks before; now he returned with little over half the number, having lost greatly by straggling as well as in battle. Had McClellan known that on the day after the battle Lee was nearly out of ammunition and his army was greatly disorganized, he could have overwhelmed and crushed him. His pursuit of Lee was long delayed; it should have been immediate and vigorous. He alleged that his army was short in horses, short in wagons, rations, clothing, etc.; but he should have remembered, for he certainly knew, that the retreating enemy was shorter in everything than he was. Lincoln urged an immediate pursuit of Lee;

but McClellan waited five weeks before attempting to cross the Potomac River. At last he did move: he crossed the river late in October, and the celerity of his march was unusual for him.

But the patience of the administration had been exhausted, and on November 7, as he sat in his tent with his friend Burnside, he received a dispatch from the President relieving him of the command and giving it to Burnside.

**McClellan
dismissed.**

Why McClellan was removed at this time the historian has no power to determine. Some attribute the removal to the inner political councils at Washington. It was known that McClellan was a conservative, and his friends outside the army were generally Democrats or conservative Republicans.¹ Others believed that the administration feared that McClellan, if left a few weeks longer, would crush Lee, annihilate his army, and end the rebellion, leaving slavery intact, and they preferred that the war continue rather than that it should end with the cause of it left over to disturb the country in future. There is no proof that this motive entered the mind of the President and his advisers; but if it were so, we cannot hesitate to give it our approval. From a military standpoint, however, the removal of McClellan was a serious mistake. It is certain that he was a growing man, and that with his extreme caution and his wonderful powers of organization a great defeat of the army under him was scarcely possible. Thus closed his career as a soldier, and it is with sincere regret that we take leave of McClellan. He was a man of clean moral life and was deeply devoted to the cause of the Union. Much has been written concerning McClellan as a commander, and the best summing up of it all, in our opinion, was made by General Grant in later years. "The test applied to him," said Grant, "would be terrible to any man, being made a major-general at the beginning of the war. . . . McClellan was a young man when this devolved upon him, and if he did not succeed, it was because the conditions of success were so trying. If McClellan had gone into the war as Sherman, Thomas, or Meade, — had fought his way along and up, — I have no reason to suppose that he would not have won as high distinction as any of us."²

Who should succeed McClellan? Various names were considered,

¹ Rhodes, Vol. IV, p. 190. Burgess pronounces the dismissal of McClellan "a dark, mysterious, uncanny thing, which the historian does not need to touch and prefers not to touch." "The Civil War and the Constitution," Vol. II, p. 105.

² See Young's "Around the World with General Grant," Vol. II, p. 216.

and the choice fell on General Burnside, who had repeatedly disparaged his own ability and had affirmed over and over again that McClellan was the ablest commander in the army. This was attributed to his modesty. Had not Cæsar refused the crown offered him by the Roman Senate? Twice had Burnside been offered and twice he had refused the command of the Army of the Potomac, declaring that he was incompetent. But George Washington had said the same thing to the Continental Congress. It was left, however, for Burnside to do what Washington never did—to prove his assertion to be true. His short, disastrous campaign, which we shall notice hereafter, left no doubt in the minds of his countrymen.

EMANCIPATION

The battle of Antietam not only drove Lee back to Virginia soil and ended his invasion, which, with a simultaneous invasion of Kentucky by forty thousand Confederates under General Bragg, had caused great excitement in the North; it also enabled Lincoln to issue the most important proclamation ever issued by a President of the United States.

The war had been going on for a year and a half; it had cost eighty thousand men and \$1,000,000,000; but it was still, as in the beginning, a war for the Union. The real cause of the strife, slavery, was not yet seriously molested. But a beginning had been made, and after Antietam the matter took such shape that henceforth there could be no backward step. Emancipation, as well as the preservation of the Union, became the policy of the government. From the beginning of the war there was a radical party that ceased not to demand that the government strike at slavery. But the President hesitated long, and the radicals denounced him unsparingly; yet Lincoln was right. He knew that the radicals were greatly in the minority; he knew that, with all his desire to see the institution fall, he would alienate the border states and perhaps the whole Democratic party of the North if he pressed the matter too soon. The Democrats claimed to be fighting for the Union and not for the negro. Lincoln therefore, with infinite tact, waited for public opinion and aided in its development.

The gradual steps toward emancipation are interesting to note. The first step was taken by General Butler while in command at Fortress Monroe. He refused, in May, 1861, to send three black

fugitives back to their master, pronouncing them contraband of war. The next step was an act of Congress in August of the same year, confiscating all property, including slaves, employed in the service of the rebellion. Next came Frémont's confiscation order in Missouri, which, as we have noticed, was overruled by the President. In May of the next year, 1862, General David Hunter, commanding on the coast of South Carolina, issued a proclamation declaring the slaves in his department—South Carolina, Georgia, and Florida—free; but the President overruled this, as in the case of Frémont. In spite of these apparent checks the subject continued to develop. On April 16, 1862, Congress abolished slavery in the District of Columbia, with compensation. In June it passed a law prohibiting slavery in all the territories of the United States, including those to be acquired. As early as March 6 Lincoln had urged Congress in a special message to cooperate with any state for the gradual emancipation of its slaves, with compensation from the government. He figured out that the cost of the war for eighty-seven days would purchase all the slaves in the border states at the rate of \$400 apiece.¹ A resolution to this effect passed the House on March 11 and the Senate on April 2. Lincoln in July called the senators and representatives from the border states to the White House for a heart to heart talk on the subject. He begged them to accept his policy, pointing out to them that the opportunity might never come again, that the signs of the times pointed to the ultimate extinction of slavery; but he pleaded in vain.²

Steps toward
emancipation.

The second and most sweeping Confiscation Act was passed on July 17, 1862. This act in substance pronounced all slaves free who should come within the protection of the government, if their owners were in rebellion against the government, or had given or should give aid or comfort to the rebellion.

On July 22 at a Cabinet meeting Mr. Lincoln declared his purpose to issue an emancipation edict to take effect January 1, 1863, and he read the document he had prepared. Two of the members, Seward and Welles, had been taken into the President's confidence and knew what was coming. The others were astonished at the announcement.

¹ The war at that time cost \$2,000,000 a day, and the cost of eighty-seven days would be \$174,000,000.

² The next winter a bill came up in Congress to offer Missouri \$10,000,000 for her slaves; but it was defeated by the efforts of the border state members, aided by the Democrats of most of the northern states.

But all approved it except Blair, who feared that it would throw the fall elections against the administration. At Seward's advice Lincoln decided to wait for some signal Union victory in the field, and the document was pocketed and the secret kept for two months. Meantime the radical party continued to denounce the President for moving so slowly. Horace Greeley, representing this party, addressed an open letter, "The Prayer of Twenty Millions," to the President through the *New York Tribune*, urging him to take immediate action, to "execute the laws," meaning specially the confiscation laws. To this Mr. Lincoln replied that while his personal wish was that all men should be free, his paramount official duty was to save the Union with or without slavery.¹

Then came Antietam and the retreat of Bragg from Kentucky. Now the proclamation could be issued and seem a child of strength. On the 22d of September, therefore, Mr. Lincoln issued his preliminary Emancipation Proclamation, which has been pronounced the most important document ever issued by a civil ruler. In this proclamation he declared that the slaves in all the states or designated parts of states that should be in rebellion against the government on the first of January, 1863, should be forever free. This gave a hundred days' notice to the rebellious states, but none of them heeded the warning, nor were they expected to heed it. Accordingly, on the first day of January the President issued his proclamation, of which the former had been but a warning, declaring the freedom of all slaves in the seceding states, except in certain parts of Louisiana and Virginia, then held by the Union armies.²

This proclamation had no immediate effect in emancipating the slaves, no more than had the Declaration of Independence in bringing independence. This could not have been expected. But the proclamation set forth the policy of the government on this most important question that ever arose in American politics since the Revolution, except that occasioned by secession; it placed the war on a new basis without abandoning the old, namely, that henceforth it should be a war against slavery as well as against disunion; it announced to the world that if the North were successful in the great war, slavery must

What it meant.

¹ This letter to Greeley was written on August 22, precisely a month after the famous Cabinet meeting, and precisely a month before the more famous proclamation was issued to the world.

² It will be remembered that slavery in the border states was not affected by this proclamation.

perish. The proclamation had a salutary effect on Europe, and won the North many friends. Europe cared little about preserving our Union, but as soon as the North proclaimed to the world that it was battling against human slavery, as well as against disunion, the sympathies of mankind were turned in its favor.¹

Lincoln had at heart belonged to the radical party all along, in that he desired the overthrow of slavery; but he was too wise to be rash. He waited for the development of public opinion, and he waited none too long. The proclamation made the administration many enemies, as well as friends, and it doubtless had much to do in bringing about an alarming political reaction in the fall elections. A new Congress was elected about six weeks after the preliminary proclamation, and the Democrats showed great gains. The Republicans lost nine members from New York, six from Pennsylvania, eight from Ohio; and but for New England and the border states they would have lost control of the House, while New York and New Jersey chose Democratic governors. But the Emancipation Proclamation was not the sole cause of the reaction. Many voted against the administration because of arbitrary arrests, of the suspension of the writ of *Habeas Corpus*, of want of success in the field, of the dismissal of McClellan; and thousands of strong friends of the Union voted the Democratic ticket simply because they had always done so. The result, however, fell heavily on the burdened heart of Lincoln. He feared that it meant a want of confidence in himself, but he bore the burden silently and took no backward step.

Often has the constitutional right of the President to issue this proclamation been questioned. The President ordinarily has no power to interfere with private property. Not even the general government had the constitutional right to touch slavery in any state. How then could Lincoln by his mere fiat set free four million slaves? The answer is that the measure was a war measure. It is the right and duty of the President to suppress rebellion by any means necessary to success. Here was a vast rebellion against the government, and it was the slaves that raised the crops that fed the armies that fought against the government. Why not then strike at slavery? Here was the legal, technical ground on which Lincoln

The President's right to issue the proclamation.

¹ The governing classes in England, however, still favored the South. See Lecky's "Democracy and Liberty," Vol. I, and the second volume of McCarthy's "History of Our Own Times."

could do what he did, and he made use of it. He issued the proclamation ostensibly to weaken the southern armies, knowing, at the same time, that he would not weaken them thereby.¹ This then, could not have been his real object, but it was the only ground on which he had any legal right to act. Must we, then, pronounce his act but a lawyer's trick after all? However that may be, the real object of the proclamation was to compass the downfall of slavery, to prepare the way for a constitutional amendment, to secure to the future immunity from the curse of slavery. The end accomplished was so unselfish and so vast as a factor in modern civilization that the world has long forgotten the technicality in admiration of its author.

BUELL, BRAGG, AND ROSECRANS

We must now change the scene again to the Mississippi Valley. A year has passed since we left the two great armies stunned and bleeding at Pittsburg Landing, and it was a year of great activity in the West. Halleck had taken command after Shiloh. He moved to Corinth, which the Confederates abandoned on his approach. In midsummer he was called to Washington, and left Grant at the head of the Army of the Tennessee. The star of General Grant, which had burst out so brilliantly at Donelson, had waned after Shiloh, and nothing but another victory could again attract to it the public gaze. For a year the army under Grant lay in west Tennessee and did little, while the Army of the Ohio, under Buell, became the chief object of the nation's attention, next to the Army of the Potomac. Early in the summer of 1862 Halleck sent Buell to capture Chattanooga, in southern Tennessee, an important railroad center and the key to east Tennessee. But Buell was delayed in repairing railroads, and the Confederate army, now commanded by General Braxton Bragg, who had succeeded Beauregard, reached the place before him and held it. Bragg was a stern, exacting man of much energy and moderate ability. His name had long been familiar to American readers through the historic expression of Zachary Taylor at Buena Vista, "A little more grape, Captain Bragg."

President Davis determined to retrieve, if possible, the losses of Donelson and Shiloh, and he sent Bragg to invade Tennessee and

¹ It is true that as the war neared its end many of the slaves were practically free, but this condition was brought about more by the exigencies of war, the ruin of the South, than by the proclamation.

Kentucky. A sweeping conscription law had passed the Confederate Congress, and this brought many new recruits to the western armies. Bragg's army moved northward in two divisions, one commanded by himself and the other by Kirby Smith. Smith moved northward from Knoxville late in August, and captured Lexington. The people of Cincinnati became greatly frightened; but Smith made no attempt on that city. He waited for Bragg, who, with the main army and a wagon train forty miles long, was racing across the state with Buell. Both were headed for Louisville, and Bragg, who had the shorter line of march, might have won, but he hesitated at the magnitude of the undertaking, and Buell entered the city in the last days of September. There his army was swelled by new recruits to sixty thousand, while Bragg had fifty thousand, nearly all seasoned veterans. Bragg now went through the farce of setting up a Confederate state government in Kentucky. Buell moved out from Louisville, determined to drive Bragg out of the state. The latter slowly retreated before the advancing army, but was overtaken at Perryville, where, on the 8th of October, was fought a bloody battle. The Union left wing under General McCook was assailed with great fury by General Polk. Buell, who had not expected a battle till the next day, was a few miles distant, and did not know of the fighting till late in the afternoon, when too late to make disposition for a general battle. He fully expected a great battle on the morrow, but during the night the enemy de-camped and took up his march to the southland.¹

**Bragg starts
north across
Kentucky.**

**Battle of
Perryville,
October 8,
1862.**

Buell was severely censured for his bad management at Perryville and for his subsequent dilatory pursuit of the retreating enemy. He drove Bragg out of Kentucky, and that was a victory, but his permitting Bragg to escape with all the plunder he had

¹ The Union loss at Perryville was nearly four thousand; the Confederate loss was about one thousand less. A curious incident occurred to the Confederate general, Leonidas Polk, near the close of the battle. It was growing dark, and he unwittingly rode into the Union lines, thinking them his own men firing on their friends. He angrily demanded why they were shooting their friends. The colonel, greatly astonished, answered, "I don't think there can be any mistake about it. I am sure they are the enemy." "Enemy!" rejoined Polk, "why, I have just left them myself. Cease firing, sir. What is your name?" "I am Colonel—of the—Indiana. Pray, sir, who are you?" Polk now saw his blunder, and saw that his only hope of escape was to brazen it out. "I will show you who I am," he shouted; "cease firing." Then he called to the men to cease firing, and cantering down the line, reached a copse, put spurs to his horse, and was soon back in his own lines. "Battles and Leaders," Vol. III, p. 602.

gathered was not relished at the North. Lincoln's pet project had long been to throw an army into east Tennessee, and soon after Perryville he informed Buell, through Halleck, that he must lead his army into that region before winter and live off the country. Buell knew this to be impossible, as east Tennessee had already been partially stripped by the Confederates; and he knew it to be bad policy, as any army subsisting off the country will become demoralized by foraging and theft. He therefore suggested to the President that if it were the intention to change the command, now would be a suitable time to do it.¹ Mr. Lincoln thereupon relieved Buell and appointed General William S. Rosecrans commander of the Army of the Ohio.

The parallel between Bragg's invasion of Kentucky and Lee's invasion of Maryland is striking. Both occurred in the early autumn of 1862; both failed to awaken much border-state enthusiasm for the southern cause. Both ended in failure, the one at the great battle of Antietam, the other at the moderate battle of Perryville three weeks later. In each case the Confederate commander withdrew after the battle, at night, and abandoned the expedition. The parallel is notable also between the two Union commanders—McClellan and Buell. Both were good disciplinarians, but lacking in the fire and dash necessary to an offensive campaign. Both were sincerely devoted to the Union, but were conservative on the slavery question. Both were Democrats in politics. Both were successful, without a great victory, in driving the Confederates from border-state soil. Both were removed by the President at the close of their respective campaigns, ostensibly because they were too slow to satisfy the great impatient public of the North.

Now we turn to Rosecrans. His laurels had been recently won—at Iuka and Corinth in Mississippi. When Bragg moved into Kentucky he left Generals Van Dorn and Price with a large army in northern Mississippi. Price seized Iuka in September, and Grant sent Rosecrans against him. A sharp battle ensued, with a loss of some eight hundred on each side. Two weeks later Van Dorn, now joined by Price, with twenty-two thousand troops, made a desperate assault on Corinth, in which

¹ Buell had been threatened with removal for some weeks. Before he left Louisville an order was sent to displace him and to put General Thomas in his place; but it was recalled. Military critics pronounce Buell one of the ablest commanders of the war, and agree that the administration was wholly at fault in removing him.

an enormous amount of supplies were stored under the guardianship of Rosecrans with twenty-three thousand men. Here Rosecrans displayed remarkable powers. The first attack was made on the afternoon of October 3; but the real contest came the next day. About the middle of the forenoon a vast column of gleaming bayonets flashed out from the woods and made directly for the heart of the town. It came in the form of a monstrous wedge, which presently spread out in two great wings. On these Rosecrans opened his artillery, which mowed down the men with merciless slaughter. As the column advanced the whole line of Federal infantry opened on it from their intrenchments; but the Confederates with desperate valor came on, averting their heads like men striving to protect themselves against a storm of hail.¹ When the Federal line at length gave way at one point, Rosecrans rode between the lines in the midst of the fire of both sides, rallied his men, brought in his reserves, and won a complete victory. Corinth, with all its stores, was saved. The victory was regarded by the North as the most important of the season, next to Antietam. The Confederate loss was forty-two hundred, while the Federals lost but twenty-five hundred. Van Dorn was soon replaced by General John C. Pemberton; Rosecrans was made a major-general and was promoted to the chief command of the Army of the Ohio, thenceforth called the Army of the Cumberland.

**Battle of
Corinth, Octo-
ber 4, 1862.**

Rosecrans displayed his independent spirit by refusing to attempt the impossible task of marching into east Tennessee, and the administration ax was soon swinging over his head. On December 4 Halleck telegraphed him, "If you remain one more week at Nashville, I cannot prevent your removal;" to which Rosecrans made the manly reply, that he was trying to do his whole duty, and that he was insensible to threats of removal. Halleck rejoined apologetically that no threat was meant, and Rosecrans remained three weeks longer at Nashville, waiting for supplies.

On the day after Christmas Rosecrans moved his army, forty-seven thousand strong, in three divisions under Thomas, McCook, and Crittenden, to Murfreesborough, a town forty miles from Nashville, in which Bragg had taken up his winter quarters. Bragg's army of thirty-eight thousand men was divided into three corps under Hardee,

**Battle of
Murfrees-
borough or
Stone River.**

¹ See Greeley, Vol. II, p. 227.

Polk, and Kirby Smith. On December 30 the two armies lay on the banks of Stone River near Murfreesborough, within cannon shot of each other. Rosecrans's plan of battle for the next day was perfect; but it was frustrated by Bragg, who took the initiative. McCook, who held the Union right, was assaulted with terrific force by Hardee, and long before noon his division was driven back and almost crumbled to pieces. He would have been utterly defeated but for the heroic stand made by Thomas. By noon the Union forces seemed on the verge of defeat; but the great skill and the prodigious efforts of Rosecrans during the afternoon — galloping from one division to another and rearranging his lines — saved the day, and the honors at nightfall were about even between the two armies. Next day, the first of the year, 1863, both armies rested, except that each prepared for the struggle that was to follow on the second. In the afternoon of the second John C. Breckenridge was sent with a large force, the best soldiers of Bragg's army, to take a hill near the bank of the river. He succeeded, but in doing so he came in range of the Federal batteries across the stream. These opened such a murderous fire that two thousand of Breckenridge's men fell in twenty minutes. When darkness settled over the field of carnage the Union army had advanced far enough to throw shells into Murfreesborough. Bragg then abandoned all thought of victory, and sought only to save his army; and before the morning of the 4th he had stolen away with his army, leaving his dead and wounded to his enemy. Stone River, or Murfreesborough, was one of the most fiercely fought battles of the war. It was a clear victory for Rosecrans, for although he had lost more heavily than the enemy,¹ he drove Bragg from his winter quarters and opened the way to a large portion of central Tennessee. Coming within a few weeks after the disaster at Fredericksburg, this battle infused new courage into the dispirited North and gave a new meaning to the Emancipation Proclamation, which had just gone into operation. It made Rosecrans, for a season, the most conspicuous figure in the field; and it brought also into prominence a superb young commander from Ohio — Philip Henry Sheridan.

**Bragg's
retreat.**

The battle cost Rosecrans about 13,000 men and Bragg nearly 12,000.

FREDERICKSBURG AND CHANCELLORSVILLE

Again our scene must be shifted to the East. Ambrose E. Burnside, like many of our commanders, was a graduate of West Point, and had seen service in Mexico. Personally he was an admirable character, but he was quite right in believing that he was not competent to command a great army. He divided the army, now swelled by reënforcements to 120,000 men, into three grand divisions, to be commanded respectively by Sumner, Hooker, and Franklin. By the end of November he confronted Lee near Fredericksburg, a town on the Rappahannock River, about halfway between Washington and Richmond. Lee had placed his whole army, now almost 80,000 men, in a strong position on the heights just south of the town. Here Burnside determined to make an attack. After infinite trouble he succeeded in crossing the river by December 12, and next day came the dreadful slaughter of Fredericksburg. Burnside seemed bewildered, and he would listen to no advice of his subordinates. He decided to attack Lee's center, occupying Maryes Heights, at the base of which there was a stone wall and a trench. The hill was crowned with lines of cannon, the sides were covered with rifle pits filled with sharpshooters, and several regiments of Confederate infantry crouched behind the stone wall. In the face of all this the foolhardy attack was to be made. Sumner's grand division was put to the awful work. General French made the first assault, but he was driven back with great slaughter. Then went General Hancock with 5000 men; but in a few minutes he, too, fell back leaving 2000 men stretched upon the fatal field. Three other divisions were then successively sent forward, but the result was the same — dreadful slaughter, with no impression on the enemy's works. "Oh, great God!" cried General Couch, "see how our men, our poor fellows, are falling; it is only murder now."¹ Burnside now became frantic. He called upon Hooker to lead his men to the assault. Hooker protested that it was useless, that the works could not be carried. Burnside would listen to nothing; he sternly declared that his orders must be obeyed. Hooker then sent 4500 men with fixed bayonets into the death trap. As they came within range of the muskets the top of the stone wall became a sheet of flame. The

**Battle of
Fredericks-
burg, Decem-
ber 13, 1862.**

¹ "Battles and Leaders," Vol. III, p. 173.

brave men fell by hundreds, and in a few minutes the division fell back, leaving a third of its number on the ground. Now it was night, and the battle of Fredericksburg was over.

Great was the carnage at Fredericksburg, and it brought mourning to many a fireside in the North. The sadder it seemed from the fact that it might have been prevented. The Union loss exceeded 12,000 men, the Confederate loss was slightly more than 5000. Burnside was wild with anguish at what he had done. "Oh, those men, those men over there, I am thinking of them all the time," he wailed, pointing to his army of dead and dying across the river. In his desperation he decided to storm the heights next day and to lead the assault in person, but he yielded to the dissuasion of his generals.

Seldom during the war were Confederate hopes so high as in the days that followed Fredericksburg.¹ The correspondent of the *London Times* wrote from Lee's headquarters that December 13 would be a memorable day to the historian of the Decline and Fall of the American Republic. He might have written that no braver army ever wielded the sword than the Union army, whose legions dashed six times, in the face of that murderous fire, against Maryes Heights at Fredericksburg. Burnside decided on another general engagement a few days later, but he was overruled by the President. The morale of the army was destroyed; officers and men lost confidence in their leader. Burnside offered his resignation, which was at length accepted by the President, who then appointed Hooker to the command of the army. In the same order he also relieved Sumner at his own request, on account of advancing age, and Franklin, because he was accused of not properly supporting Meade against Jackson at Fredericksburg.

General Joseph Hooker, known among the soldiers as "Fighting Joe Hooker," took control of the Army of the Potomac late in January, 1863. He found it greatly disorganized and discouraged; but he was a good organizer, and in two months the army was restored to an excellent condition for active service. The entire army numbered at least 125,000, and a better army never trod American soil. It spent the winter at Falmouth, across the Rappahannock from Fredericksburg, while the army of Lee, now reduced to 60,000 by the detachment of

**Hooker in
command.**

¹ This feeling was heightened by the capture of Grant's immense stores at Holly Springs, Mississippi, by General Van Dorn, just a week after the battle of Fredericksburg, and by Sherman's bloody repulse before Vicksburg a little later.

Longstreet's corps, occupied the heights beyond the river whence it had dealt such fearful blows to Burnside in December.

There were various cavalry skirmishes during the winter, but nothing serious was attempted till the middle of April. Hooker then broke camp, moved up the river with the main army, crossed it and the Rapidan, and marched to Chancellorsville, a country tavern bearing the name of a town, about ten miles west of Fredericksburg. Hooker boasted that the enemy must now ingloriously fly or come out from his defenses and give battle "where certain destruction awaits him." Lee chose the latter alternative; he came out from his defenses to give battle — but not to meet certain destruction.

On the first day of May, 1863, the two armies lay near Chancellorsville, on the edge of the Wilderness which became the scene of a great battle a year later, and the series of battles of the next few days are known collectively as the **Battle of Chancellorsville.** Hooker enjoyed every advantage — a strong position, the larger army, and the eager confidence of his troops. But at this moment Hooker seems to have lost his judgment. To the astonishment of the enemy and of his subordinates he ordered his army to fall back from its elevated position to a lower one nearer the Wilderness. "My God!" exclaimed Meade, "if we cannot hold the top of a hill, we certainly cannot hold the bottom of it." Little fighting was done on that day, but on the 2d the storm broke forth with fury. Stonewall Jackson now made one (and this was his last) of the rapid, stealthy, flanking marches of which he was such a master. With a force of thirty thousand he marched fifteen miles around the Union right to attack the corps under Howard. Hooker and Howard believed that the enemy was in retreat; but they were soon undeceived. At six in the evening, while Howard's men were resting, preparing supper, or playing cards — all unconscious of danger — a sudden rush into camp of wild animals, deer and rabbits, from the near-by forest, apprised them of the coming enemy. They seized their arms and attempted to form in battle line — but it was too late. In a few minutes the Confederates were upon them. Howard's men fought nobly, but they had no chance of success. In an hour the corps was cut to pieces and almost annihilated, the survivors fleeing like madmen. As night fell the corps of Sickles and the cavalry of Pleasanton planted themselves in the way of the on-rushing Confederates and stopped their advance. In this wild desperate charge on the

evening of May 2 the Confederates had slain thousands, and had won a brilliant victory. But it was a dear victory for the South: it cost the life of Stonewall Jackson. It was after nightfall, when the hush after the battle was broken only by the wails of the dying and by a stray shot here and there, that Jackson rode out with his staff to view the ground in front of his lines. On their return the Confederates mistook them for Union horsemen and fired on them. Jackson received a mortal wound.

Sickles renewed the battle by night, and the firing did not cease till midnight. Next morning the conflict was renewed at an early hour. Lee had brought his own immediate command to the aid of the corps of Jackson. Hooker became bewildered and knew not what to do. Nothing was plainer than that he, like Burnside, was not competent to command a great army in battle. The Confederates dashed upon Sickles again and again, and were driven back. Sickles might have gained a great victory but for the fact that Hooker held back in idleness probably thirty thousand men. All was confusion in the Union ranks, and the enemy soon gained the high ground for which it fought, the Federals being pressed back to the river bank.

Thus ended Sunday, the 3d of May, with another Confederate victory. Next day another engagement took place between General Sedgwick, who had been left at Fredericksburg with twenty thousand men, and a portion of Lee's army under Early. All day the fight continued, and at night Sedgwick recrossed the Rappahannock. Two days later Hooker did the same, and the battles at Chancellorsville were ended, both armies now occupying the respective positions they had held during the winter. The campaign had cost Hooker more than seventeen thousand men. The southern loss was over twelve thousand — and Stonewall Jackson.

In some respects this man was the most remarkable character brought into prominence by the Civil War. There is a glamour of romance around the name of Jackson. As a schoolboy he dragged far behind his class. He was a graduate of West Point; but, disliking warfare, he resigned from the army and became a college professor and a teacher in a squalid negro Sunday School. He was rather slow-moving, silent, distant, had few friends, and was not generally popular. There was something unfathomable in his nature, but no one dreamed that he was a genius. The war brought out his powers and proved him one of the

Death of Jackson.

greatest commanders of modern times. The popular notion that his attacks were impulsive and only accidentally successful was erroneous. His plans were well laid and almost faultless. Jackson was excessively religious, and his men said that when he remained long on his knees in his tent they knew that a great battle was impending. Lee's estimate of Jackson is shown in a note sent him as he lay wounded. In this note Lee stated that he would have chosen for the good of the country to be disabled in Jackson's stead. Jackson died on May 10, and there was none to fill his place. During his last hours he seemed to have forgotten the great war. He lived now with his God and with his family, who could never forget the tender beauty of his final words, "Let us cross over the river and lie down amid the shade of the trees."

DEMOCRATIC OPPOSITION—VALLANDIGHAM

As we have noticed in a former chapter, the firing on Fort Sumter welded the North into a unit for the saving of the Union. The voice of the politician was hushed in the presence of the national danger. But this condition could not continue. The old party that had ruled the country for half a century, that had been defeated by the new-born Republican party and was now in a state of eclipse, could not long remain in quiet. It might agree with its great rival in military matters, but in the field of politics new issues must be found, the administration must be attacked, as usual, by the party out of power. The Democrats soon found a plausible issue in the suspending of the writ of *Habeas Corpus* and the arbitrary arrests that followed it. As early as April, 1861, Mr. Lincoln authorized General Scott to suspend the writ between Philadelphia and Washington. Congress afterward gave the President full power in the matter, and he extended the suspension from time to time till it covered the entire country for the period of the war.¹

This was a dangerous reach of power. To the President's constitutional power as commander of the army and navy of the United States it added the power of a dictator, of an absolute monarch, the control of the whole fabric of civil government. He could

¹ On September 24, 1862, the suspension was made general as affecting arrests by military authority for disloyal practices. In March, 1863, Congress sustained the President and again authorized the suspension, and on September 15, 1863, the President issued another proclamation limiting the suspension to prisoners of war, deserters, abettors of the enemy, etc.

arrest any man in civil life, from a Cabinet officer or the governor of a state to the common laborer, throw him into prison and retain him indefinitely without giving him a trial or informing him why he was arrested. What a power for evil this would have been in the hands of a tyrant! But Mr. Lincoln was not a tyrant. Nevertheless he caused thousands of men to be arrested and cast into prison

on such charges as "disloyal practice," "discouraging enlistments," and the like.¹ Justice of the United

Arbitrary arrests. States Supreme Court Benjamin R. Curtis, who had given the opinion adverse to Chief Justice Taney in the Dred Scott case, came out in a pamphlet against the President. He stated that to the rights of the President as commander were added the powers of a usurper, and this he pronounced military despotism. Other prominent Republicans, as, for instance, Governor Curtin of Pennsylvania, protested loudly against the arbitrary acts of the government. Above all, these acts became a powerful weapon in the hands of the Democrats, who were unsparing in their criticisms. Some of the more rabid Democratic journals were suppressed by the government; but this action only awakened a louder demand for freedom of speech and the liberty of the press, and there is little doubt that the result was a weakening of the administration party. The same may be said of the arbitrary arrests. In some cases the result was doubtless beneficial; in others great injustice was done. On the whole it may be safely asserted that more harm than good came of the suspending of the writ of *Habeas Corpus*, especially in the states not occupied by the armies, and that it weakened rather than strengthened the Union party. The civil authorities should not have been superseded by the military, except in the armies and the territory occupied by them. The only reason that the people did not rise against the government for its usurpations was the same that prevents a sick man from rising against the surgeon that operates on him with the knife. Every man, Democrat or Republican, knew in his heart, whether he acknowledged it or not, that the administration did not mean to abolish our free institutions or to overturn our form of government, but that it meant simply to put down the rebellion. The people, regardless of party, also knew that Abraham Lincoln, from the rugged honesty of his soul and the breadth of his human sympathy, was not and could

¹ Alexander Johnston in Lalor's "Cyclopedia" gives thirty-eight thousand as the whole number of military arrests; but this number is no doubt too large. See discussion in Rhodes, Vol. IV, pp. 231, 232.

not be a tyrant; that whatever he did, and however many his mistakes, his ultimate aim was to save the country and to serve the people.¹

But the Democrats must oppose the administration. Why not? Such is the chief business of the party out of power in the United States, and a good, wholesome business for the country it is. The Civil War period was no exception. There was much to criticise aside from what has been mentioned — corruption in the giving out of government contracts, extravagant expenditure of money, political favoritism in military appointments, and the like. The Democrats certainly made a profound impression on the country, as shown by their carrying so many of the great states of the North in the autumn elections of 1862. To the end of the war there was a strong, fearless Democratic minority in Congress. Many of its issues were well chosen. Its influence was often wholesome, and it had far more weight in shaping legislation than is generally believed. There were other issues, however, concerning which we have less sympathy with the Democrats. They — many of them, not the party as a whole — opposed emancipation, and, still worse, they opposed the draft. They had at first heartily joined the administration to save the Union; but they were set against making the war a war for abolition also.

**Democratic
opposition.**

At the opening of the war there were more volunteers than could be used. But the enthusiasm subsided. The reports of the frightful slaughter on the battlefield, of the hard life and small pay of the soldier, contrasted with the good times and opportunities to make money at home, led men to prefer staying at home. Volunteering almost ceased, and the government followed the example of the Confederacy and resorted to conscription. In March, 1863, Congress passed an act authorizing the President to make drafts on the national forces at his discretion, after the first of the ensuing July. By this act he could replenish the armies by force. Men between the ages of eighteen and forty-five years were subject to the draft;² they were to be chosen by lot, and any one drafted who did not report was to be treated as a deserter. One might, however, hire a substitute, or be excused on the payment of \$300.

The draft.

¹ This thought is brought out by Rhodes; see Vol. IV, p. 171.

² There were many exemptions from the draft. Certain high officials of the government or of the state, the only son of a widow or of an aged father dependent on that son, the father of motherless children under twelve years of age, the residue of a family which had two members in the service, and others, were exempt from the draft.

This practice raised an outcry from many, chiefly, but not exclusively, Democrats. The supreme courts of New York and Pennsylvania pronounced the draft unconstitutional and void.¹ The opposition broke into open rebellion in the city of New York. Most of the newspapers of that city denounced the draft as an outrage on individual liberty and state rights. When the enrollment began in that city (at 46th Street and Third Avenue), a mob broke into the enrollment office, drove the officials out and set the building on fire. For three days thereafter the streets of the city were filled with a drunken, furious, bellowing mob numbering many thousands. The rioters, many of them foreign born, attacked the *Tribune* office, fell upon negroes on the streets, killing several, burned the colored orphan asylum on Fifth Avenue, and indeed held the city wholly in their grasp for several days.² Meantime the newly elected Democratic governor, Horatio Seymour, addressed the crowd, begging them to return to their homes and to keep the peace until he heard from Washington, as he had sent his adjutant-general thither to have the draft suspended. A body of troops soon arrived in the city, fired on the mob, killing several, and at length restored order. Similar outbreaks on a smaller scale took place in Jersey City, Boston, and other places. In the end, however, the people submitted to the government, and the depleted armies were replenished by means of the draft.

Let us once more advert to the subject of arbitrary arrests and note the most conspicuous case in the history of the war — that of Clement Laird Vallandigham, a member of Congress from Ohio until defeated for reelection in 1862 by Robert C. Schenck. He was the leader of the radical element of the Democrats in the West, often called “Butternuts” or “Copperheads,” and he lost no occasion to denounce the administration. Referring to arbitrary arrests, he declared that Lincoln, Stanton, and Halleck should be arrested. Ohio was to elect a governor in 1863, and Vallandigham was an aspirant for the Democratic nomination. He went about over the state making speeches bitterly denouncing the conduct of the war. He was a strong and able leader, a successful orator, a dashing politician of the Douglas type, but, there is reason to believe, without the deep sincerity of soul that characterized Douglas. The last and

¹ This was afterward reversed by circuit and district courts, but the matter never came before the Supreme Court of the United States.

² See *New York Tribune*, July, 1863.

most violent of his speeches in this canvass was made at a great Democratic meeting at Mt. Vernon.

General A. E. Burnside, after his disaster at Fredericksburg, was assigned to the Department of Ohio, with headquarters at Cincinnati. Soon after he was installed in the new position he issued a war order stating that declaring sympathy for the enemy would not be allowed. Burnside soon had his eye on Vallandigham, and sent agents in citizen's clothes to hear his speeches. These agents declared the speech at Mt. Vernon incendiary, and Burnside determined to arrest Mr. Vallandigham. On May 5, at two o'clock in the morning, a band of soldiers beat upon the door of Vallandigham's home in Dayton, and, being refused admittance, they burst in the door, seized Mr. Vallandigham in his bedchamber, and carried him to Cincinnati.

Arrest of Vallandigham.

In a few days the distinguished prisoner was tried by a military court, before which he refused to plead and whose jurisdiction he denied. But the trial went on, and Mr. Vallandigham was found guilty of "declaring disloyal sentiments," and was sentenced to close confinement during the remainder of the war. Burnside approved the decision, but Mr. Lincoln commuted the sentence to banishment to the southern Confederacy, the sentence of the court to be carried out only in case of his return. The banishment was duly executed by General Rosecrans.

There was a vigorous Democratic protest from all sides against the summary dealing with Vallandigham. A great meeting at Albany, New York, strongly condemned the proceedings, and sent a set of resolutions to the President requesting, almost demanding, a reversal in the case of the Ohio statesman. Mr. Lincoln answered in a long argument for the necessity and the constitutional warrant for the system of arbitrary arrests. He touched a popular chord when, in speaking of the universal rule of inflicting the death penalty for army desertions, he said, "Must I shoot a simple-minded soldier boy who deserts, while I must not touch a hair of the wily agitator who induces him to desert?"

Vallandigham did not remain long in the South. He escaped in a blockade runner and repaired to Canada. While there he was nominated by the Democrats for governor of Ohio, and the convention that made the nomination appointed a committee of eminent citizens to address the President in favor of a revocation of the order of banishment. Lincoln made a most ingenious, if not a very dignified, answer. He offered to

He escapes to Canada.

revoke the order if they, the members of the committee, would sign a paper promising to do all in their power to aid and encourage the army and navy in suppressing the rebellion. The committee replied that they would not enter into any bargains or contracts with the President for the return of Mr. Vallandigham, that they asked it as a right and not as a favor.

The Ohio canvass went on, and the Democrats declared that if their candidate were elected they would meet him at the state line and conduct him to the capital in such numbers as to protect him from attack. But the news from Gettysburg, from Vicksburg, and from Port Hudson was so favorable to the Union cause that the war party took new courage and swept the state, electing their candidate, John Brough, over Vallandigham by a majority exceeding a hundred thousand.¹

DOINGS OF CONGRESS

During the war period Congress attracted less attention than usual, for the reason that the eyes of the country were directed to the armies in the field and to the President, whose "war powers" led him to trench greatly on the power of Congress.² To the ordinary legislation necessary to support the war it is needless to devote our space; but a few of the extraordinary acts must be noted. We have referred to the scheme for internal taxation and to the Confiscation Act, and also to the action of Congress concerning the writ of *Habeas Corpus*. In May, 1862, the Homestead Act was passed, which has proved a wonderful boon to the settlement of the great West. By this law any citizen was given the right to settle on one hundred and sixty acres of public land, and at the end of five years to own it by paying \$1.25 an acre. An act of July, 1862, provided for a railway to the Pacific Coast, but some years were yet to pass before this great work could be completed.

No legislation during the war was of greater importance than

¹ Burnside soon after this affair suppressed the *Chicago Times* for disloyal utterances. But the people rose in great numbers, Republicans as well as Democrats, and demanded that the right of a free press should not be infringed, and President Lincoln revoked the order of Burnside. By a decision of the Supreme Court of the United States (The Milligan Case, 1866, 4 Wallace 128) such proceedings as that against Vallandigham, as also the suspending the writ of *Habeas Corpus* away from the seat of war, were virtually pronounced unconstitutional. Vallandigham returned to Ohio in June, 1864, and went about unmolested by the government. He died in 1871 by a pistol shot fired by himself accidentally, while explaining a murder case to a jury.

² See Rhodes, Vol. IV, p. 57.

that which concerned the national finances. The public debt, less than \$70,000,000 at the opening of the war, shot upward with surprising rapidity, and within two years it had reached \$500,000,000. In December, 1861, the government and the banks agreed to suspend specie payments. To meet the new conditions Congress passed the Legal Tender Act, which became a law on February 25, 1862. By this law an issue of \$150,000,000 in treasury notes was made legal tender for all private debts and public dues, except duties on imports and interest on the public debt. The issues were afterward increased till they reached \$450,000,000, popularly known as "greenbacks" because of their color. The act authorizing the first issue of greenbacks provided also for funding them in six per cent bonds, payable in coin, and known as "five-twenties."¹ The great problem was, how to keep the legal tender notes from depreciating in value. The fact that they could be used in the purchase of government bonds while the interest on these bonds was payable in coin was a tower of strength. But the government preferred to sell its bonds for coin, as coin had the greater purchasing power. And yet, if the government refused its own notes in the sale of bonds, the value of the notes would fall in an alarming degree. How to prevent this was the question; and its solution in part was found in the establishing of the National Banking system.

The act creating the National Bank was passed in February, 1863,² and was based on the state bank system of New York. Under this law a company of five or more persons might found a bank with a capital not to fall below a certain amount. The company was then obliged to deposit with the United States treasurer government bonds to the amount of one third of its capital stock paid in. These bonds were then held to secure the notes issued by the banking company, and such notes were not to exceed ninety per cent of the bonds held by the government. The government thus became responsible for the bank's notes, made them legal tender, and secured the holder from loss by the bank's failure. In March, 1865, Congress passed a law taxing state banks so heavily that they had to go out of business or become national banks. This admirable system relieves the people

Legal Tender Act.

National Bank Act, February 25, 1863.

² This act was amended and improved by act of June 3, 1864.

from keeping track of the standing of any bank of issue, as the nation is security for its notes. Some object to the national banking system because it precludes the full payment of a national debt; but, as I have stated elsewhere, a moderate national debt is not a burden, and it may be a benefit, to any country. This system inspired confidence on all sides; it became a power in drawing from the people the necessary support of the war, and in later years it aided the government greatly in resuming specie payments. The banking system was the crowning achievement of Secretary Chase. It has grown in public favor to this day, and it promises to be a fixture in our government.

It will be observed that congressional legislation during the war encroached seriously upon the powers granted by the Constitution. This was especially true in the case of the suspension of the writ of *Habeas Corpus*, as we have noticed, of the Revenue Act, and of the restriction of the press. The Constitution expressly provides for liberty of speech and of the press. In spite of this, many newspapers were suppressed, issues of others were seized by United States officials, and the use of the mail service was denied them; and many men were seized and imprisoned merely for criticising the government's conduct of the war. In time of peace such a procedure would be alarming to a free people. But a state of war changes the whole aspect of the government. The nation was struggling for its life. Why should it not use every means necessary to preserve that life? The government made many mistakes; but there is no reason to believe that there was any intention to encroach permanently on American personal liberty. Nor did it so result; for now, after the space of forty years, personal liberty and local self-government are as sacred and as fully enjoyed by the people as before the war.

VICKSBURG

At the close of the year 1862 the military situation was not very favorable to the Union cause. In the East the mistake had been made of withdrawing McClellan from the peninsula, and, after Antietam, of superseding him with a much weaker man. This had resulted in the great disaster of Fredericksburg, and, the following spring, in that of Chancellorsville. In the West, Corinth had been saved, Bragg had been driven from Kentucky and defeated in early January at Murfreesborough, but he had not been disabled — only put on

the defensive. Meantime the Federals had lost a grand opportunity to seize Vicksburg before it was fortified by the Confederates.

We have stated that Grant did little for a year after the battle of Shiloh, but the fault lay far more with Halleck than with him. After Shiloh Halleck had assumed command of the Army of Tennessee, which had swelled to a hundred thousand men. He moved southward and occupied Corinth the last of May, the Confederates having abandoned the place without a battle.

A week later the Federal fleet on the Mississippi captured Memphis, after a fierce fight of the gunboats. Farragut, after the capture of New Orleans in April, had proceeded up the river, had passed Vicksburg, and had joined with Commodore Davis, the successor of Commodore Foote whose wound had obliged him to retire. Farragut repeatedly asked Halleck for a portion of his army to occupy Vicksburg, and thus to secure the whole course of the great river. Vicksburg, situated on a bluff opposite a sharp bend in the river halfway between Memphis and New Orleans, was the greatest stronghold, and, next to Richmond, the most strategic point, in the South. Its occupation by the Federals at this time would have been easy; and its possession would have given them control of the whole course of the Mississippi and would have severed Arkansas, Louisiana, and Texas from the rest of the Confederacy. But Halleck's mind was not large enough to grasp so great a subject;¹ he refused to send Farragut any aid, and meantime Van Dorn hastened to Vicksburg with a few thousand men and worked them day and night till the place was well fortified and mounted with cannon. Farragut returned to New Orleans, and Van Dorn went down the river to Port Hudson, two hundred miles below Vicksburg, fortified it, and held the river between the two points. At any time before the middle of July 1862, Halleck, coöperating with Farragut and Davis, could have secured Vicksburg with a small portion of his army; but the opportunity was lost, and the blunder cost a year of weary warfare and thousands of human lives.

Again, Halleck might have seized Chattanooga, the key to eastern Tennessee and the chief railroad center between Virginia and the Southwest. But he failed also to do this. In the midst of this series of blunders by this opinionated western commander, President Lincoln committed a still more serious blunder—he appointed Halleck commander in chief of all the armies of the United States.

¹ See Fiske's "Mississippi Valley in the Civil War," p. 141.

**Van Dorn
occupies
Vicksburg.**

This promotion of Halleck left Grant in superior command in the West, and he immediately began planning the capture of the great Confederate stronghold, Vicksburg. The Mississippi River in its lower course winds like a mighty serpent from side to side of an alluvial bottom averaging forty miles in width. On the eastern side these great coils here and there sweep up to the bluffs of the highlands of Tennessee and Mississippi. On such bluffs are situated Vicksburg, Memphis, and Port Hudson, and these strategic points were necessary to the military occupation of the river. Memphis had fallen from the Confederate grasp, and Grant saw that the capture of Vicksburg would occasion the fall of Port Hudson and would sever the three trans-Mississippi states from the Confederacy, which drew from that section much of its food supply, thousands of its soldiers, and even munitions of war from Europe through the ports of Mexico. But Vicksburg was almost impregnable. Situated two hundred feet above the waves that break upon the base of the cliff, its cannon could destroy any hostile fleet that might approach from above or from below, while the obstacles in the way of a land approach were almost equally insurmountable. The capture of Vicksburg was therefore a work of unknown peril to an army, and few generals could have accomplished it.

Grant, with an army of fifty thousand men, made several unsuccessful attempts in the autumn of 1862, and the northern public grew impatient at his failure and clamored loudly for his removal. Halleck, Stanton, Chase, and others joined in the general demand that Grant be superseded; but President Lincoln determined to "try him a little longer," and thus in some degree he counteracted his mistake in making Halleck commander in chief. Grant's first attempt consisted in moving his army down into the interior of Mississippi in the hope of forcing the evacuation of Vicksburg without attacking it. In this way — by his great flanking movement up the Tennessee by way of Donelson to Shiloh — he had caused the evacuation of Columbus, Fort Pillow, and Memphis; but in the case of Vicksburg he had to leave his base of supplies so far behind that the plan was found impracticable, and it was abandoned.

The next plan was to divide the army: Grant was to remain in Mississippi with a portion, while Sherman was to return with the rest to Memphis and embark on the fleet of Admiral Porter, who had succeeded Davis, for a point just north of Vicksburg, and thence

to coöperate with Grant. This plan was carried out in December, and might have promised success but for the fearful ravages of the Confederate cavalry. On the same day that Sherman embarked at Memphis, Van Dorn with thirty-five hundred cavalry swooped down like an eagle upon Holly Springs, where Grant had stored a million and a half dollars' worth of supplies, destroyed the stores, and captured the garrison. At the same time General Nathan Forrest made a cavalry raid across Tennessee, destroyed the telegraph and sixty miles of railroad, cutting Grant off for nearly two weeks from all communication with the rest of the world. With his stores destroyed and no railroad left by which to secure more, Grant could only retreat and live off the country while doing so.¹ While Grant was making this retreat of eighty miles, Sherman with thirty-two thousand men was floating down the river. Reaching the mouth of the Yazoo just above Vicksburg, he ascended that river for a few miles, made a desperate attack on the enemy's works at Chickasaw Bayou, and suffered a stinging defeat, losing eighteen hundred men to two hundred by the enemy. Sherman's command was then turned over to General John A. McClernand, who had come down the river with an independent command. McClernand, after fighting in Grant's army at Donelson and Shiloh, had raised an army in the West, boasting that he was tired furnishing brains for Grant, and had persuaded the President to send him down the river on his own account. He and Sherman then made a raid up the Arkansas River, captured Arkansas Post (January 11, 1863), and were about to make an expedition far into the Red River country when Grant made serious complaint against taking so large a force from the main object of the campaign; whereupon Grant was given the command over McClernand, with the option of giving that general the conduct of the movement against Vicksburg, or of assuming it himself; and he chose the latter.

Grant now went down the river, collected his army in four corps under Sherman, McClernand, Hurlburt, and McPherson, and spent the winter in making various unsuccessful experiments. First he tried to dig a canal across the narrow peninsula opposite Vicksburg,

¹ Some southern ladies tauntingly asked Grant from what source he could now feed his army, and he quietly remarked that their barns seemed to be well stocked. "What," they exclaimed in alarm, "you surely would not lay hands on private property!" Grant regretted the necessity, but informed them that they could not expect him to starve his army. Fiske, p. 200.

Van Dorn captures Holly Springs, December 20, 1862.

Sherman on the Yazoo.

so as to bring his supplies from Memphis without coming within range of the guns of the city. But after six weeks of arduous toil the great river rose beyond its banks, submerged the work, drowned many horses, and forced the men to flee for their lives. **Plans to capture Vicksburg.** Another plan was to follow the labyrinth of bayous west of the Mississippi; but this too had to be given up. Grant next attempted to approach Vicksburg by way of the Yazoo Pass and the Tallahatchie and Yazoo rivers; but his vessels were unable to pass the guns of Fort Pemberton on the Yazoo, and the plan was abandoned. An attempt was then made to reach the Yazoo by means of a stream that empties into it below Fort Pemberton, but after eleven days of perilous toil this too was given up. March had passed, and Grant had made no progress whatever toward investing Vicksburg. It was at this time that the cry in the North became loudest that Grant should be dismissed, and that Lincoln decided to try him a little longer.

General Grant now at last conceived the plan that was destined to succeed; namely, to send the army to a point below Vicksburg by an overland route west of the river and to run the batteries at Vicksburg with the supply boats under the protection of Porter's ironclads. Silently in the darkness a fleet floated down the river. For an hour the darkness and silence were unbroken, and the crews began to believe they would pass unnoticed, when suddenly the heavens were lighted by burning powder, and the roar of artillery burst forth from the tiers of batteries that crowned the bluff in front of the city. "The sight was magnificent, but terrible," said Grant. Porter opened his guns from the fleet and threw many shells into the streets of the city. All the vessels were struck, but all escaped destruction save one of the steamers, which, being set on fire, burned to the water's edge. A week later another fleet of supply boats ran the batteries in safety, and on the last day of April the fleet met the army, which had been struggling for a month through the swamps west of the river.¹ The army was now on the west side of the river opposite Grand Gulf, another bluff in the hands of the Confederates and twenty-five miles below Vicksburg. A crossing was effected some miles below, and on the 3d of May Grand Gulf was captured after a sharp battle with eight thousand of the enemy.

¹ Sherman's corps was still above Vicksburg, but came down and joined the main army early in May. Hurlburt was still at Memphis.

The Federal army had secured a footing below Vicksburg, but its tenure was uncertain. It was in the midst of a hostile country, far from any base of supplies, and every day would increase its perils. Grant knew that he must strike without delay. He came to a resolution that would have done credit to the great Napoleon for its audacity. Grant had about forty-five thousand men. Before Vicksburg sat Pemberton with an army of about the same size. Near Jackson, the capital of Mississippi, fifty miles from Vicksburg, was another Confederate army, fifteen thousand strong, soon to be commanded

by Joseph E. Johnston, who was hastening from Chattanooga. Grant determined to cut himself off from his base at Grand Gulf, to march against Johnston's army and destroy it, then to turn upon Pemberton, beat him in battle and drive him within the defenses of Vicksburg. The daring campaign was begun on the 7th of May.¹ On the 12th the battle of Raymond was fought between McPherson and five thousand Confederates. Two days later Johnston's army

was again routed, and the city of Jackson was captured. Leaving a body of troops to burn the arsenals and military factories at Jackson and to tear up the railroad for twenty miles around, Grant turned his face toward Vicksburg. Pemberton had come out to meet him, and they came face to face at a place called Champion Hill. Here a terrific battle of eight hours was fought, in which Pemberton lost all his artillery and four thousand men, including

¹ The Confederates of central Mississippi had been demoralized by a daring raid, April 17-May 2, around Jackson by one thousand cavalymen under Colonel Grierson. This was a great aid to Grant.

prisoners, while four thousand others became detached from his army and fled into the interior of Mississippi. The remainder hastened toward Vicksburg, but on the next day they were overtaken at the Big Black River, and were again defeated.¹ The Confederates then took refuge in the defenses of Vicksburg; and Haines Bluff, a stronghold on the Yazoo a few miles above, was abandoned to the Union army with its stores and guns, for the enemy had left in too great haste to destroy them. On the 18th of May Grant's army was safely lodged on the heights around Vicksburg, and the fall of Haines Bluff had opened its communications with the North. This was without exception the most brilliant campaign of the Civil War. It is true that Grant fought against inferior numbers in every battle; but this was largely because of his skill in preventing the two armies of the enemy from uniting. In eleven days from the time he

Grant invests Vicksburg. left Grand Gulf, Grant had marched about one hundred and fifty miles in the enemy's country without a base of supplies, had fought and won four battles, had destroyed or captured twelve thousand of the enemy with a loss of less than five thousand, and had captured a state capital. He had moved with a celerity never surpassed by Stonewall Jackson in his palmiest days; and he was now ready to invest this great Gibraltar of the South. On the morning of the 19th, as Grant and Sherman rode out on the bluff, the latter burst forth in praise and admiration of his chief and of the great campaign that he had planned and carried through. Grant lighted a fresh cigar, smiled, and said never a word.²

The Union army was flushed with victory, and the troops believed they could carry the works of the city by storm. On the 19th an assault was made upon the works, and the result was a moving of the base of the besiegers nearer the besieged, a tightening of the coil of the encircling army about the doomed city. A grand assault was then made by the whole Union army. But the enemy fought like a wild beast at bay, and the Federals lost three thousand men and won nothing. Grant has been censured for this waste of men; but he believed that his army would be impatient of a long siege unless first convinced that to carry the works by storm was impossible. After the assault the army was content to settle down to a regular siege.

¹ But the enemy succeeded in burning the bridge over the Big Black. Otherwise Grant would doubtless have beaten him in reaching Vicksburg.

² Fiske, "The Mississippi Valley," p. 241.

Johnston was raising a large army to attempt the rescue of Pemberton. Grant saw the danger, and called for reënforcements from the North. The response was prompt, and within a few weeks his army was almost doubled. He placed nearly half the army under Sherman some miles in the interior to watch Johnston, who hung in the rear like a gathering cloud. The siege went on for six weeks. The men worked like marmots in the trenches, approaching nearer and nearer the breastworks of the enemy. Porter's fleet lay in the river, from which the bombardment was incessant day and night. The shrieking shells rose in grand parabolic curves, bursting in midair, or on the streets of the city, spreading havoc in all directions. The people of the city found safety by burrowing in the ground. Whole families lived for weeks in safety in these dismal homes, with their walls of clay shaken at intervals by the roar of battle that raged above them.

Siege of
Vicksburg.

Vicksburg was shut out from the world. Food soon began to run low. At length almost nothing could be had except mule meat and a mixture of dried peas and cornmeal, and these were becoming exhausted. Many had perished, both of the garrison and the residents, from the bursting of shells, from sickness and exhaustion; and at length starvation stalked among the remnant like a devouring monster. Such was Vicksburg at the opening of July, 1863. Further resistance was suicidal. Nothing was left but to surrender, and at ten o'clock on the morning of the 3d, white flags were seen waving above the parapet. The cannon instantly ceased to roar, and that afternoon Grant met Pemberton to arrange terms of surrender. Next day, the glorious 4th, the surrender was accomplished, and this powerful citadel of the South fell into the possession of the Union army.

With Vicksburg were surrendered 37,000 prisoners of war, 172 cannon, and 60,000 muskets. Port Hudson could not stand after the fall of Vicksburg; on the 9th of July it surrendered to General Banks,¹ and the whole course of the Mississippi was in the hands of the Union armies. In the vigorous language of Mr. Lincoln, "The Father of Waters rolled unvexed to the sea."

GETTYSBURG

During the last days of the siege of Vicksburg still greater events were taking place in the East. Here was fought at this time the

¹ Grant paroled his prisoners. Port Hudson was surrendered by General Gardner with over 6000 men and 7500 muskets. It could not have withstood the siege much longer, even if Vicksburg had not surrendered.

greatest battle of the Civil War — the battle of Gettysburg. Most of the fighting in the war took place south of Mason and Dixon's line, but this terrific clash of arms occurred on the soil of the old Keystone state, which had given birth to the Declaration of Independence and to the Constitution of the United States. We left Lee's army flushed with victory at Chancellorsville and strengthened by the memory of Fredericksburg. Southern hopes were high after Chancellorsville, and public opinion was unanimous in demanding an invasion of northern soil. On the other hand, the Army of the Potomac, under its many masters, had met with one discouragement after another, and, with all its patriotism and valor, its two years' warfare showed but few bright pages to cheer the heart of the war-broken soldier, and to inspire the hopes of an anxious public.

Leaving General Stewart with ten thousand cavalry and a part of Hill's corps to prevent Hooker from pursuing, Lee crossed the Potomac early in June, concentrated his army at Hagerston, Maryland, and prepared for a campaign in Pennsylvania, with Harrisburg as the objective point. His army was divided into three corps under the respective commands of Longstreet, Ewell, and A. P. Hill. Lee had divided his army so as to approach Harrisburg by different routes and to assess the towns along the way for large sums of money, when, late in June, he received the startling intelligence that Stewart and Hill had failed to detain Hooker, that the Federal army had crossed the Potomac and was in hot pursuit.

Lee was quick to see that his programme must be changed. He knew that to continue his march he must keep his army together to watch his pursuing antagonist, and that such a course in this hostile country would mean starvation, while the willing hands of the surrounding populace would minister to the wants of his enemy. Again, if he should scatter his forces that they might secure the necessary supplies, the parts would be attacked singly and destroyed. Lee saw, therefore, that he must abandon his invasion of the North or turn upon his pursuing foe and smite and disable him, in order to continue his march. But that foe was a giant of strength and courage equal to his own; and the coming together of two such forces in a final, mighty death struggle meant that a great battle must be fought — a greater battle than this western world had hitherto known.

The Army of the Potomac had again changed hands, and George Gordon Meade was now its master. Hooker, after a dispute with

Halleck, had resigned the leadership, and Meade, the strongest of the corps commanders, was appointed in his place. The two great armies were scattered over portions of Maryland and southern Pennsylvania, moving each toward the other, and it was plain that they must soon come together in a contest more terrific than they had yet experienced in their two years' struggle; but just where the shock of battle would take place was yet unknown. Meade had ordered a general movement toward Harrisburg, and he sent General Buford with four thousand cavalry to intercept the advance guard of the enemy. On the night of June 30 Buford encamped on a low hill a mile west of Gettysburg, and here on the following morning the famous battle had its beginning.

Gettysburg was a quiet hamlet of fifteen hundred people, in Adams County, Pennsylvania, and some twelve miles east of the South Mountain range. West of the village is situated on a ridge running north and south a Lutheran Theological Seminary, and this ridge is called Seminary Ridge. Just south of the town, about a mile from Seminary Ridge and parallel to it, is Cemetery Ridge, which, curving eastward at the village, culminates in Culp's Hill on the bank of Rock Creek.

On the morning of July 1 the two armies were still scattered, the extremes being forty miles apart. But General Reynolds, with three corps of the Union army, was but a few miles away, and was hastening to Gettysburg, while Longstreet and Hill were approaching the town from the west. Buford had opened the battle with Hill's corps. Reynolds soon joined Buford, Longstreet joined Hill, and three hours before noon the battle was on in full force on Seminary Ridge. Reynolds rode out to his fighting lines on the ridge, and here, about ten o'clock, he received a sharpshooter's bullet in the brain, and fell dead. John F. Reynolds, who had been promoted for gallantry at Buena Vista, was one of the bravest and ablest generals of the army. No casualty of the war brought more widespread mourning in the North than the death of Reynolds.

**Opening of
the battle.**

But even this calamity could not stay the fury of the battle. By one o'clock both sides had been greatly reënforced, and the battle line extended north of the town from Seminary Ridge to the bank of Rock Creek. Here for hours the roar of the battle was unceasing. About the middle of the afternoon a breeze lifted the smoke that had enveloped the whole battle line in darkness, and

revealed the fact that the Federals were being pressed back toward Gettysburg. General Carl Schurz, who commanded the right wing

near Rock Creek, leaving nearly half his men dead or wounded on the field, retreated into the town, where the enemy pursued him and

captured five thousand of the remainder. The left wing was also forced back, and it took refuge on Cemetery Ridge, which had been selected by General O. O. Howard; and the first day's fight was over. It was some hours yet till night, and had the enemy known of the disorganized condition of the Union troops, he might have pursued and captured a large part of the army. Meade, who was still some miles from the field, hearing of the death of Reynolds, sent Hancock to take general charge until he himself should arrive.

Hancock rode at full speed and arrived on the field at four o'clock. His presence soon brought order out of chaos. His superb bearing, his air of confidence, his promise of heavy reinforcements during the night, all tended to inspire confidence and to renew hope in the defeated army. Had this day ended the affair at Gettysburg, the usual story of the defeat of the Army of the Potomac would have gone forth to the world. Only the advance portions of both armies had been engaged; and yet the battle had been a formidable one. The Union loss was severe. A great commander had fallen, and the rank and file had suffered the enormous loss of ten thousand men.

Meade reached the field late in the night, and chose to make this field, on which the advance of both armies had accidentally met, the place of a general engagement. Lee had come to the same decision, and both called on their outlying legions to make all possible speed to Gettysburg. Before morning nearly all the troops of both armies had reached the field. The Union army rested with its center on Cemetery Ridge, with its right thrown round to Culp's Hill and its left extending southward to a rocky peak called Round Top. The Confederate army with its center on Seminary Ridge, extending its great wings from Rock Creek on the north to a point opposite Round Top on the south, lay in a grand semicircle half surrounding the Army of the Potomac. But Lee was at a disadvantage. First, Stonewall Jackson was gone, and second, Stewart was absent with his ten thousand cavalry. And further, Meade was on the defensive, and had the advantage of occupying the inner ring of the huge half-circle. Thus lay the two mighty armies—each nearly a hundred thousand strong—awaiting the morning and the dreadful carnage that the day was to bring.¹ It seemed that the fate of the Republic was here to be decided, and the people of the North

¹ Livermore gives the fighting strength of Meade's army at 88,289 and of Lee's at 75,000.

and of the South awaited with breathless eagerness the decision now about to be made at Gettysburg.

The sky was clear on July 2, and the dawn betokened a beautiful day in southern Pennsylvania. The two armies hesitated, as they were loth to begin the fearful work of slaughter and bloodshed. The hours passed, with a stray shot here and there, till four in the afternoon. General Sickles held the Union left wing at the base of Round Top, and opposite him was Longstreet. At this point occurred the chief fighting of the day. Sickles moved forward half a mile without orders, and found himself face to face with nearly half the Confederate army. Longstreet advanced in a magnificent battle line and opened fire with his batteries. Sickles answered, and presently the musketry was opened, at first a few shots, then more and faster, till there was a continuous roll, and no ear could distinguish one shot from another. Sickles was pressed slowly back to the position he had occupied in the morning, and might have been routed but for the arrival of Sykes to his rescue. His lines were still in good order; but of his brave men, thousands lay in the fateful valley, and among them lay the Confederate dead and wounded in almost equal numbers. This valley has been called the Valley of Death.

Meantime General Early made a desperate attack on the Union center from the north, and was repulsed only after a hand-to-hand encounter in which clubs and stones, as well as muskets and bayonets, were used. An attack on Culp's Hill was more successful. Ewell in a fierce encounter of half an hour gained possession of the hill and held it during the night. On this second day of the battle the Confederates had gained an apparent advantage in forcing Sickles back and a real advantage in gaining possession of Culp's Hill. Otherwise the situation was not greatly changed — except that each army had lost about ten thousand men.

On the morning of the third day the people of Gettysburg, which lay between the two armies, were awakened from sleep by the roar of artillery. At daybreak the Union guns were opened on Culp's Hill, and after a bombardment of four hours the hill was carried and the Union lines were reestablished where they had been the day before. But the most famous onset of the three days' battle was yet to come — Pickett's Charge on Cemetery Ridge — preceded by the heaviest cannonading ever known on the American continent.

After the contest at Culp's Hill and a cavalry fight east of Rock

Creek, there was a lull, almost a deep silence, over the whole field. It was the calm that precedes the storm. Lee had been massing artillery on Seminary Ridge, and for two miles the hill bristled with cannon. Lee had determined on a great final charge on the Union center. Longstreet strongly opposed it, believing that it could not succeed; but he protested in vain.

At one o'clock the silence was broken by a terrific outburst from one hundred and fifty guns, and the whole crest of Seminary Ridge was a line of fire. The Union guns were soon in operation, and cannon answered cannon until the hills shook to their foundations.¹ After an hour and a half the firing gradually slackened and ceased, and the Union army prepared for the more deadly charge of infantry that was sure to follow.

They had not long to wait. Fifteen thousand of Longstreet's corps, the flower of the Confederate army, emerged in a grand double column from the wooded crest of Seminary Ridge under the command of General Pickett. Longstreet foresaw the fate of his brave men; he had opposed their going, but Lee overruled him, and when he was asked for final permission, he could not speak, he only nodded his head and burst into tears.

The charge was one of the most daring in the history of warfare. The distance to the Federal lines was a mile. For half the distance the troops marched gayly, with flying banners and glittering bayonets. Then came the burst of Federal cannon, and their ranks were torn with exploding shells; but the lines reformed and swept on. When they came within musket range Hancock's infantry opened a terrific fire, but Pickett's valiant band only quickened their pace and returned the fire with volley after volley. They rushed to the very mouths of the cannon. The Union line fell back from the shelter of a stone wall, and it seemed for a moment that the Confederates would reach their goal — would capture the works on Cemetery Ridge and split the Army of the Potomac in twain. General Armistead leaped upon the stone wall and waved the Confederate banner in frenzied, momentary triumph. Next instant he fell mortally wounded, and with him fell the hopes of the slaveholder's rebellion — not yet slain, but mortally wounded.

This was the supreme moment of the war. The tide of rebellion could rise no higher; from this point the ebb must begin. Not only

¹ See my "Side Lights," Series II, Chap. V. I have drawn freely on that chapter in this account.

here, but in the West the southern cause took a downward turn; for at this very hour of Pickett's Charge, Grant and Pemberton, a thousand miles away, stood under an oak tree on the heights above the rolling tide of the Mississippi and arranged for the surrender of Vicksburg.

Pickett had entered a death trap. Thousands of musket shots at close range were poured into his ranks every minute. The tempest of lead was beyond human endurance. Great numbers fell on the gory field, many surrendered, and the remnant fled, blood-stained and weary, to the waiting lines on Seminary Ridge. The battle of Gettysburg was over. The cost in men was frightful. The losses of the two armies reached fifty thousand, about half perhaps on either side. More than seven thousand men had fallen dead on the field of battle.¹

Lee could do nothing but lead his army back to Virginia. The Federals pursued but feebly. The Union victory was not a very decisive one, but being powerfully supported by the fall of Vicksburg, the moral effect on the nation and the world was great. The period of uncertainty was ended. It required but little prophetic vision now to foresee that the Republic would survive the dreadful shock of arms, and that secession and slavery must perish.

NOTES

Negro Soldiery.—During the early period of the war while the ranks were kept filled by volunteers, there was little disposition to enlist black men in the service. In July, 1862, however, Congress passed an act for the employment of negroes in camp service, on intrenchment constructing and the like, and another a year later for their enlistment as volunteers. In February, 1864, an act was passed to include the blacks in the national enrollment, and if a slave was drafted, his master received a bounty from the government. Negro soldiery awakened some race prejudice at the North, and much more at the South; but as the war progressed this was largely overcome even at the South. Toward the close of the war many black regiments were raised for the northern armies, and they were conspicuous in the fighting at Fort Wagner, Port Hudson, Mobile, and other places. The South also accepted military service from negroes. The legislature of Tennessee authorized the governor (June 28, 1861) to enlist blacks in the service. The legislature of Virginia discussed a similar bill in February, 1862. In November, 1862, a regiment of fourteen hundred free black troops entered the Confederate service, while in March, 1865, the Confederate Congress passed an act for arming the slaves. See Greeley's "American Conflict," Vol. II, p. 522.

¹ Livermore gives these figures: Federals killed, 3155, wounded, 14,529, missing, 5365; Confederates killed, 3903, wounded, 18,735, missing, 5425; total, 51,112.

Morgan's Raid. — Of the many cavalry raids during the war the most famous and daring was that of John H. Morgan with four thousand men, in July, 1863. He crossed the Ohio River into Indiana below Louisville. The Indiana militia, called out by the governor, swarmed after Morgan in such numbers that he left the state and entered Ohio. Sweeping past Cincinnati he traversed the southern part of the state, burning bridges and buildings, stealing horses, and plundering the towns and farms. But there was a band of men in hot pursuit, and the farmers obstructed Morgan's path with felled trees. Attempting to cross the Ohio near Pomeroy, his way was obstructed by gunboats and militia. A sharp battle ensued; Morgan was defeated and fled up the river, leaving six hundred of his men, wounded and prisoners, behind. A few miles further up the raiders again attempted to cross, but here were the pursuers and the gunboats. Morgan lost a thousand of his men and all his heavy guns. Many of his men had perished in attempting to swim the river. Again Morgan, with the remnant, struck the river above Marietta, but he was again prevented from crossing. At length (July 26) he was captured near New Lisbon. Only about four hundred of his band escaped death or capture. Morgan was taken to Columbus and confined in the penitentiary, whence he escaped in November by burrowing under the walls, and found his way back to the South. The following year he was killed in Tennessee. In one of the fights with Morgan the venerable Daniel McCook lost his life. He had given eight sons to the Union army, four of whom became generals. They were known as "The Fighting McCooks."

The Sanitary and Christian Commissions. — These voluntary organizations did in war times the same kind of noble work as has been done in later years by the Red Cross Society. The Sanitary Commission was organized in the spring of 1861, and the Rev. Dr. H. W. Bellows of New York became its president. More than 7000 women's auxiliary societies were afterward organized. The people were called on by them to contribute money and articles of usefulness for the soldiers in the field, and especially for those in hospitals. In the course of the war \$15,000,000 worth of articles and \$4,000,000 in money were contributed. The commission followed the armies with its supplies and helpers. For example, after the battle of Antietam the 10,000 wounded lying on the field were for four days in the hands of this commission; and on this one occasion it furnished 28,000 shirts, towels, etc., 30 barrels of lint, bandages, etc., 2000 pounds of condensed milk, and other things in proportion. In the course of the war it furnished 4,500,000 meals to hungry and wounded soldiers.

The Christian Commission was organized later in the year 1861. George H. Stewart of Philadelphia was its chairman. It sent out over 6000 delegates without pay. Its work was confined chiefly to supplying religious reading matter and medical supplies. It sent out hundreds of thousands of Bibles, hymn books, magazines, and over 10,000,000 religious tracts. In addition to these organized societies, there were many women who volunteered as nurses, the leader of whom was Miss Dorothea L. Dix. Others of note were Miss Amy Bradley, Mrs. Barlow, and Miss Clara Barton, who in the Spanish War, thirty-five years later, became the head of the Red Cross Society. The women of the South were also devoted to the cause in which they believed, and were even more self-sacrificing than their sisters of the North.

CHAPTER XXX

THE CIVIL WAR—THE GREAT FINAL DOUBLE MOVEMENT

THE grand twofold movement which ended the war was that carried on by Grant in Virginia and by Sherman farther south; but before treating this we must notice the military movements at

CHICKAMAUGA AND CHATTANOOGA

After the battle of Stone River at the beginning of January, 1863, Rosecrans and Bragg lay for many months near Murfreesborough, each sending out bands of cavalry on destructive raids, but both avoiding a general engagement. Meantime Grant was preparing to invest Vicksburg, as we have seen, and Hooker was battling with Lee in Virginia. Rosecrans's immediate object was to prevent Bragg from joining the forces against Grant near Vicksburg. Near mid-summer he began to move his army toward the vicinity of Chattanooga. Bragg's army was also soon in motion. Chattanooga is situated on the east bank of the Tennessee River in the midst of a vast amphitheater of mountains. Rosecrans passed through the mountain passes south of the town, as if to invade Georgia. Bragg followed him, and here on the banks of a mountain stream, whose Indian name, Chickamauga, is said to signify "River of Death," was fought the most destructive battle of the war thus far, except Gettysburg. The Federal army held two passes through Missionary Ridge, which lay between the combatants and Chattanooga. Bragg's aim was to defeat Rosecrans, seize these passes, and beat the Federals back to Chattanooga. And he had every hope of success, for Longstreet arrived from Virginia on the evening of the 18th with two of the best divisions of Lee's army. Buckner had come from Knoxville, and Bragg had now nearly seventy thousand men, while Rosecrans had but sixty thousand.

The first day began with heavy skirmishing that grew into a battle, which continued till nightfall. The battle was renewed next

morning. The Federals might have held their own but for a sad blunder. Rosecrans sent an order to General Wood which was misunderstood, and in consequence Wood moved his division in such a way as to leave a wide gap in the center of the Union lines. Longstreet, quickly seeing this, poured an overwhelming mass of Confederate troops into the opening. By this movement the entire Union right wing was torn from the rest of the army and swept from the field, and Rosecrans and two of his corps commanders, McCook and Crittenden, were carried away in the mad rush.

**Battle of
Chickamauga,
September
19-20, 1863.**

But this did not end the day's work. The Union left, some twenty-five thousand men, was commanded by one of the ablest generals of the war, George H. Thomas. On a curving ridge called the Horseshoe he planted his guns and formed his lines. The Confederates, now sure of winning a great victory, swarmed up the slope in great numbers; but Thomas hurled them back with fearful slaughter. Again and again they came, almost the whole Confederate army; but Thomas stood like a wall, and against him the surging enemy dashed in vain. For six long hours the assaults continued, but the Union forces stood their ground till night, at the cost of ten thousand of their number. The spectacle was one of the grandest in the annals of warfare.¹ Thomas was afterward known as "The Rock of Chickamauga." He withdrew to the mountains during the night, and soon joined Rosecrans in Chattanooga. In this battle the Union army lost about sixteen thousand men and the Confederates above eighteen thousand. It is usually considered a Confederate victory; but Bragg lost the greater number, and failed to gain the passes to Chattanooga.

Rock of Chickamauga.

South of Chattanooga lies Missionary Ridge, a few hundred feet high, extending north and south, while just west of this ridge rises Lookout Mountain, a bold spur three thousand feet above the sea, extending to a great bend of the river.¹ These heights were soon occupied by Bragg, and Rosecrans found himself cooped up in Chattanooga with but one rough mountain road over which to bring his supplies. The situation was growing critical; ten thousand mules and horses died within a few weeks from want of food. The government saw that Rosecrans must be rescued or his army would perish. General Grant was now placed in command of all the

¹ See Fiske, p. 275.

² See map on p. 759.

forces between the Alleghanies and the Mississippi. He chose to go to Chattanooga and take personal charge, while, at his suggestion, General Thomas succeeded Rosecrans. Grant arrived before the close of October; but before he reached his new command Thomas had begun to act on a new plan which proved in the end to be a brilliant conception.¹ This was to seize a low range of hills on the peninsula, made by the bend of the river, opposite Lookout Mountain, and thus to establish a wagon road to a point farther down the river to which supplies could be brought by boat. This line was soon secured, and henceforth the army received all the supplies it needed. But not only supplies; by this same route came General Sherman with the army that had captured Vicksburg, and joined the army under Grant. At the same time Bragg made the unpardonable blunder of weakening his army by sending Longstreet with twenty thousand men to attack Burnside, who had come out from Cincinnati with twenty-five thousand men, and who was then at Knoxville.

Grant now had some eighty thousand men. He sent Sherman with the left wing to make an attack on Missionary Ridge, while Thomas held the center and "Fighting Jo Hooker," who had come from the east, with the Union right approached Lookout Mountain. Sherman encountered unexpected obstacles in the nature of the ground, and his success was not what he had expected; Thomas pressed forward upon Bragg's center and captured Orchard Knob, between Chattanooga and Missionary Ridge, and this became Grant's headquarters next day; while Hooker did the most famous day's work of all.

Hooker had been sent to the base of Lookout Mountain; and he led his men up the rugged slopes, attacked the enemy on the summit, and won a complete victory. During the action the mountain was enveloped in a dense mist and was invisible from the valley below. It has been called "The Battle above the Clouds." The roar of the battle rolling from the invisible summit of the mountain seemed literally to indicate a battle in the sky. Nobly here did Hooker retrieve the prestige he had lost at Chancellorsville.

Next day witnessed the battle of Missionary Ridge. The whole Union army centered its attention upon this last Confederate strong-

¹ Thomas was indebted for this plan to his chief engineer, General W. F. Smith, who first suggested it.

**Battle of
Lookout
Mountain,
November 24.**

hold. Hooker hastened from Lookout Mountain to the support of Sherman, and for some hours the fighting was heavy, but the Union troops made little headway. Then Thomas's corps of twenty-five thousand moved against the Confederate center on the ridge overlooking Orchard Knob. The task of carrying the place seemed an impossible one. Along the crest of the ridge stood fifteen thousand veteran soldiers with fifty cannon. But the Union troops ran across the plain and up the slope with a courage equal to that of Pickett's men at Gettysburg—and with a different result. In the face of a galling fire—grape and canister and shell—they rushed on and on, without orders, it is said, leaving hundreds of their number dead and dying on the hillside. But they reached the goal, and a few minutes later the Confederates fled in wild disorder, and the guns they had left behind were turned against them.

Thus ended the campaign of Chattanooga. Bragg's army had been wholly defeated, and, after being pursued for some days by Hooker, it found a resting place at Dalton among the mountains of Georgia.¹ It is a notable fact that this was the only battle in which the four greatest Union generals of the war were engaged,— Grant, Sherman, Sheridan, and Thomas.²

Grant then dispatched Sherman to Knoxville to aid Burnside. Longstreet, hearing of his approach, attempted to carry the works by storm; but after a desperate effort in which he lost eight hundred men in half an hour, he gave up the siege, and, unwilling to meet Sherman, marched his army eastward into Virginia.

The Chattanooga campaign secured to the Union the entire Mississippi Valley. Of the four chief strongholds of the South—Richmond, New Orleans, Vicksburg, and Chattanooga—three were now in possession of the Union armies.

GRANT IN THE WILDERNESS

During the winter that followed the defeat of Bragg at Chattanooga, the country was comparatively quiet. The armies lay in winter quarters ready for active operations in the spring. That the Confederacy would collapse within the coming year was the general belief, and this feeling was strengthened by the further belief that

¹ Grant lost about six thousand in killed and wounded. The Confederate loss was over seven thousand, more than half of whom were prisoners.

² Fiske, p. 315.

the "coming man," the "great general," had at last been discovered. The hopes of the country were first centered in McClellan, then in Halleck; but now the steady gaze of the great public turned upon the hero of Donelson and Vicksburg. In February, 1864, Congress revived the grade of lieutenant general, hitherto held only by George Washington and Winfield Scott.¹ As every one knew, it was meant for Grant; and the President promptly sent his name to the Senate, and it was confirmed. Grant came east to receive his new commission, and early in March he was made commander in chief of all the armies of the United States. This would insure the concerted action of the western with the eastern armies. Halleck was nominal commander in chief up to this time; but he was weak and incompetent, and his orders often prevented the armies from winning victories. This was now changed, and the armies were henceforth to move at the dictation of one master mind.

Grant was now by far the most popular man in the country, not excepting the President. Crowds followed him about the streets of Washington wherever he went. He is described by one² who saw him at the time as a "short, round-shouldered man in a very tarnished major-general's uniform. . . . He had no gait, no station, no manner, rough, light-brown whiskers, a blue eye, and a rather scrubby look withal . . . a rather seedy appearance . . . but he had . . . a look of resolution, as if he could not be trifled with, and an entire indifference to the crowd about him."

Grant soon decided on the great twofold movement,—the campaign against Lee in Virginia, led by himself, with Richmond as his goal; and a simultaneous campaign against Johnston, who had succeeded Bragg, led by Sherman, with Atlanta as his goal. Should either or both of these be successful, the downfall of the Confederacy was assured. First we turn our attention to Virginia.

The Army of the Potomac, now almost one hundred and fifty thousand strong,³ was divided into three corps under Hancock, Warren, and Sedgwick, with Meade in immediate command, and Grant in superior command. Sheridan was at the head of the cavalry. Lee's army, in

¹ Scott, however, held it only by brevet. The still higher grade of "general" was conferred on Grant in 1866, and later on Sherman, then Sheridan. These three alone have held this highest military grade in the United States.

² Richard H. Dana. See Adams's "Dana," Vol. II, p. 271.

³ This included a division of thirty thousand under Butler on the James River, and Burnside's command, which had been brought from Knoxville.

three corps under Longstreet, Ewell, and A. P. Hill, with Stewart as cavalry leader, is said to have numbered sixty thousand. These were the actual bearers of arms; but by the method of counting employed by the Union side (which included teamsters, cooks, musicians, etc., as well as soldiers), these figures must be increased to about seventy-five thousand. These two great armies now entered upon a month's campaign, — the bloodiest and most murderous campaign of the war, — which brought no apparent advantage to either side.

On the 4th of May, 1864, Grant's army crossed the Rapidan, and entered that dreary region of tangled underbrush near Chancellorsville known as the Wilderness.¹ The battle of the Wilderness proper, as generally understood, continued but two days, the 5th and 6th of May. Grant had no thought of offering battle in this jungle; but Lee considered this his opportunity, and moved his army upon the Federals. Ewell attacked Warren's corps on the morning of the 5th and pressed it back; but it made a stand and joined the Federal left wing under Hancock, and thus, with almost the whole of both armies in action the fight continued till night. Next morning the battle was renewed at an early hour, as both Grant and Lee had determined to take the offensive. Hancock attacked Hill with great fury.

**Battle of the
Wilderness,
May 5 and 6,
1864.**

Hill was driven back, but Longstreet, who had not been present on the 5th, came to his rescue, and the Federals in turn were driven back. At this point General Wadsworth was killed and Longstreet was dangerously wounded.² All along the line the battle raged during the day. Saplings by thousands were cut down, and even large trees were felled by the flying missiles. The Federal loss in the two days' battle was more than seventeen thousand, the Confederate loss, not accurately known, was much less, probably twelve thousand.

Four days after the close of this fight in the Wilderness the great battle of Spottsylvania was fought. Grant began his movement toward Spottsylvania Court House, between the enemy and Richmond, on the night of the 6th. It is said that the soldiers, not knowing whether they had suffered defeat or won a victory, as is often true of the rank and file, feared that the movement was to be a retreat

¹ See map on p. 695.

² Longstreet's wound is said to have been received from his own men. It was similar in character to that received by Stonewall Jackson near the same spot a year and three days before.

back across the Rapidan; but when they found that they were marching toward Richmond, they sent up cheer after cheer. Under McClellan, Pope, Burnside, and Hooker, respectively, this army had made an attempt on Richmond; but in each case it had retreated after encountering the Army of Northern Virginia. Lee believed that Grant also was now in retreat, but he was soon undeceived. On learning of Grant's destination he made a forced march and reached Spottsylvania before him. Every day there was heavy skirmishing, and on the 9th the brave General Sedgwick, one of the ablest of the corps commanders, was struck in the face by a sharpshooter's bullet and fell dead. Sheridan on the 8th began a cavalry raid around the Confederate army, and in a terrific fight within seven miles of Richmond the ablest cavalry leader of the South, General J. E. B. Stewart, was killed.

The battle of Spottsylvania was fought on the 10th and the 12th of May, both armies resting on the intervening day; and it was on this day that Grant sent his famous dispatch to Washington, declaring his purpose to "fight it out on this line if it takes all summer." The chief feature of the action on the 12th was the attack by Hancock on a weak position of the enemy called a "salient." He succeeded, and captured four thousand men after great slaughter on each side. Five desperate, fruitless efforts the Confederates made to retake the position. One of these General Lee started to lead in person, but his men refused to advance till he went back beyond the danger line. At a point known as the "death angle" **Spottsylvania, May 10 and 12.** the hand-to-hand fighting, which continued till midnight, was equal to any ever known in war. Men fought from the top of heaps of dead men till their own bodies were added to the pile and others came to take their places. Not a tree or a sapling was left alive and standing. One tree nearly two feet in diameter was literally cut in two by musket balls.

The battle of Spottsylvania was one of the most tremendous of modern times. Had it continued another day, it would have surpassed Gettysburg. Neither side won. The losses, about the same on each side, footed up the frightful total of thirty-six thousand men.¹

For a week now the two armies remained inactive. On the 19th the Confederates under Ewell made a fierce assault on the Union right, but were repulsed. Lee then took up a strong position on the North Anna River; but Grant refrained from an attack, moved toward

¹ "Battles and Leaders," Vol. IV, p. 182; Burgess, Vol. II, p. 252.

Richmond, and crossed the Pamunkey but twenty miles from that city. Lee followed and there was heavy fighting nearly every day, but no general engagement. At length they reached the old battleground where McClellan had fought two years before. Lee, on the first days of June, took up a very strong position at Cold Harbor. The only chance to attack him was in front. Grant determined to make an assault. His troops knew that it would be hopeless, that it would mean wholesale murder, and many of them tacked labels to their clothes, giving their names and addresses that their friends at home might learn where and when they died. The result was as expected: the Union men were mowed down in thousands. Not even at Spottsylvania or at Gettysburg was the slaughter more terrible than here. The main assault lasted but half an hour, and it was the bloodiest half hour in American history. About twelve thousand Union men lay dead or writhing on the ground.¹ Ordering this charge was the greatest military error in the life of General Grant, and he frankly acknowledges in his "Memoirs" that he never ceased to regret it.

**Battle of Cold Harbor,
June 3, 1864.**

Grant now determined on a change of base. He decided to cross the Rappahannock and the James to a point below Petersburg, and to approach Richmond from the south. It was exactly this move that Halleck had prevented McClellan from making two years before. Grant made the transfer with consummate skill, but he suffered great losses in attempting to carry Petersburg by storm. By the 20th of June his army was joined by that of Butler on the James.

**Grant crosses
the James.**

The Union loss in this campaign, from the Wilderness to Cold Harbor, reached the appalling total of nearly sixty thousand men. The Confederate loss was something less than forty thousand.² Why this wide difference in numbers? The fact that Lee knew the ground well and Grant did not, may account for it in part, but not in full. Indeed, this may be balanced by the further facts that Grant's generals, if not himself, were familiar with the country and that while his army was well fed the Confederates were in a half-starved

¹ Livermore gives this number as an estimate (p. 114). Swinton says that Grant's loss was twenty times greater than Lee's in this engagement. "Campaigns of the Army of the Potomac," p. 494.

² These figures represent the men rendered *hors de combat*, many of whom were captives and were eventually restored to their homes. Neither army had decreased greatly, as both were reënforced from time to time.

condition.¹ If we can rise above all sectional or partisan bias, we must agree with the military critics that Grant was no match for Lee as a strategist. Grant himself practically admits this in his statement that his plan was to keep hammering away and to reduce the enemy's force by mere attrition. Grant, however, grasped the great purpose of the campaign—to destroy the Confederate army and bring the war to a close.² If this could not be done by strategy, by outwitting the enemy, there was just one way left—to pound him to death by superior numbers; and this Grant proceeded to do. We deplore the costly mistake at Cold Harbor;³ we deplore the making desolate of so many thousand homes; but we must not overlook the main object of the war—to save the country even at the sacrifice of the armies. This campaign, however, with all its vast sacrifice of men, had thus far failed. The country was much dissatisfied with Grant, and some urged that McClellan be recalled; but there is no evidence that Mr. Lincoln contemplated doing this. During the long period of inaction that followed, Grant's dispatches did not bear the air of confidence that marked them before he entered the Wilderness. Soon after crossing the James the army made attempts to carry Petersburg by storm. One of these was by means of a mine which exploded with great violence. But the enemy was on the alert, and every attempt to carry their works was fruitless. Grant then settled down to a long siege, and his army did little active field work till the following spring.

Closely associated with this campaign, or rather, a continuation of it, was that of Sheridan in the Shenandoah Valley. In the hope of relieving Richmond and Petersburg, Lee sent Jubal Early with fifteen thousand veterans to threaten Washington. Early drove Sigel out of Martinsburg, occupied Hagerstown, and then turned toward Washington. On July 10 and 11 he was but a few miles from the city and in sight of the Capitol dome. The excitement in the city was great. The President was composed, and made no provision for his personal safety; but a vessel lay waiting in the river, without his knowledge,

¹ Major Eggleston (Confederate) relates in "Battles and Leaders" (Vol. IV, p. 231) that his men marched fifty hours from the North Anna without food, when they received each three hard biscuits and a very small slice of fat pork. Two days later they received each a single cracker without meat.

² Rhodes, Vol. IV, p. 447.

³ Though it was scarcely a greater mistake than that of Lee in sending Pickett to Cemetery Ridge at Gettysburg.

to take him away in case the enemy should capture the city. Washington was then garrisoned by some twenty thousand raw troops, and there is little doubt that Early could have defeated them and captured the city on the 11th. But for some unknown cause he hesitated, and before night of that day his great opportunity was gone; for in the afternoon two corps sent by Grant had arrived, and the Capitol was safe. Early then turned up the valley and sent General McCausland into Pennsylvania. McCausland occupied Chambersburg, July 30, 1864, and demanded a large sum of money on pain of burning the town. The money was not forthcoming, and he carried out his threat. Grant at length appointed Sheridan in command in the Shenandoah Valley. That the Confederate raids along the Shenandoah be prevented in future, Sheridan was instructed to lay waste the valley and destroy everything that would support an army. Sheridan had shown the mettle of which he was made at Murfreesborough, at Chickamauga, and at Missionary Ridge; and no one doubted that he would do the work assigned him. With nearly forty thousand men he entered the valley, and first met Early at Opequan Creek near Winchester, and a sharp battle ensued. Some weeks then passed with little action, when Lee recalled some of Early's troops, leaving his army scarcely half the size of Sheridan's, and Sheridan saw his chance. The two armies met again on nearly the same spot, and a terrific battle ensued. Sheridan won a clear victory, driving the enemy through the streets of Winchester.¹ Three days later the two armies met again at Fisher's Hill, and Early was again defeated, with a loss of twelve hundred men, while Sheridan lost but five hundred. These battles saved Maryland and Pennsylvania from further invasion.

**Battle of
Opequan, or
Winchester,
September 19.**

Sheridan's famous raid down the valley began on October 5. He destroyed everything that an enemy might use. He spared the dwellings, but he burned two thousand well-filled barns and seventy mills filled with wheat and flour, and drove before him four thousand head of cattle. Early had meantime been reënforced and was following the Federals, who had encamped at Cedar Creek. The troops were not expecting an attack when, in the misty dawn of the morning, the enemy crept by stealth upon the sleeping army. The Federals sprang to arms, but they had little time to form in line, and in a

¹ Sheridan's loss was about five thousand, exceeding that of the enemy by about one thousand.

short time they were defeated. Sheridan had gone to Washington and was then at Winchester, some miles away. Hearing the cannonade, he galloped to the battle field. Meeting his men in flight, he stopped them, saying, "Face the other way, boys; we will go and recover our camps!"¹ With marvelous skill Sheridan went about re-forming his lines and infusing his own spirit into the army. From the moment of Sheridan's arrival the whole current of the movement was changed. The men threw up their hats and leaped and danced for joy.² In a few hours Sheridan had the troops again in fighting trim, and in the afternoon he led them against the enemy. Early was not only defeated, but thoroughly routed, and his army was practically destroyed; and thus ended the war in the Shenandoah Valley.

THE ATLANTA CAMPAIGN—MOBILE

General Grant, on assuming command in the east, had planned for Sherman a campaign against Atlanta, Georgia, an important railroad center and base of military supplies. To carry out this plan Sherman had to penetrate the heart of the Confederacy and cope with the army of J. E. Johnston, which had spent the winter at Dalton. Preliminary to this great move, a portion of Sherman's army joined with that of Banks and with the fleet of Admiral Porter in an expedition up the Red River. Several severe battles were fought on this expedition, but in the end it played only a small part in the general plan.

The direct line from Chattanooga to Atlanta is only a hundred miles, but the country is rugged, and Johnston was a vigilant, able commander and had sixty-five thousand men in his army. Sherman's army numbered over one hundred thousand, and was in three parts under Thomas, J. B. McPherson, and John M. Schofield.³ Of this force Sherman, as he progressed, had to leave many to guard his line of supplies to Nashville. Johnston, on the other hand, could keep his entire army with him and use the whole when needed in battle. Sherman began this great march from Chattanooga on the day after Grant entered the Wilderness. Johnston came out of Dalton and

¹ Sheridan's "Memoirs," Vol. II, p. 81.

² Davies's "Life of Sheridan," p. 185.

³ It was the three armies of the Cumberland, the Tennessee, and the Ohio combined.

intrenched his army at Resaca. Here Sherman stood before him on the 13th of May. For two days there was heavy fighting, but Sherman refrained from a direct attack. His maneuvers, however, were such as to force Johnston to abandon his position and retreat southward. Sherman followed, and the two armies, both moving toward Dallas, met at a little church called New Hope, where a considerable battle was fought, neither army gaining great advantage.

By the end of May each army had lost about ten thousand men. Sherman was nearing his goal; but he found in Johnston a master strategist. There was now heavy skirmishing and artillery firing nearly every day. On the 14th of June General Polk was killed. While standing with Generals Johnston and Hardee on the crest of Pine Mountain, viewing the field through a glass, he was struck squarely in the breast by a cannon ball, and his body was torn to pieces. As a youth, Polk had graduated at West Point; he then studied theology, and for twenty years before the war he was Episcopal bishop of Louisiana.

The last week of June found Johnston strongly intrenched on Kenesaw Mountain, and here, for the first time in the campaign, Sherman decided to make a front attack on his works. **Kenesaw Mountain.** The attempt was a foolish one and must be classed with **June 27, 1864.** Pickett's charge at Gettysburg and Grant's at Cold Harbor. And the result was the same: Sherman lost over two thousand men and won nothing. General Daniel McCook was among the killed. Sherman made no more such blunders. He again resorted to his flanking tactics. On the 17th of July he led his army across the Chattahoochee River within a few miles of Atlanta, and on the same day Jefferson Davis made the great

mistake of dismissing Johnston because he had "failed to check the advance of the enemy," and placing General John B. Hood in command. The change was a happy one for the Union army; for Hood, though a bold and fearless fighter, was no match as a tactician to the masterly Johnston. Three days after receiving the command Hood left his intrenchments and offered battle in the open field at Peachtree Creek. He was driven back by Hooker with heavy loss. On the 22d Hood again made an attack, and on this day the battle became general all along the lines. Hood was thoroughly defeated, losing probably eight thousand men, while Sherman lost less than half that number.

Hood succeeds Johnston. But the Union loss was very great, nevertheless, for General McPherson was killed. He was riding through a wood almost alone when a sharpshooter's bullet pierced his brain and his horse galloped back riderless. McPherson was one of the ablest commanders in the army. He was the only man whom Grant on going east placed in the same class with Sherman.

Battle near Atlanta. Another battle, known as the battle of Ezra Church, took place on the 28th of July, and Hood was again defeated, with a loss six times as great as that of Sherman. A month more was spent in maneuvering, in raiding with cavalry, and in tightening the coils about Atlanta, where Hood had taken refuge. Finding that he could hold the city no longer, Hood escaped with his army on the night of September 1, and next day Sherman entered and took possession. The campaign had been four months in duration, and the Federal loss in killed, wounded, and missing was about thirty-two thousand. The Confederate loss was probably thirty-five thousand.

While Sherman was maneuvering around Atlanta, Farragut won his famous naval victory in Mobile Bay. This was the most important harbor on the gulf coast, and next to Charleston,¹ the most important on the entire Confederate coast. Here the Confederate blockade runners found a retreat when nearly all other ports were closed to them. The closing of this port was determined on, and Admiral Farragut was intrusted with the perilous task. For months he was preparing and waiting for a land force to coöperate with him. At length the land force arrived under General Gordon Granger, and was

¹ The summer before had witnessed a determined but unsuccessful effort to capture Charleston, South Carolina, guarded by General Beauregard. General Gilmore and Admiral Dahlgren led the expedition. They captured Fort Wagner on Morris Island, after a long and terrific siege, and reduced Fort Sumter to ruins, but they failed to capture Charleston.

landed on Dauphin Island in the mouth of Mobile Bay. The naval battle took place on August 5. Two forts, Gaines and Morgan, guarded the main entrance of the bay, while within the bay lay a line of sunken torpedoes and beyond these a Confederate fleet of gunboats and the powerful ram *Tennessee*, commanded by Admiral Buchanan. Farragut had a fleet of four ironclads and some other vessels. That he might not fall to the deck, if shot, Farragut had himself tied to the mast of his flagship, the *Hartford*, and the fleet steamed into the harbor amid a storm of shot and shell from the two forts and the opposing fleet. One of the Union vessels, the *Tecumseh*, was wrecked by a torpedo, and sank with one hundred and thirteen men on board.¹ The forts were soon silenced, and the battle with the Confederate fleet was short and furious. Two of the Confederate gunboats were soon destroyed, a third fled into shallow water and escaped. The *Tennessee* made a brave fight against the whole Union fleet, but at last a fifteen-inch solid shot pierced her armor, and she surrendered. The two forts soon afterward surrendered to Granger; and thus ended the career of the blockade runners in Mobile Bay. The city of Mobile at the head of the bay, however, with its guarding forts, remained in the hands of the Confederates for many months longer. It was surrendered to a Union army of forty thousand men under General Canby in April, 1865.

Mobile Bay,
August, 1864.

THE PRESIDENTIAL ELECTION

Politics, like the poor, is always with us. In the midst of the great war came a presidential election. The risk of changing the whole policy of the government at such a time, when ultimate military victory seemed in sight, was not relished by the friends of the Union and the enemies of slavery. But the civic campaign had its compensations; it was some relief for the great public for a season to take its eyes from the dreadful scenes of carnage, and to witness the familiar scene of the battle of the ballots. In view of the

¹ A remarkable incident occurred at the sinking of the *Tecumseh*. There was a narrow ladder, the only possible means of escape. When the vessel was about to sink, Captain Craven, her commander, and his pilot met at the foot of this ladder. The pilot stepped aside that the captain might go up first; but the captain said, "After you, pilot," and stepped back. The pilot then ran up the ladder to the deck, and was saved. But he was the last; the ship sank, and the chivalrous Captain Craven went down with his crew and was lost.

world's present estimate of Abraham Lincoln it seems strange that within his own party there was a powerful opposition to his renomination to the presidency in 1864. But such was the case. Among Lincoln's opposers were such leaders as Horace Greeley, William Cullen Bryant, Henry Ward Beecher, Thaddeus Stevens, and no doubt a majority of the senators and representatives in Congress. The choice of the opposing faction was Mr. Chase, the secretary of the treasury. Chase was an all-round leader and had proved himself a great financier. In January, 1864, a committee of prominent Republicans issued a circular, known as the "Pomeroy Circular," named from the chairman, Senator Pomeroy of Kansas, attempting to show that it were better for the country if Chase instead of Lincoln be chosen President. The ground of objection to Lincoln was that he was too slow and too conservative in dealing with the rebellion and with the slavery question, nor was his plan of reconstruction, to be noticed later, pleasing to the leaders in Congress. No doubt the President was disturbed by this movement, but his outward calm was unbroken. With admirable magnanimity he said concerning the Chase movement: "I have determined to shut my eyes, so far as possible, to everything of the sort. . . . If he (Chase) becomes President, all right. I hope we may never have a worse man."¹ Lincoln's strength lay with the masses of the people, who had learned to trust him and to recognize his great ability in managing the war. Chase was anxious for the nomination, and, with well-feigned reluctance and with the usual coyness, gave his name to the movement. When, however, the Republicans of the legislature of his own state, Ohio, held a caucus and declared for Lincoln, Chase thought it wise to withdraw from the canvass, and did so. Other states followed the example of Ohio, and long before the convention it was a foregone conclusion that Lincoln would be renominated.

But there was in the Republican party an extremely radical faction that refused to abandon its hostility to Lincoln, and when his nomination was seen to be assured, this faction called a convention to meet at Cleveland, Ohio, to name its own candidate. It nominated John C. Frémont, who a few days later came out with his letter of acceptance, in which he denounced the administration, and hinted that he would retire from the contest if the coming Republican convention would select any candidate other than Lincoln.

The Republican convention met in Baltimore on the 7th of

¹ Nicolay and Hay, Vol. VIII, p. 316.

June, and the name "Union" was substituted for "Republican" to accommodate the war Democrats that were acting with the party. The platform pronounced in favor of putting down the rebellion without compromise, and of an amendment to the Constitution abolishing slavery forever in the United States. It also approved the administration of Lincoln in vigorous terms, and pledged the national faith for the payment of the public debt. Lincoln was nominated on the first ballot amid great enthusiasm. He received the votes of all the delegates except those from Missouri, who voted for General Grant.

**Nomination
of Lincoln.**

The choosing of a candidate for the vice presidency brought a contest. It was generally conceded that a war Democrat should be selected, and Andrew Johnson of Tennessee was chosen, for two reasons: First, the choice would "nationalize" the Republican party, which had hitherto been considered sectional, and second, it would have a salutary effect on the nations of Europe. By thus choosing the second highest official in the land from the heart of the Confederacy, an impression would be made on foreigners that the country was simply dealing with a rebellion and was not in reality divided. The choice of Johnson as his running mate was favored by Lincoln, as was disclosed many years later.¹ He made his wishes known to a few friends, who had much influence in shaping the action of the convention.

The weeks that followed the Republican convention were marked by great discontent throughout the country. The people were weary of the long war, which seemed less hopeful now than the year before after the victories at Gettysburg and Vicksburg. Two attempts at reconciliation had been made, without success. President Davis, approached on the subject, declared that he would listen to no overtures for peace except on the ground of southern independence. Lincoln had said with equal decision that the war could end only on the ground of a restored Union and the abolition of slavery. The gloom of the northern people was great. The public mind dwelt on the failure of Grant's campaign before Richmond, the awful slaughter at Spottsylvania and Cold Harbor, the defeat at Kenesaw Mountain, the death of the noble McPherson, and the threatening of Washington by the army of Early.

There was, furthermore, great dissatisfaction with Lincoln. Nearly all the leaders of the party believed that the convention had

¹ See McClure's "Lincoln and Men of War Times," Appendix. Vice President Hamlin received 150 votes on the first ballot.

made a serious mistake in renominating him, and there was a loud cry for a new convention and a new ticket. "Mr. Lincoln is already beaten. . . . He cannot be elected," wrote Greeley. Thurlow Weed wrote Seward that the election of Lincoln was impossible. The chairman of the Republican national committee, Henry J. Raymond, informed the President that there was but one voice from all sides, "the tide is setting strongly against us." Lincoln fully believed that he would be defeated, and his unselfish soul was shown by a private memorandum stating that it would be his "duty to so cooperate with the President elect to save the Union between the election and the inauguration."¹

All this convulsion took place in Republican ranks before the meeting of the Democratic convention. This convention met in Chicago on August 29. Governor Seymour of New York was its permanent chairman, and Vallandigham one of its leading spirits and the writer of its platform. The platform in substance pronounced the war a failure and demanded that immediate efforts be made for a cessation of hostilities, that a convention of all the states be held, to the end that peace be restored on the basis of a restoration of the Union. On the first ballot General McClellan was nominated for President, and George H. Pendleton of Ohio was nominated for Vice President.

The Democratic platform was very weak in its two main points: its pronouncing the war a failure,² and its call for a conference with the Southern states to treat for peace on the basis of a restored Union. The first did not take account of the sentiment of the vast number of northern families from which a father, a husband, or a brother was serving in the ranks or had filled a soldier's grave. How could these admit that the war had been a failure and that their loved ones had fought and died in vain? The second did not take account of the fact that the South was still defiant and hostile, that it had recently declared through its President that it would treat for peace on no ground except that of separation. And yet, on these two points the Democrats had laid down the gauge of battle, and on these the people must decide the election.

Scarcely had the Chicago convention completed its work when a reaction set in in favor of Lincoln. Frémont withdrew from the con-

¹ See Nicolay and Hay, Vol. IX, p. 251.

² This item of the platform McClellan practically set aside in his letter of acceptance; but the letter had little effect on the campaign.

test in his favor, and the leaders were inspired to renewed efforts. The pithy phrase of Lincoln that it was "not best to swap horses when crossing a stream" touched a popular chord. But this was not all. The news from the front was suddenly changed in complexion. First came the report of Farragut's great victory in Mobile Bay; this was followed early in September by the news of Sherman's capture of Atlanta, and a few weeks later came the thrilling account of Sheridan's terrible devastation in the Shenandoah Valley, which insured henceforth the safety of the capital. "Is the war a failure?" tauntingly asked the Republicans; and the Democrats could make no satisfactory answer. The autumn state elections added another to the unerring signs that pointed to a victory for Lincoln. The election was held on November 8, and Lincoln electors were chosen in all the states except three, New Jersey, Delaware, and Kentucky, he receiving 212 electoral votes to 21 for McClellan. The meaning of this voice of the people was twofold,—that the Union must be restored at all hazards, and that slavery in the United States must be no longer.

THE FINAL WORK OF THE ARMIES

We left Sherman at Atlanta, where he remained for six weeks, sending the residents out of the city and making it a purely military center. Hood hovered around with his army for some weeks, fighting several small engagements, and then determined to move northward into Tennessee. By this move he expected to draw Sherman after him and thus to force him to abandon all he had gained in the campaign against Atlanta; or, in case Sherman did not follow, Hood felt that he would defeat any force that he might encounter, after which he would march into Kentucky and then deflect eastward and join Lee against Grant in Virginia.¹ But Sherman, after pursuing Hood as far as Gaylesville, Alabama, left Thomas with an army to take care of him, and returned and prepared for his great march from Atlanta to the sea.

Receiving permission from General Grant to do as he thought best, Sherman, after destroying the machine shops and other public property in Atlanta, set out, November 15, on his historic march. The army was sixty-two thousand strong, with General O. O. Howard in command of the right wing and General Henry W. Slocum of the left, while Judson Kilpatrick was at the head of the cavalry. There

¹ See "Battles and Leaders," Vol. IV, p. 426.

were sixty-five heavy guns, six hundred ambulances, and twenty-five hundred wagons, each drawn by six mules. The army was instructed to march by four roads as nearly parallel as could be found, to begin marching at seven o'clock each morning, and to cover fifteen miles each day. The soldiers were permitted to forage freely, but not to enter private houses. All railroads and public property that might

aid the Confederate armies were to be destroyed. The distance to the sea was about three hundred miles; the swath cut by the army was from forty to sixty miles wide. But little opposition was encountered in the march, and it was play compared with the campaign of the past summer against Atlanta. By the middle of December the army came in sight of the sea, reduced Fort McAllister, opened communication with Admiral Dahlgren's fleet, and made ready to besiege Savannah. General Hardee, who held the city, evacuated it by night, and Sherman entered it on the 21st of December. He then sent President Lincoln the well-known dispatch, "I beg to present to you, as a Christmas gift, the city of Savannah, with one hundred and fifty heavy guns and plenty

of ammunition, and also about twenty-five thousand bales of cotton." Thus after nearly four years in the possession of the Confederates, this old historic city of the Revolution, where Pulaski had fallen, came again into the hands of the Federal government.

General Thomas, as we have noticed, had been sent to Tennessee to deal with Hood. Sherman left Thomas but twenty-seven thousand men, retaining to himself more than twice that number for the easier task of marching to the sea. Hood's force consisted of forty thousand infantry and ten thousand cavalry under Forrest. Had Thomas been beaten by Hood the blame would have fallen on Sherman, and the country would have severely condemned him for leaving Thomas with an insufficient force. Thus the status of Sherman's name in history rested with Thomas. With many a commander the risk would have been greater, but Thomas was the Rock of Chickamauga. He occupied Nashville, where he was joined the last of November by General A. J. Smith with fourteen thousand men from Missouri, and by some nine thousand stragglers and colored troops, raising his army to over fifty thousand men. But this did not excuse Sherman, for if Hood had not been delayed three weeks in Alabama, waiting for supplies, he would have struck the Union army before it had been reënforced. Hood was now moving rapidly toward Nashville, where Thomas held the main army. Scho-

field, however, had been sent with two corps to retard the enemy, and he retreated before him to Franklin, Tennessee, where he took a strong position and stood for battle. Here Hood made an attack on the afternoon of November 30. With the valor of desperation the Confederates assaulted again and again, continuing till midnight. They lost several generals and six thousand men; but they failed to dislodge Schofield's army or to inflict upon it half the loss they had themselves sustained. Soon after midnight the Union army continued its march and by noon of the next day it had joined the main army at Nashville. Hood was soon in front of Nashville with his challenge to battle. Thomas waited, and two weeks passed. Lincoln and Grant became very impatient lest Hood escape, and they threatened to remove Thomas if he did not strike. Strange that they did not know the man better. Thomas replied that he could not get ready sooner, and, if relieved, he would "submit without a murmur." On December 9 he was ready; but then came a freezing rain and he decided to wait for a thaw. Grant now lost patience and determined to go to Nashville in person. Arriving at

**Battle of
Franklin.**

Washington, he received a dispatch from Thomas stating that he would attack the next day.

Thomas's tactics at Nashville were perfect. The city, situated within a great double curve of the Cumberland River, is inclosed on the south by a chain of low hills. On these Thomas held his army facing the enemy. His plan was to threaten and hold the enemy's right, and swing his own right, as on a pivot, and overwhelm the enemy's entire left wing. The plan was eminently successful. Hood was pressed back with heavy losses. The next day the battle was renewed, and before nightfall the Confederate army was utterly demoralized, routed, and in full flight. Hood escaped across the Tennessee with scarcely half his force. He could not rally; his army was practically destroyed. The defeat was the most decisive one suffered by any army in a general engagement in the whole war. And it is said that the plan of Thomas is the only one of the Civil War that is now studied as a model in the military schools of Europe.¹ The power of the Confederacy was now destroyed west of the Alleghany Mountains.

The opening of the year 1865 found General Grant in the trenches before Petersburg and Sherman at Savannah. The next plan was that Sherman should move northward through the Carolinas to the aid of Grant in crushing Lee and ending the rebellion. He had already marched four hundred miles from Chattanooga, and a greater distance yet lay before him. Since leaving Atlanta his army had diminished but little, and it was fully sixty thousand strong when he left Savannah on the 1st of February.

Before this march began, however, and preliminary to it, the capture of Wilmington, North Carolina, was decided on. This was the last opening the Confederacy had to the outside world, and it was guarded by Fort Fisher. About the middle of December, 1864, Admiral Porter approached this fort with a strong fleet, and soon reduced it to ruins; but the garrison was overpowered only after a desperate assault by a land force under General Terry, whom Grant had sent to the aid of Porter. This closed the mouth of the Cape Fear River, shut the Southern states out from the world, and thus completed the blockade proclaimed by Lincoln in April, 1861.

¹ McClure's "Lincoln and Men of War Times."

Sherman's march from Savannah was far more difficult than his more famous march from Atlanta to the sea; for now he had to cross the rivers instead of following their courses (and most of the bridges were destroyed), and he found more opposition from the enemy. There were also vast swamps and marshes to be crossed. The right wing of the army was still commanded by Howard and the left by Slocum. At Orangeburg a slight battle was fought, and another before Columbia, the enemy being led by General Wade Hampton. Columbia surrendered on February 17, Hampton escaping after setting fire to five hundred bales of cotton. The fire soon spread, and a large part of the town was consumed.¹ Charleston was also abandoned by the Confederates, who, on leaving, set fire to the great stores of cotton. The flames spread until the greater part of the city was laid in ashes. Sherman moved on, without touching Charleston, toward Goldsboro. The opposing forces were again in command of Johnston,² who was defeated in a sharp battle at Bentonville. On the 23d of March Sherman occupied Goldsboro, where he was joined by Schofield, who had been sent with a force from Thomas's army at Nashville, and Terry, who had captured Fort Fisher. Sherman was then in a position to cooperate with Grant. Meanwhile Stoneman was sent with his cavalry to destroy the railroad from Virginia to Tennessee, and thus cut off from Lee an important source of supplies.

**Burning of
Charleston.**

Another attempt had been made to bring about peace. A. H. Stephens and others met Mr. Lincoln and Secretary Seward at Fortress Monroe, February 3, in a long conference. But as Lincoln refused all overtures except on the basis of a restored Union and the abolition of slavery, the conference came to nothing. He declined absolutely to treat with the Confederacy as a government, and the Southerners went back and did everything in their power to "fire the southern heart."³

¹ Mr. J. F. Rhodes in an article in the *American Historical Review*, Vol. VII, p. 485 sq., gives as his opinion that Columbia did not take fire from the burning cotton, but was set on fire by drunken soldiers, negroes, and escaped prisoners.

² Lee had been made commander in chief by act of the Confederate Congress (January 19), and it was he that reappointed Johnston, against the wishes of President Davis, who greatly disliked Johnston.

³ Mr. Stephens, in trying to induce Lincoln to treat with the Confederacy, cited the case of Charles I of England treating with his rebellious subjects. Lincoln answered: "I am not strong on history. I depend mainly on Secretary Seward for that. All I remember about Charles is that he lost his head."

The days of the Confederacy were almost run. Atropos was ready to cut the thread. The coils of the Union army were tightening around Petersburg and Richmond. Lee had been empowered to treat for peace, and on March 3 he made overtures to Grant. But Grant, after receiving instructions from Washington, answered that this power belonged to the President alone. Lee then informed Davis that Richmond could hold out but a little time, and it was decided that Lee should lead his army toward Danville and make a junction with Johnston. But first Lee decided to make an assault on Grant's lines. He sent General J. B. Gordon to attack Fort Stedman, and the attack was made with great vigor. But Grant had expected just such an attack, and had prepared for it. His artillery opened on Gordon's men, and half of them were cut down, many were made prisoners, and the rest fled in disorder.

Grant's object was to prevent the escape of Lee southward. He sent Sheridan with his cavalry to Five Forks, a few miles from Petersburg, to try to gain the Confederate rear. Here Sheridan met a strong force, which was soon increased by Pickett with seven thousand men, and Sheridan was pressed back to Dinwiddie Court House. But Grant sent Warren to his aid, and a desperate battle followed, resulting in the utter rout of the Confederates, five thousand of whom were captured. Never did Sheridan display his powers better than at Five Forks.

It is sad to relate that the war continued another day after Five Forks. Why should another life have been sacrificed when the outcome was so easy to foresee? It is no credit to Lee¹ and Davis that they again pitted this faithful, obedient army against an antagonist now three times its size. Grant had ordered a general assault at Petersburg all along the line, to begin at daybreak on Sunday, April 2. The Confederates met it as only brave men could. Hundreds were slain on each side. Long before night the battle was over and Grant had taken twelve thousand prisoners.

On that Sunday morning, as Jefferson Davis sat in his pew at church, an officer walked up the aisle and handed him a telegram from Lee. Davis opened it and read, "Richmond must be evacuated this evening." Concealing his feelings, he rose and left the church.

¹ And yet the calm letter that Lee wrote Davis on April 2, discussing the methods of recruiting the army, etc., would indicate that he had no thought that the end was near. See Nicolay and Hay, Vol. X, p. 183.

Calling his Cabinet together, he hastened to pack the archives of the government and to board a train for the southward. The fatal news spread through the city and the scene during that afternoon, the coming night, and the next day was such as no pen can describe. All social order was destroyed to its foundations. Many left the city, but the great majority could not do so. The nine ships building in the river were set on fire, and so were the bridges and the great tobacco and cotton warehouses. The arsenal was also fired, and the thousands of bursting shells sounded like an artillery battle. Barrels of liquor were emptied into the streets, and hundreds of the rabble became intoxicated; and these, joined by the convicts from the penitentiary, ran howling like demons through the streets. The fire spread to the city, and seven hundred buildings were soon in flames, and the crash of falling walls was added to the general pandemonium. The people rushed from their homes to the streets and to Capitol Square with the few effects they could carry. Such was the condition of Richmond on the 2d and 3d of April, 1865, — the proud city on the James that had defied the Union armies for four years. On the 3d the Union troops entered the city, and within a few days order was in some degree restored.¹

**Fall of
Richmond.**

Lee thought only of escape with his army, but at every turn he found Grant's troops planted in the way. Grant denied himself the pleasure of entering the conquered city. He determined to capture Lee's army then and there. Lee reached Amelia Court House, some thirty miles from Richmond; but here he found that his expected train of supplies had gone on to Richmond; and his starving army had to stop a day to forage. This enabled Sheridan to pass around him and gain his front. Lee then attempted to march around the Federal left toward Lynchburg. Grant divided his army into three parts, placing one part north of Lee, another south, a third in direct pursuit, while Sheridan with the cavalry was sent to his front. Ewell's corps and Pickett's division were soon cut off and forced to surrender. Lee's army, now cut down to thirty-five thousand men, was in a deplorable condition; but it fought a fierce battle to gain the bridge across the Appomattox, succeeded, and hurried on toward Lynchburg. But Sheridan's cavalry and Ord's infantry were again planted in the way. There was nothing left but surrender, and the despairing Confederates raised the white flag. This was the 9th of April. Grant had demanded a surren-

¹ President Lincoln visited Richmond on April 4, while the fires were yet burning.

der on the 7th. Lee offered to treat for peace, but Grant had no authority to do this. The great commanders met at the house of a Mr. McLean at Appomattox Court House, and Grant wrote out the terms of surrender: the army, officers and men, were to be released on parole, not to take up arms against the United States until properly exchanged; the officers were to retain their side arms, baggage, and horses. To this Lee agreed, and Grant then generously added that the private soldiers might also retain their horses, as "they would need them in their spring plowing." Grant refused to permit his army to fire a salute in honor of their victory. Lee informed Grant that his men were in a starving condition, and the latter ordered that they be fed from his supplies. The number of men surrendered was 28,231, not counting the thousands who had deserted or had been captured during the preceding weeks.

When Johnston learned that Lee had surrendered, he saw that his hour had come. He therefore sought Sherman, and the two agreed on terms of surrender; but Sherman exceeded his authority in attempting to arrange the future relations between the seceded states and the national government.¹ His action was disapproved at Washington; he so informed Johnston, and prepared for further hostilities. But Johnston was willing to accept the terms granted

Surrender of Johnston, April 26. Lee at Appomattox. The two generals met again on April 26, and the surrender was effected.² A week later all the remaining Confederate forces east of the Mississippi were surrendered by General Richard Taylor, and on May 26, E. Kirby Smith surrendered the last Confederate army west of the Mississippi — and the great tragedy of the Civil War was at an end.

A grand review of the Union armies took place in Washington on May 24 and 25, when sixty-five thousand men marched through the streets. The parade was viewed by the highest civil and military officials of the nation. But the one on whom, above all men, the marching veterans would have loved to cast their eyes, — the one who, more than any of the commanders in the field or on the sea, had attracted the world's notice and the nation's love, — this one was not there.

¹ Grant had also exceeded his authority in granting full amnesty to all of Lee's army. But in the general rejoicing this was overlooked. Sherman, acted in perfect good faith, nor did he deserve the abuse heaped upon him by Stanton and others on account of his mistake.

² Johnston's surrender, made at Durham's Station, Virginia, included all his military department, some thirty-seven thousand men.

DEATH AND CHARACTER OF LINCOLN

The most atrocious murder in American annals was committed on the night of April 14, 1865, in the city of Washington, when the great war President suffered death at the hands of an assassin. The day had been one of rejoicing throughout the land over the prospects of early peace. It was the fourth anniversary of the fall of Fort Sumter. A great celebration had taken place at Charleston, and General Robert Anderson had raised over the ruined walls of the fort the identical flag that he had been forced to haul down four years before. The country was settling down to the serene happiness of peace, and none was happier than the President, who looked forward to four years of comparative rest in his great office. But his duties were still arduous, and on the 14th, after a long session of the Cabinet, after meeting many officials and doing much business, he sought diversion by attending the theater. He was a little late, and the play had begun, but when the President entered a private box, the acting stopped for the moment and the audience rose and cheered. The play was then resumed, and it continued till a few minutes after ten o'clock, when the audience was startled by the sharp report of a pistol. The President was shot by an assassin, who then leaped from the private box to the stage, dramatically brandished a dagger before the audience, cried, "*Sic Semper Tyrannis*,"¹ ran down the back stairway, leaped upon a horse held in waiting, and galloped away in the darkness. The assassin was John Wilkes Booth, an actor, who was at the head of a plot to murder the chief officials of the government. At the moment he entered the theater one of his accomplices, Lewis Payne, entered the chamber of Secretary Seward, who had been seriously hurt by being thrown from his carriage, and, after a desperate fight with Mr. Seward's son and other attendants, stabbed the secretary several times and then made his escape, after having inflicted terrible wounds on five persons.²

Mr. Lincoln was shot through the brain. His head fell forward and his eyes closed, but he uttered no sound. The audience was stupefied with horror at the appalling tragedy, and few thought of

¹ The state motto of Virginia.

² All recovered. Mr. Seward's son, Frederick, did not recover consciousness for several weeks.

attempting to apprehend the murderer till he had made his escape.¹ The President was carried to a house across the street, and physicians were summoned. He continued to breathe through the night, but he did not recover consciousness. At a few minutes past seven o'clock on the morning of the 15th, as the physicians and members of the Cabinet were standing about the bed, the breathing ceased and the great life was over. Stanton first broke the silence by saying, "Now he belongs to the ages."² The people mourned their great dead as never before in American history. The funeral train passed through the chief cities of the East, taking nearly the same route by which Mr. Lincoln had come to Washington in 1861. At every stopping place the remains were viewed by silent, mourning thousands, many of whom had come hundreds of miles to pay their last respects to their beloved President. The body was carried to Springfield, Illinois, the President's home, and there on the 4th of May it was laid to rest.

From the time of Lincoln's death until the present his fame has been rising. He is at this day considered, not only America's ablest President, but also one of the most powerful world figures in history. His name alone stands coördinate with that of Washington in the history of his country. His achievements were two, — either of which would embalm his name forever in history, — the destruction of slavery and the preservation of the Union. His motives in striking at the evil of slavery were the same as those held by millions of his countrymen, — the belief that no man has a right to enslave his fellow-man, and that slavery was a political evil and a drawback to civilization. But his motives in saving the Union were higher than those of most men. Others of the North rushed to arms in 1861 because they loved the Union and would not have it divided. Lincoln grasped the subject in its larger sense. He saw that the principle of democracy, of self-government, was at stake, that the welfare of the "whole family of man" was wrapped up in the issue. These two great ends could not have been achieved by Lincoln but for the powerful and loyal nation at his back, and millions must share the honors of the victory; but as he was at the helm of the ship when the breakers came, as it was his masterly skill that guided the vessel and kept his subordinates employed, each in his

² Nicolay and Hay, Vol. X, p. 302.

proper place, it is only just that the chief glory of weathering the storm should fall to him.

No one now questions that Lincoln was a very great man; but it is not easy to point out the qualities in which he was great. Certainly he did not generally impress his immediate associates with his powers, and it is a strange fact that his own Cabinet was longer in discovering those powers than were the masses of the people. Many did not realize what a vast man he was until after he was gone; then the consummate skill with which he had managed affairs in that critical period began to appear, and to this day the deeper one studies into the words and acts of Lincoln the greater he seems. His greatest quality was perhaps his ability to read public opinion, and few public men have ever enjoyed a fuller confidence of the masses. He not only led the people to believe in his sincerity of purpose and his wisdom, but he had a profound belief in the correctness of his own judgment.¹ He was a man of infinite tact and patience, and his great kindness of heart impressed itself upon all who were about him.²

**Character of
Lincoln.**

No one attempts to explain the origin of the genius of Lincoln. No character in history has proved a greater surprise to the world. "Only America has produced his like," says a British historian.³ Born among the lowliest of the lowly, trained in the merciless school of adversity and penury, he rose in public life and became the leading American of his time. Entering upon his great office at the moment when the forces of freedom and of slavery were ready to grapple in deadly conflict, he grasped the reins of government with a master hand; and but for his consummate ability, many believe the Union could not have been saved.

In the life of Lincoln we find a series of contradictions. He was untrained in the art of oratory, yet an audience would listen unwearied as long as he chose to speak. He never studied logic nor the arts of casuistry, yet his speeches on the slavery question were the most concise, logical, and unanswerable produced by that generation of eloquence. In literature he was unversed, yet in his Gettysburg speech and his second inaugural address are literary gems that will live as long as the language in which he spoke or the nation that he

¹ Blaine, Vol. I, p. 547.

² While not devoted to any particular creed, Lincoln was deeply religious at heart, and his reverence for God is shown in almost every state paper that he wrote.

³ Goldwin Smith.

served. Apparently confiding with his friends, his inmost soul was fathomless and was veiled from every eye. Awkward and ungainly in appearance, there was something so deeply impressive in his face that none who ever saw him could forget it. Always ready with a witty answer or a droll story, there was yet a strange vein of sadness that pervaded his whole life, and was always visible in his countenance.

Lincoln was the Providential instrument in guiding the nation through the wilderness of threatened disunion, and it seemed sad that when the wanderings were at an end, and, like Moses, he could ascend the mountain and view the promised land, he was not permitted to enter. But Lincoln's work was done. He was probably less fitted for the arduous work of reconstruction than for the great work that was assigned him. Many who are not in sympathy with the harsh measures of Congress that characterized the reconstruction period, believe that Lincoln would have swung too far in the opposite direction; that he was too great-hearted, that his soul was too generous and forgiving, for him to have been the proper one to adjust the legal relations between the emancipated slave and his former taskmaster, and that in the death of the great President, as well as in his life, we can see the hand of God.¹

FOREIGN RELATIONS—THE ALABAMA

Aside from the Trent Affair and the recognition with undue haste of the belligerency of the South by the European nations, there were two items in our foreign relations during the war that became serious. One was the building in British waters of Confederate cruisers to prey on United States shipping; the other was the attempt of France to set up a monarchy in Mexico. The one was a palpable violation of neutrality, the other a violation of the Monroe Doctrine.

The English Foreign Enlistment Act, passed in the reign of George III, forbade the equipping, furnishing, fitting out, or arming within the British dominions of any vessel to be used against any state with whom his Majesty should then be at peace. This was construed to mean that a vessel could be built for such a purpose in British waters if fitted out elsewhere. Mr. J. D. Bullock, the Confederate naval agent in England, soon found therefore that the

¹ Others believe that Lincoln, with his tact, his firmness, and his great popularity, would have won Congress to his plan of reconstruction, and would have thereby left far less bitterness between the sections than was actually the case. See next chapter.

English shipyards were open to him. The first vessel to be so built was the *Florida*; but the most notorious was the *Alabama*, to which, as an example of all, we give more particular attention. The *Alabama* was built on the Mersey, by Laird and Sons, the senior member of the firm being a member of Parliament. The ship, known while building as "290," was a vessel of about a thousand tons, her engines representing three hundred horse power. It was generally understood that she was intended for the Confederate service, and our minister at London, Mr. Adams, procured the necessary evidence, and called on the British government to detain her. But the matter was delayed, owing to the illness of the chief advocate, and the "290," under pretext of making her "trial trip," escaped. She steamed to the Azores, where she was equipped by two British vessels, and was placed in command of Raphael Semmes. She then unfurled the Confederate banner, and on August 24, came out in her true colors as a privateer, and took the name *Alabama*.

After capturing a few American vessels near the British coast, the *Alabama* started on her wonderful tour of the oceans. She swept across the Atlantic to within two hundred miles of New York, thence turning southward to the West Indies. By the 1st of November she had captured twenty-two Federal vessels. In the early spring of 1862 the *Alabama* made another grand detour, touching the coast of Brazil, and proceeding thence eastward to South Africa and to the Bay of Bengal, where she spent the following winter, making prize of every American vessel that came within her reach. In June, 1864, we find her in the harbor of Cherbourg, France. Here also was the United States war vessel, the *Kearsarge*, commanded by Captain John A. Winslow.

Semmes had been twitted with being a pirate, and to prove the *Alabama* a legitimate war vessel, and to revive, if possible, the expiring question of the recognition of his new-born nation by the European powers, he challenged Captain Winslow to a naval duel. The challenge was accepted; and the two vessels, about the same in size and force steamed out to neutral waters and began their death duel.

People gathered in thousands on the shore to witness the strange, unnatural spectacle — the mortal strife between the estranged brethren of the same household. The two vessels began circling round and round, lessening the distance between them and pouring in their broadsides. One shell from the *Kearsarge* exploded on the *Alabama* and killed or wounded

The naval
duel.

eighteen men. The *Alabama* was soon disabled, and after an hour of conflict she raised the white flag; but before her crew could all be rescued she sank beneath the waves. For two years she had plowed the main unhindered on her mission of destruction. She had destroyed sixty-nine vessels,¹ ten million dollars' worth of property. But at last her meteoric course was ended, and, with many of her devoted crew, she found a final home on the bottom of the ocean, on whose bosom she had reigned, a queen without a rival, until her too-sanguine master made this hapless challenge to fight a duel with the *Kearsarge*.²

Nearly a score of Confederate vessels, built in English waters, preyed on American vessels. The most destructive, next to the *Alabama*, was the *Shenandoah*, which made thirty-six captures; the *Florida* made thirty-seven and the *Tallahassee* twenty-nine. The subject gave rise to a serious international dispute, to be noticed on a later page.

The occupation of Mexico by France also came near bringing international trouble. Mexico had suffered a revolution almost every year, and sometimes oftener, from the time she had won her independence in 1824, to 1858. The country was usually in a state of anarchy, and was unable to protect the lives and property of foreign residents and sojourners within her bounds. In 1861 the foreign debt amounted to nearly \$100,000,000, but the treasury was bankrupt, and the Mexican Congress decided that no foreign obligation should be paid for two years. This was done under President Benita Juarez, a full-blooded Indian, a highly educated and honorable man. The intention was, not to repudiate the debts, but to recuperate the treasury.

France, England, and Spain, however, had grown impatient and they decided to make a joint demand for immediate payment of their claims on Mexico. But as Mexico was utterly unable to pay, they sent a fleet to take possession of Vera Cruz and collect the customs of that port until the claims were settled. This was in the spring of 1862. In a short time the Mexican government made arrangements by which England and Spain were satisfied, and they withdrew their vessels. But France refused to accept the same

¹ Bullock's "History of the Confederate States Navy," p. 815.

² See "Side Lights," Series II, p. 224. Most of the survivors of the *Alabama* became prisoners of Captain Winslow; but Semmes was rescued by a British vessel and given his freedom.

terms, and then it developed that she had ulterior motives — nothing less than the seizure of the Mexican government and the setting up of a monarchy on the ruins of the Republic. As a pretext the French espoused the famous Jecker bond swindle. A few years before this a revolutionary government in Mexico had issued \$15,000,000 in bonds, and these were purchased by the Swiss banker, Jecker, at five cents on the dollar. France now demanded full payment of this fraudulent debt, and as Mexico could not pay, determined on the conquest of the country. This was accomplished by midsummer, 1863, and Maximilian, archduke of Austria, was invited to become the emperor of Mexico. A year later Maximilian, who was doubtless a sincere man, but not a statesman, assumed the government, the Mexicans at the same time making a pretense of being content with the new order. The French army, however, remained, and on it rested the security of the throne.

**France in
Mexico.**

All this was galling to the people of the United States. It was the most radical infraction of the Monroe Doctrine yet attempted. But as it occurred during the darkest period of the Civil War, Mr. Seward managed the matter with admirable tact, lest the life of the nation be endangered. Not until after the battle of Gettysburg and the fall of Vicksburg did he inform the French that the proceedings in Mexico were distasteful to the United States government. After the war had closed, Seward came out boldly and demanded of the Emperor Napoleon that the French armies be withdrawn from Mexico; and to emphasize this demand General Sheridan was sent into Texas with fifty thousand veteran troops. The Emperor of France now clearly understood, and ere long he withdrew his armies. Maximilian, however, remained, in the belief that he had won the Mexican people, and that they would willingly remain his subjects. But in this he was sadly in error. The deposed President Juarez marched upon the capital with an army. The unhappy Maximilian was easily overpowered and captured. He was executed in 1867, and Mexico again became a republic.

**Execution of
Maximilian.**

It is a pleasure to turn to our relations with Germany and Russia during the war. Not only was the German Confederation in full sympathy with the Union cause, but thousands of German-Americans gave their lives in defense of that cause. But Russia was the most conspicuous foreign friend we had in war times. Not long after the

war opened, the Czar revealed to the United States that some of the powers were contemplating concerted action against the Union. In the spring of 1863 a fleet of Russian war vessels was stationed in New York harbor and another at San Francisco, where they remained for many months. The admiral of the fleet at New York, being asked why he was here, answered that he did not know, that his orders were sealed and were not to be broken, except in a certain contingency which had not occurred. It was afterward learned at St. Petersburg that the orders were, that in case of war between the United States and England or France, the Russian fleets were to report to the President for duty. Various motives for the action of Russia are given, the most plausible of which is that the Crimean War had left with her bitterness toward France and England.

OBSERVATIONS ON THE WAR

The magnitude of the Civil War may be realized by contrasting it with the Revolution. The army of McClellan in 1862 or that of Grant in 1865 was at least seven times greater than any ever commanded by Washington. When Lee surrendered at Appomattox his army was less than half its usual size, and yet he surrendered twice as many men as Burgoyne at Saratoga and Cornwallis at Yorktown combined.¹ There were cavalry raids in the Civil War that are scarcely mentioned in history; any one of which in one month destroyed more property and took more captives than did any British army of the Revolution in a whole year.

The cost of the Civil War in life and treasure was enormous. Of the northern armies one hundred and ten thousand men were shot dead or mortally wounded in battle, while two hundred and fifty thousand died of disease or accident. If the losses to the South were proportionally great, as they probably were, the war cost the nation at least half a million human lives, to say nothing of thousands who returned to their homes with broken health or maimed bodies. President Lincoln issued twelve calls for volunteers, and the whole number of men enlisted was 2,773,400,² many of whom were reënlistments. The highest number of northern men in the field at one time (April, 1865) slightly

¹ Johnson, p. 321.

² This does not include one hundred and twenty thousand emergency men who were not in active service.

exceeded one million. The whole number of enlistments in the South probably reached a million.¹

The cost in treasure was equally astonishing. The expense to the government reached an average of nearly \$3,000,000 a day, and there was a public debt in August, 1865, of \$2,845,000,000. These figures take no account of the separate expenditures of the states and cities, amounting to nearly \$500,000,000, **Cost in treasure.** nor of the expense to the South, nor of the incalculable destruction of property. To all this must be added the interest on the public debt and the pensions paid to the soldiers, to the widows, and the orphans. The total cost of the war no doubt exceeded \$10,000,000,000. And yet the country increased in wealth and resources during the war and the period following it. The South, it is true, was ruined and exhausted; but the North was stronger and better equipped in 1865 than in 1861.

A great movement will always bring before the public gaze great characters who might otherwise have died unknown. In the Civil War several commanders in the field achieved fame of the first order; while in civil life the fame of only one, Abraham Lincoln, was greatly enhanced by the war. The reverse was true of the Revolution. Of the half dozen who achieved great fame in that period, only one was a commander of armies.²

The Civil War brought out no commanders of the very highest grade — certainly no Napoleons or Hannibals. The first place among the commanders is usually, and perhaps justly, awarded to Grant. He has been severely criticised. It is often stated that his army always outnumbered the army of his enemy, that he was simply a bull-dog fighter, was no tactician, and won his victories by brute force. Much of this is true, and it is also true that Grant was want-

¹ "Battles and Leaders," Vol. IV, p. 768. Livermore makes a higher estimate based on the census of 1860; but no accurate records of Confederate enlistments were kept.

² Washington stands without a rival as the military leader of the Revolution. Greene, who comes next, must be classed below him. But Franklin, Jefferson, Patrick Henry, and John and Samuel Adams are all among the first-rank heroes in the popular mind. The Civil War gave us Grant, Sherman, Sheridan, and Farragut, closely seconded by Meade and Thomas: and, if we include the other side, Lee and Jackson. But outside the battle field Lincoln stands grandly alone. Other great names we have: Seward, Sumner, Chase, Fessenden, Wade, and Stevens; but most of them had reached the acme of their fame before the war, and none of the galaxy is classed in popular fancy as a star of the first magnitude. — Note from "Side Lights," Series II, p. 48.

ing in that essential to a great commander, — personal magnetism, the ability to electrify an army with his own spirit. But with all this, the facts remain that Grant did at times display great power as a tactician, and that the three great surrenders, at Donelson, Vicksburg, and Appomattox, were all made to him.

Next to Grant stands Sherman and then Sheridan. Sherman displayed extraordinary talents at Shiloh and in the Atlanta campaign, as did Sheridan at Cedar Creek and at Five Forks. **Great military leaders.** Sheridan possessed the power above all men in the war, except Stonewall Jackson, to infuse the fire of his own soul into an army. Next to these we would place Thomas. There was nothing more grandly heroic in the war than the stand made by Thomas at Chickamauga, and there was no battle more perfectly planned than the battle of Nashville. But Thomas never received the honor he deserved. Why the name of Thomas was not mentioned in the congratulatory order to the officers and men who fought at Mill Spring; why he, instead of Rosecrans, did not succeed Buell after Perryville; and why General Grant in his *Memoirs* persistently withholds from Thomas the credit he deserves, are among the war mysteries not yet revealed. Rosecrans gave much promise for a time, but he never recovered from his unfortunate disaster, for which he was not to blame, at Chickamauga.

On the southern side there were at least five able commanders — Lee, Jackson, the two Johnstons, and Longstreet. The fact that two of these were slain in battle before the issue of the war was decided may have had much to do, if not with the ultimate result, certainly with the duration of the war. Albert Sidney Johnston was at first believed to be the ablest commander in the South, and Jefferson Davis declared that when Johnston fell at Pittsburg Landing, the cause of the South was lost. The worth of Jackson is well known. Lee declared that he would have won a mighty victory at Gettysburg had Jackson still been with him, and it is possible that he would have done so. Bishop Polk ranked next in importance among the southern slain, but his death did not perceptibly affect the outcome.

On the northern side at least four prominent men were killed, — Baker, Reynolds, Sedgwick, and McPherson; but the death of none of these is believed to have affected the general result. One of the southern generals of some prominence was born in the North, — Pemberton, a native of Connecticut, — while two of the strongest northern commanders — Farragut and Thomas — were of southern

birth. It will be noticed that all the generals who achieved the highest success were graduates of West Point. A few volunteers, however, such as John A. Logan, N. P. Banks, Lew Wallace, Butler, Phil Kearney, Nelson A. Miles, Sigel, and Carl Schurz, made most creditable records. It is notable that no well-known commander of the war, except General Hunter, had reached the age of fifty years at the close of the war, and many of them were under forty.¹

In addition to the causes of northern success given on a preceding page, another must be mentioned, — the great superiority of Lincoln over Jefferson Davis. These two opposing chieftains were born in the same state, Kentucky, but a year apart. Both left their native state in early life, the one drifting northward absorbed the free-soil sentiment of his adopted section, until it became the guiding star of his life; the other, migrating to the cotton belt, espoused the cause of the slaveholder and became the leader of the far-famed aristocracy of the South. It is curious to speculate what might have been the history of our country had the direction of the migration of these two been reversed.

The most remarkable fact concerning the Civil War is that it wrought no permanent change in our civic institutions (aside from slavery), that it left no trace upon the people as regards local government, personal liberty, or freedom of speech, and that it did not change our character as a peace-loving people. For four years the President wielded almost imperial power, but the functions of his office were not permanently affected. No President since Lincoln has enjoyed greater power than those who preceded him. The thousands of arbitrary arrests and the suppression of many newspapers have left not a trace on our personal liberty and freedom of the press. At the close of the war the armies melted away like magic, the soldiers returned to the pursuits of peace, and the relative importance of the civil and military authorities was left absolutely the same as before the war. These facts we look upon with pardonable pride, as they prove our great steadiness and conservatism as a people.

What then were the results of the great war aside from the extinction of slavery? It readjusted the relations between the nation and the individual states, and established the nation on a permanent basis by eliminating from American politics the idea of state sovereignty and of secession; it transferred the primary alle-

¹ See Blaine, Vol. II, p. 29.

giance of the citizen from the state to the nation ;¹ and, by removing slavery, the war opened the way for a feeling of common brotherhood between the two great sections of the country, and led to the development of the vast resources of the South. The war was a surgical operation, severe indeed, but necessary to restore the normal health of the nation, and with all its cost it brought untold blessings to the United States. Never before the war was the development of the country so marvelous as it has been since ; never was there a feeling of oneness in all sections of our broad land as at present, and never in history was the theory of self-government so firmly established as a practical and enduring thing as to-day in the United States.

NOTES

Capture of Jefferson Davis.—The Confederate President, on escaping from Richmond, April 2, went with his cabinet to Danville, where they obtained rooms, set up the departments of the government, and issued an address to “fire the southern heart.” Learning of Lee’s surrender and of the approach of Federal cavalry, he hastened to move to Greensboro, North Carolina. Here he had an interview with Johnston and Beauregard, who declared that the cause was hopeless, and advised a surrender ; but Davis refused to give up. From here the party moved in all sorts of vehicles to Charlotte, North Carolina, thence to Abbeville, South Carolina, and thence to Washington, Georgia. On leaving Charlotte the company consisted of some two thousand persons, mostly cavalry from Johnston’s army, but it rapidly melted away until few were left except the fallen President, his family, one member of his cabinet, and a few servants. The aim was to move westward and join with the army of Kirby Smith west of the Mississippi ; but this was now given up, and it was decided that Davis leave his family and proceed on horseback to the coast of Florida and thence embark for Texas. The party encamped on the night of May 9 in a pine forest near Irwinville, in southern Georgia, and here at daybreak next morning they were captured by a band of Federal cavalry under Colonel Pritchard of Michigan. Davis was defiant and sullen, though he was well treated by his captors. He was carried northward, and imprisoned in Fortress Monroe. Here he remained for two years, when he was indicted for treason and released on bail, his bondsmen being Horace Greeley, Gerrit Smith, and Cornelius Vanderbilt. On Christmas day, 1868, President Johnson proclaimed a pardon for all hitherto unpardoned participants in the rebellion. This included Davis, who thus became a free man. He returned to his former home in Mississippi, where he lived for a quarter of a century in retirement, writing, meantime, his “Rise and Fall of the Confederate Government” in two large volumes.

Fate of Lincoln’s Assassins.—John Wilkes Booth was found to be at the head of a few conspirators, whose headquarters had been at Washington for

¹ This was accomplished by the Civil War and was put into permanent form by the Fourteenth Amendment to the Constitution.

several months. Their intention was to abduct President Lincoln and carry him to Richmond; but as no opportunity offered, and as the surrender of Lee maddened their brains, already insanely devoted to the southern cause, they resolved to kill the President, the Vice President, Mr. Seward, and General Grant. But Grant went to Baltimore on the afternoon of the 14th, and thus escaped.

After the assassination, Booth escaped across the navy-yard bridge and, joined by an accomplice named Herold, rode till toward morning, and came to the house of Dr. Mudd, a sympathizer, who set the bone of Booth's broken leg. They were aided by sympathizers along the way, remaining a whole week with a Mr. Jones near Port Tobacco. At length they were rowed across the Potomac into Virginia; but the government detectives were scouring the country, and escape was impossible. Booth was greatly disappointed. He expected the whole South to rise up and call him a hero. On the night of the 25th of April, Booth and his companion were found sleeping in the barn of a Mr. Garrett near Port Royal, by a searching party under Lieutenant Doherty. Herold came out and surrendered, but Booth refused to do so, and the barn was fired. While it was burning, Booth was shot in the neck by Boston Corbett, and died three hours later.

Payne, who had attempted the life of Secretary Seward, left his hat when he escaped. This led to his capture. Hiding a few days near Washington, he stole into the city, hatless, in search of food, and was arrested. He and Herold, Mrs. Surrat, at whose house the conspiracy was hatched, and an accomplice named Atzerodt, were hanged, while Dr. Mudd and a few others were imprisoned for life, but were afterward released. The common belief at first, that Jefferson Davis was connected with the conspiracy to assassinate Lincoln, was proved to be wholly without foundation.

The Finances.— The government met its war expenses by laying an income tax of 3 per cent on all incomes over \$800, by tariff duties, by internal revenue, and by issuing interest-bearing bonds to the extent of \$1,199,000,000, and non-interest-bearing notes called "greenbacks" to the extent of \$450,000,000, as noted in the text. By the close of the year 1861, all banks had suspended specie payments, and the government soon did the same. All coin soon disappeared from circulation, and gold rose rapidly in value, reaching 285, its highest point, in July, 1864. A soldier's pay was \$13 per month with food and clothes. It cost the government about \$1000 a year to keep each soldier in the field. The Confederate notes depreciated until, in the spring of 1865, it required \$100 to purchase one dollar in gold, and \$1000 to purchase a barrel of flour, while a spool of thread cost \$20, and a pound of sugar \$75. This money, of course, had no purchasing power on the collapse of the Confederate government.

CHAPTER XXXI

ANDREW JOHNSON AND RECONSTRUCTION

THE surrender of the Confederate armies marked the end of bloodshed, but did not bring rest and peace to the American people. As at the close of the Revolution the great problem of self-government remained to be solved, so with the close of the Civil War came the serious task of restoring the seceded states to their normal relations in the Union.

THE NEW PROBLEM

Long before the war had closed, the subject of how to get the seceding states back into the Union began to occupy the attention of the President and Congress. The problem was a new one and had no precedent in history, nor was it provided for in the Constitution. Much eloquence was wasted on the subject of the relations the rebellious states bore to the Union during the war. Some took the ground that the seceding states had lost all standing as members of the Union, others, including President Lincoln, contending that the relations of the seceded states to the government were only suspended and could not be severed.¹

But the practical question was, how to reinstate the straying sisters in the family. On this subject the Republican party came to be seriously divided. One faction took the position that when the war was over and the Southern states had accepted the great twofold result,—the restoration of the Union and the removal of slavery, **The President and Congress** — they should be readily forgiven and should be readmitted with as little further humiliation as possible. **at variance.** To this class belonged President Lincoln, Secretary Seward, Generals Grant and Sherman, and many of the leading men of the North who had done all in their power to put down the rebellion. The opposing faction was far more radical. It comprised the

¹ This position was sustained in a Supreme Court decision (*Texas vs. White*, 1868), in which our country is pronounced "an indestructible Union composed of indestructible states."

majority of the members of Congress, led by Charles Sumner in the Senate and by Thaddeus Stevens in the House. These men and their followers were ready to humiliate the people of the South still further after defeating them in battle, and to grant them forgiveness only when they abjectedly begged it and acknowledged themselves utterly in the wrong. This was asking too much. If it be granted that the southern people were sincere in warring against the Union, how could they be expected, on their defeat, instantly to denounce the cause in which their fathers and brethren had died as a false one? Time alone can bring such changes; matters of the heart and conscience are wholly beyond the powers of legislative coercion. The South has come to see that a division of the Union would have been a disaster, and that slavery was an evil; but such a condition could not have been expected in 1865.

Early in the war Stevens took the ground that the seceded states had forfeited all rights under the Constitution, and should be dealt with as conquered territory. As the war drew to a close, he and his followers became more fierce in their attitude toward the South; they displayed an utter want of magnanimity, and they failed also to realize that their course was bad public policy. Many of the leading southerners would have been of great service, had they been given an opportunity, in leading their countrymen to accept in good faith the results of the war and to become good citizens. "I perceived that we had the unbounded respect," said General Sherman, "of our armed enemies. . . . I am sure that at the close of the Civil War the Confederate army embraced the best governed, the best disposed, the most reliable men of the South; and I would have used them in reconstruction instead of driving them into a hopeless opposition." This was also the view of President Lincoln; but not so with the leaders in Congress, and the result was a serious breach between the legislative and executive branches of the government.

Mr. Lincoln believed that as the pardoning power in the case of an individual rested with the Executive, the same should extend to the states. In December, 1863, he set forth a plan of reconstruction by which he offered pardon to those who had been in rebellion, with certain exceptions, on condition that they take an oath **Lincoln's plan of reconstruction.** to support and defend the Constitution and the Union, and to abide by the laws and proclamations relating to slavery. He also declared that a state might resume its place in the Union when one tenth of the number of the voters of 1860 had taken

this oath and had set up a state government. At the same time he confessed that the question of the admission of their representatives in the national Congress must be decided by the respective houses. It was not long before Louisiana and Arkansas took advantage of this offer, framed and adopted constitutions in which slavery was forever forbidden, and set up state governments under them. A little over one tenth of the presidential vote of 1860 was cast in these two states. The element of weakness in these governments lay in the fact that they could exist only when protected by national arms.

Mr. Lincoln acted in good faith. He bore no malice toward the people of the South. But his plan was not carefully completed, and he was wrong in not taking more pains to win Congress to his way of thinking. The opposition in Congress to the President's plan was at first feeble; but owing to a growing jealousy of the executive department, to a distrust of the ex-Confederates, and to a belief that Mr. Lincoln would be too lenient in his dealings with them, the majority came to be openly hostile to the "ten per cent" plan, and when the newly elected members from Arkansas presented themselves, they were unceremoniously rejected by both House and Senate. Congress then passed a reconstruction bill differing widely from the views of the President. By this bill the President was directed to appoint a provisional governor for each rebellious state, and this governor should, on the cessation of hostilities, make an enrollment of all the white male citizens; and if a majority of these should take an oath to support the Constitution, a convention should be called to frame a state Constitution, which should disfranchise the leaders of the rebellion, abolish slavery, and pronounce against the payment of any Confederate debt. This Constitution must then be submitted to a popular vote; if it were supported by a majority, the governor was to report the fact to the President, who should recognize the state government after obtaining the consent of Congress.¹

The measure was a severe rebuke to the President. It was sent to him on July 4, 1864, the last day of the session, and he quietly disposed of it by a pocket veto.² A few days after the session closed

¹ Even this bill was too mild for Stevens, the House leader, who denied all constitutional rights to the South, and favored confiscating the property of the leaders of the rebellion.

² The Constitution provides that a congressional bill must be signed or vetoed by the President within ten days after its passage. If he does neither, it will become a law without his signature. This, however, does not apply when Congress adjourns within the ten days. If in that case the President withholds his signature, the bill

he issued a proclamation declaring that he was "unprepared . . . to be inflexibly committed to any single plan of restoration," or to declare the governments in Louisiana and Arkansas set aside, thereby repelling the loyal citizens of these states. Had Congress been in session, a fierce conflict would doubtless have been precipitated. But the members had gone to their homes and would not again assemble for some months; and further, the country was in the midst of a presidential campaign, and any party schism at that time might have proved disastrous. Most of the leaders therefore smothered their resentment and continued to work for Mr. Lincoln's reelection.

But there were two notable exceptions. Senator Benjamin Wade of Ohio and Representative Henry Winter Davis of Maryland, chairmen of the respective committees on rebellious states, came out in a most caustic paper against the President. **The Wade-Davis manifesto.** This paper was published widely over the signatures of the two statesmen. It arraigned Mr. Lincoln in the severest language, declaring that the Union men in Congress "would not submit to be impeached of rash and unconstitutional legislation," that the President "must confine himself to executive duties — to obey and execute, and not to make the laws." This remarkable paper only served to rouse Lincoln's friends, and it doubtless contributed to his great majority at the polls in November. So fully had Lincoln won the hearts of the people, even in Maryland, that Mr. Davis, who had written this paper, was denied a renomination to Congress. When Congress assembled in December, the President wisely refrained, in his message, from making any reference to reconstruction, and the winter passed without further progress. But Congress was still defiant; and an open rupture with the President, when the great subject should again be reached, seemed inevitable. Lincoln adhered to his "Louisiana plan" with unexpected tenacity. In a speech made on April 11, 1865, the last public speech of his life, he reviewed his plan of reconstruction, stating what he had done and why he did it. He explained **Lincoln's last speech.** how unwise it would be to reject and spurn the loyal people of the South in their endeavors to aid in bringing back the erring states

does not become law. This is called a pocket veto. Congress was wrong in rebuking the President so sharply in this bill; but Mr. Lincoln no doubt made a serious mistake in not signing it. In a private conversation with Sumner he expressed his regret at not having done so. The bill was far milder than the reconstruction bill adopted three years later.

into the Union. "It may be my duty," were his final words, "to make some new announcement to the people of the South. I am considering and shall not fail to act when satisfied that action will be proper." What the "new announcement" was to be was never known. Four days after making this speech the great President was dead.

THE NEW PRESIDENT AND THE OLD PLAN

Of all our Presidents who rose from the humbler walks of life, the most notable example was Andrew Johnson. He was the third accidental President, the third also to be born in North Carolina and elected from Tennessee. As a youth Johnson belonged to the class of "poor whites" in the South, a class whose social standing was scarcely above that of the slave. Besides being low in the social scale, Johnson was illiterate. A tailor by trade, he worked industriously and picked up the little knowledge within his reach. When married, he was scarcely able to read; his wife became his first and only teacher, and he soon acquired a fair working education. He was a coarse, honest, powerful personality. Becoming interested in politics, he was sent to the legislature of his adopted state, whence he was promoted in 1843 to the Lower House of Congress. After ten years' service in the House, he was elected governor of Tennessee, and later he entered the United States Senate. Here we find him at the outbreak of the war; and he alone, of the twenty-two senators from the seceded states, remained true to the Union. Thus Johnson attracted the attention of the country and especially of Lincoln, who made him military governor of Tennessee, and who later gave his voice for him as candidate for the vice presidency.

Johnson's patriotism was unquestioned, and his courage rose to the heroic. On one occasion he kept at bay a mob thirsting for his blood by the defiant glare of his eyes. But his courage was of the bull-dog character. To the better part of valor, discretion, he was a stranger. He was pugnacious and egotistical; "he seemed to enjoy combat and continued to fight after he was beaten without knowing he was beaten."¹ In ordinary times Johnson might have made a good President. But the times were inauspicious. The agitation of the people over reconstruction was scarcely less than during the war, and moreover, the machinery

His character.

¹ "Side Lights," Series II, p. 186.

of government had been thrown out of balance by the death of Lincoln. Among public men of the time, it would have been difficult to find a man less fitted for the ponderous duties of the great office than was this belligerent, egotistical, tactless man from Tennessee.

Now in the midst of the strife over reconstruction Andrew Johnson became President of the United States. Twice before had the Vice President succeeded to the chief office, and in each case the policy of the government had been radically changed. That the same would again occur seemed evident from the earliest utterances of the new President. In the first weeks of his presidency he breathed out threatenings against the leaders of the rebellion continually. What a contrast with the attitude of the mild, the ever humane Lincoln! But a change came over the mind of the newly installed President. Only a few weeks passed before he veered about in his attitude toward the South, and seemed ready to go as far as Lincoln had ever gone in his efforts at conciliation. The change in Johnson is supposed to have been wrought by the influence of Seward, whom he retained as secretary of state. The wounds received by Mr. Seward on the night of the assassination of Lincoln were at first thought to be fatal. For days he hovered between life and death. Then he began to improve, and so rapid was his recovery that in a few weeks he again took his place in the Cabinet. Seward did not favor the harsh measures toward the South implied in the threats of Johnson. In magnanimity of soul he was comparable with his fallen chieftain. Johnson came under the subtle power of Seward's mind, and the less yielded to the greater.¹ The outcome of this coalition was unhappy; but neither foresaw this, and Seward, judged alone from his motives, was never greater in all his great life, never more heroic and admirable.

It must be remembered that for many years before the war, Seward, as champion of the cause of the slave, as the unrelenting political foe of the slaveholders, as the father of Republicanism, was despised from one end of the South to the other. But as the war neared its ending he became an advocate of mild measures toward the South, and he labored with Lincoln for months to make the pathway of the erring sisters easy to

**Greatness of
Seward.**

¹ This view is strongly advocated by Mr. Blaine and is doubtless the correct one, though it is quite probable that Johnson's change was partly due to the reasserting of his democratic views.

retrace. While thus engaged, he was attacked on the bed of sickness by a half-crazed sympathizer with disunion, and stabbed and gashed till life was almost gone. Had there been a grain of littleness in Seward's soul, it would now have gained the mastery. But instead of showing resentment, he resumed his place in the Cabinet and advocated the same mild reconstruction plan for which he had labored before. Johnson now took up the thread of reconstruction where Lincoln had left off, and henceforth his attitude was one of conciliation toward the South.

Congress was not in session, and Johnson was easily persuaded to believe that he had power to restore the Southern states to the Union without the aid of Congress. On the 29th of May, 1865, he issued his great amnesty proclamation extending pardon to almost the entire South, with the exception of the leaders in the rebellion who were designated under thirteen different headings; and most of these exceptions were promised pardon on the condition that they personally seek it.

On this same day, May 29, the President issued a second proclamation appointing a provisional governor of North Carolina, who was to reestablish the machinery of government in that state on the basis of the vote of the white citizens who should take the oath required by the amnesty proclamation. In a short time similar action was taken with regard to other states, and by the middle of July all the seceded states had taken steps toward setting up governments by the authority of Johnson, — except four, Louisiana, Arkansas, Tennessee, and Virginia, whose "ten per cent" governments, established under Lincoln's authority, were now recognized; — and each soon had its legislature at work and everything moving in apparent harmony.

What a marvelous achievement! This great problem of reconstruction for which the history of the ages furnished no precedent, which had puzzled the brain of the wisest statesmen, — this vast problem had been completely solved and disposed of in a few weeks by this accidental President who had scarcely learned to read when he reached adult life. Johnson had asked no advice of Congress.

He seemed to have forgotten that President Lincoln had found a powerful obstacle to his method of reconstruction in the opposition of the legislative branch. Johnson's egotism led him to believe that he could do what Lincoln had failed to do, and that he was quite competent to perform the

**Johnson's
amnesty.**

**His plan of re-
construction.**

work; and he was led to believe that it came within his duty and authority to readmit the seceded states single-handed. He probably expected opposition from the legislative branch, but there is little reason to believe that Johnson meant to defy or to offend Congress, or to alienate the party that had elected him.

It cannot be denied that there was much merit in the plan of Johnson, of which, however, Lincoln and Seward, rather than he, were the authors. John Sherman in his "Recollections" declares the scheme "wise and judicious." Johnson's plan was based on Lincoln's Louisiana plan, but it also contained many features of the congressional bill that Lincoln had refused to sign the year before. By this plan a state was to be restored to the Union, after it had abolished slavery, repudiated any debt incurred in aid of rebellion, and ratified the

THIRTEENTH AMENDMENT

For more than sixty years the Supreme Law of the land had remained unchanged. So slow moving are we, and so tenaciously do we cling to our organic law, that in those sixty years every proposed amendment, and they were many, fell to the ground.¹ Nothing short of a great national upheaval could bring about constitutional changes, and this was furnished by the Civil War, whose permanent results are registered in three amendments to the Constitution. The first of these, the Thirteenth, is very short and deals only with removing slavery forever from the United States. When President Lincoln issued his Emancipation Proclamation, he intended it only as a preliminary measure, and it applied only to slaves of disloyal masters. He knew that to be effective and universal it must be followed by an amendment to the Constitution. When the saving of the Union seemed assured, the great subject on the mind of the President was that of removing slavery. His later messages are full of the subject. In his annual message of December, 1864, referring to the blacks who had been set free by the proclamation of 1863, or by acts of Congress, he declared that if the people should make it an "executive duty to reënslave such persons, another and not I must be their instrument to perform it." This was a notice

¹ See Ames's "Proposed Amendments," *passim*. Other reasons for our not amending the Constitution more frequently are, that some features have been changed by custom, others by the decisions of the Federal court in accordance with broad construction, and the fact that the machinery of amendment is very cumbersome. See *supra*, p. 339.

that he would resign his office rather than become an instrument in reënsaving the blacks already set free.

As early as April, 1864, the Senate adopted an emancipation amendment; but it failed in the House. As the summer and autumn passed, the Union armies made notable progress; Lincoln was reëlected and the Republican majority increased in Congress. Maryland had emancipated of her own accord, and other border states were moving in the same direction. It seemed certain that if the Thirty-eighth Congress refused to reconsider and pass the amendment, the Thirty-ninth would pass it. But the Thirty-eighth did not wait. A few Democratic votes were needed to make the two-thirds majority, and these President Lincoln secured by an adroit use of the patronage. After some weeks' debate, the measure was passed (119 to 56) amid the greatest excitement. The members of the House then sang the doxology and adjourned.

The Thirteenth Amendment, abolishing slavery forever in the United States, was then sent to the states and, being ratified by the necessary three fourths, was proclaimed, on December 18, 1865, a part of the Supreme Law of the land.¹

On meeting in December, 1865, Congress utterly ignored the work of Johnson. The House, after electing a speaker, entertained a motion made by Thaddeus Stevens, that a joint committee of House and Senate be appointed to inquire into the condition of the seceded states, and passed it without debate—before the annual message of the President had been received. The seceded states, whose representatives waited outside for admission, were not even mentioned in the roll call. The Senate, led by Sumner, was equally defiant, and the President soon found himself out of harmony with both houses. Admitting that the Johnson plan of reconstruction was wise in many respects, as is now generally agreed, but two reasons are apparent for this action of Congress. The first was ignoble and unworthy the lawmakers of a great nation. It was a feeling of malice toward the people of the South, coupled with a feeling of pique that the President had attempted this great work without consulting them. The second reason, a commendable one which justified their revising of Johnson's work, but not their

¹ Among the states ratifying were a few that had seceded and had not yet been readmitted by Congress. These were necessary to make the three fourths. This fact forced the country to one of two conclusions: that the Amendment was not legally adopted, or that the restoration of states by Lincoln and Johnson was valid.

wantonly offending him, was the fact that some of the southern legislatures, assembled under the Johnson plan, had already passed unjust laws discriminating against the black man. To these may be added a third reason, namely, a fear that the Democrats of the North would join their political fortunes with the South, and at an early day get control of the government.

Ruined by the war, the South had won the sympathy of the world, and there were many in the North ready to follow the lead of Lincoln, Seward, and Grant, and deal gently with the fallen foe. During the summer of 1865 the South had a great opportunity to show its appreciation of this and to increase the rising sympathy by dealing gently with the negro. But various Southern states took the opposite course. It is true that the problem of the southern whites was a hard one. The government of millions of illiterate freedmen, ignorant, lazy, and often vicious, required special legislation; but such legislation, instead of being humane, was in some cases harsh and unjust, and this threw a chill over the rising sympathy of the North, and gave color to the harsh measures of Congress that were soon to be enacted.

CONGRESSIONAL RECONSTRUCTION

With the meeting of the Thirty-ninth Congress in December, 1865, began the most violent political contest in American history. Congress, as stated, ignored the work of the President and formulated its own plan of reconstruction. The President, whose chief characteristic was pugnacity, refused to bow to the will of Congress; and he made personal attacks in public speeches on the leading men in Congress, pretending to believe that they were desirous of having him assassinated.¹ Such a radical departure was this from the ordinary presidential dignity that it produced a shock, and served only to unite the President's enemies against him.

The great debates on reconstruction, covering many months, began on December 18, 1865. On that day Thaddeus Stevens, who was henceforth to the end of his life dictator of the House, made a radical, not to say violent, speech, in which he pronounced the South conquered territory whose future condition must depend on the will of the conquerors. The Senate, led by Sumner and his colleague, Henry Wilson, was equally radical. The Freedmen's Bureau Bill

¹ See McCall's "Thaddeus Stevens," p. 253.

was passed in February, vetoed by the President, but failed to pass over the veto. The act provided for selling land to the freedmen at a very low rate, reserved the property of the late Confederate government for their education, and ordered the President to protect them when necessary.¹ A few days after the failure to pass this bill over the veto, President Johnson made a violent speech from the steps of the White House in which he pronounced Congress an irresponsible body and denounced its leaders unsparingly. This speech tended to solidify Congress against him, and when in March he vetoed the Civil Rights Bill, it readily passed over his veto. This law was intended to give the negro the rights of a citizen before the law; but its principles were soon embodied in a more permanent form by the passing in June, 1866, of the Fourteenth Amendment. It was believed that merely giving to the black man his freedom would not insure his rights before the law. He must have other safeguards or his freedom would amount to little. The Fourteenth Amendment, therefore, in its first section, defined citizenship in such a way as to make the negro a citizen, and to place him exactly on a footing with the white man in his relation to the Federal government. It also denied to any state the right to abridge the privileges of the citizens of the United States, to deprive them of life, liberty, or property without due process of law, or to deprive any within its jurisdiction of equal protection of the law. The second section declared that if any state denies the elective franchise to any portion of its male citizens above twenty-one years of age, its representation in the Lower House of Congress should be reduced in like proportion.² This left in the power of the state the colored man's right to vote, and any state might disfranchise him if it were willing to pay the penalty of a reduced representation in Congress.

The adoption by the Southern states of this Amendment was now made a condition of their readmission to the Union. One of the eleven, Tennessee, took advantage of the opportunity and came back into the Union fold. The other ten held aloof. The summer

¹ The Freedman's Bureau Bill came up again and was passed over the executive veto in July.

² The third section excluded from the right to hold office under the government all who, having held a national or state office, had entered into rebellion against the government. The fourth section pronounced on the validity of the public debt, and forbade any state from paying any debt incurred in rebellion, or for any of the emancipated slaves.

of 1866 passed, and the autumn brought the election of a new Congress. Never before had there been such a bitter fight when a President was not to be elected. Both parties held great national conventions in various cities. The Johnson party consisted of the Democrats and a considerable section of the Republican party led by Henry J. Raymond, editor of the *New York Times*. President Johnson at this time made his famous "swinging round the circle" tour, ostensibly to the laying of the corner stone of the Douglas monument in Chicago. But it became a campaigning tour, and the partisan speeches of the President were so violent and so unbecoming the exalted office that he filled as to make every true American blush. He attacked Congress with great fury, declared he would stick to his "policy," nor be turned from his purpose "though the powers of hell and Thad Stevens and his gang were by," that Stevens and Wendell Phillips should be hanged, and the like. But Johnson's policy was very much discredited at the election. The opposition won a great victory and had a majority of nearly three to one in the next House.

Had Johnson, on learning the result of the election, bowed himself to his master, the people, with "Thy will be done," he might have regained much that he had lost, and his name might now have a meaning in history that it can never have. But Johnson still showed fight; he clung to his plan, and the Southern states took courage. They seemed to think that he would win in the end, and the entire ten deliberately rejected the Fourteenth Amendment.

Congress regarded this as a defiance of its power and a challenge to battle. The recent election was looked upon as an approval by the people of its plans, and henceforth its dealings with the South were drastic and merciless. It was now evident that the radicals meant to reconstruct the South over again under the supervision of the army directed by Congress and to build up a Republican party in the South by enfranchising the negro. That this was the aim of Congress was acknowledged by such leaders as Sumner, Stevens, and Wade.¹ In February, 1867, Stevens moved in the House the "Great Reconstruction Act" which provided that the ten states not yet admitted be divided into five military districts, into each of which should be sent an officer with an army to supplant the civil government. The bill was passed over the President's veto on the 2d of March,

August-

and two days later the Thirty-ninth Congress expired. But instead of taking the usual recess of nine months, the new Congress met at the moment the old expired, in the fear that the President, if left alone, would not properly carry out its desires.

This reconstruction act, with a supplementary one passed later in March, provided that the military governor of each district make a registration of all the male citizens of each state, submit to them a test oath, and call for a constitutional convention, the delegates to be elected by those who should take the oath. If a state constitution so framed should conform with the national Constitution, should be ratified by a majority of the voters of the state, and be approved by Congress, the state would thereupon be readmitted to the Union, after its legislature had ratified the Fourteenth Amendment.

Thus the Southern states were placed under military rule,¹ order was again restored, and most of them at length proceeded to comply with the exactions of Congress. Within a year and a half after the military occupation of the South seven of the ten states had complied with the conditions and were readmitted to representation in Congress, each having ratified the Fourteenth Amendment, which became a part of the Constitution in July, 1868. Three states, however, Virginia, Mississippi, and Texas, still held aloof and thereby denied themselves the privilege of taking part in the presidential election of 1868.

The Southern states that ratified the Fourteenth Amendment had done so through the newly built-up Republican party, composed chiefly of negroes in those states. But the northern radicals, fearing that the Republican party in the South, which depended on the negro vote, would be insecure when the whites again gained control, and believing that the ballot would be a permanent means of protection in the hands of the blacks, now determined that the right of the negro to vote should not be left with the states at all. This idea took shape in the Fifteenth Amendment, which denied to Congress or to any state the power to disfranchise a man on account of race, color, or previous condition of servitude. This amendment passed both houses in February, 1869, and the three states that had not yet been admitted were now required to ratify it, as well as the Fourteenth, as

¹ The five districts were put under the respective commands of Generals Schofield, Sickles, Pope, Ord, and Sheridan (who was soon supplanted by Hancock). They were appointed by the President with the advice of General Grant.

a condition of their admission. This they eventually did, and before the close of the year 1870 all had been reinstated, and the Fifteenth Amendment was part of the Constitution.¹

THE CARPETBAGGERS—THE RACE QUESTION

Congressional reconstruction was thorough, drastic, merciless; a study of it enlists our sympathies with the South. The governments it set up were all temporary, and during their short existence the most corrupt in the annals of the United States. Had it not been for the summary negro laws made by some of the Southern states in 1865, and the abusive violence of President Johnson, public opinion at the North would not have sustained Congress in its methods of procedure. It is true that something more was necessary to be done for the black man than merely to set him free. It seemed needful that he be protected, for a time at least, by the national arm. This was effected by congressional reconstruction, and the result was a series of milder negro laws in the Southern states and the adoption of the Fourteenth and Fifteenth amendments to the national Constitution. Aside from this, congressional reconstruction left no permanent results, and the expediency of adopting the two amendments is at this day seriously questioned,² and, whatever their merits, they have practically ceased to be operative in the South. The Fourteenth and Fifteenth amendments, it will be remembered, deal only with the states and do not protect the individual voter from local violence while casting his ballot. For such protection the negro must still depend solely on the state in which he resides. If it refuses to protect him, he has no redress.

The governments set up during those days were scandalous beyond precedent. The old political leaders were not yet permitted to take part in the state governments. The newly enfranchised freedmen were utterly unfit to take the lead, and the result was that a class of unscrupulous adventurers from the North, packing up their goods in a carpetbag, as it was said, went to the South, won the negro voters by their blandishments, and soon had the state governments under their

¹ Georgia, however, had forfeited its rights by pronouncing the negro ineligible to hold office. The state was obliged to repeal this law, and it was January, 1871, before it was finally readmitted.

² Mr. Blaine, Mr. John Sherman, and most of the leading Republicans of the period following the war agree that the Fifteenth Amendment was an unwise measure. See Blaine's "Twenty Years of Congress," Vol. II, p. 418, and Sherman's "Recollections," Vol. I, p. 450.

control. The state treasuries were plundered and bonds were issued increasing the state debts to an alarming degree. In Louisiana the public debt rose from ten to fifty million dollars in the few years of carpetbag government; in Alabama it increased over thirty million; in Georgia nearly fifty million.¹ These are but samples of all. The increase indicated no public improvements — only theft. Taxes rose to a point beyond the ability of the people to pay. In Mississippi six hundred and forty thousand acres, one fifth of the state, were forfeited for taxes. In South Carolina twenty-six hundred pieces of land were sold for taxes in one county in a single year.² The negro voters were easily led into the corrupt business, but the carpet-bagger always managed to get the lion's share.³ Here and there an ex-Confederate would join the thieving gang for the plunder there was in it. Such were called "scalawags."

The better class of whites stood aghast and helpless at the further impoverishment of their already bankrupt states. Many kept a sullen, bitter silence; but the more vicious class formed a secret organization known as the "Ku Klux Klan" with the object of intimidating the black voter. These governments were sustained by the military arm. The Republican party as a whole received the blame. There were many thousands of whites in the South at the close of the war who were in sympathy with the Republican party;

The "solid" South. but now, almost to a man, they turned against it and joined the Democrats. For many years thereafter the

South was known as the "solid" South. Before the war the South was scarcely more Democratic than Whig; and it was not the war that made it solidly Democratic,—it was preëminently the carpetbag governments.⁴

The carpetbag governments disappeared with the withdrawal of the troops, and the state governments immediately passed again into the hands of the white men.⁵ And this was most natural. Nothing else could possibly have been expected. The white race had labored for centuries to attain self-government. It paid more than 99 per

¹ Curry's "The South," p. 231.

² McCall's "Thaddeus Stevens," American Statesman Series, p. 303.

³ Lalor's "Cyclopedia," Vol. III, p. 554.

⁴ And, it may be added, the race question helped to keep it solid so long. See the following pages.

⁵ President Johnson had issued a universal pardon in December, 1868, and in May, 1872, Congress removed the disabilities imposed by the Fourteenth Amendment, except in a few cases.

cent of the taxes. Could it be possible that the government of these great communities should be turned over to a landless, penniless, homeless, illiterate race that knew not the first principles of self-government? Such a spectacle is unknown in the world's history. Where the brains and property are on the one side and most of the ignorance and poverty on the other, the former will rule at any cost. The cost in this case was too often violence and fraud; but under the same conditions the same results must have followed in the North, or anywhere else.

The rule of the white man is essential to southern progress. Can it be said, on general principles, or on the basis of the carpetbag governments, that the black race could have developed the South as it has been developed since the war? **The white man's government.** The writer of this volume believes himself to be as nearly without race prejudice as a normal white man can be; but he believes that all thoughtful people will agree that the great development of the South since the war—in art, in science, literature, education, and in material resources—could not have been, except under the domination of the white race.

Then arises the question, Why do not the two races blend and cooperate in matters of government? This brings up the so-called race problem, the most serious and menacing question before the American people to-day. In two respects the two races have refused to blend—politically and socially. Nor is it possible to coerce them. It is folly to attempt by legislative acts, or by moral pressure, to force unnatural relations between them. Nature seems to have drawn a line between the races that man has no power to obliterate. In matters of business the two races may have and do have the most cordial relations; but in politics and in the social circle there is a gulf between them, almost as wide now as at the close of the war. For a generation after the war the North reproached the South for its attitude toward the colored man, and in so far as this pertained to violence and abuse, the reproach was just; but in matters of politics the North has come to take practically the same ground as held all along by the South. I make no attempt to explain why the white man will not admit the black man as a partner in governmental affairs; this belongs to the domain of the sociologist; but there are the facts, and the instinct far transcends any party allegiance. It is not a tenet of Democratic doctrine peculiar to that party. The Republicans have reached the same attitude. For many years after the war

there were colored Republicans in both houses of Congress; to-day (1904) there is not one in either House. The Republican state convention in North Carolina in September, 1902, as in several other Southern states the same year, refused to admit a single black man to its membership.¹ In recent years the solidity of the South has been broken,² but this was not done until the Republicans threw the race question into the background and made other issues paramount. We want no solid South, nor solid North, no dividing on sectional lines in American politics. As above stated, the race question is not a political question, and if the Democrats of the North were to attempt to force their brethren of the South in this matter, the South would soon be solidly Republican.

What, then, of the negro in the future? He can become equal to the white man in the government of the South only when he makes himself an equal force in civilization. And perhaps this may never be, for Nature has done more for his pale-faced brother than for him. What, then, of the negro in the future? The best thing remains to be told, namely: The negro is quite safe and his happiness quite secure under the white man's government. The white man at this time makes every law in every southern state, but in no case, aside from those pertaining to the franchise, do the laws now discriminate against the black man. There is not a colored child in any city, village, or township of the whole South that has not access to a free public school, established under the white man's government, and supported by his money.³ So in property rights, the negro stands before the law on a level with his white brother. If the time shall ever come when the negro can make himself an equal force with the white man in matters of government, he need not build the edifice; there it stands ready for him to occupy, there is the unchangeable law, making him an equal, in the last three amendments to the Constitution — so much for congressional reconstruction. Meantime if he is denied a free ballot, if he is denied a part in making the laws, he still enjoys the same protection under the laws with the men who make them.

There still remains the social problem. In this the line between the races is more tensely drawn than is the political line, and all

¹ See the *Outlook*, Vol. LXXII, p. 2591.

² Notably in Maryland, West Virginia, and Kentucky.

³ Except in some localities where schools are not provided for either race. The whites still pay above 90 per cent of the taxes. See Curry's "The South," p. 238.

attempts at coercion are worse than folly. Why should there be any attempt at coercion? Why should not the races remain apart socially and each be content with his own society? If the white man is content with the society of his own race, why should not the negro be content with his? Constitutions, congresses, and courts are powerless to change the social relations between the races. Until this natural difference between them is properly recognized, this great problem cannot be solved.

The future of the negro rests chiefly with himself. The great curse of the race to-day is, not the want of a free ballot, but the want of ambition to *do* something and to *be* somebody. Vast numbers of the southern blacks are of the listless, aimless class who aspire to nothing, who are content to live in squalor and ignorance. But there are noble exceptions; there are many southern colored men who are striving to uplift their race to a higher plane of civilization. If the bulk of the race would follow the guidance of that most useful of all colored men in the United States, Booker T. Washington, the race question would soon cease to be troublesome.

A final word must here be said about congressional reconstruction. The process of the "undoing of reconstruction" began with the downfall of the carpetbag governments, continued for more than thirty years, and resulted in the complete restoration of the whites to power throughout the South. The first stage in this process was marked by violence and disorder in the extreme, the most prominent feature being the work of the Ku Klux. This condition led Congress to pass the Enforcement Act of 1870, the Ku Klux Act of 1871, and of an additional Civil Rights Bill in 1875. There were also Federal Elections acts passed in 1871 and 1872. But in spite of all this, every southern state that had seceded turned Democratic, beginning with Tennessee in 1869 and ending with Florida, Louisiana, and South Carolina in 1877. But as violence in the South against the black voter always awakened an outcry from the North, a new plan was inaugurated about 1877, which marks the beginning of the second stage of the undoing of reconstruction. During this period, which continued till 1890, the whites kept control chiefly by sharp practice, such as gerrymandering and ballot-box juggling, by which the ignorant blacks were easily managed.¹

¹ All sorts of devices were employed. Sometimes the negroes were obliged to travel thirty or forty miles to vote, where rivers without bridges were to be crossed, and all the ferries would be tied up on election day. In one town where a poll tax

Meantime, a series of Supreme Court decisions, if we may anticipate a little more, served to encourage the southern democracy in its methods. A decision of 1873, known as the Slaughter House Cases, to be referred to later, greatly weakened the Fourteenth Amendment as compared with its earlier intended meaning, and other later decisions continued this weakening process. In a decision of 1875 and another in 1882, the Enforcement Act¹ of 1870 and the Ku Klux Act were rendered null by their being confined to state action, and not to individuals who conspired to deprive negroes of their rights, and in 1883 the Supreme Court pronounced the Civil Rights Act of 1875 unconstitutional.

During this period the equality of the negro with the white man was recognized in law, though not in fact. But in 1890 the third and last stage of the process of disfranchising the blacks began. In this year Mississippi applied another method without treading on the Fifteenth Amendment. The state adopted a constitution which shut out nearly all the black voters by a property and educational test, while the ignorant white voter was taken care of through the "reasonable interpretation" of the constitution clause. South Carolina followed in 1895 with an "understanding" clause to save the illiterate white voter; for the white election officer may, all unconsciously of course, decide that the ignorant negro does not understand the constitution, while the equally ignorant white man does. Louisiana, in 1898, protected the ignorant whites by a new device known as the "Grandfather clause" by which a man could not be denied the right to vote if his father or grandfather was a voter in 1867. North Carolina followed this example in 1900, and other states have since then adopted similar constitutions. These new state constitutions render the Fifteenth Amendment and parts of the Fourteenth almost a dead letter at the South. Some of these constitutions have been tested before the Federal Supreme Court but in each case the matter has been dismissed for want of jurisdiction,² nor have the Republicans of the North shown

was required, and the Republicans had furnished hundreds of the negroes with tax receipts for a certain election, the Democrats managed to have a circus in town on election day, and arranged to have tax receipts accepted for admission. The election booth was deserted by the blacks while the circus was crowded. See Professor W. A. Dunning's "Undoing of Reconstruction," in the *Atlantic Monthly*, Vol. 88, p. 437 sq.

¹ All the Force Acts were repealed by a Democratic Congress in 1894.

a disposition to apply the test of the Fourteenth Amendment to reduce the representation of the Southern states in Congress, in consequence of their disfranchising so large a portion of their voters.

IMPEACHMENT OF PRESIDENT JOHNSON

By far the greatest historic trial ever held in the United States was that of Andrew Johnson by the Senate in the spring of 1868, after his impeachment by the House of Representatives. The strife between the President and Congress that began in December, 1865, increased in violence for two and a half years, culminating in the impeachment by the House and the trial by the Senate. Had Lincoln been spared, he might have succeeded in his method of reconstruction. He had won the hearts of the people as few had ever done, and they would probably have sustained him in defiance of Congress. But Johnson had never won the people, and without the aid of Congress he was powerless to carry out his plans. Moreover, Lincoln was a man of infinite tact, and he could parry the blows of his enemies with his consummate wit. Johnson was peculiarly lacking in these respects, and if Congress had the temerity to oppose Lincoln with all his resources of power, would it not more readily set its hand against this accidental President?

The warfare between the President and Congress went on month by month, and on the 2d of March, 1867, Congress passed over the President's veto, not only the Great Reconstruction Act, which we have noticed, but also the Tenure of Office Bill. By this law the power of the President was greatly curtailed. The Constitution provides that many of the more important official appointments of the President must be ratified by the Senate, but all such officials were subject to removal by the President alone. So the practice had continued by common consent from the founding of the government; but the Tenure of Office Act required the consent of the Senate for removals, as well as for appointments. Two reasons are conceivable for the enactment of this law: first, a fear entertained by some that the President designed some attack on the powers and privileges of Congress; and a personal dislike of Johnson, coupled with a desire to curb his power wherever possible.¹

**Tenure of
Office Bill,
March, 1867.**

¹ In other ways the power of the President was also curbed. A "rider" of the Army Appropriation Bill took from him the command of the army and gave it to the

Johnson, on becoming President, had retained the Cabinet of Lincoln. At first the members generally agreed with the new President's policy; but as the contest grew hot, several of them took the side of Congress, and for this reason three of them resigned from the Cabinet in the spring of 1868. The secretary of war, however, Edwin M. Stanton, though condemning the President's course, refused to resign. As the months passed all personal relations ceased between the President and his secretary, and yet the latter clung to his office. In August, 1867, Johnson addressed a note to Stanton requesting his resignation, but Stanton bluntly refused to resign. A week later Johnson suspended him from the office and appointed General Grant secretary *ad interim*. The Tenure of Office Law permitted such action during the recess of Congress, but required the President to make a report of it to the Senate at its next meeting. If the Senate approved his action, it stood; if not, the old official resumed his place.

Accordingly, President Johnson reported his action to the Senate on its meeting in December, and some weeks later he was astonished when that body refused to concur in the removal of Stanton. No explanation can be given for this action of the Senate, except on the ground of personal feeling against Andrew Johnson. There was no public demand for Grant's removal, for at this moment Grant was the most popular man in the United States. Thus Johnson had forced upon him a secretary with whom he was not on speaking terms, and the United States Senate never did a less creditable act. Johnson's anger rose to the boiling point. He even chided General Grant and made a personal enemy of him for giving up the office too readily on hearing of the action of the Senate. Grant had been on very friendly terms with Johnson, and had accompanied him on his "swinging round the circle" tour of the West. Had Johnson been possessed of a tithe of the tact of his predecessor, he would have retained the friendship of Grant at any cost. But now with a few reproachful words he ended their friendship, and they were never afterward reconciled.¹ No man in public life ever played into the hands of his enemies more completely than did Andrew Johnson. The majority of the Republican party had been looking forward to

general of the army. In January, 1867, a law was passed denying him the power to proclaim general amnesty; but Johnson deemed the law unconstitutional, and went on issuing pardons at his pleasure.

¹ The first hitch in their friendship, however, had occurred the year before, when Johnson, against Grant's wishes, removed Sheridan from command of a district in the South.

making Grant their candidate for President in the approaching campaign, and they were not pleased with the warm friendship between him and their most implacable enemy. They were now highly gratified at this open rupture between the two.

Stanton had resumed his place in the Cabinet. But Johnson brought matters to a crisis when, on the 21st of February, he defied the Senate by dismissing Stanton from the Cabinet. The country was startled at the reckless courage of the President. The Senate was enraged at the defiance of its authority, but it could do nothing except condemn the action of Johnson in a resolution. This it did, as Blaine says, "promptly, resentfully, almost passionately."¹

**Johnson
removes Stanton,
February 21, 1868.**

With the House rests the power of impeachment. Many were Johnson's enemies in the House. They had attempted to impeach him the year before, and had failed. Since then they had watched with eagle eye for an opportunity to renew their efforts, and they promptly seized on his quarrel with the Senate. On the same day that Johnson sent to the Senate a notice of Stanton's removal, a resolution was brought before the House that "*Andrew Johnson, President of the United States, be impeached of high crimes and misdemeanors.*" The resolution was referred to a committee with Stevens at its head. It reported next day and recommended that the resolution pass without debate. Two days, however, were taken for debate, and when the vote was taken the ballot stood 126 for impeachment and 47 against it. Thus the President of the United States, for the first and only time in our history, was legally impeached, and he must now stand before the bar of the Senate and answer for his alleged crimes. The House proceeded to elect seven of its members as prosecutors in the trial that was to follow.²

The impeachment.

Johnson meantime seemed calm and undisturbed by the great movement going on in Congress. He quietly sent to the Senate the name of Thomas Ewing as secretary of war. This for once was a tactful stroke. It had been rumored that Johnson meant to usurp the government and to place it in the hands of the military. But the appointment of Ewing, a man of well-known honesty and patriotism, rendered all such rumors idle and foolish.

¹ "Twenty Years of Congress," Vol. II, p. 355.

² The men elected were Boutwell and Butler of Massachusetts, Williams, Bingham, and Stevens of Pennsylvania, Wilson of Iowa, and Logan of Illinois. All were intensely hostile to the President.

THE GREAT TRIAL

The Senate sat in grave silence with Chief Justice Chase as its presiding officer, when, on the 5th of March, 1868, the members of the House filed into the chamber, led by their chosen managers, to present formal charges against the President of the United States. The charges were eleven in number, the most important being the second, charging Mr. Johnson with violating the Constitution by removing Mr. Stanton in defiance of the Tenure of Office Act; the third, charging him with appointing another to fill the office when no vacancy existed; and the eleventh, charging the President with stating in a public speech that the Thirty-ninth Congress was not a lawful body because certain Southern states were not represented.

The most serious of these, and that on which the trial hinged, was the removal of Stanton. Let us look into this for a moment. When the Tenure of Office Bill was pending before the Senate, it was agreed by a majority of the senators that Cabinet officials be not included in the law, but the House insisted that they be included, and won its point; not, however, without bringing out some significant remarks from leading Republican senators. "If a Cabinet officer," said John Sherman, "should attempt to hold his office for a moment beyond the time when he retains the entire confidence of the President, I would not vote to retain him." Similar expressions were heard from Senators Fessenden, Edmunds, and others.¹ The attempt of Congress to force upon the President a confidential adviser in whom he had no confidence and whom he personally disliked, furnishes a spectacle unknown before or since in our government. Mr. Blaine, in his "Twenty Years of Congress," discusses this subject with great fairness, and agrees with every thoughtful student of the subject at this time that Congress was clearly in the wrong and was prompted by ignoble motives. And the more does this appear when it is remembered that the defense sought to show at the trial that one of the objects of Johnson in removing Stanton was to bring the matter before the Supreme Court in order to test the validity of the Tenure of Office Law.

After the formal presentation of the articles of impeachment on March 5, the high court adjourned, and the trial was not properly begun till the 30th. The President's counsel was composed of men of the highest ability. Among them were Benjamin R. Curtis,

¹ See Blaine, Vol. II, p. 352.

former justice of the Supreme Court, and William M. Evarts, the eminent New York lawyer.

In the course of the trial Mr. Evarts offered to prove that while the Tenure of Office Act was before President Johnson, it was submitted to the Cabinet, every member of which deemed it unconstitutional, and that the duty of preparing the veto message devolved on Mr. Seward and Mr. Stanton. Chief Justice Chase decided to admit this testimony, but a vote of the Senate on its admissibility was called for and a majority decided to exclude it. Again Mr. Evarts offered to show that the entire Cabinet had agreed that the appointees of President Lincoln could not come within the law. Mr. Chase decided that this testimony should be received, but this too was cast out by a vote of the Senate. Still again, Evarts offered, on the part of the President, to prove that he and his Cabinet agreed, before the removal of Stanton, that the legality of the Tenure of Office Law should be tested, and that one object in dismissing Stanton was to bring the matter before the Supreme Court. But even this testimony was ruled out by the eminent jury. Certainly this was an extraordinary method of dealing with an accused before a court. When a man, on trial for the alleged violation of a questionable law, offers to show that his motive was to put the law itself on trial, and his offer is rejected, what unbiased observer can believe otherwise than that such rejection is based on prejudice?

Rejection of
evidence.

Among the witnesses in the great trial were men of national fame, members of the Cabinet, and generals of the army. Gideon Wells and General Sherman each sat for two days under the cross-fire of the contending lawyers. By the 22d of April the testimony was all in, and then began the fierce oratorical contest of the lawyers. For many days they furnished the country with a rare intellectual treat. Not until May 16 was the Senate ready to vote on the great question — whether the President of the United States should be acquitted or deposed from his office.

There were fifty-four senators, and it would require two thirds, or thirty-six, to convict. Eight of the senators were Democratic, and these, having no quarrel with the President, were sure to vote for his acquittal. So also were four others, who were known as administration Republicans. In addition to the votes of these twelve, seven more were needed, from the regular Republican ranks, to save the President. Many of the senators filed their opinions, giving

their reasons, before the voting began; but enough had declined to do this to leave the outcome in doubt. The doubtful class was led by Fessenden of Maine and Trumbull of Illinois.

The voting began on the 16th of May. The occasion was a solemn and momentous one; for the decision on this great question must be a precedent for generations to come. The interest became intense as the moment for taking the first ballot approached. The members of the House were admitted to the floor of the Senate chamber, and the galleries were packed with high officials of the government, foreign ministers, and citizens of every rank from all parts of the country.¹ Outside the chamber surged a multitude unable to gain admittance. Telegraph operators sat at their places ready to flash the news to the uttermost parts of the Union — to the cities, towns, and railroad stations, where eager throngs had gathered to await the verdict of the Senate. Within the chamber the silence was almost painful as the roll call proceeded, and each senator rose in his place and pronounced “guilty,” or “not guilty.” The first vote was taken on the eleventh impeachment article, as it in a general way embodied all the rest. The result was thirty-five for conviction and nineteen for acquittal. The President therefore escaped deposition by a *single* vote. The Senate then adjourned to the 26th of May. When the Court of Impeachment met again and voted on the second and third articles, the vote stood the same as before. The court then adjourned *sine die*; the remaining articles were never voted on; the great trial was over.

Secretary Stanton immediately resigned his office, and General Schofield was appointed in his stead. Stanton had served as secretary of war from the time of his appointment by Lincoln in 1862, and no man ever filled that office with greater fidelity and devotion to the public service. He was an unrelenting foe to all jobbery and corruption, and while we cannot sympathize with him in this contest with Johnson, we honor his memory for his unselfish public service. Soon after the trial his health failed and the next year he sank into the grave, after being honored by President Grant with an appointment to the Supreme Court.

Next to the President and Stanton the one most concerned in the outcome of the trial was Senator Benjamin Wade of Ohio. Had the trial gone against Johnson, Wade, as president of the Senate, would have been President of the United States until the following

¹ Blaine, Vol. II, p. 374.

spring. He had missed it by a single vote. In our history but two others, Aaron Burr and Samuel J. Tilden, have come so near the great prize and yet missed it. Wade's political life was soon to close; it had reached its zenith and it took a downward turn at the great trial. He had been a powerful leader. For eighteen years his voice had been heard in the Senate chamber. The public awarded him high honor; but now he voted against Johnson and thus for himself. His friends had boasted that, if he could not give his voice for acquittal, he would refrain from voting at all; but he voted nevertheless. The public never fully forgave him. It still honored him still, but not so highly as before.¹

Wade.

The verdict of the Senate was at first a disappointment to the Republican party; but when the excitement of the moment had subsided, a general satisfaction with the verdict was manifest. The people could not wholly forget the noble stand for the Union taken by Andrew Johnson at the beginning of the war. They remembered, too, that, with all his faults, Johnson had risen of his own force from the lowest depths of society, and such a record is the highest passport to public esteem in America. Nor could the belief be eradicated from the public mind that the trial was not altogether a fair one, that many of the members of Congress were unconsciously prejudiced against the President. In ordinary criminal cases the members of the jury are required to be without previous personal relations with the accused; but here was a jury the greater part of which had, for a long season, been engaged in a bitter contest with the accused. They were men of the highest training and education, but this did not lift them above the common weaknesses of humanity. Education gives a man greater self-control and develops any talent with which nature has endowed him; but it cannot implant new virtues, nor train out of a man the common follies of our nature. This highly cultured jury was in some measure partial and prejudiced, simply because it could not help being so.

The real offense of the President consisted, not in the removal of Stanton nor in anything written in the impeachment articles, but in his persistent, exasperating opposition of the party that gave him his power.² Johnson had a legal, if not a moral, right to his course concerning the negro and the South; but as the enemies he

¹ Within the same week Wade was defeated as candidate for Vice President, and these disasters closely followed his defeat for reelection to the Senate.

² See the *Nation*, Vol. VI, p. 384; Blaine, Vol. II, p. 377.

made by taking this course could not reach him on account of it, they arraigned him on a technicality which under other conditions would have attracted little attention. The most gratifying fact in connection with the great trial is that during its progress there was no popular uprising, no disturbance of the social and business relations of the country, no evidence that the quiet reign of law would be disturbed whatever the result of the trial.

NOTES

Thaddeus Stevens.— During the last years of his life, Stevens was not only the leader in Congress, but also the leader of his party throughout the country, and congressional reconstruction was an embodiment of his ideas. So radical and relentless was he that at first Congress was unwilling to follow him, but at length came to do so, except as to his desire to confiscate the property of Confederates. Stevens's attitude toward the South arose less from a malicious feeling, than from his extreme principles of democracy, almost approaching the John Brown type; though, unlike Brown, he shrank from bloodshed. His love for the black man seemed to reach an abnormal state, and just before his death he requested that his body be buried in an obscure private cemetery, because the public cemeteries excluded negroes by their charters. Stevens was a man of unusual wit. On one occasion, while speaking in the House, a certain very loquacious member, who always affected great humility and put a low estimate on his own ideas, desired Stevens to yield him the floor for a time. Stevens did so, saying "Now I yield the floor to Mr. —, who will make a few feeble remarks." (McCall's "Stevens," p. 314.) During the last months of his life, Stevens was so weak that he had to be carried about in a chair. One day he said to the two stalwart men who were carrying him, "Who will carry me when you two strong men are dead and gone?"

Nebraska and Alaska.— Nebraska was part of the Louisiana Purchase. The country was partly explored in 1804 by Lewis and Clark. In 1854 it was organized as a territory in the famous Kansas-Nebraska Bill. In 1863 Nebraska was reduced to its present limits, and in 1867, having sixty thousand inhabitants, it was admitted as a state. President Johnson vetoed the bill of admission because it forbade the new state ever to deny a man the right to vote on account of race or color. But it passed over the veto, and Nebraska became a state on March 1, 1867.

Within the same year, 1867, the territory of Alaska was purchased by the United States from Russia for \$7,200,000. Russia acquired the right to Alaska through the discoveries of Vitus Bering in 1741. It is a dreary, mountainous region of long, severe winters. Its valleys are fertile, and at the time of the purchase the country was inhabited by various Indian tribes, with a few white men and Chinese. In recent years it has been found to be exceedingly rich in gold deposits, while the seal fisheries have amounted to over \$12,000,000. The whole country comprises 599,446 square miles. See map following p. 896.

CHAPTER XXXII

RECUPERATING YEARS

PEACE, the long-desired, can hardly be said to have spread her white wings over the land until reconstruction had been practically accomplished and the trial of Johnson was over. Now at last the great strife was ended, and though the bitterness engendered by it could only wear away with the passing of the generation, every one felt that, as the one and only cause of internecine war had been removed, never again would America witness the scenes of the past eight years. Before reconstruction had been fully accomplished the country turned to its quadrennial duty of electing a President.

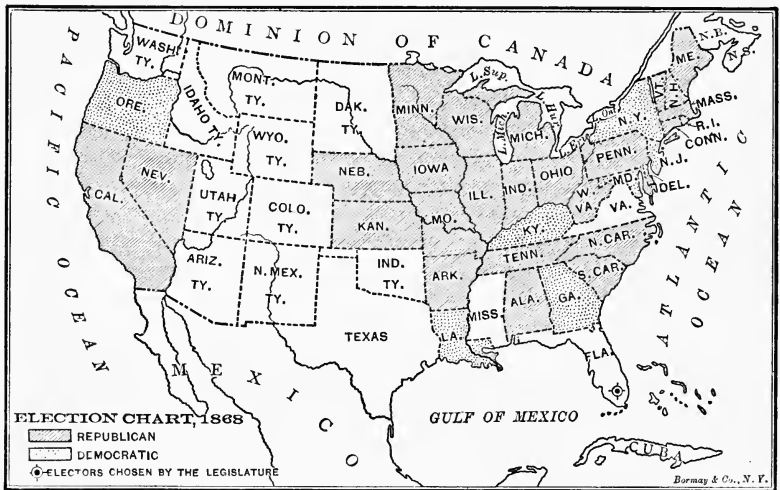

THE ELECTION OF 1868

Four days after the deciding vote in the trial of Johnson had been cast, the national Republican convention met in Chicago. For the first place on the ticket there was no contest, as the whole party was agreed in its choice of the valiant commander who had won first honors on the battle field. Not only had General Grant distinguished himself in war, but during the Johnson administration, though his position was a trying one, he had borne himself with great discretion and dignity. So reticent had Grant been in regard to politics that for some time after the close of hostilities his political bias was unknown. He had voted for James Buchanan in 1856, and the rumor gained currency that the Democrats hoped to make him their candidate in 1868.¹ But Grant indicated that his sympathies were with the Republicans. On the first ballot Grant was named by a unanimous vote. For Vice President the convention named Schuyler Colfax of Indiana, speaker of the House of Representatives.

The platform adopted by the convention made two points con-

¹ Colonel A. K. McClure declares (see "Our Presidents," p. 202) that Grant before the war was a radical proslavery Democrat, not even so liberal as Douglas, and that he never voted the Republican ticket before he became President. It was Colonel Forney of the *Philadelphia Press* who persuaded Grant to permit the Republicans, rather than the Democrats, to make him their candidate.

spicuous, — a pledge in substance, though not in so many words, to pay the public debt in coin, and a demand for equal suffrage for white and black men in the South. The first of these, concerning the finances, was highly commendable, and the pledge was carried out to the letter in the following years. But the other plank was highly discreditable to the party. It imposed negro suffrage on the South (the Fifteenth Amendment being not yet adopted) and left the matter to be decided by the various states in the North. "This was an evasion of duty quite unworthy the Republican party," says Mr. Blaine, and "carried with it an element of deception."¹ It was a

strange proceeding to attempt to force the South to stand upon a higher plane of political virtue than the North itself was willing to adopt. The object in exempting the Northern states from this condition was to avoid giving offense to a few doubtful states, notably Indiana and California.² The Republican keynote of the campaign, however, was not found in the platform, but in the laconic phrase, "Let us have peace," from General Grant's letter of acceptance.

The Democratic convention, which met on the 4th of July in New York City, was looked forward to with great interest because of

¹ "Twenty Years of Congress," Vol. II, p. 388.

² Other Republican states, Connecticut, Wisconsin, Minnesota, Ohio, and Kansas, had recently rejected negro suffrage.

the uncertainty as to what it would do. Two great questions must be pronounced on: Republican reconstruction, and the payment of the public debt in specie; and it decided adversely on both. The platform adopted declared that the portion of the public debt not payable by express terms in coin "ought to be paid in lawful money," that is, legal tender notes, which were far below the gold standard in value; and it pronounced the reconstruction acts "usurpations, unconstitutional, revolutionary, and void." The plank on the money question appealed to many who did not hold government bonds; but that on reconstruction was not popular at the North, as the people were weary of the long-drawn-out subject and were unwilling to undo the great work now so nearly completed.

**Democratic
convention.**

The most widely discussed candidates for the nomination were George H. Pendleton, who represented the greenback craze, and Salmon P. Chase, both of Ohio. Chase had first been elected to the Senate by the Democrats, but for many years he had acted with the Republicans. He had resigned from Lincoln's Cabinet in 1864, and was now chief justice of the Federal Supreme Court. Thomas A. Hendricks of Indiana and General W. S. Hancock were also voted for; but after the convention had cast twenty-one ballots without result, there was a sudden stampede for Horatio Seymour of New York who at that moment sat before the delegates as chairman of the convention. Repeatedly had Mr. Seymour declined to permit his name to be considered, and he now reiterated this decision from the chair. But his words were unheeded. On the twenty-second ballot the convention cast a unanimous vote for Seymour. Frank P. Blair of Missouri was then nominated for the vice presidency.

Mr. Seymour was a man of great ability and political sagacity, and was doubtless the most popular man the party could have named. During the war he had vigorously criticised the administration, but he was never violent nor disloyal. Moreover, he was a "hard money" man, and on this point opposed to his party platform. Blair had acted with Lincoln during the war, but now he was a radical Democrat on reconstruction. So extreme were his views that he became a heavy burden for the party to carry. The party was further handicapped by the prominent part taken in the convention by former leaders of the Rebellion, notably Wade Hampton, who had written the plank on reconstruction.

General Grant was elected by 214 votes to 80 for Mr. Seymour. These figures would indicate an overwhelming victory for

Grant; but an analysis of the vote was by no means reassuring to the Republicans. Of the eight seceded states which voted, six cast their ballots for Grant.¹ This was due chiefly to the fact that many of the whites were disfranchised, and that these states were under carpetbag governments. Seymour carried New York, New Jersey, Oregon, and Delaware, and also Maryland, Georgia, and Louisiana. Had all the Southern states voted, and had the South been solidly Democratic, as it came to be a few years later, Seymour would have been elected President over Grant. But this was not all. Seymour came within less than a thousand votes of winning in Indiana and was but 514 below Grant in California, while the Republican majorities in Ohio, Pennsylvania, and other Northern states were very small. These facts were startling to the Republicans, and convinced them that henceforth, as in ante-bellum days, they would have to reckon with a powerful rival in the Democratic party. The two chief causes of this unexpected showing of the Democrats were, that thousands of their number who had acted with the "Union" party during the war had now returned to their old allegiance, and that a considerable number of Republicans, who had followed President Johnson and had opposed congressional reconstruction, now found a permanent home in the Democratic fold.

OPENING OF A NEW ERA

Many of our Presidents have been men with military records; but only once before the election of Grant — just twenty years before — had the people chosen a chief magistrate on account of a purely military record. General Grant's inaugural address, in which he said that he accepted the responsibilities of the great office without fear, and his subsequent choosing of a cabinet, revealed his profound ignorance of the great work that lay before him. The surprise to his party was complete when he named Mr. A. T. Stewart, the well-known New York merchant, as secretary of the treasury. Mr. Stewart was ineligible, as a law passed in 1789 forbade the employment in the revenue service of any one engaged in foreign commerce. When the President ascertained this fact he chose George S. Boutwell of Massachusetts to fill the office.²

¹ As stated in the preceding chapter, Virginia, Mississippi, and Texas did not vote in this election.

² First, however, he requested Congress to remove the disability of Mr. Stewart, but this request was not granted.

Other appointments were quite satisfactory: E. B. Washburne became secretary of state, Jacob D. Cox, secretary of the interior, E. R. Hoar, attorney-general, and J. A. J. Cresswell, postmaster-general. Mr. Washburne, however, after a week's service, resigned and became minister to France, and was succeeded in the Cabinet by Hamilton Fish of New York. **The Cabinet.**

The House was organized on March 4, 1869, according to the law passed two years before, and James G. Blaine was elected speaker. The Senate easily maintained its standard of ability. Among its leading members were Carl Schurz, newly elected from Missouri; Hannibal Hamlin of Maine, former Vice President; Henry Wilson, a future Vice President; George F. Edmunds of Vermont, Allan G. Thurman, the sturdy Ohio Democrat who came to be called the "Old Roman," John Sherman, Charles Sumner, Jonathan Trumbull, W. P. Fessenden, and William A. Brownlow, the erratic fighting parson of Tennessee.

One of the first acts of this Congress was to modify the Tenure of Office Act to an extent amounting almost to its repeal. This was an acknowledgment that the law was a purely partisan one. Affairs at the South were still in an unsettled condition, and, as briefly stated on a preceding page, Congress passed laws known as "force bills," aimed chiefly at Ku Klux interference with elections in the South. The first of these, passed in May, 1870, provided that in cities of more than twenty thousand inhabitants the elections be controlled by Federal supervisors. The second, passed in April, 1871, was far more sweeping. It resembled the famous Sedition Law of 1798.¹ It made the depriving of any one of the rights of citizenship, as defined in the Fourteenth Amendment, a penal offense, held the state responsible for the enforcement of that Amendment, **The force bill.** authorized the President, for a specified time, to suspend the writ of Habeas Corpus, and to suppress any insurrection by the army and navy of the United States. But for some years longer election troubles at the South continued to disturb the whole country, and President Grant was frequently called on to quell the riots and to decide the contests. In some states "Returning Boards" had been created by law, and these boards were empowered to sit in judgment on all election returns. They were destined to attract great attention a few years later, at the disputed presidential election of 1876.

Meantime the Federal Supreme Court was again making itself felt in the land. Three decisions of great national importance were

¹ Alexander Johnson's "American Politics," p. 214.

made at this period. The first of these, the famous *Texas vs. White* case of 1868,¹ while upholding congressional reconstruction, pronounced that the seceding states had not been out of the Union, and that the act of secession was void. The second, in 1869, was a decision against the constitutionality of the Legal Tender Law of 1862. In this famous case, *Hepburn vs. Griswold*, Chief Justice Chase pronounced unconstitutional a portion of the law by which he had, as secretary of the treasury, issued the greenbacks eight years before. The decision pronounced against the validity of the law with reference to preëxisting debts. But this decision was not permitted to stand. Two new justices having been appointed, the case was tried again the next year and the decision was reversed.² Finally, the "Slaughter House" cases of 1873 concerning the chartering of a company by the government of Louisiana practically set state rights on the same footing as that commonly understood at the North before the war, and decidedly limited the scope of the Fourteenth Amendment. These decisions were very conservative in their tendencies, and they strongly emphasize what I have stated on a preceding page, — that the Civil War wrought little permanent change in the civil government of the nation, or even in the relation of the states to the Union.

The great industrial event of this period was the completion of the first railroad across the continent to the Pacific Ocean. The great West was rapidly growing. In the late fifties gold had been discovered on the eastern slope of the Rocky Mountains, near the present city of Denver, and silver within the bounds of Nevada. But these places were far from civilization. It was determined therefore to build a railroad through this vast mountainous region at the nation's expense. The work was begun in 1862. Two companies were chartered, the Union Pacific to build westward from Omaha, and the Central Pacific to build eastward from Sacramento. On the 10th of May, 1869, the two companies met at a point in Utah, the last rail was laid with impressive ceremony, and the great work was completed.

More than \$27,000,000 had been given by the government to each of these companies, and they received, in addition, every odd section of land in a strip twenty miles wide along the entire route. This land grant came to give great dissatisfaction to a large portion of the people of the country, and was for many years a disturbing element. The building of the Pacific Railroad occasioned, a few

¹ See 7 Wall. 700.

² See McPherson's "Hand-Book for 1871-1872," p. 53.

years later, one of the greatest scandals in the history of Congress, known as the *Crédit Mobilier* case.

Soon after Grant became President he conceived the project of annexing the Dominican Republic, comprising the eastern portion of the island of San Domingo, to the United States. But the scheme was opposed by most of the leading statesmen of the party, and it came to naught. In the light of these later days, since we have acquired West Indian possessions, greater wisdom must be accorded General Grant's views than was accorded them at the time. The President's views remained unchanged in regard to San Domingo, and he referred to it again in his last message to Congress. One effect of the matter was a complete alienation between him and Senator Sumner, who had led the opposition to annexation. They were henceforth personal enemies.¹

THE TREATY OF WASHINGTON

In our foreign relations the chief legacy of the war was the unsettled dispute with Great Britain concerning the depredations of the reckless *Alabama* and her reckless sisters. Mr. Charles Francis Adams, our minister at London, protested from the beginning against the building of Confederate cruisers in English waters, and in 1865 he made to Earl Russell an official statement of the number and tonnage of the United States vessels transferred to the British flag on account of the depredations of the southern cruisers. The earl answered in the following decisive language: "Her Majesty's government must decline either to make reparation and compensation for the captures made by the *Alabama*, or to refer the question to any foreign state." Secretary Seward some time later sent a list of the claims for which the British government would be held responsible. The British government still refused to be moved; but when, in 1868, Mr. Adams's successor concluded a treaty with that government which ignored the *Alabama* claims, providing only for a commission to settle private claims of both countries, and that treaty was rejected by the United States Senate by an almost unanimous vote, the English public began to awaken to the fact that there was something serious between the two nations. Senator Sumner had made a most radical speech, in which he put forth the

¹ Sumner was in the end greatly humiliated by being removed, through Grant's influence, from the head of the Senate committee on foreign affairs, and by the recall of his personal friend, John Lothrop Motley, from the post as minister to England.

most extravagant claims. He contended that England was responsible not only for the destruction of our shipping, but for our loss in the carrying trade, and even for the prolongation of the war occasioned by the early recognition of the belligerent rights of the South by the British queen. According to Sumner's rating, the British government should pay to the United States some hundreds of millions of dollars.

General Grant, who had now become President, gave no countenance to the preposterous claims of Sumner; but with the more moderate claim of damages for the destruction of our shipping he was in full sympathy. In his annual message of 1870 he recommended that the government assume and pay these claims of American citizens against England, and thus raise the affair to the dignity of a purely international one. The message made a profound impression in England, and moved the Ministry to speedy action. Some weeks later the English minister at Washington, Sir Edward Thornton, proposed a Joint High Commission to sit at Washington and discuss pending questions. The offer was accepted and this commission, composed of men of the highest standing in the two countries, began its sittings early in March, 1871.¹

For two reasons the British were now anxious for an early settlement: to preclude all danger of hostilities with the United States, and, as Lord Granville said in the House of Lords, to prepare for "possible complications in Europe" that might arise from the Franco-Prussian War. If England had become embroiled in a European war with the Alabama claims unsettled, she could hardly have expected the United States to take the trouble to prevent the building and fitting out in American waters of vessels hostile to her.

The Joint High Commission labored for two months and brought forth the Treaty of Washington, which was ratified by the Senate in May, by the British government in June, and was proclaimed in force by President Grant on the 4th of July. The treaty provided not only for the settlement of the Alabama Claims, but also for the settlement of the north-western boundary of the United States which had been but vaguely

¹ The United States was represented by Hamilton Fish, secretary of state; Robert C. Schenck, minister to England; Samuel Nelson, E. R. Hoar, and G. H. Williams. Great Britain was represented by Earl de Grey and Ripon, Sir Stafford Northcote, Sir Edward Thornton, Sir John A. Macdonald, and Professor Bernard who held the chair of international law at Oxford.

defined in the Treaty of 1847, and for the claims of Canada against the United States concerning the fisheries.¹ The Alabama claims were to be decided by a tribunal of five men to meet at Geneva, Switzerland, the fisheries dispute by a commission to meet at Halifax, and the boundary between the United States and British Columbia was to be referred to the Emperor of Germany.

Of the five men who were to form the Court of Arbitration at Geneva, one each was to be appointed by the President of the United States, the Queen of England, the King of Italy, the Emperor of Brazil, and the President of the Swiss Republic. President Grant appointed Charles Francis Adams, Queen Victoria appointed Sir Alexander Cockburn, lord chief justice of England, the King of Italy named Count Sclopis, whose reputation as a jurist and a man of letters extended throughout Europe, while the Emperor of Brazil appointed the Viscount d'Itajubá, and the Swiss President chose Jacques Staempfli. These men were all of great eminence. They began their sittings on December 15, 1871. The claims at first put forth by the agent of the United States were very extravagant, and included the "indirect claims" for consequential damages, such as Mr. Sumner had advanced in his Senate speech. Mr. Gladstone declared that the "indirect claims" did not come within the tribunal's jurisdiction, and the whole British press broke out fiercely against the American proposal. While the two nations were in a furor of excitement over the matter, the Geneva tribunal ended the suspense by deciding in favor of the British view, namely, that only the claims for actual destruction of property by English-built Confederate cruisers could be considered.

The real work of the tribunal continued for many months, and was not completed until the following September. The decision was that the British government had failed to use due diligence in the performance of its neutral obligations, and that it pay the United States the sum of \$15,500,000 in gold. The only negative vote cast was that of Chief Justice Cockburn, who refused also to sign the article when it was completed. The British public was greatly displeased with the verdict; but the Ministry accepted it, and the troublesome question was settled. The Americans rejoiced, not on account of the money to be paid, but over the moral victory, as the verdict pronounced England in the wrong throughout the long controversy. This Alabama Affair has

Geneva
award.

¹ See McPherson's "Hand-Book," p. 87.

been pronounced the most unfortunate blunder in the history of the British Monarchy.¹

The decision of the German Emperor with regard to the boundary dispute in the Northwest was in favor of the United States, giving us a group of small islands that had been claimed by both countries. This left the United States, for the first time after the close of the Revolution, as stated by President Grant, without a boundary dispute with Great Britain.²

THE LIBERAL REPUBLICAN MOVEMENT

No party was ever founded on purer motives than was the Republican party, and no President ever entered on the great office with nobler intentions than did General Grant. But no party can long have a monopoly of government without the rise of demagogues and corruptionists within its ranks. Especially is this true at a time of great social upheaval like civil war, when offices are multiplied and when the opposing rival becomes so weak that its protesting voice can be heard but faintly. The Republican party proved no exception to the rule. Its achievements during the first years of its power were great. It had left a record in American annals that cannot be effaced, but the cankerworm had begun its work. The political jobber had gained his seat in the inner councils of the nation; and now, to his great advantage, the people had chosen a President who, though a true soldier, was, like Zachary Taylor, only a soldier, a President who wanted the knowledge and capacity for administration, who was honest — too honest to suspect and watch the dishonest man.

Before the close of Grant's first term there was widespread demoralization in high government circles. Few if any suspected Grant of conniving at wrong doing, but many believed that his simplicity of nature, his want of capacity to curb the wily politician in search of plunder, was the chief obstacle to good government. The Force Bill, which practically suspended civil government in parts of the South, also helped to cause a reaction in the North; and a very respectable element in the Republican party opposed the re-nomination of Grant for a second term. In this class of anti-Grant Republicans we find such leaders as Seward, Greeley, and Charles A. Dana of New York; Lyman Trumbull and David Davis of Illi-

¹ The *Nation*, Vol. XIV, p. 84.

² The fisheries question was not disposed of for some years after this. It will be noticed later.

nois; Chase and Stanley Matthews and Thomas Ewing of Ohio; Governor Curtin and A. K. McClure of Pennsylvania; Charles Francis Adams, Senator Sumner, Carl Schurz, General Banks, Cassius M. Clay, Justice Field, and many others. These men had many followers, and were supported by such great dailies as the *New York Tribune*, the *Chicago Tribune*, and the *Cincinnati Commercial*. The great body of the Republican party, however, determined to renominate Grant, whereupon a majority of the opposing faction broke away from the party, put its own ticket in the field, and called itself the Liberal Republican party. The national movement was preceded by a local movement in Missouri, where the liberals, led by Carl Schurz and B. Gratz Brown, joining the Democrats, won a victory over the radicals, who favored retaining the disabilities of the ex-Confederates. The Missouri liberals were soon joined by a similar faction in New York and other states, and thus the anti-Grant or Liberal Republican party came into existence.

When the Liberals saw that the nomination of Grant by the regular party was inevitable, they called a national convention, to meet at Cincinnati on the 1st of May, 1872.¹ The proposal met with a wide response, and on the appointed day the city on the Ohio witnessed a great gathering, a huge mass meeting rather than a convention. Much of the best Republican brains was represented, but the crowd was a motley one; the members had not been sent, they had come of their own accord. They represented every shade of political opinion, and were of the same mind in one thing only — opposition to Grant. Had the regular party consented to drop Grant, the Liberal movement would doubtless have dissolved;² but as this could not be, they proceeded with their work. Their platform pronounced against civic corruption, and the continued disabilities of the ex-Confederates, and, as a direct thrust at Grant, declared that no President should be a candidate for reelection.³ On the tariff they could not agree, and they waived the issue. The momentous question was the choice of a candidate for the presidency. On this point success or failure would probably turn. It was known that the new party could not win alone; but there was a tacit understanding that the Democrats would indorse its nominees if acceptable to them. Much, therefore, depended on the choice of the Liberal convention.

¹ The call was made by the Missouri Liberals.

² The *Nation*, Vol. XV, p. 20.

³ McPherson, p. 207.

The leading name before the convention was that of Charles Francis Adams. Adams was a finished statesman. He had displayed high diplomatic skill as minister to England during the war, and, moreover, he belonged to the only family in America that had given two Presidents to the United States. But Adams, like his father and grandfather, was wanting in tact and in the winning arts of the politician; and, true to his ancestral precedents, he made a foolish blunder at the moment when this convention seemed about to name him for the highest office in the land. He telegraphed his managers to "take him out of that crowd" rather than make any pledges for his honesty. There were men in "that crowd" who resented the apparent reflection and cast their ballots in another direction. The other leading candidates were Lyman Trumbull, David Davis, and Horace Greeley. Any one of the first three would have been agreeable to the Democrats. The convention nominated the fourth.

HORACE GREELEY

The great editor of the *New York Tribune* was the most conspicuous man in the country next to President Grant; and while Grant had but recently loomed first upon the military, then upon the political, horizon with the suddenness of a meteor, Greeley's fame had shone with a steady light for a generation. While Grant was yet a boy in knickerbockers on his father's farm in southern Ohio, Greeley was experimenting in the nation's metropolis with the first one-cent daily ever issued; while Grant was an unknown cadet at

Grant and Greeley. West Point, Greeley was in the forefront of the memorable political battle of 1840; and while Grant was hauling cordwood and hoeing potatoes in Missouri, already a middle-aged man, and perhaps without a dream of future greatness, Greeley was the proprietor of the leading American newspaper and the acknowledged prince of American editors.

Horace Greeley, the son of a farmer, was born in New Hampshire in 1811. As a well-grown boy we find him in the printing business in Erie, Pennsylvania. At length, determined to strike out in the great world and win for himself the best that his talents could procure, he went to the city of New York. After a long journey on foot and on canal boats he reached the metropolis with ambition in his soul and nothing in his pocket; to become, after years of toil and discouragement, the leading editor in the city and the nation.

For many years Greeley had been in the midst of every political battle in his state and in the nation. His pen was often caustic, always powerful; his courage never faltered, but he often displayed a singular lack of wisdom at a critical moment. So outspoken had he been on public questions that he had made enemies on every side. Herein lay his weakness as a candidate. He could not hope to be elected without the aid of the Democratic party, and he had been the implacable foe of that party for a generation. Scarcely a leading man in the party had escaped the bitter castigation of his pen. Could this party now make this man their standard bearer in the great contest?

The nomination of Greeley at Cincinnati stunned the Democracy of the North.¹ Any other public man would have suited them better. For a time the opposition to him was formidable; but as the weeks passed and the leaders perceived the hopelessness of their cause, except they joined with the Liberals, it was decided to swallow the medicine, however bitter. Accordingly, the Democratic convention, which met in July at Baltimore, nominated Greeley and B. Gratz Brown, the Liberal Republican candidates.²

The Republicans had met in Philadelphia, and had renominated Grant by a unanimous vote. Henry Wilson, the Massachusetts senator, was named for Vice President.³ The campaign partook of the character of that of 1840, when Greeley first rose to public notice. The Greeley orators rung many changes on Grant's civic incapacity, his nepotism in public appointments, and on the corrupt carpetbag governments of the South. The Grant supporters declared that if Greeley were elected, it would be a Democratic victory, as the great majority of his supporters came from that party; that it would be turning the government over to the unregenerate Democracy. It was dangerous, they argued, to intrust the hard-won fruits of the war to the party that but eight years before had pronounced the war a failure, the party that was unfriendly to the freedman and to the last three amendments, the party that included all the old slaveholders and ex-rebels. But Greeley was hopeful until the early state elections

¹ Greeley was more popular at the South because of his mild attitude on reconstruction, and because he had signed the bail bond of Jefferson Davis.

² A small faction of the party, however, calling themselves "the Straightouts," refused to support Greeley, met in convention at Louisville, and nominated Charles O'Connor and John Quincy Adams. This party made little showing in the election.

³ Wilson's origin was as obscure as that of Lincoln or of Andrew Johnson. He was the son of an Irish farm laborer named Colbath, and his own name was Jeremiah Jones Colbath. Not liking his name, he had it changed by the state legislature to Henry Wilson.

pointed unerringly to the reëlection of Grant. The election came, and Grant swept the country overwhelmingly, receiving the votes of every state in the North, and of all but six in the South. Since the reëlection of Monroe in 1820, but twice (in 1852 and in 1864) had there been such a sweeping victory. Greeley's elements of weakness were two: tens of thousands of old-time Democrats refused to support him and remained away from the polls; and a great many Republicans, who were at first in full sympathy with the Liberals, finding themselves in Democratic company, hastened before election day to get back into the Republican fold.

Greeley's defeat came upon him with a shock. It was not simply the defeat, for that was not unexpected, even by him, but the overwhelming vastness of it, that was crushing. Greeley had come to believe, from his great editorial success and from his influence in national councils, that he was one of the most highly honored among his countrymen; and now to have his idol shattered at one fell blow was more than his sensitive nature could endure. He could not see that thousands of his friends had voted against him because they feared that a change in the government at that time would not be well for the country, and that they were still his friends. He did not foresee that his countrymen, for generations after he was gone, would honor his memory as one of the ablest and noblest men of his times. He saw only the result of the election, and it crushed him. Moreover, the last weeks of the campaign he spent at the bedside of his dying wife, the companion of his long struggles. Her death occurred just before the election, and the double blow proved too heavy. Greeley's reason was dethroned, and he was sent to an insane asylum. Ere

**Death of
Greeley.**

the month that brought his great defeat had closed — while the shouts of victory for his successful rival were still resounding and the bonfires were still burning — Horace Greeley was dead. The whole nation mourned at the sad end of Greeley, one of the noblest of men with all his political antagonisms; and men of every political shade, including President Grant, stood sorrowing about the grave when his body was laid to rest.

EXECUTIVE DEMORALIZATION

The sweeping victory of Grant in 1872 gave the Republican party a feeling of security, a belief that it was more strongly entrenched in power than ever before. This condition was an unwholesome one,

and it led the party more than ever to disregard the accusations of corruption that had been so freely made in the campaign. The prophecies of evil, freely made by the Democrats, were soon amply justified. General Grant proved utterly incapable of cleaning the Augean stables, and during his second term the demoralization in public life was more widespread than ever before in the history of the government. If Grant were not utterly without a knowledge of the responsibilities of the great office, he was hopelessly egotistical. This was shown by his appointing his first Cabinet without consulting any of the leaders of his party. And he maintained this attitude throughout the eight years. Nor was he a good judge of character; the political adventurer could gain his ear as readily as the long-tried statesman of well-known probity, and many of his appointments were made without consultation with his Cabinet. The result was that every branch of the government became infested with men who sought only plunder.

The most notable of the resulting scandals was that known as the **Crédit Mobilier** case. The **Crédit Mobilier** was a corporation, which in 1864 became a company to construct the transcontinental railroad. During the presidential campaign of 1872 the Democratic leaders charged various Republican leaders with holding stock in the **Crédit Mobilier** Company. For members of Congress to be interested in a company whose profits and fortunes depended mainly on friendly acts of Congress was considered highly improper. A searching investigation revealed that the charges were founded on facts. Many reputations were blasted, and two members of the House were severely censured.

The "Whiskey Ring" was exposed by Secretary of the Treasury Bristow. In many western towns — St. Louis, Chicago, Milwaukee, and others — the manufacturers of whiskey corrupted the government officials, and in two years defrauded the government of over \$4,000,000. More than fifty United States officials were arrested, but most of them escaped punishment.

The corrupt practices were not confined to the lower officials. In 1876, Secretary of War W. W. Belknap was accused of offering to sell the control of the post-tradership at Fort Sill, Indian Territory. An investigation followed, and the most glaring frauds were unearthed. Belknap was shown to have received at least \$24,000 by "farming out" contracts. He was speedily impeached by the House of Representatives; but before he could be tried by the Senate, and indeed, a few hours before the impeachment

vote was passed, he resigned from the Cabinet, and thus no doubt escaped conviction by the Senate.

Indian affairs were woefully mismanaged during this period. The Indian bureau had its ring of contractors who grew rich by defrauding the government and the Indians. Many of the tribes, entitled to certain supplies by treaty with the government, were systematically defrauded, and they grew discontented and hostile. The disastrous Indian troubles in the Northwest at this time were due chiefly to the gross mismanagement of the Indian bureau.

In 1873 the Modocs of Oregon became unmanageable and General Canby, a distinguished officer of the Mexican and Civil wars, was sent to pacify them. With two civilians he met the Modoc chief, Captain Jack, and his attendants, under a flag of truce, when suddenly the Indians opened fire without a word of warning. Canby and one of his companions were killed. A vigorous campaign was then opened against the tribe, and it was soon subdued and the assassins captured. They were tried in a civil court for murder, and three of them, including Captain Jack, were put to death.

The most disastrous Indian battle in the last half century occurred in June, 1876, on the Little Big Horn River in Montana.

It was decided that a band of Sioux be removed, and General George A. Custer, a noted cavalry leader of the Civil War, was assigned the dangerous task. The Sioux resisted, and Custer's army, consisting of less than three hundred men, was unexpectedly attacked by an Indian band numbering probably three thousand warriors, led by Sitting Bull. The troops fought bravely and slew many, but the odds were too great, and Custer and his whole band perished in the battle.¹

Not all the troublesome questions of the day resulted from executive incapacity. The political turmoils of the South, the remaining legacy of the war and reconstruction, grew out of the opposition to the Force Bill. The southern whites were determined to terrorize the black voters and to drive the northern squatters from the country. To do this bands of masked men rode through the country by night and spread terror on every hand. But there were other causes of disorder. In Arkansas two of the carpetbaggers, Brooks

¹ Only one man, a half-breed scout, escaped alive. The horse "Comanche" also escaped, and was found some miles from the battle ground with seven wounds. The secretary of war afterward detailed a soldier to attend the horse and forbade any one to ride him.

and Baxter, both claiming to be Republicans, fought over the governorship. The struggle covered two years; finally President Grant, through his attorney general, settled the matter in favor of Baxter.

Louisiana was the state to suffer most and longest through political disorders. Here also the fight began between Republican factions, but it soon became a war between the Republicans and the Democrats. W. P. Kellogg, the Republican governor, was accused of running the state into ruinous debt, and his election was disputed. In August, 1874, an outbreak in the Red River Parish resulted in the killing of six Republican officials. President Grant was about to send troops when the defeated candidate for lieutenant governor, Mr. D. B. Penn, in the absence of Mr. McEnery, the defeated candidate for governor, denounced Kellogg as a usurper, and called on the people to arm and drive him from office. Some ten thousand men responded to Penn's call, and an armed collision took place on the streets of New Orleans in which a dozen or more men were killed on each side. Kellogg was driven from the statehouse, and Penn was installed governor. But Federal troops soon arrived and drove Penn out and reinstated Kellogg. The next year the trouble was renewed over the election of the legislature, and bloodshed was narrowly averted. At length the Democrats sullenly yielded to the Kellogg government, owing to the presence of Federal troops. On the withdrawal of the troops in 1877 the state passed into the hands of the Democrats, where it has since remained.

War in
Louisiana.

FINANCIAL LEGISLATION

The great subject of finance, with which the country had to grapple during the war period, as we have noticed here and there in treating of that period, was still a troublesome problem in the years that followed the war. Whatever fault may be found with the government during these post-bellum years, in one thing — in managing the finances — it did nobly.

At various times during the war there were temporary spasms in the money market, but on the whole the finances were kept in a fairly steady condition, owing chiefly to the masterly ability of Secretary Chase, and to the legal tender and banking acts of Congress. Nevertheless gold rose to 285, as before mentioned, and ceased to circulate in the channels of trade; and with all the vast sources of current

revenue the public debt reached \$2,800,000,000. This debt had to be reckoned with, and in doing so the Republican party, in order to maintain the public credit, took a stand equally commendable with that of the Federal party eighty years before. Mr. Hugh McCulloch, secretary of the treasury, began retiring the greenbacks in 1866, but, after he had withdrawn some \$66,000,000 from circulation in a little over two years, Congress, alarmed at an outcry against it from the West, put a stop to the process. Through the able management of McCulloch the public debt had been reduced before the close of the year 1868 by more than \$200,000,000, while the annual revenue had been cut down \$140,000,000, and nearly all the temporary obligations had been exchanged for long-time bonds.

In 1869 occurred the great gold conspiracy, culminating in "Black Friday." The leading character in this plot to corner the gold market was Jay Gould of New York. It had been the custom of the government to sell a million dollars' worth of gold per month for the accommodation of importers and others. Gould, who was aided by James Fisk and A. R. Corbin, a brother-in-law of President Grant, and one or two others, conspired to corner the gold market; but this could not be done while the government sales continued. They convinced the President, therefore, that it would be better for the country, the movement of the crops, and the like, if the gold sales were suspended. The President innocently consented and promised to grant their request. Lest he should change his mind, however, he was induced, how or by whom is not known, to make a visit of a week or two with an old friend in an obscure town in western Pennsylvania, which was without railroad or telegraphic communication. The conspirators determined to purchase all the gold in sight and then force it to the highest possible point before selling. Everything seemed to work well. The pool held a hundred millions. On the fatal Friday they purchased twenty-six million at 1.60, and pandemonium reigned in the stock exchange. But on one thing they had not reckoned. President Grant had returned to Washington, and in response to many letters and telegrams urging him to break the conspiracy, he yielded and threw five millions of gold on the market. This worked like magic. It caused a sudden drop in the gold market, and the conspirators were beaten at their own game. Their losses reached many millions. The panic caused by this plot was temporary and was purely financial. The

24, 1869.**

real panic that was to lay a heavy hand on all the people was four years yet in the future.

We return to our subject — the doings of Congress concerning the public debt. President Grant in his annual message of 1869 recommended that the large portion of the public debt which still bore 6 per cent interest be funded at $4\frac{1}{2}$ per cent. The response was a refunding act in July, 1870, and a supplementary one the following January. These acts authorized the issue of \$500,000,000 of 5 per cent bonds redeemable in ten years, \$300,000,000 at $4\frac{1}{2}$ per cent to run fifteen years, and \$1,000,000,000 of 4 per cent bonds to run thirty years. All were payable in coin and exempt from taxation. The saving to the government occasioned by refunding at a lower rate of interest amounted to many millions a year. But, on the other hand, the revenues were greatly reduced by the expiration of the income tax law at the end of the year 1871, and by the reduction of the duties on tea, coffee, sugar, and some other articles; and yet, the war expenses being cut off, the public debt diminished rapidly, and by the close of the year 1872 it was nearly a thousand million dollars less than at the close of the war.

**Refunding
the debt.**

Before the refunding was completed, the silver question came into prominence. In February, 1873, a law was passed to "demonetize" silver, or to drop the standard silver dollar of $412\frac{1}{2}$ grains from the list of United States coins, and substitute the trade dollar of 420 grains.¹ This caused a drop in the value of silver, and a popular desire that the old dollar be restored grew up. The result was the Bland-Allison Bill of 1875.² By this law the secretary of the treasury was directed to purchase enough silver to coin not less than two million nor more than four million dollars a month of $412\frac{1}{2}$ grains; while, by a law of 1877, the trade dollar ceased to be a legal tender. By a law of 1878, the dollar of $412\frac{1}{2}$ grains was made a legal tender, and the following year silver coins of less than one dollar were made legal tender to the amount of ten dollars. Thus began the silver agitation that was to result in the Sherman Law of 1890, its repeal a few years later, and the great silver movement that was to mark the closing years of the century.

**Demonetizing
silver.**

The great aftermath of the inflation of the war period was the

¹ This act was not opposed by any one, as the silver dollar had long been out of circulation.

² Passed over the President's veto.

panic of 1873. For some years after the war money was plentiful, and the people formed the habit of spending it freely, and of engaging in unwise speculation. The currency had been greatly contracted by the canceling of legal tender notes under Secretary McCulloch. But the people did not take account of the new conditions; they went on in the old way until the crash came. Hundreds of miles of needless railroads were built in the unpeopled West; great business enterprises were undertaken on borrowed capital. As a fever leaves its victim weaker than before, so the fever of inflated prices and overissues of money will in the end bring disaster in the business world. The panic of 1873, which ran its course in four or five years, was occasioned, but not caused, by the failure of the great Philadelphia banking house of Jay Cooke and Company on September 18, 1873. This day is known as a second Black Friday. From this day failure followed failure among the great business and banking firms. Business of every sort became stagnant, and only after years of recuperation could the normal conditions of trade be resumed.

POLITICAL REACTION

In our American politics a money panic or an industrial depression, "hard times" from whatever cause and however inevitable, is laid at the door of the party in power. For many scandals in public life and for many other shortcomings the Republican party was, in whole or in part, responsible; but no human wisdom could have prevented the panic of 1873. And yet the party was held responsible for it, and it became a powerful weapon in the hands of the Democrats in their struggle for supremacy. The defeat of Greeley in 1872 left the Democratic party disorganized and prostrate; but in the end the party was strengthened by the escapade. It went down in the disaster, but it had become used to defeat, and it rose with its usual resilience. The Liberal party was crushed to rise no more, and most of its members went back to the Republican fold whence they had come; but not all,—thousands remained with the Democratic party, and in this way was that party strengthened by the Liberal movement.¹

¹ As examples take A. K. McClure and ex-Governor Curtin of Pennsylvania. McClure, one of the ablest editors in the country and the intimate friend of Lincoln, after many years as a Republican manager, now became a leader of the Democrats. Curtin never went back to the Republicans, but was sent to Congress for several terms as a Democrat. Thomas Ewing and Lyman Trumbull were of this class.

The Republicans had sinned grievously. The party was justly blamed for the corruption that pervaded the administration, for the *Crédit Mobilier* scandal, and for the "Salary Grab," by which the members of Congress increased their own compensation by 50 per cent, and made the bill retroactive so as to apply to the Congress that passed it;¹ but it was unjustly blamed for bringing on the panic of 1873. The people are ever ready to listen when their pockets are touched. They heeded the Democratic call for reform. The first note of warning came from Ohio, where, in 1873, the people elected as their governor William Allen, an old-time Democrat who had served in Congress before the Mexican War. New York sounded the next note in the election of Samuel J. Tilden as governor. The political reaction swept the country like a tidal wave, and in 1874 the Democrats carried the country. The Republican majority of near a hundred in the Lower House was replaced by a Democratic majority almost as great. Mr. Blaine, who had been Speaker for the past six years, was replaced by Michael C. Kerr of Indiana.

The Republican party, guilty though it was of many misdemeanors, now did a noble act. After a short session the House would pass into other hands, after which no party measure could be enacted. Before the close of the session, therefore, the Republicans passed a law providing for the gradual resumption of specie payments. The act was passed at this time for the purpose of placing the matter beyond the control of the Democrats, as they were known to oppose it. Resumption of specie payments, — that is, a redeeming of all paper money, or a readiness to redeem it in coin, was necessary to the credit of the nation and to the bringing about of perfectly normal business conditions. The Resumption Act had been recommended in the President's message, and by the secretary of the treasury, B. H. Bristow. It was passed in January, 1875, and was to go into operation just four years later. John Sherman of Ohio, secretary of the treasury during the succeeding administration, became the chief agent in bringing it about, and in doing so he placed himself as a financier in the class with Hamilton, Gallatin, and Chase.

**Resumption
Act.**

¹ So fierce was the cry of the people against this act that the same Congress repealed it.

THE CENTENNIAL

A pleasing episode in the midst of political turmoil was the great industrial fair that was held at Philadelphia in commemoration of the nation's birth. The old city from which the Declaration of Independence had emanated was the most fitting place for this Centennial Exhibition, and the expansive Fairmount Park, lying on both sides of the winding Schuylkill, furnished an admirable site. In 1872 Congress passed an act creating a Centennial Board of Finance with full power to transact the financial business. It also created a commission to consist of one delegate from each state and territory, requested the President to proclaim the exposition to the world and invite other nations to participate. Thirty-three countries responded — all the civilized nations, except Greece.

The necessary money was raised by a loan of \$1,500,000 by Congress, an appropriation of an equal sum by Philadelphia, \$1,000,000 by Pennsylvania, smaller amounts by other states, and the remainder by the sale of stock. Several hundred buildings, large and small, were erected on the grounds. The main building, a great structure covering twenty acres, was devoted chiefly to manufactures and mining products of all nations. Next in size came Machinery Hall, which covered thirteen acres. The chief attraction of this building was the great Corliss engine which furnished the motive power for thousands of connecting machines. Agricultural Hall, covering ten acres, was built in the form of a nave with three transepts. The products here displayed, especially from the great middle West, constituted one of the most attractive features of the fair. These aforementioned buildings were temporary; but Memorial Hall, a substantial granite structure devoted to art, and Horticultural Hall, made of iron and glass in the Moorish style of the twelfth century, were intended to be permanent, and are still standing.

A vast throng of people attended the opening, President Grant and Dom Pedro II, Emperor of Brazil, being the chief figures. The people who entered the gates during the six months of the exhibition, from May 10 to November 10, numbered 9,900,000, a larger attendance than had any previous international exhibition, except that at Paris in 1867, which was open eight months instead of six. The Centennial Exhibition was not successful financially, as its stock-

holders were never repaid in full. But in the more important objects—the advancing of science and knowledge, the awakening of a fraternal interest between our country and foreign nations and between the various sections of our own country—the exhibition was eminently successful. It proved a stimulus to art, science, and commerce, to agriculture and manufacturing in every branch.

The lesson learned by America was a long-needed lesson in art and grace. The American people, in preparing a great continent for modern civilized life had been painfully practical, and in the great rush of building cities and railroads and inventing machinery had aimed at utility while neglecting the refinements that characterize the older countries. Many of the foreign exhibits at the great fair were of such a character as to awaken in the overpractical American a desire to cultivate the higher graces and refinements of art and beauty that mean so much in modern civilization. The European, on the other hand, was benefited by his contact with the sleepless activity, the ingenious, ever advancing life that characterize America.

THE DISPUTED PRESIDENTIAL ELECTION

Never but once in our history has there been a disputed presidential election. Twice before the electoral college had failed to choose a President and the election was thrown into the House;¹ but in neither case was there any dispute as to the number of votes cast for each candidate. In 1876, however, there was a dispute concerning the number of electoral votes cast for each candidate, and the peace of the country was most seriously threatened.

For sixteen years the Republican party had held the reins of government. Its achievements were great and of permanent value; but its many false steps, especially those of Grant's second term, had greatly weakened the party. The great wave of Democracy that swept over the country in 1874 had in some measure subsided; but the sentiment for reform was still strong, and the Democrats eagerly entered the presidential contest of the centennial year.

The Republicans met in national convention at Cincinnati on the 14th of June. For the first time since 1860 there was to be a contest for the nomination. The man whose following was largest was James G. Blaine of Maine, and his name was put before the convention by Colonel Robert G. Ingersoll in a brilliant outburst of eloquence

¹ In 1800 and 1824.

that made the speaker scarcely less famous than the one for whom he spoke. Blaine was by far the strongest and most popular leader in the party. But his name had been tainted with a charge of corruption, and a certain conservative element of the Republican party regarded him with distrust. Furthermore, he had powerful enemies who were ready to go to any lengths to compass his defeat.¹

On the first ballot Blaine fell but little short of the nomination. Six ballots were cast without result; but on the seventh there was a stampede for Governor Hayes of Ohio, who received the nomination. William A. Wheeler of New York was nominated for the vice presidency. The platform sounded the great deeds of the party in the past, promised to punish all public offenders with unsparing severity, and mercilessly arraigned the Democracy as in league with, if not identical with, the late foes of the government.

The nomination of Rutherford B. Hayes was a surprise to the country. He may be classed among the "dark horse" candidates, as no important element of his party had intended to make him the nominee. Hayes had not been looked upon as a leading man of his party, but his record was by no means to be despised. A native of Ohio, and a graduate of the Harvard law school, he had served through the war and had attained the rank of brigadier general. While still in the field he was elected to Congress, where he served four years. It is singular how often the number four recurs in the career of Hayes. Four years he spent as a youth in college; four years he served in the war, being wounded four times; four years he served in Congress, being first elected in 1864; four years and a little over he was governor of Ohio, and four years President of the United States.

The Democratic convention was held in St. Louis two weeks after the nomination of Hayes. For the first time since the passing of Douglas the party enjoyed the leadership of a great man. For many years Samuel J. Tilden of New York had served his party in minor capacities; but only recently — not until he had almost reached his three score years — had he risen in the political sky as a star of the first magnitude. He was a great lawyer, and possessed vast wealth. He had come into national prominence by unearthing the corruptions of the Tweed Ring in New York, and he was then

¹ A feeble effort was made by the friends of President Grant to have him nominated for a third term; but the plan was killed by an almost unanimous vote in the House of Representatives against it.

made governor of the state. In a short time he was recognized as the leader of the Democracy in the nation. He beheld his party, as it were, a flock without a shepherd, and quietly assumed control.

Tilden was nominated on the second ballot by a very large majority, and Thomas A. Hendricks of Indiana was given second place on the ticket. The platform sounded, with the ring of a bugle blast, the one note of reform in the government service. And this became the Democratic cry throughout the campaign. It was reiterated and reëchoed from every side; the city daily and the country newspaper, the famous orator and the local exhorter in the country schoolhouse — all joined in the one widespread cry of reform. The Democratic orators told the truth, but not the whole truth. Unwearied they were in crying out against the evils of the Republican administration, but its good deeds they left unmentioned; the settlement of the Alabama claims, the provision for a resumption of specie payments, the improvement of the naturalization laws — for such the Democratic orator had no use in 1876.

**Nomination
of Tilden.**

The Republicans were clearly on the defensive. They could not raise a counter cry of corruption, for the Democrats had been out of power for sixteen years, and they resorted to the old device of “waving the bloody shirt.” They denounced the Democrats, North and South, as public enemies, unregenerate rebels, and called on the people to meet them at the polls in the same spirit as they had been met on the battle field.¹ If the Democrats succeeded to power, the southern war debt would be paid, and perhaps the black man reënslaved. But the cry was well worn; only the least intelligent were frightened by it. As the campaign progressed the Republicans assailed the character of Mr. Tilden, and drew forth from him an explanatory letter which satisfied his followers, but did not silence his accusers.

Besides the two great political parties two smaller ones came into the field in this campaign. The Independent, or Greenback party, nominated the venerable New York philanthropist, Peter Cooper, for the presidency, while the newly organized Prohibition party chose Greene Clay Smith for the same office. But these minor parties cut a small figure in the great contest.

The contest was a close one, as had been foreseen; but no one was prepared for the long, exciting struggle that was to continue throughout the winter. On the morning after the election, the newspapers of the country announced the election of Tilden; but this

¹ *The Nation*, Vol. XXIII, p. 227.

was soon disputed by the Republicans, and the struggle, which was supposed to end with election day, had only begun. Tilden had won the states of New York, Connecticut, New Jersey, and Indiana in the North, and every southern state except three, South Carolina, Florida, and Louisiana, which were still under carpetbag government. He had also received a popular majority of a quarter of a million votes. It required 185 electoral votes to elect, and Tilden had secured 184 without any from the three disputed states. Mr. Hayes, therefore, to win the presidency must have every elector from these three states. All these states, on the face of the returns, had been carried by Tilden, the majority being 7876 in Louisiana, and somewhat less in each of the others. How then could the Republicans go behind the returns and claim the states? Simply by pronouncing the Democratic majority fraudulent through the "Returning Board," which had absolute judicial power over the elections. The Returning Board in each state was a creation of the carpetbag government, and the carpetbag government was sustained by national troops. If these forces chose, therefore, to pronounce the three states Republican, there was no power to prevent it—and that is exactly what they chose. The matter was decided in high Republican circles at Washington. The prize was vast—the control of a great nation—and the temptation proved too great to be resisted. The Democratic party has been a dreadful sinner since long before the war, has often committed fraud, and even now is unreformed and unfit to control the government. If such a misfortune can be averted by appropriating a few electoral votes, it is quite right to do so. It would in the end be a real service to the country. Thus reasoned the Republicans, and their conscience in the matter was probably up to the standard of the average political conscience. The Democratic party might have done the same thing under the same conditions.

The returning boards were wholly Republican.¹ Their decision was final; and they decided to throw out enough Democratic votes in each state on the cry of fraud to give its electors to Hayes. No doubt there was fraud in all these states, and probably in many others, as there usually is in such elections; but one party is seldom more guilty than the other. The Democrats believed that though they lost South Carolina and Florida, they could certainly hold Louisiana, where the returns gave them a

Returning boards.

¹ Except that there was one Democrat on the returning board of Florida.

majority of nearly eight thousand. Some of the leading members of each party went to New Orleans to see fair play for their respective parties. The Democrats who went thither proposed joint meetings that all might witness the final count by the returning board, but the Republicans refused their request and excluded them from the meetings.

The returning board in this state was properly composed of five members; but at this moment there were but three, and two of them were negroes.¹ The situation was not only grave; it was ludicrous in the extreme. A great nation of fifty million people waited with breathless eagerness for two black men, the majority of the board, both lately emerged from slavery, to name its Chief Magistrate for the ensuing four years. These colored men were utterly insignificant and unknown. At length they decided that Louisiana had cast her electoral vote for Hayes, and while they gave certificates to the Hayes electors, the Democratic governor gave certificates to the Tilden electors.

The Democrats all over the country raised the cry of fraud. The weeks passed. Neither party would yield, and intense excitement prevailed everywhere. The Democrats threatened to raise an army and prevent the seating of Hayes by force. The danger of internecine war was tremendous. **Great excitement.** Such a war might have been the most appalling in history. Only the deep-seated conservatism of the people, the inborn love of peace and order, saved the country. The people at this crisis looked instinctively to Congress for a solution. But the Senate was Republican and the House Democratic. What could be done? Inauguration day drew near. One proposal for settlement after another was made and rejected. At length, however, it was agreed by a vote of both houses that the matter be settled by a grand tripartite committee of fifteen — five from the Senate, five from the House, and five from the Supreme Court. This committee, known as the Electoral Commission, was to decide the contest, and from their decision there was to be no appeal. When fourteen had been chosen, five from each House and four from the Supreme Court, seven of them were from each political party. Justice David Davis was about to be selected by the four from the Supreme Court, as the fifteenth, as he was considered a neutral in politics; but at that moment the Illinois legislature elected him to the United States

¹ The *Nation*, Vol. XXIII, p. 294.

Senate as a Democrat. Justice Bradley was then chosen in his stead.¹ Davis had supported Tilden in the campaign, while Bradley had supported Hayes, and this change was fatal to the chances of Tilden.

The Electoral Commission was thus composed of eight Republicans and seven Democrats. It was hoped, however, that they would rise above the trammels of party and render a judicial verdict on the pure merits of the case. But this they could not do. On every question that came before them they voted as partisans and not as judges. Double returns had been sent from each of the three disputed states, and in every case, including a disputed elector from Oregon, the commission decided for the Hayes electors by a vote of eight to seven. The final vote was taken on the 2d of March, and two days later General Hayes became President of the United States. The Democrats were greatly disappointed and they found some relief in renewing the cry of fraud, in accusing the Republicans of having stolen the presidency — and this cry they kept up for many years.

General Hayes was an honest man, and he made a faithful President; but he never ceased to feel keenly the accusation of his opponents that he had accepted an office to which he had not been elected. And yet it is difficult to see how he could have done otherwise, when called to the presidential chair, than obey the mandate of his party, without bringing greater evils upon the country.

Scarcely had Mr. Hayes taken his seat when he withdrew the troops from the three Southern states, which at once passed into the hands of the Democrats, and from that time to the present they all have been steadily Democratic. Thus ended carpetbag rule in the South. The Republican rank and file were not pleased with this action of President Hayes. By thus recognizing the governors and other state officers who had been voted for on the same tickets that had contained the Tilden electors, the President was in a sense acknowledging that the Tilden electors had received a majority of votes over his own. The act certainly darkened the cloud that hung over his title to the presidency. This was explained by the claim that as the electors may be chosen "in such manner as the legislature of the state may direct," the legislature had the power to commit the choice of electors to the

¹ The Electoral Commission was composed of the following persons: Justices of the Supreme Court, Clifford, Miller, Field, Strong, and Bradley; Senators, Edmunds, Morton, Frelinghuysen, Bayard, and Thurman; Representatives, Payne, Hunton, Abbott, Garfield, and Hoar.

returning boards, though not the choice of state officers. But this was an admission that the Hayes electors had not been chosen at the polls. It developed, however, that the Republican leaders had bargained with the Democrats of these states to withdraw the troops and to give them (the Democrats) full control, if they would agree to the appropriation by the Republicans of the electoral votes. If this is true, — and it is positively stated by Colonel A. K. McClure in his recent book,¹ — it was one of the most unsavory bargains in our political history, and either party was quite as guilty as the other.

NOTES

The Chicago Fire. — One of the most destructive fires of modern times, and the greatest city fire in history, was that of Chicago, October 8-9, 1871. It started in a small barn in the western district of the city, and burned over nearly 2200 acres, reducing 17,450 buildings to ashes, and destroying 250 human lives. Some of the finest business blocks were included in this area, as were also many costly private residences, extensive factories, vast piles of lumber, and thousands of tons of coal. The value of the property consumed reached nearly \$200,000,000, and 98,000 people were rendered homeless. The rebuilding of Chicago displayed, as nothing had ever done before, the marvelous energy of the West, and especially the enterprise of the people of this great mid-continental metropolis. On the ruins of the old city a new and grander city was built, and with such rapidity that within a very few years scarcely a trace of the disastrous conflagration remained.

The Tweed Ring. — One of the notable events of 1871 was the unearthing of the notorious Tweed Ring in New York. For some years the city had been held by the throat by a gang of politicians, who proved to be thieves plundering the people under the guise of law. The leader of these was W. W. Tweed, formerly a mechanic, then the political "boss"; and with him were associated R. B. Connolly, city comptroller; P. B. Sweeny, head of the public parks department; A. Oakley Hall, the mayor, and others of lesser note. The thieves secured control of all the machinery of the city, and then by forged accounts, by furnishing supplies, giving out contracts, and the like, they looted the treasury of vast sums of money. They charged the city \$12,000,000 for the new city treasury building, which probably cost less than \$2,000,000. The robberies doubtless exceeded \$100,000,000, much of which was used for bribing lower officials. The corruption was exposed largely through the tireless efforts of Samuel J. Tilden. Hall was tried and the jury disagreed. Connolly and Sweeny fled the country. Tweed was sentenced to pay a heavy fine, and to serve twelve years in prison, when he made his escape. He was afterwards caught in Spain and brought back. He died in prison in 1878.

The Burlingame Treaty. — An important event of the year 1868 was the making of the Burlingame Treaty with China. Anson Burlingame, a man with a varied career as a member of the Free-soil and Know-nothing parties, as one of

¹ See "Our Presidents," p. 266.

the founders of the Republican party, and as member of Congress from Massachusetts, was sent as minister to China in 1861. After six years' service, when about to return to the United States, the Chinese government offered to make him envoy of that country to the United States, and to the nations of Europe. He accepted, and arrived in the United States with a Chinese embassy in the spring of 1868. They were received with high honor, and a treaty of commerce and amity was soon framed, and was ratified by our Senate in July. Burlingame then proceeded to Europe in the employ of China, and soon had treaties with that country and most of the European countries. Early in 1870, while negotiating at St. Petersburg, he died of pneumonia. The later influx of Chinese to the United States had its origin in the Burlingame Treaty, as it permitted a free migration from one country to the other.

CHAPTER XXXIII

INDUSTRIAL PROGRESS

THE retirement of President Grant was pathetic. As a commander of armies he had won enduring honors, but his eight years' service in the great office of the presidency had added no luster to his name. For the intrigues and corruptions of his administration he was responsible only in so far as he was incapable of perceiving and checking them. That he was personally honest cannot be doubted. He received no share of the plunder of his dishonest officials, and it must have grieved his soul when he realized, as he certainly did, that his administration would be remembered more by the corrupt practices of the officials whom he trusted than for anything else. But the American people have affectionately overlooked his weaknesses, and they remember him as the heroic figure that forced the surrender of Vicksburg and of the Confederate army at Appomattox; while his generous terms at the surrender of Lee and his mild partisanship in the years following endeared him to the people of the South.

NEW CONDITIONS

President Hayes was a sincere man and not without ability; but he was not popular with his party. He never gained, nor attempted to gain, a place in its inner counsels. His withdrawal of the troops from the South displeased many; his vetoing the Bland Silver Bill won him few friends. All corruptionists were arrayed against the President when they found that he was beyond their reach. Then it must be added that Mr. Hayes had no power to win and manage Congress, as many of his predecessors had done. The Democrats had control of the House, and during the whole four years no distinctive party measure could be passed. In fact, the Democrats on several occasions held up the necessary legislation, such as the appropriation bills, by putting on riders for the repeal of some obnoxious Republican law, notably the General Elections Law of 1872. Every

effort to coerce the President was resorted to, such as refusing appropriations necessary to carry out the laws, but the President refused to yield; he vetoed one measure after another and triumphed in the end. But these were only ripples compared with the turbulent breakers of the past, and the Hayes administration was of great benefit to the country as a season of political restfulness. From the outbreak of the war fifteen years before, the violence of partisan or military contest, or both, had been incessant. Now for the first time since the firing on Fort Sumter the South was left to take care of itself, the great parties were well balanced, and the people were free to turn their attention to the industrial development of the country. They felt too, as never before, the oneness of the nation. The bitterness engendered by the great civil strife was beginning to soften, and, but for the occasional rumors of violence at the South, the negro question and the secession question passed out of the public mind. For half a century such political quiet had been unknown; and for the first time in American history the national pride was rightfully enthroned in the public heart, and state pride forever relegated to the second place.

Mr. Hayes was fortunate in securing William M. Evarts as secretary of state and John Sherman as secretary of the treasury. The great task before Sherman was to bring about resumption of specie payments without disturbing the business of the country. This he did with admirable skill, and when the day of resuming came (January 1, 1879), not a ripple did it make on the business world. The secretary had \$130,000,000 in gold with which to redeem outstanding notes; but few were offered, so great was the confidence of the people in the government.

During the last half of the Hayes administration the Democrats were in full control of both houses of Congress—for the first time since 1858. But owing to the veto power of the Republican President the Democrats could carry out no party measure. The deadlock continued for ten years longer.¹ Meantime the people turned their attention to business. For the first time the resources of the South were added to the economic forces of the nation. The system of labor in the South before the war was such that only the agricultural interests could be developed. The vast coal beds, covering some forty thousand square miles, the extensive iron deposits, the

¹ Except for two years, 1881-1883, when the Republicans, who controlled the House by one vote, also controlled the Senate by the single deciding vote of the Vice President.

illimitable timber regions — all had remained unused. But now the old system was swept away, the whole South was thrown open to the labor of the world, mines were opened and manufactories built, and this without any decrease, but indeed with a steady increase, of the production of cotton.

One effect of the newly awakened industrial life was that the great business interests of the country became centralized in the hands of a comparatively few men. Great corporations were organized, and as a partial result the labor world became restless. In 1877 the great railroad strike occurred. The employees of the Baltimore and Ohio Railroad went on a strike on the 14th of July, and they were soon followed by the employees of all the other great lines east of the Mississippi, and for two weeks all traffic in that great section was at a standstill. The strikers took possession of the railroad property, — tracks, yards, roundhouses, and rolling stock, — and in Pittsburg, the center of the disturbance, there were serious riots, resulting in many deaths, and in the destruction of millions of dollars' worth of property. In Martinsburg, West Virginia, in Baltimore and other places there was much rioting and frequent conflicts between the rioters and the troops sent to keep the peace. The governors of Maryland, Pennsylvania, and West Virginia were forced to call for national troops to aid them in enforcing the laws. By the end of July the fire of mob violence had burned out and the strikers resumed work. In some instances the strikers had won some advantage by the strike; but in many cases they went back to work without any substantial gain.

The railway strike was contagious. It was followed by sympathetic strikes in many callings — coal-mining, manufacturing, and many branches of industry in which the wages of the laborer were low — and the disturbance spread to the Pacific Coast. The most serious of these was the strike of the anthracite miners of Pennsylvania, which spread to the bituminous regions of West Virginia and westward to Illinois. The twofold grievance of the miners was too low wages, and the obligation to purchase all their supplies at the company stores at exorbitant prices. The miners, who had the general sympathy of the public, won in the contest and gained an advance of 10 per cent in wages.¹

¹ Just before this strike the notorious Mollie Maguires, a murderous band that had spread terror through the coal regions of Pennsylvania for several years, were run down and captured, several of the leaders being hanged.

Close upon these events followed a labor agitation of a different kind on the Pacific Coast, known as the anti-Chinese movement. The Chinese began migrating to California in large numbers soon after the concluding of the Burlingame Treaty. Their willingness to work for very low wages rendered them, as their numbers increased, undesirable competitors with white laborers. After earning a few hundred dollars they would betake themselves back to their native land, whence hordes of their brethren would come to America to repeat the process. In no case did the Mongolian pretend to become an element in American society; he remained apart from the body politic, retaining his peculiar customs and superstitions. The Chinese threatened to deluge the whole western coast with their undesirable presence. After various sporadic efforts that came to nothing, a movement against Chinese immigration was set on foot in 1877. The laborers of San Francisco, led by Dennis

Anti-Chinese movement.

Kearney, one of their number, held many open meetings to denounce Chinese labor and immigration. The meetings were disorderly, and the leaders, including Kearney, were imprisoned. But the movement would not subside. Congress was petitioned to take up the matter, to the end that the Burlingame Treaty be modified in the interest of the people of the Pacific Coast. In 1878 Congress passed a Chinese Exclusion measure, which, however, was vetoed by President Hayes. Years passed and the Chinese continued to come in increasing numbers. The agitation was renewed, and in 1888 a Chinese Exclusion law was enacted. This was followed in May, 1892, by the Geary Chinese Exclusion

Geary law, 1892.

Law, introduced by representative Geary of California. This law was the most sweeping of its kind ever enacted by any country, and it awakened a vigorous protest from the Chinese government. While to some extent evaded, the law has greatly relieved the western coast of a most undesirable class.

About the time of Hayes's accession to the presidency an industrial movement of the farmers reached its height. The Patrons of

The Grangers. Husbandry, commonly called Grangers, was a secret organization for the promotion of agricultural interests.

It was organized in Washington in 1867, admitted both men and women to membership, and professed to be non-political, though it had much political influence in forcing a reduction of the exorbitant freight rates of the railroad corporations. In 1876 the membership reached at least a million and a half.

Another agricultural society, the Farmer's Alliance, was organized in 1873. It spread rapidly until it became national in scope.¹ It is not a secret order, as is the order of Grangers, but it gives more attention to questions of politics. The Alliance opposes the alien ownership of land, national banks, and federal election laws.

THE FISHERIES DISPUTE

The most important matter in our foreign relations during the Hayes administration was the settlement of the Canadian fisheries question, as provided for in the Treaty of Washington of 1871. For more than half a century the Atlantic coast fisheries had been the subject of controversy between the United States and England. The treaty made at the close of the Revolution continued to the citizens of the new republic the right to fish in Canadian waters, which they had enjoyed as colonists. But at the making of the Treaty of Ghent, at the close of the War of 1812, the British claimed that all existing treaties were abrogated and that our fishing rights had expired. The treaty, however, left the matter unmentioned and the Americans continued to exercise the rights granted in the former treaty.

But in 1818 another treaty was concluded, by which the Americans, for the privilege of taking and curing fish on the coasts of Newfoundland and Labrador, renounced forever the right to take, dry, or cure fish within three marine miles of any of the coasts of his Majesty's other possessions in America. From this moment the trouble began. The difficulty of determining the three-mile limit, the presence of armed vessels to prevent violations of the treaty, and the rulings of the local courts by which alleged violators were tried, each played its part in disturbing the peace between the two countries. This disturbance continued until 1854, when a new treaty was made. This is known as the Reciprocity Treaty. It restored the rights of the Americans substantially as granted by the Treaty of 1783, but at a great price. The price was reciprocity or free trade between the United States and Canada in a great many kinds of goods, nearly all of which favored Canadian interests. The markets of the United States were thrown open to Canada for nearly every article she could produce. The treaty provided that either party

**Treaty of
1818.**

**Treaty of
1854.**

¹ The national organization was not completed till 1889.

could cancel it after ten years by giving a year's notice. This notice was given by the United States in 1865; and the next year the treaty terminated, reciprocity was discontinued, and in the matter of the fisheries the provisions of the old Treaty of 1818 were again in force.

This brings us to the Treaty of Washington of 1871. It was hoped that the Joint High Commission would reach a permanent settlement of this vexed question; but the hope was not fully realized. The British commissioners desired to restore the Reciprocity Treaty of 1854, but the Americans would not consent to it. They intimated, however, that the United States might be willing to pay \$1,000,000 for the permanent use of the inshore fisheries, — that is, within the three-mile limit. The English commissioners thought this sum entirely too small. When the treaty was at length arranged, it provided that the privilege of the inshore fisheries along the coast of Canada be granted to the Americans, and for this privilege the Canadians received a free market in the United States for salt-water fish and fish-oil. But as the Canadians were supposed to be granting more than they received, it was provided that a commission of three be appointed to determine the amount of money that should be paid by the United States. One of these was to be appointed by the President, another by the Queen of England, while the third was to be chosen by the President and Queen conjointly.

The commissioners met at Halifax in the summer of 1877. The case was ably argued on both sides, and as the American and English commissioner could not agree, the Belgian minister, who was the third commissioner, was left to name the compensation. He named \$5,500,000. The British were greatly gratified and the Americans astonished at the amount of the award. It was not the payment of the money that created excitement, for the United States is very rich and such a sum is but a trifle; it was the sense of being the victim of extortion that caused ill feeling. Secretary of State Evarts gave statistics to show that all the fish taken by American fishermen during the time in question could not possibly leave a balance in England's favor of more than \$1,500,000, to say nothing of the privileges granted to Canada. But the British, who had lost in the other two items of the Treaty of Washington, the Alabama claims and the boundary controversy, insisted that the report of the commission be accepted; and Congress

**The fisheries
award.**

voted the money and it was paid to the last dollar. But the matter left a sting in the minds of the American people, and a few years later the President, instructed by Congress, annulled the treaty, and the fisheries question became more troublesome than ever, as we shall notice later.

THE GARFIELD TRAGEDY

Three times in our history has our President suffered death at the hands of an assassin. The first of these tragedies occurred at the close of the great war while the blood of the combatants still boiled. The second, in time of peace, had its origin in a deadly feud between two great Republican leaders, and was the work of a half-witted fanatic who believed that he would be made a hero for his deed by the faction of the party that opposed the President. The feud was between James G. Blaine and Roscoe Conkling, and it began many years before. Blaine, a young editor from Maine, first entered the House in 1863. Though he found there many strong leaders, he soon proved himself one of the strongest; and he began a course of party leadership unrivaled since the passing of Henry Clay. When Blaine entered Congress he found, among other leaders, the brilliant young lawyer from New York, Roscoe Conkling. Blaine and Conkling were wholly unlike in mental endowments. Blaine was hale and genial; Conkling was dignified and self-contained. Blaine delighted to win new friends and to grapple them to his soul with hooks of steel; Conkling delighted in winning admiration, in wounding his enemies with his wit and sarcasm, and in dazzling his hearers with rounded periods of eloquence. As a party leader, a winner of popular applause, Blaine far surpassed Conkling; as an orator of brilliant diction and rhetorical power, Conkling greatly excelled Blaine.

Scarcely had these two men met in Congress when a rivalry sprung up between them, and it was soon seen that there would be a clash. The occasion arose in April, 1866, when the House was considering a bill to reorganize the army. The New York and Maine statesmen had a fierce war of words on the floor of the House. Each lost his temper and denounced the other unsparingly. At length, after the conflict had continued for two or three days, Blaine poured forth one of the most extravagant tirades of sarcastic scorn and vituperation ever heard on the floor of Congress. "The contempt of that large-

Blaine-Conkling feud.

minded gentleman," said he, "is so wilting, his haughty disdain, his grandiloquent swell, his majestic, supereminent, overpowering, turkey-gobbler strut, has been so crushing to myself and to all the members of the House, that I know it was an act of the greatest temerity for me to enter upon a controversy with him."

Conkling was mortally offended, and from that day to the end of his life he never spoke to Blaine. Soon after this Conkling was transferred to the Senate and Blaine became Speaker of the House. In later years friends of the two attempted to bring about a reconciliation between them. Blaine expressed his willingness, but Conkling met every overture with a scornful refusal.

The Blaine-Conkling feud had its results. Not only did Conkling prevent the nomination of Blaine for the presidency in 1880; he caused the defeat of Blaine when the latter was nominated four years later. A few years after this quarrel in the House, Blaine had come to be looked upon as the leading Republican of his time. He received a heavy vote in the convention of 1876. Mr. Hayes, who was nominated and elected, was pledged to a single term, and Blaine was hailed as the coming man for 1880. But a change came o'er the spirit of his dream.

General Grant, on ceasing to be President, had made a tour round the world. He received high honor from foreign peoples and potentates, not only as an American and a former President, but chiefly as a soldier, for the chivalry in men's minds still places the warrior above the statesman, the orator, and the poet. The reception of Grant in foreign lands became a matter of national pride to all Americans; and when, after an absence of three years, the vessel that bore the illustrious traveler was moored in the haven at the Golden Gate, a wild shout of welcome arose from the people. The progress of Grant from San Francisco to Philadelphia, whence he had started, was one continuous ovation. Men forgot the scandals of his administration; their minds went back to remoter days. They saw now in his silent dignity the hero of Donelson, of Vicksburg, of Appomattox.

It happened that at this moment there was a large faction in the Republican party searching for a man. This faction opposed Blaine for President, and looked with dismay upon his growing favor with the people. They wanted a man who could be successfully pitted against Blaine. Grant had already been spoken of for a third term. His great reception from abroad proved his popularity. Why let

**Grant's tour
around the
world.**

all this enthusiasm go to waste? So thought the leaders of the anti-Blaine faction of the Republican party in 1880, and they decided on Grant as their choice for President. The leader of this faction, a man of vast resources and power, was Roscoe Conkling of New York.

The convention met in Chicago the first week in June. Conkling had a solid phalanx of a little over three hundred delegates for Grant. Blaine, however, was the popular choice, and his nomination would never have been doubtful had his forces been managed by a leader equal to Conkling. The speech of Conkling in nominating Grant has been pronounced second only to that of Ingersoll in presenting the name of Blaine at Cincinnati four years before. A third candidate, John Sherman of Ohio, was nominated by General James A. Garfield in a speech scarcely less eloquent than that of Conkling. Thirty-five ballots were taken without success, and it was evident that neither Blaine nor Grant could be nominated. A dark horse must be found, and the choice fell upon Garfield. On the thirty-sixth ballot there was a sudden breaking up of the convention — the Blaine men, the Sherman men, the scattering votes, all except the Grant phalanx of 306, made a dash for Garfield, and he was nominated by a large majority. The scene was indescribable. The boom of cannon from without, the bands of music and the shouts of the multitude within the great hall, made an uproar that no pen can picture. The newly made hero sat amid the waving flags and banners, dazed and speechless, as one awakened from a dream.

**Nomination
of Garfield.**

Garfield was not the choice of the convention. His nomination was almost an accident. He happened to be on the uppermost crest of the popular wave when the inevitable break came; and the gate was opened to him for great honor and position, such as many strive for and do not attain, and for the mournful tragedy that was to follow — all within a year. Garfield was one of the many public men in America who rose from the commonest walks of life. His father, a plodding farmer in the wilderness of northern Ohio, died in early manhood. James was still a child; as he grew toward manhood he yearned for an education, and between his working hours, — on the farm, in the carpenter shop, or driving the mules of a canal boat, — he succeeded in preparing himself for college. After being graduated he became a professor, then president of a small college in Ohio. Next we find him in the Ohio legislature, then an

officer in the Civil War, and later a member of the Lower House of Congress, where he served without a break for eighteen years. He was then elected to the United States Senate, but had not entered that body when nominated at Chicago. Garfield was not great nor brilliant as a statesman, though he had much power as an orator; he was sturdy, honest, reliable, and his selection proved a healing balm to the warring factions of his party. To appease the Conkling faction the convention chose one of that faction, Chester A. Arthur, for the second place on the ticket.

The Democrats nominated General Winfield Scott Hancock, the ideal soldier, one of the heroes of Gettysburg and of Spottsylvania, for the presidency, and W. H. English for the vice presidency. The Greenback party, which had cast but eighty thousand votes for Peter Cooper in 1876 and had rolled up a million two years later in the state elections, put forward General James B. Weaver of Iowa, and the Prohibitionists presented General Neal Dow of Maine. It is notable that all four of the presidential candidates bore the military title of general.

The campaign was singularly free from bitterness, vituperation, and personal attacks. Garfield was elected by an electoral vote of 214 to 155 for Hancock; but his popular plurality in a vote exceeding 9,000,000 was less than 10,000. The Greenback party polled 308,000 and carried no state, while the Prohibition vote was but 10,000.

The Republican factions had worked together during the campaign, but the trouble broke out afresh when Garfield chose Blaine for his secretary of state. This was galling to Conkling, and Blaine doubtless felt a sense of triumph over his great enemy. He had often expressed a willingness to be reconciled to his antagonist, but at heart he thoroughly disliked Conkling and had no desire to be his friend. Conkling was bold and open in his antagonism; Blaine was wily and cunning, nor did he lose an opportunity to give the enraged lion a stealthy prod, and then turn to an inquiring public with, "What is he howling about?"

The times were ominous at the opening of the new term. Never had the office seeker been more clamorous for place. The two factions of the dominant party were ready again to break into open war for spoils. Soon came the occasion; Garfield appointed Judge Robertson collector of the port of New York. Robertson was a friend of Blaine and an enemy of Conkling, and Conkling, joined by his colleague,

Thomas C. Platt, requested, almost demanded, that the appointment be withdrawn. But the President refused, no doubt through the influence of Blaine, for Garfield had no personal object in offending Conkling or promoting Robertson. Various writers have asserted that Blaine was a neutral observer, and had nothing to do with this appointment or with the refusal to withdraw it. But this contradicts the logic of the whole situation. Garfield was not a powerful leader, as was Blaine. He had reached the limit of his capacity in Congress, while that of Blaine was yet unmeasured. Nor had Garfield the will power, the moral fiber, to stand out for a principle, and it was only natural that he leaned heavily upon his great secretary of state. The course of the President in this affair can be explained only by attributing it to the influence of Blaine. When Conkling and Platt discovered that they could not secure the withdrawal of the name of Robertson, nor prevent its confirmation by the Senate, they resigned petulantly from that body, expecting to be vindicated by a reelection by the New York legislature. But both were defeated. This closed the public career of Roscoe Conkling — but we shall meet him once more in this history.

Conkling and Platt resign.

This episode opened wide the breach in the Republican party. The Conkling wing was known as “Stalwarts,” the Blaine-Garfield wing as “Half-breeds.” Alarming was the condition of the party, when suddenly the country was thrown into consternation at the assassination of the President. The assassin was Charles J. Guiteau, a disappointed office seeker, a rattle-brained egotist from New York who claimed to be a “Stalwart of the Stalwarts,” a “lawyer, theologian, and politician.” He declared that the President’s “removal” was a political necessity, as it would reunite the Republican party. He was plainly a man of disordered brain, nor was the country warranted in crying out frantically for his blood. After a long trial the following winter he was convicted and put to death. He should have been shut up for the rest of his natural life in an insane asylum. The jury simply reflected public opinion, which clamored for the prisoner’s life.¹

Assassination of Garfield, July 2, 1881.

President Garfield was shot through the body. It was at first thought that he would die within the hour; but he rallied, and lin-

¹ One of the experts employed to pronounce on the sanity of Guiteau acknowledged, twenty years later, that they all agreed that he was insane, but feared to say so because of the excited state of the public. For a fuller account of the Garfield tragedy see “Side Lights,” Series II, Chap. XII.

gered for many weeks through the hot summer months. The nation waited and hoped and prayed. The illustrious patient bore up bravely; he never groaned nor complained; he signed a few official papers, but was never able to raise his head from the pillow. In August the President was removed to a cottage by the sea; but the benefit was slight, and on the night of September 19 he died. A few hours later—some hours before day the next morning—Chester A. Arthur was sworn into the great office in his own house in the city of New York, and the government passed into the hands of the Stalwarts. The dead President was borne to Cleveland, Ohio, the beautiful lake city near which he had been born and had always lived, and here, on a grassy mound, amid a countless throng of weeping admirers, the body was laid to rest.

CIVIL SERVICE REFORM

Chester Allan Arthur had been an obscure politician in New York, and was known as a leader in polite society circles rather than as a statesman. No man had ever become President of the United States who was so little known to the great public as was Arthur, and many were alarmed because his ability and character were unknown, and especially because they feared that he would represent, not the country as a whole, nor even the great party that had elected him, but the faction of that party to which he belonged. But Arthur was not long in the presidential chair before he put all such fears at rest. He rose above all subserviency to faction and even to his party; he became the people's President in the true sense of the term; and so wise and able was his administration that nothing except Blaine's powerful hold on the party prevented his nomination for another term.¹ The Cabinet was gradually changed until none of the Garfield Cabinet remained except Robert T. Lincoln, son of the great war President.

This administration was not marked by any great and stirring events. The interest of the people was enlisted in the centennial celebration of the surrender of Cornwallis at Yorktown in 1781, in the great industrial exposition of 1881 at Atlanta, Georgia, in another greater one at New Orleans three years later, and in two American exploring expeditions into the Arctic seas.

¹ So impartial and independent was Arthur's course, and so decidedly did he refuse to cater to the Stalwart faction, that even Conkling soon became estranged from him.

The attention of the public was also attracted in 1881 by the "Star-route" frauds. These routes were mail lines in the interior of the country where the mail could not be carried by railroad or by steamboat.¹ Thomas J. Brady, second assistant postmaster-general, S. W. Dorsey, a Republican senator from Arkansas, and others, were accused of conspiring with certain mail-carrying contractors to defraud the government. For several years the combination stole from the government about half a million dollars a year. The business was broken up by publicity and the dismissal of several prominent officials. Some of the alleged conspirators were put on trial, but no punishments followed.

**Star-route
frauds.**

We now come to the chief legislative movement of the Arthur administration — the reform in the civil service. When the federal government was organized, the civil service officials were appointed without any limit as to time, but their tenure of office was wholly subject to the appointing power, the President.

For half a century the spoils system had held full sway.² Public officials had come to feel that they were serving their party rather than their country, or were simply receiving their just reward for mere party zeal. The system was pernicious and destructive of all good government; but, against the protests of many honest men, it continued unbroken till Grant became President. A fruitless effort was then made to reform the civil service. In 1871 Congress, forced by public opinion and in spite of the protests of the professional politicians, passed an act authorizing the President to make certain changes in the methods of appointing subordinate officers. Grant thereupon appointed a civil service commission of eminent men, who established a system of competitive examinations for appointments to office. This system continued for three years when Congress, again under the sway of the politicians, refused longer to vote money to carry it on, and it had to fall to the ground. President Hayes throughout his term of office made strenuous but futile efforts to reestablish the reform in the service. The evil system might have continued indefinitely but for the tragic taking off of Garfield. His death was an indirect result of the pernicious system, for it was a New York appointment that tore open the half-healed wound in the Republican party and rent it in twain,

**Civil service
reform.**

¹ The name "star" route arose from the use of a star on the map to indicate these routes.

² For the Crawford Act and the origin of the spoils system, see *ante* p. 466

and it was a disappointed office seeker that took his life. Public opinion now called with overmastering power for a reform in the civil service, and Congress heeded the call of its master.

In 1882 Mr. Pendleton, a Democratic senator from Ohio, introduced a bill to reestablish the civil service on the merit system. Both houses were Republican, but the autumn elections swept that party from power in the House. The leaders of the party saw in this a warning from an impatient public that trifling with civil service reform would be tolerated no longer, and, by an almost unanimous vote, the Pendleton measure became law in January, 1883. At first but few classes came under the new law, but successive Presidents have enlarged the list until it includes nearly every branch of the government service. President Arthur with sincerity and courage set about putting the new law into operation, and it is a matter of great gratification to the country that all our recent Presidents have in this way limited and restricted their own power, and that of their chief supporters, for the good of the public service. Other legislation of importance that marked the official term of President Arthur included the "Edmunds law" against polygamy in the territories, aimed chiefly at the habits of the Mormons of Utah, and a tariff act. The tariff was at this time rapidly becoming a prominent issue. The high duties of war times had been for the most part retained, and a cry from the West for a reduction of duties was too strong to be resisted. As early as 1872 a general outcry from the West against the high tariff resulted in the reduction of many duties; but three years later, when the clamor had subsided, the duties were quietly restored. Again, in the early eighties, the subject came to the front. In 1882 a tariff commission, recommended by President Arthur, was appointed. This commission made a report to Congress in December, 1882, and out of this grew the tariff of 1883, a measure that pleased no one. It was an abortive attempt to reduce the duties, but while it reduced them on many articles, it actually raised them on such articles as woolen dress goods, where a reduction would have brought relief.¹ Thus far the tariff was not strictly a partisan question, nor had it been so for nearly forty years; but it was soon to become the chief issue between the two great parties.

¹ Taussig's "Tariff History," p. 234.

A POLITICAL REVOLUTION

For four and twenty years the Republican party had held supremacy in the government. In that time its achievements had been great. But the party had made many serious blunders, and on these its powerful rival had fattened until it now seemed ready to seize the reins of government.

The Republican convention met in Chicago the first week in June, 1884. There were many candidates, but the idol of the party was "the magnetic man from Maine," and his nomination was assured from the beginning. Blaine led all others on the first three ballots and was nominated on the fourth. The convention then wisely chose for second place one of the most prominent of the leaders of the Stalwarts, General John A. Logan of Illinois. In the platform the party fulsomely praised itself for its past good deeds, pronounced for a protective tariff, and heartily indorsed civil service reform.

The Democrats met in the same city a few weeks later and nominated Grover Cleveland, governor of New York, for President, and Thomas A. Hendricks of Indiana for Vice President. In their platform they pointed out the moral decay of the Republican party, and mercilessly arraigned that party for not keeping faith with the people, making, at the same time, the most glowing promises to correct every abuse if the people would intrust them with power. They also called for a reduction of the tariff without injuring "any domestic industries."

The Prohibitionists nominated Governor John P. St. John of Kansas for President. The Greenback, now called the National party, chose Benjamin F. Butler as its standard bearer, and Butler was also nominated by the new-born Anti-Monopoly party. The great interest of the people, however, centered in the candidates of the two great political parties. Of these two men one had been in the public gaze as a party leader for many years, and frequent have been our references to his career; the other was a new star in the political sky.

Grover Cleveland, the son of a clergyman, was born in New Jersey in the same year and the same month that witnessed the inauguration of Martin Van Buren, the only President yet elected from New York. A few years later the family moved to a village near Syracuse, New York, where most of Grover's boyhood was spent.

Denied a college education by the early death of his father, the boy at length determined to go westward and seek his fortune. He started for Cleveland, Ohio, being attracted by the name, but he stopped on the way at Buffalo, and made that city his home. He had determined to become a lawyer, and he soon found a place with one of the largest law firms of the city.

At the outbreak of the Civil War he was a lawyer of good standing and a fair income. When President Lincoln made his first call for volunteers, he and his two brothers held a conference about their duty to the country, and it was decided that two of them answer the President's call, while the third should remain at home to care for their mother; and as Grover's income exceeded that of the others, he was chosen to remain, while the others entered the army.¹

In the late seventies he was elected reform mayor of Buffalo. His record as mayor attracted wide attention. Against a most corrupt city council he strove unceasingly and he won in every contest. His scathing veto messages awakened the people as nothing had done before to the fact that they were being robbed by their officials. He saved the city over \$800,000 on a sewer contract, and \$109,000 annually in the street-cleaning department.

In 1882, when his party wanted a reform candidate for governor of the state, they naturally turned to the mayor of Buffalo. The Republicans had nominated Judge Folger of President Arthur's Cabinet, against the will of the rank and file of the party, who desired the renomination of Governor Cornell. Thousands of them now turned to Cleveland, and he was elected by a plurality of almost two hundred thousand. It happened that the legislature of New York, like the city council of Buffalo, was controlled by a "machine" which had many political debts to pay and many political fences to repair—at public expense. But here sat the reform governor, quiet, unostentatious, businesslike, watching the interests of the people, and every bill sent him that savored of corruption was sent back with a positive veto. The people applauded. The politicians grew angry and raised the cry that Cleveland was bidding for the presidency by appealing over their heads to the people; but when he vetoed a bill to compel the Elevated Railway Company of New York City to reduce its fare to five cents, because it would impair the obligation of a contract and be "a breach of

¹ Stoddard's "Life of Cleveland," p. 40. The two brothers returned safe from the war, but both were lost at sea in 1872.

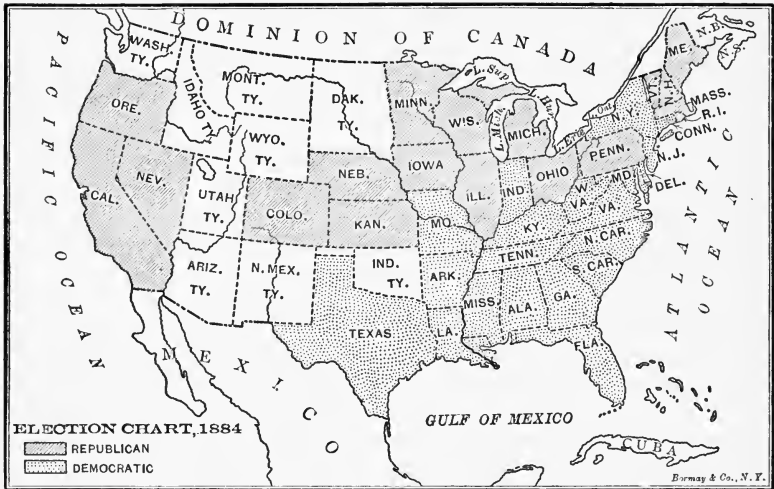

faith on the part of the state," and when he vetoed another appropriating money to the Catholic Protectorate because it was purely a sectarian institution, his enemies were at a loss to explain. He vetoed the one bill against the wishes of ninety-nine out of every hundred people of the metropolis, and the other at the risk of offending great numbers of Catholic voters. Such actions exhibited a moral courage that was astonishing, or an indifference to public opinion that was equally so. Cleveland thus proved himself entirely beyond the control of the political bosses of New York, and against their fierce opposition he was nominated for President at Chicago.

The chief issue of the campaign was, nominally, the tariff, the Republicans having pronounced for protection and the Democrats, in a halting way, for tariff reform; but in fact the campaign became a personal one between the two leading candidates. Both parties stooped to defamation of character and indécent personalities. Mr. Blaine was a strong and fearless leader, and he took personal charge of his canvass; but he was unfortunate from the beginning. A strong element of his party, who came to be known as "Mugwumps,"¹ opposed him bitterly and supported Cleveland. Among these were Henry Ward Beecher and George William Curtis. These men, whose motives were beyond question, had many followers. They not only distrusted Blaine; they believed that with the dawn of the new industrial era the old leaders of war and reconstruction should be set aside, and the government placed into new hands. The Prohibitionists, who held the balance of power in New York, and whose vote would be drawn chiefly from the Republicans, were entreated by the Blaine followers to withdraw their candidate, Mr. St. John, from the field in Blaine's favor, but they refused to do so. Again, Blaine made serious blunders during the canvass. He made a tour through several states and, with his magnetic power over great crowds, he left a good impression. But on his return he made a stop in New York City, and this was fatal to his cause. Here he dined with a company of millionaires, and the Democrats paraded the fact before the public. A company of ministers called on him, and their spokesman, the Rev. Dr. Burchard, referred to the Democratic party as the party of "rum, Romanism, and rebellion," and the candidate offered no rebuke in his reply. This was eagerly seized on by the Democrats, as a denunciation of the Catholic

¹ Mugwump is an Algonkin word and means chief. It was long in use in parts of New England, but before this campaign its use was not general.

Church, and in vain did Blaine deny all sympathy with the sentiment; and the Irish Catholic vote, which seemed to be gravitating toward him, was now turned to Cleveland.

New York was the pivotal state, and its vote was cast for Cleveland by a plurality of less than twelve hundred — and the long season of Republican supremacy was broken. Blaine's defeat was pathetic. For years he had hoped and labored for the great prize, and it seemed so near. Had he been elected, he would have made a strong President and, no doubt, an honest one. But he had a premonition

that, like Henry Clay, he would never be President. And how strangely similar seemed the defeat of Clay just forty years before. Clay had failed to obtain the nomination when his party was successful at the polls; and when he was chosen by the convention, he was defeated at the polls — and the same was true of Blaine. New York was the pivotal state in 1844 and also in 1884. Clay had lost that state and the nation through a little third party which held the balance of power, and so with Blaine. And yet there is one more item in this strange parallel: Clay and Blaine each seriously injured his own cause by writing ill-advised letters during the campaign.

Another element that entered into the defeat of Blaine was the attitude of his old enemy, Roscoe Conkling. Twice had Conkling pre-

vented the nomination of Blaine in convention, and now when Blaine received it, Conkling could have secured his election; but the mighty Achilles sulked in his tent. His friends understood; they refused to support the lifelong enemy of their idol and cast their votes for Cleveland. Had Conkling made a single speech, had he raised a finger in support of Blaine, in spite of the St. John vote, in spite of the Mugwump defection, in spite of the Burchard alliteration, the Empire State would have cast its vote for the magnetic statesman and he would have been elected.¹ But Conkling remembered the insult of eighteen years before, the bitter denunciation on the floor of the House, the "grandiloquent swell," the "turkey-gobbler strut," and his high-poised soul could not forgive. He took his revenge, and Blaine never became President.

Conkling's
revenge.

THE NEW CONDITIONS²

This campaign was one of unusual significance; it marked the restoration to power of the old party that Jefferson had founded, that had ruled the country for forty years without a break, that had sinned grievously and had suffered deeply. Now again the people had restored the old party to power—but only in part, for the Senate was still Republican, and from this cause party legislation was impossible and the first term of Cleveland, like the term of Hayes, was a season of quiet in the political world.

Viewed in another light, the party of Cleveland was not the old party of Jefferson, or of Jackson, or even of James Buchanan. A new era had dawned and had brought with it new ideals and new duties. Thousands who aided in the election of Cleveland had been born since the firing on Fort Sumter. The great body of American voters had grown to manhood since then. Old conditions had passed away with the old generation; the new conditions called for a new type of statesmanship, and in none was this embodied more than in the newly elected President. In his inaugural address he advised that the heat of the partisan be merged into the patriotism

¹ The Republican defection in Conkling's home county alone was greater than Cleveland's majority in the state of New York.

² The remainder of this history will be given in a more condensed form, nor will a critical discussion of current public questions be attempted. Only the historian of the future will view the great issues of to-day in all their bearings, and be able to discuss them without partisan bias.

of the citizen. The Republicans took their defeat gracefully, and the people bravely turned their faces to the future.

Nothing so emphasized the friendly reunion of the states as the fact that two members of the new Cabinet, L. Q. C. Lamar and A. H. Garland, had been commanders in the Confederate armies. The fitness of these appointments was soon recognized by all. They did not signify, as a few radicals at first cried out, that "the South was again in the saddle," but rather that the old war spirit was dying and that the Southern states were again in spirit, as well as in fact, members of the happy sisterhood. Thomas F. Bayard of Delaware became secretary of state, and W. C. Whitney of New York, secretary of the navy.

Nothing could have been more fitting than that the first bill to which this new Democratic President placed his signature was an act restoring General Grant to the retired list of the army. **Last days of General Grant.** The aged ex-President, in the hope of gaining a fortune, had engaged in business in the city of New York. The firm with which he was connected proved to be disreputable; the business came to an unhappy end, and, though the honor of the general was untouched, his modest savings were swept away in the crash. Moreover, Grant was suffering from an incurable disease, a cancer in the mouth, which baffled the skill of the physicians. The heart of the nation went out in sympathy with the dying hero. He had been laboring faithfully on his "Memoirs," the story of his life, that his family might reap the benefit when he was gone. In the spring and early summer of 1885, the malady from which he suffered became alarming, but the general continued his writing with the same unwearied courage that he had displayed on the battle field. The end came on July 23, 1885, at Mt. McGregor, near Saratoga. The funeral pageant in New York City was the most imposing ever seen in America; and the body was laid to rest at Riverside Park, overlooking the Hudson.¹

Cleveland proved himself a firm adherent of the principle of civil service reform. It is true that in a few years he had appointed many of his fellow partisans to office, as the statutory terms of the Republican incumbents expired. He also dismissed some for

¹ Grant's "Memoirs," in two volumes, is, from a literary point of view, the best of its kind in our American literature. The straightforward, unadorned narrative has a charm of simplicity and clearness that is very unusual. Mrs. Grant realized a large sum of money from the sale of the work, the first payment reaching \$200,000.

“offensive partisanship”; but he made no clean sweep, much to the dismay of the professional politicians of his party. The administration was not marked by any great question of public policy, but rather for its unbroken smoothness, and for the extraordinary strength in the personality of the President. The country soon learned that Cleveland was fully equal to the new duties before him, and that his conscience in dealing with national affairs was the same as that which characterized him at Buffalo and Albany.

For many years Congress had been in the habit of granting pensions to the old soldiers with little regard to merit. Mr. Cleveland took the ground that unless a soldier was disabled by the war he had no just claim to the support of the government. He vetoed scores of private pension bills, many of which were shown to be fraudulent. He also vetoed the Dependent Pension bill, which provided pensions for all who had served in the war ninety days or more and were now unable to do manual work; but a similar bill became a law in the next administration.

The most important measure, aside from the necessary legislation, to become a law in the first four years of Cleveland's incumbency was the Presidential Succession bill. As the law stood before, the president of the Senate, and after him the Speaker of the House, would succeed to the presidency in case of the death or disability of both the President and the Vice President. But such a succession might throw the government into the hands of a party that had been defeated at the polls by the people; or in case there was no Vice President and neither the Senate nor the House had chosen a presiding officer, there would be no one between the President and a legal lapse of the functions of the office. Such had been the condition for a time while Arthur was President, and the death of Vice President Hendricks in the autumn of 1885 again brought about the same condition. The death of Hendricks awakened Congress to a sense of the necessity of providing against the danger of a lapse and also of securing the presidency to the party that had carried the election. The Presidential Succession bill became a law on January 18, 1886. It provides that the line of succession run through the Cabinet in the following order: The secretaries of state, treasury, war, the attorney-general, the postmaster-general, the secretary of the navy, and the secretary of the interior. Any member of the Cabinet to be in the line must be eligible to the presidency. This law settled a matter that had for a long period caused much anxiety.

In the following year (February, 1887) the Electoral Count law was enacted. This grew out of the disputed election of 1876. It provides that each state shall be its own judge concerning its electoral votes. But if through opposing tribunals a state is unable to decide, the matter must be settled by a joint resolution of the two houses of Congress.

Next came the Interstate Commerce Act, which became a law in February, 1887. For years the great railroads had discriminated against the small shippers by giving cheaper freight rates to the manufacturers and producers whose shipments were large. The most flagrant case in point was that of the Standard Oil Company, which, in 1872, merged with the Southern Improvement Company and bar-

Interstate Commerce Act. gained with the great railroads to have its products carried at from 25 per cent to 50 per cent less than that which was charged the small refiners. The result was that the small concerns could earn no dividends, and they were forced to sell out to the Standard at a great loss, and the Standard soon had a monopoly of the oil business.¹ The farmers of the West and small manufacturers in every part of the country suffered greatly from this unfair discrimination by the railroad companies. The public demanded that Congress come to the rescue and stop the practice, and the result was the Interstate Commerce Act. By this act the railway companies were forbidden to make discriminations in freight rates or to enter into combinations for "pooling" and dividing their receipts.

Two other laws of considerable importance complete the series of this presidential term. One of these was an amendment to the Edmunds Anti-Polygamy law of 1882, by which the Mormon Church was dissolved as a corporate body and much of its property was confiscated. The other was the Anti-Chinese law, which has been mentioned on a preceding page.

The only foreign subject that seriously engaged the attention of this administration was that of the Canadian fisheries. This matter had been temporarily adjusted, as we have noticed, but as the United States deemed the settlement a disadvantageous one, it was canceled by President Cleveland. This left the old Treaty of **Fisheries.** 1818 again in operation, and the Canadians promptly put its worst features in force. They seized American vessels for landing at Canadian ports to purchase bait, to transship fish, or for any pur-

¹ The chief movers in this conspiracy were John D. Rockefeller of Cleveland, W. G. Warden of Philadelphia, and O. T. Waring of Pittsburg.

pose except for shelter, for repairs, or to obtain wood, water, and food. The old treaty had never before been literally interpreted, and now the complaints came thick and fast to Washington. A bill in Congress to close American ports to Canadian vessels was considered and lost. A new treaty was made with England, but the Senate killed it. Discretionary power was given the President to deal with the matter as he deemed best, and within a few years the affair was patched up so as to be fairly agreeable to both sides.

During the time we are treating the labor world again became agitated. An order known as the Knights of Labor, founded some fifteen years before, now made a sudden bound and its membership soon exceeded half a million men. It represented nearly all trades, and was governed by a national executive board which had power to order strikes and boycotts. The Knights of Labor was touched with anarchy, and ere long its disintegration began. The order, however, was not responsible for the fearful outbreak of anarchy in Chicago in May, 1886. For years a few immigrant anarchists had preached their detestable doctrines in American cities, and at last they seemed to have a following in Chicago. On the night of May 3, some fourteen hundred of the discontented gathered in Haymarket Square to hear the harangues of their leaders. A body of policemen was sent to disperse the crowd when suddenly a bomb, thrown into their midst, exploded with terrific force, causing the death of six policemen and wounding many more. The whole country was shocked at the outrage. Chicago did its duty. It sent four of the leaders of the mob to the gallows and others to the penitentiary. This summary dealing, which was applauded by the great body of the people, gave a setback to the anarchists from which they have not recovered to this day.

**Anarchy in
Chicago.**

THE TARIFF ISSUE

President Cleveland believed that much of the unrest in the labor world had its roots in the high protective tariff. From far back in Jackson's days the Democratic party had been a party of low tariff. The Civil War brought high impost duties; but the war was now long past, and yet the high duties were retained. In the early part of the century a protective tariff was demanded for the benefit of infant industries; but now, as such industries were beyond the need of government aid, protection was demanded on an entirely

different ground — on the ground of maintaining the wages of the laboring man. But it was evident that the laborer was not receiving his share of the benefit, that the manufacturer received more than the lion's share. So thought Grover Cleveland. And besides, there was another "condition" rather than a "theory" confronting the nation. The high tariff had caused a great surplus of money to be drawn from the channels of trade, only to be heaped up in the treasury at Washington. But the country was so wedded to a high tariff that not even the Democratic House had the courage to attack it. At last the party had a man at the helm whose courage seemed unlimited, and whose concern for his own political fortunes seemed to stand at zero.

In December, 1887, President Cleveland, without advice from his fellow party leaders, devoted his entire annual message to a denunciation of the high tariff laws and a call for their modification. As the writer doubtless foresaw, the message brought confusion to the ranks of his party, which was not prepared for such a positive declaration; and, as he probably expected, it cost him a reelection to the presidency. But the message did exactly what it was intended to do — it made the issue for the coming election; it committed a great party, comprising half the nation, to the principle of moderate impost duties. The party haltingly followed its leader, but enough stragglers fell by the wayside to bring defeat instead of victory.

The Republicans took up the gage of battle that Cleveland had thrown down, and rejoiced at the opportunity. It is true that the famous message made all men think on the great subject of the tariff, and it won some Republicans. But the people were too devoted to a high tariff to consent on such short notice to abandon it. Mr. Blaine was still the Republican idol, and could have had the nomination of the party. But in the belief that he was fated never to be President, and in a moment of despondency, to which he was subject late in life, he positively refused to have his name considered. The convention chose Benjamin Harrison of Indiana, grandson of William Henry Harrison, who had been elected by the Whigs in 1840. For second place Levi P. Morton was chosen, while the Democrats selected Allen G. Thurman, the sturdy "Old Roman" of Ohio, as Cleveland's running mate.

Harrison was one of the ablest men in his party, but he was utterly wanting in the power to rouse popular enthusiasm. Cleve-

land in some measure also lacked this power. The campaign was clean, intellectual, and dignified. The chief issue was of course the tariff, and to emphasize this each party put forth a congressional tariff bill. The Mills bill, framed by Roger Q. Mills of Texas, passed the Democratic House in the summer of 1888.

It was framed on the lines of the tariff message of Mr. **The Mills bill.** Cleveland, who was now the undisputed master of his party. This bill was not only rejected by the Republican Senate; it was answered by a Senate bill proposing even higher duties than those then in force. Neither of these bills became law, nor was such a result looked for by their respective supporters. They were merely expressions of party policy.

Other political parties — the Prohibitionist, the Union Labor, the United Labor, and others — had candidates in the field; but these organizations had little influence on the battle of the giants. Mr. Harrison was elected, receiving 233 electoral votes to 168 for Cleveland, though his popular vote fell below that of Cleveland by about 110,000. Cleveland would have been elected but for the loss of the pivotal state of New York through the defection of Tammany Hall.¹ The Republicans also gained control of the House, and were now in position to carry out any party measure.

The success of the Republican party was now interpreted by its leaders as a mandate from the people to raise the duties on imports to a still higher point, and they proceeded forthwith to do so. The result was the **McKinley Tariff Act**, of 1890, named from its framer, Representative William McKinley of Ohio. By this law duties were raised to a point beyond any before known in our history, — to an average of above 50 per cent, — but its framers made one concession to the free traders by putting sugar on the free list.² This act did not by any means settle the great question.

¹ David B. Hill, New York's Democratic candidate for governor and the favorite of Tammany, was elected by nearly twenty-nine thousand majority, while Cleveland fell fourteen thousand short of carrying the state.

² Even the Democrats did not propose free trade by any means. The Mills bill was called a free trade measure by its enemies; but its average of duties, about 42 per cent, was higher than any tariff before the war.

IMPORTANT ACTS OF 1890

Mr. Harrison had made James G. Blaine secretary of state, and in no capacity in his long political career did the Maine statesman display his powers to greater advantage. The Republican House elected another Maine statesman as its Speaker, Thomas B. Reed, in some respects a stronger and more admirable character than Blaine. A practice of the minority in the House, almost from the beginning of the government, was to delay legislation which they did not favor,

Speaker Reed. by making dilatory motions; but Speaker Reed put a stop to the practice by steadfastly refusing to recognize any member whose purpose was to obstruct business, however loud he might shout. Another long-standing custom in the House was that a member was considered absent if he refused to answer to his name when the roll was called to ascertain whether there was a quorum present. Mr. Reed broke this custom by counting as present those who sat silent at the roll call. The protest that arose was fierce and threatening, but Reed, with quiet, inflexible courage, proceeded with the business of the House. The minority appealed to the Supreme Court, but Reed was sustained, and within a few years his innovation was adopted by both parties as the rule of the House.

One of the first efforts of the Republicans was to amend the election laws for the better protection of colored voters of the South. This bill, which the Democrats called the "Force Bill," and which they opposed with great bitterness, succeeded in passing the House; but it was defeated in the Senate, chiefly through the efforts of Senator Arthur P. Gorman of Maryland.

This session of Congress, however, enacted, in addition to the McKinley Tariff bill, no less than five or six important laws. The Republicans were less troubled about the surplus in the treasury than Cleveland had been. Instead of attempting to check the flow of money into the treasury, they devised plans to spend it. One of their first acts was to pass the Dependent Pension bill, very similar to the one Mr. Cleveland had vetoed. By this act Union soldiers and sailors who had served ninety days in the war were entitled to a pension, if they were from any cause unable to earn a living; and the benefits were extended to their widows, children, and dependent parents. There was at once a rush to secure pensions, and the lobbyists and pension "sharks" who infested the halls of Congress were no doubt enriched more rapidly

Dependent Pension law.

than the old veterans. In 1889 the annual pension outlay was \$89,000,000, and four years later it reached the enormous sum of \$158,000,000.

The pension law was passed in June; and the same month witnessed the passage of the Anti-Trust law under the title of "An act to protect trade and commerce against unlawful restraints and monopolies." For a decade there had been much popular protest against great combinations of capital for the purpose of preventing competition and of crushing out smaller concerns, and all the party platforms of 1888 called for legislation against such combinations. This law gave the courts the power to pronounce void any contract injurious to the public in cases brought to trial.¹

The following month, July, brought the famous Sherman Silver law. The Bland-Allison Act of 1878 had been a concession to the silver interests of the West. This desire for more money in circulation had found expression through the Greenback party, the Farmers' Alliance, and such organizations, and now it took the form of further demands on Congress for additional legislation favorable to a larger use of silver. Both the great political parties had stood for a sound and stable currency; but both were now willing to yield something to the popular demand, and the result was the enactment of the Sherman law, so named because Senator John Sherman of Ohio, the greatest financier in the country, was a member of the joint committee that framed it. The Senate, augmented by members from several newly admitted silver states in the West, was in favor of the free coinage of silver; but the House would not agree to this, and they compromised with the Sherman law. By this law the Bland-Allison Act, which provided that not less than \$2,000,000 or more than \$4,000,000 per month was to be coined, was repealed, and the purchase of four and a half million ounces of silver per month was ordered. The notes issued in payment for this bullion were to be redeemable in gold or silver; after July 1, 1891, the bullion should no longer be coined, except as it was needed to redeem treasury notes, and a ratio of sixteen to one in the coinage of silver and gold was fixed by law. The law provided also that for every gold dollar's worth of silver purchased an equivalent

**Sherman
Silver law.**

¹ This law lay almost dormant for nearly fourteen years when it was given great significance by a decision of the Federal Supreme Court (March 14, 1904) dissolving the Northern Securities Company, by which the two great railroads of the Northwest, the Great Northern and the Northern Pacific, had been brought under one management.

amount of legal tender treasury notes be issued. The attempt to keep up the price of silver by law resulted, like its predecessor of 1878, in failure; and a few years later the question rose again in far greater proportions, and became the leading issue in a presidential election.

Three other laws of considerable importance were enacted within the year 1890. One of these was known as the Original Package law. Some of the states had passed stringent anti-liquor laws, but these laws were evaded by persons who purchased liquor in the original package in other states, and, bringing it into a state having anti-liquor laws, sold it under the protection of the Interstate Commerce Act of 1887. The Supreme Court sustained this practice; whereupon Congress enacted the Original Package law, by which packages thus brought within a state were subject to the local laws of that state. Another was the Anti-Lottery law, which excluded lottery tickets and circulars from the mails of the United States. This was a deathblow to the Louisiana Lottery, which, in spite of many state laws to the contrary, had for many years done a large business in all the states through the mail. A third was a law forfeiting public land grants made to various railroad corporations. Many of these companies had not built their proposed roads and were simply holding their land grants as investments; but an act of September, 1890, added again to the public domain many millions of acres which had been granted to the corporations.

The years 1889 and 1890 brought into the Union six new states in the West. The population had moved westward across the vast prairies of the middle West, and up the slopes to the towering heights of the Rocky Mountains; people on the Pacific Coast had been moving eastward. There was no longer a frontier; the population had embraced the continent. It is true that these western settlements, composed of mining towns among the mountains, of cattle ranches along the slopes, with here and there an agricultural community, were sparse as compared with those of the East; but the extent of the various territories was so vast that the population as a whole was very considerable. Four new states — North Dakota, South Dakota, Montana, and Washington — were admitted to the Union in 1889, and two — Idaho and Wyoming — the following year. The admission of the last-named states brought prominently before the country the long-discussed subject of woman's

suffrage, as in both of them the right to vote and hold office was given to women.¹

The territory of Oklahoma, a portion of the Indian Territory, the title of which had been secured from the Indians in 1866 — on the condition, however, that only freedmen and civilized Indians occupy the land — was now opened to white **Oklahoma.** settlers. Owing to the pressure of the “boomers” Congress set apart \$4,000,000 to remove these conditions, and by a proclamation of the President the land was thrown open to white settlers at noon on April 22, 1889. Fifty thousand people waited on the boundary line for the bugle call to proclaim the hour. When the call was heard, there was a wild rush to possess the land. Many were successful in staking off choice lots or farms, but the demand was greater than the supply, and thousands failed to realize their golden dreams. Cities were staked out and city governments were organized before the evening of the first day. A census of that year showed that the population of Oklahoma exceeded sixty thousand.

The addition of new states in the West had much to do with the passage of the Sherman Silver law, and these states played some part in the political upheaval of the same year. The congressional elections of 1890 resulted in a great victory for the Democrats. The Republican majority of about twenty in the House was replaced by a Democratic majority of nearly one hundred and fifty. The chief issue was the McKinley Tariff. This tariff had been in force but a few weeks at the time of the election, and the test was not a fair one; but the prices of commodities had suddenly risen, and the people were distrustful of the future. One of the surprises of this campaign was the strength shown by the People's party, or “Populists,” the legitimate heirs of the Greenback party and the Farmers' Alliance. The strength of this third party came almost wholly from the South and West, where the spirit of unrest had reigned for several years. The party elected eighteen members to the House, controlled seven senatorial elections, and chose the governors in Georgia, South Carolina, Tennessee, and South Dakota. With the House thus in the hands of their enemies, the Republicans could no longer enact party measures, and the administration dragged listlessly along.

¹ In four western states — Colorado, Utah, Idaho, and Wyoming — women have the right to vote and to hold office. In more than twenty other states woman suffrage is recognized in some form, as in municipal elections, school suffrage, and the like.

In our foreign relations the Harrison administration was marked by several items of interest. One arose from the violent killing of eleven Italians, or Sicilians, by a mob in New Orleans. There existed in that city a secret, oath-bound, murderous society known as the "Maffia." The chief of police, David C. Hennessy, who was very active in running down these criminals, was treacherously assassinated, and these eleven men were put on trial for the crime. There

New Orleans
massacre. was little doubt of their guilt; but the jury failed to convict them. At this miscarriage of justice the people of the city rose in anger and excitement; a great crowd marched to the jail, battered down the door, seized the prisoners, and put them to death. Eight of the slain men were naturalized Americans; but three proved to be subjects of the King of Italy, who promptly demanded redress for the outrage. After a long diplomatic correspondence the king's ultimatum, that indemnity be paid the families of the dead Italians and that their slayers be punished, was declined by Secretary Blaine, on the ground that the state of Louisiana, and not the United States government, had jurisdiction in the matter. The United States, however, agreed to pay \$25,000 indemnity; the Italian king accepted this offer, and the matter was thus amicably settled.

Early in 1889 the world's attention was directed to the far-away group of islands in the south Pacific known as Samoa. The United States had made a treaty of friendship with the Samoans in 1878.

Samoa. For a long period civil war raged in the islands; and at length, in 1889, the United States, Great Britain, and Germany, each of which had a small fleet in the harbor, agreed to establish a protectorate, and decided to restore the deposed king. In March of the same year a terrific hurricane broke upon the islands, and most of the American and German war ships, together with all the merchant vessels in the harbor, fifteen in number, were destroyed.

By anticipation this subject may here be disposed of by stating that in 1899 this agreement of the three powers was rescinded. Great Britain gave up all claims in Samoa for some other islands in the Orient, while the United States and Germany agreed to a division of Samoa. Upolu and other islands west of 171 degrees west longitude fell to Germany, while Tutuila and the other islands east of 171 degrees became a possession of the United States.

A diplomatic dispute with Chile, South America, absorbed public

attention in the autumn of 1891. That country, as is common in South America, was in the throes of insurrection; and the insurgents, believing that our minister, Mr. Egan, **Chile.** sympathized with their opponents, conceived a dislike for him and all Americans. The United States cruiser *Baltimore* was lying in the harbor of Valparaiso in October, 1891. While her crew were on shore leave, they were attacked by the populace of the city and had to run for their lives. Most of them escaped to their ship; but two were killed and many were wounded with knives and clubs. For a time it seemed that war with the little republic would result, for the Chilean government treated the matter lightly; but when the United States made a demand for redress, Chile humbly receded from her position and paid \$75,000 to atone for the outrage.

A long-standing diplomatic dispute with the British government over the seal fisheries in the Bering Sea reached an acute stage in 1892. Before 1867 Russia had owned Alaska and had exercised exclusive rights in the Bering Sea. When we came into possession of Alaska, our government laid claim to the full control of the sea, as the Russian government had done; our motive being to protect the seals from extermination. England denied **Seal fisheries.** our exclusive right beyond the three-mile shore line. But in 1892 the two governments agreed to a treaty which provided for arbitration. Meantime a tribunal of temporary arbitration met in Paris, the United States, England, France, Italy, and Sweden being represented. This tribunal decided in favor of Great Britain; namely, that our possession of Alaska did not warrant our closing the Bering Sea to the world. The British government, however, agreed to coöperate with the United States in saving the seals from extermination, and thus the matter was for the time allowed to rest.

THE ELECTION OF 1892

President Harrison was not popular with his party. A man of unquestioned integrity and ability, he was wanting in the powers of leadership, in personal magnetism, and the leaders of his party found it impossible to get into his confidence. And yet, as the policies of the party were the same as four years before and as Mr. Harrison was in full sympathy with those policies, he was the logical candidate for renomination. His secretary of state, Mr. Blaine, was still the popular choice of the party, but there had long been a

feeling among the people that a Cabinet official should not become a candidate for the presidency in opposition to his chief. But all was not harmonious between the President and Mr. Blaine, and only three days before the meeting of the Republican convention in Minneapolis, Blaine petulantly resigned from the Cabinet and permitted his name to go before the convention. It was too late, however, as many of the delegates were pledged to Harrison and he was nominated on the first ballot. As it was, Blaine received 132 votes, and had his break with the President come a few months sooner, nothing could have prevented his nomination. Mr. Whitelaw Reid, editor of the *New York Tribune*, was named for Vice President. Blaine soon became reconciled, and used his efforts to reelect Harrison.

The Democrats met a few weeks later in Chicago and nominated Grover Cleveland and Adlai E. Stevenson. Cleveland was opposed by many delegates from the South and West who favored free silver, and by the delegation from his own state of New York. But the great masses of the party favored him, and in spite of a written protest signed by every delegate from New York, he was nominated on the first ballot. The platform denounced the McKinley Tariff, the Sherman Act, trusts and combinations, and advocated both gold and silver; while the Republican platform upheld the McKinley Tariff, pronounced for the rural free delivery of mail, and for a Nicaragua Canal, and on the coinage question took a position similar to that of the Democrats. Both parties favored national aid to the Columbian Exposition soon to be held at Chicago.

The third party of this year was the most formidable since 1860. It was known as the People's party, and was composed chiefly of farmers and laborers to whom the free coinage of silver at the rate of 16 to 1 had presented itself as the panacea for nearly every national ill. Its platform pronounced also for a graduated income tax, and for national ownership of railroads, telegraphs, and telephones, and for the creation of postal savings banks. The party met in convention at Omaha in July, and nominated General James B. Weaver and James G. Field. The Prohibitionists nominated John Bidwell and J. B. Cranfill, and pronounced against trusts, mob-law, and the alien ownership of land. The Socialistic Labor party nominated Simon Wing of Massachusetts for President.

The canvass was one of great interest, the chief issue being the McKinley Tariff. There was one other question, that of the free

coinage of silver, which threatened for a time to become paramount in this campaign. The Sherman law of 1890 had failed to arrest the steady decline in the price of silver, and the friends of the white metal now clamored for free coinage. This free-coinage movement swept rapidly over the West and South, and had many adherents in the East. It carried with it many thousands of Republicans, a greater number of Democrats, and the entire body of Populists. The Democrats would doubtless have headed off the Populists and made free silver their leading issue, but for one insurmountable obstacle—the attitude of Grover Cleveland. In February, 1891, when the party was on the verge of committing itself to free silver, Cleveland had written his “Cooper Union letter,” pronouncing against free coinage. His friends had urged him not to commit himself on the great question at that time, as by so doing he would endanger his nomination; but with the reckless courage that had always characterized him, he made his views public. The millions of advocates of free coinage were stunned and angered at this letter of Cleveland, the only real leader of the party in the past seven years; but they were forced to decide between the issue and the man. So great was the popularity of Cleveland with the masses, and so urgent the call for his nomination in 1892, that the silver leaders accepted him sullenly and suffered their pet issue to remain in the background. Hence the tariff became the great issue in the campaign.

**The silver
issue.**

The Republicans were on the defensive in 1892. Mr. Cleveland had won the masses, if not the leaders, in his party, while Mr. Harrison had won neither in his. Moreover, Harrison had quarreled with Blaine at the moment of his nomination. But the chief cause of his defeat was the McKinley Tariff. This tariff had raised prices of commodities, but not the wages of labor, and the Democrats were diligent in attributing to it greater evils than it brought. Its advantage to the manufacturer could not be questioned, but there was a widespread belief that the laborer was not receiving his share of the benefits. During the months of the campaign outbreaks between capital and labor occurred in various states, the most serious of these being at Homestead, Pennsylvania, a town near Pittsburg, between the Carnegie Steel Company and its workmen.

All these labor troubles militated against the Republican party in 1892, since the party in power, guilty or not guilty, must bear the blame for public disorders. The result was a great victory for Cleve-

land, who thus became our first President to be elected to a second term that was not consecutive with the first. So great had been the silver wave in the West that the Democrats named no electoral tickets in Colorado, Idaho, Wyoming, North Dakota, and Kansas, and most of these states were carried by Weaver. Cleveland received 277 electoral votes, to 145 for Harrison, and 22 for Weaver.¹

NOTES

The Australian Ballot. — For many years public opinion had been awakening to the fact that many elections were fraudulently carried on by the professional politicians. In 1888 the legislature of Massachusetts adopted a method of balloting, borrowed from Australia, which is known as the Australian system. Many other states followed the example of Massachusetts, until most if not all the states in the Union had adopted the new system. Its chief feature is that each voter receives an official ballot from the election officers, on which are printed the names of the candidates of all parties. With this he enters alone an election booth, and, in private, marks the names of the men for whom he wishes to vote, after which he folds the ballot, and returns it to the officers. The system has greatly aided in securing honest elections, but it has by no means removed all the evils. The most serious defect remaining is probably found in our method of choosing party candidates for local and state offices. By this method the party "boss" is usually able to name the party candidate without consulting the party, and this is most detrimental to the securing of honest men to fill the offices.

Inventions. — This period is also marked by the coming into practical operation of various useful inventions. The telephone, invented simultaneously by Elisha Gray of Chicago and Alexander Bell of Boston, both of whom applied for a patent on the same day, and almost the same hour, came into practical use about 1876. Since then hundreds of thousands of miles of telephone lines have been constructed, and conversation can easily be carried on between New York and Chicago, and even between cities still further apart. Few inventions have added more to the comfort and the business facilities of modern life than has the telephone. The electric light, invented by Brush and Edison, and many electrical appliances, are also the product of this post-bellum period.

Among the engineering achievements of the time, the most notable are the Brooklyn Bridge, the great suspension bridge that spans East River between New York and Brooklyn; the New York elevated railway, and the "jetty system" for deepening the channel at the mouth of the Mississippi River. A word further must be said of this last-mentioned work. As the current of the great river becomes more sluggish near its mouth, great quantities of mud are deposited, and the channel becomes so shallow as to impede shipping. Captain James B. Eads proposed the jetty system, long in use in Europe, by which the river is

¹ The popular vote stood: for Cleveland, 5,556,533; for Harrison, 5,175,577; for Weaver, 1,122,045; for Bidwell, 279,191; and for Wing, 21,191. The House and the Senate were both Democratic by large majorities.

made narrower, and the current deeper and swifter. In 1875 Congress made an appropriation, and Captain Eads began the work. It was completed in four years and has been eminently successful. The channel was made deep enough to float the largest ocean steamers to New Orleans, and the advantage to that city and to the whole country is very great.

In 1878 was established the government life-saving service. Such establishments had, in various parts of the world, been maintained by individuals, and in the United States, in a limited and local way, before this date. But by this act of 1878 the service was made general, and was placed as a subdivision in the treasury department. It is the first instance in the world of a life-saving service established and carried on wholly as a governmental institution.

Exploring the Arctic Seas. — The first of the voyages in quest of the North Pole was fitted out by James Gordon Bennett, proprietor of the *New York Herald*, and was commanded by Lieutenant De Long. In the little steamer *Jeannette*, De Long with a company of thirty men, left San Francisco in July, 1879. For two years the party battled with the frigid climate, when their little vessel, after being locked in the ice for many months, became a total wreck. After a dreadful journey of six hundred miles the party reached the coast of Siberia near the mouth of the Lena River. But relief was still far away, and the men perished from hunger and cold before succor could reach them. The bodies were recovered, and the diary of De Long, kept to the day of his death, told of the awful sufferings of himself and his party. In 1881 Lieutenant A. W. Greely of the United States army led an expedition of about twenty-five men to the far North at government expense. He established a post at a point $81^{\circ} 44'$ north, farther than any point before attained. Nothing was heard of the party until July, 1884, when a relief party, under Commander W. S. Schley, found and rescued those who survived. Greely and six of his men alone were left alive. Since then Lieutenant Peary and others have made brave efforts to reach the pole, but without success.

CHAPTER XXXIV

WAR AND EXPANSION

GROVER CLEVELAND was inaugurated President for the second time on the 4th of March, 1893. The Cabinet was a personal rather than a political one ; with two or three exceptions its members were in no sense party leaders. For secretary of state the President chose Walter Q. Gresham, a former member of the Cabinet of Arthur and a lifelong Republican until the campaign of 1892. John G. Carlisle of Kentucky became secretary of the treasury ; Daniel S. Lamont, secretary of war ; Richard Olney, attorney-general ; William S. Bissell, postmaster-general ; H. A. Herbert, secretary of the navy ; Hoke Smith, secretary of the interior ; and J. S. Morton, secretary of agriculture.

HAWAII, SILVER, AND THE WILSON TARIFF

The first important act after his inauguration was the withdrawal by Mr. Cleveland of a treaty to annex the Hawaiian Islands to the United States, which had been sent to the Senate by Mr. Harrison. Hawaii was a tiny independent monarchy in the Pacific Ocean some 2100 miles west of San Francisco, and the reigning queen was Liliuokalani. But the monarchy had long been tottering, and at length, in January, 1893, a party of revolutionists, chiefly Americans or the descendants of Americans, rose against the government, deposed the queen, and set up a provisional government with Sanford B. Dole as president. The cause of the uprising was an attempt of the queen to set aside the new constitution, adopted in 1887, and to restore the old one, by which the Americans and other foreigners residing on the islands would be deprived of their right to participate in the government. The revolution was approved by the minister from the United States, John L. Stevens, and through him Mr. Dole requested the United States to assume a protectorate over the islands. On the 1st of February the American flag was

raised over the government building at Honolulu. A treaty of annexation to the United States was drafted and sent by special messengers to Washington. Almost the entire American public, including President Harrison, favored annexing the islands in spite of the protests of the agents of the deposed queen, who had also reached Washington. Accordingly, on February 15 the President submitted the treaty to the Senate, but before that body could act he went out of office.¹

Mr. Cleveland, who now became President, had ideas of his own. Without the slightest regard for public sentiment, he withdrew the treaty from the Senate and sent a commissioner to Honolulu to investigate, and, on learning the facts, he sent another minister to supersede Stevens and to haul down the American flag. Cleveland acted on the old American principle, as he claimed, that we have no right to assume the government over a people without their consent, and this he declared had not been obtained. He even offered to restore Queen Liliuokalani to her throne if she would promise amnesty to those who had dethroned her. But this she would not do; and the government, under President Dole, continued and became stronger, and Mr. Cleveland recognized the islands as a constitutional republic. At length, however (July 7, 1898), when the Cleveland administration had been succeeded by another, the Hawaiian Islands were formally annexed to the United States by a joint resolution of Congress, as in the case of Texas.²

Scarcely had this administration come in when the finances of the country became greatly disturbed. The conditions of panic had been accumulating for many months, and a panic now seemed ready to break upon the country. There were about five hundred million dollars in currency notes outstanding and redeemable in gold; but when once redeemed, they were not canceled. The law directed that they be reissued, and thus an endless chain prevented the government from protecting its gold reserve. In addition to this the government was obliged by the Sherman Silver law to purchase four and a half million ounces of silver per month and to pay for it in notes redeemable in gold. The gold reserve had almost reached the danger

¹ The treaty provided among other things that the United States should assume the Hawaiian debt, some \$3,250,000, should pay the deposed queen \$20,000 a year, and allow the heiress-presumptive, Princess Koiulani, the lump sum of \$150,000.

² The Hawaiian group comprises about 6640 square miles. The population in 1896 was 109,000. As a naval station the islands are of great importance to the United States.

limit of a hundred million dollars. President Cleveland believed with the majority that the repeal of the Sherman law would help to relieve the situation, and for this purpose he called an extra session of Congress to meet on August 7, 1893.

But in Congress, especially in the Senate, there was great opposition to repeal. The House was dominated by the great states of the East, and in that body a motion to repeal the act was soon passed by a good majority composed of both parties. But in the Senate, where the sparsely settled mining states of the West had the same voting power as the populous states, the House bill was held up for many weeks. Meantime great commotion reigned throughout the country, and for once President Cleveland played the politician. He withheld the patronage from the opposing senators; he brought all the force of the presidential office to bear upon the matter in his determination to have the Sherman law repealed. And at last, on November 1, after a long and exciting session, the Senate yielded and the silver-purchasing clause of the act of 1890 was repealed; but further legislation, as recommended by the President for the purpose of maintaining the gold reserve, which had now fallen to \$80,000,000, was not secured.

But it was too late to avert the coming panic. The business of the country was unsettled, and the industrial depression that followed, covering several years, was one of the most disastrous in our history. Many for political purposes, and others through sheer ignorance, blamed the Democratic party entirely for the "hard times," and in this the Democrats suffered only what they had heaped upon the Republicans twenty years before. The panic of 1893, which had been gathering for many months before Cleveland's term began, was the resultant of many convergent forces — the financial conditions, the hoarding of gold by the people, the uncertainty about silver, overproduction, and of others which elude the pen of the economist.

At such a moment it was doubtless unwise for the Democrats to attempt a revision of the tariff; but on the tariff issue they had carried the election, and they were prompt to carry out their pledges. Mr. William L. Wilson of West Virginia, chairman of the committee of ways and means, brought a tariff bill into the House early in the regular session. This became known as the Wilson bill. It passed the House in February, 1894, and went to the Senate. The bill placed raw materials for the most part on the free list, as

also coal and sugar, and made many of the duties *ad valorem* instead of specific. In the Senate the bill was subjected to drastic treatment. A few Democrats, led by Senator Gorman, determined to change the bill, and so great were the alterations made that it could scarcely be recognized as the same that had passed the House. Henceforth it was called the Wilson-Gorman Tariff. The Senate took coal and iron from the free list, placed a schedule of duties on sugar, and raised them on many other things; it also changed *ad valorem* to specific duties. The House bill had reduced the average duties of the McKinley Tariff, which had been about 50 per cent, to about 35 per cent; but the Senate bill raised them to about 37 per cent. The House reluctantly accepted the Senate bill because no better was attainable, and it was sent to the President on August 13, 1894. Mr. Cleveland was so displeased with the Senate changes that he refused to sign the measure; but, believing it an improvement over the McKinley bill, he could not veto it, and it became a law without his signature.

**Wilson Tariff
law, 1894.**

This tariff measure carried with it a provision for an income tax, which, however, was pronounced unconstitutional the following May by the United States Supreme Court.¹

THE WORLD'S COLUMBIAN EXPOSITION

Four hundred years had passed since the discovery of the New World by Columbus. In that period the transformation had been the most remarkable in history, and it was fitting now that the one great nation of the Western Hemisphere, with its vast wealth and its boundless resources, take the lead in celebrating the discovery of Columbus. It was decided that the celebration take the form of a gigantic exposition, and the prize was awarded to Chicago; but as it was found impossible to make adequate preparation for holding the fair on the anniversary of the discovery by Columbus, the following year, 1893, was chosen in its stead. The site chosen was Jackson Park, an unimproved pleasure ground on the lake front near Chicago. The ground was intersected with marshy inlets and lagoons; but these were transformed by the hand of art into canals and lakelets bounded by walks and lawns, until the park presented the beauty of a fairy land.

The expense of the exposition was enormous. The cost of pre-

¹ This was a reversal of a former decision in favor of the income tax.

paring the grounds and erecting the buildings aggregated nearly \$20,000,000, raised chiefly by the citizens of Chicago, by a five-million loan by the city, and by a gift of the government of nearly two millions in the form of half dollars, coined for the purpose with a special design. The government expended also \$2,250,000 for a building of its own, foreign countries expended some six millions, and the several states over seven millions. Thus the grand total reached thirty-five millions, and if to this be added the expense of private exhibitors, the cost of the great exposition footed up the enormous total of nearly \$40,000,000.

No attempt can be made to describe the buildings of the "White City," as the exposition came to be called. Most of them were composed of an iron framework covered with "staff," a composition that resembles white marble. The principal buildings, grouped around the Court of Honor, with its glittering lake, its stately colonades, and its luxuriant foliage, presented a scene of splendor and magnificence that led the beholder to feel that he was in dreamland.

The largest of the buildings, covering forty-four acres, was devoted to manufactures and liberal arts. The government building, with its octagonal gilded dome was probably the most ornate and impressive of them all. Around these were grouped the agricultural building, the woman's building, machinery hall, buildings devoted to art, fisheries, mining, transportation, electricity, and others. The art building, Ionic in style, was probably the most perfect in grace of design on the grounds, and the treasures within it represented the choicest of public and private collections in Europe and America. In the building devoted to the work of women was exhibited, as never before, the great part that woman has played in the growth of modern civilization.

The exhibits of the great fair were bewildering in their attractiveness and their numbers. Never before in the world's history had such a collection of the products of art, science, and manufactures been made. It seemed that nothing was wanting of the best that the world could give from every nation and every clime. The Centennial Exhibition of 1876 had appealed chiefly to the artistic and the sentimental; the World's Columbian Exposition, while equally artistic and far more extensive, aimed chiefly to show the progress of the human race during the preceding four hundred years. For example, in the transportation building were exhibited

the old Conestoga wagon and the stagecoach of a hundred and fifty years ago, side by side with the best-equipped modern locomotive. So in many exhibits the old and the new were contrasted in such a way as to present most strikingly to the eye the wonderful progress of modern times.

The great exposition was open from the 1st of May to the 31st of October, 179 days, during which the paid admissions were 22,477,212. The receipts from all sources reached nearly \$15,000,000, while more than 23,000 medals were awarded to exhibitors. After the close of the exposition the problem arose as to what should be the disposal of the buildings, but the problem was solved when fire broke out in the grounds and most of the gorgeous structures of the White City were laid in ashes. Thus ended the American dream of 1893, and the people awoke to the endless duties of practical life.

In the autumn of 1895, two years after the close of the exposition at Chicago, another one of a similar character, but on a much smaller scale, was opened at Atlanta, Georgia. The site was Piedmont Park, where, thirty-one years before, Sherman had planted his guns to shell the city of Atlanta. The main object of this exposition was to reveal the vast industrial possibilities of the South. Nothing is more striking in the industrial world than the progress made by that section since the days of reconstruction. In the year 1899 the South produced nearly 11,000,000 bales of cotton, 10,000,000,000 feet of lumber, and 750,000,000 bushels of grain. A thousand million dollars had been invested in manufacturing.¹ The cotton mills now run more than 5,000,000 spindles, and great iron furnaces equipped with the latest machinery are springing up in nearly every southern state. The southern mines of zinc, lead, pyrites, salt, manganese, and valuable clays are inexhaustible, and in recent years great deposits of petroleum have been discovered in Texas. Since the Civil War the energies of the South, after long slumbering under a false system of labor, have sprung into life, and the achievements of the present are excelled only by the promises for the future.

**Progress of
the South.**

TWO UNUSUAL OCCURRENCES

Twice had President Cleveland startled the country with his great decision of character, and his singular power in taking the initiative

¹ *The Manufacturer's Record*, December, 1899. Our cotton exports for 1903 reached 3,622,000,000 pounds.

on great questions without taking counsel with his party — in issuing his tariff message in 1887, and in withdrawing the Hawaiian Treaty in 1893. Twice more was he to do the same thing. In May, 1894, a formidable strike of the employees of the Pullman Car Company, of Chicago, took place, and in their violent efforts to prevent the cars from being used on the railways great damage was threatened. The governor of Illinois, John P. Altgeld, sympathized with the strikers, and made no effort to quell the disturbance. Thereupon President Cleveland, of his own motion, sent national troops to put down the riot. The Constitution makes no express provision for such an act on the part of the President, except when the government of the state in which a riot occurs calls for national assistance. President Cleveland was severely criticised for his action, and an acrimonious controversy ensued between him and Governor Altgeld. The President justified his action on the ground that the rioters were interfering with the mails and with interstate commerce, both of which it was his duty to protect.

The second of these events was the most thrilling the country had experienced in many a year. The British government had for more than half a century been disputing with Venezuela concerning the boundary between that country and British Guiana. Again and again had Venezuela offered to leave the matter to arbitration, and the United States had urged that the dispute be settled in that way. But the British refused, nor did they propose any method by which a settlement could be reached. In the summer of 1895 Mr. Richard Olney, the secretary of state, informed Lord Salisbury, the British Premier, that in accordance with the Monroe Doctrine, the United States must insist on arbitration. Lord Salisbury replied by a flat refusal, and a declaration that he did not accept the Monroe Doctrine. Then it was that President Cleveland, in the belief that the Monroe Doctrine was about to be violated, startled the world with his vigorous message to Congress. In this message he declared that the time-honored doctrine "was intended to apply to every stage of our national life," that as Great Britain had refused for many years to submit the dispute to impartial arbitration, nothing remained to us "but to accept the situation." He then proposed that a commission be appointed to determine the rightful boundary between the two countries, and asked that Congress vote money to defray its

**Cleveland's
Venezuelan
message,
December 17,
1895.**

expenses. The message further declared that in case the disputed territory was found to belong to Venezuela, it would be the duty of the United States "to resist by every means in its power" the aggressions of Great Britain, the appropriation of lands that are determined of right to belong to Venezuela.

The country and the world were thrilled at the suddenness, the positive tone, of the message. Still more striking was the unanimity of the support given it. Congress forgot its party differences and voted without division or debate \$100,000 to defray the expenses of the commission to be appointed. It seemed for a time that the war cloud was lowering over the two great kindred nations; but Lord Salisbury receded from his position, the boundary dispute was settled by arbitration, and the people on both sides of the sea rejoiced, for they had escaped a calamity the extent of which no man could have measured.¹

THE SILVER ISSUE

As the presidential election of 1896 drew near, it became evident that the free coinage of silver would become the chief issue. The mining interests of the West were greatly crippled by the steady fall in the price of silver, and the blame for this was laid chiefly on the repeal of the Sherman law. But there were other causes. In 1873 Germany had demonetized the white metal and had made gold the sole standard. Norway, Sweden, and Denmark immediately followed the example of Germany, and a great quantity of bullion from their melted coin was thrown upon the market. In 1878 the Latin Union closed their mints to free coinage, and Russia suspended silver coinage in 1879. In addition to all this, the world's annual production of silver more than doubled in the twenty years preceding the repeal of the Sherman law.

¹The result of the arbitration was decidedly favorable to the English claim, on the ground that fifty years' actual possession of a district constitutes a national title. One result of this episode was the establishing of the Monroe Doctrine more firmly than ever. It is also claimed that the message of President Cleveland, whose authority was coördinate with that of Monroe, extended the original meaning of the doctrine, pronouncing it at the same time a permanent policy of the United States.

Other notable events of this administration were an order in May, 1895, bringing thirty thousand more places within the Civil Service law, making eighty-five thousand in all, and the framing and signing of a general arbitration treaty between the United States and Great Britain, January, 1897. This most desirable treaty, however, failed to receive the requisite number of votes in the Senate, and it fell to the ground.

As we have noticed, the administration was launched in the midst of an incipient panic. Failures in business began to multiply, and in addition to the financial and industrial depression, the crops of the West were short for several years. Many kinds of business were suspended, and armies of unemployed men walked the streets of the cities.¹ The gold reserve in the treasury ran dangerously low; and to replenish it, bonds to the extent of \$263,000,000 were sold. Vast numbers of men believed that the government's treatment of silver was the chief cause of the distress, and that free coinage would be the cure. These men heartily disliked Cleveland because he was an enemy of free coinage.

During this whole term the President and his party drifted steadily apart. But the silver question was not the sole cause of this. Cleveland exercised little tact in holding his party together. For his great courage and ability, for his independent character, his unswerving rule making principle the standard of action, for his abhorrence of demagoguery in every form—for all these President Cleveland must be admired by all honest people. But in a country governed by parties, party leadership and unity of party action are necessary in carrying out great measures. Herein lay

**Cleveland's
want of tact.**

Cleveland's great weakness. He seemed to believe that a President should be non-partisan in serving the whole people; he took little counsel with his party leaders, forgetting apparently that it was a party, and not the whole people, that made him President, and that for future usefulness the party needed guidance and leadership. Thus one of the most able and honest of American Presidents found himself almost without a party—chiefly through his own want of tact.

At the beginning of 1896 it was certain that one of the great parties would pronounce for free silver, but which it would be was uncertain, for both were swarming with the friends of silver. At length the Republicans began to drift toward the gold standard, and the Democrats took the opposite course. The Republican convention met in June at St. Louis. For months before the meeting, it seemed evident that Mr. William McKinley of Ohio would be the choice of the convention. He had been a friend of free coinage in

¹In the spring of 1894, one Coxe of Ohio marched to Washington with a rabble of several hundred men, called the "Army of the Commonwealth," to demand that Congress issue \$500,000,000 in greenbacks to be expended in public works for the benefit of the unemployed.

former years, and many now called on him to express himself on the great issue; but he refused to reveal his convictions, if he had any, stating that he would stand on the platform of the party if nominated. He received the nomination with little opposition, and Garret A. Hobart of New Jersey was chosen as his running mate.

**Nomination
of McKinley.**

William McKinley, like many of our public men, had risen by his own industry and strength of character from the lower walks of life. Valiantly he had served his country in the Civil War. Fourteen years he had served in the Lower House of Congress, had become a commanding figure in that body, and was the chief framer of the tariff bill that bore his name. He was twice elected governor of Ohio, and had for some years been looked upon as a coming candidate for the presidency. No Republican in the country had shown greater powers as a party leader than had Mr. McKinley. The platform on which he now stood pronounced for the gold standard, unless the silver standard could be adopted in conjunction with foreign nations. It also declared for protection and reciprocity, the American ownership of the Nicaragua canal, the control of Hawaii, and the purchase of the Danish West Indies.

The Democrats met in Chicago a few weeks later. The party was swayed by the spirit of revolt against old standards. Never had a great party met to nominate a presidential candidate with less knowledge of what it would do. The silver issue had swept the country like a hurricane, and the one thing the convention was sure to do was to pronounce for free coinage. On this subject the party had taken fire, and nothing could stay the impetuous demand for unlimited coinage at the rate of sixteen to one; and this became the chief plank of the platform and the chief issue in the campaign. But who would be the candidate? While this question was pending, William J. Bryan, a member of the Nebraska delegation, addressed the convention in a brilliant, passionate outburst of eloquence that thrilled his hearers with admiration. Bryan was a man unknown to the people at large, and, though he had served two years in Congress, he had not been hitherto thought of as a national party leader. He was a man of pure and sincere personal life; his espousal of the cause of silver was born of honest motives; in his eloquence there was a spark of the divine fire that touches men's souls. The effect of his speech on the convention was magical, and the day after it was made he was

**Nomination
of Bryan.**

nominated for the presidency of the United States. For second place Arthur Sewall of Maine was chosen. The Populist party held its convention a little later, and, being also devoted to free silver, it ratified the nomination of Bryan; but instead of Sewall it chose Thomas E. Watson of Georgia.¹

The campaign of 1896 was one of the most exciting the nation has ever seen. At first it seemed that the country would be entranced by the brilliant young Nebraskan, as the Democratic convention had been. Mr. Bryan made a most heroic effort. He traveled in many states and electrified hundreds of thousands with his dramatic eloquence. But ere the summer had passed the people caught their breath. They began to reflect that if the country were thrown on a silver basis business would be greatly disturbed; and that it would not be dealing honestly with the creditor, if he were forced to accept cheaper money for payment than that intended when the debt was contracted.

But old party lines were not strictly drawn. When the Republican convention adopted the gold standard, thirty-four of its delegates, led by one of the ablest Republican senators, Mr. Stewart of Nevada, seceded from the hall, and afterward indorsed Bryan. The Democrats suffered a still greater defection. Many conservatives of the party met in Indianapolis, called themselves the National Democratic party, and nominated John M. Palmer of Illinois and Simon B. Buckner of Kentucky, and adopted a gold standard platform. In addition to these defections, many thousands of Republicans voted for Bryan, and a far greater number of Democrats voted for McKinley.

The election was held on November 3, and resulted in a signal victory for McKinley. He carried all the states east of the Mississippi and north of the Ohio and the Potomac, also five states in the West, and Kentucky and West Virginia. McKinley received 271 electoral votes while Bryan received 176.² The campaign, though vigorous, was clean and dignified, both McKinley and Bryan being men of the highest personal character. Marvelously soon after the

¹ The Prohibitionists had met in Pittsburg in May, and had nominated Joshua Levering of Maryland and Hale Johnson of Illinois. The National party met in the same city, and chose C. E. Bentley and T. H. Southgate. The Socialist Labor party nominated Charles H. Matchett and Matthew McGuire. These parties were scarcely heard in the exciting campaign that followed.

² The popular votes were as follows: McKinley, 7,111,607; Bryan, 6,502,600; Palmer, 134,731; Levering, 123,428; Matchett, 35,306; Bentley, 13,535.

election the country was quiet; the defeated party accepted the result cheerfully in the true American spirit; and now that the financial status was settled for the time, the business of the country was awakened to new life and new enterprises.

Immediately on his inauguration Mr. McKinley called Congress to meet in extraordinary session on the 15th of March, for the purpose of providing additional revenue. Though the silver issue had been paramount in the campaign, it was understood by the Republicans that, if they won the election, their success would be considered a mandate from the people to enact a new tariff law. They now controlled the Executive and both houses, and they immediately addressed themselves to this subject, Thomas B. Reed of Maine having been elected Speaker of the House. A tariff bill had been prepared during the winter and Mr. Nelson Dingley of Maine brought it before the House. Before the end of March it had passed the House and had been sent to the Senate, where it remained four months. It became a law on July 24, 1897. This tariff, known as the Dingley bill, is still (1904) in force. Its duties average about the same as those of the McKinley bill, but it differs from that measure in many particulars. On the whole it is a highly protective tariff—higher in its rates than any other in our history except that of 1890.¹

tariff, 1897.**

THE WAR WITH SPAIN

For eighty-four years America had known no foreign war—save the brush with Mexico in the forties—and never had we engaged with a great power, except with England. The year 1898 brought war with Spain, and wrought vast changes in that government and in our own. As stated in an early chapter of this history, Spain was long ago the greatest power in Europe or the world. The dominion of Philip II was vast. He ruled Portugal, the Netherlands, Milan, and the Sicilies; he was master of Cuba, Porto Rico, and almost all of Central and South America. His revenue was ten times that of Elizabeth of England, says Macaulay. But alas for

¹ The following winter some important financial legislation was enacted. The gold dollar was made the unit of value, and the gold reserve established at \$150,000,000. Provision was made for refunding the national debt in 2 per cent thirty-year bonds; and the national banking law was so amended as to permit a bank to be established on a capital of \$25,000 and to issue notes to the par value of its bonds deposited in the treasury.

Spain! With all her chivalry and pride, she has fallen from among the great. Her thirst for gold and conquest was the thirst of the inebriate for drink, and the political corruption it brought proved the ruin of Spain.

At the end of the first quarter of the nineteenth century the possessions of Spain in the Western Hemisphere were confined to the islands of Cuba and Porto Rico, with a few small adjacent islands, and her government of these was one of unceasing corruption and plunder. Often had the people of Cuba revolted against the iron hand of Spain. A ten years' war in the island, begun in 1868, ended with promises; but scarcely had the patriots laid down their arms when every promise was broken, and they were ruled by the same tyrannical hand as before. For seventeen years the matter slumbered when, in February, 1895, the Cubans again rose in rebellion against their oppressors. Spain sent an army to put them down, first under General Campos; but he was too humane, and he was replaced by the cruel Weyler.

Many of the Cuban peasants remained quietly on their farms and took no part in the war. These Weyler drove, at the point of the bayonet, from their homes and penned them up in the towns, that they might not furnish food for the rebels. Soon they were in a starving condition and the death rate was frightful; but Weyler gave no heed; his evident intention was to depopulate the island. Our people were deeply concerned. Why this long-drawn-out, wholesale murder right at our door, when we could easily prevent it? President Cleveland hesitated. He was loath to offend a friendly nation; but he warned Spain. In his annual message of 1896 he said, "It cannot be reasonably assumed that the hitherto expectant attitude of the United States will be indefinitely maintained." Then he went out of office, and Mr. McKinley followed the same policy,

The cry from Cuba. warning Spain in various ways, and another year passed. Both these Presidents felt a responsibility in dealing with a friendly power that a private citizen cannot feel. But Spain refused to heed the warnings. The cry of distress from the unhappy island increased more and more, and it seemed as the voice of a brother's blood crying unto us from the ground—and the American public could endure it no longer.¹

In the early spring of 1897 President McKinley demanded the

¹ Weyler's starvation policy is said to have cost Cuba 250,000 lives.

release of American prisoners in Cuba, and this was heeded. In May he asked Congress for \$50,000 for the relief of Americans in the island, and this was administered. In *The Maine*. February, 1898, he sent the *Maine*, a fine second-class battleship of seven thousand tons, to Cuban waters to protect our interests. On the night of the 15th of February, while the crew were sleeping in fancied security, a mighty column of smoke and fire arose from the water, commingled with timbers and beams and the bodies of men. The *Maine* had been blown to fragments and 266 of her gallant crew had perished. When the news was flashed across the country, the people were shocked; and when, after waiting forty days for a board of naval officers to ascertain the cause of the explosion, they were convinced that it was the result of Spanish treachery, their wrath broke forth into fury.

The destruction of the *Maine* hastened, but did not cause, the approaching war. After proposing to Spain an armistice to continue till October 1, 1898, and receiving an unsatisfactory reply, President McKinley, on April 11, sent a message to Congress saying: "In the name of humanity, in the name of civilization, in behalf of endangered American interests . . . the war in Cuba must stop." This meant war, for Congress has no diplomatic relations; its only power in dealing with foreign nations is the war power. On the 19th of April — that ominous date in American history, the anniversary of the battle of Lexington, of the first bloodshed in the Civil War, and of the blockading proclamation of President Lincoln — on that day Congress resolved that Cuba must be free, authorized the President to use his war power in carrying out the resolution, and declared also that the United States had no intention to exercise sovereignty over the island. War was formally declared against Spain on the 25th. The Spanish minister at Washington instantly left the country, and our minister at Madrid, Mr. Woodford, departed from Spain. At that moment no idea of territorial acquisition seemed to enter the American mind. The war was solely for the rescue of Cuba, and no war was ever waged for a nobler purpose. And yet, strange as it may seem, nearly all European countries, except England, displayed a popular feeling against the United States.

**Declaration
of war.**

The first notable battle of the war occurred in the Orient. Spain had possession in the East of the populous archipelago known as the Philippine Islands, so called in honor of Philip II of Spain, after their

discovery by the dauntless Magellan in his famous world voyage. In the spring of 1898 Commodore, now Admiral, George Dewey was commanding a fleet in eastern waters. He was ordered to proceed to Manila Bay and there to attack the Spanish fleet. Manila Bay is one of the finest harbors in the world. At its mouth stand two small islands like sentries, rising five hundred feet above the water. These were bristling with Spanish cannon; but, on the night of April 30, Dewey passed them in safety, and at dawn of the next day he was ready to grapple with the Spanish fleet in the harbor. Here under the guns of Cavité, a town some miles from Manila, the capital of the islands, lay the enemy's vessels—and

Battle of Manila. one of the most remarkable of naval battles immediately followed. The Spanish fleet, commanded by Admiral Montojo, consisted of ten vessels, while Dewey had nine, somewhat better on an average than those of the enemy. The apparent advantage of the Spaniards, owing to the support they had from the shore batteries, did not avail. The battle began in the early morning hours. It was short and terrific, and wholly one-sided in its results. Five times the American fleet swung past the enemy pouring in its deadly broadsides. By one o'clock in the afternoon the enemy's fleet was totally destroyed and hundreds of the Spaniards were dead or wounded. Not an American was killed, nor was an American vessel disabled. Some months later the city of Manila was captured, with thirteen thousand Spanish soldiers, by a combined attack of the navy under Dewey and a land force sent from the United States under the command of General Merritt, and the entire archipelago was wrested from Spain.

Meantime matters were preparing for equally great events nearer home. The President had called for 125,000 volunteers and the rush to arms was most gratifying.¹ Admiral Sampson had been sent with a fleet to Cuban waters. Commodore Schley was also sent with a flying squadron. These two joined at the mouth of the harbor of Santiago, where a Spanish fleet, under Pascual Cervera, had taken refuge. This fleet was much stronger than that destroyed by Dewey. The fleets of Sampson and Schley, joined by the *Oregon*, after a fourteen-thousand-mile voyage from San Francisco around Cape Horn, watched and waited at the mouth of the

¹ The regular army was only 28,000 strong at the beginning of the war. It was soon increased to 61,000 by act of Congress. By the end of August 216,000 men had volunteered, the President having made a second call for 75,000 men.

harbor for Cervera. To prevent his escape at an unguarded moment a young officer, Richmond P. Hobson, with a few companions, steamed into the harbor under cover of the darkness and sunk an old collier, the *Merrimac*. But ere they had succeeded they were discovered, and they finished the work in the face of a tremendous fire from the enemy, after which they were picked up and made prisoners.

The country was utterly unprepared for war, and many were the blunders and mishaps before an army could be put into the field. After much confusion, 15,000 men were embarked from the coast of Florida on June 14 for the vicinity of Santiago. They were landed sixteen miles south of the harbor and began their march by two mountain trails toward Santiago. There was an army of regulars commanded by Generals Wheeler and Young, while Colonels Wood and Roosevelt led an irregular band of 534 men known as the Rough Riders. These two bodies, leaving the main army behind, pressed forward over the mountains, and encountered the enemy first at Las Guasimas. The Spaniards numbered some 2000 and the Americans less than 1000; but the latter won, driving the enemy before them and capturing their position. The rest of the army came up a few days later, led by Generals Lawton and Chaffee, and it was decided to make an attack on El Caney, a fortified town near Santiago. After a siege of nearly a whole day the works were taken by storm, most of the surviving Spaniards being made prisoners.

San Juan was captured on the same day in a brilliant assault led by Colonel Roosevelt. Other charges were also made on July 2 (some being continued into the next day) at various points near Santiago, and the combined engagements are known as the battle of San Juan. It was the most important land battle of the war. Some 16,000 Americans were engaged under the general command of General William R. Shafter. Of our army 241 were killed and about 1400 wounded.

While this was going on, Sampson and Schley were waiting at the mouth of the harbor for the egress of Cervera. On the morning of the 3d of July, a thin column of smoke was descried far up the bay, and the Americans saw that their long-looked-for enemy was approaching. Cervera, seeing that Santiago was about to fall, had determined to make a dash for liberty—and a wild, fatal dash it was. Admiral Sampson was absent on his flagship, and Commodore Schley had general charge; but, more strictly speaking, it was a

**Battle of
San Juan.**

captain's fight, as each commander was prepared and did what seemed best in his eyes.

As the Spanish fleet emerged from the harbor, the American ships opened upon it, and in a wild running fight of a few hours the entire Spanish fleet was destroyed. The battle was a repetition of that at Manila. But one American was killed and one wounded, while nearly 600 Spaniards were killed or drowned, nearly 1400, including the brave Cervera, were taken prisoners, and every one of their vessels was sunk or captured.

Two weeks after this battle General Toral surrendered the city of Santiago to General Shafter, and practically the entire island of Cuba passed into the hands of the United States.

The fertile island of Porto Rico, the smallest of the four Greater Antilles, lying some five hundred miles southeast from Cuba, was the next object of attack. On July 20 General Nelson A. Miles, the chief commander of the armies, embarked with an army for Porto Rico. The army landed at Ponce, soon had possession of the city, and began a march toward San Juan, the capital of the island. After several skirmishes, and the capture of several towns, not only by the army under Miles, but by two or three others operating in different parts of the island, all operations were suddenly brought to a standstill, on August 13, by news that a peace protocol had been signed the day before by the United States and Spain.

The war was over; it had been in progress but little over three months. The Americans had won in every engagement. It was the fall of mediævalism before the onrush of modern progress. The naval power of Spain had been swept from the seas; and now the proud old nation sued for peace. The conditions, as arranged in the protocol, were that Spain forever relinquish her sovereignty over Cuba, that she cede to the United States Porto Rico and her other islands in the West Indies, also an island in the Ladrões, and that the control of the Philippines be determined in a treaty of peace yet to be arranged.

The war with Spain was not a great one, but measured by results it was one of the most important of modern times.¹ It marked the end of Spanish rule in the Western Hemisphere, and of the Spanish Empire as a world power. But, after all, this war may prove a great blessing to Spain. Being no longer a first-class power, she

¹ The cost to the United States was about \$275,000,000; the number of Americans engaged was 274,717.

will have little temptation to boast or to wage war, and if her people, now hemmed within their own peninsula, will turn their attention to the arts of civilization, and to the education of the masses, they may yet become a great and happy people.

Still greater was the change wrought on the United States. During the century and a quarter of our national history, we have been content to remain in comparative isolation from the rest of the world; we have taken pride in the fact that we had not and did not wish to have colonial possessions. But suddenly, unexpectedly, our policy has been changed, and we have expanded into a world power. No man planned or foresaw the change. It came probably because it was time for it to come.

The treaty of peace was negotiated at Paris during the autumn of 1898 by commissions from both countries, the American commission being headed by Judge William R. Day, who had resigned the secretaryship of state. Aside from the provisions of the protocol, the one great question to be settled by the treaty was the disposition of the Philippine Islands. There was probably little thought on the part of the administration, when the protocol was signed, of forcing the cession of the islands by Spain. But the capture of Manila by the Americans on the day after the signing of the protocol (of which they had not heard, owing to the severance of telegraphic communication) placed the Philippine question in a different light. The American public now began to view the matter from the standpoint of national responsibility. It would be cowardly, it was argued, to turn the half-civilized Filipinos out upon the world to become a prey to foreign powers, or to hand them back to the misrule of Spain; and the only other alternative was to accept them as a possession of the United States. This view was strengthened by a missionary spirit among the people, and President McKinley came to adopt it. Late in October he cabled our commissioners that the acceptance of the archipelago was the only "plain path of duty." Our commissioners thereupon demanded the cession to the United States of the entire group. The Spanish commissioners objected to this with great vigor and with many arguments; but at length they were obliged to yield, and the entire archipelago was ceded to the United States in consideration of **Cession of the Philippines.** \$20,000,000 to be paid to Spain by the United States. The treaty also provided that for a term of years Spanish ships and merchandise be admitted to the ports of the islands on the same terms as

those of the United States. The treaty was signed on December 12; but when it came before the United States Senate for ratification, considerable opposition was developed. For a month the fate of the treaty was in doubt; but when the vote was taken, on February 6, 1899, the treaty was ratified with a single vote to spare. The queen regent of Spain signed the treaty on the 17th of March.

OUR ISLAND POSSESSIONS

The archipelago extends over sixteen degrees of latitude, almost from Borneo to Formosa. It comprises probably 2000 islands, hundreds of which are barren volcanic rocks. Many of the islands are inhabited, but not more than eleven are of much importance. The largest of the Philippines is Mindanao, about the size of Pennsylvania, the second being Luzon, which is at least as large as the state of Ohio. The population of the group has been estimated at from 7,000,000, to 10,000,000. The soil is fertile, and the chief products are sugar, Manila hemp, tobacco, coffee, and indigo. There are more than twenty races, nearly all of Malay stock, the most nearly civilized of which are the Tagalogs, who number probably 1,600,000. All these

The natives. races are supposed to have occupied the island in comparatively modern times only. The supposed aborigines are the Negritos, of whom some 30,000 still exist in the islands. They are a timid, shy, dwarfish people, scarcely three feet in height; they wander in small tribes among the mountains, living on roots and small game.

At the time of the American occupation probably 30,000 Europeans and 100,000 Chinese lived in the islands, and these were in control of nearly all the industries.

Scarcely had the treaty of peace been signed when the Filipinos rose against the Americans, declaring that they had been fighting for independence, and not for a change of masters. The insurrection was headed by a strong young native leader named Emilio Aguinaldo, who proclaimed himself dictator, then president of the Philippine republic. In a few weeks he had 30,000 men under arms; but, after a few pitched battles, it was discovered that the Filipinos could not stand against American troops. It was then de-

Revolt of the Filipinos. cided to disband the Filipino army, discard the uniform, and carry on a guerrilla warfare against the Americans.

This method, which soon degenerated into pure brigandage, proved very distressing to the Americans. President McKinley

found it necessary to augment the army in the Philippines until it reached 65,000. These were scattered; they occupied many posts, and their petty engagements with the natives numbered hundreds.

Meanwhile the presidential campaign of 1900 had an important bearing on the Philippine War. This campaign was strikingly similar to that of 1896. The presidential candidates were the same, McKinley and Bryan, and the platforms were very similar to those of four years before. The Democrats, at the behest of Mr. Bryan, embodied

the Chicago platform, including its free-silver feature; but they added one important declaration, that against imperialism, and pronounced this the paramount issue of the campaign. The Democrats declared against the continued possession of the Philippine Islands, and in favor of their ultimate independence, with a promise on our part to protect them against foreign powers by means of an extension of the Monroe Doctrine. The Filipino insurgents, learning that a great political party in the United States had pronounced in favor of their independence, exhibited great activity during the campaign. But the November election brought a signal victory for McKinley, who received 292 electoral votes to 155 for Bryan, and a marked subsidence in Filipino opposition was soon noted.

To aid the army in governing the islands the President appointed on February 6, 1900, a board of civil commissioners with Judge William H. Taft of Ohio at its head. This board reached the Philippines in June, and began its duties in September. It had sole legislative and appointive power, while the military governor continued to be the executive head. The board soon issued codes of law for municipal government, for an electoral system, for the government of the provinces, and the like. A system of secular schools was established, and a thousand American school teachers went to the islands as volunteers to teach the natives.

The insurrection was visibly waning. In March, 1901, Aguinaldo was captured by a clever though undignified strategy, and soon after this he took the oath of allegiance to the United States and issued a manifesto urging his fellow-countrymen to do the same. From this cause and other causes thousands of them did so, and by the close of the year 1901, 765 towns had peacefully accepted civil government, and the insurrection was practically at an end. It had cost the United States \$170,000,000 to pacify the islands. Judge Taft became governor of the archipelago on July 4, 1901, when a new system was inaugurated. The civil government in part superseded the military.¹ A commission to aid the governor was appointed, to consist of eight persons, three of whom were natives, and a supreme court was organized with four Americans and three native Filipinos. The natives had rebelled against Spain because of the friars, who had come to own a large part of the best land; and they rebelled against the Americans in part, as they claimed, because of a provision in the treaty by which the United States promised to respect the rights of the friars. The question of the friars' lands was at length amicably settled between the United States government and the head of the Catholic Church, without doing injustice to the Filipinos; and when the latter saw that the Americans were disposed to deal justly and kindly with them, giving them a large share in their own government, they laid down their arms, and the islands are now comparatively quiet and peaceful. Governor Taft proved himself a man of great tact and

¹ It was not, however, till July 4, 1902, that the President proclaimed the insurrection at an end, and that the civil government fully superseded the military. The successive military governors were Generals Wesley Merritt, E. S. Otis, Arthur MacArthur, and Adna R. Chaffee.

ability, and, after serving as governor for two and a half years, he resigned, and in February, 1904, accepted the position of secretary of war in the Cabinet of the President. Mr. Luke E. Wright, who had been a member of the Philippine Commission, then became governor of the islands.

Soon after the close of the war with Spain the country's attention was turned also to Porto Rico, our new possession in the West Indies. The island had been under military government since the war, but in his annual message of December, 1899, President McKinley recommended civil government for Porto Rico and stated further that since the island had lost its preferential tariff with Cuba and Spain, "Our plain duty is to abolish all customs tariffs between the United States and Porto Rico." Accordingly on **Porto Rico.** January 3, 1900, Senator J. B. Foraker of Ohio introduced a bill in the Senate providing for free trade with the island, and making the inhabitants citizens of the United States with a representative in Congress. This bill encountered great opposition in the House, supposed to have originated with the sugar refiners, who feared competition with Porto Rican sugar. The debate that followed hinged upon a constitutional question. The Constitution provides that all duties shall be uniform throughout the United States, and the Democrats, with some Republicans, took the ground that the Constitution follows the flag, that it extends of its own force to Porto Rico. The majority of the Republicans took the ground that Porto Rico is neither a state nor a territory, but a dependency, and that Congress has the right to legislate as it will concerning the island. The Republicans won by sheer numbers. A duty of 25 per cent of the Dingley tariff on goods going both ways between the United States and Porto Rico was proposed; but a compromise on 15 per cent for two years was agreed to, and the law was passed. A law was also passed that all duties collected in the United States on Porto Rican goods be appropriated to the expenses of the island. This 15 per cent tariff was to continue for two years, only on condition, however, that the people of the island did not in the meantime establish a system of taxation for their own benefit.¹ But they did

¹ In May, 1901, the Supreme Court rendered the first of its "insular decisions," *DeLima vs. Bidwell*, by which Porto Rico was pronounced a domestic territory of the United States. By this decision the duties levied on exports from Porto Rico to the United States were pronounced illegal and must be refunded. In a later decision, *Dooley vs. the United States*, it was decided that duties levied on goods from the

this, and on July 25, 1901, the President proclaimed absolute free trade between the United States and Porto Rico.

Civil government was established in Porto Rico on December 3, 1900, and Charles H. Allen of Massachusetts became the first governor. Mr. Allen was soon succeeded by W. H. Hunt of Montana. The governing power of the island consists of an American governor appointed by the President, an executive council, half of which shall be Porto Ricans, also appointed by the President, and a house of delegates, elected by the people. The Porto Ricans had welcomed the change of masters at the close of the war. Since then they have made great progress in popular education, in domestic products and commerce, and, with some necessary economic readjustments, such as the securing of the American market for Porto Rican coffee, the prosperity of the island will be assured.

Hawaii meantime had fared even better than Porto Rico. In April, 1900, a law was passed to extend the Constitution to the Hawaiian Islands, including the internal revenue, customs, and maritime laws of the United States, and to make the islands a territory and the people citizens, with a representative in Congress.

CUBA

Scarcely less interesting than Porto Rico and the Philippines was Cuba, on account of which the war with Spain had come about. Congress in declaring war had resolved that the purpose was to rescue the Cubans from the misrule of Spain, after which they should have their independence. Many Americans, who would gladly have seen Cuba annexed to the United States, regretted this action of Congress; but there stood the resolution; the national faith was pledged, and, as the Cuban people displayed no disposition to enter the Union, there was nothing left but to fulfill our pledge. But the Cubans were not prepared for immediate self-government; they must first be taught some important lessons under the tutelage of the great benefactor that had rescued them from the grinding heel of Spain. Accordingly our War Department took temporary possession of the island. General John R. Brooke became the first American governor, and he was followed, in December, 1899, by General Leonard Wood.

United States to Porto Rico were illegal and must be refunded. The court decided also that Porto Rico is not an integral part, but a possession, of the United States, and that the treaty-making power, while it may acquire new territory, cannot incorporate it into the United States. This may be done only by act of Congress.

A number of commissions, composed of Americans and leading Cubans, were appointed to raise the legal and judicial systems to a higher standard, to organize city governments, to reform the methods of taxation, and to investigate the prisons. The educational system of the island and the sanitary condition of Havana and other cities were improved in a remarkable degree, and, on the whole, the transformation of the island in two or three years was little short of marvelous.

Meanwhile a constitutional convention met at Havana on November 5, 1900, and after three and a half months it brought forth (February 21, 1901) a constitution modeled closely after our Federal Constitution. But a certain distrust of the United States was exhibited in the convention and in various ways throughout the island. This feeling was increased by certain demands made upon Cuba by the American Congress in the form of the "Platt Amendment," an amendment to the army appropriation bill offered by Senator Platt of Connecticut. These demands were as follows: That no foreign power acquire or control any territory in Cuba; that naval stations be granted the United States; that no debt be incurred that could not be met by the revenues of the island; that the United States be authorized to maintain the independence of the island by force if necessary, and that the Isle of Pines, a small, fertile island south of western Cuba, be ceded to the United States. **The Platt Amendment.**

These requirements were moderate indeed in the light of the great sum of money spent and the many American lives sacrificed in the rescue of Cuba. The Cuban convention demurred at the Platt Amendment, but after a long debate embodied it in the Constitution, June 12, 1901. The United States, however, decided later that the Isle of Pines be retained by Cuba.¹

In December, 1901, the people of Cuba held their first general election, and Estrada Palma was elected the first president of the new republic that was soon to come into existence. On May 20, 1902, the Cuban republic became a reality, General Wood was replaced by President Palma, and the occupation of the island by the United States came to an end. Cuba, however, is not an absolutely independent nation. The conditions of the Platt Amendment reserve to the United States certain protective powers by means of which the Cubans, while enjoying all the benefits of self-government, are

¹ Or rather, a treaty with that end in view is now pending.

restrained from certain excesses, among which are rebellions and revolutions, so common to the Latin-American countries.

Our dealing with Cuba on the whole has been remarkable for its generosity. At the close of the war with Spain Cuba was utterly powerless in our hands. Our expense in delivering the island from Spain was enormous, and had we chosen to evade the terms of our congressional resolution and to make Cuba our prize of war, no hand could have prevented our doing so. But instead of this we have incurred great additional expense in placing the Cubans on their feet,—in cleansing their cities, in organizing their school system, in renovating their judicial and administrative systems, in voting \$3,000,000 to pay the Cuban soldiers,—and after all this we have handed the island over to its inhabitants, with scarcely a word of gratitude for our services. The student of history must search long to find a parallel case,—such extraordinary treatment of a weak and helpless people by a great and powerful nation; and we venture to hope that the time will come when the people of Cuba will place the true value upon the services of their great benefactor.

During the years following the war with Spain a large part of the energy of the administration, as also of public attention, was directed, as we have noticed, to our new possessions in the Orient, to Cuba and Porto Rico. But there were also other public affairs of importance. President McKinley, in his annual message of December, 1898, recommended that the regular army be increased to 100,000 men and that fifteen new vessels be built for the navy. Congress soon afterward passed a bill to increase the regular army to 65,000, to which should be added 35,000 volunteers, most of whom were to be sent to the Philippines. It also authorized the building of three new battleships and nine smaller vessels, and it restored the rank of admiral, Rear Admiral Dewey being commissioned to fill it.¹

The Fifty-sixth Congress met on December 4, 1899. The Senate elected as its chairman W. P. Frye of Maine, Vice President Hobart having died on November 11, while D. B. Henderson of Iowa was elected Speaker of the House. Brigham H. Roberts of Utah was excluded from the House by a vote of 302 to 31, because he was an avowed polygamist.

¹ Hitherto but two persons, Farragut and Porter, had held this rank in the United States navy. On the death of Porter in 1891 the grade of admiral was allowed to lapse.

During the summer and autumn of 1900 public attention was absorbed, not only by a presidential campaign and the affairs of the various islands, as noticed, but by an uprising in China. An anti-foreigner society, known as the Boxers, began a crusade against foreigners in China. The foreign diplomatic corps at Peking, including the American minister, Mr. E. H. Conger, demanded that the Boxers be suppressed, but they received no satisfactory answer. They then called on their respective countries for military aid, and the United States, with most of the European countries and Japan, responded. Marines were landed at Taku,

**Uprising in
China.**

whereupon the rioters became more active than before. They killed the German minister, and for five weeks held the foreign legations in Peking isolated from the rest of the world. The allies seized the forts at Taku, upon which the Chinese government ordered retaliation. A fierce battle occurred on July 14 at Tientsin; the city was captured by the allies, to whom Peking also surrendered in August, and the foreign ministers were rescued. At length the trouble was settled through an arrangement by which the Chinese government agreed to pay a large indemnity to the powers and to punish the leaders of the uprising.

Another matter of great interest to Americans, and to the people of other countries as well, was the establishing of the international tribunal at The Hague. Suggested by the Czar of Russia, it soon found favor with most civilized nations. The first conference was held in May, 1899. This tri-

**The Hague
tribunal.**

bunal is an international arbitration court, to which certain kinds of matters in dispute between civilized nations are to be brought for settlement without war. If it proves to be permanent and successful, as now seems probable, it must be pronounced one of the most important steps ever taken in the advance of modern civilization.

Congress, during the winter following the presidential election, increased the House membership to 386, in accordance with the new census,¹ reorganized the army, and, in deference to the temperance sentiment of the country, abolished the canteen. It also reduced war revenues by \$40,000,000 a year, by lowering the stamp duties affecting the sale of beer and cigars, and removing those affecting various legal documents. The session ended with the 4th of March, the day that witnessed the second inauguration of McKinley.²

Every index seemed to point to a prosperous administration. But a few months later the country was called, for the third time, to mourn the death of the chief magistrate at the hand of an assassin. On the 6th of September, while holding a public reception at the Pan-American Exposition at Buffalo, the President was shot twice by an anarchist named Czolgosz, who had concealed a revolver under a handkerchief, which appeared to cover an injured hand. One shot penetrated the stomach, but it was believed for some days that the President would recover. At length, however, he began to sink, and on the 14th he died.

No President since Andrew Jackson had, after a four years' service, been so popular with all classes as was McKinley. It is hardly probable that history will pronounce him a statesman of the first rank. His great popularity doubtless rested on a twofold basis: first, he possessed surpassing ability as a politician and party manager, and he had the skill to conceal this fact from the public; second, he was personally a man of sincere, pure life, of a great, generous heart, and of upright motives. It may be added

¹ The population by the census of 1900 was, including Hawaii and Alaska, 76,303,387. Of these the native born numbered 65,843,302; the foreign born, 10,460,085. The white population numbered 66,990,788; negro, 8,840,789; Chinese, 119,050; Japanese, 86,000; Indian, 266,760. See Census Report, Vol. I, Part I, pp. 482, 483.

² The old Cabinet was retained. The members were John Hay, secretary of state; Lyman J. Gage, secretary of the treasury; Elihu Root, secretary of war; John D. Long, secretary of the navy; Ethan A. Hitchcock, secretary of the interior; James Wilson, secretary of agriculture; John W. Griggs, attorney-general; and Charles Emory Smith, postmaster-general. Mr. Griggs soon resigned and was succeeded by P. C. Knox.

further that his tact in winning friends, and his power to grapple them to his soul with hooks of steel, would be difficult to parallel.

On the day of McKinley's death Theodore Roosevelt, who had been elected Vice President, took the oath of office at Buffalo as President of the United States. Mr. Roosevelt had attracted public attention as a fearless public official in his native state of New York and in Washington, and as a dashing soldier in Cuba. He now declared his intention to carry out the policy of the late President on the great questions of the day, and he requested the members of the Cabinet to retain their respective places. They all agreed to do so; but various changes were made within the following two or three years.

The summer of 1902 will be long remembered on account of the great miners' strike in the anthracite regions of Pennsylvania.

The strike, which involved 147,000 workmen, was made to secure an advance in wages, a reduction of the hours of labor, and the recognition of the Miners' Union.

**Anthracite
coal strike.**

The mines of the entire anthracite region were practically closed for more than five months, and the coal famine brought distress to every class of society. Manufactories were closed, prices rose, and yet as the summer passed no sign of a settlement seemed in sight. At length President Roosevelt interposed, and appealed to both parties to submit their differences to arbitration. To this they agreed, and a commission of seven men was appointed by the President to adjust the differences after making a thorough investigation. Pending the investigation the strike was declared off, and the miners returned to work on the 24th of October.

Few events of national interest occurred in 1903, aside from those pertaining to the proposed isthmian canal. On the 14th of February a bill became a law creating a ninth Cabinet position, the Department of Commerce and Labor, and George B. Cortelyou became the first to fill the new office. A treaty of reciprocity with Cuba was before the United States Senate in March; and a coterie of senators interested in the manufacture of sugar, fearing that the importation of Cuban sugar would cheapen sugar in this country, opposed the treaty. But the American public, out of a kindly feeling toward Cuba, whose trade was in a deplorable condition, were clamorous for the ratification of the treaty. The Senate therefore made a pretense of complying with the public demand. It ratified (March 19), but did so on such conditions that the treaty would be inoperative until an act to put it into operation should be passed, which, it was well known,

could not be done at that session. Thus the matter was left over, and the President in consequence called Congress to meet in extra session on November 9 to complete the ratification of the treaty. This was done, but not until after the opening of the regular session in December. The buildings of the World's Fair, to be held at St. Louis in 1904, were dedicated on April 30, the hundredth anniversary of the signing of the treaty of sale in Paris. The Alaskan boundary commission, sitting in London, decided (October 17) the dispute between the United States and Canada concerning the western boundary of British Columbia, in favor of the United States, except two small islands in the Portland Channel, which went to Canada.

THE ISTHMIAN CANAL

One of the great public questions of recent years is that concerning the construction of a ship canal across the isthmus at some point between North and South America. For more than fifty years this subject has engaged the attention of the United States and, to some extent, of all civilized nations. The Clayton-Bulwer Treaty was framed with reference to this great project.¹ But in the early fifties the slavery question came to absorb public attention in the United States, and this, followed by the Civil War and reconstruction, caused the canal project to lie dormant for many years. In 1870 the United States government again turned its attention to the canal project. Two exploring expeditions, one to Darien and the other to Tehuantepec, were sent out that year; but their reports were not acted on, and the subject was left for ten years longer.

In 1881 Mr. Blaine, while secretary of state under Garfield, had a sharp controversy with Lord Granville concerning the Clayton-Bulwer Treaty. Blaine contended that the interoceanic canal should be under the political control of the United States, that the United States would view with grave concern the interference of any European power, and that the treaty of 1850 should be so modified as to conform with the changed conditions. Secretary of State Frelinghuysen, under President Arthur, went still farther, and claimed that the Clayton-Bulwer Treaty was obsolete and not binding on either power. Great Britain denied this, and refused to yield her rights under the treaty. After this correspondence little was done on the part of the United States for a number of years, and

¹ See *supra*, p. 560.

meantime a French company made strenuous but fruitless efforts to join the two oceans at Panama.

The French company was organized by Ferdinand de Lesseps. Terms were made with the government of Colombia, and the work was begun in 1881. But the company, after expending more than 770,000,000 francs and failing to obtain a loan of 600,000,000 more, went into liquidation in 1889. A new company was formed, however, and in 1894, the Colombia government extended its concessions for ten years longer on the condition that the work be immediately prosecuted. Some 3000 men were then employed to continue the work, mainly in reducing the Culebra hill. But this company which, with its predecessor, had expended a vast sum of money, found the work of constructing the canal too onerous, and suspended operations.

While the French were operating at Panama, the United States had focused its attention on Nicaragua. A private Nicaragua company was organized in 1887. The government seemed inclined to aid this company, and two bills passed the Senate to that end; but at length the attention of Congress was again turned toward government ownership. For some years the subject had been before Congress and various commissions had been appointed. In June, 1897, President McKinley appointed the Walker-Haupt commission, with Admiral John G. Walker at its head, and Professor Lewis M. Haupt as one of its members, to examine the Nicaragua route. While this commission was making a survey in Nicaragua, attention was directed to Panama, by the collapse of the French company, and by an offer of that company to sell its interests to the United States for \$109,000,000. In March, 1899, those favoring the Panama route secured the passage of a bill in Congress appropriating \$1,000,000 for a new survey. Thereupon a new commission was appointed, or rather, the old one was enlarged, to examine every available point, and to determine the most feasible one for a canal. This included Panama. But the commission, in a preliminary report (November 28, 1900), recommended the Nicaragua route; and three days later protocols of agreement with Nicaragua and Costa Rica were signed. The commission reported again (December, 1901) for the Nicaragua route; and a bill, known as the Hepburn bill, passed the House in 1901, and again in January, 1902, authorizing the government to construct the canal by this route. But the Senate failed to act on it.

In reporting as it did, however, the commission made it clear that the Panama route would be preferable, but for the excessive

price at which the French held their interests, the real value of which the commission estimated at \$40,000,000.¹ The French company then, fearing that it might lose all, reduced its price to this figure. Thereupon the commission made a report in favor of the Panama route.

This important turn in the affair led the United States to give serious attention to Panama. The Panama route was, for various reasons, considered preferable. Though over 300 miles farther from the United States, the canal at Panama would be but 49 miles in length, while at Nicaragua it would be 184 miles — more than 100 of which, however, would be through Lake Nicaragua and the channel of the San Juan River. The cost of a canal at Panama was estimated at \$144,000,000 plus the \$40,000,000 to be paid the French company; while the cost of a canal at Nicaragua was estimated at about \$190,000,000, with an additional expense for its operation of more than \$1,000,000 a year in excess of the same at Panama. It was claimed, also, that Nicaragua lies more nearly in the volcanic belt than Panama, and that it would be less desirable on that account.

But the Clayton-Bulwer Treaty stood in the way. With that treaty in force, the United States could not act with a free hand at any point. Accordingly, Secretary of State Hay arranged with Lord Pauncefote (February, 1900) a treaty by which Great Britain renounced all right to joint construction and ownership, and the United States agreed to unite with England in guaranteeing the neutrality of the proposed canal. But the United States Senate, in ratifying the treaty in December of the same year, added to it such amendments as to render it unacceptable to England, and that country rejected it in March, 1901. But Mr. Hay and Lord Pauncefote proceeded to frame a second treaty, which was signed in November, 1901. This proved acceptable to both countries, was duly ratified, and went into operation in February, 1902.

By this Hay-Pauncefote Treaty the Clayton-Bulwer Treaty of 1850 is superseded, and the neutrality of the canal is secured, while the United States becomes the sole builder, owner, and protector. The treaty further provides that the canal shall never be blockaded, and that no act of war shall be committed within it. Though the vessels of a belligerent may use the canal, they shall not take on stores or provisions, except what

¹ Less than \$90,000,000 of the vast sum spent by the French had been actually spent on construction; the remainder went to promoters, politicians, and newspapers.

may be necessary, while passing through it, nor remain more than twenty-four hours within three miles of either terminus.

The report, made by the commission in favor of Panama, was sent to Congress by President Roosevelt on January 20, 1902. At length, late in June, a bill was passed authorizing the President to purchase the French interests for \$40,000,000, and to construct the canal at Panama at a cost not exceeding \$130,000,000 additional; or, in case the French company could not give a clear title, or in case the necessary territory and jurisdiction could not be secured from Colombia, the President was directed to construct the canal at Nicaragua, at a cost not exceeding \$180,000,000.

After a careful examination, Attorney-General Knox reported that the Panama Company could convey a good title, and it was decided to accept its offer, subject to the mutual ratification of a treaty between the United States and Colombia. Secretary Hay and Dr. Herran, the Colombian commissioner, after some months of negotiation, signed the Hay-Herran Treaty on January 28, 1903, and it went before the Senate on the 3d of February. But owing to opposition, led by Senator Morgan of Alabama, who preferred the Nicaragua route, the treaty had not been ratified on the 4th of March, when the Fifty-seventh Congress expired. The President, therefore, called an extra session of the Senate for March 5, and on the 17th the treaty was ratified by a large majority. This treaty proposed to authorize the Panama Company to sell its franchise and all its interests to the United States, and to provide for the lease to the United States by Colombia, for the term of one hundred years, with the privilege of perpetual renewal, of a zone across the isthmus six miles in width. The United States was to pay Colombia the sum of \$10,000,000 on the ratification of the treaty by both countries, and, beginning nine years later, an annual rental of \$250,000. The work was to begin within two years, and the canal was to be opened within fourteen years, unless the work should be delayed by certain specified obstacles. The sovereignty of the canal zone was to remain with Colombia.

The arrangements on the whole were very favorable to Colombia, for the canal would become a wonderful stimulus to Colombian prosperity, and that country could well have afforded to grant the privileges free, rather than miss the opportunity. But a strong opposition to the treaty soon developed in the Colombian Senate, the motive of which, as generally

The Hay-Herran Treaty.

Colombia rejects treaty.

believed, was purely mercenary. On August 17 the treaty was rejected by a unanimous vote of the Colombian Senate sitting at Bogota. The cause of this action was quite plain when, in October, Colombia practically offered to make a new treaty if the ten million bonus be raised to twenty-five millions. It was also discovered that the Bogota politicians were planning to extort a portion of the forty millions from the French company; or to take over the entire French works on the expiration of the ten years' grant, made in 1894.

But scarcely had the Colombian Congress adjourned when the people of Panama, who greatly favored the canal project and who had been restive under Colombian rule for many years, **Revolt of Panama, November 3, 1903.** rose against their government and set up a provisional government, proclaiming Panama an independent republic. The United States had expected the movement; and but three days after the revolt our government recognized the new republic. Colombia saw her blunder when too late; her wail of despair was unavailing. She offered to grant all canal concessions free if the United States would permit her to send troops to subjugate Panama; but the United States had taken the infant republic under its protection, and the offer was declined. The administration was severely criticised by many for such precipitate action; but the people generally approved, not only because of an intense desire to secure the canal, but also because of the contempt felt for the trifling, mercenary methods employed by Colombia. Why should this insignificant government, in which half a hundred revolutions had occurred in as many years, now in the hands of a clique of venial politicians, be permitted to hold up for an indefinite time this vast work in the line of progress and modern civilization? The criticisms of the administration were greatly softened by the fact that France, England, and other powers were also prompt in recognizing the new republic of Panama.

The next move in the rapid progress of events was the framing of a treaty with Panama. This was soon done by Secretary Hay and M. Bunau-Varilla, who represented Panama. The treaty was signed on November 18, and was ratified by Panama on December 2. **The Hay-Bunau-Varilla Treaty.** It is very similar to the Hay-Herran Treaty; the same bonus of \$10,000,000 is to be paid to Panama that was offered Colombia, while the French company will receive its \$40,000,000. The independence of Panama is guaranteed by the treaty.

The treaty is in one respect far more satisfactory to the United States than was the Hay-Herran Treaty: it grants to the United States practical sovereignty over the canal belt (ten miles wide instead of six) across the isthmus. This fact is highly important in view of the frequent revolutions in the Latin-American states.

President Roosevelt discussed the subject at length in his annual message in December; and again in a special message on the reassembling of Congress on January 4, 1904 (the Hay-Bunau-Varilla Treaty being then before the Senate), he defended the course of the administration with great force. He declared that the United States had nothing whatever to do with bringing about the revolt in Panama, that it simply recognized the new nation, as it had a right to do, that "he would not for one moment discuss the possibility of the United States committing an act of such baseness as to abandon the new republic," and that the only question now to be considered was whether to build the canal or not to build it. After some weeks' debate the United States Senate ratified the treaty on February 23, 1904, fourteen votes being cast against it.

The Panama Canal when finished will be a work of incalculable benefit to the commercial world. The distance by sea from New York to San Francisco, now 13,714 miles, will be reduced to 5299, a saving of 8415; the gain from Liverpool to San Francisco will be 6046 miles, and from New York to Sydney, Australia, about 4000 miles. Every indication now points to an early beginning of work, and the American people are intensely gratified that the great project of joining the two oceans by a ship canal is to be deferred no longer.

- Warren, G. K., at Five Forks, 770.
- Warren, Joseph, writes Suffolk resolutions, 236; collects military stores, 237; killed at Bunker Hill, 247.
- Wars: Indian, 68, 71, 86, 91, 114, 121, 135, 137, 411, 439, 453, 497, 828; *see* Indian wars; colonial, 160 *sq.*; King William's, 162; Queen Anne's, 165 *sq.*; King George's, 168; French and Indian, 171 *sq.*; the Revolution, 220 *sq.*; War of 1812, 408 *sq.*; in the Mediterranean, 382, 448; Black Hawk and Seminole, 497; Mexican, 527 *sq.*; Civil War, 624 *sq.*; Spanish, 889 *sq.*
- Washburn, Ellhu B., 659; in Grant's Cabinet, 816.
- Washington, city of, first laid out, 375; captured and burned by the British, 435; threatened by Confederates, 653, 696, 756.
- Washington, Fort, 258; captured by British, 259.
- Washington, George, ancestry of, 70; notice of, makes journey to French fort, 173; at Great Meadows, 174; on Braddock's staff, 179; 188;

- 195; leads Virginians to resistance, 230; in first Continental Congress, 235; chosen commander of the army, 243, 244; assumes command at Cambridge, 247; occupies Dorchester, 249; at New York and Long Island, 256, 257; leaves New York for White Plains, 258; retreats across New Jersey, 260 *sq.*; crosses the Delaware, 263; escapes Cornwallis at Trenton, 264; heroism of, at Princeton, 265; at Morristown, 265; breaks camp, confronts Howe at Brandywine, 280, 281; at Germantown, 282; at Valley Forge, 283 *sq.*; at Monmouth, 286; rebukes Lee, 287; discovers Arnold's treason, 301; writes to Gates, 305; takes his army South, 310; proclaims end of the war, 312; estimate of, as a soldier, 316; farewell of, to the army, 317; becomes peacemaker between the states, 321; writes to state governors, 323; chosen to Constitutional Convention, 325; requested to become king, 325 note; becomes president of the Cincinnati, 326; in Constitutional Convention, 327; made chairman, 328; elected first President, 338; inaugurated at New York, 339, 341; proclamation of, 347; second election of, 351; attitude of, toward Genét, proclamation of neutrality of, 353; sends Jay to England, 356; sends treaty to Senate, 357; retirement of, 361; character of, 361, 362; appointed commander against France, 366; death of, 374; characteristics of, 375.
- Washington, state of, admitted to the Union, 870.
- Washington, Treaty of, 819.
- Washington, William, cavalry leader, 309, 310.
- Wasp*, the, defeats the *Frolic*, 422.
- Waterloo, battle of, 616.
- Watertown, protest of people of, against taxation without representation, 107.
- Watson, Thomas E., nominated for Vice President, 888.
- Wayne, General Anthony, 282; at Monmouth, 286; captures Stony Point, 297; 316; defeats the Indians in Ohio, 890.
- Weaver, James B., nominated for President, 852, 874; carries western states, 875.
- Webb, General, refused aid to Fort William Henry, 185.
- Webster, Daniel, 813; quoted, 844; opposes tariff, 465; great speech of, in answer to Hayne, 489; candidate for presidency, 502; becomes secretary of state, 513; arranges treaty with Ashburton, 516; resigns, 517; opposed to nomination of Taylor, makes 7th of March speech, 543; decline in popularity of, 544, 565; in Fillmore's Cabinet, 546; 565; compared with Clay, 567; talents and character of, 567-569; death of, 569.
- Webster, Noah, 476 and note 2.
- Webster-Ashburton Treaty, 516.
- Weed, Thurlow, 493, 537; predicts Lincoln's defeat in 1864, 763.
- Weehawken, dueling ground, 390, 391.
- Welles, Gideon, in Lincoln's Cabinet, 641.
- Wesley, Charles, secretary of Oglethorpe in Georgia, 95.
- Wesley, John, visits Georgia, opposes slavery, 95, 457.
- West, Benjamin, artist, 378.
- West, John, governor of South Carolina, 89.
- West India Company, Dutch, chartered, 132; its powers, 133.
- West Point, fortified, 259; attempted betrayal of, 299 *sq.*
- West Virginia, becomes a state, 654.
- Wetherford, Indian chief, at Fort Mims, 439; surrenders to Jackson, 449.
- Weyler, General, Spanish commandant in Cuba, 890.
- Whalley, the regicide, 123 note.
- Wheeler, Joseph, in command in Cuba, 898.
- Wheeler, William A., nominated for Vice President, 836.
- Whig party, the, founded, 502; denounces President Tyler, 515; fall and character of, 569, 570.
- Whiskey insurrection, 347.
- Whiskey ring, 827.
- White, Hugh L., candidate for the presidency, 502.
- White, John, leads Raleigh's second colony, 59.
- Whitefield, George, founds a school in Georgia, 95; aids in New England revival, 129.
- White Plains, battle of, 258.
- Whitman, Marcus, missionary in Oregon, 525.
- Whitney, Eli, invents cotton gin, 378; 458.
- Whitney, W. C., in Cleveland's Cabinet, 862.
- Whittier, 476; defends Abolitionists, 510; writes "Ichabod," against Webster, 544; 619.
- Wicaco, Swedish church, 155.
- Wickes, Lambert, takes prizes on the sea, 295.
- Wilderness, battle of the, 753.
- Wilkes, Charles, captures Mason and Slidell, discoverer of Wilkes's Land, 665.
- Wilkesbarre, site of Wyoming massacre, 293.
- Wilkinson, James, discloses Conway Cabal, 284; in Burr's conspiracy, 392, 393; commands in War of 1812, 416; defeated at Chrystler's Field, 427; dismissed from the service, 431.
- William and Mary, sovereigns of England, at war with France, 162.
- William and Mary College, founded by Dr. Blair, 74.
- William Henry, Fort, captured by Montcalm, 185.
- Williamsburg, Virginia, 173; arrival at, of General Braddock, 178; battle of, 694.
- Williams, Rev., captured by Indians, 165 note.
- Williams, Roger, arrives in Massachusetts, banished from the colony, 108; remarks on, 109;

- finds Providence, 115; obtains two charters for Rhode Island, 116; 129.
 Wilmington, Delaware, founded by Swedes, 150.
 Wilmington, North Carolina, captured, 768.
 Wilnot, David, 534; in Peace Congress, 635; 659.
 Wilnot Proviso, 534.
 Wilson, Henry, in the Senate, 659, 795, 816; nominated for Vice President, 825 and note 3.
 Wilson, James, in Constitutional Convention, 828.
 Wilson, William L., framer of Wilson Tariff, 880.
 Wilson's Creek, battle of, 658, 659.
 Wilson Tariff, 881.
 Winchester, General James, 416.
 Winchester, Virginia, armies at, 655, 656; battle of, 757.
 Wingfield, first president at Jamestown, 62.
 Winslow, Edward, a *Mayflower* Pilgrim, 99; makes treaty with Massasoit, 101; sent to England in Puritan cause, 108; aids in forming confederation, 120.
 Winslow, John, in expedition to Acadia, 181.
 Winslow, John A., commander of the *Kearsarge*, 777.
 Winthrop, John, leads colony to Massachusetts, 105; founds Boston, 106; aids in confederation, 120.
 Winthrop, John, the younger, founds Saybrook, 113; secures charter for Connecticut, 115; governor for many years, 115.
 Wirt, William, at Burr's trial, 393; in Monroe's Cabinet, 453; candidate for the presidency, 492.
 Wise, Henry A., governor of Virginia, 606; surrenders Roanoke Island, 671; at Malvern Hill, 700.
 Witchcraft delusion, in Massachusetts, 110.
 Wolfe, General James, aids in capturing Louisburg, 186; invests Quebec with British army, 190; scales Plains of Abraham, 191; captures Quebec, dies, 192.
 Woman suffrage, 870 and note.
 Wood, Leonard, leader of Rough Riders in Cuba, 893; governor of Cuba, 900.
 Wool, John E., at Queenstown, 418.
 Worden, John L., in command of the *Monitor*, 674, 675.
 World's Fair, at Chicago, 851 *sq.*
 Worth, William J., in Mexican War, 532.
 Wright, Luke E., governor of the Philippines, 899.
 Writs of assistance, 222; resisted by the people, 223.
 Wyoming, becomes a state, 869.
 Wyoming massacre, 298.
 Wyoming Valley, location of, 298.
 X. Y. Z. correspondence, 364, 365.
 Yale College, founding of, 207 note.
 Yamasse Indians, attack South Carolina colonists, 90.
 Yazoo frauds, 407.
 Yazoo River, Sherman on, 735.
 Yeamans, Sir John, plants colony on Cape Fear River, 83; introduces slavery in South Carolina, 88; governor of South Carolina, 89.
 Yeardley, Sir George, introduces popular government in Virginia, 67; death of, 69.
 York, Duke of, *see* James II.
 Yorktown, surrender of British army at, 311; reception of the news in America, England, and France, 312; McClellan besieges, 694; centennial of Cornwallis's surrender at, 854.
 Young, General, in war with Spain, 893.
 Young's Prairie, negro colony at, 551.
 Zenger, Peter, wins victory for liberty of the press in New York, 145.

BIBLIOGRAPHY

FOLLOWING is a list of such books on American history as may be most useful to the general reader, and most probably within his reach. The special student is directed to the fuller bibliography as found in the various volumes of Winsor's *Narrative and Critical History*, in the *Cambridge Modern History*, Vol. VII, or in Channing and Hart's *Guide to American History*. The foot-note references in this volume also will cite the reader to many works not mentioned in this department. For a critical and usually fair estimate of books on American history the reader is directed to Larned's *Literature of American History*.

GENERAL HISTORIES

On the Entire Field:

Cambridge Modern History, Vol. VII; Woodrow Wilson, *History of the American People*, 5 vols.; Bryant and Gay, *Popular History of the United States*, 5 vols.; John Clark Ridpath, *Popular History of the United States*; E. Benjamin Andrews, *History of the United States*, 2 vols.; Higginson, *Larger History of the United States*; Alexander Johnston, *The United States; Its History and Constitution*; Goldwin Smith, *The United States*; Francis Newton Thorpe, *A History of the American People*; Albert Bushnell Hart, *History Told by Contemporaries*, 4 vols.; and the better class of school histories, which furnish excellent outlines.

Histories of Limited Periods:

George Bancroft, *History of the United States, 1492-1789*, 6 vols. (last revision); Richard Hildreth, *History of the United States, 1492-1821*, 6 vols.; Francis Parkman, *France and England in North America*, 9 vols., under various titles; John Bach McMaster, *History of the People of the United States, 1784-1829*, 5 vols. (to be completed to the Civil War); James Schouler, *History of the United States, 1789-1865*, 6 vols.; Henry Adams, *History of the United States, 1800-1817*, 9 vols.; James Ford Rhodes, *History of the United States from the Compromise of 1850*, 4 vols.; Justin Winsor, *Narrative and Critical History, 1000-1840*, 8 vols.; John Andrew Doyle, *The English in America, 1492-1700*, 3 vols.; Ed. Channing, *The United States of America, 1765-1865*; Herman von Holst, *The Constitutional History of the United States, 1783-1861*, 8 vols.; George Tucker, *The History of the United States, 1492-1840*, 4 vols.

WORKS ON SPECIAL TOPICS, OR PERIODS

The Aborigines:

Daniel G. Brinton, *Myths of the New World*, and other volumes; Hubert H. Bancroft, *Native Races of the Pacific States*, 5 vols.; Helen Hunt Jackson, *A*

Century of Dishonor; George R. Ellis, *The Red Man and White Man*; George B. Grinnell, *Story of the Indian*, and other volumes; Richard I. Dodge, *Our Wild Indians*.

Discovery and Exploration :

John Fiske, *Discovery of America*, 2 vols. ; Edward J. Payne, *History of America*, 2 vols. ; Henry Harrisse, *Christopher Columbus*; Washington Irving, *Life and Voyages of Columbus*, 4 vols. ; Charles K. Adams, *Christopher Columbus*; Henry Vignaud, *Toscanelli and Columbus*; Charles R. Beazley, *John and Sebastian Cabot*; Theodore Irving, *The Conquest of Florida*; Grace King, *De Soto and his Men*; J. G. Shea, *Exploration of the Mississippi Valley*; T. W. Higginson, *American Explorers*; E. J. Payne, *Voyages of Elizabethan Seamen*; and the general works mentioned above, especially the first volumes of Bancroft, Hildreth, Winsor, and Doyle.

The Colonial Period :

Henry Cabot Lodge, *The English Colonies in America*; Reuben Gold Thwaites, *The Colonies*; Richard Hakluyt, *Discourse on Western Planting*; John Fiske, *Old Virginia and Her Neighbors*, 2 vols., *Beginnings of New England*, *The Dutch and Quaker Colonies*, 2 vols., and *New France and New England*; Edward Eggleston, *The Beginnings of a Nation*; William Bradford, *History of Plymouth Plantation*; John G. Palfrey, *Compendious History of New England*, 4 vols. ; Charles F. Adams, *Three Episodes in Massachusetts History*; E. B. Greene, *The Provincial Governor*; Hugh E. Egerton, *Short History of British Colonial Policy*; William MacDonald, *Select Charters*; Rossiter Johnson, *History of the French War*; William M. Sloan, *The French War and the Revolution*; Frank R. Stockton, *Buccaneers and Pirates*; Mrs. Alice Morse Earle, *Home Life in Colonial Days*, *Curious Punishments of Bygone Days*, and other volumes; George Park Fisher, *The Colonial Era*; Sidney George Fisher, *Men, Women, and Manners in Colonial Times*.

Biographies.—Of *Cotton Mather* by Barrett Wendell; of *General Oglethorpe* by Henry Bruce; of *James Otis* by Francis Bowen; of *William Penn* by Samuel M. Janney; of *William Pitt* by Lord Rosebery; of *Peter Stuyvesant* by Bayard Tuckerman; of *Roger Williams* by Oscar S. Straus; of *John Winthrop* by Joseph H. Twichell; of *Thomas Hooker* by George L. Walker.

The Revolution :

John Fiske, *The American Revolution*, 2 vols. ; Sir George Otto Trevelyan, *The American Revolution*, 3 vols.; H. C. Lodge, *Story of the Revolution*, 2 vols.; Benson J. Lossing, *Pictorial Field Book of the Revolution*; C. H. Van Tyne, *Loyalists in the Revolution*; Moses Coit Tyler, *Literary History of the Revolution*, 2 vols.; Francis Wharton, *Revolutionary Diplomatic Correspondence*, 6 vols.; Richard Frothingham, *Rise of the Republic*; Charlemagne Tower, *Lafayette in the American Revolution*; Sidney G. Fisher, *True History of the Revolution*. Autobiography of Franklin.

Biographies.—Of *Franklin* by Paul L. Ford, by John B. McMaster, by

John T. Morse ; of *Washington* by Paul L. Ford, by Washington Irving, 4 vols.; by Woodrow Wilson, and by H. C. Lodge, 2 vols. ; of *Jefferson* by James Schouler, by J. T. Morse, by James Parton, by H. S. Randall, and by George Tucker ; of *James Otis* by William Tudor ; of *Paul Revere* by Elbridge H. Goss, 2 vols. ; of *Joseph Warren* by Richard Frothingham ; of *Patrick Henry* by Moses Coit Tyler ; of *Benedict Arnold* by Jared Sparks, 3 vols. ; of *John André* by Winthrop Sargent ; of *Robert Morris* by W. G. Sumner, by E. P. Oberholtzer ; of *Samuel Adams* by J. K. Hosmer ; of *Ethan Allen* by Henry Hall ; of *John Jay* by George Pellew.

The Formation of the Union :

John Fiske, *The Critical Period* ; Francis A. Walker, *Making of the Nation* ; Albert B. Hart, *Formation of the Union* ; Alexander Hamilton and others, *The Federalist* ; George T. Curtis, *Constitutional History of the United States*, 2 vols. ; Francis N. Thorpe, *Constitutional History*, 3 vols. ; the last volume of George Bancroft's History, the fourth of Hildreth, and the first volumes of McMaster, Schouler, and Von Holst.

The National Period, to the Civil War :

The fifth and sixth volumes of Hildreth, the histories of Schouler, McMaster, and Von Holst, the nine volumes of Henry Adams, Vols. III and IV of Woodrow Wilson's history, Vols. III and IV of Bryant and Gay's history, and Vols. VII and VIII of Winsor's history ; J. P. Gordy, *A Political History of the United States*, 2 vols. ; John W. Burgess, *The Middle Period* ; Walter F. McCaleb, *The Aaron Burr Conspiracy* ; Thomas H. Benton, *Thirty Years' View*, 2 vols ; Benson J. Lossing, *Pictorial Field Book of the War of 1812* ; Theodore Roosevelt, *The Naval War of 1812* ; Rossiter Johnson, *The War of 1812* ; Nathan Sargent, *Public Men and Events*, 2 vols. ; Benjamin F. Perry, *Reminiscences of Public Men* ; Henry A. Wise, *Seven Decades of the Union* ; Josiah Quincy, *Figures of the Past* ; Theodore Roosevelt, *Winning of the West*, 4 vols. ; Edwin Earl Sparks, *Expansion of the American People* ; Wilber H. Siebert, *The Underground Railroad* ; Henry Wilson, *Rise and Fall of the Slave Power*, 3 vols. ; H. R. Helper, *The Impending Crisis* ; Harriet Martineau, *Society in America* ; Alexis de Tocqueville, *Democracy in America* ; R. M. Ormsby, *History of the Whig Party* ; Edward Standwood, *History of the Presidency* ; John Quincy Adams, *Memoirs* ; Ben Perley Poore, *Reminiscences* ; Alexander Johnston, *History of American Politics* ; Vols. I and II of Rhodes' history ; Vol. I of Greeley's *American Conflict*, and Vol. I of William H. Smith's *A Political History of Slavery*.

Biographies. — Of *Gouverneur Morris* by Theodore Roosevelt ; of *Hamilton* by H. C. Lodge, by J. T. Morse, 2 vols. ; of *Albert Gallatin* by John A. Stevens, by Henry Adams ; of *Burr* by James Parton ; of *Madison* by Sidney H. Gay ; of *J. Q. Adams* by J. T. Morse ; of *Rufus King* by Charles R. King ; of *John Marshall* by A. B. Magruder ; of *John Randolph* by Henry Adams ; of *Tecumseh* by Benjamin Drake ; of *John Brown and Calhoun* by Von Holst ; of *James Buchanan* by George T. Curtis, 2 vols. ; of *Webster* by George T. Curtis, 2 vols., by J. B. McMaster ; of *Henry Clay* by Carl Schurz, 2 vols. ; of *Andrew Jackson* by W. G. Sumner, by W. G. Brown ; of *Van Buren*, by Edward

M. Shepard, by George Bancroft ; of *Lewis Cass* by A. C. McLaughlin ; of *Winfield Scott* by Marcus J. Wright.

The Civil War and After :

J. S. Pike, *First Blows of the Civil War* ; Horace Greeley, *The American Conflict*, Vol. II ; Theodore A. Dodge, *Bird's Eye View of Our Civil War* ; Rossiter Johnson, *Short History of the War of Secession* ; John C. Ropes, *Story of the Civil War*, 3 vols. ; John W. Burgess, *The Civil War and the Constitution*, 2 vols. ; Edward McPherson, *Political History of the Rebellion* ; Comte de Paris, *Military History of the Civil War*, 4 vols. ; John W. Draper, *History of the American Civil War*, 3 vols. ; Alexander H. Stephens, *War Between the States*, 2 vols. ; Jefferson Davis, *The Rise and Fall of the Confederate Government*, 2 vols. ; The Century Company, *Battles and Leaders*, 4 vols. ; William H. Seward, *Diplomatic History of the War for the Union* ; J. C. Schwab, *Confederate States of America* ; F. L. Olmsted, *The Cotton Kingdom* ; William G. Brown, *The Lower South in American History* ; the third and fourth volumes of Rhodes, and the final volumes of Schouler and of Bryant and Gay ; David D. Porter, *Naval History of the Civil War* ; Personal *Memoirs* of U. S. Grant, of W. T. Sherman, and of P. H. Sheridan ; Joseph E. Johnston, *Narrative of Military Operations* ; Raphael Semmes, *Service Afloat* ; George B. McClellan, *McClellan's Own Story* ; Nicolay and Hay, *Abraham Lincoln : A History*, 10 vols.

John W. Burgess, *Reconstruction and the Constitution* ; E. Benjamin Andrews, *The United States in Our Own Times* ; James G. Blaine, *Twenty Years of Congress*, 2 vols. ; Hugh McCullough, *Men and Measures of Half a Century* ; John D. Long, *The American Navy*, 2 vols. ; H. A. Herbert, *Why the Solid South* ; Henry W. Grady, *The New South*.

Biographies.—Of *Abraham Lincoln* by J. T. Morse, by Carl Schurz, by Ida M. Tarbell ; of *Charles Sumner* by Moorfield Storey ; of *George H. Thomas* by T. B. Van Horne ; of *Samuel J. Tilden* by John Bigelow, 2 vols. ; of *Robert Toombs* by P. A. Stovall ; of *Thaddeus Stevens* by E. B. Callender ; of *A. H. Stephens* by R. M. Johnson and J. S. Black ; of *Robert E. Lee* by J. E. Cooke ; of *Thomas J. Jackson*, by R. L. Dabney ; of *U. S. Grant* by Adam Badeau, by C. C. Chesney ; of *Salmon P. Chase* by J. W. Schuckers, by A. B. Hart.

Miscellaneous :

J. F. Jameson, *Dictionary of U. S. History* ; Alexander Johnston's articles on American history in *Lalor's Cyclopaedia*, 3 vols. ; portions of Larned's *History for Ready Reference*, 6 vols. ; portions of Lecky's *History of England*, McCarthy's *History of Our Own Times*, and of other English histories ; James Bryce, *The American Commonwealth*, 2 vols. (also an abridged one-volume edition) ; F. W. Taussig, *Tariff History of the United States* ; A. S. Bolles, *Financial History of the United States* ; John W. Foster, *A Century of American Diplomacy* ; State histories, especially of the American Commonwealth Series ; local histories as issued by the various historical societies ; historical fiction, such as Mitchell's *Hugh Wynne*, Atherton's *The Conqueror*, Churchill's *The Crisis*, and many others.

SUGGESTIONS TO THE READER

AMONG the general histories Bancroft's held first place for many years, but it is now largely superseded by others. His account of the Revolution and of the formation of the government, however, still rank among the best. Hildreth is painstaking and accurate, but his style is not attractive, and his partisan bias is too much in evidence.

Of the complete histories of the country, from the Discovery to the present time, we have but two extensive ones of importance — those of Bryant and Gay, and of Woodrow Wilson, each five volumes. The former, written by Gay and not Bryant, is clear and interesting in style; but the perspective is bad. It gives altogether too much space to the colonial period as compared with the national. Wilson's history is written in excellent style. Its chief defect lies in the assumption that the reader knows the facts, or does not wish to know them. It is a series of consecutive discourses on public questions, rather than a history, and may be very useful to a reader who is already fairly familiar with the facts. An important one-volume history of the United States is the *Cambridge Modern History*, Vol. VII. This book is the work of many writers instead of one; and, though most of them are specialists, a continuous narrative, showing the gradual development of the nation, is wanting. The proportion is also defective; for example, fifty-seven pages are devoted to the framing of the Constitution, while the sixty years following its adoption are crowded into but ninety pages.

The history of our national period before the Civil War has been written by three historians — Von Holst, McMaster, and Schouler. Von Holst's work (written in German, translated by J. J. Lalor) is a learned discussion of political events and parties. The originality of the author is striking, but the style is often heavy. The writer is not free from political bias, nor is he in full sympathy with American institutions. McMaster's work is written in a vivacious, attractive style. As a vivid presentation of the social and industrial life of the

people, and as a storehouse of facts, gathered from original sources, the work of McMaster has no equal. Its great defect lies in the fact that it is disconnected, and that the writer does not fully discuss public questions; does not sufficiently show the influence upon our national development of great movements and great characters. In this respect McMaster occupies a ground quite opposite that occupied by Von Holst and Woodrow Wilson. A medium ground is taken by Schouler, whose work bristles with facts, and who, at the same time, gives admirable characterization of great men, and intelligently discusses important movements. But Schouler's style is often wanting in dignity and clearness. Two admirable accounts of the development of the United States are those of Goldwin Smith and Edward Channing. These are each given in a single small volume, and each may be characterized as a bird's eye view, rather than a history.

A reader may acquire a good knowledge of American history by reading the histories of limited periods, only a few of which can here be mentioned. The best account of the discovery of America for the general reader will be found in the two volumes of John Fiske; while the best short biography of Columbus is that of C. K. Adams, which is based largely on the more learned work of Harrisse. Payne's *History of America* is in part a scholarly study of the aborigines. Grace King's *De Soto and His Men* is brightly written and fairly accurate.

The best short history of the colonial period as a whole is that of R. G. Thwaites. Lodge's *English Colonies* is much fuller and gives an excellent account of the life of the people; but the most attractive writer on the colonial period, except Parkman, is John Fiske, who has given us six volumes on this period, covering almost the entire subject. The history of A. J. Doyle, an Englishman, is full and broad in spirit. For a series of pictures of colonial life, habits, manners, dress, and furniture the delightful volumes of Mrs. Earle have no equal.

The history of the French-English struggle for North America has been admirably presented by Francis Parkman, who practically exhausts the subject. For accuracy and for beauty of style Parkman has no superior as a historian. The history of the Revolution is best presented by Fiske in two volumes and by Trevelyan in three volumes, with others to follow. The latter, an Englishman, writes from the Whig view point, and deals with the Americans in the

utmost fairness. For the short period of disorder, between the close of the Revolution and the framing of the Constitution, *The Critical Period* by Fiske is by far the best we have. On the formation of the national government Hart's *Formation of the Union* is the best short account; while the fuller accounts by Bancroft, by Curtis in his *History of the Constitution*, and by Thorpe in his *Constitutional History*, are of great value.

On the period following the adoption of the Constitution the reader will find, in addition to the works of McMaster, Schouler, and Von Holst, already mentioned, other works of great importance. Henry Adams's *History*, covering the first sixteen years of the century in nine volumes, is accurate, exhaustive, and most delightfully written. It is to be regretted that this writer has chosen to discontinue his great work at this stage. The slavery agitation before the Civil War is best treated in the first volumes of Greeley's *American Conflict*, of Wilson's *Rise and Fall of the Slave Power*, and of A. H. Stephens's *War between the States*; while most interesting side lights will be found in Sargent's *Public Men and Events*, Quincy's *Figures of the Past*, Forney's *Anecdotes of Public Men*, and Wise's *Seven Decades*.

For the account of the great events immediately preceding the war the history of James Ford Rhodes stands above all others. As a historian Rhodes must be classed with Fiske, Parkman, and Henry Adams; his only fault is a slight tendency to prolixity.

The history of the Civil War has been written by various historians. The best short histories are J. C. Ropes's *Story of the Civil War* and T. A. Dodge's *Bird's-Eye View of Our Civil War*. Fuller accounts are given in the histories of the war by Comte de Paris, by John W. Draper, by John W. Burgess, by Greeley in the second volume of *The American Conflict*, by Rhodes in his third and fourth volumes, and by Schouler in his sixth volume. The best military history is found in *Battles and Leaders*, four large volumes written by leading participants of both sides. Two southern views are Jefferson Davis's *Rise and Fall of the Confederate Government*, and A. H. Stephens's *War between the States*. In addition to these the following are recommended: William Garrott Brown's *The Lower South in American History*; W. H. Seward's *Diplomatic History of the Civil War*; T. S. Goodwin's *Natural History of Secession*; W. A. Dunning's *Essays on the Civil War and Reconstruction*; J. C. Schwab's *Confederate States*; the various biographies of this department as

given under Bibliography; S. S. Cox's *Three Decades*; Ben: Perley Poore's *Reminiscences*; Hugh McCullough's *Men and Measures of Half a Century*, and the personal memoirs of U. S. Grant, of W. T. Sherman, and of P. H. Sheridan.

No complete history of Reconstruction and of the period following has been written, the best perhaps being Burgess's *Reconstruction and the Constitution*, the recent volume of E. Benjamin Andrews, and the fifth volume of Bryant and Gay. A fuller history of the times may be gathered from McPherson's *Handbook*, published every second year from 1868 to 1894, except in 1870, from Appleton's *Annual Cyclopaedia*, and from the many able articles on public questions in *The Atlantic Monthly*, *The Forum*, *The North American Review*, *The New Princeton Review* (merged into *The Political Science Quarterly*), and *The Nation*. The history of this period is greatly illuminated by the personal writings of various public men, especially by the *Recollections* of John Sherman, by the two recent volumes of Senator Hoar, and *Twenty Years of Congress* by James G. Blaine. The work of Blaine is not very critical and is marred by too adulatory notices of contemporaries; but the style is excellent. For current history the reader is directed, in addition to the daily papers, to the weekly review of events in *The Outlook* and in *The Nation*, to the monthly review in *The World's Work* and in *The Review of Reviews*, and to *The Political Science Quarterly*.

The special student will delve more deeply than the general reader. He must go to the original sources, such as the Colonial Archives, British State Papers pertaining to the colonies, the Annals of Congress, Elliotts' Debates, Supreme Court decisions, messages and papers of the Presidents and the various Works of the leading statesmen. Every reader, however, should aim to read at least a few of the speeches of the leading statesmen of each period of our development, a good collection of which is Alexander Johnston's *Representative American Orations*, in four volumes.

Finally, if asked by the busy American reader to name one handy reference book, one compendious history of the United States (in addition to the present volume to be sure), and one miscellaneous work, describing the American people, government, and institutions, we would recommend Jameson's *Dictionary of American History*, Cambridge *Modern History*, Vol. VII, and Bryce's *American Commonwealth*.

HISTORY OF THE UNITED STATES

FROM THE COMPROMISE OF 1850

By JAMES FORD RHODES

Four Volumes. Cloth. 8vo. \$10.00

“One of the most important historical efforts of the present generation, and it is gratifying to know from a careful examination that he is thoroughly equipped for his responsible task, and is certain to present to the country and the world a standard history of the most important era of modern civilization.” — *The Times*, Philadelphia, Pa.

“The first volume begins with the passage of the Compromise Measures of 1850, and ends with the repeal of the Missouri Compromise in 1854. The second volume deals with the stirring political events which transpired from the repeal of the Missouri Compromise, through all the Kansas and Nebraska struggles to the organization of the Republican party, and its final national triumph by the election of Mr. Lincoln in 1860.” — *The Times*, Philadelphia, Pa.

Vol. III. covers 1860-'62; Vol. IV., 1862-'64; and the author will complete the work to March 4, 1885, in three or four volumes more.

“It is the one work now within reach of the young American student of to-day in which he may learn the connected story of the great battle that resulted in the overthrow of slavery and the rededication of the republic to unsullied freedom. In no other publication are these facts so concisely, so fully, and so well presented, and the student who makes careful study of this work will fully understand, not only the actual causes which led to the war, but he will know how gradually they were developed from year to year under varying political power, until the nation was ripe for the revolution. . . . Taking the work altogether, we regard it as the most valuable political publication of the age, and the intelligent citizen who does not become its careful student must do himself great injustice.” — *The Times*, Philadelphia, Pa.

“This is the best all-around history of this period which has yet appeared.” — *The Public Ledger*, Philadelphia, Pa.

“The interest of the reader is sure to grow as he turns the pages, and it is safe to say that the stirring history of the period has not been told in a more forcible and vivid way.” — *The Dial*.

“Fair and careful, it rests on abundant information and laborious study, . . . and it is hardly exposed to the risk of supercession.” — *The Speaker*, London.

“His impartiality, too, is really judicial, and never results from missing or underrating the greatness of the issues wherewith he is dealing.” — *The Saturday Review*, London.

THE MACMILLAN COMPANY

66 FIFTH AVENUE, NEW YORK

The American Commonwealth

AND REFLECTIONS—SOCIAL INSTITUTIONS. pp. 904. Price \$ 2.25, net.

The two volumes in a box, \$ 4.00, net

"It is not too much to call 'The American Commonwealth' one of the most distinguished additions to political and social science which this generation has seen. It has done, and will continue to do, a great work in informing the world concerning the principles of this government."—*Philadelphia Evening Telegraph*.

"No enlightened American can desire a better thing for his country than the widest diffusion and the most thorough reading of Mr. Bryce's impartial and penetrating work."—*Literary World*.

American History TOLD BY CONTEMPORARIES

By ALBERT BUSHNELL HART

Harvard University

Each Volume sold Separately, Price \$ 2.00

VOL. I. ERA OF COLONIZATION, 1493-1689.

VOL. II. BUILDING OF THE NATION, 1689-1783.
